Exercise is useful in the treatment of many diseases. It is used in hospitals for mental patients to aid in the reco-ordination of mind and body and in physical therapy departments of general hospitals for general treatment of disease. It corrects postural defects in many cases.

Exercise, therefore, must be indulged in with due regard to one's age and physical condition. A moderate amount is a necessity for a healthy person and it is a method of treating the sick. It is a standard tonic, but like other tonics it has its purpose and proper dosage.—Doctor Nall, Hygiea Magazine.

Why Galleries "Whisper"

Whispering galleries are generally the result of accident. There are two general types—the focusing and the conducting. The dome of St. Paul's cathedral in London is the second type. A whisper close to and along the smooth concave wall is continually deflected inward upon itself by the wall, is prevented from spreading and is thus conducted with only slightly diminished intensity to the other side of the dome. The sound, traveling by great circles, concentrates again at the opposite end of the diameter of which the sound is produced.

Why Freezing Variation

Hot water pipes are reported to burst from freezing more often than cold water pipes. This is not because of a difference of freezing point of the water, but is probably because the water in cold water pipes contains dissolved air, which separates on freezing and forms slushy ice; while when water in a hot water pipe freezes, it is more apt to become undercooled and then freeze rather suddenly, forming compact ice, free from bubbles, which is more apt to break a pipe.

Why Flowers Smell Sweeter

Flowers smell sweetest after a rainy day because the air is clearer.

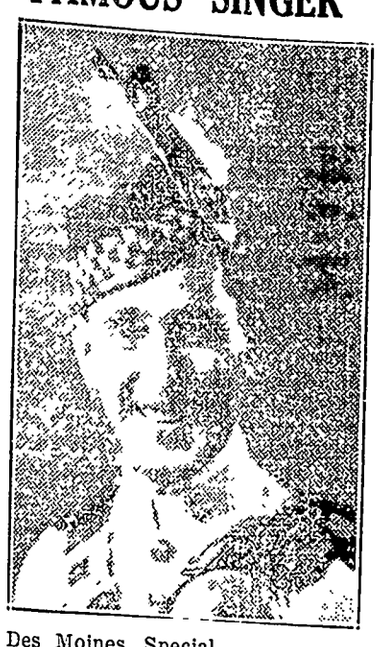
FAMOUS SINGER



Des Moines, Special.

One of Scotland's most famous singers, Bobbie Brollier, who has won nationwide fame in America on concert tours during the last several years, has been engaged to appear at the coming Diamond Jubilee Iowa State Fair as one of the features on the program of continuous musical entertainment from August 21 to 30. Brollier will accompany Roy D. Smith's Royal Scotch Highlanders Band, who will play three concerts each day of the exposition.

Auntie Agreed

Pretty Niece—Woman's dresses are becoming longer, auntie.

Puritan Aunt—Yes, my dear, very much more becoming.

Separation Coming

Harrington—I am wedded to my art.

Carrington—Cheer up, there'll be an uncontested divorce.

Profit System Ensures Consumer Fair Chance

If your goods are acceptable, or your services useful, you will receive a profit. If, on the other hand, your fellow creatures decide (wisely or unwisely, it makes no matter) that they do not want your goods, or that they will get on better without your services, then you will make a loss. The profit-making system is the only one under which the consumer can be perfectly sure of obtaining the article he wants—any other scheme can only mean that he will have forced upon him the article which somebody else things he ought to want.

Working for a profit on an individualistic system also ensures that the people who receive the goods are the same as those who pay for them—a very important point. Based upon the interests of the consumer, it is the only system under which the consumer can ever stand a chance. We can make no money, we can do no good, unless we can persuade others to accept our services at the value that we and they jointly place upon them.—Ernest J. P. Benn, "The Confessions of a Capitalist."

Ancient Nautical Terms Still Used on Vessels

On all seagoing vessels both merchant marine and men-of-war, men work in shifts; watches is the nautical term. The watch from 8 p. m. to midnight is called the "first watch" since at one time it was regarded as the first watch in the day. Then came the "mid watch," from midnight to 4 a. m., as it comes in the middle of the night. Then followed the "morning," the "forenoon" and the afternoon" watches. The watch from 4 p. m. to 8 p. m. is called the "evening watch," but it is often divided into two-hour watches and called the "first dog" and "second dog" watches. These were thus named because the sailormen of another day regarded them as so short that even a dog could not catch a nap during one of them. The "second dog" watch is sometimes called the "admiral's watch" since it is the watch the highest in command would choose for himself, in which the officer would relieve after supper and get relieved early with all night left for sleep.

The Junkman

Consider, sir, the junkman! He is a high commissioned officer in the war against waste. He even merits a medal with palms, for he is daily assisting in the important work of conserving values and, by preventing waste, makes substantial contribution to the world's store of wealth. In recent years, reclamation of basic materials has been so extensively developed as to have attained a high peak of economic prominence. Skilled scientists in the employ of our large corporations give their entire time—long hours every day—to the reduction of waste, thereby swelling surplus profits which otherwise would be forfeited. The junkman, in his own way, is serving the same purpose.

Napoleon's Prophecy

"Not one of my descendants or relatives is capable of regaining the throne of France. So the girls had better marry into the Colonna and Orsini families. These are the families that produce popes," so confided Napoleon to General Bertrand, one of his closest companions. It was known that General Bertrand wrote down the Corsican's last wishes but for many years the manuscript was lost and only recently was published in the Revue des Deux Mondes.

"Some day," Napoleon continued, "there will be a Bonaparte in the chair of St. Peter, and so my name will be revered once more and that all over the Christian world."

Scotsmen Fooled

Canny Scotsmen were taken in recently by the shining teeth of a sheep, forgetting that all that glistens is not gold. A sheep's jawbone from the lead-mining district of Scotland was found to contain teeth which had a metallic luster, and it was popularly supposed that the luster indicated a deposit of gold. However, the teeth were analyzed by the British government chemist in London and he found traces of lead but no gold. The metallic sheen appeared to be due to the effect of light on a laminated, or flaked, crystalline structure, mainly calcium phosphate

Hotel Man Nicked

A stranger called at the Moberly (Mo.) hotel and told the proprietor that he was broke and hungry. The proprietor ordered a good meal for the man. When he arose from the table a $20 bill dropped from his handkerchief. A waiter picked it up and handed it to the proprietor, who got angry and took out 75 cents for the meal, returning $10.25 to the stranger. Later the proprietor discovered the bill was counterfeit.

Successful

Old Doctor—Is the new doctor successful? Got many patients?

Druggist—Oodles of them. Got the latest movie magazines in the waiting room, and his patients can't get in quick enough when the latest copy comes out.

In the Sanctum

"I have here a poem."

"I'll tak it," said the office boy.

"But this is valuable."

"G'wan. We ain't got no receiving teller.

FESTIVAL OF BALLOONS WILL FEATURE AVERY MEETING

Public Is Invited To Attend Farm Bureau Carnival

The Avery Township Farm Bureau announces a "Festival of Balloons," at the home of Mrs. C. A. Arnold, Friday evening, August 2.

Living statuary, folk dancing, a trip through Chinatown, jinrikishas and a Chinese pageant will be features of the evening's entertainment.

Doughnuts, coffee, cake, pie, popcorn, and ice cream will be offered for sale.

The public is cordially invited to attend this out-of-door meeting.

REPORT OF GARNER KLEMME COW TEST ASSOCIATION

The Grade Holstein cow belonging to Bem V. Greiman led the Association in the production of 60 4 pounds butterfat for the month of July. M. T Love's grade Guernsey was second with a prodcution of 57.9 pounds of butterfat. The high herd in the association belonged to Oscar J. Greiman. It consisted of 11 grade Holsteins and they produced an average of 34.3 pounds of butterfat for the month. The second high herd was that of M. W. Sprole consisting of 26 grade Guernsey cows with an average production of 33.9 pounds butterfat. The association average as a whole was 617.7 pounds milk and 25.2 pounds butterfat. There were 274 cows included, 24 of which were dry.

—Howard Horne, Tester.

(Left Over From Last Week)

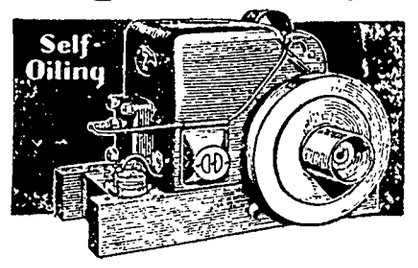
There were a large number of Klemme people at Camp Roosevelt Sunday to enjoy picnic dinners and to visit the boys and take in the Court of Honor. There may have been others there but we observed the following Klemme people: Mr. and Mrs Chris Gram; Mr. and Mrs. Elmer Arnold and children; Mrs. C. A. Arnold, Miss Minnie Lenz and Gale Ridder; Ben Coobs and family; Wallace Pavey and family and Glen Lewis; Mr. and Mrs. J. N. Day, and Mr. and Mrs. Wm. Smith and Miss Mabel; Leonard Sampson and family; Mrs. Bredbenner and Novella; Harold and Ben Ridder and Rev H. E. Whyte; Mr. and Mrs. Clarence Kluckhohn and Eugene and Mrs. Metzgar; Mr. and Mrs. Fred Kluckhohn and Thelma; Frank Kluckhohn and family; Mr. and Mrs. C. F. Keraus, Wm. Keraus and family of Traer; Mrs. G W. Kluckhohn, Sadie Turgasen and sons Vernon and Donald and Jack Wellemeyer; Dr. Missman and Mr. and Mrs. Ely of Belmond; Mrs. C. G. Waterman, and Marian; Mrs. R. A Jorgenson and Buster, Mr. T. Davis; Mr Levi Klotzbach and family, Will Anderson and family; and posisbly a number of others whom we did not see

Pick Farm Woman.

Des Moines, Special:

The champion farm woman of Iowa, selected from among hundreds of nominations from every county in the state, will be chosen and honored here at the Diamond Jubilee Iowa State Fair with special ceremonies on Farm Bureau Day, August 23 The eleven district champions will be guests of the fair, and the final champion will be determined by a group of widely-known farm leaders. The contest has aroused unusual statewide interest, and Farm Bureau Day at the State Fair this year is expected to be one of the biggest days in the history of the exposition.

Sensational new Engine Design



The "Z" 1½ hp. New Engine

If you want to see the biggest value ever offered in a 1½ hp. Engine, come and see the New "Z" Engine—made by Fairbanks-Morse.

New, and radically different from all others in design. Powerful—compact—completely enclosed and self-oiling—the most outstanding power plant of its kind on the market.

Easy Terms

See this wonderful engine demonstrated. Low price—big value Easy terms too!

NEWS REVIEW OF CURRENT EVENTS

Hoover's Cabinet Accepted by the Senate—Serious Rebellion in Mexico.

By EDWARD W. PICKARD

PRESIDENT HOOVER'S first official act of consequence was to submit to the senate the names of eight men whom he had selected for his cabinet. Radical senators were all set to make a fight against confirmation of Andrew Mellon for secretary of the treasury, but, as was explained in these columns some time ago, it was not necessary for Mr. Hoover to send in Mr. Mellon's name, since he is a holdover, so the radicals were circumvented. Making no invidious distinction, the President also omitted from the list Secretary of Labor James J. Davis, the other member of the Coolidge cabinet who was retained.

The senate without hesitation confirmed the eight names submitted. They are:

Henry Lewis Stimson of New York, secretary of state.

James William Good of Illinois, secretary of war.

William Dewitt Mitchell of Minnesota, attorney general.

Walter Folger Brown of Ohio, postmaster general.

Charles Francis Adams of Massachusetts, secretary of the navy.

Ray Lyman Wilbur of California, secretary of the interior.

Arthur M. Hyde of Missouri, secretary of agriculture.

Robert Patterson Lamont of Illinois, secretary of commerce.

After a sharp debate the senate adopted a resolution offered by McKellar of Tennessee ordering the judiciary committee to investigate Secretary Mellon's right to continue in the cabinet without reappointment and to determine if he has violated an old law that prohibits treasury officials from engaging in any business. It was not believed in Washington that this action would bring about results adverse to Mr. Mellon. The secretary of the treasury, it was reported, intended to hold the office for not more than two years.

Since Mr. Stimson is on his way home from the Philippines, where he has been governor general, Secretary of State Kellogg consented to remain in office until his successor arrives in Washington and qualifies. In general the President's cabinet selections met with warm approval.

On Thursday President Hoover issued the call for the extraordinary session of congress, to open April 15. He said in the proclamation that the purpose is "to effect further agricultural relief and legislation for limited changes of the tariff."

During his first days in the White House Mr. Hoover received throngs of congratulating callers from all parts of the country, and also he settled down to the business of conducting the affairs of the nation. He told the newspaper correspondents he desired to continue the periodical press conferences and to develop them in directions that would assist both the press and the President. He conferred with Senator Smoot and Representative Tilson concerning the calling of the extraordinary session of congress for farm relief and tariff revision, and with Attorney General Mitchell concerning the appointment of the commission to investigate the administration of justice and especially the enforcement of prohibition. His emphatic words concerning law enforcement in his inaugural address were especially pleasing to all the church and dry organizations, and they presented him with their felicitations hand illumined on parchment and bound in tooled leather gold embossed. Mr. Hoover desires to place the entire prohibition enforcement machinery under the attorney general. This may require legislation, and the dry leaders in congress are not all in favor of this course.

MR. AND MRS. COOLIDGE, returning to their home in Northampton, Mass., were given an impromptu loving welcome by their neighbors that affected them deeply. Both of them were sincerely glad to resume their unpretentious home life, and Mrs. Coolidge especially seemed gay and happy. To the reporters Mr. Coolidge said, interviewing himself, that he is not going to practice law in Northampton or anywhere else at present; that the several contracts he has made for magazine articles are all he contemplates now in that line; that he will not write a book and will not make any speeches. He will not travel in foreign countries this summer, believing there are plenty of interesting places in the United States to be seen.

Gen. Charles G. Dawes, late Vice President, hastened back to Chicago and at once resumed work in the bank with which he was long connected. He was made chairman of the board. He declined to talk politics but vehemently denied that he intended to run for senator to succeed Charles S. Deneen. On March 28 General Dawes leaves for Santo Domingo as head of a commission of his own choosing to advise the Dominican government on financial problems.

REBELLION broke out in several states in Mexico and speedily reached alarming proportions. A number of governors and military chieftains joined in the movement, directed at the government of President Portes Gil and aimed particularly at what they called "Calles domination." They immediately ordered opened all the churches that had been closed by the Catholic authorities in protest against the religious laws which Calles, while President, put into effect. At first the rebels under General Aguirre gained possession of Vera Cruz and other important cities. Gen. Gonzalo Escobar was sent by the government to Monterey to combat the revolutionaries, but on arrival there he joined the rebels and was made military chief of the movement. President Portes Gil appointed Calles secretary of war, and under vigorous direction the federal troops regained possession of Monterey, Orizaba, and other strategic points. Aguirre in Vera Cruz state was deserted by most of his men, and Escobar was said to be surrounded by three strong armies. The government issued a bulletin predicting the early collapse of the entire rebellion, and dispatches from Ambassador Morrow indicated the same belief.

It was stated at the White House in Washington that the new administration would continue to inforce the embargo on arms shipments to Mexican rebels that was maintained by President Coolidge, but that licensed arms shipments would be permitted to go forward to Mexico City if requested by the Mexican government. The State department said every effort was being made to prevent the smuggling of arms across the border.

THAT fuss over an alleged secret Franco-Belgian military treaty came to an end when the man who sold the document to a Utrecht newspaper was arrested and confessed that it was a forgery. He was set free by a Belgian judge and declared he was really an agent provacateur of the Belgian government. The Dutch journalists passed a motion of censure on the Utrecht editor who published the forged paper.

TREATMENT of racial minorities in Europe was the topic the council of the League of Nations took up when it met in Geneva last week, but there was no prospect of action, for the council felt the problem was too big to be settled now and should be studied by a subcommittee. Sir Austen Chamberlain, British secretary for foreign affairs, said: "The rights of the minorities cannot be separated from their obligations, and they have to show that they have behaved loyally to the country of which they are part and given true allegiance to the country to which they are subject."

INSTEAD of whitewashing Gen. Umberto Nobile for the disaster of the dirigible Italia in the Arctic regions, the Italian court of inquiry censured him severely. The report of the court is divided into three sections. The first deals with the causes of the accident, the second with the behavior of the survivors, and the third with the relief efforts. After stating that the loss of the dirigible was due to error in handling made at the moment of the accident, for which the commander of the expedition must take responsibility, the report passes to a consideration of the charges of cannibalism in connection with the disappearance of Dr. Finn Malmgreen, the Swedish scientist, and the third man with Capts. Alberto Mariano and Filippi Zappi on the Arctic ice.

Regarding General Nobile's action in allowing himself to be rescued first, the report says: "It cannot find plausible justification and it can only be explained, not justified, by conditions of physical or moral depression in which he was found which did not permit him to estimate the just value of his action, even though it was determined by the pressing invitation of Lundborg." Lieut. Einar-Paal Lundborg was the Swedish airman who took off Nobile.

CONDITIONS in Shantung province were so serious that the Nationalist government of China was reported fearful of defeat at the hands of General Chang's rebels and therefore trying hard to arrange a compromise by which further hostilities might be avoided. Meanwhile large numbers of government troops were being mobilized. The commander at Chefoo reiterated the charge that the Japanese were financing Chang.

JOHN D. ROCKEFELLER, JR., was the victor in the dramatic "war of the proxies" which reached its climax Thursday in Whiting, Ind. The final battle ground was the annual meeting of stockholders of the Standard Oil Company of Indiana and the man who went down to defeat was Col. Robert W. Stewart, chairman of the board of directors. With about twice as many shares as Stewart could control, the Rockefeller forces ousted the colonel from the board, replacing him with Dr. W. M. Burton, inventor of the famous cracking process; and Stewart's close friend, L. L. Stephens, general counsel and director, also was put out. Stewart had proxies from 31,336 stockholders, the "little fellows"; but the Rockefeller proxies, though only half that number, were from the rich men and corporations and easily controlled the situation. Stewart had the satisfaction of presenting a report that showed the company had just closed the most prosperous year in its history and he was uproariously applauded by his supporters.

THOMAS TAGGERT, for many years the leader of the Democrats of Indiana, passed away at his home in Indianapolis at the age of seventy-three years after a long illness. Starting business life in a lunch room in Xenia, he became a very wealthy man, and a power in his party both in the state and in the nation. He was given the credit for making Woodrow Wilson President, and Thomas R. Marshall, twice Vice President, said his success in politics was due to Taggart. Moses Edwin Clapp, former United States senator from Minnesota, died in Washington where he had practiced law since leaving the senate in 1917. Among other recent deaths were those of Haley Fiske, president of the Metropolitan Life Insurance company, in New York; and of David D. Buick of Detroit, a pioneer in the automobile industry.

JUST before he left office, Attorney General Sargent granted freedom on parole to Thomas W. Miller, former alien property custodian, who was serving a term of eighteen months in Atlanta penitentiary for conspiring to defraud the government in the handling of German property during the World war. Miller was convicted in 1927 and began serving his sentence last April.

IN SUMMING up the work of the late Seventieth congress it is found that it authorized new expenditures totaling more than a billion dollars during the next decade. The chief authorizations included the following:

Mississippi flood control project, $325,000,000.

The 15 cruiser construction bill, $274,000,000.

The Boulder dam project, $165,000,000.

Public buildings and army structures, $175,000,000.

Compensation for German ships, patents, and radio stations, $10?,000,000.

River and harbor projects, $72,000,000.

Increased capital for Mississippi barge line, $10,000,000.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

THE ANNUAL VACATION

TOO many people look upon the annual summer vacation as a time and money spending orgy. They "save up" for a two-weeks' blow—and they blow it. They are out to get their money's worth; and this, no matter if it nearly kills them!

So far as the money is concerned, no objection need be raised provided one can afford to spend it. One certainly is entitled to some fun after having had one's nose to the grindstone for fifty weeks. Indeed, the change alone is a great life saver but it should be a life lengthener also And this is usually exactly what it most positively is not!

The common mistake that most people make about this vacation business is that they fail to appreciate that pleasure, so-called is not the only thing they should seek.

While one's brain needs a rest from the daily grind, the body also should come in for its fair share of attention. Instead, the majority of excursionists absolutely disregard its requirements by eating all sorts of things at all sorts of hours, by sporting themselves into a sun-baked condition, and by deliberately robbing themselves of the sleep and rest which they so emphatically require.

And so it comes to pass that by far the majority of summer vacationists defeat the very purpose for which vacations were intended and frequently return to their daily routine more dead than alive. "Tired, broke, blistered and happy" as one optimist stated, as he crawled back to his desk after a fourteen-days' absence.

Now, seriously, is the game worth the candle? How much more logical it would be if one would resolve to cash in on his vacation rather than to cash out. There is nothing involved or complex in the process; and it certainly is more sensible from any standpoint one cares to take.

The rules are few and not especially exacting. Why not try them?

1. Don't try to crowd a year's bathing into one afternoon.

2. Keep your body out of the direct rays of the sun as much as possible.

3. Don't overload your stomach three times a day in an attempt to "break" the hotel kitchen. It can't be done.

4. And in spite of the bright lights, the poetical moon or the midnight cabaret, get eight and more hours sleep each night.

In short, be sensible. Have a good time. But don't kill yourself in the process.

LADY NICOTINE

BEAUTY is worshiped the world over. True, its standards differ with the races. But the fundamental instinct is the same. It is safe to say that the highest expression of this concept in America is a beautiful woman. And America has more than its fair share of this type of pulchritude. Moreover, never in the world's history have the aids to beauty been so highly perfected and so generally employed as they are today. Beauty, therefore, is in a high state of development indeed.

Nevertheless, there is one habit into which many young men and women, and older ones too, have fallen that is quite antagonistic to beauty. This habit is the too great affection displayed for Milady Nicotine in the particular form of the cigarette.

The artistic sign board advertisements invariably associate high-colored cheeks and good health in tobacco users. But paint put the color there, as it is compelled to do on the cheeks of thousands of the feminine contingent who habitually inhale cigarette smoke to excess.

And this pallor so cleverly camouflaged by the ladies and so frankly displayed by their male counterparts in itself is bad enough. But it is also an indication of the physical condition of the person so unfortunate as to possess it.

Tobacco indulgence in moderation may not be harmful. On the other hand, if cheeks that were meant to be rosy are pale because of it, then it is quite time to consider the question and consider it seriously.

Reason it out for yourself. You will not need to be much of a logician to do so. Unhealthy pale faces are caused by some unhealthy practice or condition. If you lack normal color in your face it may not be on account of the excessive use of cigarettes. But if it is, you will have no difficulty in discovering the fact.

Smoke if you care to, but don't smoke yourself pale. Beauty is gone if you do. And neither rouge nor massage can bring it back. Take this hint, please. If for no other reason than for the sake of appearances!

(©, 1929, Western Newspaper Union.)

Master's License

Joseph Conrad's knowledge of English, literary and colloquial, need not here be praised. But there were certain words which he, so to speak, declined to learn. One very odd example was the word "vowel;" he transposed the "v" and "w" sounds, so that it become "wowvel." I have been told that he would even write it so. He pronounced "used" as two syllables, something like "usit."—London Fortnightly Review.

ATWATER KENT RADIO

Buy your radio just as you buy your farm machinery..

WHO MAKES IT—and how? Is it simple, and easy to keep in order? Will it do its job—and keep on doing it?

Aren't these the questions you want answered before you invest your money in a tractor and everything else you use on the farm?

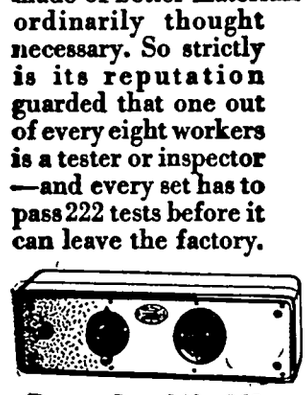
It's the same way with radio. Here's an instrument your family will depend upon for years and years. You want to know it's always ready to go.

Atwater Kent Radio comes from the largest manufacturer. It is made of better materials than are ordinarily thought necessary. So strictly is its reputation guarded that one out of every eight workers is a tester or inspector—and every set has to pass 222 tests before it can leave the factory.

So, when an Atwater Kent co into your home, it is absolu dependable—*and* it stays so. do not have to fuss and tinker apologize . . . If *Atwater K makes it, it's right*—tone, vol range—*everything*. More t 2,000,000 owners know it.

House current or battery sets—your choice

Quality Atwater Kent Radio—first ch of rural families everywhere—is of in two forms: 1. For all-electric o tion direct from the same house cu that lights your home; you merely in. 2. For operation from batteries.



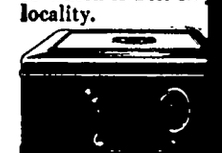
Model 56

The new all-in-one set that fits so beautifully anywhere. FULL-VISION Dial. For 110-120 volt, 50-60 cycle alternating current. Requires 6 A. C. tubes and 1 rectifying tube. Without tubes, $97.

Battery Sets, $49—$68

Solid mahogany cabinets. Panels satin-finished in gold. FULL-VISION Dial. Model 48, $49; Model 49, extra-powerful, $68. Prices do not include tubes or batteries.

Either way, you plenty of power for l range reception, na tone, and instantan program selection the FULL-VISION D There are several all- tric models and two ba models. Let an Atw Kent dealer advise yo to which is best for locality.



Model 40 (Electric), $ For 110-120 volt, 50-60 cycle al ting current. Requires 6 A. C. and 1 rectifying tube, $77 (wi tubes).

On the air—every Sunday night—Atwater Kent Radio Hour—listen in!

Prices slightly higher west of the Rockies

Haircuts Donated

Needy schoolboys get free haircuts in Santiago. Upon invitation of the barbers' union they began recently to go in crowds to the barbers' school, where they were shingled by student barbers. Thirty youngsters were sent in one day by the principal of their school.

Drink Water If Back or Kidneys Hurt

Begin Taking Salts If You Feel Backachy or Have Bladder Weakness

Too much rich food forms acids which excite and overwork the kidneys in their efforts to filter it from the system. Flush the kidneys occasionally to relieve them like you relieve the bowels, removing acids, waste and poison, else you may feel a dull misery in the kidney region, sharp pains in the back or sick headache, dizziness, the stomach sours, tongue is coated, and when the weather is bad you have rheumatic twinges. The urine is cloudy, full of sediment, the channels often get irritated, obliging one to get up two or, three times during the night.

To help neutralize these irritating acids and flush off the body's urinous waste, begin drinking water. Also get about four ounces of Jad Salts from any pharmacy, take a tablespoonful in a glass of water before breakfast for a few days and your kidneys may then act fine and bladder disorders disappear.

This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for years to help clean and stimulate sluggish kidneys and stop bladder irritation. Jad Salts is inexpensive and makes a delightful effervescent lithia-water drink which millions of men and women take now and then to help prevent serious kidney and bladder disorders. By all means, drink lots of good water every day.

Through a Glass Darkly

I have read of a glass kept in an idol temple in Smyrna that would make beautiful things appear deformed, and deformed things appear beautiful; carnal sense is such a glass to wicked men, it makes heavenly things which are beautiful to appear deformed, and earthly things which are deformed to appear beautiful.—Ohio State Journal.

Horse's Long Swim

An all-night swim was perfor by a wild horse at Le Araroa, N Zealand. While being chased by Maoris, it dashed into the sea swam away. Late at night the mal was observed through glas far from shore. At nine o'clock morning it was seen to land make its escape.

Mrs. John Durrum Sa Could Write All Da and Not Say Enough Good About Milks Emulsion

"Have been thinking for some t of writing you in regard to Mi Emulsion.

"When I wrote you last fall I very much discouraged. Doctors told me for five years that I had B. Five doctors told me last fall t I was in advanced stages of T.

"I have taken your wonderful me cine all winter. Sometimes I wo neglect taking it every hour. would take several doses a day, this is the first winter for seven ye that I haven't spent most of the w ter in bed. I haven't been in bed s this winter, and for two years I been so sore across my abdomen couldn't bear to press on it. That all gone. I do all of my housew now except washing; weight pounds, and feel fine.

"I can't praise your Emuls enough. I tell every one I talk what it has done for me and a ashamed if I neglect it sometim when I know what it has done me and what it means for me.

"I could write all day and co never write enough good words ab Milks Emulsion." Yours truly, M John Durrum, 451 W. Green Frankfort, Ind.

SAFETY AUTO RIM PREVENTS ACCIDENTS

A new and remarkable device which is expected to end the toll of accidents caused by tires "blowing out" while vehicles are in motion was recently demonstrated to members of congress at Washington. The device consists of a heavy inner rim flanged to the wheel which takes the weight of the car should the tire collapse from any cause.

NITION SYSTEM EEDS ATTENTION

Is Easy to Check Up and Find Smallest Gap Possible to Use.

Present-day engines with faster and higher compression have ated a condition that requires more ntion to the automobile's ignition ers than ever before, an engineer- bulletin just issued, says:

The bulletin prepared by Hector bezzana, spark plug engineer, of- this important information:

Spark plug gap settings which forly were more or less standardized .025 to .030 inches must be now .018 to .022 inches and distributor nts, in most cases at .015 to .020 hes.

Higher Sparking Voltage.

Higher compression means higher rking voltage for a given gap. er speed has a tendency to re- the time it takes the coil to build and in order to normalize these ditions the spark plug and break- point gaps should be reduced in or- to keep the sparking voltage on same level.

The higher speed of the engine re- es the amount of current which s into the coil and requires a aller gap in the breaker or inter- ter to compensate. A smaller gap The advantage of giving an extra gth of time to the current for build- up in the coil, so it is advisable set the contact point at the small- normally operating gap that is pos- e.

Ignition Systems Differ.

It is not possible to make a rigid e in regard to distributor points as the case of spark plugs, because rarious ignition systems differ so ely in their construction and char- teristics that some of them may re- e only a .005 gap, while others d a gap as high as .020 in the aker. Nevertheless it is easy to ck up and define the smallest gap t it is possible to use, and the ma- ity of ignition systems will work tisfactorily with a gap of about .015 .020.

When gaps are too wide the mo- r will generally experience engine ble at high speed, although he get satisfactory performance at speed. On the other hand, too ll a gap may work at high speed, likely will be unsatisfactory at low ed, because it will not make a n break, preventing the coil from ering a high enough sparking ge to the plug."

The bulletin recommends checking ignition system every one thou- d miles, and especially inspecting breaker contacts, because it is par- unt that they be clean and square, spaced as described above. For ning, a fine file and some No. 00 paper is all that is needed.

In addition to the breaker points, spark plug gaps and ignition cable uld also be checked during the in- ction, "which altogether requires five minutes and will be worth thousand miles of improved engine rmance," the bulletin adds.

THE MOTOR QUIZ

(How Many Can You Answer?)

1.—What part of the 3,000,000 miles roads in the U. S. A. have been sur- ed?

Ans.—About one-sixth.

2.—What is the total highway mile- of the world and wh part of this the United States?

Ans.—6,500,000 miles, half of which in the United States. Of the im- ed roads more than half are in United States.

3.—How does the mileage of travel- roads compare with the railroad ge?

Ans.—The mileage of travelable is four times greater.

Rights of Road Hogs Are Upheld by Court

Road hogs have as much right to a place on the highway as motor vehicles, according to decision handed down by Judge Walter M. Pickett of New Haven, Conn. John Biondi of East Haven, whose automobile was wrecked when the driver, William Green, hit a tree to avoid a drove of romping porkers, had brought suit for $2,000 damages against Gerardo Triumfo, owner of the animals.

Much Wear Is Caused by Slipping Action of Tire

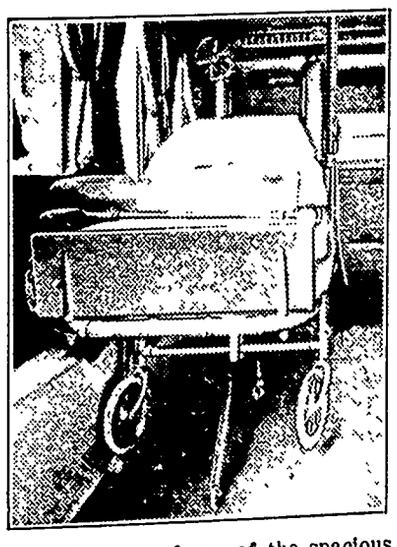
"Don't," reads the old rule, "reverse the direction of rotation of tires if you want to get the most mileage from them."

But times change, and rules change with them. Today the bureau of standards suggests that it may be desirable to change the direction of rotation of tires occasionally in order to reduce the wear through "scuffing."

The old theory was that when a tire's tread had become accustomed to taking strain in the one direction it was best to let it go along in the same old rut throughout its entire life. When the garageman changed a tire many car owners were careful to see that the tire went back on the wheel in such a way as to roll in its accustomed direction.

But the latest tests show that much tire wear is due to a constant slipping action known as "scuffing" and suggests that much of the peculiar wear on the treads could be spared by occasionally reversing the direction of rotation of the tires.

Hospital on Wheels



The interior of one of the spacious "hospital ward on wheels," belonging to the Walton Private Ambulance Service, London, which carried King George to the enormous Bognor estate, where he rested after his recent illness.

AUTOMOBILE NOTES

To the motorist hard roads are the easiest to travel.

* * *

Another practice that runs into money is running into hydrants.

* * *

A career of crime can't be so much, economically, if you have to steal a second-hand car every time you leave town.

* * *

Headlight lenses should be wiped frequently, advises service officials. Dust on the lenses greatly diminishes the power of the lights.

* * *

Seventy steam railroads are using motor trucks for short hauls and terminal service, according to the Chicago Motor club.

* * *

A recent decision of the United States Court of Appeals is that the pedestrian has the right of way when ever he steps off the curb while the "go" sign of a traffic signal is with him.

Open Herdbooks to Best Cattle

Dairy Associations Overlooking Means of Improving Their Breeds.

(Prepared by the United States Department of Agriculture.)

Dairy breed associations in the United States are overlooking an important means of improving their respective breeds in keeping their herd books closed to the many unregistered high-producing cows of excellent type, according to O. E. Reed, chief of the bureau of dairy industry, United States Department of Agriculture.

Speaking before the annual convention of the Holstein-Friesian association in Philadelphia, Mr. Reed suggested the desirability of the national breed associations giving "some study to setting up a system of registry which will permit entering in the herd books unregistered animals that have reached a high degree of purity for a high level of production."

Seems Like Rank Heresy.

Mr. Reed admitted this suggestion might seem like "rank heresy to those who have not thought the proposition through," but he called attention to the fact that all cattle now registered sprang from the common herd. Moreover, he cited figures showing the very slight difference existing between the production of unregistered and registered commercial herds today.

Of 100,000 cows tabulated by the bureau of dairy industry, 70,000 were grades and 30,000 were registered. The grades, he said, produced 7,124 pounds of milk and 284 pounds of butterfat a year on the average, while the registered cattle averaged 7,878 pounds of milk and 303 pounds of butterfat, a difference of only 754 pounds of milk and 19 pounds of butterfat in favor of the registered cattle.

New System Is Favored.

There are many unregistered animals of great productive capacity and excellent type in the United States today that could be made use of in our breeding operations with profit, he said. A system of registering such animals has plenty of backing, and it can be made genetically sound. Great Britain, Holland, and other countries famous for their fine herds and flocks have used such a system in the past and still follow the practice of admitting animals that have three to five top crosses of registered sires. In discussing the plan, Mr. Reed pointed out that it would not mean an immediate wholesale registration of grade cattle. If only three top crosses were required for the registration of females and all first calves in the crosses were females, which is improbable, he stated, it would take ten years to get a female registered in the herd book.

Preventive Steps for Poults and Blackhead

Such tragic stories as come in about "poults the size of quails." "They get a yellowish or greenish color droppings"; "they begin to walk slow"; "they go light until they die," etc.

This is the old enemy "blackhead." The preventive measure is to rear the turkey poults on ground that is not pastured by chicks; to give them all the sour milk they will drink, and every third week to give epsom salts in the proportion of a teaspoon each per old bird, and a half teaspoon for poults.

The droppings of a flock affected with blackhead should be kept cleared away and burned or buried. Make sure that the fowls are free from mites and lice.

Do not keep as breeders birds that have been cured of blackhead.

Food for Goslings.

Bread and milk, cornmeal and bran mash are all good food for goslings. One thing that tends toward profit in geese-raising is that but little food is required after the first few days when grass is plentiful. But because goslings are not always careful as to diet they sometimes eat poisonous weeds, principally young cockleburr, and unless timely aid is given they die. It is best to feed them at least once a day, and to include a little lard or grease skimmed from liquor in which vegetables have been boiled and seasoned, to overcome the effects of such poisons.

Agricultural Notes

Feed a dry mash.

* * *

Hoeing is the life of peas. Give them plenty of it.

* * *

Sudan grass used for pastures is not nearly so hard on the land as sudan grass used for hay.

* * *

One of the latest devices is a conveyor and self feeder for baling straw directly from the threshing machine.

* * *

Vegetables will not develop satisfactorily if the plants are thick, hence judicious thinning is very important.

* * *

Don't forget to take a daily lookout for bugs and give them a shot of poison. One bug can produce a big family in short order.

* * *

Unless turnips are thinned just at the right time they will be disappointing. Get them pulled to reasonable distances to permit growth.

Quick energy POST TOASTIES for that hot weather feeling

It's the Wake-Up Food

YOU need an energy food these summer mornings, but you want it light and easily digestible. Try a heaping bowlful of the Wake-up Food, Post Toasties.

Here's a delicious breakfast that's as light as toasted flakes can make it, and full of energy to fight off that lazy, hot weather feeling. Energy that is quickly released to the body, it's so easy to digest.

And how those crunchy flakes tempt the appetite! Delicate flakes from the tender hearts of selected white corn, toasted golden crisp and seasoned to flavory goodness! Every member of the family votes for this quick-energy breakfast the Wake-up Food, Post Toasties.

And don't forget—there's just one way to get the Wake-up Food. Ask your grocer for Post Toasties in the red and yellow, wax-wrapped package.

Western Newspaper Union

(A Delaware Corporation)

Fifteen-Year 6% Convertible Gold Debentures

Dated August 1, 1929 **Due August 1, 1944**

Interest payable February 1 and August 1 without deduction for normal Federal income tax not exceeding 2%. The Company will agree to refund to holders, upon proper application, any State income tax not exceeding 5% per annum, and in Massachusetts not exceeding 6% per annum, and personal property and security taxes in certain States as provided in the Trust Indenture. Redeemable at any time as a whole or in part on 60 days' published notice at 105 and accrued interest. Coupon Debentures in interchangeable denominations of $1,000 and $500 registerable as to principal only. Central Hanover Bank and Trust Company, Trustee.

Debentures will be convertible, at the option of the holder, at any time prior to maturity, or up to five days prior to earlier redemption, into Common Stock at the rate of 40 shares for each $1,000 principal amount.

H. H. Fish, Esq., President of the Company, summarizes from his letter to us as follows:

BUSINESS

Western Newspaper Union, successor to a company of the same name and a business founded in 1865, serves more than 10,000 daily and weekly country newspapers, maintaining fully equipped plants in 36 key cities of the United States from California to Massachusetts.

The Company supplies these newspapers with ready printed inside pages or with columns of prepared plate, containing various feature stories, serials and special articles selected by the newspaper publishers; places national advertising in their papers and prepares cuts and copy for local advertising campaigns.

The Company also does a large volume of commercial printing, prints in their entirety various magazines and trade journals and is responsible for the mechanical production of many of the feature services of The Associated Press.

FINANCIAL

During the past 20 years net profits of Western Newspaper Union, after all charges including depreciation, but before Federal taxes, averaged more than $680,000 annually, and in no single year were such net profits less than $450,000.

Net profits after depreciation, but before Federal taxes, for the past 4 years, as certified by Messrs. Arthur Andersen & Co., after eliminating operations of the paper mill, which is being sold coincident with this financing and after other adjustments arising from the reorganization as stated in their certificate, were as follows:

1925	$741,336
1926	955,385
1927	571,249
1928	765,825

Such net profits as above have averaged about $758,448 annually, and for the year ended December 31, 1928, amounted to $765,825, equivalent to more than 3 times the annual Debenture interest requirement.

After deducting from such net profits in 1928 Debenture interest requirements, Federal Taxes (parent company) at 12% and Preferred Stock dividends, the balance amounted to over $352,000, or about $2.35 per share on the 150,000 shares of Common Stock to be presently outstanding.

The net assets of the Company, available for these Debentures, based on the balance sheet, as at April 30, 1929, adjusted to give effect to the present financing, including the sale of the paper mill, were in excess of $8,500,000.

MANAGEMENT

Since the death in 1916 of the former owner, George A. Joslyn, his widow and other heirs have owned the majority of the Common Stock of Western Newspaper Union, control of which is now being acquired by the executives who have been responsible for its successful operation during the past 13 years.

All legal details will be passed upon by Messrs. Tenney, Harding, Sherman & Rogers of Chicago and by Messrs. White & Case of New York.

OVER MILE GRAVELED ON THE ROAD EAST OF TOWN

Fleet Of Trucks Rushing Work To Completion

As we go to press nearly two miles of the county road running east from Klemme has been graveled, and a part of the gravel has been spread.

The road which is now being surfaced with gravel was graded up by the county last year and the bed is in perfect condition for graveling.

Work of graveling was begun at the east end of the road, and as the work progresses a bigger showing is made each day as the hauls become shorter.

During the past week the Wilson or Highway No. 15 has been re-surfaced with a coat of gravel. New gravel has been put on the highway from Garner to about half way between Klemme and Goodell.

The street leading north from the east end of main street and connecting with the county road has been brought to standard grade and completes the county road system through Klemme. We understand that this stretch will also be graveled at an early date.

Yourself and Your Neighbors
--Items of Personal Mention--

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

Rudy Frisch, of Garner, was n Klemme on business Tuesday.

Ed. Jacobs was at Fort Dodge on business Tueday.

Harry Buss and family were at Mason City Monday.

We aim to give service on threshing supplies. E. F. Jacobs. 1tc

Marie Blank was at Mason City Wednesday afternoon on business.

Clarence Bredlow has sold his oil business and truck to Dwight Hummel.

Misses Marie Blank and Gracka Quandt returned Tuesday evening rom their visit at Utica, Ill.

Hans Hansen and family and Tom Nelson, Sr. drove to Forest City Sunday afternoon.

Dr and Mrs D. P. Anderson visited at the Dr. Weson home at Garner Sunday.

Mr. C. C. Schaefer of Marble Rock visited in Klemme and vicinity a couple of days last week.

FOR RENT—160 a. farm equipped for dairying. Inquire at Klemme Creamery. 1tp.

A number of Klemme Masons attended first degree work at Garner last Thursday evening.

Donald Gibbs went to work for Harry Gibbs Tuesday to help with harseting and threshing.

Frank Gibbs has been at Sioux City for a couple of weeks on business.

The Central States Electric Company installed an electric range at the Chris Gram home Tuesday.

The Ladies Aid Society of the Reformed Church met Wednesd y at the home of Mrs. Geo Albers.

Frank Gibbs returned Tuesday evening from Sioux City where he went to get his Ford.

Cornelius Wille and family visited with relatives at Meservey Sunday.

Wm. Schlawin and wife and Werner Schlawin and family were at Clear Lake Sunday to visit the silver fox farm.

George Carsom and daughter, Doris; Nova Koerner, Thelma Kluckhohn and Blanche Gimer were at Kamrar, owa, Monday night.

Charles Gibbs and family and Lewie Terhufen and family of Mason City, spent Sunday at the home of Mrs. Emma Gibbs.

Kenneth aud Clarence Kluckhohn hiked to Camp Roosevelt early last Friday morning, as one of their first class Scout tests.

Mr. and Mrs. Frank Kluckhohn entertained Mr. and Mrs. L. O. Deal and son, James, Friday evening to a dinner and swim at Clear Lake.

Mr. and Mrs. John Bock entertained Mr. and Mrs. Dave Ender of Hokah, Minnesota Saturday evening for dinner.

Marlin Croner, Ed. Jacobs and Chris Gram returned Saturday evening from Chicago where they had been on busines for several days.

L. O. Deal and family moved to Sanborn, Min., Sunday, where Mr. Deal will manage the telephone system.

Mr. and Mrs. David Ender, of Okey, Minnesota, came Friday and remained until Sunday visiting with their cousins, the Bock brothers of this vicinity.

Mr. and Mrs. Paul Grange and son, Dorance went to Lake Okoboji over the week end to visit the F. J. White family at their summer home at the lake.

Clarence Elder, who is working for the "Farmer's Wife" at Saint Paul, has been home quite often the past week as he is working this county.

Mr. and Mrs. C. F. Keraus entertained L. O. Deal and family for breakfast Sunday morning before the Deal family left for their new home at Sanborn, Minn.

C. G Waterman and family and R. A. Jorgenson and family and Mr. Davis spent a couple of days last week at Woodhaven Cottage at Ventura Heights

R. A. Jorgenson and family and Mrs. Jorgenson's father, Mr. Titus Davis, enjoyed dinner Monday evening at the J. Jorgenson home at Garner.

Mr. and Mrs. Gilbert Schaeper and son, Pennie; Herman Priebe and family and Henry Josten and family enjoyed a picnic dinner at the Clear Lake State Park Sunday.

Geo. Thieman and family; Henry Thieman and family; Fred Neuhring and family and Mr. and Mrs Geo. Born visited the Grotto at West Bend Sunday.

Mrs. Clarence Bredlow has an 8 lb. cabbage which she grew in her garden. If all her cabage is that large she could easily supply the town with kraut.

John Bock was at Des Moines on business Saturday and to visit with his daughter, Mis Stella, who is attending summer school there Mr. Bock purchased a new truck while in Des Moines.

Harvesting is well under way in this community. The warm weather of the past few days has caused the corn to grow skyward and most fields are tasseled out and many are setting ears.

Part of main street was sprinkled Wednesday morning. Fine stuff! Do it again, and don't forget other business places would also like to have the dust settled in front of their places.

Rev. and Mrs. H. E. Whyte, R. A. Jorgenson and family and Mr. T. Davis and C. G. Waterman and family, and Byrnes Missman, packed a lunch and drove to Clear Lake to enjoy a swim and eat their supper.

Mr. and Mrs. W. O. Lassahn entertained the following to dinner Sunday: Mr. and Mrs .Fred Lassahn of Wesley, Mr. and Mrs. Wm. Bell and son, Kenneth; Mr. and Mrs. R. Carolus and sons Ralph and Clarence; and Miss Anna Lassahn of Garner. All report a fine dinner and a good time was spent visiting.

The new hollow tile warehouse which Ed. Jacobs is having built at the rear of his hardware store is nearly completed. The new building will give Mr. Jacobs lots of needed storage space and is a fine improvement to his business property.

Sunday Mr. and Mrs. Lew Lewis entertained a number of people for dinner. Those present were Mr. and Mrs. Henry Yahnke, and son, Erwin and wife of Good Thunder, Minn; Henry Lewis and family; Verner Lewis and family; B. Coobs and family, and Mrs. Lew Lewis' sister who is visiting her.

OVER 400 AT AVERY FARM BUREAU MEET

JAPANESE PAGEANT FEATURE ON THE PROGRAM

Beautiful Lawn At Mrs. Arnold's Home Is Setting For Scene

The regular monthly meeting of the Avery Township Farm Bureau was held at the home of Mrs. C. A. Arnold, Friday evening, August 2. Although the roads were muddy and the sky looked threatening, over 400 people attended this out-of-door meeting. The beautiful lawn was lighted by electric lights furnished by Mr. Papousek. The large cedar trees which border the lawn made a beautiful background for the prison tower and the tea garden, which were used in the pageant. Mr. A. Wellemeyer furnished the piano for the program.

Following is the program which was carried out:

Community singing led by Clarence Ruigh.

Song, Eva Stokesbarry and Gayle Ridder.

Folk Dance, presented by Iris Sherwood an dthe following: Junior Barger, Kenneth Griggs, Zola Carpenter, Zeota Andreason, Verna Andreason, Donald Andreason, Delores Cook, Lavon Sherwood, Nellie Griggs, Bonnie Bachman.

Violin Solo, "Frasquita" by Fritz Krisler, Mildred Johnson, accompanied by Irene Johnson.

Reading, "The Tryst," Iris Sherwood.

Songs, "Carolina Moon," and "Dream Train," by Albert White and Gayle Ridder.

Six Pieces Of Statuary

Reading by Howard Barger.

1. "On My Kiddie Kar," Song. Delores Cook and Lavon Sherwood. Posed by the Sims twins.

2. "Pussy," reading by Evelyn Arnold. Posed by Emma Jane Barger, Betty Ward, Lavon Sherwood.

3. "The Sheep Club," Reading Delores Cook. Posed by Stanley Pal Virgil Prilipp, Marion Prilipp, Leo Kearney.

Song, by whole Club.

4. Canning Club. Posed by Leona Prilipp and Clarice Johnson.

Song by whole club.

5. "The Man With the Hoe," Reading, Mrs. Elmer Arnold. Posed by Mr. Elmer Arnold.

6. "Mother," Reading by Iris Sherwood. Posed by Mrs. Leon Sherwood.

Song, "Believe Me If All Those Endearing Young Charms," Clar-Ruigh and Raymond Pals.

Topsy Turvy Drill, 4-H Girsl.

Talks on Achievement Day by L. T. Nutty, County Agent and W. L. Lawhorn, F. B. President.

Chinese Pageant "Willow Lady"

Li Lang ..... Jane Dutheridge
Yang Chu ..... Eva Stokesbary
Shan Shang .... Gertie Trampel
Wu Wang ..... Edna Koehler

Soloists: Mrs Harry Whyte, Mrs. D C. Davies, Mrs. Clarence Ruigh.

Violin, Mildred Johnson.

Piano, Irene Johnson.

Reader, Mrs. H. C. Barger.

After the program people thronged around the stands when cake, pie, doughnuts, coffee, pop corn, ice cream and candy were sold.

Mrs. Leon Sherwood made all the doughnuts. Mrs. Dutheridge had charge of the tea garden, where the "Willow Ware" depicting the story of the pageant was used.

The Chinese Queen and the Jinrikishas were popular attractions. Hundreds of balloons were sold and the air was filled with the noise of squawkers and barkers for the various stands.

Over sixty dollars was taken in at this meeting. This will be used for the expenses of the township meetings throughout the year.

ARMY WORMS ARE FOUND IN HANCOCK COUNTY

County Agent Nutty Gives Method Of Killing Invaders

Army worms are extremely abundant in Northern Iowa this year and several places in Hancock county have been infested with them. Several farmers have lost a few acres of oats. These worms may migrate into the corn fields. The poison bran mash works very satisfactorily in the control of these worms. Best results will be ecured by preparing the mah and leaving it stand about two hours before using. The poison bait should be scattered as thin as possible and about un down or soon after. The bait must be moist to be effective. The worms prefer this bait to their natural foods, consequently excellent results may be secured. The poison bran should be made as follows:

Wheat bran	20-25 lbs.
Paris Green	1 lb.
Cheap molasses	2 qts.
Water	2 gal.

Thoroughly mix the dry poison and the bran in a tub or large box. Pour the molasses into the water, then moisten the bran with the sweetened water. It should be moistened until crumbly so the mixture will hold loosely together. The use of furrows to prevent the migration of the worms is also a good thing

4-H CLUB SHOW WILL BE BEST EVENT OF THE YEAR

Will Be Held At Garner On August 20 and 21

The 4-H Club Show to be held at Garner on August 20 and 21 promises to be one of the big events of the year. Club members in all parts of Hancock County are making plans to exhibit the results of their club activities at this show. The Garner Commercial Club have their committees busy making arrangements to accomodate the exhibits.

The club boys and girls are busy preparing their exhibits. The girls club work representing 251 members will put on exhibits from each of the 16 clubs. A number of clubs are training demonstration teams and they will compete in the demonstration contest for the county championship The 65 boys in the livestock club work are taking the best possible care of their animals and are getting them into show condition. More than 100 head of livestock will be exhibited.

MILTON SCHAPER PREACHING IN SHELDON DISTRICT

Has Completed Three Year Course At Garrett

Milton Schaper, former Klemme boy, in June completed a three year course at Garrett, on Northwestern University Campus. Mr. Schaper is now serving the charges of Diamond and Good Hope, in the Sheldon district.

In a previous issue of the Times we stated Mr. Schaper was a Moody graduate, but in that we were not correct. Entrance to Garrett requires a college degree, and the Moody Institute does not.

Regarding other members of the Schaper family we are glad to inform our readers that Miss Roxanna Schaper will be the Normal Training and History instructor in the high school at Allen, Nebraska this coming school year.

Homer Schaper is now a Junior in Morningside College, Sioux City.

WESLEY METHODISTS VISITED CHURCH HERE SUNDAY

Came To Hear Their Former Pastor Rev. Whyte, Preach

Rev. and Mrs. H. E. Whyte were agreeably surprised at the Sunday morning service when they saw old friends from Wesley enter the door of the church. And they kept on coming until fifty seven people of Wesley had been seated to hear their former pastor preach.

They brought with them their picnic diner which they enjoyed on the parsonage lawn and all enjoyed a godo visit together.

SHOW HOOVER BIRTHPLACE

Des Moines, Special:

An exact replica of Herbert Hoover's birthplace in West Branch, Ia., has been constructed at the Iowa State Fair grounds in Des Moines as one of the features of the Diamond Jubilee Exposition which will be held here August 21 to 30. The above photograph shows the little cottage as it appears on the fair grounds, embracing all the details of the home at West Branch as it appeared when Hoover was a boy. Even the interior furnishings, the flower beds on the lawn, and the old-fashioned board fence have been carried out with historical accuracy. It will be open to visitors free of charge throughout the period of the fair Mollie Brown Carran, Hoover's school teacher at West Branch will act as official hostess at the cottage and will answer questions concerning the president's boyhood.

Campers Invited.

Des Moines, Special:

More than 100 acres of beautiful wooded ground will be thrown open to the public free of charge during the Diamond Jubilee State Fair here August 21 to 30 as a free public camp ground for the more than 400,000 State Fair visitors expected to attend the big exposition this summer. This camp ground is one of the most beautiful in the United States and is equipped with electric lights, city water service, modern roads, stores, and every possible convenience.

4-H Clubs at Fair.

Des Moines, Special:

More than 2,000 farm boys and girls representing every county in the state will assemble here this month for competition in scores of different departments of the junior state fair—one of the outstanding features of the Diamond Jubilee Iowa State Fair and Exposition opening on August 21.

Every type of work now being carried on by boys and girls on Iowa's farms will be represented in the exhibits, demonstrations and contests here this summer.

EASTERN IOWA IS WONDERFUL SCENE

EDITOR AND FAMILY ENJOY A TRIP TO WISCONSIN

Lots Of Scenery Packed Into Two Day Flying Trip

The Times Editor and family accompanied by Mrs. Jorgenson's father, Mr. T. Davis of Lincoln, Nebraska, left last Thursday morning at 4.20 bound for Spring Green and Plain, Wisconsin to locate the boyhood home of Mr. Davis, which he left as a thirteen year old boy fifty-eight years ago in a covered wagon for eastern Nebraska.

We followed the AYP highway to Charles City, then east thru New Hampton, West Union, Postville, to McGregor where we were delayed an hour waiting for the ferry to take us across the Mississippi river to Prairie Du Chien, Wis.

This route abounds in scenery all the way and takes us through a lot of good farming country and we noted that crops looked fine all the way. The only thing to mar the pleasure of the trip to the river is a very bad detour near McGregor, which is really quite dangerous in places. However, new paving is being laid and the road will soon be open again.

We headed southeast out of Prairie Du Chien, crossing the Wisconsin river at Bridgeport, thence east and we enjoyed a fin edinner at Fennimore, Wis. The next lap of the journey took us to Dodgeville where we headed north and into a very rough, hilly section of Wisconsin. The roads there were steep and winding and full of "S" turns. The scenery there was very much like parts of the Black Hills, except the pines were lacking, and in their place were oak, elms, and other trees Great rock formations protrude from the hills and many formations look like great castles. The scenery along the high ridges is wonderful as one looks down far below into the deep valleys.

At Spring Green Mr. Davis stopped at the bank to inquire of old residents and was informed to see Mr. Tom Hill, whom he easily located. Mr. Hill knew Mr. Davis' father and mother well and other relatives and gave him much information regarding his old home, which was located ten miles further north near Plain, to which place we next journeyed and located an old gentleman by the name of Henry Heiser, who was well acquainted with the country and knew the Davis family when he was a boy.

Mr. Heiser joined us and we drove out to Mr. Davis old home, or what was left of it. In fifty eight years many things can take place. In that time the old log house had been taken down and other buildings removed and a corn filed now grows where the old home used stand. Further down there used to be an old mill pond, dam and mill where Mr. Davis with other boys used to wade and swim, but that also had disappeared and the old creek was nearly dry.

The only land mark remaining was the old school house about 3-4 of a mile away where Mr. Davis went to school. That had changed but little.

Mr. Davis related some of the experiences during his boyhood days. How that oxen were used as very few people even had horses then. And when the Civil War came his father answered the call, was taken a prisoner and later died in the Andersonville prison, starvnig to death, leaving the mother with her six children to care for. He told how that his mother often walked over the hills and valleys ten miles to Spring Green to buy needed articles. She would leave early in the morning and often did not get home until dark. The family then later moved to Nebraska in a covered wagon where other relatives were located.

After spending some time in the vicinity of Mr. Davis' old home and taking pictures, we again turned around and headed south, bound for Galena and Hanover, Ill. We had supper at Galena, the home of General Grant, and then drove on to Hanover to spend the night and to visit relatives.

We again left Hanover Friday morning about 10:30 and followed the AYP highway, crossing the river at Dubuque. We had paving all the way to Garner, except about 12 miles, which was gravel. We arrived home at 7:00 p. m..

Although we were gone but two days, we covered a lot of territory and saw a lot of nice scenery, as most of the drive was through hilly and wooded country, over gravel, pavement and crushed rock roads.

Crops were good all through the section we traveled. In the extreme hilly country fields are of course very small and more dairying is done.

Northern Iowa and this section looks best of all.

AERIAL ACT WILL BE FEATURE ON BAYSIDE PROGRAM

Comedy Clown Act Has Also Been Engaged For Sunday

Two feature vaudeville acts will be presented on the out door stage at Bayside Park, Clear Lake, Iowa, next Sunday, August 11. Peggy Klein will entertain with an aerial butterfly and swinging ladder offering. Her stage custumes are very charming and her act is highly pleasing.

Charles, the police Clown, also known as the Irish Cop, will entertain the children and grown-ups with a 100 per cent comedy act. He will appear with a clown make-up and dressed like a husky policeman. The children will be fond of this Irish Cop. Everything he does will make the kiddies laugh and he will delight the older ones too.

These are two real circus and vaudeville attractions. These outdoor stage acts will appear at 2:00 p. m. and 9:30 p. m.

Water Carnival To Be Held

A Water Carnival and Bathing Beauty Contest will be held at Clear Lake and Bayside Park Friday and Saturday, Aug. 23 and 24. A $185 radio will be given to the most beautiful bathing beauty on each day of the celebration. Any girl may enter the bathing beauty contest. Complete information may be had by writing the Chamber of Commerce Secretary, Clear Lake.

COOBS FAMILIES HAD REUNION AT NEW HAMPTON

Families From Two Parts Of State Gather For Picnic Dinner

The Coobs families of this vicinity and from eastern Iowa gathered at New Hampton Sunday to enjoy a picnic dinner and a family gathering, or re-union.

Those from Klemme and vicinity who attended were: Benn Coobs and family; Venrer Lewis and family; Wallace Pavey and family and Henry Buseman and family.

Those who came from McGregor were: Mr and Mrs. Herman Coobs, Sr., and son, William; Herman Coobs, Jr., and family; Henry Coobs and family.

This was the first time that the entire family has been together since the children were married. It was a happy affair and all had a fine time.

No doubt they will make it an annual affair hereafter.

Real Estate Transfers

Clayton A Burgardt to Independent School District of Britt; Wty Deed date 6-3-29, $56.25, undiv 1-8 interest in lots 4, 5, 6 and 7 block 1, lot s1 and 2 Chas. Millers add to Britt, Iowa.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German service.

11:00 a. m. Sunday school.

8:00 p. m. Tuesday, young peoples Bible Class.

Miss Irma Olm, Girls Matron of the Indian School at Millsville, Wis. will speak about the work our Church is doing for the Indians.

DAY WILL INSTRUCT SCOUTS SIGNALING

KLEMME SCOUTS ENJOY SWIM HIKE AT CLEAR LAKE

Over Half Of Troop Said Swim Hike Was Great Stuff

Klemme Boy Scouts and several adult Leaders enjoyed a new kind of Scout meeting Monday night instead of the regular meeting when they drove to Camp Roosevelt and enjoyed an hour's swim and instruction period at the Scout Camp beach on the south shore of Clear Lake.

Local Scouts are making good progress in swimming and several need only more practice to complete the first class test in swimming. that of being able to swim 50 yards.

Following the swimming period the boys enjoyed a paper bag lunch which they had brought with them.

It is planned have more "swimming hikes" before the summer is over in order that more Scouts may be able to pass their tests in the water. Parents and friends are invited to accompany the Scouts on these hikes and to enjoy the fine beach at the Scout Camp. It is hoped that all Troop 56 Scouts will be able to attend the next hike.

Signalling Instruction Next

First Class Signalling instruction under the direction of Troop Committeeman J. N. Day will be the feature on the program at Scout Headquarters here next Monday evening.

Scouts who are ready for tests will have an opportunity to point out stars for the Scoutmaster as a part of their nature study requirements. Identification and classification of ten trees, their leaves and bark is also required in Nature Study as a First Class Test.

As many out door tests as possible will be completed before winter sets in. It is planned to work up leather bil folds, key purses, etc as Christmas gifts during the late fall months.

Troop 56 has advanced the past few months and now has two First Class Scouts, the balance being Second Class Scouts and several well advanced toward First Class. There are no Tenderfoot Scouts in Troop 56 at the present time, although a number of boys are anxiously awaiting their twelfth birthda syo they can become Scouts.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning service in Klemme at 10:00 o'clock. Sunday school at 11:00 o'clock.

Morning worship at Liberty at 11:15 o'clock. Sunday school at 10:15 o'clock.

Choir practice at the Klemme church Friday evening at 8:00 o'clock.

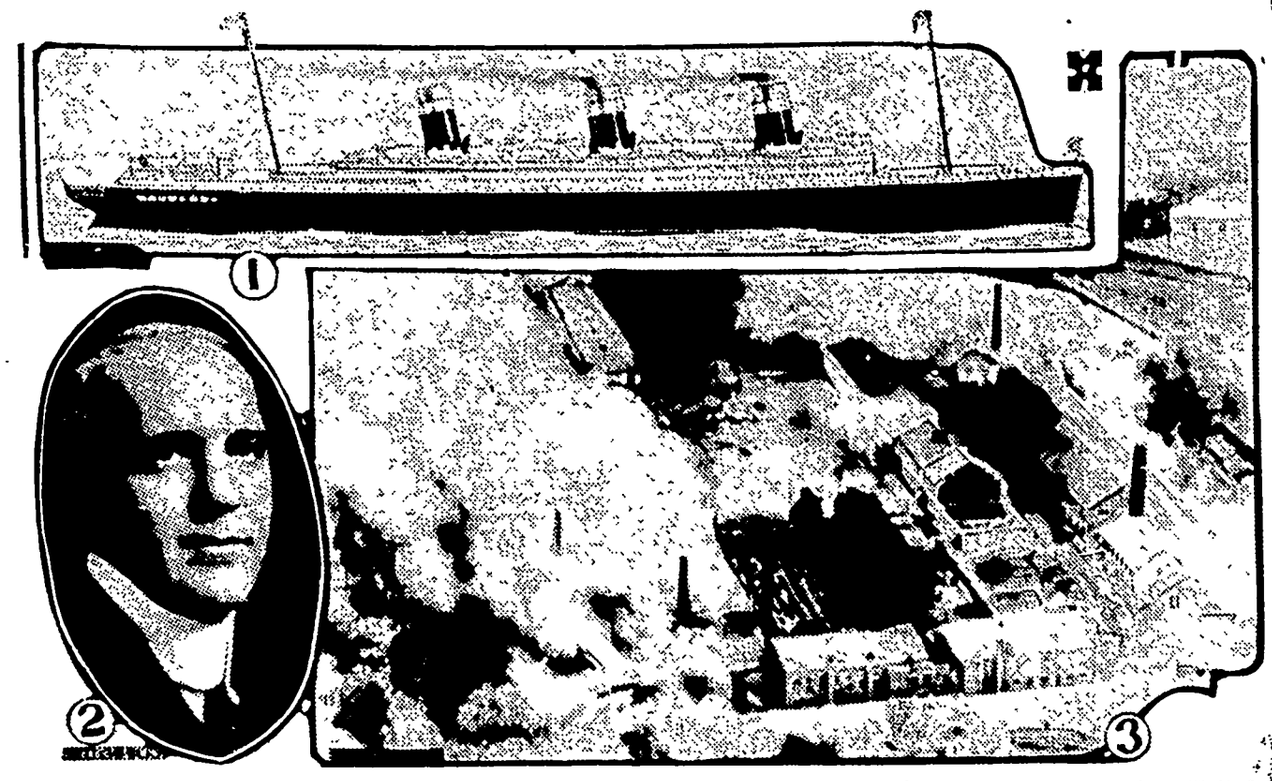
A special out door meeting for the Epworth League is being planned for next Sunday evening, if the weather permits. Members will receive further notice concerning details later.

MOTHER OF MRS. D. D. ROSS DIED AT GARNER

Funeral Services Were Held Wednesday Afternoon In Garner

Mrs. Elizabeth Murdie passed away at the home of her daughter, Mrs. Dave Ross in Garner. Funeral services were held Wednesday afternoon, after which the remains were taken to Manhattan, Ills., for burial.

The Ladies Aid Society of the M. E. Church will meet next Friday, Aug. 16 at 2:00 p. m. All members are asked to come prepared to answer roll call with a household hint. Mrs. A. D. Gimer and Mrs. Frank Kluckhohn are hostesses.



1.—Design for two sister ships of the Leviathan to be built next year in American shipyards for the United States lines. 2.—Representative Franklin Fort of New Jersey who may be appointed to the senate when Senator Edge is made ambassador to France. 3.—Air view of Auburn prison, New York state, during the uprising of convicts and the fire they started.

NEWS REVIEW OF CURRENT EVENTS

Farmers of United States at Last Get Together for Mutual Benefit.

By EDWARD W. PICKARD

FOR the first time in history the farmers of all sections of the United States are getting together to work for their mutual benefit. Wheat growers, corn growers, cotton planters and live stock raisers, numbering more than two millions, decided at the meeting of the American Institute of Co-operatives in Baton Rouge to create a national chamber of agricultural co-operatives with headquarters in Washington. This organization, which is expected to be the strongest of its kind in the world, will be ready to function almost immediately and its officers will represent the nation's farmers before congressional committees and in all ways act for them in public matters.

This action follows closely on the formation of a committee of leaders of farmer co-operative groups for the purpose of organizing the producer-owned $20,000,000 grain marketing corporation proposed by the new federal farm board. The members of this committee are now conferring with their respective groups and conducting a drive for membership. They meet again in Chicago August 26 and soon thereafter will be in Washington preparing for incorporation of the big concern. William H. Settle, head of the Indiana Farm Bureau federation, is chairman of the committee. He was prominent in the "farmers' revolt" at the Republican national convention last summer. The new corporation was officially named the Farmers' National Grain corporation.

To the meeting in Baton Rouge, Chairman Legge of the federal farm board set forth his views of the problem of rehabilitating American agriculture, and his outline of the board's program was approved by the other members. Mr. Legge made it plain that the only farmers' organizations which will receive financial help from the board are those that are efficiently organized and properly administered within the provisions of the law. The kind of co-operative organization he has in mind is one that will exert a real influence as a stabilizing agency in the marketing of the products of the more than 6,000,000 farms, an organization that will exert, as he put it, "at least a measurable degree of control" over the flow of those products to the markets and an agency virtually in control of the condition under which the products of American farmers are sold. The board, he emphasized, never will buy or sell any commodity.

President Hoover completed the membership of the farm board by naming Samuel R. McKelvie, former governor of Nebraska, to represent the wheat growers. Mr. McKelvie accepted the appointment with the understanding that he may withdraw at the end of one year. He is the owner of the Nebraska Farmer and was indorsed by a large number of farm organizations, and Mr. Hoover chose him for the place after the different wheat groups were unable to unite upon a recommendation.

JOHN W. GARRETT of Baltimore, banker and former diplomat, has been appointed American ambassador to Italy to succeed Henry P. Fletcher who is retiring from the service and will leave Rome very soon. Mr. Garrett has had nearly twenty years of service in the diplomatic corps and other foreign service. He was first secretary of the American embassy at Rome from 1908 to 1911 and also has served as minister to the Netherlands, Venezuela and the Argentine and was secretary general of the Washington arms conference.

PRESIDENT HOOVER'S decision to suspend work on the three cruisers that were to be laid down in navy yards next autumn aroused a lot of adverse criticism as well as praise. One of those who expressed his disapproval was Paul V. McNutt, national commander of the American Legion. In a reply to Mr. McNutt the President says he is relying on the agreement between the United States and Great Britain looking to complete equality in the strength of their navies. He describes the agreement as "the first step of the renewed consideration of reduction of the excessive world naval armament" and holds it to be "a forward step of the first importance," reiterating his position that defense is all that the United States is seeking.

DRASTIC economies in the American military establishment are contemplated by President Hoover, and he has ordered a general staff survey of army expenditures. He expects a report with recommendations in time for the submission of an economy budget at the next regular session of congress. Branches of the military establishment, especially the cavalry and the coast artillery, were alarmed and at once began marshaling arguments in their behalf. Outside the army the opinion was that the President's move was a threat especially against the many "political" posts that are of no military value and are maintained at great expense through the influence of congressmen and politicians of the districts or states in which they are located.

Senator Bingham of Connecticut said: "At least 50 of the garrisons which the taxpayers are now called upon to maintain are not needed for national defense and have no military value. The army is considering the establishment of three large divisions East, South and Far West—and the limitation of army posts to a few, well planned and chosen because of the proximity to divisional headquarters as well as their availability for training large units of the service together, would be not only economy but sound military practice.

"Of course the infantry school at Fort Benning, Ga., the general service schools at Fort Leavenworth and similar projects should be maintained, but there are forts and posts all over the country that should be abandoned, the property on which they are located should be sold, and the proceeds applied elsewhere in the service."

LOSS of the Lamport and Holt liner Vestris with 112 lives last November off the American coast was due in part to overloading, according to the findings of the British board of trade which conducted a long and thorough inquiry. Other contributory causes were the "tender" condition of the ship; her insufficient margin of stability and reserve of buoyancy; the heavy weather encountered, and water finding its way into the lower bunkers. Some of the company's agents in New York and several of the ship's officers came in for varying degrees of blame.

REPRESENTATIVES of Soviet Russia and China began negotiations for settlement of the Manchurian quarrel, meeting on a train placed on the border line near Manchouli. The Chinese emissaries were said to have indicated a willingness to restore the Chinese Eastern railway to its "status quo ante" provided that Russia furnishes guarantees to refrain from Communist propaganda in Manchuria.

Continued unrest along the Manchurian border, blamed largely on the "White" Russians, led the Soviet government to order out all the Siberian reserves up to the age of twenty-seven years. They were assembled at Khavaraovsk, Vladivostok and Chita.

HALF a million cotton mill workers of England went on strike rather than accept a 12½ per cent reduction of wages proposed by the employers. Consequently practically all the mills of the Lancashire region were closed, to the consternation of the nation. The operators refused to yield and the weavers and spinners would not listen to talk of negotiations, so it seemed the dispute was likely to be long drawn out. The minister of labor, who is Miss Margaret Bondfield, says there is no action her department can helpfully take at present.

CHILE and Peru have signed a protocol complementary to the general treaty concerning Tacna and Arica. It states emphatically that no part of the territory covered in the general treaty shall be ceded to a third power, which seems to put an end to Bolivia's strong hopes of gaining an outlet to the Pacific ocean.

SUDDEN Communist uprisings in two sections of Colombia were put down after bloody battles with the soldiers and police. The casualties were at least a dozen killed and many hurt. Thursday, August 1, was named "anti-imperialism day" by the Communists, and they made demonstrations in many of the large cities of Europe, though their activities were curbed by the authorities everywhere except in the Soviet republics.

DALE JACKSON and Forest O'Brine, flying the Curtiss-Robertson monoplane St. Louis Robin above St. Louis, Mo., established a record for sustained flight that may stand for a long time. They remained in the air 420 hours 21 minutes and 30 seconds, and then landed not because they or their engine was worn out, but in order to attend the funeral of a friend, another aviator, who was killed in a crash. They made 77 contacts with another plane, 47 of which were for refueling, and they flew approximately 25,200 miles, or about the distance around the world at the equator. The two pilots earned more than $42,500 by their exploit. The flight was especially a triumph for the motor, a six-cylinder air-cooled radial type engine designed by Arthur Nutt. After being feted in St. Louis, Jackson and O'Brine started on a tour of the country in their record-breaking plane, following about the same route taken by Col. Charles A. Lindbergh two years ago.

An endurance flight started at Minneapolis ended in the crashing of the plane and the death of the pilots, Owen Haughland and Capt. Preston L. Crichton. They had been up 154 hours. Lieut. Harold Bromley, intending a nonstop flight from Tacoma, Wash., to Tokyo, came to grief as his monoplane slid down the runway and turned over on its right wing and was smashed. He promised to make another start as soon as he could get another plane. Roger Q. Williams and Lewis Yancey, the New York-to-Rome flyers, after being entertained in New York, flew to Chicago, Yancey's home city, where they were given a great reception and banquet under the auspices of the Chicago Press club.

SEVENTEEN hundred convicts in Auburn prison, New York state, made a desperate attempt to gain their freedom, battling the guards and police for five hours and burning down some of the prison buildings. They seized the arsenal and armed themselves with rifles, pistols and four machine guns, and the ensuing fight was sanguinary. Two convicts were killed and four guards were wounded. Four of the prisoners made their escape in the confusion. This affair, coming only six days after the futile uprising of the inmates of Clinton prison, Dannemora, aroused the state authorities, and Governor Roosevelt called for a thorough investigation. The New York state prisons are admittedly greatly overcrowded, and more outbreaks are feared.

M. POINCARE, who resigned as premier of France immediately after the parliament had ratified the war debt settlements with the United States and Great Britain, has been succeeded by Aristide Briand, who retains his portfolio of foreign minister, and who has made almost no changes in the cabinet. Briand's first task was to obtain a vote of confidence for the government's negotiations at the international conference to put in operation the Young reparations plan, which meeting was scheduled for August 6 in The Hague. The vote was given Briand by a big majority. It was announced in London that Prime Minister MacDonald would not attend the conference and that Great Britain would be represented by Foreign Minister Henderson, Chancellor of the Exchequer Snowden and William Graham, president of the board of trade. MacDonald and his government have declared their opposition to the Young plan as it now stands, feeling that it involves too much sacrifice of British interests for the benefit of France.

Silo Profit Is in the Feeding

Dairy Farms and Live Stock Feeders Declare Silage Is Essential.

The proof of the silo profit is in the feeding. Wisconsin has proved the economy of this. If the value of silage in the live stock ration was known all over this land as well as it is in this state, where there is one silo to every 30 head of cattle, there would be 2,000,000 silos built in America in the next three years. All the evidence is in favor of this feed as a profit-bringing, milk-making and beef-building ration.

Corn silage can be grown and put into the silo for less than $6 a ton. Some reports set the cost figures as low as $5 a ton. This is crediting the corn as being worth about 94 cents a bushel.

Value of Silage.

Experts in different states claim that when butterfat is selling for 45 cents a pound, corn silage will bring the dairy farmer $10 per ton, and when fat steers are selling from $9 to $10 per hundredweight, corn silage is worth from $7 to $8 per ton. The owner of a silo with a fair yield of crop can receive a value from his corn made into silage of $70 to $80 an acre when fed to steers and $100 when fed to good dairy cows.

It has been proved that, with dairy animals, the feeding of silage saves from 8 to 15 cents on the cost of producing a pound of butter, and from 30 to 50 cents on producing 100 pounds of milk. For beef production the saving produced by silage is about $1 per 100 pounds of gain.

It is true that the horse is decreasing in numbers, but the cattle census must be kept up and will be kept up by the steady demand for milk and meat. It is probable that the values placed upon silage as given above will be considered too low before next spring.

Make Study of Silo.

It is just the time to make a study of their value and economy, watching the feeding through the winter and letting the facts stand as proof that thousands more should be set to work making money for stockmen. Experiment stations, dairy farms and live stock feeders all over the United States have proved that the silo is of highest importance in the economic production of stock and stock products. The half-million progressive stock farmers who are using silos find them indispensable. For many years we have urged the trial of the silo as a money maker.—Wisconsin Agriculturist.

Grafting Relationships Not Clearly Explained

(Prepared by the United States Department of Agriculture.)

One of the facts of plant life on which scientists would like to have more complete information deals with the relationship of plants within which grafting may be done. As Guy E. Yerkes, of the United States Department of Agriculture, remarked recently, the limits of this botanical relationship are not clearly defined. "Varieties within the same species," he said, "may be expected to unite; for example, all varieties of European pear will grow on French pear stock. Often different species within the same genus will make satisfactory unions. As an example, most botanical species of apple (Malus) will grow on each other. On the other hand, cherry will not unite with peach, although both are placed by many botanists in the genus Prunus. In many cases, plants more distantly related may be grafted and will grow, as hawthorn upon apple and firethorn upon mountain ash. The citrus fruits are related closely enough so that it is by no means uncommon to see a single stock, which has been grafted, producing different fruits on different limbs, lemons on one, oranges on another, and perhaps grapefruit and tangerines as well."

Fall Plowing Will Make Enlarged Crop of Oats

On average land oats will usually make a larger crop when the ground is plowed shallow in the fall. One is usually less likely to get a good stand of clover when it is sown in oats on fall or spring plowed ground unless the land has been disked and rolled to get it into a firm seedbed, than when the land was only disked for oats. The surface of the plowed ground will dry out deeper than on disked land and the clover seed is not so likely to have as good moisture conditions for germinating on plowed ground as on disked ground. A good rolling will overcome this tendency to a large extent however.

Plant Food Will Make Crops More Pleasing

On soils that are full of plant food, the crops will grow quickly and more succulent. The individual plants will grow larger and freer from fiber and thus be much more desirable for table use. This applies more particularly to salad crops like cabbage, celery, spinach, etc. The very best kind of root crops will be produced on such soils. The radishes thus grown will be less peppery and free from fiber—the kind that fairly snap when you bite one of them. Beets and carrots, too, will be tender because they have made a quick growth.

NEW PORTABLE AUTOMOBILE SPRAY DEVICE

A demonstration of the new portable auto-spray device which has been introduced in Germany. Whether in town or country, the motorist needs only a pail of water, and this hand-spray to clean up his car.

LAXITY BLAMED FOR RACE DEATHS

Accident to Ray Keech Was Due to Hole in Wooden Bowl at Altoona.

Criticism of the laxity under which automobile speed contests are conducted throughout the country was voiced in Washington by the American Motorists' association, in co-operation with the Automobile Club of Illinois.

The charge was made by Si Mayer, president of the Automobile Club of Illinois and vice president of the A. M. A., that the failure on the part of authorities supervising the races to permit only experienced drivers to participate on well-conditioned tracks has resulted in avoidable loss of life to both drivers and spectators.

The recent death of Ray Keech at Altoona is the latest example of this laxness, writes Walter A. Bermingham in the Chicago Evening Post. Following his death it was officially announced that the accident was due to a hole in the wooden bowl, which it was stated would have required less than a carload of lumber to repair.

State authorities should put a stop to these avoidable race-track killings, Vice President Mayer told the executive board of the association, which approved his charge of laxness by the adoption of a resolution deploring the sacrifice of life and placing the blame primarily on the organization having supervision of the races.

"Any auto organization, whose major function is public safety and which undertakes to sponsor automobile races," said Mayer, "cannot escape responsibility for the tragic consequences of inexpert driving, as regards personnel, or the physical condition of tracks over which the races are run.

"Automobile racing is sufficiently hazardous without imperfect track conditions, and we believe public opinion will no longer tolerate contests under such conditions, no matter under whose auspices and sanction the races are run.

"Automobile racing, under the present system, is conducted primarily for profit and serves no useful purpose.

"In the early years of the automobile, races were of value in the development of automotive science and mechanism. At the present time, however, each automobile manufacturer makes his own tests on his own proving ground. Furthermore, the development of an automobile that will travel 200 miles an hour is of no practical value to automotive science, for such speed would always be a menace on the public highway."

AUTOMOBILE HINTS

Wash the wheels last when cleaning the car.

* * *

A thin coating of grease is best to seal a cylinder head gasket.

* * *

And in particular, familiarity with the sense of going fast breeds contempt of chances.

* * *

Western judge rules that pedestrians have the right of way, so now they can go ahead and run over the automobiles.

* * *

Auto trucks compete with camels on the new highways of Persia. Rates by camel are lower, but trucks are so much faster that shippers prefer them at higher rates.

* * *

If you are half way past the left-hand road into which you intended turning, better pull over to the right, and slow down and back up instead of suddenly swinging around.

* * *

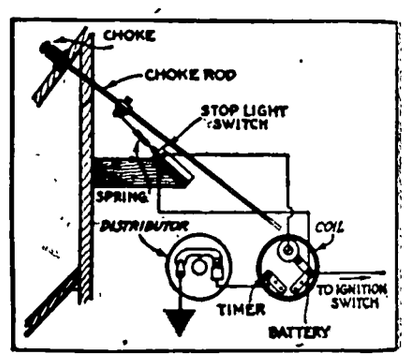
A bill before the legislature of South Carolina would provide that the penalty for automobile thieves be not a fine but sentences ranging from five years in prison for the first offense to life for the fourth offense.

New Arrangement Makes Automobile Starting Easy

Easy starting for the automobile motor depends on the proper mixture of gasoline and air and on a strong, hot spark, assuming, of course, that the mechanical condition of the motor is good.

By pulling out the choke knob you can be sure that there will be plenty of gasoline in the mixture, and by using the arrangement shown in the illustration you can get a stronger and hotter spark than normal, even though the storage battery is not fully charged.

A fixed resistance coil is connected in the circuit in series with the spark coil to limit the amount of current that will flow in the coil and prevent it from burning out if you accidentally leave the ignition switch turned on



Easy starting is insured by connecting a stop light switch with the choke button so that a resistance coil on the spark coil is short-circuited when the choke is out, giving a strong, hot spark.

when the motor is not running. The idea is to connect a stop light switch as shown so that when the plunger of the switch is pulled out the resistance coil will be short-circuited. The plunger of the stop light switch is connected by means of a piece of wire and a spring to the choke rode, so that when you pull out the choke the resistance coil will be short-circuited and an abnormally large amount of current will flow through the spark coil, producing a fine spark even with the starting motor drawing a large amount of current from the battery. Pushing in the choke rod again after the motor starts restores the circuit to normal running condition.—Popular Science Monthly.

MOTOR QUIZ

How Many Can You Answer?

Q.—How tight should the fan belt be kept, and why?

Ans.—Just tight enough to prevent slipping. Putting the belt under too great tension shortens its life and may cause it to break.

Q.—What was the total amount of gasoline tax collected in the United States during 1928, and how many gallons of gasoline were consumed?

Ans.—More than $305,233,000. 10,178,344,700 gallons of gasoline.

Q.—How often should breaker points and spark plug gaps be checked? Does it take long for such an inspection?

Ans.—Every one thousand miles. This is very simple and requires but a few minutes. Breaker points should be filed square and clean and gapped according to recommendations in instruction manual. Plug gaps should also be adjusted according to recommendations.

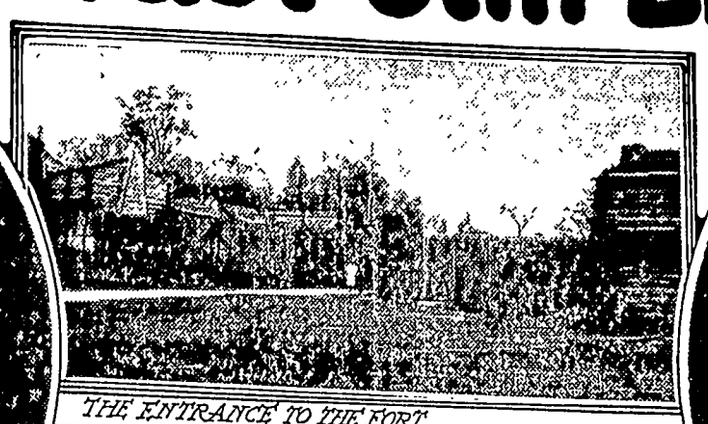
Fatalities Per Car Is Declining Materially

Pointing out that the number of motor fatalities per 100,000 registration in the United States has declined materially in the past ten years, Harry R. Cobleigh of the National Automobile Chamber of Commerce advanced the view that the modern motor car was built with maximum safety, speaking before the traffic safety instruction course of the Newark safety council, recently.

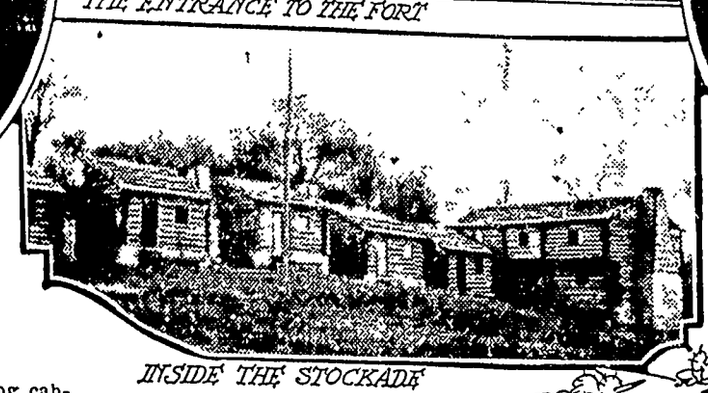
While competence of the driver is always an essential, the speaker noted four-wheel brakes, more responsive motors and balloon tires as among the features of modern automobile construction which make for safety.

Harrodsburg—Where a Historic Past Still Lives

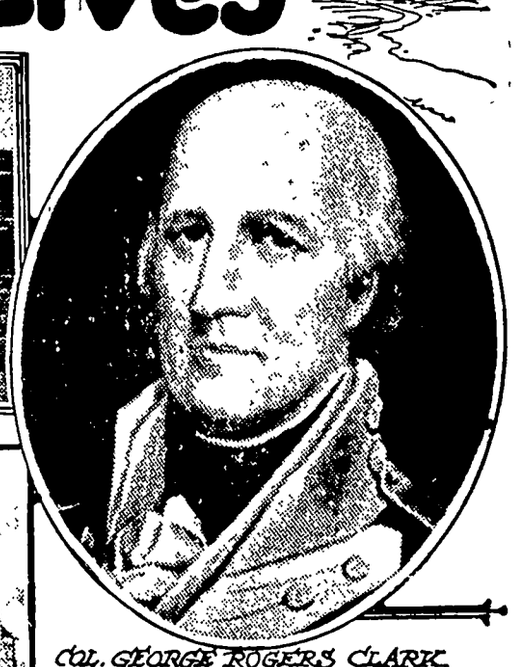
LIEUTENANT-GOVERNOR HENRY HAMILTON



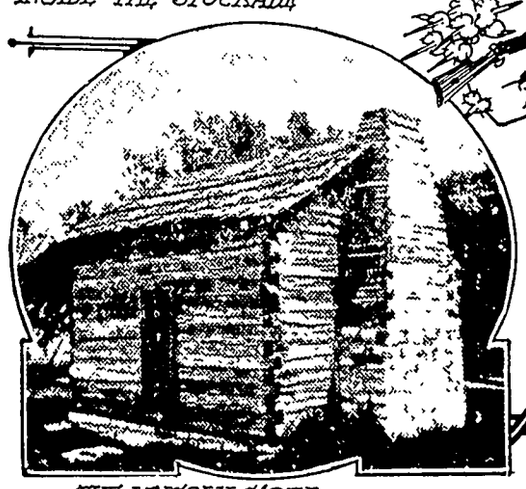
THE ENTRANCE TO THE FORT



INSIDE THE STOCKADE



COL. GEORGE ROGERS CLARK



THE LINCOLN CABIN

DANIEL BOONE

Portraits of Hamilton and Clark from Quaife's "The Capture of Old Vincennes" (courtesy of Bobbs-Merrill Co.). Photographs of the fort and Lincoln cabin by the author.

By ELMO SCOTT WATSON

Imagine a great parallelogram made of log cabins set end to end, their common outside wall being the wall of the fort, and loopholed. At the four corners of the parallelogram the cabins jutted out, with ports in the angle in order to give a flanking fire in case the savages reached the palisade. And then there were huge log gates with watchtowers on either side, where sentries sat day and night scanning the forest line. Within the fort was a big common dotted with forest trees, where such cattle as had been saved browsed on the scanty grass. There had been but the one scrawny horse before our arrival.

And the settlers! How shall I describe them as they crowded around us inside the gates? Some stared at us with sallow faces and eyes brightened by the fever, yet others had the red glow of health. Many of the men wore rough beards, unkempt, and yellow, weathern-worn hunting shirts, often stained with blood. The barefooted women wore sunbonnets and loose homespun gowns, some of linen made from nettles while the children swarmed here and there and everywhere in any costume that chance had given them. All seemingly talked at once, they plied us with question after question of the trace, the Watauga settlements, the news in the Carolinas, and how the war went. . . .

Of course, the love of the frontier was in the grain of these men. But what did they come back to? Day after day would the sun rise over the forest and beat down upon the little enclosure in which we were penned. The row of cabins leaning against the stockade marked the boundaries of our diminutive world. Beyond them, invisible, lurked a relentless foe. Within, the greater souls alone were calm, and a man's worth was set down to a hair's breadth. Some were always to be found squatting on their doorsteps cursing the hour which had seen them depart for this land; some wrestled and fought on the common, for a fist fight with a fair field and no favor was a favorite amusement of the backwoodsmen. . . .

So the summer wore away, while we lived from hand to mouth on such scanty fare as the two of them shot and what we could venture to gather in the unkempt fields near the gate. A winter of famine lurked ahead and men were goaded near to madness at the thought of clearings made and corn planted in the spring within reach of their hands, as it were, and they might not harvest it.

SUCH is the picture of an American scene 150 years ago which Winston Churchill painted in his book, "The Crossing." For if you remember that great novel of a quarter of a century ago, you will recall that Churchill was writing of those Americans who, in the words of Arthur Guiterman, the poet,

. . . Built their lonely stations and the logs were cut and hewn
By the breed of Simon Kenton and the blood of Daniel Boone.
They stood behind the loopholes in their rugged palisades
Through hot and weary sieges, attacks and ambuscades,
They shot and made their sallies till the Shawnees broke and fled,
While the women charged the rifles and the women shaped the lead,
The women nursed the wounded and the women watched by night,
The women brought the water through the peril of the fight.
The mothers never faltered; and the sons that then were small
Grew as Hunters of Kentucky and were strong and brave and tall.

And this "great parallelogram made of log cabins set end to end" was the cradle of Kentucky, the first English settlement west of the Alleghanies, the place which has been aptly called the "Hamestown of the West"—historic Harrodsburg. Although the stirring events which took place within and around its walls are now a century and a half in the past, that historic past still lives. Go to Harrodsburg today and you will rub your eyes in astonishment. For there you will see "these logs and cabins, broiling in the midsummer sun," much as Churchill has described them, and as you walk through the huge log gates," which stand invitingly open, it is easy to forget that you are living in the Twentieth century America of radios and automobiles and airplanes and it is easy to believe that some magic has carried you back to that far-off time when the nation was in the making.

For on the edge of the modern city of Harrodsburg, Ky., is a park which has been presented to the state by the citizens of Harrodsburg as a memorial to her pioneers, and dominating all of the other reminders of the past is a heavily-stockaded enclosure, a replica of Harrod's fort. As you stroll across the grassy common inside its walls, it is not difficult to people those cabins around with you with the pioneers who once lived and loved, labored and fought and (some of them) died there.

Over in that doorway stands James Harrod, "tall, massive, strong, active, dignified, one of the handsomest men of his time." Look through the doorway of that cabin and there you might see a young man, tall, square-built, sun-reddened, sandy of hair, his piercing blue eyes scanning intently the papers which litter the hand-hewn table before which he sits. It is George Rogers Clark planning his conquest of the British forts in the Illinois country. From another cabin comes the sound of voices in loud dispute. There is an angry note in the deep, coarse voice of a short, thick-set man. For Hugh McGary is a hot-tempered man, a brave man but a rash and hasty man as the story of the disastrous battle of Blue Licks testifies. Equally brave are Joseph Bowman, John Floyd, John Todd and Benjamin Logan, but they cannot persuade Hugh McGary. And then speaks up the quiet voice of another, around whose broad mouth there is always the trace of a smile and in whose blue eyes there glints always a kindly but determined look. And all of them listen, for this man is Daniel Boone.

But not all of the imaginary inhabitants of Harrod's Fort which you might see are fighting men and generals and empire builders. From one of the cabins comes the hum of young voices and as you peep through the window you see the homespun-clad form of Mrs. William Coomes, around whom are gathered a group of youngsters learning their letters from paddles, crude reproductions of the old English hornhooks of Queen Elizabeth's time. For this is the first school west of the Alleghanies. But before some stupid or mischievous child learns that these paddles have another use at the hands of Mistress Coomes, let us investigate the steady hum which comes from another cabin. For there sits Anne McGinty at the spinning wheel which she has brought with her over the long mountain trail and she is busy spinning the thread of combination buffalo wool and lint from wild nettles. Back of her stands the loom which she has resigned for weaving the coarse but warm cloth which so many of the pioneers of Harrod's Station are wearing.

"Anne also experimented with nuts and barks for dyeing her goods, for, having an artistic eye, she was not satisfied with the drab tones of the natural colors," one of the charming women of Harrodsburg, who act as guides through the fort, will tell you. "The inner bark of white walnut produced dull yellows; black walnut, dark browns; indigo, blues; madder, dingy reds; oak, purple; cedar berries, dove or lead color. With these pretty colors the women made bright dresses of the linsey-woolsey, and the woman who could originate the most beautiful combination of colors or designs, the most perfect 'broken plaids,' was a woman of note. Anne was rarely skillful and full of energy and so soon as the Indians had scalped a husband, she selected at will from the waiting list before her."

Little wonder that the citizens of the Harrodsburg of today have taken pains to recreate the atmosphere of the past and to take pride in the history of their city. For they have undisputed claim to the following "historic firsts." The first white settlement of Kentucky, 1774. The first white child born in Kentucky. The first summer resort in Kentucky. The first court for Kentucky county. The first school in Kentucky. The first sermon preached in Kentucky. The first Presbyterian church organized in Kentucky. The first representative from Kentucky in the Continental congress. The first election in Kentucky, sending George Rogers Clark and Gabriel Jones to the Virginia legislature. The first Sunday school organized in Kentucky. The first spinning wheel for making linsey. The first grist mill driven by water (near Harrodsburg). The first race course in Kentucky. The first manufacturing of pottery, fabrics, plows, etc.

At the intersection of two of the principal streets in Harrodsburg stands a granite boulder with a bronze tablet bearing this inscription, "Erected by the Woman's Club of Harrodsburg honoring the Mother Town of Kentucky, founded June 16, 1774, and remembering the first mothers of the west to enter the wilderness: Mrs. Daniel Boone, Mrs. Richard Hogan, Mrs. Hugh McGary, Mrs. Thomas Denton. A tribute from the womanhood of the present to the womanhood of the past, June 16, 1926." Although that simple inscription suggests the glory of Harrodsburg's historic past, it is not until one visits the pioneer memorial state park, previously referred to, that the past can be visualized. For besides the replica of the fort, there one finds a monument erected by the same Womans' club to that "Washington of the West" —George Rogers Clark. Nearly, too, is the pioneer cemetery, Old Fort Hill cemetery it is called, in which lie buried more than 500 of the pioneers of that region. In front of the fort stands another reminder of the past, a log cabin, which has a compelling interest for all visitors. For it is the log cabin in which Nancy Hanks lived when a girl and in which she was married to Thomas Lincoln by Rev. Jesse Head of Harrodsburg, a Methodist circuit rider. In this cabin, which stood originally on the Lincoln farm in Washington county but which was moved to the Harrodsburg park several years ago, Thomas Lincoln and his bride lived for two or three years before moving to the farm near Hodgenville where on February 12, 1809, this pioneer mother gave birth to the son who was destined to become one of the great men of all time—Abraham Lincoln.

Harrodsburg gets its right to the title of "The Mother Town' from the fact that on June 16, 1774, a party of settlers led by Col. James Harrod, pitched their camp beside a big spring on its site and proceeded to lay off a town there. They assigned one acre in-lots on each side of the street running east and west and ten acre outlots to each of the inhabitants. They then proceeded to build four or five cabins on their in-lots and drew lots for cabins scattered over a wide territory which were called "lottery cabins." Soon after their arrival they were joined by Isaac Hite, a surveyor, and another party of men. While they were busy planning the town, Daniel Boone and Michael Stoner, messengers from Lord Dunmore, who had come 800 miles in 62 days to warn the venturesome pioneers in Kentucky that the Indians were on the warpath, arrived. While there Boone became interested in their plans and was given a lot in the new town, adjoining that of Evan Hinton. A double log cabin was built to serve both Boone and Hinton and stood there until it was burned by the Indians in 1777. Thus it will be seen Boone had a hand in settling Harrodsburg before he did the town which bore his name. The settlers at Harrodsburg remained there until July, then, as a result of the warning brought by Boone and Stoner, returned to take part in the Dunmore war and fought in that historic engagement, the battle of Point Pleasant.

On March 15, 1775, Harrod and his settlers returned to make their permanent settlement at Harrodsburg (since Boone began his fort at Boonesborough, April 1, 1775, Harrodsburg has a priority of more than two weeks over Boonesborough as a permanent settlement). By September 8 the wives and families of the Harrodsburg settlers had arrived and, finding the original fort inadequate and scarcely safe as a defense from the Indian attacks which were sure to come, a second and larger one was built on old Fort Hill.

"Within its narrow confines that stockaded stronghold contained all the elements that have made Kentucky famous—courage and kindliness which distinguished such leaders as Boone and Harrod and Logan; religion as practiced by Rev. John Lythe and Squire Boone, who came with Bible in one hand an ax in the other; culture and statesmanship as exemplified in John Todd; superb generalship, for there George Rogers Clark planned his conquest of the Northwest Territory." So reads a descriptive pamphlet of the fort.

"Situated on the Wilderness Road, it was conveniently reached and provided a refuge for other forters when Indians were on the warpath. Brave pioneers placed their wives and children there for safety when unable to protect them at their own forts. People traveling over this Wilderness Road stopped there and found cordial welcome, except perhaps Gen. Henry Hamilton, called the 'hair buyer,' who rested there when sent in chains to Williamsburg, the captive of George Rogers Clark.

"Black Fish attacked it. Capt. John Haggin, Capt. John Hinkson, Capt. John McClelland, Col. Robert Patterson, General Logan, John Maxwell and scores of others whose names adorn the pages of our pioneer history occupied Harrod's fort at some time during those eventful years. . . . To them all we must accord the honor due for they came as the Revolution began, held their ground, defended Virginia's back door and saved an empire to the nation."

Being Well Informed

SOME man who wanted to be smart said that a well-informed woman was one who was on a party wire. Naturally there are people who listen in, but they are not always women, for curiosity is as much masculine as feminine.

Being well informed seems to be a sort of mania today. Plenty of encyclopedias are on the market and after we have dodged these we are confronted by Ask Me Another Question and things of that sort. Now, it's nice to be well informed about history and current events, but we mustn't kid ourselves into believing that we are clever simply because our brains have stored up a lot of interesting information.

A well-stocked mind of that sort is like an attic. It's better to have a brain like a suitcase, well packed and easy to carry.

The superior person is one who has taste and courage rather than information, or even scientific knowledge. When I say "taste," I mean the ability to select the idea or word that's right to the point. That really constitutes the clever person. We women exercise taste in dress, why should we not do the same thing in conversation? We think of taste in connection with the body, but it can apply as well to the mind.

In a certain sense everybody has what everybody else has. The same earth is underneath all feet, the same sky over all heads. But there are some people who have the ability to pick out the impression they want at the time and that's the thing that does the trick. It makes that person interesting. Such taste in conversation and action means originality. If you do no more than remember what happened or what somebody else said, you are no better off, no wiser than a parrot. It's a better bird which can sing its own song.

But such ability to select impressions and words amounts to little without the courage which enables you to put the idea forth. We are all a bit timid. We have our ideas about things, but we prefer to say what we have heard. That means a string of bromides. We need to be pepped up by courage; then we shall speak right out in meeting and give our opinion.

When it comes to brilliancy in conversation, a clever person is one who is constantly carrying on conversations with himself just to see how they will sound. Then when he or she is in a company, that sort of person is prepared.

All this amounts to saying that a person should have faith in himself.

Be as well informed as you can be. Answer as many questions as you can. But remember that originality is the best bet, and for this you'll need the taste of the mind and the courage of the will.

The Passing of Pin Cushions

I SAW one of those old-fashioned contraptions up in the garret of a farm house not long ago. It was a meek-looking and faded-out mess and punched full of pin-holes. These pin cushions passed out of existence along with a host of other things found peculiar to the female of the species.

The old style woman was of the pin-cushion variety. She just stuck around and took whatever happened to come her way. She was a humble, silent being who had about as much initiative as the average government employee. Her idea was that of watchful waiting, and she did a lot of the latter. She took what she could get and hung on to it until it got rusty.

You don't find many of these female pin cushions nowadays. The flapperish woman is more of a porcupine who throws the pins, or quills. If you wait to take what the men offer, you'll take a lot that you don't want, or nothing at all.

The modern girl never had a chance to be receptive, for she came into the world when life was flying. She knew that she had to reach out after what she wanted whether it was a dance or a job, a spiffy hat or a man.

When it comes to getting a man, it doesn't pay to sit down and look interested. A girl has to exert herself. As a matter of fact, the only way to get the man you want is to take the ice-tongs and drag him into the kitchen. Of course, that doesn't seem dignified, but dignity is only another one of the things that has been stuffed away in the attic of the apartment.

But I'm not thinking of mere men. No, I'm considering the change that has come over us women since the revolving doors began to spin around. We can't afford to sit still and accept the pins which Fate has in store for us.

We've got to be on the job in all matters.

The moment a girl makes a pin cushion of herself, and accepts the opinions of other people, she's on her way to the attic.

Don't say to us, "Use no hooks," for that's just the thing we have to do.

A very large crowd gathered at the home of Mrs. C. A. Arnold Friday evening Aug. 2nd where a Farm Bureau Meeting and entertainment was held.

KLEMME LOCALS

Dr. and Mrs. W. F. Missman and son, Byrnes, and Miss Gertrude Ely left Monday for the Missman cottage at Land O'Lakes, Wisconsin to enjoy a two week's vacation. Dr. L. R. Parsons and family of Belmond are with them.

Mr. and Mrs. Ed. Schaefer and other Klemme relatives are njoying a visit this week from Mr. and Mrs. C. C. Suckow and son Robrt, from Clarinda, Iowa, who came the latter part of hte week; and Mr. E. P. Schaefer and son Kenneth, of Hebron, Ill., who are going through on their way to Portland, Oregon.

Mr. and Mrs. C. G. Waterman and Marian, and Mr and Mrs. R. A. Jorgenson and Buster, drove to Swea City Sunday where they were joined by Mr and Mrs. Tom Mitchell and all drove to Interlaken Park to enjoy a picnic dinner and the afternoon was then spent in Fairmont. Minn.

The new long type stationery at The Times Print Shop at 30 cents and up per box. tc

Mr. and Mrs. C. F. Keraus entertained the following Sunday at the Wood Haven Cottage at Ventura Heights: Mrs. Geo. Kluckhohn, Sadie Turgasen and sons, Donald and Vernon; Mr. and Mrs. Frank Kluckhohn and children; Mrs. Kindon; and Mr. and Mrs. Fred Kluckhohn and Thelma. A fine time was enjoyed by all.

Thanks! Just phone that item of news to The Times. Phone 1-2.

Mr. and Mrs. R. E. Warner, of Cedar Falls and the latter's mother, Mrs. C. T. Marshall from Peoria, Ill, and Mrs. A. Peterson of Minneapolis arrived in Klemme last week Sunday for a visit at the homes of D. A., H. T. and Clyde Marshall. Mr. Warner and sister, Mrs. Peterson, left for Minneapolis Sunday afternoon and Mr Warner will return later for his wife and her mother.

We print your letterheads and envelopes on Hammermill Bond. Call at Times Print Shop for prices. tc

Remember the sun has a sinking spell every evening, but it rises alright again the next morning.

ALL IOWA TO CELEBRATE AT JUBILEE FAIR

Des Moines, Special:

All Iowa is preparing this month for the celebration at Des Moines, August 21 to 30, of the Diamond Jubilee Iowa State Fair and Exposition, commemorating the seventy-fifth anniversary of the founding of America's largest agricultural and livestock fair.

The exposition here this year will be the largest of its kind ever held in the United States, combining the fair proper with eight days of Diamond Jubilee features of almost every description. Cash premiums being offered this year are likewise the largest ever provided by any state fair in America, totalling more than $142,000.

Among the headline exposition features will be: the National Livestock Show of more than 6,000 head of purebred stock; a junior state fair with entries by more than 2,000 farm boys and girls; midwest agricultural and grain show including hundreds of exhibits of prize grains, fruits and farm produce of all kinds; forty acres of farm equipment and machinery; statewide women's exposition occupying two entire buildings; a statewide educational exposition in the new $350,000 Educational Building; second annual Aircraft Show; first annual Radio Show; and midseason Motor Show.

Among the many historical features planned for the Diamond Jubilee celebration are: a mammoth pageant of transportation tracing the history of transportation in Iowa from the days of the ox-cart and prairie schooner down to the present time; a complete harvesting machinery exposition showing every type of harvesting equipment used, beginning with the year 2,000 B. C., continuing to the present date; a replica of Herbert Hoover's birthplace; "The Pageant of the Pioneers", showing the story of the settlement of Iowa; an old-fashioned woodchopping contest of pioneer days; a style revue tracing fashions in clothing from 1854 to the present time; and numerous other events recalling life and customs of early Iowa.

The entertainment program is the most elaborate that has ever been arranged for the fair. It embraces five days of horse racing for $20,000 in purses, two days of championship auto races, August 23 and 30, the golden anniversary revival of Pain's huge fireworks spectacle, "The Last Days of Pompeii", fifteen famous hippodrome attractions, four nights of Society Horse Shows, forty carloads of midway attractions and riding devices of all kinds, State Horseshoe Pitching Tournament, Old Fiddlers' Contest, seven famous bands and orchestras, and a free camp ground comprising over one hundred acres.

The combined State Fair and Diamond Jubilee Exposition are expected to attract the largest attendance ever witnessed at any eight-day fair in the United States, officials said this week.

Wood Choppers Compete.

Des Moines, Special:

An old-fashioned wood-chopping contest, which was one of the popular diversions in Iowa seventy-five years ago, will be resurrected as a feature of the entertainment program at the Diamond Jubilee celebration at the Iowa State Fair here August 21 to 30. The contest is open to wood-choppers throughout the state and will be held in front of the grandstand on one of the main days of the fair. Each chopper will be required to cut three pieces from a ten-inch log.

Art Kudje Is New Secretary Of The Local School Board

Art Kudje as been appointed as Secretary of the local school board to succeed Paul Grange who resigned his position.

Mr. Grange served well as secretary but felt that he could not devote the time which was necessary to fulfill the job, so resigned.

Mr. Kudje wil made an excellent secretary as he has already made a fine record as Town Clerk, keeping records in fine shape at all times.

Policies in the Farmers Mutual protects your property and your automobile. U. G. Smid, Agent. tfc

Graveling (or should we "sanding") of the county road from Klemme will be finished few days. Today the trucks surfaced the road ot within miles or less of town. We heard a lot of complaint on quality of "gravel" being used this road. It is nothing more less than fine sand.

Mrs. R. A. Jorgenson and B were at the John Bock farm nesday to assist Mrs. Bock cook threshers. Mrs. Calvin Grosh Miss Irma Olm and Miss I Bock also assisted her. Ye E and Rev. Grosshuesch drove o time to assist—eating the big ner.

CRAFTY CANNERS HAVE GOOD MEETING AT PEARSON HOME

Planned Menus Of Canned Products nd How To Judge Them

The Crafty Canners of Ell township met with Lydia Pearson Wednesday, July 24th. During the business meeting the girls planned menus made of canned products and discused how to judge them.

The Club plans to be represented at the Club Fair to be held at Garner, August 20 and 21.

The main features of the Club program to be given Frnday evening are:

American Girl's Beauty Products an illustrated talk.

Dr. Vegetable, health play.
Good Cooks, health song.
Katie's New Hat, play.
"Courage," dramatic reading.
Who's the Boss, play.

The Club Girls have worked hard in preparing their program and they will appreciate a good attendance.

Ice cream, cake, sandwiches will be sold to defray club expenses.

IOWA'S HEALTHIEST

Des Moines, Special:

Here is Iowa's healthiest girl, Evelyn Kirkpatrick, of Keokuk County, who was selected from scores of contenders at the Iowa State Fair last summer. Preparations are being made this month for another statewide boys and girls' health contest which will be held in connection with the Diamond Jubilee Fair here August 21 to 30. Every part of the state will be represented in the event, which is a feature of the annual boys and girls' Club Congress at the fair in which over 2,000 farm boys and girls participate.

Concerning Canaries

The biological survey says that the actual origin of the canary as a cage bird is obscure. It seems probable that captive canaries were first secured from the Canary islands, but it is doubtful that this stock has furnished ancestors of all our birds of this kind. The serin finch of middle and southern Europe is so similar that it may often have been captured and accepted as a canary and interbred until all distinguishable differences were lost.

Thoughtful Driver

Policeman on Point Duty—Why didn't you put out your hand when you turned this corner?

Pretty Little Motorist—Well, you see, it's this way. I've just been out with Jack, and he gave me the most thrilling diamond ring—isn't it a beauty?—and I knew only too well that if I put out my hand the headlights of the car behind would shine on the diamond and dazzle the driver, then anything might happen!

Early History of Iowa to Be Re-enacted.

Des Moines, Special:

Colorful scenos from the early history of Iowa will be re-enacted again in Des Moines this summer in the big historical exposition which will be one of the features of the Diamond Jubilee celebration at the Iowa State Fair here August 21 to 30.

Among the scores of historical features headlining the seventy-fifth anniversary celebration will be a huge pageant each afternoon, tracing the history of transportation from pioneer days down to the present time; an exposition showing the history of harvesting in Iowa from the days of the sickle and scythe to the present; old-fashioned games and contests which were popular in the state fifty and seventy-five years ago; a style show featuring costumes worn by famous Iowa people in 1850, 1860, 1870, and 1880; a replica of Herbert Hoover's birthplace at West Branch, furnished with old-fashioned home equipment of fifty years ago. Each day of the fair will feature new historical attractions augmenting the main exposition program. Exhibits of pioneer furnishings, equipment and methods will be located in all parts of the fair grounds. This will be the most important historical exposition tracing Iowa life and events that has ever been assembled in the state, officials declare.

Big Air Show Planned.

Des Moines, Special:

Plans for Iowa's second annual Aircraft Exposition—which will be one of the headline features of the Diamond Jubilee State Fair here August 21 to 30, give promise of one of the most complete and interesting aviation shows thus far held in the midwest, according to the announcement made here this week by Iowa aviation enthusiasts.

The big air show this summer will be held in the open air and will be open to the public without extra charge. All of the country's most famous plane manufacturers have been invited to send their newest models of ships for display at this show, and in addition numerous manufacturers of accessories have been invited to participate. One of the features of the show will be a huge captive balloon of the type used in the recent World War, which will carry passengers continuously each day and night of the fair.

First Radio Show.

Des Moines, Special:

The first statewide radio show ever held in Iowa, embracing exhibits showing the entire history of radio over the period of the last thirty years, and comprising numerous new discoveries in radio science which have not even been placed on the market as yet, will be one of the new features of the Diamond Jubilee Iowa State Fair here August 21 to 30.

FARM STOCK

SEAWEED LATEST HEALTH BUILDER

Fed to Live Stock, It Also Provides Iodine in Milk.

Perhaps there is nothing new under the sun, but the new uses often found for old things are amazing enough to keep as interested in life. For instance, seaweed.

When the hogs owned by J. M. Ballard, of Indiana, won the grand championship at the last International Live-stock show in Chicago, most of the farmers who inquired about their diet were amazed to find that they were being fed kelp, a rough brown-leaf seaweed that grows in profusion off both American coasts.

Prof. Oscar Erf, of the Ohio State university, was the first to experiment with kelp as live stock feed. His success prompted experiments at Purdue university, and later ones at the Iowa and Utah agricultural experiment stations. It was found that the weed contained at least 30 important chemical elements and was especially rich in iodine, in which several regions of the country are deficient, says the Farm Journal. Mixed in a very small proportion with other feed it proved to have decidedly valuable medicinal qualities.

Not only has this addition to animal diet helped the animals, it also is providing a means of supplying iodine to the human population.

"It has been definitely proved that by using kelp in a cow's ration iodine can be fed into the milk. Chicago physicians are recommending this iodized milk to their patients," says the Farm Journal article, adding that similar experiments with eggs are proving successful.

Strangely enough, kelp has been used for many years in the making of iodine itself, although it never occurred to anyone that its health-giving properties could be transmitted directly to human and animal uses. That is, it had never occurred to anyone in the United States until recently. Over in Japan, wise little Orientals have been eating seaweed for ages, and Occidental visitors generally have regarded it as a primitive habit.

Good Market Seen for Right Kind of Colts

For about the first time in 15 years the old-time horse dealer is in his glory now, says W. H. Peters, chief of the division of animal husbandry of the University of Minnesota. This year the demand for horses has been such that most any old kind of a horse could be sold for some kind of a price and any good horse could be sold for a good price.

"The time has finally arrived," says Professor Peters, "when all that farmers need to do to insure a good profitable horse market for several years to come is to go ahead and raise colts provided they have good big mares to mate to good big stallions.

"The need for horses is so great, however, that many farmers are likely to decide to begin raising colts from whatever mares they have, the common, inferior ones as well as the good, big ones. This will be the quickest and surest way of creating an over supply of inferior horses in a few years and destroying what would become a permanent profitable market for horses if every farmer would resolve to raise only good, useful colts."

Brood Sows Should Be Fed Very Little Grain

Brood sows should be given very little grain for 24 hours after farrowing but should have all the water they desire. The first feed given after farrowing should be limited in amount and fed as a thin slop. The amount fed is increased gradually as the pigs need more milk, until in 10 or 15 days the sow is being fed all she will eat. The brood sow's ration during the suckling period should be slightly laxative and provide for increased milk production to meet the needs of the pigs.

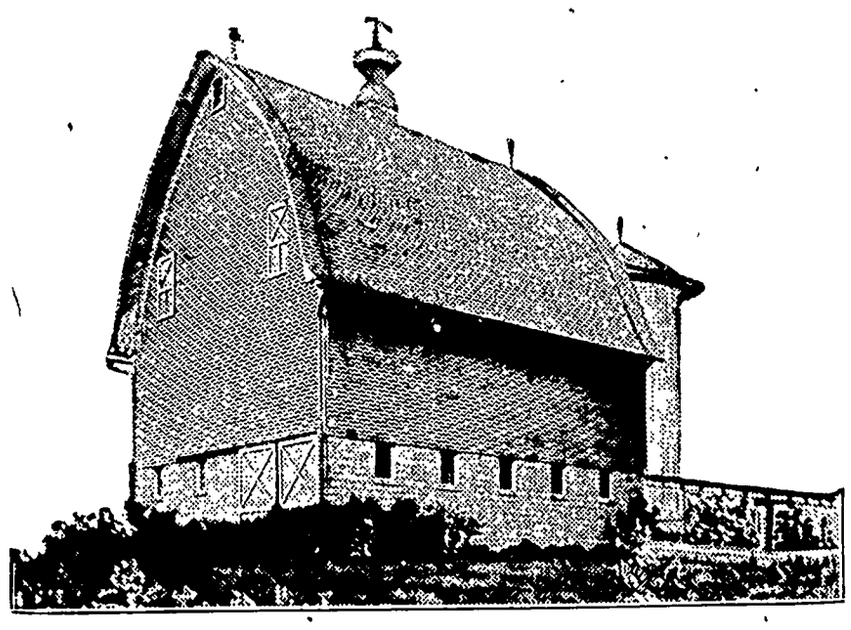
Economical Gains

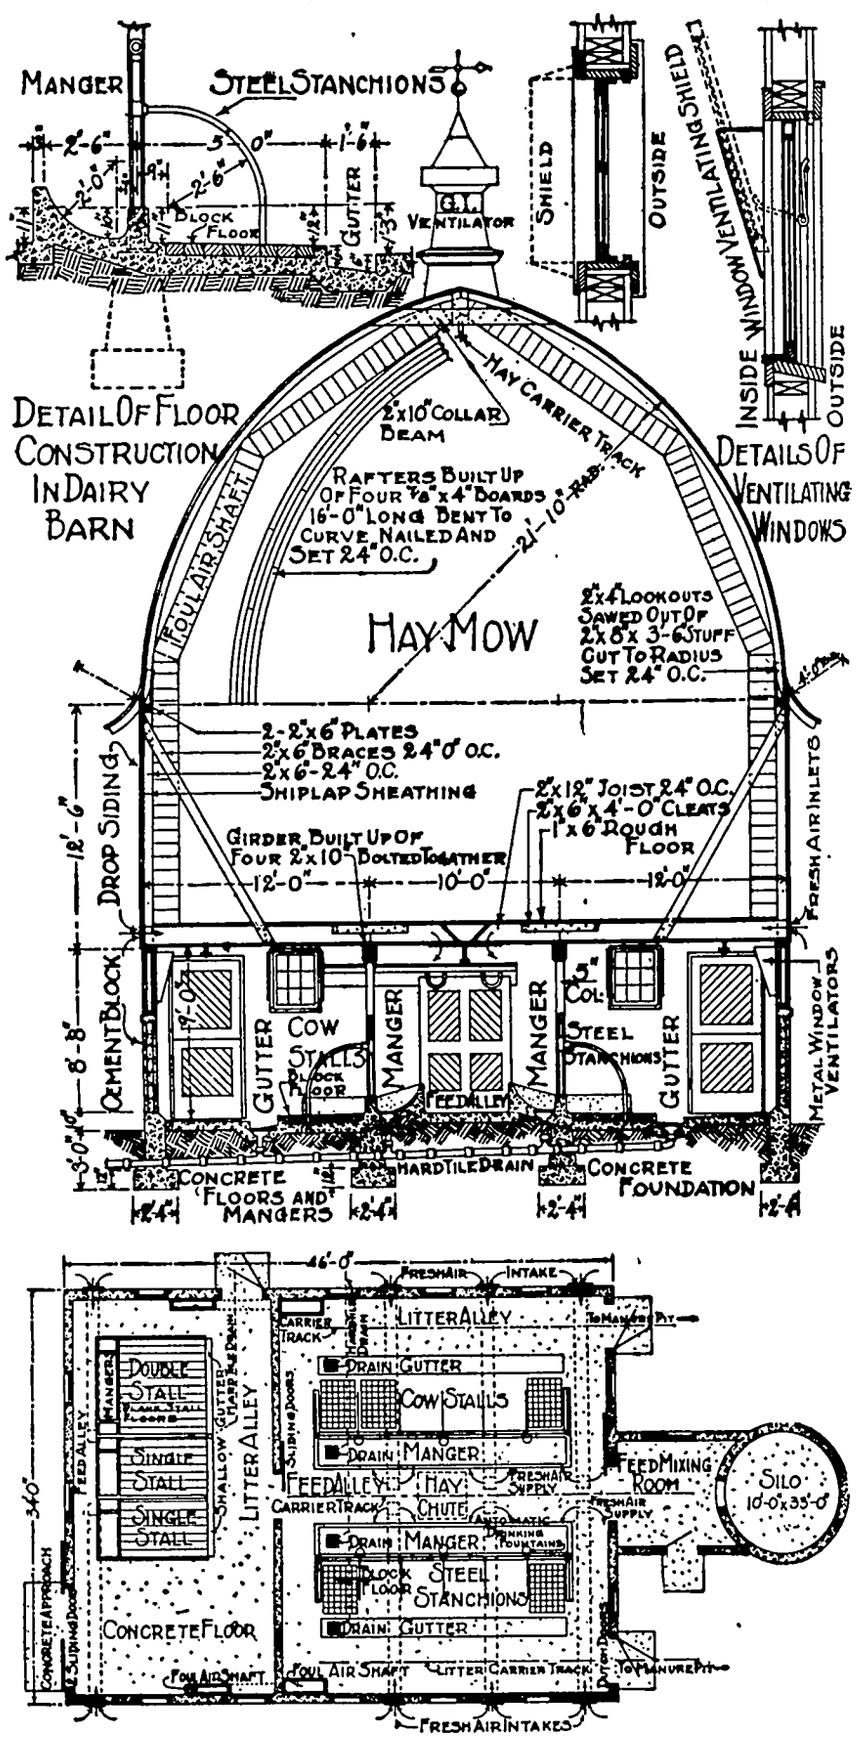
At no time in a sheep's life can a more economical gain be made than when the lamb is suckling its mother, and at this time one has to be on the alert less something is done or neglected to be done so as to hinder its growth, thereby robbing it of its baby fat much earlier than nature intended. The first 90 days of the lamb's life the lamb can, with a little forethought, be made to gain from one-half to a pound per day.

Feeding for Profit

It makes a big difference how a person feeds live stock when it comes to counting profits. The cow that is not fed a balanced ration—a ration such as is required for economical milk production—cannot produce up to her capacity; an improperly fed hog cannot make pork economically and a steer fed nothing but corn and timothy hay or corn stover cannot produce beef at as low a cost as is possible with good feeding. Proper care also is a big factor.

Combination Horse and Dairy Barn With Modern Equipment





By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

While building costs today are greater than they were 15 years ago, dairymen throughout the country are finding it economical to build a modern barn to house their milking herd and the feed required to carry the animals through both the fall, winter and spring when there is no pasture. And even in the summer it is advisable to add a grain ration to the pasture, in order to keep up milk production and keep the dairy operation on a paying basis.

Shown in the accompanying design is a combination horse and dairy barn for the farm where a small herd of dairy cows is kept. It will be noted that a concrete wall separates the dairy barn from the horse barn. This is in conformity with the laws of many states, which prohibit the housing of horses and dairy cattle in the same stable. The floor plans of the stable floor show single stalls for twelve cows. There are stalls for four horses in the other section of the stable floor.

This barn is 34 feet wide and 46 feet long. The width—34 feet—has been found to be the most economical for a dairy barn. This allows for a driveway through the center and litter alley back of each row of stalls. The floor plan specifies steel stanchions, a concrete manger with a drain so that it can be hosed out and kept clean, automatic drinking fountains at each stall head, an overhead carrier track for the transportation of feed to the mangers and removal of litter, an automatic ventilating system. All of these things are labor-savers and tend to make the herd more profitable. Cleanliness is an essential in the dairy stable, while an automatic ventilation system keeps the constant flow of fresh air coming in for the animals and removes the foul air which is bad for the animals and for the purity of the milk.

Besides the floor plan there is reproduced an architect's cross-section of the building showing how the frame is set up and some of the details of construction. This cross-section and the details will be of great assistance to anyone who is contemplating building a barn of this type.

Brighten Up Kitchen With Attractive Color

There is every reason why the kitchen should be as charmingly decorated as the other rooms of the house. It is a place where the housewife spends many hours. An attractive color scheme goes a long way toward making it a place of happiness instead of drudgery.

One of the many attractive color suggestions is based upon walls of taupe gray, painted with white lead and flatting oil which has been tinted very sparingly with lampblack. The paint for woodwork and trim is tinted a slightly darker shade of gray, just dark enough to give contrast between the two shades. Then the inner sides of doors, shelves, interiors of cupboards, built-in features and rungs of chairs are painted a deep orange. Curtains of pale gray voile with bands of orange crepe and a suitable floor covering of blue and gray complete the color arrangement.

This is only one of hundreds of color suggestions, all of which depend upon harmonious colors to create an atmosphere of cheerfulness. The white-lead paint finishes on walls and woodwork have proved as practical as they are beautiful, for when dirt collects on the surface, it can be cleaned with soap and water without being harmed.

Be Careful of Rust

Rust stains washtubs, sinks and bathtubs. Rusty water ruins clothes in the laundry. Walls are stained and ceilings fall when pipes leak and rugs and furniture are frequently damaged by dripping water.

POULTRY

VITAMINE NEEDED IN CHICK RATION

Liberal Use of Milk Quite Essential for Chickens.

A vitamine required by poultry and hitherto unrecognized, has been discovered by L. C. Norris, G. F. Heuser and H. S. Wilgus, Jr., of the Cornell university agricultural experiment station. This vitamine which is contained in milk is essential for the growth of chicks and for the prevention of a peculiar type of paralysis which may result in incurable deformities.

The discovery was in part accidental and resulted from an attempt to get a chick ration low in calcium and phosphorous, which would be suitable to study the requirements of chicks for these minerals. Casein, a purified milk protein, was used as the main source of protein in the experimental ration. When it was used in place of milk the chick ration was found lacking in this vitamine which prevents paralysis.

The experiment demonstrates that the use of liberal qualities of milk is essential where chicks or mature birds are confined indoors and are not provided with succulent green feed. To conclude from this experiment that milk should invariably be used in all poultry rations would be unwise, they say, as good chicks have been reared in the past with little or no milk and good winter egg production has also often been obtained with rations which contained no milk. It is probable, therefore, that this unknown factor is present in slight amounts in meat products, cereals and cereal by-products, and in large amounts in succulent leafy green feeds.

Barred Plymouth Rock Favored to Caponize

One of the best breeds of poultry for caponizing is the Barred Rock as the sex can be determined at an early age. The cockerels will be light and the pullets dark and when the chicks are about six weeks old and weigh close to one and a half pounds each, the poultryman can go into his colony houses with a spotlight and collect cockerels as fast as he can pick them up.

In caponizing such breeds as Rhode Island Reds or White Wyandottes, it is more difficult to pick out the male birds at an early age, says a writer in the Michigan Farmer. Considerable accuracy is possible by studying the heads. The male birds soon appear more coarse and have a harsher voice than the pullets. Pullets of any color soon develop what might be called the feminine type of head. It is smaller and more refined than the head of the male bird. The heads, beaks, and even the undeveloped combs on male chicks have a different appearance from pullets.

Some breeders caponize White Leghorn cockerels and make them weigh as much as six pounds but in general the caponizing is confined to the heavier meat breeds like the Barred Plymouth Rock, Jersey Black Giant or Light Brahma.

Various Good Points of the African Goose

The African goose has had at different times several names, among which were China goose, swan goose, Chinese swan, Guinea goose, Spanish goose and others. Its origin is unknown, but it is quite probable that it originated in a cross between the goose we now call the China goose and the Toulouse, and from this cross was perfected until it is now an enlarged kind of a Brown China goose.

The African goose lays better than any of the other larger breeds and it grows to be as large as any other. Specimens that were given the best care have grown to weigh 25 pounds, but the standard weight for a full-grown African goose is 20 pounds. They are very hardy and easy to raise. They are very watchful and know strangers from those whom they see every day. When a stranger comes among them they set up a clamor that notifies every one within hearing that something out of the ordinary has happened.

Plenty Good Features

Poultry houses that are built today are sensible; though they have plenty of fresh air, they have no draughts, though they contain more hens to the square foot, there is no dampness which is so fatal.

Two essentials that can be had for the taking are provided—sunlight and fresh air—and with these there is no reason why we should not have the healthiest race of fowl found on the face of the globe, and as a result an increased production of eggs.

Ventilation Essential

Ventilation is another essential of modern poultry housing. A good ventilation system supplies fresh air in the poultry house without making it subject to sudden temperature changes. Ventilation removes dampness and eliminates foul odors, making the flock healthier and more comfortable. Automatic ventilation systems are now on the market which consist of intake flues in the back of the house and a cupola on the roof to carry out foul air.

Rather a Giveaway

"What are the qualifications required to make a successful card player?" asked Mrs. Bowling, casually.

"Well, it's hard to say," replied her husband, thoughtfully. "A man must be cool, calculating, crafty, cunning, and have a touch of meanness in his disposition."

"Oh, John!" exclaimed his wife. "Surely you wouldn't like to play cards with such horrid people!"

"That's all right," the husband answered, proudly. "I nearly always win."

Da Vinci's Learning

Leonardo da Vinci drew a map of the globe, said to be the first to include America, and also showing an imaginary Antarctic continent. Even before Columbus sailed from Spain Leonardo not only maintained that the earth was round, but calculated its diameter to be more than 7,000 miles. The actual diameter, as now accepted, is roughly 7,900 miles.

Want Checks in Welsh

Whether banks in Wales should print checks in Welsh was discussed at the recent annual conference of the National Union of Welsh Societies at Aberystwyth. One bank manager said he often received checks with the words "payable to order" crossed out and a Welsh translation written instead.

Continuous Performance

A couple of rival but friendly shopkeepers were talking things over.

"When does your opening sale close?" asked the first.

"When our closing sale opens," the second replied. — American Legion Monthly.

Conciliation

"What's the gent beefing about?"
"Hair in the soup."
"Send out a pretty waitress."

Is the Girl to Blame?

She—Jim Jones is certainly cracked.
He—Probably, his girl dropped him.
—Border Cities Star.

It's not a very wise doctor who doesn't know better.

Times Have Changed

Elinor Glyn, the novelist and ture maker, said at a Hollywood den party:

Habits and customs have ch since my young days. The other I heard two girls talking at a club.

"'What would you do,' said first girl, 'if you'd been out times with a man and he never tried to kiss you?'

"'I'd lie about it,' said the girl.'"

Good Suggestion

Jones—I never know what with my week-end.

Bones—Why not keep your it?

Huh?

"What's the matter with her?"
"She is disappointed in her band."
"Who isn't?"—Detroit News.

o or three days Norma also serious thinking, but she et ready to acknowledge that of shortage in their finances here save in the fact that not earn enough. A hundred dollars a month wasn't h which to run a house, buy thing, pleasures, everything people needed. She shook over the problem. It was or her. She wished that in ning of their married life Jerry had not decided to turn over the finances to her.

"I simply can't make it do," she thought.

Hitherto Jerry had always deposited the money to her credit in the bank and allowed her to manage the check book. For himself he took out just enough to cover sparingly his small expenses. He had suggested that they ought to save something, but as yet they had not saved a penny. How could they, Norma argued.

She had half formulated some plans for taking care of the next pay check when pay night arrived. Jerry entered looking serious.

"Sit down," he said to her.

She obeyed wonderingly.

"Spread out your apron," he next commanded.

And Norma spread her small kitchen apron to its widest extent, puzzling over what he was going to place in it. Flowers! Fruit, perhaps! Or candy! She began to laugh.

But with perfect solemnity Jerry took a huge roll of greenbacks out of his pocket and showered them into her lap. The apron overflowed; some of the money fell on the floor. She gasped at the sight of such wealth.

"There!" said Jerry. "There is my month's salary."

"Your month's salary? Why, Jerry, you never earned all of this in one month!" she exclaimed.

"There it is," Jerry said. "Seems as if it ought to be enough for the two of us, doesn't it?"

Norma stared at the money. She was overwhelmed. But as she began to study the bills she saw that they were all of one denomination—one dollar bills. A hundred and fifty of them! It was stupendous.

"Why, I never saw so much money in my life," she whispered.

"Worth taking care of, eh?" Jerry questioned.

She looked up at him. And then she understood. He had taken the only way possible to teach her the importance of the money he earned.

They saved $50 the first month and by the end of the year they had a delightful savings-bank account. They were better fed, too, and if they lacked in some small ways they had the consciousness of owing nothing. Norma had learned her lesson well.

World Progress Aided by Lazy Individuals

Where, we rise politely to inquire, would this world be if it had not been for lazy men? Had it not been for man's struggle to avoid work we should still be lighting our homes with handmade candles instead of flooding them with brillance by the flip of a switch. Had it not been for man's high opinion of ease, we should still be plowing with a forked stick dragged by oxen instead of turning over the loam with steel plows pulled by tractors.

All around us are great businesses, living monuments to the lazy. Combine a strong strain of indiligence with a brilliant mind and you usually get an inventor. Bring together a distaste for work and a determination to do something about avoiding it and you have an organizer. Out of the inactive shall come activity. Out of the slothful shall come industry. Despite these tangible tributes to the type of man who so appreciates leisure that he will work himself to death to get it, we commend in the same breath the go-getter and labor-saving devices!

This is the kernel of the thing. Work for its own sake is meaningless. It is pointless, unimportant, futile. It is the result of the expenditure of energy which counts. If one man requires 400 words to explain in a letter a business matter and another does it equally well in 200 words, the second man is the more efficient and the lazier. The hustler dashes at his job, all energy. little thought. The languorous one thinks about his task, then gets it done with a minimum of effort. Follow the careers of successful men. At each step upward he has "reorganized a department" or "eliminated operations." He himself may have worked with desperate energy to help achieve for mankind a greater degree of freedom from work.—Western Electric News.

The Sticky Trap

The British office of works, whose duty it is to supply on demand all government offices with the means to destroy rats and mice, is superseding the office cat with a patent vermin trap.

This consists of a mixture of rosin and pitch, which is smeared on a piece of wood or cardboard. A tasty morsel of fish or cheese is placed in the middle of it, and when the mouse or rat tries to reach it he finds his feet firmly stuck in the quagmire, from which no amount of wriggling can release him. There he remains till the morning, when a cleaner arrives—and quickly puts an end to him.

The trap has been used extensively in the general post office.

The "Gent" of 1847

In the first half of the Nineteenth century, the "gent" seems to have been a recognized character and Albert Smith facetiously sketched him as he then appeared in the "Natural History of the Gent," published in England in 1847. His characteristics, according to Smith, included an abnormal capacity for consuming spirits, oysters, and stout, and a fancy for ballet girls. He frequented the night-houses in the Haymarket, revelled in rows with "peelers," and never got home till morning. When the pace began to tell, he either married a widow or an innocent heiress, or died of "galloping consumption."—Detroit News.

Horticultural News

LIME-SULPHUR IS USEFUL ON FUNGI

Very Effective if Applied Early in September.

Sooty blotch, or sooty fungus, and Brook's spot are the only obstacles that now stand between the fruit grower and a crop of clean, perfect apples, provided the six summer sprays recommended by the New Jersey Agricultural college have been applied, says A. F. Mason, extension specialist in fruit growing.

Sooty fungus is the black, unsightly, web-like blotch which appears late in the fall and sometimes gets so bad that the whole apple is covered. It occurs very generally in orchards situated on low ground, or in foggy localities. If the fall weather is rainy, it is frequently abundant in orchards on high ground. Control measures are very simple. Concentrated lime-sulphur, diluted four quarts to fifty gallons of water, applied in early September is very effective. Dry-mix, sulphur-lime or self-boiled lime-sulphur may be substituted for the commercial concentrated lime-sulphur wherever there is danger of russeting the fruit or burning the foliage with the latter material.

Brook's spot is the small, greenish-brown spot with irregular edges which commonly appears around the blossom end of some varieties, notably Grimes, Stayman and Black Twig. This fungus does not attack apples until they are nearly mature. During the past few years it has been prevalent in many orchards, causing heavy loss. Where the disease has been severe in previous years, it may be necessary to make one to three additional applications of concentrated lime-sulphur at ten-day intervals between the sixth and seventh applications of the regular spray schedule, in order to keep the fruit clean.

Fredonia Gooseberry Is Vigorous and Productive

The gooseberry is the fruit of fruits in northern European countries, but in North America has never been popular because nursery men for the most part offer to fruit growers only sorts derived from the American species, of which the wretchedly small Houghton and Downing are the best known kinds. The New York experiment station has long been testing European kinds and trying to breed new sorts which have the character of the European varieties. This year Fredonia is recommended as a new gooseberry of the European type. The nurseryman who propagates and popularizes it deserves to make a fortune.

The plants are vigorous, productive, quite resistant to the mildew and hold their foliage longer than any other European sort. The berries are large, attractive in appearance and of most excellent quality, suitable for culinary purposes from the time they are as large as a pea until they are ripe enough for a dessert fruit. The skin is thick and tough, and the fruit hangs and keeps well, so that the sort should be excellent for the general market and cannery, as well as for home use. The berries are most delectable when ripe and make a splendid dessert fruit for those who appreciate gooseberries to eat out of hand.

Horticultural Notes

Following the harvest the strawberry grower must decide whether to renew or abandon his producing fields.

* * *

Not all trees in an orchard may need thinning. Where the crop is light and well distributed over the bearing area, thinning is unnecessary.

* * *

Thinning reduces the amount of breakage in an overloaded fruit tree and cuts down the expenses of propping.

* * *

The question of pollination should be carefully considered in the case of pear trees of bearing age that do not set satisfactory crops of fruit.

* * *

The average strawberry field should produce some three or four profitable crops but the question of renewal depends entirely upon the condition of the field.

* * *

Strawberries that were planted this spring should be kept cultivated and free from weeds throughout the season. Next year's yield is largely influenced by the care the planting receives this season.

* * *

A small, well cared for patch of blackberries or raspberries can be a profitable side line for any fruit farm.

* * *

A minimum of 40 to 50 leaves per apple is required to bring about maximum development of quality, flavor, color, and size.

* * *

Trees like the sour cherry, which do not start growth readily from the dormant buds on the older parts, but which make new growth from the active buds near the terminals of branches, should be pruned least.

On your toes with POST TOASTIES -*quick*, rich energy

Busy day ahead? Begin it right with Post Toasties. There's an ample store of brisk new energy in each crisp, appetizing mouthful. Easily digested energy that turns quickly into zest for the day's work.

And it's so good to eat! Pour the crumbly, golden-brown flakes out of the handy package into the saucer. Then add cream and sugar if you like. We've found that rich, natural corn flavor and the toasted crispiness make a perfect combination. *Everyone* likes it!

Ask your grocer for the genuine Post Toasties in the red and yellow package.

Electricity Great Aid to Market Gardeners

Electrical gardening has proved to be a practical and economically profitable occupation in Sweden. Although the recent winter was one of the hardest in history, such garden products as "home-grown raspberries," cucumbers and the most delicate of garden flowers have been available at all times. In the gardens near Hamlingby, a small town north of Stockholm, 10,000 tulips, 1,500 lilies-of-the-valley, and 1,500 hyacinths were raised during January, all in ground electrically heated and under the artificial light of electric lamps. The operating expense of the electrical system was found to be negligible. The most difficult phase of the work is found in supplying various types of plants with the particular variety of light which they require, the lamps suitable for roses, for example, being unsuited to the development of carnations. There are 300 so-called "electro-horticultural" stations in Sweden, all of which are carrying on experiments in the artificial production of flowers and vegetables.

The Devil to Pay

Judge Thomas F. Graham of San Francisco was talking at a dinner party about marriage.

"Woman has come into her own," he said, "but Henry Ward Beecher's dictum about marriage is as true today as it was a generation ago. Beecher's dictum, you know, was this:

"'A marriage between a young man and a young woman is made by God, between an old man and a young woman it is made by the world, between an old woman and a young man it is made by the devil.'"—Detroit Free Press.

Letters From Home

Two small colored youths were playing when a truck load of watermelons passed by. The younger one looked at the truck load lovingly and he finally said to his companion:

"Oh, my, look at all those letters from home."

Which Is That

Blinks—There is a whale of a difference between the picture of a girl in the old family album and the one in the rotogravure section.

Jinks—Yes, one shows the clothes and the other the girl.

Military Landowner

Judging by the signs you see at attractive camping places all through the country, this fellow Private Keep-out owns enough land for a general.—Terre Haute Tribune.

A trainload of tractors filling 70 cars recently was received in Regina, Saskatchewan, for farmers in that vicinity.

Even the silver-tongued orator is seldom able to interest his wife.

Birds won't stand for winter. They have wings.

Good Old Hickory

The making of hickory handles, an activity of the wood-turning industry, is carried on mostly in the southern Appalachians and the lower Mississippi basin. Hickory is a native of the United States, and the wood is more suitable than others for the handles of tools. Approximately 8,000,000 wood shafts will be used this year, requiring a total of 27,000,000 board feet of lumber.

Unfortunate

Mother (to little Gertie, just put to bed)—Why, sweetheart, why are you crying?

Gertie (whose one foot is sleeping)—Boo-hoo! I've started to sleep from the wrong end.

"Cliff Dwellers" Increase

Eight years ago 24.4 per cent of urban folk lived in apartment houses. Today, a survey of 302 cities, estimates the "cliff dwellers" as 53.7 per cent.

NO OLD EQUIPMENT LEFT AT CREAMERY NOW SAYS GIMER

ALL NEW EQUIPMENT ADDED TO THRIVING PLANT THE LAST FEW YEARS

Manager Reports That Business For June And July Surpass All Former Records At Plant

A. D. Gimer, manager of the local creamery, reports that the Creamery has attained some new high records again for June and July over former years.

During the month of June, one thousand, one hundred twelve tubs of butter were shipped to the markets, and in July one thousand, and ninty-five tubs were shipped out, and with what was sold locally to stores and patrons makes a total of 74,435 pounds for the month of July alone. In butter shipped out of the state the Creamery had a gain over July of last year of 73 tubs, weighing 64 pounds each.

Has Now All New Equipment

In making a survey of the plant and after careful checking, Mr. A. D. Gimer finds there is not a single piece of equipment in the creamery which was there when the creamery began operation in September, 1913 and that new machines and equipment has been added steadily as the plant grew in the volume of business handled.

40 H. P. Boiler At Creamery

In place of the original 20 h. p. boiler which was installed at the beginning the creamery is now equipped with a modern 40 h. p. boiler which easily handles all the requirements of the plant. Likewise the old 12 h. p. steam engine has been replaced with a 25 h. p. engine of the latest type. In the boiler and engine room are also found other new items, such as a hot water heater which was installed but a few years ago. This consists of a large steel tank with tubes, through which the exhaust steam from the engine is run and which affords an adequate supply of hot water at no expense whatever, as it utilizes the exhaust steam which would otherwise be wasted. In connection with this equipment is a hot water feed which supplies the large boiler with water. The pasteurizing vats are likewise supplied with hot water from the large tanks.

Creamery Has Now Four Vats

The receiving capacity of the local plant has been more than doubled. The plant had two vats installed to begin with. Later these were traded in for new vats and two more large vats were added, all being fitted with recording thermomters, which are carefully watched during the pasteurization process.

Two Large Churns Installed

The churn which was installed in 1913 gave fine service, but finally wore out. In it's place are now located two large churns, and often these are taxed to capacity in the days run.

A great change has also been made in the refrigeration equipment at the Klemme Creamery.

The first refrigerating outfit was sold a few years ago and a large six-ton high speed, self contained refrigerating machine of the latest type installed in its place.

Can Store Car Load Of Butter

The refrigerating room has been enlarged twice to meet the demands of increased business. The last time the orom was completely remodeled and enlarged and at the present time has a capacity of one car load of butter in cold storage. This refrigerating room is modern in every respect.

Other Equipment Added Also

In other parts of the plant will be found new machines and devices, such as a new up to date Toledo No-Springs modern dial scale in the weighing room. This ne wtype of scale weighs absolutely correct under all conditions.

The laboratory equipment includes a new tester, cream sample test scale and a new moisture sample scale for weighing butter samples to test the per cent of moisture in each churning, a record of which is kept on file.

There are other devices which have also replaced old equipment.

Winter Heat Now Circulated

Even the heating of the room in winter has been changed from the steam radiator to a modern motor driven heater made by the King Ventilating Co. When steam is turned into the tubes the motor drives a heavy aluminum fan and this blows and circulates the hot air through the tubes and affords a quick heat at a small cost.

Water System Also Changed

Most of the trouble at the plant in the past has been with the water supply. The type of well pump had been changed four times to correct the fault and the creamery men now think they have the best type of pump it is possible to use.

However, at times the water supply is not over abundant. Mr. Gimer states that he believes that the creamery well and the city well both tap the same underground water stream, as when the town pumps are operating the creamery water supply goes down, but soon after the town pump quits running, the creamery well supply again comes up It is a peculiar situation.

Support Of Community Needed

In looking back over the years in which the Klemme Creamery has developed from a small plant in 1913 to one of the largest in this part of the state, Mr. Gimer made the following statement relative to the success of the local plant:

"No Co-Operative Creamery can attain the greatest success without the support of the farmer or dairyman giving it his full patronage and also boosting it and talking in support of the home concern. No matter how efficiently managed they must have a lot of staunch helpers. Thanks to the large number of men who have dnoe so much to make this Creamery the success it has attained."

COUNCIL PROCEEDINGS

Klemme, Iowa,
July 2, 1929.

Regular meeting of the Town Council held at the Town Hall.

Three members of the Council present

Motion made an dseconded that the following bills be allowed:

A. E. Finn, May and June Marshall Salary and Labor	$40.20
Wellemeyer Company, 2 bulbs for Bandstand	1.50
Etchen Auto Co., Supplies	.85
H. H. Stoltenberg, Juno Salary	42.70
W. F. Pavey, Repairs	3.05
Klemme Times, Publishing Council Proceedings	1.55
E. F. Jacobs, Supplies	10 98
A. H. Ridder, Labor and Supplies	/ 8.85
Louie Knoke, Drayage	.50
Fred Gates, June, Salary	14.60
Central States Electric Co. June Power and Automatic Switch	71.10
Central States Electric Co. Light	1.00

Bills allowed.

Bill of Central States Electric Co. for June Street Lights not allowed.

Motion made and seconded to hire H. H. Stoltenberg as Marshall and Street Commissioner at $75.00 per month.

Budget for 1930 arranged for publication.

Meeting adjourned.

A. J. KUDJE,
Clerk.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German service.

11:00 a. m. Sunday school.

8:00 p. m Tuesday, young peopels Bible class.

The Choir will meet Saturday evening.

KLEMME BOY SCOUTS TO HAVE SWIM NEXT MONDAY EVE

Will Also Take In Camp Fire Program At Camp Roosevelt

Last Monday evening Souts of Troop 56 held an indoor meeting at the Parish House and were given instruction in Signaling under the direction of Troop Commiteeman J. N. Day, who also acted as Scoutmaster for the evening.

It was decided that the next two meetings will be out door meetings and the program for Monday evening, August 19th will include a swimming period and instruction at the Scout beach at Camp Roosevelt. Scouts are asked to take with them a paper bag lunch to eat after the swimming period. They will leave the Times Print Shop at 5:30 p. m. sharp. Any Scouts who cannot go at that time should plan to come later. See Mr. J. N. Day in this respect.

After the swim lunch will be eaten at the Handicraft Lodge and boys in camp visited.

Parents And Friends Invited

The closing camp fire program for this period will then be taken in. This is one of the outstanding camp fires of the period and will be of interest to parents and friends f Scouts.

Parents and friends of Troop 56 Scouts are urged to plan now to go with the boys. Bring your bathing suits and enjoy a good time, bring your lunch and plan to stay for the evening program.

LEW LEWIS SURPRISED ON 84th BIRTHDAY ANNIVERSARY

Neighbors And Friends Gather To Help Mr. Lewis Celebrate

Last Thursday evening, August 8th, a large number of friends and neighbors met at the Wallace Pavey home to plan the best way of giving Mr. Lew Lewis a real surprise party on his 84th birthday. It was decided that the children should be the advance guard and accordingly the children filed across the street to the Lewis home and greeted Mr. Lewis with singing, "Happy Brithday to You." By that time the older folks had also come out of hiding to extend greetings and to help Mr. Lewis celebrate. The party was held on the lawn, and at the proper time a delicious lunch of home made ice cream and cake was served.

Mr. Lewis was presented with a reading lamp as a birthday gift.

Those present were Verner Lewis and family; Henry Lewis and family; Wallace Pavey and family; Paul Grange and family; Benn Coobs and family; P. W. Johnson and family; Miss Marie Blank; Grandma Schlawin and Mrs. Bredbenner and daughter, Novella, and Mr. Dwight Osborne.

CRAFTY CANNERS WILL HOLD A RALLY DAY FRIDAY

Club Wil Have Canned Products At 4-H Club Fair At Garner

The Crafty Canners Club of Ell Township held an interesting meeting Wednesday, August 7th, at the home of Nellie Stromer. Roll call was answered by the list of products each had canned. Ethel Barz gave a talk on bathing.

The girls planned a menu for a luncheon to be held August 29th at the home of Bernice Weaver.

On Friday, August 16th the club intends to hold a Rally Day at the home of their leader, Mrs. Charles Griffen. The various jars of canned products will then be judged and the best ones will represent the club at the 4-H Club Fair to be held at Garner, August 20 and 21.

EPWORTH LEAGUERS AT EAGLE LAKE FOR SERVICES

Twenty six Epworth Leaguers of the Methodist Church enjoyed a novel out door meeting when they held a Galilee Service at Eagle Lake State Park Sunday evneing.

The Leaguers took with them their lunch baskets and enjoyed a picnic supper.

The meeting was greatly enjoyed and was a fine success.

WATER CARNIVAL TO BE HELD AT CLEAR LAKE & BAYSIDE

Two Day Celebration Will Be Novel Entertainment For Visitors

Water Carnival, including an Atwater Kent Bathing Beauty Contest, will be held at Clear Lake and Bayside Amusement Park on Friday and Saturday, August 23-24.

Each day of this two-day Carnival is to be as big and more thrilling and colorful thna a July 4th celebration, according to plans.

Band Concerts will be presented each day and seakers will address the crowds. Free ttractions will entertain visitors at Clear Lake and Bayside. There will be speed boat races and swimming contests. A fast ball game will be played on the Bayside Park diamond each afternoon of the two-day Carnival. A beautiful boat parade, with vari-colored lights, will take place each evening after dark on the lake front. The Globe-Gazette is offering a silver trophy as first prize. It is planned to have varipus north Iowa towns represented in this parade with floats. Surf boat riding and other contests will be featured during this sensational two-day event. A public dance will be held the first night, August 23, at Bayside Park and at the White Pier, Clear Lake, Saturday night, August 24.

An Atwater Kent Radio Bathing Beauty contest will be staged each day of the celebration. Friday, Aug. 23 it will be held in the Clear Lake City park, and at Bayside Saturday Aug. 24. Two $180 radios will be given as first prizes, and other prizes will be awarded.

This is to be one of the greatest water carnivals ever held in the central west.

Next Sunday the Bayside Cubs will battle the fast semi-pro team of Cedar Falls at 3:00 o'clock. The roller skating rink, bathing beach, little train, rolle rcoaster and the shady picnic grounds will attract visitors at Bayside next Sunday.

COUNCIL PROCEEDINGS

Klemme, Iowa,
June 10, 1929.

Regular meeting of the Town Council held at the Town Hall.

All members of the Council were present.

Minutes of last meeting read and approved as read.

Motion made and seconded that the following bills be allowed:

Duncan Band, Memorial Day Band	$ 30.00
Central States Electric Co. May Street Lights	49.18
Central States Electric Co. May Power	12.20
Fidelity & Casualty Co., Workman's Compensation Insurance	38.00
Matt Parrott Sons Co., Clerk's Supplies	.97
White Phillips Co., Bond Interest	210.00
Fred Henschen, Labor	1.00
Lloyd Lau, Drayage	2.25
Klemme Times, Publish-Statement	19.00
W. M. Kirkwood, Grease	5.78
C. D. Smock, Labor	1.40
Wellemeyer Company, Supplies	10
Fred Gates, May Salary	27.90
G. P. F. Baack, Damages In Full	5.00
W. S. Darley Co., Electric Leak Detector	90.00

Bills allowed.

The bond of A. J. Kudje as Town Clerk on motion accepted.

Motion made and seconded that the Town of Klemme hire a band to give Wednesday evening concerts for at least 8 weeks. Motion approved.

Motion made that meeting be adjourned.

A. J. KUDJE,
Clerk.

NO SERVICES AT METHODIST CHURCHES NEXT SUNDAY

There will be no preaching service at either the Klemme or Liberty Churches next Sunday, August 18, as the pastor and wife will be away on their vacation.

It was also voted to dismiss the Sunday School in Klemme for that day.

H. E. Whyte, Pastor.

AUXILIARY LADIES WILL SEND FOOD BASKET AROUND

Each Member To Receive Basket And Send To Next On List

The Auxiliary Ladies have adopted the plan recently carried out by the M. E. Ladies Aid, that of sending a basket of food from one member to the next on the list, and so on until the basket has made the round.

Here's how the plan works. Mrs. W. F. Pavey, first on the list will start the basket. She will place in the basket some baked article or other delicacy, and a small bank. The basket is then sent to Mrs. P. W. Johnson, next on the list. Mrs. Johnson will take out the food sent by Mrs. Pavey and place in the bank a sum equal to the value of the food. Mrs. Johnson will then make something, place it in the basket with the bank and it goes on to the next party, and so forth until Mrs. Pavey finally receives the basket and at which time the bank is opened and the monye put into the Auxiliary treasury.

Following is the list: Mrs. W. F. Pavey; Mrs. P. W. Johnson; Mrs. Paul Grange; Mrs. Ben Coobs; Miss Berdice Schwichtenberg; Mrs. Dave Schwichtenberg; Mrs. Harry Gram; Miss Lydia Bock; Miss Grace Blank Miss Marie Blank; Mrs. Tom Blank; Mrs. E. J. Arnold; Mrs. Aldne; Mrs. Griffen; Mrs J. Thomas; Mrs. Fred Becker; Mrs. C. Kurtz; Mrs. Lew Lewis; Mrs. Walter Lau; Mrs. Ed. Jacobs; Mrs. Lester Stille; Mrs. Will Lassahn; Mrs. John Lemke; Miss Dorothy Carolus; Miss Alice Carolus; Mrs. Ernie Helps; Mrs. Henry Schuldt; Mr. Albert Hippen; Mrs. Frank Kluckhohn; Mrs. John Panhoff; Mrs. Bell; Mrs. F. Ward; Miss Leona Lau; Mrs. Albert Carolus; Mrs. Martha Bredbenner.

Real Estate Transfers

L. A. Andrews, Receiver Commercial State Bank, Britt, Iowa, to Morris Smith. Receiver's Deed, date 6-29-29, $3,500.00, on W 8 a of E 23 a N 40 a SW¼ 33-96-25.

C. R. Wondford and wife to John A. Bailey, Admr of Est of Bertha Bailey, Q C D date 8-2-29, $1.00, on lots 4, 5, 6, and 7, Way's Sub-Div. lot 1 Stubbin's add to Britt.

Bernice Oxley and husband to Celia Stilson, Q C D date 8-5-29, $1.00, interest in lots 2 and 3 blk 1 in Rofinot's add to Corwith.

Kluver and wife to J. Preston. Q C D date 8-6-29, $1.00 on lot 10 and 11 blk 7 orig Crystal Lake.

Isabel Milde to M A Milde, Q C D date 8-3-29, $1.00, lot 10 blk 11 at Crystal Lake.

Louisa Barz and hus et al to Ben H Goll, Waraanty Deed date 7-17-29, $5,000.00 S 50 a of E½ NE¼ 15-95-24.

Louisa Barz and hus et al to Jacob Gol and John C. Goll. Warranty Deed date 7-17-29, $3,000 North 30 a of E½ NE¼ 15-95-24.

Mrs. Louisa Barz and hus et al to August H. Kropp, Wty deed date 6-20-29, $10,000. on S½ SW¼ (ex. school house site, Sec 3-95-24.

Ottilia Hildman to George W. Hildman. Wty deed date Nov 7, '28, $1.00, undivided 1424 interest in W½ NW¼ 19-96-26.

Martha Lee Sennett and Frank W. to Helena Luebke. Q C D date 7-27-29, $1.00 on part NW¼ 27-96-25.

Homer Haxton to Ind. School D. of Britt. Q C D date 8-2-29, $1 on lots 4 and 3 block 2 Chas. Miller's add to Britt.

Stella Halverson to Ind. School Dist. Britt, Q C D date 8-2-29, on lots 3 and 4 block 2 Chas. Miller's add to Britt.

Celia Stilson, Bernice Oxley and husband to Roy C. Stilson, Q C D date 8-5-29, $1.00, on W½, S½ & E½ lot 3 block 1 Rofinot's 2nd add to Corwith.

Roy C. Stilson and wife to Celia Stilson, Q C D date 6-3-29, $1.00 on lots 2 and 3 Block 1 Rofinot's add Town of Corwith.

L. B. Orr and husband to State of Iowa. Wty deed date 8-8-29, $300 on lots 3 and 4 E 16' lots 5 and 6 all in Block 12 original Garner.

Frank Kluckhohn and family drove to Traer Sunday morning for a visit with the W. C. Keraus family. They also visited with relatives at Waterloo, returning to Klemme Tuesday.

BOYS AND GIRLS CLUB SHOW WILL BE GREAT EVENT

WILL BE HELD AT GARNER ON TUESDAY AND WEDNESDAY MORNING AND AFTERNOON

Farm Bureau Club Achievement Days Greatest Event In County To Be Held This Year

Everything is all set for the big Hancock County Achievement show to be held at Garner Tuesday and Wednesday, August 20 and 21 Elaborate plans have been made for this event and there is every assurance that this is to bo the biggest event in Hancock County this year.

Exhibit 100 Head Of Livestock

The Farm Bureau has been busy during the last month getting the things lined up for the Show and the boys and girls are busy getting their club articles ready to exhibit. Over 100 head of livestock will be on exhibition and the girls clubs will have a big exhibit of their canned products.

Klemme Girls Will Demonstrate

The club members in the vicinity of Klemme are planning to be there The girls club of Ell Township in charge of Mrs. Chas. Griffen and the club of Avrey Township in charge of Mrs. Howard Barger will have exhibits and demonstration teams.

The Sheep club of Avery Township will exhibit 7 fat lambs.

The club program will be as follows:

TUESDAY, AUGUST 20

—Forenoon—

Entering of Exhibits. All entries must be in place by 1:00 p. m.

—Afternoon—

Boys and girls judging contest.
Health contests.
Girls Music Memory contest.
Judging of Dairy Heifers.

WEDNESDAY, AUGUST 21

—Forenoon—

10:00 o'clock. Start judging in livestock departments and continue until completed.

11:00 o'clock. Girls demonstration contest and continuing until completed.

—Afternoon—

3:30 o'clock. Livestock Parade.

Other Entertainment Planned

Aside from this there will be plenty of entertainment every day including a county kitten ball tournament, horseshoe tournament, miscellaneous athletic events, band music, etc.

BIRTHDAY SURPRISE HELD FOR MR. HENRY JAHNKE

Fifty Seven Relatives Give Henry Real Surprise Party

Mr. Henry Jahnke was pleasantly surprised Sunday when one after another of the families of his relatives came to celebrate his fiftieth birthday with a picnic dinner and to spend the afternoon.

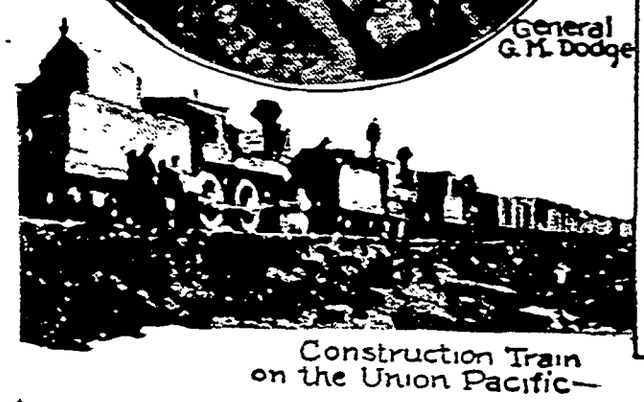
There were fifty seven persons present. They were: Mr. and Mrs. Henry Thiemann and family; Mr. and Mrs. George Thiemann and family; Mr. and Mrs. Herman Thiemann and family; Mr. and Mrs. John Newberger and family; Mr. and Mrs. J. M. Newberger; Mr. and Mrs. Clarence Newberger; Mr. and Mrs. Walter Blumer and family; Mr and Mrs. Cornelius Wille and family; Mr. Fred Jahnke; Mr. and Mrs. Will Waddingham and family; Mr. and Mrs. Gotlieb Goll, all of this vicinity, and Mr. Magnes Rasmussen of Alexander.

SUPT. PENROD WILL ARRIVE IN KLEMME NEXT WEDNESDAY

The Times Office is in receipt of a card from M. F. Penrod in which he states that he expects to arrive in Klemme by August 21st. Mr. Penrod has been attending summer school at St. Paul, and is at the present time looking after his farm interests at Sebeka, Minn.

HE SPANNED the CONTINENT WITH STEEL

General G. M. Dodge



Construction Train on the Union Pacific—

When the Engines Met

By ELMO SCOTT WATSON

SIXTY years ago there took place in the state of Utah an event which marked the completion of what has been aptly described as "the mightiest work of utility ever undertaken by man." For on May 10, 1869, at Promontory Point, not far from the Great Salt lake, a golden spike was driven in a railroad tie which connected the Central Pacific railroad with the Union Pacific and for the first time in history a ribbon of steel lay clear across the continent of North America.

The completion of the first transcontinental railroad not only marked an epoch in American history bnt it was the crowning achievement in the life of one of the great engineers of all time, the man whose surveys, totaling upward of 60,000 miles, were basic in railroad pathfinding and building throughout the West. Grenville M. Dodge was his name and his career, covering more than half a century of amazing activity, entitles him to a place on the roll of great Americans. Recently there has been published by the Bobbs-Merrill company a book which tells the story of that career. It is appropriately called "Trails, Rails and War—The Life of General G. M. Dodge," written by J. R. Perkins and published under the auspices of the Historical, Memorial and Art department of Iowa.

The Old Bay state, which gave to the nation so many statesmen, also gave it her greatest railroad builder. For Dodge was born in Massachusetts on April 12, 1831, eight generations removed from a Richard Dodge who arrived in Salem in 1638. When he was thirteen years old he hired out to work on a farm near Danvers and there he met with experiences that gave direction to his whole life. "The farm was operated by a Mrs. Lander, and she seems to have been the high and mighty lady of all that section," says his biographer. "She had two sons, Frederick and Charles. The former had attended Norwich university for two years and was just about to start upon a career of civil engineering. The latter was in the ice business. He purchased an abandoned church, moved it to Wenham lake, and converted it into an ice house. Frederick surveyed and constructed a siding from the Eastern railroad to his brother's ice house and Dodge, then fourteen, assisted in the work. It was his first survey!"

Influenced by Frederick Lander, Dodge decided to enter Norwich and become an engineer. "Perhaps in no school in the nation was the enthusiasm for railroad expansion at so great a pitch as at Norwich university in 1850. The students discussed steam transportation and expansion of railroads from the Atlantic to the Pacific with all the ardor that students today discuss airplanes, air routes and oversea flying. True, there were no lines west of Chicago and but few east of this point that were of any consequence, but there were dreams and dreamers; there were explorers and pioneers, and they were as heroic and as forward-looking as are the men today who think in terms of world flying. Dodge's school days fell in the beginning of all this excitement and he was stirred to the depths of his being."

So when he was graduated from Norwich in 1851 he surprised his parents by announcing that he was "going way out west to Chicago." Two of his friends who had preceded him in this "go-west-young-man" move invited him to join them at the town of Peru where they were working for an uncle, who was a surveyor, a land agent and one of the projectors of the Rock Island railroad which was just beginning to build west from the prairie town of Chicago. However, it was with the Illinois Central, which had just received its land grant from the government, that Dodge first got an engineering job, but after a year he left that railroad because he was more interested in the Rock Island which was building west than he was with the Illinois Central which was building south. In 1853 he was given a job with a surveyor for the Rock Island and helped run the lines of the Mississippi and Missouri River railroad (organized by the Rock Island) across Iowa.

It was this connection which brought him into contact with a future great American who was to play an important part in his future career. Dodge began his survey from the wooden bridge which the Rock Island was building across the Mississippi between Rock Island, Ill., and Davenport, Iowa. This bridge was

The famous woodon structure that was burned in 1856, when the steamboat Effie Afton swung against it, caught fire and destroyed one of its spans. In the suit that followed, a young lawyer from Sangamon county represented the bridge company and the Rock Island railroad. Lincoln argued that the people had a right to travel east and west as well as north and south and freight the necessities of life. The opposition contended that the Lord made the river for navigation and that it should not be obstructed by a bridge—even a drawbridge. There was no decision and the controversy over this bridge echoed in congress.

Judge Love of Iowa finally rendered a decision and issued a singular order—that three piers of the bridge "within the state of Iowa" be removed, thus affording navigation up and down on the west side of the river. Four years later, when Abraham Lincoln became President, the United States Supreme court reversed the decision. By this time it had become apparent to many politicians, and others, that the Lord wanted travel east and west as well as north and south.

Dodge completed his survey across Iowa on November 22, 1853, at Council Bluffs. "Six years later Abraham Lincoln was to visit this village and to meet the young engineer who had won the surveying race to the Missouri, and ten years later Lincoln, as President of the United States, would designate this village as the eastern terminus of the Union Pacific railroad, whose chief engineer Dodge was to become."

During the early fifties the building of a transcontinental railway was a national issue, mixed up with the slavery dispute between the North and the South and in 1856 both Democratic and Republican National conventions placed in their platforms the statement that a railroad to the Pacific was a national necessity. The South wanted the eastern terminus of such a railroad on the lower Mississippi and the North wanted it on the upper Mississippi. Before the dispute could be settled one way or the other the Civil war was precipitated. Then on June 24, 1862, with most of the southern representatives absent, a bill was pushed through congress for the construction of a road with the eastern terminus "a point on the one hundredth meridian . . . between the south margin of the valley of the Republican river and the north margin of the valley of the Platte river in the territory of Nebraska."

Although this foreshadowed the selection of Council Bluffs as the eastern terminus as Dodge had desired it and as he had pointed out to Lincoln at the time of Lincoln's visit to Council Bluffs, it was to be several years before the building of that railroad would begin. In the meantime Dodge had entered the Union army as colonel of the Fourth Iowa infantry. He rose rapidly to the position of brigadier general and commanded a division at the battle of Atlanta. But it was as a railroad builder that he made himself indispensable to Halley, Grant and Sherman in the armies of the West. Grant and Sherman especially were his fast friends and Sherman has told how Dodge repaired railroads and built bridges almost as fast as his troops marched on the famous expedition to Georgia.

At the close of the war Grant sent Dodge to take care of the campaign against the Indians on the western frontier and, as his biographer states, "no single factor was more vital in the construction of the Union Pacific than the campaign that General Dodge made against the Indians in 1865-66." Grant had selected Dodge as the man he thought best qualified to meet them in their own kind of warfare and the result justified his choice. Before he could complete the job, however, the Union Pacific claimed him as chief engineer for the railroad which it was beginning to build. He assumed this post on May 1, 1866, and the great adventure of spanning the continent with steel began.

From the west coast the Central Pacific Railway company, a California organization, was building east on the same terms granted the Union Pacific by the bill of 1862. Each railroad was to go as far and as fast as it could until it met the other and every extra mile won meant a fortune in government bonds. Thus was the stage set for the greatest race in history. The Central Pacific had to climb the Sierras more than 7,000 feet high, but without waiting for the completion of the tunnels its builders dragged material over the peaks and laid tracks beyond. Its iron and steel it had to bring around Cape Horn or across Panama. The Union Pacific was compelled to carry its rails and even the ties on flat boats on the Missouri or haul them over the prairies from Iowa. It was constantly harassed by hostile Indian attacks. "We marched to work to the tap of the drum with our men armed," writes General Dodge. Every construction train was a moving arsenal and every track layer worked with firearms near at hand.

The dramatic scenes which took place at the close of the race is described by Dodge's biographer as follows:

On the first day of April (1869), the two roads were nearly equidistant from Promontory Point, the Central Pacific being 54 miles to the west and the Union Pacific 57 miles to the east. The construction crews, numerically, were about the same strength, not 10,000 to a side, as has often been said, for so vast an army would have impeded rather than accelerated, track laying. In the final contest there were about 2,500 men on each side. . . . The Central Pacific had used Chinamen, who were adept enough at pick and shovel but when it came to track laying the Irish of the Union Pacific proved superior, so the former road now perfected its system by employing fifty of the ablest Irish track layers in the country; and it is said that Thomas Durant lost $10,000 in a wager that this Central Pacific gang could not lay ten miles of track in a day.

April, 1869, was the month that witnessed the fastest track laying in the history of railroading and each road went forward on an average of five miles a day. Materials were now plentiful, for in anticipation of the battle, the Central Pacific months before, had started great ships around the Horn with iron from the East, while the Union Pacific linked up the Northwestern at Council Bluffs and kept a steady stream of flat cars laden with materials coming up to the front. And the eyes of the nation if not of the world, centered on the contest. . . . On May 9, the rival crews came within sight of each other and the rails of both roads extended down into a little valley on Promontory Point. When the sun went down that day the Central Pacific and the Union Pacific were just 100 feet apart. The crowds cheered each other and did not fight. That night they slept but a few yards apart but when the morning of May 10 dawned there was the greatest of activity, for it was the day appointed when the last rail would be laid that linked the two oceans for the first time in their history with a great transportation system.

The engines of the rival roads were brought up to the ends of their respective tracks and between them there crowded the most notable group of railroad builders in the world . . . and in an ever widening circle were all the others that had made the transcontinental possible: soldiers from Fort Douglas, Mormon bishops and elders from Salt Lake, Chinese from San Francisco, Irish from Boston, Mexicans from the Rio Grande, negroes from Dixie, Indians from the deserts and the mountains and the omnipresent Jewish traders from many lands, good humored and thrifty, but wide-eyed and wondering at the genius of a Nordic race.

Gen. Jack Casement, whose genius for railroad construction pushed the Union Pacific from Missouri to Salt Lake, seven years earlier than the government expected, mounted the pilot of one of the engines and called the assembly to order; Edgar Mills, toastmaster of the Last Spike program asked Rev. Mr. Todd of Massachusetts to offer prayer, and men of all creeds and of none, stood silent and respectful while a clergyman from the old Puritan town of Pittsfield prayed.

A man at the preacher's left, Doctor Harkness of Sacramento, cleared his throat and said: "Gentlemen of the Pacific railroad, the last rail needed to complete the greatest railroad enterprise in the world is about to be laid; the last spike needed to unite the Atlantic and the Pacific is about to be driven."

He turned, handed a golden spike to President Stanford of the Central Pacific while Governor Trittle of Nevada held out a silver spike to Thomas Durant, vice president of the Union Pacific. The Nevada executive said: "To the iron of the East and the gold of the West, Nevada adds her link of silver to span the continent and wed the oceans. . . ."

Voe, of the Pacific Union Express company, gave Stanford a silver sledge; Reed, superintendent of construction for the Union Pacific, and Strowbridge, of the Central Pacific, shoved the last tie to position—one of California laurel, finely polished and bearing a silver plate with the inscription "The last tie laid in the completion of the Pacific railroad, May 10, 1869."

A wire was attached to the gold spike and when Stanford struck it an electric spark signalled the nation that the first transcontinental railroad was completed.

WHAT THE ENGINES SAID

What was it the engines said,
Pilots touching head to head?
Facing on the single track,
Half a world behind each back.
This is what the engines said,
Unreported and unread.

With a prefatory screech,
In a florid Western speech,
Said the engine from the West:
"I am from Sierra's crest,
And if altitude's a test,
Why I reckon it's confessed,
That I've done my level best."

Said the engine from the East:
"They who work best, talk the least.
Suppose you whistle down your brakes,
What you've done is no great shakes.
Pretty fair, but let our meeting,
Be a different kind of greeting.
Let those folks with champagne gushing,
Not the engines, do the puffing.

"Listen where Atlanta boasts,
Shores of snow and summer hosts,
Where the Indian autumn skies
Paint the woods with wampum dyes.
I have chased the flying sun,
Seeing all that he looked upon,
Blessing all that he blest,
Nursing in my iron breast,
All his vivifying heat.
All his clouds about my crest
And before my flying feet
Every shadow must retreat."

Said the Western engine, "Phew!"
And a long whistle blew,
"Come now, really that's the oddest
Talk for one so modest.
You brag of your East, you do,
Why, I bring the East to you.
All the Orient, all Cathay
Find me through the shortest way
And the sun you follow here
Rises in my hemisphere.
Really if one must be rude,
Length, my friend, ain't longitude."

Said the Union, "Don't reflect, or
I'll run over some director."
Said the Central, "I'm Pacific,
But when riled, I'm quite terrific.
Yet today we shall not quarrel
Just to show these folks this moral
How two engines in their vision
Once have met without collision."
That is what the engines said,
Unreported and unread,
Spoken slightly through the nose,
With a whistle at the close.

—Bret Harte.

ORCHARD GLEANINGS

WHEN HARD RIPE PICK APPLE CROP

Keeping Qualities of Fruit Depends on Ripeness.

Picking, handling and exhibiting apples may be summarized as follows: Produce the best quality of fruit possible. Pick it when it will make the highest quality and most attractive product. Handle carefully at all times and keep it as cool as possible after picking.

Apples should be picked for market when hard ripe. Hard ripe means that the fruits have not softened to any extent, but are mature enough that they will soften and become eating ripe after picking. Picked too late these fruits soften either on the tree or soon after picking, and as a consequence break down and decay. On the other hand, if picked too early, they have poor color and eating quality when they are eating ripe, and are more subject to diseases in transportation and storage.

There are limits on either side of the proper time to pick fruit. These are easy to recognize, and economic necessity forces fruit growers to observe them. Fruit should not be picked before it has attained fair size and color, because the grower cannot generally sell it to advantage. Fruit should not be left on the tree until it drops, for fallen fruit as a rule cannot be sold at a satisfactory price. For best results, fruits must be picked between these two stages. One of the best indications that apples are ripe enough to pick is the change of the ground color from green to yellow. Immature fruit is leaf green. Some varieties never have any red color, but most varieties develop more or less red color as they ripen. The green is called the ground color. The red, which appears later, is called the over color. When fruit is eating ripe, the green color has become yellow. This change begins, however, before the fruit is eating ripe, and about the time it is hard ripe. In general, the fruit is ready to pick when the green ground color takes on a tinge of yellow.

An instrument known as a fruit pressure tester is now being used to determine the hardness and softness of apples and other fruits. Growers and investigators have found its use valuable when supplemented by known characters of fruit ripening.

The determination of the proper time to pick fall and winter apples is more difficult than is the case with summer apples. The different varieties offer different problems. Some varieties, of which Jonathan is an example, become hard ripe relatively early; others ripen later. Some suffer in keeping quality if picked too late; other varieties keep if left on the tree until relatively late. Jonathans tend to soften on the tree and suffer from Jonathan spot and decay after picking if left too long. It is best to harvest them as soon as they have developed good size and color.

Old Apple Orchards Are Best for Fruit Grower

Old apple orchards are more profitable to their owners than young orchards, according to Prof. G. P. Scoville in a talk at the New York State College of Agriculture.

Orchards set 50 to 70 years ago on good soil are paying a better income than those that have recently come into full bearing. Orchards on soil not suited to apples become poorer and poorer as they grow older. Professor Scoville said that the fruit grower has one great advantage even though his income does fluctuate. He gets used to living on the small income of poor years, so when a big year does come he spends the surplus to improve his farm and buildings or to pay off his mortgage. He believes that this, to a great extent, is the reason why many fruit growers get ahead.

Lighter Soil Is Favored for Northern Spy Trees

The Northern Spy apple grows well on a soil that is not too heavy. The main problem with this variety seems to be to get it thoroughly matured. On soils that are slow or that delay the ripening of the fruit, it is an inferior product. Climate complicates the matter still further so that there are relatively few places in the country where Northern Spy is at its best.

As for pollination, the Northern Spy is supposed to be one of the few varieties that will set fruit with its own pollen. Any variety, however, is benefited by having several varieties nearby for cross pollination.

Time of Picking

The time of picking is an important item within the control of the grower which affects the susceptibility of the apples to scald. Early picked and poorly colored fruit is extremely susceptible, while well-colored, well-matured apples are more resistant to the disease. Color and maturity are influenced by the weather conditions, the pruning, the soil, the fertilizer, and the orchard management. Good exposure to sunlight makes the apples more resistant to scald

It's the Berries, Girls

One of the richest and most fashionable shades for autumn will be what the French call "light currant."—Woman's Home Companion.

NEVER wait to see if a headache will "wear off." Why suffer when there's Bayer Aspirin? The millions of men and women who use it in increasing quantities every year prove that it does relieve such pain. The medical profession pronounces it without effect on the heart, so use it as often as it can spare you any pain. Every druggist always has genuine Bayer Aspirin for the prompt relief of a headache, colds, neuralgia, lumbago, etc. Familiarize yourself with the proven directions in every package.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

POISON IVY

Hanford's Balsam of Myrrh

Money back for first bottle if not spited. All dealers.

Like may beget like, but we also get to have our dislikes.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

LIVE STOCK NEWS

LIBERAL FEEDING OF BROOD SOWS

Generous Rations While Nursing Pigs Profitable.

"Liberal feeding of brood sows while they are nursing their litters pays big dividends," declares B. W. Fairbanks, associate professor of animal husbandry at the Colorado Agricultural college.

"Excellent rations can be balanced with skim milk or buttermilk, bran, shorts, ground oats, wheat, barley, or corn," he adds. "A little leafy alfalfa hay builds up the quality of the proteins and supplies vitamine "A."

In discussing the weaning of pigs, Fairbanks says that "when the pigs are two to three weeks old they will drink from a trough in addition to their nursing. A shallow flat-bottomed trough placed in a pig creek is ideal for the feeding of additional milk.

"Fresh milk is generally fed the first day or two, and then skim milk is substituted. Middlings or shorts may be mixed with the skim milk and fed as a thin slop twice daily.

"When the pigs have learned to take freely of the shorts or middling slop, they are ready to wean, according to Fairbanks. This usually occurs when they are seven to ten weeks of age. If skim milk is not available it will be necessary to keep them on the sows longer.

"After weaning, a slop of shorts or middlings or corn meal is offered twice daily. At first the pigs should receive a ration with a liberal supply of protein, but this may be reduced slightly later."

Operations on Lambs Pay in Real Dollars

Docking and castrating will add materially to the receipts from the lamb crop. Either operation is simple and the risk negligible when performed on lambs at ten days to two weeks of age.

"Long-tailed lambs sell on the market for 25 cents to $3 a hundred less than docked lambs," says W. E. Morris, a live stock specialist with the agricultural extension service of the University of Minnesota. "Thin long-tailed lambs are classified on the market as cull feeder lambs and suffer the largest cut in price.

"Ram lambs sell for $1 to $3 per hundred less than wether lambs of the same quality. Fat ram lambs sell on the market at a cent a pound below fat wether lambs. Thin ram lambs are classified as culls and sold to the packers as such, at about $3 a hundred less than they would bring as feeders if they had been castrated."

Feeding Breeding Pig for Efficient Growth

Pigs retained for breeding purposes should not be fed and handled in the same way as those to be sent to market. Young breeding stock should be grown rather than fattened. Strong feet and legs and strong backs are more essential than fat in the development of gilts for brood sows. They should be fed only enough corn to keep them in a good thrifty condition. The rest of their feed should consist of shorts or oats with sufficient tankage or skim milk to balance the ration.

Figuring Horse Feeds at Cost of Production

Many farmers by figuring their horse feeds at cost of production find that they can keep a horse per year in very satisfactory manner at a feed cost of $50 to $60. To cover all costs of keeping a horse for a year including care, shelter and veterinary service, you would be entirely fair to the tractor side of the argument and reasonably fair to the horse by allowing a set charge of $100 per year as the total cost under farm conditions of keeping a good work horse.

Live Stock Facts

It pays to summer fallow land before sowing it to alfalfa.

* * *

Sixty per cent of all pigs are born in March, April and May.

* * *

The use of self-feeders is the most satisfactory system of growing hogs.

* * *

A good pure-bred ram should never be considered an expense but as an excellent investment that will bring a high percentage of profit when properly handled.

* * *

An acre of good forage usually can be depended upon to carry from 1,000 to 2,000 pounds of hogs.

* * *

Hog cholera first appeared in the United States in Ohio in 1833. In a single year the losses of hogs by cholera have amounted to $65,000,000.

* * *

Pure-bred rams will pay, through increased profits on market lambs, their original purchase price in one year, provided there are as many as 30 or 40 ewes in the flock in which they are used.

Using Fish Oil in Poison Spray

Needed as Spreader and Sticker in Treatment for Gypsy Moth.

(Prepared by the United States Department of Agriculture.)

Among the problems incident to gypsy-moth control work are those of applying poison sprays effectively. Lead arsenate is the spray most used, but with it is needed some other substance as a spreader and sticker, preferably some material that will make the spray adhere to the leaves throughout the season in spite of rain or other weather conditions. Many different substances have been tried for the purpose—soap, glue, casein, molasses, gelatin, glucose, flour, and various oils.

Best Results From Oils.

Experiments carried on by the bureau of entomology of the United States Department of Agriculture have shown that, of these substances, the oils, especially linseed, fish and corn oil, gave by far the best results. Linseed oil is the most satisfactory of all, but it is also expensive; and when after numerous experiments on trees at various stages of growth, it was found that fish oil gave almost as good results at a much lower cost, it was felt that fish oil could be recommended as an economy in large-scale control operations.

Fish oil mixes practically as well as linseed oil with lead arsenate, and is nearly as adhesive. Foliage sprayed with a fish-oil mixture as early as the first week in June was found in September still well covered with the spray, although some rain had fallen. The use of either oil, but especially fish oil, makes it possible to reduce with safety the proportion of lead arsenate used, and to start spraying operations sooner, even though the foliage is small and likely to grow, since the quantity of poison that adheres remains effective. A few experiments have also indicated that fish oil is a good adhesive to use with bordeaux mixture or a combined lead arsenate and bordeaux mixture.

Details of Tests.

Details of the experiments conducted at different times with various adhesives are given in Technical Bulletin 111-T, published by the United States Department of Agriculture. The work was done by Clifford E. Hood, associate entomologist, who is the author of the bulletin. Copies may be obtained upon application to the United States Department of Agriculture, Washington, D. C.

No Treatment Known for Eradicating Corn Smut

Unfortunately, there is no treatment known for corn smut. It can be reduced somewhat by growing the corn on land that has not grown corn for some years and by cutting off and carrying out of the field any smut balls that form. These should be buried or burned to destroy them. Ordinarily, they are allowed to go with the cornstalks to the feed yards where they become incorporated with the manure supplies. This happens to be a good place to preserve them and they go back to the land when the manure is applied.

If the cornstalks are left standing in the field, the smut balls become incorporated with the soil when the land is plowed or disked and reinfection occurs when the corn is grown. There isn't any remedy for it except to reduce the smut balls all you possibly can by destroying them and keeping them out of the feed supplies.

Early Soil Preparation Insures Big Wheat Crop

Timely preparation of the ground is one of the principal factors in insuring a good wheat crop. Early preparation aids in conserving soil moisture and in the development of nitrates in the soil. When it is possible to plow or list immediately after harvesting the wheat crop, the land should be disked early and then plowed as soon as possible. After the land has been plowed or listed, it should receive sufficient cultivation to destroy all weeds and volunteer grain.

Agricultural Hints

Steel fence posts, painted green, are best for the farm yard.

* * *

More growers each year find that to thin overloaded trees increases their profits.

* * *

Too much or too little fertilization of vegetables may increase their susceptibility to disease.

* * *

It is a good plan to beware of all alfalfa seed that is selling at prices considerably below those of good seed.

* * *

The requirements for success in growing sweet clover are an abundance of lime in the soil, thorough inoculation and a well-prepared, firm seedbed.

* * *

A simple and fairly successful whitewash for trees is made with eight pounds of quick lime, two pounds of salt, one-fourth pound of glue, and water enough to slake the lime well and then to make a thick paste.

POULTRY

RIGHT FEEDS AND GOOD MANAGEMENT

Fowl That Consumes Most Rations Is Best Layer.

Have the early hatched pullets started to lay on the range? This is the question that leading poultrymen in New Jersey are asking themselves, as the method of handling these birds has everything to do with their production record this fall.

The men know that the expected molt can sometimes be avoided if the weight of the pullets after they come into production is maintained by feeding plenty of scratch grain. Just before the pullets begin to lay or when they are laying about 10 per cent on range, they are removed to their permanent laying quarters. Here the poultryman endeavors to get them in prime condition and, once he does so, trys to maintain it.

Proper feeds and a good system of management have been found essential if maximum feed consumption is to be secured. To lay eggs, feed is needed and the bird which consumes the largest quantity of a well-balanced ration, lays the most eggs.

Some poultrymen will be disappointed in the early-hatched pullets unless the birds have been carefully managed during the growing period, asserts L. M. Black, poultry specialist. It takes from five to six months to grow a Leghorn pullet properly. Longer than this is required for heavier breeds. According to Mr. Black, birds starting to lay at a younger age are often small and undersized and their eggs are likewise small. "Give the birds time to develop, furnish them with the necessities for proper development," he says, "and then have pullet eggs which can be sold as extras."

Deformed Baby Chicks Caused by Incubation

Spraddle legs and deformity among baby chicks are usually a result of the eggs having been kept too long before incubation. Eggs are at their best when only four days old and depreciate at a rate of approximately 5 per cent daily after they are one week old.

Another condition often responsible traces back to the health and vitality of the hens in the breeding flock. If there had been some disease in the flock or if all of the birds were not in the best of physical condition the consequent lack of vitality often results in an unusually large number of deformed chicks.

Muscle-Building Food of Greatest Importance

Many losses in raising chicks result from failure to furnish an adequate amount of the right kind of protein feed. If chicks are to make a profit for the poultryman, their growth must be rapid. This requires a large amount of muscle-building material. Therefore, the ration should consist of an adequate supply of either milk or meat scraps.

Milk is regarded as the most efficient form of protein that can be given to chicks. If it is available, it should be kept before the birds all the time. Semi-solid and dried buttermilk are good substitutes for liquid milk.

Poultry Hints

Feed table scraps and kitchen waste.

* * *

Also feed grain once or twice a day.

* * *

Purchase well-matured pullets rather than hens.

* * *

Eggs should be marketed at least twice a week.

* * *

Watch growing pullets for intestinal parasites.

* * *

Oats are not at all suitable feed for geese or ducks.

* * *

Keep hens free from lice and the house free from mites.

* * *

The oftener one can get the eggs to the market the better.

* * *

The requirements of incubation for turkey eggs are the same as for the incubation of chicken eggs.

* * *

Adopt a definite program of sanitation on your farm to reduce the loss of chicks. About half the losses of young chickens occur during the first four weeks.

* * *

A good market egg should be fresh, clean, have a good strong shell, and be a good size. Infertile eggs are better, as they keep longer at high temperatures than fertile eggs.

* * *

As soon as an egg becomes dirty it goes into the lowest fresh egg grade. To get clean eggs supply plenty of nests, at least one nest for every five hens. Construct your nests so the hens cannot roost on them. Keep plenty of litter on the floor. Clean the dropping boards daily or cover them with 2-inch mesh wire.

Veteran Placer Miner Picks Up Big Nugget

John E. Perrett, veteran prospector and placer miner, struck it lucky in Potato creek, west of Spearfish, S. D., when he found a ten-ounce gold nugget, valued at $250. The nugget, says the Omaha World Herald, is more than four inches long, about two inches wide and almost half an inch thick. For its size, it is said to be the purest one ever unearthed in the Black hills. A few finds like this would give a prospector more than a grub stake for his year's work, Perrett says. Mr. Perrett has been a resident of the Black hills for more than 46 years, and he has prospected more or less during that time. His present claim is located on Potato creek, where he has lived for the last 19 years. Potato creek has yielded many gold nuggets in the past, but it is doubtful if any has equaled this latest find.

Contrary to the general opinion, says Mr. Perrett, a placer miner or prospector does not depend for his grub stake and wages only on the gold he finds, but he also washes out such valuable metals as tin, tantulum, columbine, copper, tungsten, shellte and mica.

Seek "Old Maid" Insurance

Getting insured for almost any contingency is becoming a fad in Europe. The latest idea, but one which the insurance companies have not accepted, is insuring women against failure to secure a husband. Even this may come, for inquiries have been made both in Paris and London for policies of this type. A London company recently insured a glass eye for a woman. She pays a premium of $1.85 a year, and if anything happens to her glass optic she receives $15.75. Polaire, known as "The Ugliest Woman on the Stage," has taken out a policy for a large sum payable should she become beautiful.

Repairing Garden Hose

If the garden hose has sprung a leak and you are contemplating buying a new one, try painting it on the outside with pliable roofing paint and see if that does not mean another season for it.

Men sometimes marr ytheir ideals—if they have money.

Many a man who claims to be a gentleman doesn't work at it.

GREAT RESULTS FROM COMPOUND

Read How This Medicine Helped This Woman

Brainerd, Minn.—"I read about Lydia E. Pinkham's Vegetable Compound in a newspaper and I have got great results from its tonic action at the Change of Life. Before I took it I was nervous and at times I was too weak to do my housework. I was this way about a year. But now I do all my housework and do chores outside also. I must say that Lydia E. Pinkham's Vegetable Compound has done wonders for me and no woman should be without it. I sure can speak a good word for it."—Mrs. Jim Smith, R. R. 1, Brainerd, Minnesota.

King George's Name

The illness of King George was being discussed, when James interrupted to ask the last name of King George.

"Well," said his mother, "that is a long story," thus shielding her ignorance of the fact. 'Wait until tomorrow," said she, "and I will tell you about it."

James did not forget the promise of a story and on the following day reminded his mother of it.

"Oh, I already know his name," said brother William. "I read it in the paper last night, and it's 'George V Rallies.'"

Boys Spare Mirror 20 Years

Beckenham, England, boasts that it has the best-behaved boys in the world. For 20 years the lads have resisted the temptation to throw stones at a mirror erected for the help of automobile drivers at a junction of roads. The mirror has just been removed by the city.

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Mr. and Mrs. Earl Kahler and children were in West Bend Sunday to see the Grotto.

Mrs. Bill Anderson and baby visited Wednesday at the John Velan home.

Irene Carlson visited at the Ed. Schoenwetter home Thursday.

Miss Florence Gates visited at the Ben Ridder home Thursday.

Mr. and Mrs. August Ridder and son Walter were Sunday visitors at the Beier home.

Miss Lucille Ludeke of Garner has been visiting her cousin. Ethel Schoenwetter and Mildred Schoenwetter the past week.

Florence and Francis Tanner visited at the Will Lemke home Friday afternoon.

Ruth and Madeline Abele were Sunday guests at the Tanner home.

Mr. and Mrs Albert Riemer of Garner visited their daughter, Mrs. Beier Thursday afternoon.

Mrs. Jim Lilly and son of Cedar Rapids visited at the Otto Lemke home Thursday and at the John Lemke home Friday. Mrs. Lilly was formerly Miss Lydia Lemke of Garner.

Miss Mildred Beier returned to her home at Peltrami, Minn, Wednesday, after spending the summer at the homes of her sisters, Mrs. Clarence Cook of Kanawha, and Mrs. Wilbur Haefner.

Mrs. Anderson and Mrs. John Sackow assisted their sister, Mrs Vic Schoenwetter cook for threhers Monday

Charley Whitney of Britt, a nephew of Mrs. Will Lemke, visited at the Lemke home Thursday. Mr. Whitney just returned from an extended stay at Ashland, Kentucky.

Mr. and Mrs. Art Schoenwetter and Ethel were guests at the Will Ax home near Swaledale Sunday.

"Red" Carlson made a special trip to Cedar Falls Sunday to visit a friend.

Mr. and Mrs. Clarence Cook and daughter of Kanawha were dinner guests at the Wilbur Haefnre home Sunday.

Mr. and Mrs. Geo. Schoenwetter and children visited relatives in Garner Sunday.

Grandma Beier and Miss Lydia Beier visited relatives in Klemme Monday.

Gladys and Ruth Kulper visited at the Ben Ridder home Monday.

Mr. and Mrs. John Lemke were Sunday dinner guests at the Tim Waddingham home. They also visited in Garner at the Eric Clrak home

Wayne Lemke has been enjoying a two weeks vacation from his duties as clerk in the J. C. Penny store in Mason City.

Mr. and Mrs. Walter Blumer visited at the Tim Waddingham home Sunday.

Mrs. Will Kulper and Miss Lydia Beier visited at the Frank Ward home Monday.

A Mr. Lange, owner of an eighty farmed by J. J. Stille was a business caller at the Stille home Monday while they threshed.

The Rev. and Mrs. Priestly of Jewell came up Sunday to visit their son, Jonas. They enjoyed a picnic dinner at Clear Lake. Jonas works at the J. . Lemke farm this summer.

The Rev. and Mrs. Milton Schaper stopped off for a day's visit at the home of Mr. Schaper's aunt, Mrs. Tanner. They also visited friends and old neighbors. They were on their way east to visit at the home of Mrs. Schaper's parents who live near Davenport. Rev. Schaper was formerly a Liberty township boy and is now located near Storm Lake and is pastor of two churches.

Mr. and Mrs. Will Kulper and daughters of Waterloo came Saturday evening for a visit at the Beier home. Mr. Kulper returned Sunday but Mrs. Kulper and children will remain for a week to visit with relatives.

Mr. and Mrs. Otto Lemke and sons, Clarence and Wayne and Miss Dorothy Hampel of Garner left on Monday afternoon for a week's trip to the Black Hills. Mr. and Mrs. E. H. Patet will look after things at the Lemke farm during their absence.

Threshing is getting pretty well done in Liberty township at this time. The dry weather of the pas week was appreciated by the men as they were able to put in good time. The small grain in genera. has been running fine. Most of i goes better than 40 bu. to the acr. and some as much as 70 bu. to the acre.

Mr. and Mrs. Ben Riemer entertained Mrs. Reimer's relatives to a big dinner Sunday. Those present were: Mr. and Mrs. Ben Ridder and children; Bub Gates; Mr. and Mrs Roy Schaefer; Florence and Margaret Gates; Mr. and Mrs. Fred Gates.

A bunch of Liberty Epworth Leaguers joined the Klemme bunch and also Rev. and Mrs. Whyte at Eagle Lake Park Sunday evening for a Twilight Service. They also had a picnic supper and a social hour together.

Miss Meta Lemke was operated on for appendicitis Saturday morning at the Mercy hospital in Mason City. She has started to show some gain at this time and it is hoped she will soon be well on the road to recovery. Her parents, Mr. and Mrs. R. R. Lemke visit her each day at the hospital.

Mrs. Emil Beier invited in a few of Grandma Beier's old friends and neighbors Wednesday, August 14th. that day being Grandma's 87th birthday. She thoroughly enjoyed every minute of the time as some of the friends are old acquaintances of many years, as the Beier family have lived in Liberty township around fifty years. After a splendid dinner prepared by Mrs. Beier they all spent a few hours visiting. Those present were: Mr. and Mrs. Reimer; Mr. and Mrs. Will Bredlow of Garner; Mrs. Emma Schwichtenberg; Mr. and Mrs. August Riddre; Mr. and Mrs. Aug. Neuhring; Mr. and Mrs. Art Wellemeyer and Grandma Wellemeyer; Chester and Elsie Ward and Ruth Ridder; Mr. and Mrs. Will Beier and Grandma Lemke spent the evening there also.

Tonsil Clinic

I wish to announce that DR. H. K. MARSHALL, Ear, Nose and Throat Specialist of The Taylor Clinc of Des Moines will conduct a Pre-School Tonsil, Ear, Nose and Throat Clinic at my Office—

Friday
August 16th

By having this work done in groups we are able to make the fees very reasonable.

Call 149-L or J For Appointment—

Dr. E. H. Phillips
OSTEOPATHIC PHYSICIAN
Masonic Bldg. Garner, Iowa.

En-ar-co Oil and Grease

Make your fall farm work easier by using En-Ar-Co Oils and Greases on your machinery. Note the low prices we are quoting on some articles you need now:

EN-AR-CO
Motor and Tractor Oils, all weights

Prssure Gun Grease, bulk, per lb ..... .15c
Hard Oil, Bulk, per lb. ..... .10c

AXLE GREASE—
In 3-10-15 and 25lb Pails.

Fly Chaser, Bulk, per gallon..... .90c
Guaranteed To Satisfy

Dip, Bulk, per gallon ..... .90c

We carry a complete line of Alemite Guns, Fittings and Repairs.

Mr. and Mrs. William Reuben and daughters, Della and Doris visited at the George Albers home on Sunday afternoon.

The Misses Ann and Emma Christians spent Sunday afternoon at the George Albers home.

PROMISES TO GET POWER FROM SEA

Newest source of power is a motor that derives its energy from the difference in temperature of sea water at the surface and deep down. It does not require very great depth to produce a difference of 35 to 40 degrees and such a variation is as valuable for power purposes as water falling 300 feet, explains the French inventor, Claude, who is developing this new form of hydraulic power. Near Havana he will build a 12,000-kilowatt plant to demonstrate to scientists it can be done. He says his invention is capable of completely transforming living conditions in the tropics, a boon especially to islands and seacoasts where coal and falling water are not available for power purposes. All this sounds like a fair-fetched scheme but it isn't safe to laugh at anybody these quick-changing days.—Capper's Weekly.

Homing Pigeon Still Factor in Warfare

Judging from a remark of Capt. John K. Shawvan, the army carrier pigeon has a war advantage over radio, and so, despite modern scientific communication developments, is still doing business at the old stand.

"When an army takes the field against the enemy, quite naturally the greatest possible effort is made by that enemy to destroy communications," Captain Shawvan said. "In the heat of battle telephone lines become destroyed, radio and visual often fail. Concentrated artillery and machine gun fire make it humanly impossible for runners to get through with their messages. It is in this most intense stage of combat and at this vital time that the homing pigeon comes into his own as the peerless and unfailing messenger."

The Eternal Feminine

Mrs. William Walker, aged ninety, of Wainfleet, England, is planning a dress with short skirts for her eightieth wedding anniversary. She says she approves abbreviated skirts for those who have good legs, and that she has not seen any legs in Wainfleet recently that are prettier than hers. She and her husband, aged ninety-one, recently celebrated their seventy-first wedding anniversary. Walker said he enjoyed reading accounts of sprightly young people celebrating their golden weddings, and of middle-aged couples holding diamond weddings.

Scandinavian Color

Other states may have their Browns, their Joneses and their Smiths, but Minnesota has its Andersons, Johnsons and Petersons. Taking St. Paul, the capital of the state, as a representative Minnesota city, it is learned there are 2,870 Johnsons, as compared to 1,050 Browns; 2,350 Petersons, compared to 630 Smiths, and 1,570 Andersons, compared to 280 Joneses. Other Scandinavian names predominate in St. Paul, as is shown from the following figures obtained from the city directory: Carlsons, 770; Ericksons, 880; Jensens, 400. The population of St. Paul is about 250,000.

Put Badgers to Work

E. S. Sholin, of Elko, Nev., fox ranch proprietor, not caring to do the work himself and deciding that his foxes were subject to too much wear and tear digging dens in the frozen ground, educated several badgers to do the work. He penned the badgers, and the animals began to dig themselves out by digging in. As soon as they had dug deep enough they were hauled out and the foxes were introduced to their new winter quarters.

Not Included

Mother was telling of some place she had taken the older boy when he was quite small. Three-year-old Billy piped up, "Was I there, too, mother?" He was told that he was not, as he wasn't even born.

His little eyes filled with tears, and his lips puckered as he said: "That's just it, you never take me any place."

Not Exactly

Blinks—I always count ten before I speak when I am angry.

Jinks—That's commendable—

Blinks—No, hardly; you see, I use the time it takes it think up meaner things to say than I could if I spoke right out.—Cincinnati Enquirer.

MOTOR TOURISTS' CAMPS IMPROVED

Resting Places Now Comprise a Number of Cottages or Cabins.

Like cars and highways, motor tourists' camps have been in the throes of evolution for a decade but seemingly are now taking a permanent form, according to the touring bureau of the Chicago Motor club. The camps now comprise a number of cottages, or cabins, with complete furnishings, and are known as "cabin camps."

"They are a far cry from the camps or ten, or even five, years ago," a bulletin issued by the motor club touring bureau stated. "Many cities and towns were prone to designate as a camp any place where water was available. The result was that those motorists who favored camping were forced to carry a tent, cots, blankets, cooking utensils and even portable fireplaces. Their cars, loaded with this duffel, resembled the covered wagons of the forty-niners. After driving perhaps 300 miles during the day, the motorists had to allot at least two hours to the strenuous effort of making camp.

"Today, however, the cabin camp is frequently encountered west of the Mississippi river, and particularly in the western mountain states. Motorists driving in those regions can expect to stop at a cabin camp almost every night. Spotless linen and shining pots, pans and tableware await the travelers. A commissary is frequently nearby. Some cabin camps offer private garages and even a kennel for the dog. All of these accommodations are usually obtainable at nominal prices.

"The East, in this instance, is slowly following the example set by the West. Cabin camps are making their appearance east of the Mississippi river, but slowly. If the law of supply and demand applies here, it may be expected that western car owners on tour in the East this summer will give great impetus to the creation of cabin camps in those states."

MOTOR QUIZ

How Many Can You Answer?

Q.—What danger is connected with driving a car with a cracked window?

Ans.—A minor accident, an unexpected bump, or even a strong wind may cause the glass to shatter, throwing chips into the car and possibly some one's eyes.

Q.—How many persons are employed in the automobile industry directly and indirectly?

Ans.—About 3,956,000 directly and 385,000 indirectly.

Q.—Why should the steering wheel be held by the rim instead of the spokes when driving at a fast rate of speed?

Ans.—Should a front tire blow, this method of holding the wheel gives more latitude in an emergency.

Q.—What should be done if a fire occurs in the wiring system?

Ans.—Turn off ignition, then disconnect either one of the battery terminals.

AUTOMOBILE NOTES

Germany has 400,000 passenger automobiles and 500,000 motorcycles.

* * *

Germany plans to spend more than $1,000,000 in improving its highways.

* * *

A careless driver is detected by the condition of the fenders of his car.

* * *

Driving in the rain has its advantages. That it is cooler is one advantage.

* * *

Watch front wheel alignment. If the wheels are out of line for a day on the tour it may mean more tire wear than in a week of normal driving.

Automobile Racing Very Popular Pastime in Italy

According to a report issued by the Italy-America society, automobile racing at break-neck speed is a major sport in Italy, rivaling even soccer in popularity. Thousands of fans see the races held in all parts of the country, particularly near Milan, where the "Monza classic," world-famous, is an annual treat. Recently the best machines and the fastest drivers in Italy took part in a thousand-mile race, which was won by Campari, Italian champion. Campari scored an average of 70 miles an hour, not on a race track, but on country roads—a real record when one considers the handicaps and the obstacles in this type of racing.

The Monza classic is open to foreigners as well as to Italians, but the latter have been winning so consistently that foreign entries are becoming fewer and fewer each year. Campari has won the national championship twice and is easily the best road racer in the world. A few years ago he won the Grand Prix at Lyon, beating the most famous of his European competitors.

Italy is fast becoming a sporting nation. Besides auto and bike racing, soccer, basket ball and track, another rapidly-growing sport is boxing. A recent national championship drew 55,000 fans. Italian boys make splendid fighters—as Americans well know. They have stamina, speed and courage. The Italian public, youthful, vigorous and enterprising, loves the element of contest. It is an inheritance from the days of old, when Romans packed the Coliseum and made national heroes of their athletes. Surely it is a good sign.

Automobile Is Equipped With New Safety Device

There is no more need for the driver of auto equipped with this safety gadget to put his arm out to signal his intention of truning or stopping. The driver of an English car has but to touch a button on the

Safety Device on English Cars.

steering wheel and the arm worked by compressed air swings up and lights up immediately. A young English miss is shown signaling to the car behind that she had made up her mind to turn.

Motor Brake Regulation in Canada Quite Strict

The department of highways of the Canadian government has issued regulations governing motor vehicle brakes. In class A, which includes all passenger cars and some trucks, foot brakes must stop the car within fifty feet at twenty miles an hour on a dry, level road. Under the same conditions, hand brakes must stop the car within seventy-five feet. Class B includes vehicles over 6,000 pounds gross weight, designed for transportation of goods, and all cars not in class A. Foot and hand brakes when applied simultaneously to this class of car must stop it within fifty feet or within seventy-five feet if applied separately.

PREVENT STEALING OF PARKED AUTOMOBILES

The new device which blazes out the word, "Stolen," directly when a thief attempts to switch on the ignition of a parked motor car, in an attempt to steal it. The secret of the new device lies in a little box attached to the ignition system which it is necessary to unlock before the ignition is switched on. The invention is pronounced absolutely infallible.

1. Mrs. Susan D. Grove of Hagerstown, Md., sixty-nine-year-old grandmother, who plans a trip over Niagara Falls in a rubber ball in September. 2. The Graf Zeppelin sailing along the New Jersey coast line toward Lakehurst. 3. Scene in Communist summer camp near Kenosha, Wis., where children of Chicago and Milwaukee were being taught the economic principles of the Reds.

NEWS REVIEW OF CURRENT EVENTS

Graf Zeppelin Arrives and Starts Eastward on a Trip Around World.

By EDWARD W. PICKARD

GRAF ZEPPELIN, the great German dirigible, was the feature of the week's news. Its second crossing of the Atlantic, from Friedrichshafen to New York, was made without mishap, and after flying over the metropolis it came to the ground at Lakehurst, N. J., in a perfect night landing. Nineteen fare-paying passengers, one stowaway and a miscellaneous cargo that included one chimpanzee, one gorilla and 600 canaries were brought over in comfort and safety.

Three days later the big airship, having been refueled, started back to Germany on what is planned to be the first leg of a trip around the world. The only stops are to be at Friedrichshafen, Tokio, Los Angeles, and again Lakehurst. If the Zeppelin keeps to her schedule she will arrive at the New Jersey hangar on August 29. Twenty-two passengers were taken on the eastbound trip. Those who intended to continue aboard for the globe circling journey included William B. Leeds, Lady Grace Drummond Hay, Carl Von Wiegand, Joaquin Rickard, Sir Hubert Wilkins, Lieut. Jack Richardson, Lieut. Commander C. E. Rosendahl and C. B. Burgess, the last three being sent by the United States Navy department. Dr. Hugo Eckener, as on the previous flight, is pilot of the dirigible, but it was reported that after this world tour he would relinquish its command and devote himself to the management of the Zeppelin company, of which he is the business head.

Rear Admiral William A. Moffett, chief of the naval bureau of aeronautics, while praising the successful trip of the Graf Zeppelin, calls attention to the fact that our navy is now building at Akron, Ohio, two dirigibles that will be about twice the size of the German airship. Work on these vessels has been going on for some time and the admiral says the first of them will be put into use in 1931. Each will be filled with six and one-half million cubic feet of helium gas and will carry five airplanes attached to the bag. Admiral Moffett has been looking along the Pacific coast for a good place for a base for these immense dirigibles.

One novelty in aviation is to be noted this week. A company has been formed in Kansas City to rent "fly-it-yourself" airplanes to persons who cannot afford to own and maintain planes. One hundred two-seater sport planes have been ordered and they will cost the renter between $15 and $20 an hour.

LIEUT. ALFORD J. WILLIAMS, America's lone hope in the international seaplane race for the Schneider trophy, to be run at Cowes, England, September 6 and 7, has produced his plane, without government backing but with the aid of Admiral Moffett, and was testing it out near Philadelphia last week. He believes it will prove to be the fastest ship in the world and that it will beat the time made by Major De Bernardi of Italy last year—318 miles an hour. The engine, of 24 cylinders in banks of six, will deliver 1,100 horsepower. The plane is a twin float monoplane, the fuselage, wings and fixed tail surfaces of wood and the control surfaces of metal.

Lieut. Florentin Bonnet of the French army, selected by the ministry of air to pilot the French entry in the Schneider cup races, was killed when the airplane in which he was training for the speed test was wrecked in leaving the airfield at Bordeaux. Bonnet was the holder of the world speed record for land airplanes.

EMINENT statesmen representing 12 world powers gathered in The Hague and on Tuesday opened a conference designed to liquidate the international problems left over from the World war. The chief matters to be settled were the adoption of the Young plan for German reparations, the evacuation of the Rhineland, and the establishment of a committee of conciliation and control to supervise the demilitarized zone of Germany along the western frontier. Whether all or any of these things could be arranged amicably at this conference was a bit doubtful. This was especially true concerning the Young plan, which in certain of its features was distasteful to every one of the powers except possibly France and Italy.

Philip Snowden, British chancellor of the exchequer, opened the discussion by frankly stating that the British government could not accept the Young scheme for division of reparations because it reduces England's share from 22 per cent to 18 per cent. He said: "Great Britain objects to the proposed division by which France gets five-sixths of the unconditional annuities—$11,900,000 out of $157,080,000. Italy gets a considerable annual sum, amounting to $10,000,000—much larger than under the Dawes plan. I hope for your forgiveness for my frank and firm speaking, but this division is utterly indefensible and the experts did not attempt to explain or justify it."

The smaller creditor powers, for which Premier Venizelos of Greece was the spokesman, also protested that their debts had been overlooked by the experts when they formulated the plan which "compresses" their reparations, but they said they had no intention of attacking the Young plan.

Representatives of France, Italy, Belgium and Japan defended the new plan as probably the best that could be devised, although each of them asserted his country was making sacrifices in accepting it. M. Cheron, French minister of finance, declared France accepted the plan in its entirety, without reservations, and considered it indivisible as the experts stated. Notwithstanding these expressions on behalf of the other nations, Mr. Snowden and Arthur Henderson, British foreign secretary, told the reporters positively that Great Britain would reject the proposed new division of reparations.

Two commissions were named by the conference, one to study the political consequences of adoption of the Young plan and the other to deal with the financial questions involved. These bodies may not get through their work for five or six weeks.

Dispatches from Rome said Italians generally were indignant at Snowden's speech, which they considered a churlish attack on the Latin nations and calculated to endanger the friendship between Italy and England. Berlin also disliked it, feeling that Snowden was trying to "squeeze still more out of the unfortunate German tax payers," and fearing that France, rather than quarrel with England, would compromise at Germany's cost.

PRESIDENT HOOVER'S law enforcement commission has divided its work into eleven sections and for each a committee has been named. Chairman George W. Wickersham himself is head of the committee to study prohibition, the other members being Newton D. Baker, Ada L. Comstock and Judge William S. Kenyon. No other single body of laws was singled out for such concentrated study as those concerning the Eighteenth amendment.

Judge Kenyon was designated chairman of the committee on lawlessness by government law-enforcing officers, which was made one of the subjects of special inquiry because of the recent use of firearms by prohibition agents in cases which aroused criticism in and out of congress. The committee on juvenile delinquency is headed by Miss Comstock, that on causes of crime by Henry W. Anderson, of Virginia, statistics of crime and criminal justice by Dean Roscoe Pound, of Harvard law college, police by Frank J. Loesch, of Chicago, courts by Judge William I. Grubb, of Alabama, prosecutions by Monte M. Lemann, of New Orleans, penal institutions by Judge Kenneth Mackintosh, of Washington state, criminal justice by Newton D. Baker, and cost of crime by Judge Paul J. McCormick, of California.

FARMERS who wish to make cider and let it get hard will not be interfered with by the agents of prohibition if they don't sell the stuff. Treasury officials announced that no restrictions would be placed on the manufacture of cider and fruit juices in the home providing these beverages were not sold unlawfully, and Dr. James M. Doran, prohibition commissioner, warned the dry agents not to molest the makers unless there was clear violation of the Volstead act.

"HOLD your wheat as long as possible in order to avoid increasing the congestion of the terminal markets," is in substance the message to wheat growers issued by the federal farm board. The board's statement said the crowding of the markets by unusually heavy shipments has caused a sharp depression of cash prices, although there is every prospect of a crop shortage in the world supply, which naturally would make prices higher in domestic and foreign markets.

OUR federal prisons must be made bigger and better, especially because they are now so overcrowded with violators of the prohibition and narcotic laws, in the opinion of President Hoover. Consequently he has given his approval to a program of expansion of prison facilities that calls for the expenditure of $5,000,000 and includes the building of a new prison in the northeastern states. The penitentiaries at Atlanta and Leavenworth will be considerably enlarged.

VICTOR L. BERGER, former congressman from Wisconsin and for many years an international leader of the Socialist party, died in a Milwaukee hospital from injuries sustained in a street car accident in July. He was a determined fighter for the cause of socialism and though he got into trouble during the war because of his denunciations of capitalism, he was respected by his political enemies. He was elected to congress first in 1910, being the first Socialist to hold a seat in that body. Two famous inventors were claimed by death. They were Emile Berliner, who devised the disk phonograph and many other things, and Dr. Karl von Welsbach of Austria, best known for his invention of the incandescent gas mantle that bears his name and his development of metal filaments in electric lamps. Thorsten B. Veblen, noted economist and author, passed away at Menlo Park, Calif.; and Mary MacLane, who gained considerable fame a generation ago as the writer of a diary and several other books, died in Chicago.

THERE is going to be a lively fight for the governorship of Virginia, for the Democrats who refused to bolt their party last fall because Al Smith was the Presidential candidate have nominated John Garland Pollard of William and Mary college to contest with Dr. William M. Brown, put up by the anti-Smith Democrats and the Republicans and backed by Bishop James Cannon, Jr. Professor Pollard was an active supporter of Smith.

Down in Georgia the split in the Democratic party was made wider by announcement of the anti-Smith faction that they would take no part in the primary called to select a candidate for congress to succeed the late Leslie J. Steele of the Fifth district but would concentrate their strength in the general election. There will be three aspirants for Steele's seat—a Republican, a regular Democrat and an anti-Smithite.

THAT old war between the On Leong and Hip Sing tongs broke out again in New York, Chicago and other large cities, and several slant-eyed gentlemen were shot to death. But United States District Attorney Charles H. Tuttle of New York threatened wholesale deportations unless the conflict ceased, so the tong leaders got together and signed a peace treaty.

KING FUAD of Egypt and his prime minister left London with a proposal from the British government for giving Egypt the status of an independent nation and at the same time preserving in all essentials British control of the Land of the Nile. It is designed to satisfy the troublesome Egyptian nationalists without periling British interests, and it must be accepted by a new freely elected Egyptian parliament.

AGED LOVE POISON MAY HAVE KILLE

Claims "Love Potions" Given as Tonics.

Vienna.—Anna Pistova, age two or ninety-three is to go o shortly in Pancevo, Yugo-Slav the charge of furnishing pois wives who wished to get rid of husbands. Six wives who trie "love potions" on their husband became widows are to be tried Anna, or after her case is Some say she has led to the of 60 husbands, and of many for men also patronized her.

While Anna is called the " of Vladimirovac," a place not from Belgrade, and is an exceed aged person, it appears that she no means a peasant crone. Her as now told is one for a novelis it is difficult to say how much it contains. The United States the only country in which a w on trial for murder is provided w romantic past.

The Village Enters.

The story is that Anna was daughter of a rich cattleman of mania, who moved to Vladimir 80 years ago, and that she rec an excellent education. The vi goes the story, entered her life she was twenty-one. As is al the case with more than ordin heartless female killers, she ha be more than ordinarily beau The villain was a young officer, finally cast Anna aside and left h pessimist and misanthropist.

Anna sought seclusion after th fair of the heart, and with her kn edge of five languages gave herself to medical and chemical studies. came out of her grief sufficiently marry a landowner named Pist by whom she had 11 children. one survives, a prosperous merch

Her husband's death sent back to the test tubes and beak She built a laboratory onto her h and evolved from herbs many rea supposed remedies for diseases, she is charged with having plenty arsenic around. She dispensed of her remedies to wives who not inconsolably distressed when t husbands tried the remedies and the wives with property and prosp of other husbands. As has been s It is charged that not a few husba who bought remedies of Anna careless about leaving them aro where their wives could sample th with disastrous consequences for samplers.

That is the defense. Anna's co sel assert that she was not respo ble if wives or husbands took o doses of her medicines. Some of fatal medicines are said to have c tained vegetable poisons which w exceedingly difficult to detect, some of them appear to have c tained arsenic.

Called 'Em Tonics.

Arsenic is used as a tonic and so people became arsenic addicts. husband of Mrs. Florence Maybr was an arsenic addict, which made Mrs. Maybrick's conviction poisoning him to death with arse extremely doubtful as to the cha having been proved. Anna's defe is somewhat along the same lines. says that the death dealing medici containing arsenic which she d pensed were first rate tonics for t purchasers, if used properly.

Anna herself is said to be a wr ing advertisement for her own toni if she takes them. She is describ as looking not more than fifty-f years of age, instead of ninety-two ninety-three; has her hair curled and uses cosmetics.

Criminals in Belgium Inclined to Be T

Antwerp, Belgium.—In the crimi population of Belgium the proport of tall persons is much higher th it is among recruits, representing p sumably the average of the male p ulation. Doctor Vervaeck, a Belgi psychologist and authority on cri nology, made this discovery after comparison of the measurements about 25,000 individuals.

The Belgians are a short but bro race. Their average height is ab 5 feet 6 inches. Doctor Verra classified the recruits and crimina into four groups—the shorts, betwe 5 feet 1 inch and 5 feet 3; the m dles, from 5 feet 3 to 5 feet 7 inch the talls, from 5 feet 7 to 5 feet 10 inches, and the superior talls, 5 fe 11 inches and over. The shorts cluded 13.5 per cent of the recru and only 11.6 per cent of the crim nals. The middles included 63.5 p cent of the recruits and only 55.9 p cent of the criminals. In both t groups proportions of criminals in excess, the talls having 22.1 p cent recruits and 30.6 per cent cri inals, while the very talls include 0.9 per cent of recruits and 1.9 p cent of the criminals.

One Street Housing 100 Incorporated as Villa

St. Louis, Mo.—One street, fifty families numbering with servants than 100 persons, five trustees and bridle clubhouse as town hall prise the newest village in St. L county. The Village of Huntleigh cated on Denny road, was rece incorporated by the County C to avoid the possibility of annexa by some other community. Trust who were appointed by the court, call an election soon for the pur of choosing a mayor.

AN OBSERVING WOMAN

(© by D. J. Walsh.)

SINCE when," asked Philip Lane lightly—and if Barbara had been an observing young woman she would have noted that he spoke almost too lightly to be natural—"do you sport jewelry at breakfast?"

"Good gracious!" in a burst of exasperation, "must one have habits for everything? Have you any objection to my wearing a bracelet in the morning for a change?"

Her husband smiled tolerantly. Let me see—just a month ago you criticized Mrs. Haversilk for wearing diamond rings before noon in the garden.

Barbara flushed. The very mention of her neighbor, a very pretty young widow, annoyed her. "That's different," she said in a voice that refused to invite any further explaining. She pushed her chair back impatiently and walked out of the dining room. Odd, how everything Flip said lately got on her nerves.

"So long, Barby," Philip brushed her cheek with his lips, "enjoy your bracelet!"

She managed a "Good-by, Flip," in a rather hoarse voice, though indignation choked in her throat. Bangle! The very idea! This beautifully carved jade bracelet! Her fingers touched it lovingly, dreamily. A princess had worn it many years ago, that was before he had told her. A Chinese princess with creamy skin and velvet black eyes who had loved the artist who had carved it for her. And when her stern parents had insisted she marry a man of royal birth of their choosing she had run to the temple and given her precious bracelet to the priests for safekeeping and then flung herself in the lily pool.

Barbara had been thrilled by the story, or was it the deep, low voice of Captain Jameson, with its plaintive pathos, that had aroused her womanly love of romance? He had heard the story from an old mandarin and immediately set out to search for the bracelet. Tumbling back to Barbara were his words. The weeks of hunting, the picturesque old temple, hidden from the world; the cold-eyed, silent priests; the weeks of winning their confidence; the bargaining in the dead of night in the tomb-like stillness of the temple; the incense burning and finally the bracelet in his hand. One thing that bothered Barbara a little was that she had never known that Captain Jameson had loved her. Now, she remembered him in a vague way, remembered dancing with him; it was before she had married Flip, almost five years ago. She had not even known that he had gone to China. The idea that he had cherished a deep love for her without her being aware of it now irritated somehow. Think of the trouble he had gone to getting this marvelous bracelet for her!

The living room, with its soft-toned draperies and deep-seated armchairs, a few weeks ago the pride of Barbara's heart, was suddenly a stuffy, commonplace room, totally out of keeping with her poetic thoughts of Chinese temples and lily pools. Even the new wilton rug, Flip's birthday present, jarred her. She flew to the garden, but even here there must be something irritating, for who stood over the hedge in the garden but her neighbor, Mrs. Haversilk. Oddly enough, ever since Captain Jameson had arrived Barbara had taken a dislike to the pretty widow. For one thing, she had found out that Mrs. Haversilk was a flirt and that she was quite brazen about vamping Jameson. Barbara, however, had scored a point when she had shown Mrs. Haversilk the bracelet. She would never forget the expression of utter astonishment on the widow's face.

"Hello!" called her neighbor genially. "Come over and see my peonies. Aren't they loves? Oh, by the way, have you heard from Captain Jameson since he was called to Washington?"

Barbara was forced to admit that she had not.

"Really not? Why, only this morning I had another postcard!"

Barbara told herself that Mrs. Haversilk was fibbing, but somehow as she went back into the house she felt very depressed and absent-minded.

When Flip came home that evening he found a very excited, hot-cheeked wife waiting for him. "Oh, Flip," she was almost in tears, "I've lost my jade bracelet Captain Jameson gave me!"

Flip did not really mean to smile and when his "Well, well!" sounded a bit too much like congratulations he hastily added, "That's too bad, I'll get you another."

Another! As if one could buy another that a Chinese princess had worn centuries ago! Barbara decided to ignore his stupid remark. "I think I lost it in the garden this morning, I'm not sure. I never missed it until long after lunch and I've hunted and hunted!" It was all she could do to keep from wringing her hands, so great was her misery. "I was in the garden this morning talking to that horrid Mrs. Haversilk and I might have lost it then, I'm not sure. I looked all over on both sides of the hedge and I asked her, but she said she had not seen it. She smiled sort of spitefully, I think. And I looked everywhere in the house. I went through all my bureau drawers and turned out my closet. I shook out every dress. And I emptied the clothes hamper and I even moved the bed and the davenport."

"Let's have dinner and then I'll look the garden over again," Flip comforted. "You know I'm a great detective," he attempted to joke.

Barbara made a brave effort to eat her dinner. Flip must not see that she cared so dreadfully. She even tried to converse about other things and forced a laugh when Flip told a funny story. But all the time her thoughts ran wildly. What would Captain Jameson say when he came back from Washington? The bracelet guarded by the priests in that old Chinese temple for centuries she had not been able to keep longer than a week! The bracelet that had cost him weeks of work, of effort, to say nothing of money! The bracelet he had obtained at the risk of his life for her.

No amount of searching brought forth the jade bracelet. It was as if the world had swallowed it up and for some strange reason Flip seemed very cheerful about it. If Barbara had not been so unobserving she might have noticed how every now and then he smothered a chuckle.

Flip suggested going to the "movies," and because Barbara thought she might as well suffer there as at home, she consented to go. As they entered the lobby of the theater, who should they meet but Mrs. Haversilk, just coming out. "It's a wonderful picture, you'll love it!" she enthused. "Oh, and by the way, did you find your bracelet?"

"No," answered Flip, for his wife, "we should worry. I'm going to buy Barby another."

"Oh, haven't you the nicest hubby?" cooed the pretty widow. "Good-by," and waved her hand in a little gesture of farewell. Barbara's eyes grew suddenly large, her mouth opened, and if the incoming crowd had not pushed her along she would have run after Mrs. Haversilk, for on the pretty widow's white wrist Barbara had seen her jade bracelet.

Flip had a bad night of it. Barbara got up at least a dozen times to raise or lower the windows, and when she was not getting a glass of water she was adjusting the bedclothes or turning her pillow for the hundredth or so time. Because of it all Flip got very little sleep, and naturally he was in a bad humor the next morning.

Barbara's last plan just before she had fallen asleep at dawn had been to tell Flip of her discovery, but when she saw his scowling face she decided to surprise him in the evening. She was quite determined to get her bracelet back, and all through breakfast she practiced a dozen little scathing speeches she would make to Mrs. Haversilk.

Directly after Flip had left she began to dress. She wanted to face Mrs. Haversilk looking her very best, but no amount of primping and fussing could change the dark circles under her feverish-looking eyes.

It was just when she was adjusting her new blue felt hat to a smart angle that the bell rang and a little annoyed she snatched up her coat and gloves and ran downstairs to open the door.

There stood Mrs. Haversilk in her pink house dress with the cheeriest smile on her face. "Good morning!" she breezed. "Oh, you're just going out! Well, I won't keep you a minute, my dear."

With an icy little smile Barbara led her into the living room.

"Just think, I found your bracelet this morning!"

Barbara colored. Of all the nerve, she thought hers was the most.

"The gardener must have dumped a wheel-barrow of trash over it yesterday right at the hedge. He put the manure on the flower bed this morning and found your bracelet.

Barbara boiled inwardly. Lovely! Inventing a story about trash on her precious, century-old Chinese bracelet!

Indian Mound Builders Fond of Good Eating

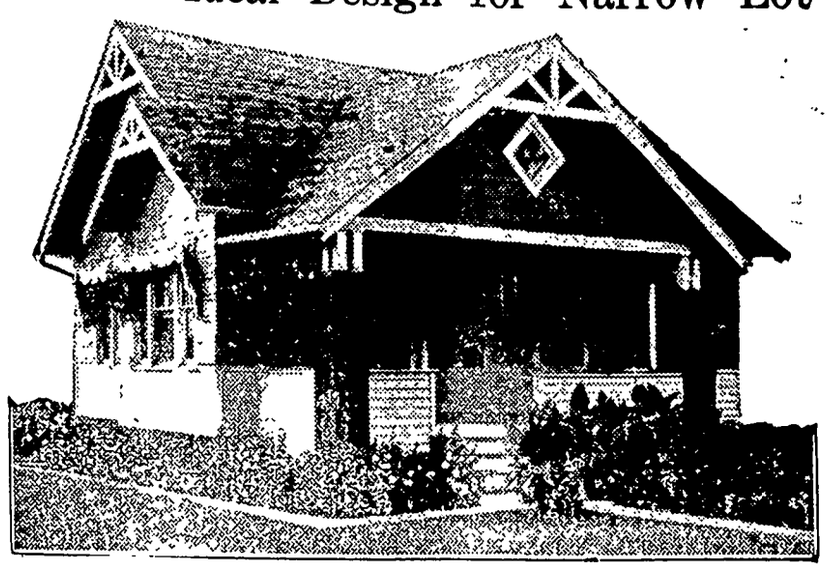
Tender turkey, duck, racy venison and 'possum, frog legs, and even the French delicacy of snails were relished by the early Indian mound builders of central Illinois. That the mound builder knew his meats and used them in great variety is indicated by the bones found in recently excavated mounds, Frank C. Baker, curator of the University of Illinois museum, has reported to the Illinois Academy of Science. Beaver, squirrel, raccoon, geese, clams and fish were all on the menu.

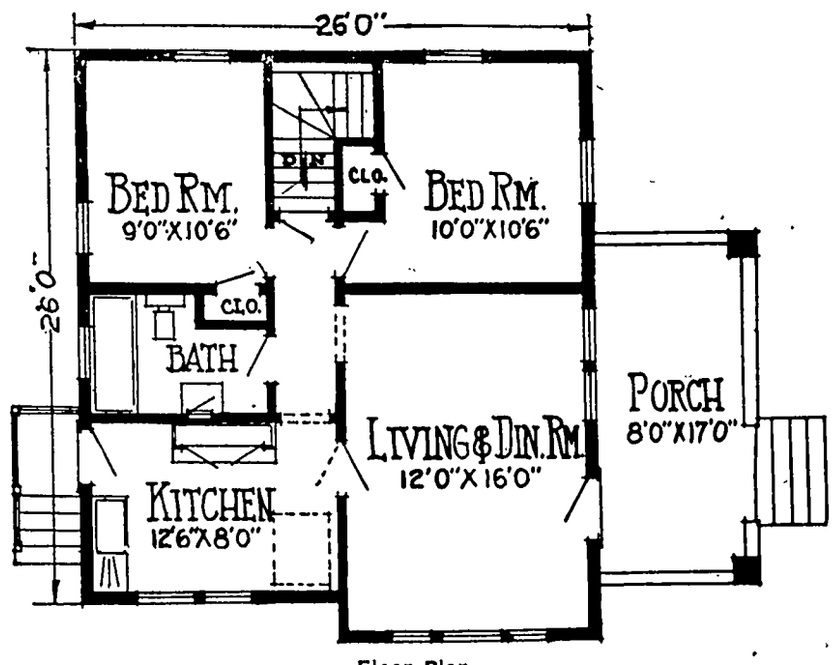
Tools as well as food were furnished by animals. The sharpened bones of deer were especially useful for such things as awls, chisels, scrapers and needles. A large mollusk shell fastened to a handle made an excellent hoe. Smaller shells became spoons. The Indian flapper wore necklaces of pearls, or small shells, and used clam shells for earrings. The warrior decorated himself with the teeth of bears, one human skeleton found having teeth from 12 bears. In one mound was found a human jawbone and the jawbone of a dog, drilled, apparently worn around the neck as an amulet.

National trade was used by the mound builders to secure mollusk shells from Florida and the Gulf of Mexico. These probably came by way of the southeast, passing from tribe to tribe, until they reached the Indians in Illinois, who prized them highly.

These early Indians had no domesticated animals. A few skeletons of Indian dogs have been found in the mounds. These probably were brought in by barter from British America.—Kansas City Star's Science Service.

Cottage Type Bungalow Makes Ideal Design for Narrow Lot





Floor Plan.

This cottage type bungalow contains only four rooms and bath. However, the living room is designed so that it makes a combination living and dining room. This is an excellent design for a home to be built on a narrow city lot; it is only 26 feet wide and 26 feet deep.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Home! There is magic in that word. It brings thoughts of a place that is your own—a place where you and yours are happy—a place where you forget your cares and business problems—where your wife may rear your children and where, as they grow into young manhood and womanhood, they may have their friends. Home at once brings to mind the comfort and companionship that is found only at one's own fireside.

Then, too, there is the mental picture of the grounds surrounding the home. The lawn is smooth and velvety; there are flowers in beds along the walk and the driveway; at the back is the garden where you may grow vegetables for the family table.

Truly there is magic in the word "home." Thoughts of home may be turned into a realization of a home of your own by firmly resolving that you will have a home, a lawn and flowers, and a garden.

Building a home is a considerable undertaking but millions of other American families have achieved homes of their own, and what millions have done, those who have not yet secured a home of their own, may do.

Begin now to know the pleasure of living in a home suited to your own requirements and to know the satisfaction of owning your home and get acquainted with the magic in the word "home."

It need not be large or expensive. We look at the larger estates and mansions and admire them and perhaps borrow an idea here and there, but it is our own little home that really arouses our enthusiasm. A small home can be added to and improved year after year, and every investment of money or time and labor is not lost, but becomes a real and growing improvement for years to come.

Today we show a four-room love nest, and how can love fail to endure and thrive in so lovely and cozy a bungalow. Every room has cross ventilation, are all of generous size, and the arrangement is all that anyone could desire.

As a well-known writer once said:

The little white gate stands open and
rambler roses beckon,
To rest within the little house where
time doth never reckon.

Truly there is magic in the word, "home."

Concrete Job Finished in One Day Is the Best

Any large piece of concrete work should, if possible, be started early enough to insure its completion the same day and thus avoid construction joints between one day's work and the next.

If it is necessary to stop work on a wall or foundation before it is finished, the concrete should be brought to a level in the forms and the surface prepared to receive the next day's work by placing pebbles projecting half way out of the concrete or by roughening the surface with a trowel. This will make a better bond. Before concrete work is commenced the next day, the top surface of the hardened concrete must be cleaned.

If too much water has been used a creamy scum will be found which must be cleaned off. Then coat the surfaces with a paste of cement and water just before new concrete is applied.

Floors Must Reflect Architectural Plan

A floor should always be selected for its suitability. No successful architectural and decorative treatment of a room is possible unless the floor harmonizes with its character and individuality.

It must conform to the architectural design of a room, which is the key to its decorations and furnishings. Whether the proper floor would be antiqued oak plank floor or one of rich colorful tiles, is a question for your architect to determine.

Try Many Experiments With Metal Shingles

Many experiments have been tried with sheet metal shingles. Interlocking patterns have been invented, and you will see roofs covered with copper or zinc pressed into these shapes. The latest is the sheet steel tile, covered with lead. No one doubts the durability of these metal roof coverings.

Home Builders Need Help of Experienced

This is the "open season for indoor building," architects say, but they are distressed at the way the game laws are desregarded.

It is now that people, planning to build homes or to remodel those they already have, are busy with paper and pencil and blue print.

"Two things amaze me," said one architect. "One is the real ability shown by so many novices. The other is their stupidity regarding obvious and vital details, which they so often utterly overlook."

He went on to explain—stairways in the wrong place, necessary closets forgotten, plans for artistic lighting equipment and the placing of this equipment ignored, doors in the wrong spots or not at all, any number of grievous and costly errors.

"This is particularly true of light furnishings," the architect said. "People generally don't appear to realize how necessary it is to have lighting equipment in harmony with the house and its furniture if the house is to have the charm they seek.

"Apparently they don't know that colonial wall brackets clash with a Spanish type dwelling; that period furnishings require lighting equipment of the corresponding period. They are apt to use any old thing, just so it gives light."

Especially was this the case, he explained, when the owner of a house decided to remodel and refurnish it.

"The owner and his wife are so likely to let the old light equipment stay," said the architect.

"They've heard them called 'fixtures' and they believe it. They have an untru picture of great expense in removing the old equipment. They really are more concerned over that than about the relative inexpensiveness of the new fittings which would harmonize with the new furniture.

Is Big Asset

Resale value is a big asset in a home, but it is greatest in the brick home.

DAIRY FACTS

FEEDING GRAIN TO DAIRY COWS

Wise Feeder Will Supply Balanced Ration.

(By J. W. LINN, Extension Dairyman, Kansas State Agricultural College.)

Balanced rations are just as important to the dairy cow in summer as in winter. To maintain the balance and keep up the high production record, grain must be fed.

Grain feeding is always more expensive than roughage or pasture feeding in Kansas. If grain feeding is more expensive than roughage or pastures, there can be only one reason for its use, and that is to supply nutriment that the heavy producing cow cannot get from the roughage or pasture.

Profit from dairy cows is linked so closely with high production that it is impossible to separate them. In other words the cow producing 400 pounds of fat is making two and a half times as much profit as the one making 200 pounds of fat.

The wise feeder will feed a balanced ration and do so according to production. He will feed such as to have the same ratio between protein and carbohydrate—about one to six.

The grain ration that will usually be found most profitable is two parts of corn to one part of oats or bran. This will be true until the grass begins to dry up or grow short. It is important to again increase the protein part of the grain ration at which time the 4-2-1 ration which consists of four parts corn, two parts bran or ground oats, and one part cottonseed or linseed meal should be used.

The second important thing in profitable grain feeding is to use the grain according to production because the cow producing 50 pounds of milk will need about three times as much grain as the cow producing 20 pounds.

Production Best Guide for Feeding in Summer

It's the high producing cow that needs grain while she is on pasture, according to I. W. Rupel, of the animal husbandy staff at the Wisconsin State College of Agriculture.

Some have the idea that their cows do not require grain because they turn up their noses at it when they first go out on pasture. These men will find, according to Rupel, that as soon as the cattle have been on the new grass about a week, grain will keep them from slumping in production.

The proper way to determine how much grain to give during the summer, Rupel believes, is to feed according to production. A Holstein, producing over 30 pounds of milk per day, should receive grain at the rate of one pound for every four pounds of milk produced above 30 pounds. That is, a cow producing 50 pounds of milk should have five pounds of grain. Jerseys and Guernseys should have a little more grain than Holsteins, and when the pasture is poor, the grain ration should be increased.

Equal amounts of corn and oats make a good mixture for the summer grain ration. A little oil meal may be added to make the feed more palatable. Protein supplements are not usually necessary because sufficient protein is obtained from the average good pasture. When pastures become poor during the dry season, some protein feed is beneficial.

Dairy Facts

Heavy producing cows pay best.

* * *

To feed cows well is to feed them profitably.

* * *

In calf production, the influence of a good bull is of major importance.

* * *

Feeding dairy cows according to the amount of milk they produce is a profitable practice.

* * *

Milk can't be manufactured without salt and water. See to it, therefore, that the cow, the ewe, and the sow have plenty of both.

* * *

All kinds of young animals thrive best on green pastures. A green patch, enclosed with a temporary fence, often solves the grazing problem.

* * *

Creameries which buy whey cream should have no fear of ill effects from mixing it with the regular supply of cream, if the quality of the whey cream is equal to that of the regular supply.

* * *

To keep the average butterfat production on a steady increase, a herd owner must cull unprofitable cows.

* * *

Destroy all breeding places of flies by hauling away manure daily and preventing accumulation of any filth.

* * *

Since milk is one of the most easily contaminated foods, it is important that it be kept away from disagreeable odors and in a cool place. A brick or cement milkhouse furnishes the needed conditions in a most satisfactory manner.

CAP AND BELLS

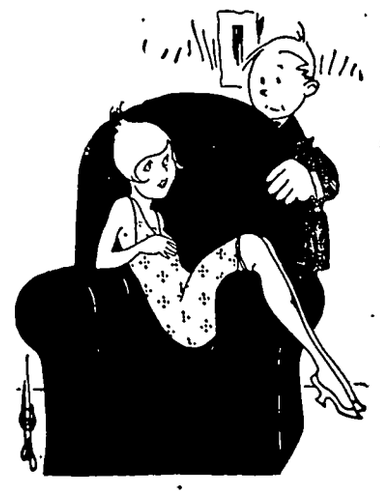
PRETTY POLL

For a long time the loquacious man in the barber's shop had made comments on the appearance of a parrot standing on a ledge over a mirror, saying it was the worst stuffed bird he had ever seen.

"Look at its legs!" he scoffed. "No parrot ever had legs like that. It couldn't stand on them!"

"Really?" said the parrot, lazily scratching the side of its head.

CAUSE OF LONGEVITY



She—You say your dad is over a hundred year old? To what does he attribute his longevity?

He—He was always a good dodger.

Night Clubbers

The lightning bug said to the owl,
"Though difference we display,
We sympathize. At night we prowl,
And stay awake all day."

Division of Labor

"My friend," said the artist, "this picture here has taken eight years of work."

"Eight years? Why, it's only a small one!"

"Well, it took six hours to paint it and the rest of the time to sell it."—Swindon Advertiser.

Emphatic

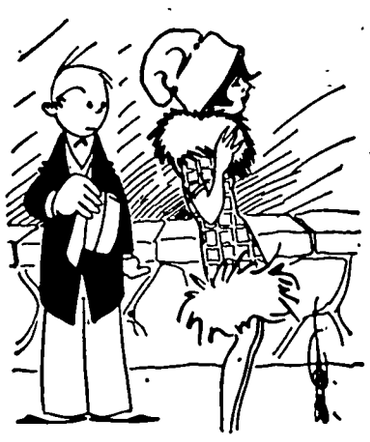
She was lecturing on the wrong of poor down-trodden women. Finally she put this question:

"Is there in this hall a single man who has never spoken an unkind word to his wife?"

At once an old man jumped up.

"Yes, I'm that single man," he said, "and I mean to remain so?"

DOUBLE CROSSED



He—What was wrong in putting those two X's at the end of my letter?

She—That's double crossing me.

Onward and Upward

The aviator is so proud,
He seeks a lofty form of mirth;
He'd rather hit a thunder cloud
Instead of coming back to earth.

Appearances

"Your daughters have all made charming photographs."

"Yes," answered Mr. Cumrox, "I have learned to recognize them by their printed pictures. In order to become better acquainted I think I shall request them to assemble at dinner in their bathing suits." — Washington Star.

Hubby's Advice

Benham—I wish you wouldn't make me pay so much for your complexion."

Mrs. Benham—Why not?

Benham—Do you want people to say that your face is in your husband's name?

Fired!

"It is said of the late Andrew Carnegie—" began the efficiency expert, impressively.

"I won't have this," stormed the self-made boss. "If he was late discharge him at once."

Popular Place

"Where is the most popular place to live in this town?" asked the newcomer.

"Well," replied the local agent, "I should say, just off hand, beyond one's means. At least that's where most everybody seems to be living."

Got His Ideas Complete

Father—I'm sure our boy did not inherit his silly ideas from me!"

Mother (icily)—No, you've still got yours complete!

Mr. and Mrs. Henry Lewis and ...n, and Mr. and Mrs. Lew Lewis ...ve to Garden City, Minn., Satur... y to visit over Sunday at the Hen... Yahnke home. Sunday a lot of ... relatives there go together and ... a big dinner.

NOTICE TO PIANO PUPILS

I will be in Klemme at the R. A. Jorgenson home, Tuesday, August 20th at 3:00 p. m. at which time I would like to meet with the former piano pupils of Miss Ely, and others who are interested in receiving piano instruction. Miss Marian McNulty, Belmond, Iowa. 1tc

---

Art Wellemeyer, accompanied by his nephew, Fletcher Wellemeyer, drove to Red Wing, Minn., the first of this week on business. Red Wing is a beautiful place and as you approach the town it appears you will drive right into a high bluff, but the road divides and one goes around to the river and the other to the main highway. There are 800 steps leading up to the top of the Bluff; Art climbed 400 of them. Each step has a name on it of the person who paid for it. A fine view is seen from the top of the hill.

Miss Adella Kuhlman came Monday from Menno, South, Dakota, where she has spent the summer visiting with her parents. She visited a few days at the Grosshuesch home in Klemme before leaving for Forest City, yesterday, where she has a position as operator on the telephone exchange.

Earning Is'nt Enough!

Most of us like to work, for work enables us to satisfy our hopes and ambitions. It produces the money with which we can purchase the things we most want and need.

—But working and earning isn't enough — saving must be part of our program if we are really to succeed and enjoy the fruits of our work in our old age.

Work hard and intelligently; save a portion of your earnings with regularity; enjoy life as you go along and your future and that of your family is assured.

First National Bank

49 calls for office help were received at the college during the month of July.

If you want a good position, we can help you.

HAMILTON COLLEGE OF COMMERCE. Mason City, Iowa 1tc.

Mrs. Lena Schroeder and daughter, Adella, Grandma Schroeder and Dorothy Croner drove to Geneva last Thursday. Miss Adella will teach domestic science in the high school there this coming year.

Miss Meta Lemke was taken to the Mercy Hospital at Mason City Friday afternoon and on Saturday morning underwent an appendix operation. At this time she is making a good recovery.

Grandma Schroeder and granddaughter, Dorothy Croner, expect to leave soon for Chicago where Dorothy will enter school. They will live with Mr. and Mrs. Henry Schroeder during the winter.

Ralph Ludeke purchased a new Chevrolet coach last week. On Saturday morning the Ludeke family left on an extensive tour and camping trip through the Gulf States. They expect to return by the first of September.

Mr. and Mrs. M. O Barr and La Von are on their annual vacation. They arrivde at Mansfield, Ohio, 721 miles in 23 hours and 25 minutes after leaving Klemme. They will make trips from there to other parts of the country.

Rev. and Mrs. Adolph Fruechte and daughter, of Chicago, and his mother of New Albion, Iowa, stopped in Klemme a short time Wednesday afternoon for a visit with Mrs. G. Schroeder, and Mrs. Lena Schroeder and daughter, Adella. They had been on a trip through the West and were on their way home.

Mr. and Mrs. Albert Schroeder and Mrs. Henry Schroeder drove in from Chicago Wednesday evening for a visit. The former will remain until Sunday, but Mrs. Henry Schroeder wil remain until next week when "Butch" will come for her and Grandma Schroeder and Dorothy Croner who will be in Chicago this winter.

You will fill the place in life you are PREPARED to fill. It cannot be larger.

A practical business training will help you fill a place that is worth while.

FRED WESSELS GIVEN SURPRISE PARTY ON BIRTHDAY

Seventy Six People Help Make Him Remember 21st Birthday

A surprise party on Fred Wessel's birthday was given him on his 21st birthday, which was August 19th, but the surprise was held Aug. 18 at the home of his parents, there being seven six people invited to help him celebrate. Mrs. Wm. Wenz baked a fine birthday cake for the event.

Those present who came to help Fred celebrate were.

Mr. and Mrs. Luke Wessels from Meservey; Mr. and Mrs. Geo. Wessels and family of near Ventura; Mr. and Mrs. E. Esk and family from near Chapin; Mr. and Mrs. John Jordan from Meservey, Mr. and Mrs. Dick Wessels from near Meservey; Mr and Mrs. Ben Verkant and son of near Meservey; Mr. and Mrs. Luke Wessels and family from near Belmond; Mr. and Mrs J. Priebe and family from near Klemme; Mr and Mrs. Wm. Wenz of Klemme Mr. and Mrs. Moody Quandt and daughter from Meservey; Mr. and Mrs. Fred Quandt and daughter of near Meserve; Mr and Mrs. C. Meintz and daughter from near Meservey; Mr. and Mrs. Abe Meintz and family, Mr and Mrs Will Meintz and family; Mr. and Mrs. Kriens and family; Mr. and Mrs. John Meinders and family, all from near Meservey.

In the afternoon ice cream and cake and lemonade were served to all and cigars for the men.

All present enjoyed a good time and Fred received many fine gifts. He says t was a complete surprise in every way.

FARM BUREAU LEADERS WRITE NEW PROJECT

The woman's division of the Hancock County Farm Bureau Board met in regular session at Garner, Tuesday P. M. Aug. 13. Mrs. N. May Larson of the Extension Department of Iowa State College was present and assisted in writing the project for the ensuing year The work will be on "Second Year Nutrition" and will consist of five lessons.

The subject is one of interest and importance to all farm women and it is greatly to be desired that they avail themselves of this opportunity to take the work under expert leadership. Copies of the project, together with dates and other information, will be in the hands of local leaders soon.

Mrs. Ed Oxley, Publ. Chrm.

R. A. Jorgenson and family; Mr. and Mrs. C. F. Keraus and C. G. Waterman and family all went to Wood Haven Cottage at Ventura to spend the week end Sunday they were joined by Mr. and Mrs. Fred Kluckhohn; Frank Kluckhohn and family and Art Kudje and family, and all enjoyed a big fried chicken diner together.

SCOUTS TO ATTEND CLOSING CAMP FIRE

SCOUTS ENJOY SWIM AND CAMP FIRE AT ROOSEVELT

Camp Closes For Season Monday Evening With Ceremony

Scouts of Troop 50, Klemme, and Leaders enjoyed another outdoor meeting and a swim at the Scout Camp Beach at Roosevelt last Monday evening.

Following the swim in the lake a lunch was eaten at the Handicraft Lodge and later the camp fire program was taken in.

As Camp Roosevelt closes for the season next Monday night with a camp fire program of real interest, it is planned that Troop 56 will again attend Camp, along with parents and Scout Leaders. The closing camp fire program is the outstanding camp fire of the camping season and all Scouts, friends and parents are especially invited to attend. All Scouts should be in full uniform for this ceremony.

As the Scoutmaster and two of the Troop Committeemen will be absent from Klemme Monday, Dr. W. F. Missman, Troop Com. Chairman, will arrange all details with the Patrol Leaders, who in turn will notify their Patrols of the arrangements for Monday night.

A special invitation is extended to the parents to take in the closing camp fire program which begins at 8:00 o'clock.

BEN GREIMAN RAISES BEST OF FRUIT ON HIS FARM

Plums Are As Large And Sweet As Shipped n Varieties

Ben Greiman, who lives northwest of Klemme, brought the Times some fine plums again last week.

The plums Ben brought in this time were of three varieties. One is a free-stone, which when sliced cuts into halves like a peach. nother was a deep red plum which was very sweet. The plums were all very large and were as big and sweet as the shipped in plums.

Ben has without a doubt, the best orchard in Hancock County. He has a fine variety of plums, appels, grapes, etc., and knows just what kind is best for this locality and how to care for them.

Anyone who plans to set out fruit trees will do well to get Ben's advice ou what is best to plant.

THE TIMES WILL HAVE A VACATION NEXT WEEK

Editor And Family Expect To Take Trip Through Ozark Mountains

According to present plans The Klemme Tiems will have a vacation next week and will not be published.

This is being done so that the Times force can enjoy an uninterrupted vacation. Ye Editor and family and C. G. Waterman and family will make a journey to Kansas City, Mo., Chanute, Kansas, and on through the Ozark Mountains.

The Times will be issued again the first week in September.

KLEMMEITES ON TOUR THRU THE BLACK HILLS

South Dakota Mountains Popular With Klemme Visitors

Emil Barz, Henry Barz and Ed. Becker left Wednesday morning on an auto trip to the Black Hills of South Dakota. They expect to put in a week or more viewing the wonderful mountain scenery found at the Hills.

Otto Lemke and family and Miss Hampel returned Sunday from a trip through the Black Hills and enjoyed the scenery very much.

Erick Josten and Earl Josten are making plans for a trip through the Black Hills and will remain there about a week.

The Barz expedition plan also to take in the Yellowstone and will return thru northern N. Dak. and Minnesota. Their trip will take about two weeks or more.

The Black Hills trip is popular with Klemme folks who have been there and all praise the beautiful mountain scenery.

K. H. S. ALUMNI WILL STAGE A HOME TALENT PLAY

Local Young People Will Put On A Four et Comedy Drama

Next Friday evening, August 30, the graduates of the Klemme High School will stage a four act comedy drama at the High School auditorium.

The cast nas been hard at work on the play for several weeks and now have it ready for presentation.

The cast of characters of "Dr. Jim," title of the play, will be found in another section of the Times.

Home talents are always popular in Klemme and no doubt the play will draw a full house.

FUNERAL FOR MRS. SWANSON'S MOTHER HELD TODAY

Mrs. Lena Dahlgren, age 84 years died Monday at the home of her daughter, Mrs. Oscar Swanson.

Funeral services for Mrs. Dahlgren were held this afternoon at the Swanson home east of Klemme at 2:00 o'clock, in charge of Rev. J. T. Snyder, of Belmond.

Interment was made in the Klemme cemetery.

The sympathy of the comunity is extended to the bereaved relatives at this time.

ED. C. FORD RECEIVES PROMOTION IN INSURANCE WORK

Mr. E. C. Ford, who is well known through this section of the country as general agent for the Cedar Rapids Life nsurance Company of Cedar Rapids, Iowa, and also because of his previous connection with the Farmers National Bk., at Garner and the Exchange Bank at Dows, will remove from his home in Iowa Falls about October 1st to take the management of sixteen counties in south central Minnesota for the Cedar Rapids Life Insurance Company of Cedar Rapids, of which company Mr. Ford has been for the past five years general agent in northwestern Iowa territory with headquarters at Iowa Falls.

Mr. Ford's headquarters in Minnesota will be at Mankato where the Company will open an office for him. The territory which he will manage embraces several of the larger towns in southern Minnesota.

Mr. C. G. Waterman is the local representative of the Company in Klemme and vicinity.

FAMILY RE-UNION HELD AT STATE PARK

EIGHTY FOUR PEOPLE ATTEND BREDLOW REUNION

Family Gathering Was Held Sunday At Eagle Lake State Park

The Bredlow Clan gathered at the Eagle Lake State Park Sunday, August 18, 1929 for a reunion of the Bredlow families. There were eighty-four relatives present and all bruoght with them baskets loaded with good things to eat for a picnic dinner.

They are the descendants of Mr. and Mrs. Carl Bredlow, who came from Wisconsin in the early pioneer days and settled on a farm southwest of Garner, known later as the Charles Bredlow farm.

These parents were preceded here by their two sons, viz. William, who came to this county in 1879, and Charles, who came in 1886. The parents and two daughters, Augusta and Mary, followed the next year.

The children of Mr. and Mrs. Carl Bredlow are as follows: William, Mrs. Minnie Bucholtz; Mrs. Amelia Bowchon; Augusta, Mrs. Albert Reimer; Charles and Mary, Mrs. August Neuhring.

All resided here continuously with the exception of Charles, who had lived in Oklahoma for eleven years, but is now a resident of Liberty township; Mrs. Minnie Bucholtz and Mrs. Amelia Bowchom who remained in Wisconsin.

These people came here in the early pioneer days when there were but few settlers here. As an industrious family they did much to help build the community and school Much of their interests were also devoted to church work, serving regularly in church offices, such as Sunday School superintendent and teachers, at which William, the eldest, has now been regularly retained for fifty years.

The reunion was planned so suddenly that the sisters in Wisconsin were unable to attend this year. But plans have been made for another reunion next year at which it is hoped they may be present also.

The relatives in the party were as follows:

Mr. and Mrs. William Bredlow, Mr. and Mrs. August Kropp and children, viz. Gilbert and wife, Carris, Lucille, Hilda, Relma, Orville, Viola, Lester and Neva.

Mr. and Mrs. Herman Gast, Kenneth, Mildred, Loran, Lola and Lois.

Mr. and Mrs. Frank Bredlow, Glen, Marvin, Loroy, Lorain and Ronald.

Mr. and Mrs. Albert Borchers; Mr. and Mrs. Albert Riemer; Mr. and Mrs. Emil Beier and Billy; Mr. and Mrs. William Reimer; Carl Reimer.

Mr. and Mrs. Ben Reimer and Lois; Mr. and Mrs. Emil Blumer, Marcille and Mildred; Mr. Charles Bredlow.

Mr. and Mrs. Walter Bredlow, Ellsworth, Merle, Marva Jean and Lola May; Herbert Bredlow.; Mr. and Mrs. Elmer Bredlow.

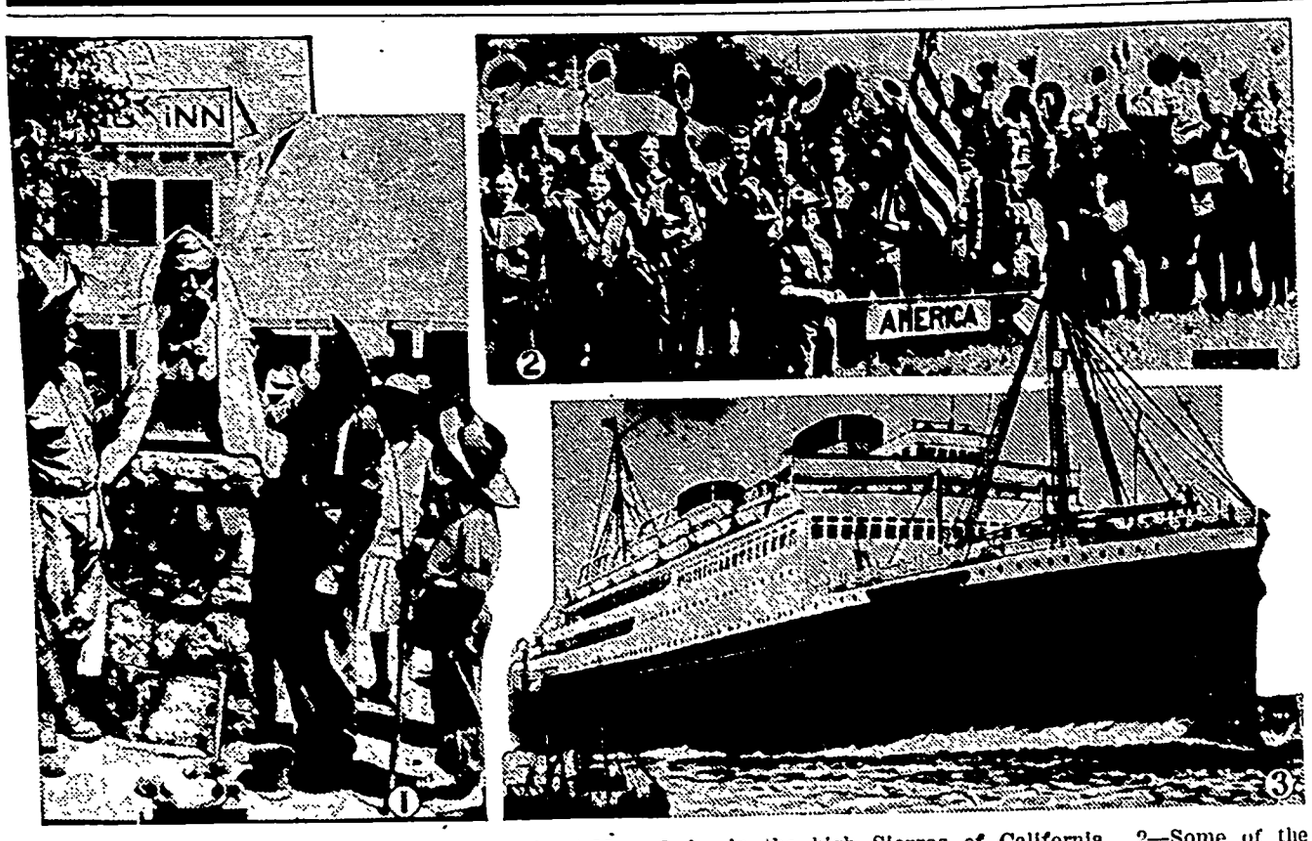
(Mr. and Mrs. William Suckow, Dale, Marvin and Luther were not present.)

Miss Edna Bredlow; Mr. and Mrs. Clarence Bredlow; Curtis Bredlow; Miss Mabel Bredlow; Lester Bredlow; George White; Mr. and Mrs. August Neuhring.

Mr. and Mrs. Owen Neuhring, Dorothy, Lyle, Clara, Grace, Morris, Betty, Mavis and Dean.

Mr. and Mrs. Sam Hammon, and Wayne, Lynn, Lois and Doris; Arno Neuhring.

The following Klemme people enjoyed a picnic dinner at Clear Lake last Sunday: Grandma Schroeder; Lena Schroeder and Adella; Dorothy Croner; Max Barz; Albert Barz and family; Henry Barz and family; Fred Barz and family; Walter Rosendahl and family; all of this vivinity, and W. J. Barz and family of Garner. All enjoyed a fine time.



1—Unveiling memorial bust of Mark Twain at Mono Lake in the high Sierras of California. 2—Some of the 1,300 Boy Scouts at the international jamboree in England cheering for the prince of Wales. 3—The huge motor ship Britannic recently launched in Great Britain for the Atlantic passenger service.

NEWS REVIEW OF CURRENT EVENTS

Progress of Negotiations at The Hague—Start of Zeppelin for Tokyo.

By EDWARD W. PICKARD

INTERNATIONAL negotiations at The Hague during the week reached a point that virtually assured early evacuation of the Rhineland by the allies, and made it fairly certain that Great Britain would have its way in the matter of the distribution of German reparations. Philip Snowden's extraordinarily undiplomatic, not to say insulting, language in characterizing the arguments of M. Cheron, French finance minister, as "ridiculous" and "grotesque" threatened at first to disrupt the proceedings. Snowden apologized, though he and his government stood firm in their position that the reparations division in the Young plan could not be accepted. Thereupon the representatives of France, Belgium, Italy and Japan began to figure out methods of satisfying the English, realizing some sacrifices must be made in order that the entire Young plan should not be scrapped. They agreed, however, to stand together and not to make separate bargains or compromises with the British. Mr. Snowden indicated he would accept an increase of $9,520,000 per annum in the British share and the four powers named got together $4,760,000 of this, but Italy refused to make further contribution and Snowden repeated his ultimatum. It seemed likely the Young plan insofar as Germany is concerned would be accepted and that the allies would postpone the distribution of the reparations among themselves until after the meeting of the League of Nations assembly late in September. Meanwhile the English may be induced to abate something of their demands, think the French.

Thomas W. Lamont, the American banker who helped devise the Young plan, admitted in London that he had been asked to go to The Hague to aid in the financial deliberations, but said he had decided it was wiser for him to stay away.

HAVING made the return trip from Lakehurst to Friedrichshafen in fast time and without any difficulties, the German dirigible Graf Zeppelin was refueled and continued on its projected flight around the world. It carried 61 persons, 20 of whom were passengers, and was equipped with rifles and emergency food supplies in case of a forced landing. The next stopping place was to be Tokyo, and this second leg of the trip was considered to be the most perilous for the huge airship. The route laid out would take it across Russia, Siberia, the Sea of Okhotsk and Saghalien.

Doctor Eckener, commander of the Graf Zeppelin, has been granted a patent on a rigid dirigible with separate gas cells, like the one he is flying around the earth, by the United States patent office. The patent, applied for in 1922, has been assigned to the Friedrichshafen Zeppelin company.

LOUIS BLERIOT, the French pilot who made the first flight across the English channel, has perfected designs for a new type of airplane that can be automatically converted into a lifeboat in case of a forced landing at sea, and he says that it will carry passengers between Paris and New York in 24 hours.

Future traffic between the continents will be carried on in neither Zeppelins nor hydroplanes, but in large land planes, according to the Frenchman, who is at present collaborating with the Armstrong company of the United States for the establishment of a regular air line between Gotham and Paris. The Armstrong concern already has begun the construction of a series of ocean airports stretching across the Atlantic, concerning which much has been printed heretofore.

SECRETARY OF STATE STIMSON announces that President Hoover is highly pleased with the progress made in negotiations between the United States and Great Britain on the question of naval armament reduction. Washington officials are hopeful it will be possible to hold a five-power naval conference for the discussion of cruiser and auxiliary ship tonnages reduction late this year or early in 1930.

This statement was given out following a breakfast given by President Hoover for the purpose of acquainting members of the naval general board with the progress of the conversations at London and to afford an opportunity for a round-table discussion of all phases of the problem.

Mr. Stimson said that the President and the State department expected the fullest co-operation from the Navy department experts in the campaign for naval reduction and that the navy experts' views would be given careful consideration. He denied that any rift has developed between the navy general board and the civilians on the question of just how far this country should go in reducing its navy.

PRESIDENT HOOVER is taking action in accord with his pre-election statements in which he declared for complete co-ordination of the work of improving inland waterways for navigation, irrigation, flood control and power development. He announces that his administration and the officials of California have reached an agreement for the appointment of a joint commission to determine the policies to be pursued in such development in California. Another joint commission will work out the problems presented by the proposed construction of a bridge across San Francisco bay.

ONE of the next steps for the stabilization of agriculture by the federal farm board will be the creation of a wool marketing agency. A conference of representatives of producers' co-operative wool marketing associations and producer-owned warehouse associations will be held in Chicago some time in October, Chairman Alexander Legge, of the board, announced. At this conference definite plans will be evolved for a national co-operative wool sales agency, to include in its membership all of the various types of co-operatives now engaged in handling the commodity.

Julius Barnes, William M. Jardine, former secretary of agriculture, and other prominent men, have begun the formation of a big fruit and vegetable marketing corporation, but Mr. Legge said its plan of organization had not yet been approved by the board. The corporation is to have a capital of $50,000,000, and in its initial work will be with 60 subsidiary co-operatives in 25 states.

THOSE persistent revolutionists in Venezuela got hold of an old German steamer and to the number of 400 landed under cover of darkness and attacked the important city of Cumana. The government forces defended the place vigorously and repulsed the attackers, though their commander, Gen. Emilio Fernandez, was killed. The casualties were heavy and the fight lasted four hours, coming to an end when a government airplane appeared and attacked the rebels with machine gun fire and bombs. President Gomez was not unduly alarmed but sent three vessels loaded with troops to try to capture the "pirate" steamer.

PEACE negotiations at Manchouli between the Chinese and Russians were broken off, according to rather indefinite dispatches from the Orient, and the Manchurian situation again became threatening. Tokyo reports said there had been a skirmish on the heights west of Manchouli and that three Russian gunboats had landed troops in three Chinese villages on the Amur river. More Soviet citizens were arrested in Manchuria and some of them deported, and in Harbin the Russian White Guards were believed to be organizing an anti-Jewish pogrom. The Chinese government sent word to Moscow that it would be forced to take retaliatory measures unless it received assurances that the Soviet firing at Sulfen would not be repeated. The Soviet government announced the formation of a "far eastern" army in view of the threatening conditions on the frontier.

THE tenth anniversary of the Weimar constitution of the German republic was celebrated with great enthusiasm in Berlin, and by dint of taking extraordinary precautions and making numerous arrests the police suppressed the intended demonstrations of the communists and nationalists. In the vanguard of the huge parade was a group of New Yorkers and Chicagoans who carried the American flag.

PREMIER MUSSOLINI of Italy is putting into effect the Fascist policy of splitting up estates that have been lying untilled and turning them over for cultivation by small farmers. The other day the feudal estates of the Doria family, comprising 2,500 acres, were thus divided among peasants in a picturesque ceremony at Roccagorga. The land was separated into 230 parcels and the division made by lottery. The proprietor of the estates, Prince Filipo Doria Pamphili, gets partial indemnity, and the peasants are bound to improve the land and to assist in the general work of reclaiming the district, which is in the Pontine marshes.

SPAIN is not nearly so subservient to its dictator as is Italy to Mussolini. This was evidenced by the action of the general labor union congress in session in Madrid in flatly rejecting the government's invitation to send five representatives to the national assembly and issuing a manifesto to the Spanish people strongly attacking the dictatorship of Gen. Primo de Rivera. The new constitution, says the manifesto, would establish "Asiatic absolutism" in Spain, wreck all progress and return the country to the tyranny of Charles V. In comment the dictator said: "The dictatorship is not losing its serenity and is continuing to be assured of support by the larger part of public opinion. I will not abandon power until I am sure of giving the country an ample juridical base to support the new regime."

CONSIDERABLE fun has been poked by the unthinking at the proposals to reform the calendar. But the national committee on calendar simplification has just reported to Secretary of State Stimson that there is nation-wide interest and widespread approval of the plan. The report, made by Chairman George Eastman, the camera manufacturer, is intended for Mr. Stimson's use in preparing a reply to an inquiry from the league of nations, which contemplates calling an international calendar conference if enough nations agree to participate.

"The inconveniences which the present calendar's defects impose," says the report, "have multiplied with the progress of civilization, and conspicuously so during the rapid economic expansion of the last hundred years. They are being felt more and more. A defect which has grown to be a cause of very serious inconvenience is the splitting of weeks at the beginning and end of months and years. The lack of comparability between corresponding divisions of the year, particularly as to the months, is one of the most serious inconveniences. It makes inaccurate and deceptive a most important instrument used by all the organized agencies of civilization to measure progress and control their activities—i. e.: statistical data."

STREET car strikers of New Orleans and their sympathizers stormed the city hall and beat up Acting Mayor Walmsley and four councilmen and then engaged in a general fight with the police in the course of which four men were shot. The attack was made while 200 union men were meeting with the council to demand the continuance of bus and jitney cab operation.

FEDERAL Judge Morris in Wilmington, Del., handed down a judgment against the Radio Corporation of America in a suit over patent rights. Two of the beneficiaries are Francis W. Dunmore, a government employee in the bureau of standards, Washington, D. C., and Percival D. Lowell, a former bureau of standards employee and at present employed by a radio manufacturing company. The Dubilier Condenser corporation of New York is the third beneficiary.

According to William Dubilier of the condenser corporation the suit will affect every manufacturer making radio sets with electric light socket attachment and will involve at least $20,000,000 in back royalties.

THIEVES WHO ROB WOMEN ARE FLOGGED

Britain Adds "Cat" to Jail Sentence.

Liverpool—News reaching here to the effect that some members of the New York state crime commission advocate whipping as part of the punishment for certain sex offenses perpetrated against women and children makes English crime experts ask why the punishment is not advocated for robbery with violence, especially when women are the victims, as it is sometimes inflicted in England, although England does not punish sex crimes with flogging, except in rare instances.

On the other hand, American crime experts who know that whipping does not always prevent a criminal from repeating a particular crime may well ask why in exceptionally vicious cases of robbery of women with violence in England the term of imprisonment is always disproportionately short; even when the whipping is taken into consideration.

Twelve Strokes of "Cat."

An example of what the average American criminal court would regard as an absurdly light imprisonment, even in view of the whipping, was furnished by the sentence of Albert Grunshaw, twenty-six, to twelve strokes of the "cat" and six months' imprisonment when he caused his woman victim excruciating pain by throwing pepper in her eyes, after first firing two blank cartridges in her face at a distance of two feet, which might well have blinded her for life.

The sentence was imposed by Justice Charles at the Liverpool Assizes for an attempted robbery of the funds of the sub-post office in Bolton road, Lancaster. The six months' imprisonment, by the way, will be served in the "second division," where prisoners have many more privileges than if they were not given that form of sentence.

Grunshaw went into the sub-post office just as Miss Elizabeth Ellen Cottam, the postmistress, was closing. She had counted her receipts, about $135, and they were on the counter. Grunshaw asked for a money order. Miss Cottam was handing it to Grunshaw when he produced a sporting pistol used for starting races and loaded with blank cartridges. He fired two shots into the woman's face and then threw the pepper, which blinded her and caused the horrible pain.

Miss Cottam screamed but did not quit. She grabbed Grunshaw and was fighting with him when another woman in the building came to the rescue. Grunshaw forced the other woman out, closed the door, and resumed the attack on Miss Cottam. They fell to the floor. Holding the woman with one hand, Grunshaw grabbed the money with the other. He was about to make his escape when a constable arrived.

Short in Accounts.

Grunshaw made his attempt at robbery on a busy street. His determination and viciousness were shown not only by firing the pistol blanks that might have blinded Miss Cottam and by throwing the pepper that blinded her temporarily and might have blinded her permanently, but by returning to the attack. His motive was revealed at his trial, when it was testified that he was about $100 short in his accounts with a club of which he was treasurer.

Not a redeeming feature marked this cruel, carefully premeditated crime inspired by another crime of his own, yet in addition to the twelve strokes of the cat Grunshaw will do no more than six months in prison, with time off for good behavior.

That the "cat" does not necessarily deter was evidenced recently by another English case in which a man convicted of robbery of a woman with violence asked for and received a sentence of 18 strokes with the cat in combination with a short term in preference to a long term without the "cat," but it undoubtedly does deter many and possibly the majority of criminals who would be inclined to rob women with violence.

Crowd Is Generous to Starving U. Graduate

New York.—A young man collapsed at Broadway and Eighty-eighth street. A crowd gathered. He was heard to mutter something about being hungry.

Someone in the crowd slipped away and reappeared with coffee and sandwiches from a restaurant. The young man ate and collapsed again. An ambulance arrived. The doctor announced the young man was starving.

There was a movement in the crowd, a hat was passed, and in a few minutes a purse of $100 was collected. A woman who had stopped her car at the scene took the young man away, promising him a night's lodging and train fare home.

The young man was Ernest Barber, twenty-three, a recent graduate of the University of Virginia, who had come here with his diploma and high hopes to make his fortune, but had been unable to find work. He had not eaten in three days.

Heavy Cancer Toll

London.—The house of commons approved an appropriation of $500,000 to be spent for radium to be distributed in the hospitals for treatment of cancer victims. It was revealed during the proceedings that 54,000 persons had died of cancer in Great Britain during 1927.

TAXI PATRONS NOW ENTERTAINED BY RA

One of Chicago's privately owned taxi cab lines now entertains patrons by radio. Our photo shows one of the taxis on the streets of Ch equipped with a two-dial set and loud speaker. At the extreme right o dash board are the two dials, while the loud speaker is shown on the windshield.

GOOD BRAKES NOT ALWAYS CERTAIN

Car Owners Should Be Turning to Latest Test Machines for Safety.

That brakes can be so effective as to trap the car owner into believing that he has nothing to gain by having them periodically and scientifically inspected is a new thought that is gaining momentum in the motor world. Brake experts now go so far as to warn that what passes for satisfactory stopping may be a broad hint of sudden and perhaps chronic brake trouble.

Almost any car with four-wheel brakes will "stop." That, in the opinion of those who are trying to get at the root of present difficulties in deceleration, is where the danger lies. Few drivers appreciate what their brakes could do if properly cared for and how vitally important it is to keep up with the brake efficiency of the newest cars.

Despite the fact that motordom is on an entirely new basis of stopping efficiency, it is still common to see motorists, even mechanics, testing their brakes by sliding the wheels along the garage floor. But 1909, or even 1919 methods, are no match for present-day needs. This is a machine age where human fallibility cannot be tolerated, and it is logical that progressive car owners should be turning to the latest brake-testing machine and brake-renovating equipment in order to safeguard stopping.

These machines and newer systems teach even the most seasoned motorist many points which he might not come to appreciate by the slower method of learning through hazardous and expensive experience. In the case of internal expanding brakes, for instance, excessively sudden stopping may result in the drums warping. When this condition prevails it is impossible to adjust the brake shoes so as to prevent their vibration when the brakes are applied. Chronic screeching of the brakes is just one of the results of such a condition.

How can the car owner tell if his drums are out of round or whether the squeaks in his brakes are due to this cause?

A few years ago this question would have been left to guesswork, or if the owner happened to be unusually interested in the matter he might seek out a machine shop. Today he goes to authorized brake service stations, runs his car up on a convenient four-wheel testing machine and is soon in possession of accurate information regarding the exact condition of the brakes.

WILD BILL'S MARRIAGE CERTIFICATE
(Photos, Courtesy United States Playing Card Co)

By ELMO SCOTT WATSON

THEY say that "gold is where you find it." It might be remarked that the same thing is true of documents which tell of the historic past. For such papers have a queer habit of bobbing up in the most unusual places, and to the historian there is no thrill quite like that of unexpectedly coming across some such memento of the past.

The museum of the United States Playing Card company in Cincinnati, Ohio, where one can see the history of playing cards for the last five hundred years graphically portrayed, is probably the last place on earth to which you would go, seeking relics of Wild Bill Hickok, famous gunman of the Old West. Least of all would you expect to find there evidence of the more tender side of this grim-faced, cold-eyed killer, before whose blazing six-shooters more than a score of men went down to their deaths. Yet, in a glass case at one end of the big room which houses the unique collections there, you will find these things, an elaborately ornamented marriage certificate which reads:

This is to certify that Mr. James Butler Hickok of Cheyenne, in the state of Wyoming, and Mrs. Agnes L. Thatcher of Cincinnati, in the state of Ohio, were by me joined together in holy matrimony on the 5th day of March, 1876, in Cheyenne, W T W F Warren, Pastor, M. E. Church. Witness. Minnie Moyer, S L. Moyer.

Close beside it is a single sheet of letter paper somewhat yellowed with age but the writing upon it is still decipherable and it reads as follows:

Dead Wood Black hills, Dacota, July 17th, 1876
My own darling wife Agnes I have but a few moments left before this letter starts I never was as well in my life but you would laughf to see me now Just got in from Prospecting will go away again to morrow but God nowse when it will start my friend will take this to Cheyenne if he lives I don't expect to hear from you but it is all the same I no my Agnes and only live to love hur never mind Pet we will have a home yet then we will be so happy I am all most shure I will do well hear the man is huring me Good by Dear wife Love to Emma.

J. B. Hickok
Wild Bill

Thus, far from the scenes of the exploits which made him famous in frontier history are preserved these evidences of a little known part in the life history of Wild Bill. In the maze of legend which has gathered about his name, thanks to the dime novelists, the sentimental side has not been neglected and the names of various women have been linked with his. The best known of these is the notorious Calamity Jane and there has sprung up a "popular belief" (erroneous as most of them are) that Wild Bill and Calamity Jane were sweethearts. This is based mainly upon the fact of their association in Deadwood, S. D., for a brief time and Calamity Jane's dying request that she be buried near Wild Bill. Recent biographers of both have established pretty definitely that, although Calamity Jane was an admirer of Wild Bill, his attitude toward her was that of genial tolerance. The linking of his name with various other women in the earlier years of his life has been set down by these biographers as possible in one or two cases but mainly unauthenticated.

The truth about Wild Bill, in this respect, is as difficult to reach as it is in many other respects. But the best evidence points to the fact that there was only one woman whom he ever loved and she was the woman he married at Cheyenne, Wyo., in March, 1876. One of his earliest biographers was James William Buell who knew Wild Bill personally and obtained much of his information first-hand. In his "Heroes of the Plains" he tells of the beginning of the romance which resulted in Wild Bill's marriage. Despite the florid and sentimentalized style of Buell's narrative, it is probable that his facts are, in the main, correct. He says:

In August, following Wild Bill's return from Wichita an incident occurred which resulted some years afterwards in his renouncing his previous declaration to remain a bachelor and the taking unto himself a wife. The circumstances which culminated in so great a change were romantically singular and are well worthy of record in these otherwise sanguinary chronicles of stirring adventures. The incident referred to grew out of the exhibition of Lake's Circus in Hays City, during August, 1871. Lake's Circus had been a standard entertainment for many years in the east and south and in addition to the excellent reputation which it bore it was well advertised by a novel free exhibition which became the rage even in the east—a grand balloon ascension just before opening the doors. The town council, like every one else in the neighborhood, though anxious to see the performance, held a meeting on the day preceding the time for the exhibition, and decided to charge Mrs. Lake, the proprietor of the circus, a license of $50; but before the municipal body adjourned, Wild Bill stepped up and asked to be heard a moment. Permission having been granted, the town council lit their pipes, passed the bottle, and leaning back in their chairs, composed themselves while Bill expressed himself substantially as follows:

"I never made a speech in my life and I don't want to begin now, but I never went back on a woman, and I'm going to give you some plain talk. You fellows live so far outside of civilization that your hearts have dried up like small potatoes left out in the sun, and as you can't read the papers of course you don't know nothing about what's going on east of the coyote's range.

"This circus that's advertised to show and furnish a little amusement for us heathens, is owned by a woman, one whose pluck catches my sympathy every time Her husband, Bill Lake, was murdered down in Granby, Missouri, by a cowardly villain, named Jake Killian, on the 24th of August, 1869 The brave little widow, after burying her husband, had to either sell out or go on the road with the circus, and circumstances advised her to carry the show. My opinion is that any woman capable to run a circus is a darn sight bigger curiosity in these parts than the leatherheads in this village ever heard of, and when I see so much pluck shown by a woman, I just feel like throwing in and helping her.

"Now, if you fellows that run this town knowed how to appreciate a good thing for the place, instead of charging Mrs. Lake a license, you would vote an appropriation to pay her for coming out here to show us heathens a first-class circus. If I've got any authority in Hays, Mrs. Lake isn't going to pay this town a cent of license for showing and if any man attempts to stop this show, then just put it down that he's got me to fight. That's all I've got to say now, so drive on, and we'll see who pays the fiddler."

When Bill concluded his "talk" the council of four decided to reconsider their action and remit the license, though this was, in the eyes of some, an extraordinary opportunity for starting a town treasury. Mrs. Lake, learning of Bill's disinterested kindness, sent for him and expressed many thanks, after which she introduced him to all the members of her troupe, including her little daughter Emma. After seeing the paraphernalia of the circus and shaking the hands of the performers, Bill turned again to Mrs. Lake and said:

"Well, now, all this is fine enough, but do you know the greatest curiosity about this canvas is yourself; I never saw a woman before that could run anything, except with a broom handle, and to find one managing one like this is a bigger sight than California Joe when he was tackled by a panther down in the Wachitas. I used to think that women never amounted to much, outside of being mothers, and I guess I wouldn't give them that much credit, if I hadn't had one myself, and a good one, too. But I've changed my opinion now. For if I could hitch up with such a business girl as yourself I'd go in search of a parson tomorrow."

This language, though full of rather profane metaphors and tempered with phrases little suited for "lutelike lover's lips" nevertheless expressed in homely truths, Bill's real sentiments. For he fell in love with Mrs. Lake not only on first sight, but even before the meeting; he was caught on the hook of her reputation.

Mrs. Lake, though not fully understanding the somewhat incoherent address of her determined suitor, yet saw beneath his rough exterior a kind and healing sympathy, and a heart ever brave and willing to protect the weak. His face and form, too, were strikingly handsome, while his dress was that of a gentleman. . . .

Although Bill was unsuccessful in his suit at this time, his interest in Mrs. Lake appears to have continued. In 1874 he had gone into the show business himself and was appearing with Texas Jack Omohundro and Buffalo Bill Cody in Ned Buntline's "The Scouts of the Plains" at Rochester, N. Y. The Lake circus happened to be showing there at the same time. They met and again Wild Bill renewed his offer of marriage but again he was unsuccessful. Two years passed before they met again. Wild Bill was in Cheyenne, Wyo., on his way to the Black Hills gold camps when he heard that Mrs. Lake was visiting at the home of a relative, L. S. Moyer. Hickok immediately called upon her and then, in the words of Buell:

Wild Bill then renewed his suit, and pressed his claims with such persistency that the engagement was perfected, and arrangements concluded for the wedding, which it was agreed would take place on the following day.

Several intimate friends of Bill's were surprised to receive invitations on the morning of March 5th, to witness the wedding ceremonies of J. B. Hickok (Wild Bill) and Mrs. Agnes Lake Thatcher on the afternoon of the same day. Of course they all responded, and when the contracting parties stood up it was before an audience numbering about 20 persons. The Rev. W. F. Warren, a Methodist divine of Cheyenne, performed the service at Mr. Moyer's residence, and after receiving many congratulations the couple took the evening train east and went directly to St. Louis, where after spending a few days they proceeded to Cincinnati, where numerous relatives of Mrs. Lake lived. Here they were received with many kind manifestations from all who knew them, and their new life thus began under auspicious promises for future happiness.

As Wild Bill had already made his plans to seek his fortune in the Black Hills he left his wife in Cincinnati after a honeymoon of but two weeks. Going to Cheyenne he remained there until some time in June when he set out with two of his friends, "Col. Charlie" Utter, and "Bloody Dick" Seymour. At Custer, Calamity Jane attached herself to the party and the four of them made their spectacular entrance into Deadwood a short time later.

So far as is known the letter which is preserved in the Cincinnati museum is the last one which Wild Bill ever wrote to his wife and it is probably the only one in existence today. Capt. Jack Crawford, the "Poet Scout," a friend of Wild Bill's, who seems to have burst forth in poetic eulogy of his former companion, wrote a poem for the Virginia Evening Chronicle two days after Wild Bill was shot down by Jack McCall in the Deadwood saloon. One verse of that poem is interesting. It reads:

And now let me show you the good that was in him—
The letters he wrote to Agnes, his wife.
Why, a look or a smile, one kind word could win him,
Here part of this letter—the last of his life:

"Agnes darling: If such should be that we never meet again, while firing my lost shot, I will gently breathe the name of my wife—my Agnes—and with a kind wish, even for my enemies, I will make the plunge and try to swim to the other shore."

It may be that this was in Wild Bill's last letter to his wife, as Captain Jack says; then again a comparison of the phraseology of that letter with the one reproduced above, leads one to wonder whether or not the noble sentiment expressed was an example of Captain Jack's poetic license.

The death of Wild Bill at the hands of Jack McCall is too well known to need repetition here. Near the marriage license and the Wild Bill letter in the museum case is a memento of that famous tragedy. It is a long lock of curling brown hair cut from the head of Wild Bill Hickok by "Colorado Charlie" Utter and sent to his widow in Cincinnati. These relics of the famous gunman were preserved by Mrs. Hickok until her death in Jersey City, in 1907. They then came into the possession of her daughter, Emma, who was the wife of Gilbert Robinson, Jr., son of John Robinson of circus fame. Gilbert Robinson was one of the directors of the United States Playing Card company and a short time before his death a year or so ago, he presented them to the company's museum.

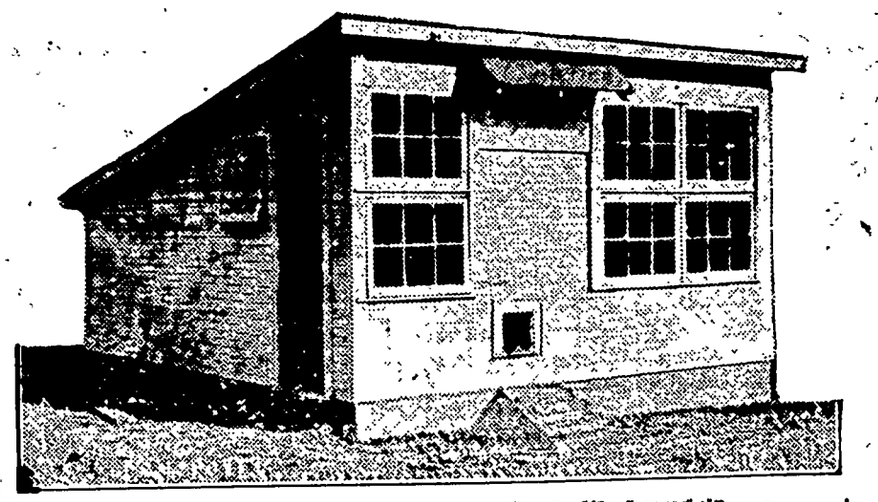
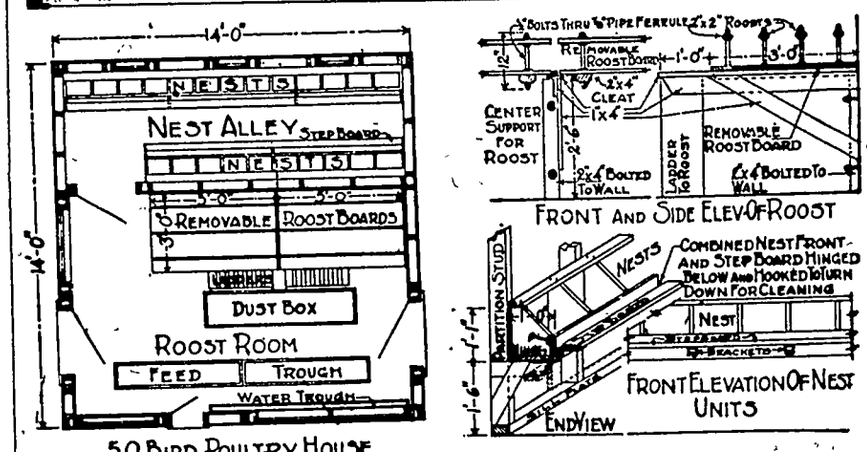
WILD BILL'S LAST LETTER TO HIS WIFE

Poultry Pays Good Profits if Properly Housed and Cared For





50 BIRD POULTRY HOUSE

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

As a plain matter of fact, poultry keeping is not so popular on the farm as it should be. The average farmer is fascinated and mesmerized by the big returns to be obtained from the raising of hogs and cattle, and forgets the much heavier expense and the greater length of time it takes to get returns from an investment in cattle or hogs than it does in poultry. He forgets that the labor and time involved in raising poultry are much lighter than in cattle, and that he can turn his money over on poultry, whereas he is satisfied with a percentage profit on other live stock.

In the majority of cases, poultry raising on the farm is left to the women and children, who are often expected to pay part of the grocery bills and buy clothing out of the proceeds from this source of revenue. The fact that the housewife has to pay out all the money she takes in on them generally lessens her interest in the flock.

The average farmer has never had any eggs in the winter time from his hens. Hence, he usually neglects them when they need his attention most, and when he has most time to tend to them, so that when spring comes the chickens are poor, infested with lice and mites, low in vitality, and they are late in starting to lay, and soon want to set after they do start laying. He allows them to lay on the ground or under the barn, or anywhere else the hen decides. Thus, many eggs are never gathered at all and soon rot under some vine or in some fence corner.

Then, too, the average farmer has only scrub stock, which is slow in development and low in productivity. This is the case on many farms where all the other stock is well cared for. The poultry, being a very small item, are very apt to be sadly neglected. Were the farmer to buy good stock in chickens he would be agreeably surprised at the very substantial profits he would find can be derived from this hitherto neglected branch of his farm investment.

There is no excuse for a modern farmer not having a good stock of poultry and a good house for them, for it costs less to get a good start in reliable breeds of poultry stock and to fix suitable places for them, than it does in any other branch of the live stock industry. Then, with a little care and attention, they will repay their worth many times over.

This poultry house is 14 feet by 14 feet in size. It is built in the usual way, by using 2 by 4 inch studding, with building paper and clapboards outside, and matched ceiling inside. The idea of placing the windows high up is to let the sunshine into the back part of the house during the winter and the early weeks of spring, when sunshine is greatly appreciated by the poultry. The house is well ventilated by muslin-covered openings under the low roof in front. This is the natural way to ventilate a poultry house, the air entering under the low roof, and circulating back of the roosts.

All the inside paraphernalia of a poultry house should be easily removable. The nest boxes, dropping board, roosts, feed hoppers, dust boxes, drinking fountains—all should be installed in such a way as to be easily and quickly detached, so that they may be carried out into the sunshine for cleaning and fumigating.

The dropping board is made to fit the space at the back of the building under the slope of the roof. The nests are supported on standards set onto the dropping board.

Bathroom Fashions Set for World by U. S.

Bathroom fashions are being set for the entire world by the United States, according to a survey appearing in Woman's Home Companion.

"It is quite possible," says Hazel Rawson Cades, author of the article, "that down the centuries we shall be known as the people who glorified bathrooms. There have been other periods, notably the Roman, when bathing was popular and elaborate, but our immediate ancestors regarded it mostly as a private, necessary and uncomfortable performance. That anybody should entertain the suggestion that a bathroom be photographed and shown in a public print would have been considered as indecorous as airing the bed clothes out of Queen Victoria's windows.

"The plumber, once absorbed by problems of drainage, now turns his grave attention to becoming colors in bathtubs. Mural painters are recruited to decorate the walls with ships and fishes and animals. Architects specialize in bathroom plans. The bathroom, from the standpoint of looks and use, rivals any room in the house. And bathing threatens to encroach upon all other diversions.

"Running salt water and fresh. Dissolving bath crystals in splendid rotation of jasmine, lavender, pine needles and rose-geranium. Leaping backward and forward on nonslip mats. Adjusting back cushions that fasten on with suction cups. Reading 'Water Babies' in a nonsplashable cover, propped up on a rack that also is held to the tub by suction cups. Submerging sponge elephants and sailing celluloid boats. I can, seriously, imagine being so enthralled by the entertainments of the modern bathroom as to forget all social obligations and simply bathe away my days.

"I'd hate to think there still exists anybody who can be stony-hearted about the soaps and salts, oils and powders that lend such sweet temporal pleasure to the bath."

Fireplace Must Have Color to Be Real Joy

Has the fireplace been the joy you expected it to be? Or has it proved to be an alien feature which you cannot bring into relation with your furnishings?

If the fireplace is built of rough, variegated red brick it is apt to seem unrelated to the more delicate fixtures of your furnishings. Often these brick fireplaces have small, inadequate light-colored tile hearths.

Such a hearth does not give sufficient color or size to act as a base for the fireplace. The brick front seems to hang upon the wall without having any relation to the floor below. The brickwork should have an adequate base upon which to stand.

If you possess such a fireplace you may change its appearance a great deal by the use of a small rug. To correlate the color and texture of the bricks with the decorative scheme of the rooms you must introduce that rough texture and color in some other furnishing.

A small rug of various shades of red, woven with a long nap, will prove the desired connection, and placed in front of the hearth it will give weight to the area before the fireplace and thus the appearance of a more substantial base.

The color of the bricks will not end at the base of the wall, but will spread out onto the rug upon the floor. There are many small oriental rugs with the desired color and texture. The pleasure and feeling of "rightness" derived from such a rug will compensate for its cost.

Color of Woodwork

In any decorative scheme don't forget to consider the color of the woodwork.

When the wood used for window-and-door trim is oak, cypress, maple or birch, or any wood with a beautiful grain, a waterproof varnish will give luster and bring out the grain.

LIBERTY TOWNSHIP

Mr. and Mrs. Lem Abele and family drove to McGregor Sunday and spent the day, making the complete trip of 312 miles that day.

Miss Meta Lemke has been improving very rapidly lately from her recent operation. She was able to be moved Monday to the home of a friend near the hospital, and came home Tuesday.

Luther Schmidt, son of Albert Schmidt, had the misfortune to fall backwards off of a truck Saturday. He was unconscious for some time, but came out of it as well as ever in a few days

The Lemke bunch enjoyed a picnic dinner at East Park, Mason City Sunday. Those present were, Mrs. Jim Lilly and son Gene of Cedar Rapids; Mr. and Mrs J. J. Lemke; Mr and Mrs. R R Lemke, Irene, Walter and Reuben; Mr. and Mrs Will Lemke and sons, all of Liberty township; Mr. and Mrs. Will Beier and grandmother Lemke of Goodell, Mr and Mrs. Eric Clark of Garner. After the dinner the bunch drove to Nora Springs to see Mrs Lilly and son off as they left for Cedar Rapids at that time.

Picnics seemed to be the chief occupation of a good share of the Liberty-ites Sunday. Mr. and Mrs. Art Schoenwetter and Ethel; Mr. and Mrs. George Schoenwetter and children; Mr. and Mrs. Henry Ludeke and son, Paul; Mrs. Fred Schlichting and Mabel, all of this place; Mr. and Mrs. Henry Suckow of Klemme; Mr. and Mrs. Will Ax and family of Swaledale; Irving Ax, Miss Kaduce and brother; and Mr. and Mrs. Carl Suckow and children of Garner all enjoyed a picnic dinner and a fine pleasure trip at the Sttae Park at Algona Sunday.

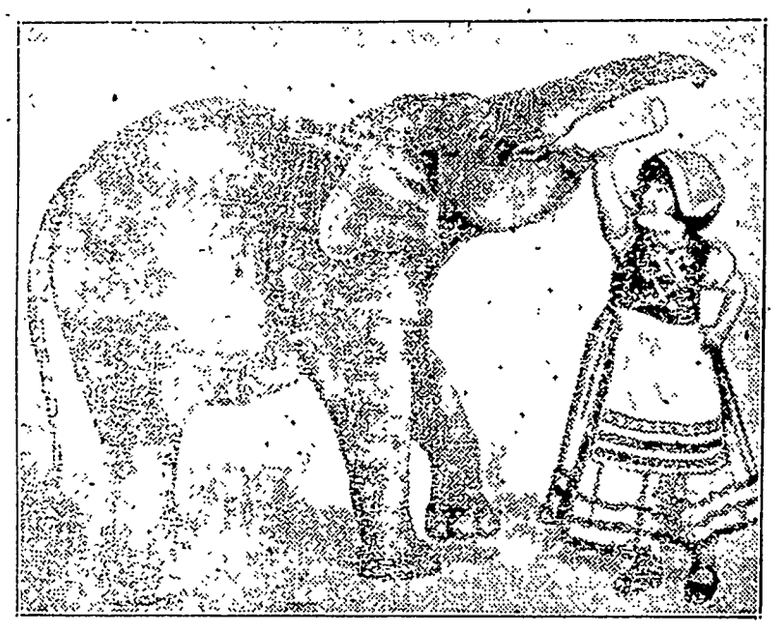
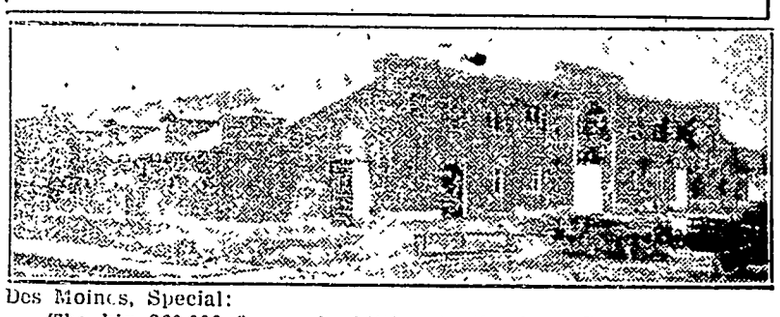
CHILDREN BUY ELEPHANT



Des Moines, Special:

Iowa boys and girls are buying this baby elephant for their very own, with thousands of youngsters all over the state contributing nickels and dimes for the purchase of the baby pachyderm from the Indian jungles. The elephant is now on its way to Iowa and will make its first public appearance in a giant boys and girls' parade on Children's Day, August 23, at the Diamond Jubilee Iowa State Fair. Every boy and girl who helped to purchase the elephant is expected to participate in the parade, and the one submitting the best name for the animal will have the honor of riding it at the head of the parade.

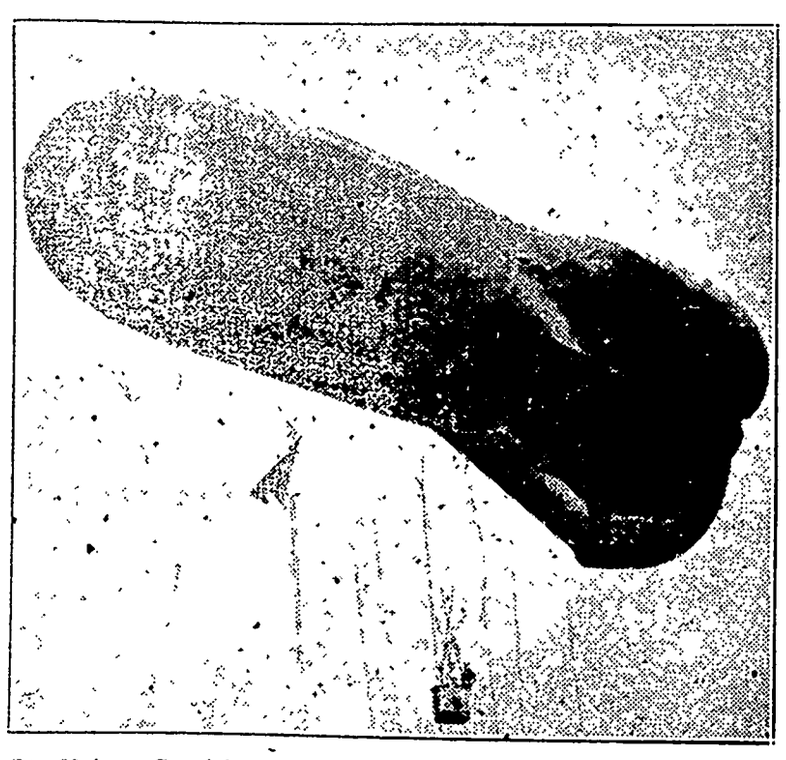
PLAN BIG HORSE SHOW



Des Moines, Special:

The big $60,000 fireproof addition to the Iowa State Fair horse barns is being rushed to completion this week in preparation for the formal opening of the Diamond Jubilee Iowa State Fair and Exposition here August 21 to 30. With the completion of the new addition, the Iowa State Fair will have facilities for housing more than 560 head of purebred horses and mules, providing one of the largest horse shows of any exposition in the United States. Over $25,000 is being offered in premiums in the Horse Department at this year's Diamond Jubilee Fair.

GIANT BALLOON AT FAIR



Des Moines, Special:

One of the giant captive balloons used on the western front during the World War will be brought to Iowa this summer as a special feature of the second annual Aircraft Show to be held at the Diamond Jubilee Iowa State Fair and Exposition, August 21 to 30. The balloon will make continuous ascensions day and night throughout the period of the exposition carrying passengers. A special corps of aerial performers, trapeze artists, and parachute jumpers will present special features each afternoon and evening.

YOUTH--AND THE NEW LEADERSHIP

By CRAIG B. HAZLEWOOD

President American Bankers Association

LEADERSHIP is a picturesque word. With it, one pictures Hannibal fighting his way through the passes of the Alps—Napoleon in his campaigns—or Washington holding together his half-frozen army by the sheer magnetism of his character at Valley Forge. But I visualize something that holds a more astounding spectacle in many respects than any of these.

Craig B. Hazlewood

It is the onrush of our business life. Our economic progress plunges ahead at a rate unheard of in the history of the nations of the world and every industrial and financial leader is daily brought face to face with new and perplexing problems requiring the highest courage and intelligence for their solution.

Ninety billions a year, they tell us, this country is now producing in new wealth. The rate of increase is even more staggering than the amount. It is difficult to say where it may lead us in even ten or fifteen years.

We are moving exceptionally fast. Our economic and industrial structure is placing before us problems of greater and greater magnitude. Few men can see far ahead Few are in complete control, for this is a changing world, as even the most inexperienced business man will readily testify. Our methods of adjusting ourselves rapidly to economic changes and of cooperating are far from perfect

What an opportunity the leadership of five, ten or fifteen years from now presents! What an adventure it will be! What responsibilities it will lay upon the broadest shoulders that may be found! This is the challenge to leadership as I see it. In the hands of the young men must rest the responsibility for this leadership.

Boys Who Reached the Pinnacles

Business is full of the romance of youngsters whose chief characteristic was working hard and keeping at it There was a green farmer boy who decided he would rather stand behind a counter than follow a plow. He seemed so obviously lacking in sales ability that for a time no merchant would hire him. He failed in his first position, and in his second his salary was reduced. He even agreed that he was a misfit—but he stuck. Out of his first five stores, I believe, three failed. But he persisted and worked hard. And that boy, Frank W. Woolworth, became the greatest retail merchant in the world with a store in every city of eight thousand or more population in this country.

There was another lad who clerked in a grocery store sixteen hours a day and studied mathematics in his odd moments. He became interested in the doings of the steel plant whose employees traded at this store. He began to study steel and sought a position in the plant. He carried a surveyor's chain and drove stakes. At night he studied mathematics and engineering. He did not despair. He could not be diverted. He kept the pressure on for seven years. And that boy, Charles Schwab, mastered the iron industry and became one of the country's great industrial leaders.

There was a lad who sold papers on a train. When he grew up, several million men and a score of billions of dollars of capital were given profitable employment through his inventions. Even in middle life, Thomas Edison continued to work twenty hours a day, if necessary to achieve his purpose.

Leadership is not play. Leadership offers countless positions of varying opportunity, of which the highest pinnacles will mean almost unbearable responsibility in the new era. There will be men with the fire and iron to qualify even for these places. Such men must have had the very finest preparation and the most grueling tests. Their reward will be the attainment of these highest pinnacles of achievement, and the rendering of an immeasurable service to their times.

MAIL BOX THEFTS AID CHECK FORGERS

American Bankers Association in Nationwide Warning Exposes Methods and Gives Rules to Combat Them.

NEW YORK.—Active operations in many cities of mail box thieves, who open bank communications to customers, containing details of their accounts and cancelled checks showing their banking signatures, and use this material in perpetrating check forgeries, have led the American Bankers Association to issue a nation-wide warning to its members with instructions for combating this form of crime. The warning as sent out by James E. Baum in charge of the association's Protective Department says:

"Heavy losses are being sustained through cancelled vouchers and statements stolen from the mail boxes of bank depositors in apartment and office buildings, thus divulging the depositors' balances and supplying models for forged checks. As a step to put customers on guard against these methods, banks are urged to instruct every depositor to whom they mail statements of deposit accounts on the last business day of each month to notify them promptly if such statement are not received by the close of the next day.

"Also banks should educate depositors to safeguard blank checks and cancelled vouchers as they would money. Such paper stolen by forgers soon puts real money in their hands. If all blank checks and cancelled vouchers were securely kept in safes instead of filing cabinets or desks, the check crooks would be denied their chief stock in trade, namely, genuine blank checks and signatures. Warnings to depositors against leaving blank or cancelled checks accessible to sneak thieves or burglars should be sent out at once.

"Estimates broadcast by surety companies indicate that individuals, merchants, hotels and others outside of banking are shouldering more than 99 per cent of the total amount of forgery losses. The bulk of forgery loss on checks is sustained by those who are willing to risk accepting them without reliable proof of identity or title of the presenter.

"Years ago the Protective Department of the American Bankers Association adopted the slogan, 'Strangers are not always crooks, but crooks are usually strangers.' If those outside of banking could be prevailed upon to observe this rule and think about it when considering accepting a check for their merchandise or services, for which they are also asked to give a substantial sum in cash in change, one of the biggest aids to the forgery business would be denied the crooks."

SCRUB BULL IS HALED TO COURT

Placed on Trial for Hindering Development and Prosperity of Dairy Industry.

Indicted for robbery, larceny, and a few other such charges, Scrub Bull went on trial for his life at Laurel, Mississippi, recently. It seems that for some time people had suspicions that Mr. Bull was hindering the right and lawful development of the dairy industry, thereby "maliciously and wilfully lowering production and decreasing profits in the dairy business," says the Bulletin of the American Bankers Association Agricultural Commission in commenting on the case.

This, it says, was the first trial of its kind ever held in that section and was attended by several hundred people. The jury, representing every vocation within the boundaries of the Laurel trade territory, rendered a unanimous verdict of "guilty." The death sentence was pronounced, "but during the night, before the sentence could be carried out, friends of the convict secretly spirited him away and he has not been seen since."

The arraignment came during the Milk Products Show sponsored by the banks of Laurel. People attending the show had the opportunity of also attending the bull's "trial" and went away firmly convinced of the seriousness of lax and out-of-date methods in the pursuit of dairying. The purposes of both the Milk Products Show and the trial were threefold, namely: to develop public sentiment for more and better Jerseys; to foster a more cooperative spirit for dairying and livestock growing, and to promote tick eradication.

The banks of Laurel entered into a cooperative arrangement in their efforts for fostering agricultural development and successful farming in the community, offering $2,165 as premiums to the outstanding farm workers throughout the territory during 1929. An instructive booklet has been issued, showing the agricultural activity of the banks, together with announcements of contests for farmers, exhibits in the bank lobbies and prizes offered.

BANKERS DEVELOP NOVEL INSTITUTE

The Georgia Bankers Association in cooperation with the State College of Agriculture has sponsored a series of farmers' institutes in various parts of the State of an entirely new character. The principle feature is a large and comprehensive exhibit transported in four large trucks and set up at each stop. When set up it fills a space 40 by 60 feet and consists of panels, charts, and models on practically every phase of agriculture, including agronomy, horticulture, agricultural engineering, poultry, animal husbandry, soils and fertilizers, home economics and marketing. A large electrified farm model, showing the uses of electricity on the farm, model farm buildings and the ideal layout and landscaping of the farmstead, is one of the most elaborate and attractive exhibits.

Local bankers in each locality visited gave the money to cover expenses for the transportation and installation of the exhibit in their territory and assisted in the preliminary advertising and publicity. The College of Agriculture assembled the exhibit and conducted the tour through its various extension specialists.

Multisyllable Words Feature Some Tongues

English, as Prof. Otto Jespersen of Denmark recently observed, may be degenerating into a mass of monosyllables, but there are many languages left over which Mark Twain could have had the kind of fun in which he indulged when he suggested that German words could be made to serve as suspension bridges across the widest rivers. There is Finnish, for instance. While the reader of an American newspaper has had flashed upon him the laconic headline, "Jap King Takes Crown." the Finnish reader, as the interpreter puts it, is still wading somewhere in valtaistuimelleusettamisjubla, which means nothing more than "coronation ceremony" and leaves him still a vast distance to go in order to learn to whom it happens. In Danish the old age pension law is known as alderdomsunderstottelsesforordningen and in Italian, as the interpreter remarks neatly, it takes time to rush headlong, as the reader may test for himself, by trying to say precipeterevolissimevolmente. No wonder that headlines in some foreign newspapers have to be three or four columns wide. Even then, the headline writer must have his troubles.

Disuse of Mentality Would Mean Idiocy

It is a funny place, this world of capitalism, with its astonishing spread of ignorance and helplessness, boasting all the time of its spread of education and enlightment. There stands the thousands of property owners and millions of wage workers, none of them able to make anything, none of them knowing what to do until somebody tell them, none of them having the least notion of how it is that they find people paying them money, and things in the shops to buy with it. And when they travel they are surprised to find that savages and Esquimaux and villagers who have to make everything for themselves are more intelligent and resourceful. The wonder would be if they were anything else. We should die of idiocy through disuse of our mental faculties if we did not fill our heads with romantic nonsense out of illustrated newspapers and novels and plays and films. Such stuff keeps us alive; but it falsifies everything for us so absurdly that it leaves us more or less dangerous lunatics in the real world —George Bernard Shaw.

She Forgot the "R"

The high school teacher was new to the East and the pupils had not yet decided whether to like her or not. They held informal meetings to discuss her from every high school pupil angle. Her clothes, her looks and the way she applied the lipstick all came in for searching analysis.

They had almost made up their minds to permit her to stay when one of the members of the English class raised her voice in protest.

"She dresses fairly well," she said, "and her make-up isn't so bad. But her pronunciation is simply awful. She comes from the Middle West and she never pronounces the 'r' in words like 'idear'."

Hint for Dog Lovers

These aristocratic dogs whose prices go up in the hundreds and sometimes thousands of dollars receive the very best of care—and food The food they eat largely determines their appearance. and their appearance wins them prizes at dog shows. And what do the kennel owners like to feed their dogs? In many cases canned dog foods, the basis of which is usually meat mixed with barley or some other cereal and some cod liver oil. The mixture is put into tin cans, sterilized just as carefully as if it were for human consumption, and then it is ready for the fastidious dog kings.

Where Monks Farmed

The historic estate of Vale Royal, in England, a portion of which is being placed on the market, includes the bulk of the lands anciently farmed by the monks of Vale Royal Abbey, once a mighty house of the Cistercian order. The monks of the Cistercian order, the eight hundredth anniversary of whose coming to England was celebrated, have been called the greatest farmers in medieval England, and no doubt the development of English husbandry was to a large extent due to them. At the dissolution the abbey was laid in ruins.

Largest Electric Lamp

A 50,000-watt experimental bulb made recently is said to be the world's largest electric lamp. It resembles a wireless valve, and at the top of the bulb a metal fin radiator carries off intense heat generated by the white-hot tungsten filament, which has a temperature of 5,500 degrees Fahrenheit. The lamp is cooled by the circulation of the nitrogen with which it is filled.

Such huge lights may ultimately find use in aerodromes and film studios.

Advice

A farmer who had subdivided his acres complained to a friend, "I can't get any turnover on my real estate." The response was prompt.

"Turn it over with a plow."

Patience

Waiter—Shall I bring you another egg for that one, sir?

Diner—No, this one will lay another pretty soon.—Pathfinder.

"Penny" Not Official U. S. Coin Designa

"Penny" is not the official des tion of any coin minted by the U States. The application of "penn the cent, however, dates back t beginning of our money system.

Until after the Revolutionary the English penny circulated free this country. Although one-cent p had been previously coined by se of the states, the word "cent" did appear officially in connection a federal coin until 1786. August that year the Continental con passed a law which prescribed "C The highest copper piece, of 100 shall be equal to the dollar."

October 16, 1786, it was ord by congress, "That no foreign co coin whatsoever shall after the day of September, 1787, be cu within the United States of Amer This law removed the English p from circulation in this country, the name "penny" was transferre our cent in popular usage and it tenaciously clung to it ever sin

After the present Constitution adopted the cent was retained part of our monetary system. 2, 1792, congress passed an "act tablishing a mint, and regulating coins of the United States." This prescribed "Cents—each to be of value of the one-hundredth part dollar, and to contain eleven pe weights of copper."

Ants by the Millions Used to Worry Bee

"Without Black Ants No Co reads a sign posted at the entr of a great plantation in Central A It does not go unheeded, either, the natives hand in some 4,00 nests of these little creatures e year, and receive payment in ret These black ants live upon trees fested by the white cocoa louse.

Neither the louse nor the ants jure the trees. The real enemy certain beetle whose name is H peltis, which also attacks the plant. It has been found that w the black ants are present the H peltis fails to injure the trees. parently this sap-sucking pest is turbed by the activity of the ants, the latter do not attack the bee

This is why the black ants are tected. Food is provided for them picking the white cocoa louse f the shells of the fruit, where congregate, and placing them on cocoa trees to attract the ants disturb the beetles.

People Must Reform

The people have revolted m times throughout their history, have never yet revolted against t own worthlessness.

We can never have real ref until the people are somehow m to realize that there is but one form: for the people themselves reform; not to glorify their race pastors, but to make themsel more comfortable.

The one great thing to strive is to render life as easy, comfort and successful as possible; to mo savage nature. This can best be d by people behaving better; to h rather than fight each other.—E. Howe's Monthly.

Bottles Drift Far

Bottled paper, thrown overboard sea to study ocean drift, is prin at the navy hydrographic office eight languages. This paper is pla in a bottle, sealed, and thrown o board and has been known to d from 5 to 5,000 miles, having b in the water from six days to years. One bottle was thrown in water at Cape Good Hope, Africa, recovered on the west coast of Ch South America, having drifted 8 miles. Another was thrown overbo off Cape Horn, southernmost point the South American mainland. drifted to New Zealand, a distance about 10,250 miles.

Time Out

Sophomore—Say, what's all th hear about Coach putting Bull Fu on the third team? Bull's the nift triple-threat man in the conference

Junior—You mean "was." That he took last summer as a hod rier to harden himself just a ruined him.

Sophomore — How d'you "ruined him?"

Junior — Coach says Bull's isn't on the play any more. It's the whistle.

All at His Service

A former college president, pas through the city, was invited to l at the home of one of his alumn The five-year-old daughter of house was delegated to show the tinguished guest up to wash hands. Opening the door of the ba room, which was duly fitted out w the best embroidered linens in ho of the occasion, Sally said: "J make yourself at home and," with royal gesture, "you may use any the towels."—Indianapolis News.

Up Against It

Judge—Why did you knock d the semaphore?

Green motorist—Well, your Lo didn't know whether to run to right of it or to the left of it, so play safe I ran over it.

Calling on Daughter

"I'm gonna shoot that critter in coonskin coat."

"No need to shoot him, paw. a steel trap for him."

School Supplies

School will soon begin and it will pay you to buy your supplies here. We carry a complete line—quality goods at lowest prices. Our line includes:

Tablets Note Books Fillres
Loose Leaf Note Books of all kinds.
Pencils of every kind an dprice.
Pens, Rulers, Inks, Erasers, Etc.
Lunch Boxes, Thermo Bottle Sets
Crayons, Chalk, Etc.

FOR BOYS AND GIRLS—

For School you want Clothing and Shoes that will stand hard wear—we feature the best obtainable:

Boys & Girls Sweaters Oxfords, Shoes
Shirts, Trousers, Ties, Caps, Knickers For
The Boys Who Want The Best
See our Line of Wear For The School Girl.

And when you pack your lunch don't forget to include sandwiches made of our delicious cold meats. Fruit in the school lunch basket fills a real want—our fruit is the best obtainable.

"THE FARM SERVICE STORE"

FARM STOCK

DIP TO DESTROY MANY PARASITES

Important That Task Be Performed Before Winter.

(Prepared by the United States Department of Agriculture.)

For September the Calendar of Live Stock Parasites, issued recently by the United States Department of Agriculture, makes suggestions as follows:

"Now is the time to dip your live stock for lice, sheep ticks, true ticks, and mange. Later it will be too cold to do more than apply relief measures. Do it now while the weather is still warm and save yourself trouble later, as these pests are more troublesome in cold weather. Consult Farmers' Bulletins Nos. 1330-F (sheep parasites), 1493-F (lice, mange, and ticks of horses), 1085-F (hog lice and hog mange), 1017-F (cattle scab), 980-F (ear ticks), 909-F (cattle lice), 798-F (sheep ticks), and 713-F (sheep scab). Clean up lice on poultry. See Farmers' Bulletins Nos. 1337-F and 801-F.

"In the fall farrowing of pigs plan to use the swine-sanitation system as modified for farrowing on pasture in the fall. Consult United States Department of Agriculture Leaflet No. 5-L.

"A mud wallow for pigs provides a breeding ground for worm eggs and helps to load pigs with roundworms and kidney worms. At one packing plant in the South it was found that kidney worms and thorn-headed worms cause an annual loss of $80,000. The use of a concrete wallow is an aid in keeping down worm infestations, provided it is properly constructed and used. See Farmers' Bulletin No. 1085-F for directions for constructing and using concrete wallows.

"In regions where parasites interfere with sheep raising, breed ewes in time to lamb early, if you have the equipment, and market before the worms share your profits. Early lambs come before the parasites wake up from their winter sleep."

This calendar, compiled by Dr. Maurice C. Hall, of the bureau of animal industry, contains similar reminders for each month in the year and a general summary of year-round precautions against parasites. The calendar, which is Miscellaneous Publication 25-M, or any of the departmental publications listed by Doctor Hall, may be obtained free by applying to the United States Department of Agriculture, Washington, D. C.

Sheep Tick Infestation Cause of Loss of Lambs

Sheep ticks, Maiophagus ovinus, are, strictly speaking, not ticks, but highly modified flies that have taken up a ticklike existence. The female retains the larvae in the abdomen until ready to pupate, when eight or ten are layed. These immediately attach themselves to hair and pupate. The pupal stage lasts from three to six weeks. While light infestation with sheep ticks produces no visible symptoms, heavy infestations cause loss of flesh and losing of wool. Since infestation of young lambs occurs by ticks that have left recently sheared wool, lambs should be kept a considerable distance from the stored wool. In severe infestation, dipping may be necessary.

Sod Pasture for Pigs in Rainy Season Best

During the rainy season it would be well to have a sod pasture for the pigs. Here they may roam around on nice days getting the exercise and sunshine so vital to their growth. They will consume only small amounts of green forage, but this is very helpful in balancing their ration and in supplying the necessary vitamines. How much easier it is to keep the quarters clean if a sod pasture is used during the wet season.

For this purpose brome grass is perhaps one of the best grasses for forming a sod.

Markets Discriminate Against Heifer Calves

The market seems to discriminate against heifer calves and apparently quotes higher prices for steer calves of equal finish and quality. Very often such difference in market price results from the fact that the heifer calves have been on full feed too long. If they had been marketed 30 or 60 days sooner, they would have returned a greater profit. Heifer calves, which are full fed on grain as long as steer calves, will carry more surface fat as well as more internal fat. Their carcasses are not so desirable.

Gluten Feed Value

Recent experiments at the Kansas station indicate that gluten feed has a value per pound, in the steer ration, slightly greater than cottonseed meal. Linseed meal proved to be worth $12 to $15 a ton more than either cottonseed meal or gluten feed. However, linseed meal usually sells considerably higher than gluten feed, and so it would seem that more farmers should be feeding gluten feed than actually are to secure the greatest returns from their steers.

Cold Storage at 37 Degrees Best

Temperature Should Not Run Too Close to Freezing for Potatoes.

(Prepared by the United States Department of Agriculture.)

Cold storage of seed potatoes should not run too close to the freezing point, and 37 degrees Fahrenheit is probably a desirable temperature, potato specialists in the United States Department of Agriculture have concluded after storage experiments with seed potatoes in several seasons.

Results of Studies.

The results of the studies appear in Technical Bulletin 117-T, "Comparative Influence of Different Storage Temperatures on Weight Losses and Vitality of Seed Potatoes," just published by the department. When potatoes are stored at a temperature of 32 degrees considerable decay results. At temperatures of 36 or 40 degrees the potatoes remain approximately dormant for the usual storage season, and may even be stored for an additional year without excessive deterioration in appearance but not in quality.

The authors, William Stuart, P. M. Lombard, and Walter M. Peacock, all of the bureau of plant industry, experimented with storage of seed potatoes, not only at the department's Arlington farm, but also at the Virginia truck experiment station near Norfolk, Va., at the Marble laboratories, Canton, Pa., and at the Aroostock farm of the Maine agricultural experiment station. Different variations in storage of potatoes showed slight differences in response to variations in storage conditions. Variations in storage temperatures did not reveal important differences in yields from the stored seed stock of the Irish Cobbler variety. Results indicated the desirability of holding potatoes for several days at a 70-degree temperature after removal from cold storage and before planting.

Results Summarized.

The authors summarize the results of previous investigations of the results of cold storage on the vitality of potato seed stock, and report in detail the methods and conclusions arrived at in the studies by the Department of Agriculture. Technical Bulletin 117-T may be obtained free, while the limited supply lasts, by applying to the United States Department of Agriculture, Washington, D. C.

Good Implements Give Protection From Bees

Many farmers who could use the honey from one to two swarms of bees on their table during the year and at practically no cost for the food will not keep bees because they are afraid they will get stung.

With a bee smoker, a bee veil, and bee gloves, all of which cost but little, bees can be handled with as little fear as chickens. Blow a little smoke into the entrance of the hive first, then raise the cover of the hive a little and blow a little smoke in on top. Wait a moment and you have a docile swarm of bees. There will be some workers in the field and they will come back while you are working with them. To protect yourself against these have a veil and for fear you would pinch one a little and cause it to sting, wear gloves. Then you are absolutely safe. But after all, a bee sting hurts but little more than a savage peck from an old setting hen.

Cellar Is Convenient for Vegetable Storage

The house cellar is a convenient place for vegetable storage. A dirt floor is preferable. The furnace cellar should be separated from the storage cellar by a concrete wall or a double wood partition. A window is needed for ventilation. An outside pit, made by burying a barrel horizontally in the side of a bank, makes an ideal place for storing cabbage and root crops, and the unused hotbed pit frequently can be used successfully for storing celery.

Agricultural Squibs

Most fungous or bacterial parasites thrive best where moisture is plentiful.

* * *

Generally millets can be sufficiently cured in the swath and windrow and this is the quickest method.

* * *

There is practically no difference between the flavor or the body of whey butter and that of the regular product.

* * *

Aphis or plant lice show signs of being particularly plentiful this year. They are sucking insects and must be controlled with a contact spray.

* * *

Millet is not a difficult hay crop to cure. Usually the cut crop is allowed to cure in the swath for at least one day after which it is raked into windrows.

* * *

To plant soy beans from the same lot of seed in the same field during the same summer with the same amount of fertilizer and make one plot yield three times the weight of cured hay as another plot is an accomplishment worthy of mention.

DAIRY

DAIRY COWS NEED SUCCULENT FEED

Silo Is Best Supplement for Dried-Up Pastures.

(Prepared by the United States Department of Agriculture.)

During the late summer pastures in most sections are short because of dry weather and because they are grazed too closely. If there is any grass, it is not succulent and is unpalatable. Consequently, cows will not consume enough for high milk production.

Experienced dairymen know that if the production of their cows has decreased during the hot, dry weather because of insufficient feed, it is difficult and practically impossible to bring the production back to normal during that milking period.

The summer silo, according to the United States Department of Agriculture, is probably the best means of supplementing short, dried-up pastures. For a herd of 12 to 20 cows, a silo from 10 to 12 feet in diameter is best suited for this purpose because the silage can then be fed out fast enough to prevent spoiling. If, however, all the silage is not fed during the summer it can be fed the following winter or the next summer. Silage will keep for several years. Dairymen frequently fill two silos, one for winter feeding and one for summer use.

Where it is not feasible to erect a silo for summer feed the short pasture may be supplemented by certain pasture crops instead of summer silage. In many sections sweet clover has proved very satisfactory for this purpose. It does well at this season and has the advantage of being a legume and consequently contains a large amount of protein. Alfalfa can also be pastured at this time and will assist materially in preventing the midsummer drop in milk flow.

Many combinations of legumes, such as peas, vetches, and soy beans, with grains, such as corn, wheat, oats, barley and rye, can be grown and fed green. Successive planting of these crops will often provide succulent feeds over an extended period. Sudan grass is also well suited for grazing purposes throughout the Central West.

In addition to good pasture high producing cows need to be fed grain to supply the required nutrients. Cows producing more than 20 pounds of milk daily should be given one pound of grain to each four to six pounds of milk produced. The grain feed may be a mixture of corn, oats, wheat bran, or barley, and should always be ground. For cows producing more than 35 pounds of milk daily the grain mixture should contain one high-protein concentrate, such as the oil meals.

Keep Cream Cool During Hot Months of Summer

To receive the highest price for cream during the hot months, dairymen must exercise extra precautions. The following facts are worthy of consideration:

Water cools 20 times more quickly than air.

A simple cooling system may be made by piping water from the windmill into a hardwood barrel and from there to the stock tank. The cream can is placed in the barrel through which the fresh, cool water flows.

Cream cooled to the proper temperature keeps sweet the longest possible time.

Never mix warm cream with cool cream.

Cream should be stirred frequently.

Cleanliness, cooling, stirring and frequent deliveries of cream are important.

Distasteful Flavors in Cream Caused by Weeds

Off flavors in cream may be caused by feeds and weeds, such as wild onion, garlic, leek and ragweed. Flavors may be absorbed from the surroundings. For example, oil, gasoline, and vegetable flavors may cause trouble. Another class of flavors resulting from bacterial contamination are called stale, cheesy, yeasty, bitter, or acid. All of these off flavors result in poor quality of cream and cause a financial loss to the dairy farmer. They may be eliminated by keeping cows out of pastures which contain undesirable weeds, handling and storing cream in sanitary surroundings, and by careful methods in production and handling.

Cooling of cream to 50 degrees Fahrenheit immediately after separation and frequent deliveries will help win the battle against poor cream.

Save Soil Fertility

One of the most difficult problems confronting our farmers who grow cash crops is the conservation of the soil's fertility. There is some difference of opinion as to the best method of accomplishing this, but judging the future by the past, we can safely say that there is no way more certain of results than the keeping of livestock. The farmer who keeps cows, being a consumer rather than a seller of feeds, will constantly increase the fertility of his soil.

FLAVOR *that tempts you to eat the* BRAN YOU NEED

That's why millions find it a help against constipation

Here's the story in a nutshell of Post's Bran Flakes. You need the bulk in bran to round out your diet and safeguard you against constipation. Post's Bran Flakes gives you the needed bulk—and adds a wholesome delicious flavor to tempt you to eat the bran . . . In millions of homes this is already a familiar story, for Post's Bran Flakes is the most popular of bran cereals. If you haven't tried it, why don't you? Eat it every morning for the next two weeks with milk or cream, or with fruits. Serve it right out of the package. And try the delicious muffin and bread recipes. See how good to eat Post's Bran Flakes is—how effective.

Ordinary cases of constipation, associated with too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

The Caustic Critic

The late Mrs. John W. Mackey was none too fond of modern fashions. At a luncheon in New York one day she nodded towards a beautiful girl with bare arms, bare knees and so forth, then said grimly:

"What wails would go up to heaven if it were poverty that made girls wear so few clothes."

Cat Horse's Guardian

S. J. Holloway, Tryell county (North Carolina) farmer, has a cat which serves the combined purpose of stable hand and "watchdog" The cat holds in its mouth the end of a halter while a big draft horse grazes. When the horse strays to the edge of the lawn, the cat draws it away from the road.

How Does He Know?

"A wife makes a man forget a lot of troubles—"

"That a bachelor never has."

Never ask a wise man the same question over again. He may have a temper besides wisdom.

Would Ruin Him

Two young prospective aviators were discussing the subject of aviation, and a certain famous flyer, when the smaller, age eight, remarked to the other:

"What if the tail of the plane would get caught as he started up; it would cut a gash in his head, wouldn't it?"

His brother answered: "Yes, it would just mash him down and break his back."

And the little fellow said: "Yes, it would break his general cord."

The Worse Way

Lyle Womak, who sued his wife, Ruth Elder, for divorce on the ground of cruelty and coldness, has joined the Byrd expedition to the pole.

"It will be cold in the Antarctic," he said to a Panama correspondent, "but it won't be as cold as Ruth."

Then in allusion to his divorce he added bitterly:

"In the old days marital problems used to be solved—now they're dissolved."

Public Fairly Warned

A warning to the public to keep off the streets while a young woman was taking her driver's test appeared recently in a paper of Vetseraas, Sweden. The advertisement read: "The public is requested to leave the streets today between 11:30 and 12:30. Margit is getting her driver's license." The notice was signed with the name and address of Margit's proud parents.

There are comparatively few pearls in the world; but there are a million pearl necklaces.

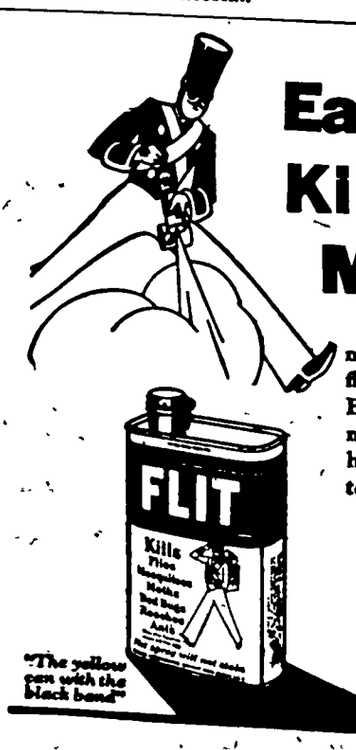
A man can make a lot of trouble out of very little material.

The mother of a dozen children has few theories about rearing them.

DOCTORS quite approve the quick comfort of Bayer Aspirin. These perfectly harmless tablets ease an aching head without penalty. Their increasing use year after year is proof that they do help and can't harm. Take them for any ache; to avoid the pain peculiar to women; many have found them marvelous at such times. The proven directions with every package of Bayer Aspirin tell how to treat colds, sore throat, neuralgia, neuritis, etc. All druggists.

ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid



Easier way to Kill Flies and Mosquitoes!

Easier—because the new Flit sprayer makes a clean-smelling vapor which floats freely and does not fall in drops. Easier—because Flit kills flies and mosquitoes faster, though harmless to humans. Prove it yourself. Guaranteed or money back.

HE NEVER REMOVED HIS HAT

(© by D. J. Walsh.)

THE little town of Flossingham had never quite recovered from the blow it received when Dickson, its neighbor by but seven miles, was declared the county-seat and given a new courthouse. Only those who have lived in an ambitious little town know the bitterness of the defeated in such small triumphs and the poorly concealed exultation of the successful. Flossingham, after this blow, sank into a doze which might have deepened into a Rip Van Winkle sleep if it had not been for the new drug store.

It had long been the consensus of Flossingham opinion that the town could not support two stores of any kind. So when a very good looking young fellow with up and coming manner came to town, rented the largest room in the new Butler building and announced that he would open a pharmacy there in the near future, the general feeling was one of pity rather than anything else.

There was one man, however, who felt nothing but resentment. Asa Pefferle had owned and run the only drug store the town ever had known. He was getting along in years and wasn't well. His store had been advertised as for sale in several county papers for some time and it was not without anything resembling equanimity that Asa received the news of his rival's approach. He longed to realize some money on his place so that he could go to a good sanitarium for a nice long rest. To be sure Millicent, his niece, and only living relative, was to be thought of but Millicent had assured him again and again that she would gladly go to work somewhere else whenever she was freed from the cares of him and his home.

"The only thing I can do," Aso told his niece bitterly, "is to give that young smart-alec a husky run for his money and I'm going to begin instanter."

Millicent was forthwith appointed a committee of one to keep a line on whatever was being done at the new pharmacy and report. The first thing she saw installed was a splendid soda fountain with all the latest improvements. There followed a magnificent line of toilet articles such as would bring to the lips of the eternal feminine only superlatives. The bottles on the shelves shone resplendently and the drugs were supposed to come from the most up to the moment laboratories in the country. The furnishings were exquisite. The color scheme would attract any artist and the orderliness and cleanliness appealed to the most fastidious.

H. Halsey gave an opening for which the latest thing in radios was installed. He sent to the city for dozens and dozens of hothouse roses, which he gave away as souvenirs and distributed leaflets among the visitors telling of a handsome prize he was going to award to the person who presented the most suitable name for the new store, the judges to be selected from among the townspeople.

The place was packed. People surged in and out all through the day and evening, commenting amiably upon the magnificent outlay, listening to the radio, drinking free ginger ale and root beer and wearing roses of every hue and variety, but it was not the radio, the equipment, the free drink or the souvenirs about which the people buzzed when out of earshot. It was about Halsey, the handsome proprietor. During the entire day and evening he had worn a soft gray fedora hat pulled low over his face. He had served sodas and free drinks, adjusted the radio and passed out souvenirs without removing it even once.

Asa Pefferle was not so well. The news of the grandeur of the new pharmacy and the crowds which continued to patronize it even after opening day seemed to make his decline more rapid. What difference did it make to him that curiosity was the leading motive which took people into the store? In vain had he scrubbed and cleaned and rearranged his own place. In vain did he offer a souvenir with every purchase over a dollar.

Even the people on the outlying farms around Flossingham heard about the new store and dropped in to take a look at the man who never removed his hat. They never failed to spend tickets and dimes and quarters before leaving for soda water and other things. The gossip grew and waxed extravagant. It was even reported that clerks at the Flossingham hotel told how the new druggist ate and slept with his hat on.

People in Dickson heard about it and came to Flossingham to buy their drugs. Drummers learned of Halsey; came and sold him goods, left and spread the story about Halsey's gray fedora over half the state.

Millicent Starbright felt perfectly justified in going to the new drug store for sodas. Uncle Asa had no fountain in his and all the time, with each and every passing day, she was falling deeper and deeper in love with the new pharmacist.

In less than a year Halsey's business grew so rapidly that he was forced to acquire additional space. He put in several new lines and leaders and still wore his hat. Flossingham had never beheld him without that hat. The store was still spoken of as Halsey's pharmacy, but the votes for the new name were scheduled to be judged on the first anniversary of the store's opening.

Curiosity was rife on that momentous day. Asa Pefferle had taken to his bed after placing his rapidly declining stock in charge of a neighbor's son who had clerked for him off and on. Millicent, his neice, having voted a name and slogan, waited among the crowd in Halsey's while the judges looked over the list. When they came out of conference and announced that the grand prize—a wonderful toilet set of many pieces—had been awarded to Miss Millicent Starbright for her name, "Halsey's Hat," with its accompanying slogan, "Look for It in the Hat," she was never more surprised in all her life. Afterward, when H. Halsey managed to tell her in an aside that he'd like her to wait or come back after the crowd had gone, she couldn't possibly have described her emotions had she tried.

She went out and walked and walked, waiting for the multitude to disperse. When she finally went back to the store only one old lady remained and Halsey promptly got rid of her. When they were alone he locked the outer door and led her into his private office.

"I've loved you ever since the first time you came in here," he told her without preface or preliminary. "Do you think you could ever come to care for me, even a little bit, Millicent?"

"Oh—but I—I—first of all, you'll have to tell me why you never take off your hat," she said, flushing very red. "Are you bald?"

"Well—I—er—"

"Don't tell me it's a disguise and you're hiding from some one! I—I couldn't bear that! You see—I—I do like you a little bit already!"

"I'm not bald and the hat isn't a disguise," he told her, smiling as he reached up to sweep the celebrated gray fedora from a wealth of curly chestnut hair. "I merely wanted to start a business here in a pleasant little town which I realized could not support two drug stores. I knew your uncle wanted to sell out but I didn't have money enough to buy at first. It was easier to start with a little money and plenty of credit but I knew I'd have to think up something radical and startling to make business come my way. My mother and father expected me to be a girl and they named me Hattie for my mother. When I disappointed them they changed the name to Hatton but everybody else in the world called me Hat. I hated it. It never seemed to arise above the indignity of that awful name. Maybe that is why I was prompted to use the hat idea for my specialty—an urge to make an unpleasantness pay for itself—anyway, it worked."

"Will—will you feel that you must keep on making it pay? And may I call you Hatton? I don't think it a bit unpleasant.

"I'm through with the gray fedora, Millicent. I've money enough to buy your uncle out now so we'll be the only drug store in Flossingham and if you'll marry me I'll spend the rest of my life trying to make you happy."

"I—I suppose I might as well say yes," she said shyly. "I've thought of such a lot of ways to use the hat idea for advertising, it would be a shame to waste them, wouldn't it?"

Great Men Who Toiled at Shoemaker's Bench

The occupation of shoemaking has furnished to the ranks of statesmen, philosophers and scholars many men famous for their abilities in later life. As an occupation which is conducive to reflection it no doubt tends to encourage and develop studious qualities wherever they exist by the gift of nature.

Nearly all modern civilized countries have possessed great and famous men who began life on the shoemaker's bench.

Roger Sherman, a patriot, jurist and statesman of high rank, worked at the shoemaker's trade until he was twenty-two years old. It is said that Sherman always kept a book open before him as he worked that he might not lose a single instant when the cessation of his duties gave him a chance to study. He became a judge, a congressman, a senator, and was considered in his time one of the wisest of American public men.

Whittier, the poet, and Henry Wilson, vice president of the United States, were also shoemakers. The lives of both men were a triumph over early disadvantages and their utterances always revealed keen sympathy with workers.

Germany produced two famous shoemakers, Hans Sachs of Nuremburg, the Minnesinger and early writer of German lyric poetry, and Johann Joachim Winckelmann, the historian of ancient art.

In England the shoemaker's bench graduated William Gifford, who became a distinguished editor, publicist and author.

Robert Bloomfield, a work shoemaker, was a popular poet, and his "The Farmer Boy" is still remembered. Another English shoemaker was Thomas Holcroft, man of letters and dramatist. Still another was John Brand, antiquary and clergyman.—New York Times.

Muskrats Plague Bohemia

American muskrats are overrunning Bohemia. Twenty years ago a few of these animals were taken to that country and established on a farm near Prague. Now millions are living in Bohemia and adjacent countries. Great damage has been done to vegetable gardens; native frogs and fish are being exterminated; even roads, dykes and railway embankments are suffering from the muskrat burrows.

Around Orchard

CONTROL BORERS WITH CHEMICAL

Paradichlorobenzene About Tree Is Effective.

Peach tree borers have played havoc in some orchards but they may easily be controlled by using a chemical called P-C-Benzene.

"The full and correct name of this chemical is paradichlorobenzene," says C. H. Brannon, extension entomologist at the North Carolina State college. "Despite its tongue-twisting name, however, it is very effective in controlling the peach tree borer. If it is applied around the base of the tree in the right manner and at the proper time, from 90 to 100 per cent control will be secured. The method of using this chemical has been tested in both experimental and commercial orchards and growers are advised to use it regularly each year."

P-C-Benzene can be used on trees four years of age and older with perfect safety, states Mr. Brannon. If younger trees are badly infested, they may be treated with one-half ounce of the chemical. Trees four and five years of age should get three-fourths of an ounce each; trees six years of age and older should get a full ounce and very old trees with large trunks should get an ounce and a fourth.

The time of application is especially important. For North Carolina conditions, this time should be between September 25 and October 10. These dates should be closely followed if best results are to be obtained, states Mr. Brannon. In applying the P-C-Benzene, the crust of the soil is broken and smoothed off above the highest borer hole. The chemical is about like granulated sugar and gives off a gas that penetrates downward into the borer holes. Scrape away the gum and apply the chemical in a continuous ring about an inch wide and about an inch from the trunk. Several shovels of dirt should then be placed over the crystals and packed into a mound with the back of the shovel.

Amount of Nitrogen Will Depend Greatly on Soil

On only the very richest of ground can the peach grower afford to leave off the application of nitrogen to his bearing trees. On many of the poorer soils it will pay well to apply nitrogen to trees below the bearing age. This will aid the trees to get the necessary size for good production in less years than will otherwise be necessary.

Too much nitrogen, especially in a wet year can be a serious disadvantage to the grower. When a great excess of nitrogen is present with the greater induced growth, the fruit is more susceptible to brown rot and other diseases and the shipping quality of the undiseased fruit is much poorer.

Just what the proper amount of nitrogen will be depends upon the soil and the size of the crop which the trees are carrying.

Three Most Promising Varieties of Cherries

The late California plant breeder, Luther Burbank, gave much attention to cherries, and three promising varieties of sweet cherries were distributed by him within recent years: Abundance, Giant and Burbank. The first two have been grown by the New York experiment station and their behavior under eastern conditions is given in their bulletin series on "New and Noteworthy Fruits." As grown in New York, Abundance is described as a "splendid late cherry of the Napoleon type. One of the best of Burbank's new fruits." As to Giant, "the quality is splendid and the cherries do not crack."

Horticultural Facts

Trees like the peach, which start new branches readily from the central trunk, but the twigs of which tend to dry out badly, should be cut back most severely.

* * *

One of the useful features that has been developed in connection with apple storage problems is the use of oiled paper wraps for the prevention of scald and the better keeping quality of the fruit.

* * *

Sow the cover crop in the cultivated orchard now. Crimson clover, crimson clover and oats, mammoth clover, rye and vetch are all good. Only remember that if rye is sown it should be turned under in the spring.

* * *

Lime sulphur solution should be made in an iron kettle over a fire or in a steam boiler.

* * *

Nowhere does clean, careful cultivation pay better than in a vineyard. It should be thorough, extending under the trellis when put up, and working up all the soil in the row.

* * *

Now and then a peach tree or a nectarine tree will even bear fruit that is half nectarine and half peach. That's how closely the two fruits are related.

Wake up your energy with this "wake-up food" POST TOASTIES

Toasted, golden flakes with all the wholesome sweetness of the sun-ripened corn—Post Toasties is just the breakfast cereal for warm weather when you want foods light and crisp. Serve it to the family tomorrow with cool milk or cream—topped off with ripe fruit or berries. See if everyone doesn't call you a good provider!

You'll send them off to work or play with a grand new store of energy. For Post Toasties is rich in energy—in the most quickly digested form. Grown-ups and youngsters alike find it easy to digest.

Easily served, too, right from the red and yellow package. Call up your grocer today.

Kill All Flies! THEY SPREAD DISEASE

Placed anywhere, DAISY FLY KILLER attracts and kills all flies. Neat, clean, ornamental, convenient and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed. Insist upon DAISY FLY KILLER from your dealer.

HAROLD SOMERS, Brooklyn N. Y.

Hope of Golden Future Not Much Consolation

Saul Bron, a leading member of the Russian committee that has come to America to spend $40,000,000 for automobile trucks and tractors, said in an interview in New York:

"Russia will get on her feet, if capital will only give her a fair deal. In Russia we are hoping, and there's nothing like hope—to disappoint you, is there?"

Mr. Bron laughed grimly and went on:

"A friend of mine was complaining about the deal Russia gets from capital. Another friend patted his shoulder and said: 'Cheer up, brother. Somewhere behind the clouds the sun is shining.'

"'Yes,' said my friend, 'and somewhere below the sea there's solid bottom, but what good does that do to the shipwrecked sailor who can't swim?'"—Detroit Free Press.

Menace of Codling Moth

The Department of Agriculture is out to see that the codling moth is not coddled any more. It is time that it be taken seriously. Estimates now are that at least 20 per cent of the crop of apples and pears of the Pacific Northwest are lost each year through the destruction wrought by the worms of the moth. In individual cases the loss runs as high as 50 per cent.

The moth is nothing if not prolific. Two generations are produced each year during the growing season. This means that it is vital that the trees in the orchards be sprayed as many as six times a season.

The Glad News

Voters of Stonington, Conn., gathered to devise means to discharge a $50,000 bond issue. Then they discovered the bonds were redeemable in 30 instead of 20 years.

Mrs. Paul Grange and Mrs. Dave Schwichtenberg left Tuesday night for Iowa City to attend the Auxiliary Convention.

C. G. Waterman and family and R. A. Jorgenson and family visited with Miss Meta Lemke at the Mercy Hospital Friday evening.

Mr. and Mrs. Albert Schroeder returned to Chicago Saturday after visiting for three days with Grandma Schroeder.

LET ME SAVE YOU MONEY ON your Auto Insurance, also Life and Property. Phone or send card—Henry Ward, Klemme, Iowa. tfc

The fall term opens Tuesday, September 3.
HAMILTON COLLEGE OF COMMERCE, Mason City, Iowa.—1tc

Mrs. Mary Waterman is at this time visiting a cousin at Spearfish, S. Dak., in the Black Hills. She expects to return to Iowa City soon.

I clean and repair al makes of Sewing Machines. All work guaranteed, satisfaction or no pay. Write or phone W. M. Voiles, Belmond. 2p

The Northern Lumber Company is being treated to a new coat of paint, a nice brown color. "Judge" H. L. Suckow wields the brush.

Mr. and Mrs. J. N. Day and son Dorance will leave Friday morning for several days visit with the Nissen boys and friends at Sioux City.

Mr. and Mrs. C. G. Waterman and Marian; Mr. and Mrs. Art Kudje, and Jackie, and R. A Jorgenson and family all enjoyed a swim at Clear Lake Tuesday evening.

Sunday Lucille Kraus and Irma Olm and a couple of friends took in the sights at Pilot Knob and also visited Adella Kuhlman at Forest City.

Mrs. Henry Schroeder, Grandma Schroeder and Dorothy, Mrs. Lena Schroeder and Adella visited with Mrs. Fred Shipley at Belmond Wednesday afternoon.

Miss Irma Olm left Monday evening for her home in Wisconsin, after visiting for several weeks in Klemme at the Rev. Grosshuesch home.

Dorance Day spent last week at Camp Roosevelt and was awarded a Whte "R" Monday evening at the closing camp fire program. Dorance is to be congratulated.

The A. D. Gimer family drove to West Bend Sunday to visit the Grotto. There were a lot of other visitors there Sunday to see this wonder.

R. W. Elder and family; Mr. and Mrs. Chris Gram and Wallace Pavey and family took in the Odd Fellows and Rebeccah Picnic at Clear Lake Sunday.

Mr. and Mrs. Emil Kraus and Arlene left Saturday morning for a three weeks visit at Joliet, Illinois. Harl Gimer is driving the cream truck while Emil is away.

When school opens in September several young folks of Klemme will be on the teaching staff at various schools. Miss Adella Schroeder is the Home Economics teacher at the Geneva school.; Earl Josten is the music director at Estherville; Abe Lauritsen is the coach at the Orange Consolidated near Cedar Rapids.

Yourself and Your Neighbors
--Items of Personal Mention--

Jack Wellemeyer and cousin, Fletcher Wellemeyer, will leave for Kansas City by airplane from Mason City Tuesday morning. They leave at about 10:00 a. m. and arrive at Kansas City at 1:30 p. m.

Leonard Lau, of Chicago, is visiting at the home of his grandparents Mr. and Mrs. Tom Blank and with other relatives in this vivinity until September when he will return to college at Washington, D. C.

Grandma Schroeder and Dorothy Croner will accompany Mr. and Mrs. Henry Schrodeer back to Chicago, where they wil spend the winter and where Dorothy will enter school for the year.

Miss Meta Lemke returned Tuesday from the Mercy Hospital at Mason City where she recently underwent an appendix operation. She is feeling fine and making a good recovery.

Miss Marian McNulty of Belmond was in Klemme Tuesday and met with several music pupils. Anyone wishing to study piano may make arrangements by calling Mrs. R. A. Jorgenson, or writing Miss McNulty.

Mrs. G. W. Kluckhohn, Sadie Turgasen and sons, Vernon and Donald drove to Traer Sunday for a visit with W. C. Keraus and family. They returned home Tuesday and were acompanied by Thelma Kluckhohn who had been visiting at Traer.

Mr. and Mrs. Frank Gruetzmacher are entertaining a lot of company this week from Chicago, who came Tuesday. They are: Alfred Gruetzmacher, J. H. Groh and wife; and F. Waterman and wife of Chicago; and H. A. Gruetzmacher, wife and son, of Tecamah, Nebr.

William Gauger, of Holstein, Ia., came this morning for a few days visit with Klemme friends. "Bill" has been working on a farm for his uncle at Dows this summer and s all toughened up for the foot ball season. "Bill" won his letter in football last year.

A number of Klemme young folks will again enter college this fall. Maurice Greiman goes to Ames; Gladys Wilson and Asa Arnold to Drake; Claire West to Ames; Oral Gibson and Harvey Nelson to Morningside; and Donald Turgasen to Hamilton's at Mason City.

Mrs. W. F. Pavey and Mrs. Paul Grange planned a farewell party on Dorothy Croner Tuesday afternoon to which fifteen of her little friends were invited. Dorothy received a number of fine gifts as remembrances from her Klemme friends. Home made ice cream and cake were served.

One year from now—will you be holding a good position or still trying to find something to do?
Thorough business training will solve that problem for you.
HAMILTON COLLEGE OF COMMERCE, Mason City, Iowa. 1tc.

Vernon Turgasen will begin work Monday at the Higley Plant at Mason City where he will be in charge of the shipping in the ice cream department. Vernon should make good as he is well qualified for the position. He has had some experience in the local creamery and has had a two year dairy course at the Iowa State College.

Last week Albert Bazr and family had plent yof "help" (?) from town to assist with the threshing. Mr. and Mrs. R. A. Jorgenson and Buster, Grandma Schroeder, Dorothy Croner, Mrs. Lena Schroeder, Adella Schroeder, Rev. Grosshuesch and family and Irma Olm were all out at Albert Barz' for dinner. Later the outfit moved over to Henry Barz farm and there a big lunch was enjoyed. The town folks sure enjoyed it greatly and are anxiously awaiting silo filling time for some more big feeds east of town.

WANTED—Work of any kind at once. Hibbo Ohling, P. O. Box 185, or phone 75, Klemme. 1tc

A dollar box of stationery, lined envelopes, for 69c at the Times Print Shop. 1tc

The President Says:-

"I have never seen any road to independence except by saving. A man with only one dollar of assets has to take the first job offered him. A man with one thousand dollars can take the choice of several. A man with five thousand dollars saved can go a long way toward debating who is to get his services. I went through this mill myself."

This bank will gladly help you get started on the road to independence. Our Savings Department is very much at your disposal.

Special--

For Next Week

Check up your Gate needs.. We are going to put on a REAL PRICE for the coming week.

W have bought 100 GATES and the prices are going to be LOWER than ever before. These Gates are Galvanized, two upright channel bars, heavy wire filler, with the wire tightening device.

These Gates are GUARANTEED and if they should get broken we will not ask any questions but will gladly replace it with a new one. We have handled these gates for a long time and know they are alright.

Check Ovre Your Needs—If We Don't Get Out To See You Just Call The Office and Leave Your Order.

The price on this Gate is going to be under $12.00 for a 16'.

HOGGING DOWN TIME WILL SOON BE HERE

GET PREPARED by getting your Fence and Post on the ground—take out a few bundles of "RED TOPS" and a roll or two of Woven Wire and be ready.

DON'T FORGET TO BUILD THAT MACHINE SHED

Why let all that New Machinery stand out this winter. Take an invoice of the machinery you have on hand. Don't you think a small investment in a machine shed would b the proper thing? Come in and let us tell you how easy it is to build a machine shed and how little one can be built for.

Threshing is getting very nearly over with and now is the time to start any fall building that you have wanted to get at earlier in the season. Our line is complete and we are here to help you in any way we can.

If it is necessary and you are pinched for time let us know, maybe we can help you in some way, possibly by hauling out a load of lumber or a jag of cement.

Northern Lumber Co.

OZARKS MTS. AND HILL BILLIES SEEN

OZARKS ARE BEAUTIFUL BUT ARE NOT MOUNTAINOUS

Were Made Famous By Wright's "Sheperd Of The Hills" Story

The Klemme Times skipped an issue last week while Editor and Mrs. R. A. Jorgenson and son, Buster, and the C. G. Waterman family enjoyed a tour and a vacation in the neighboring southern states.

It may be of some interest to our readers to have a short description of at least a part of our tour and we shall endeavor to give only what is of most interest to our readers.

To begin with the object of our trip was to spend a few days visiting Mr. and Mrs. Hugh Chapman at Kansas City, and Lyle Liebendorfer and family at Chanute, Kansas, (the ladies being sisters of Mrs. R. A. Jorgenson) and to drive through the Ozark Region.

We left Klemme 4:15 a. m. Friday, August 23rd going to Kansas City via Ames, Des Moines, Indianola, Lamoni, Iowa, through Bethany, Albany, St. Joe to Kansas City. We visited over Saturday there and saw the fifers in the women's air derby race fly over the city. Sunday the entire party drove to Chanute, Kan We went via Ottawa, Garnett, Iola, and Humboldt. We were getting into the oil fields near Ottawa, and at Humboldt saw acres and acres of oil storage tanks belonging to the Sinclair Co. There were numerous oil and gas wells in this vicinity and pipe lines runnin gall over the country. Natural gas lines are piped clear up to Kansas City along this route.

At Chanute we took a side trip in the late afternoon to the Cauble Scout Camp, about twenty miles to the southwest. The camp is down in a rocky, wooded canyon and is very beauiful. A large spring supplies the camp with water and also feeds the swimming pool. The cabins are all built different and are scattered about the canyon. For instance, one cabin is built of rough rock in the form of an old castle on an over-hanging ledge, reached only by a bridge; another cabin is built on the Spanish adobe type, another of Colonial design; one a replica of the Little Brown Church; another is a log cabin, etc. Mr. John E. Wilson is the Scout Executive and is well acquainted with Mr. J. C. Underwood and L. Osam, and we enjoyed a good visit with him and he showed us over the camp and later we took a swim in the pool.

Monday evening we packed a picnic lunch and drove out to an oil field near Chanute. At this field there were twenty-eight wells, and all producing. In this section most of the oil wells are low-producers, and only a barrel or two are pumped from each a day. The wells are scattered about but all are pumped from one station. Rods run from each pump to the station, being on an ecentric hook up and all driven from one large wheel. This field had two gas wells and the engines are driven by natural gas, thus the power costs nothing. The wells are pumped each morning and then given a twenty-four hour "rest." During this time however air is pumped down into an "air well" which forces the oil thru the soft rock into the wells.

The oil is pumped into large storage tanks and when full the crude oil is flowed into the pipe lines and sub-stations along the route pump it to tank farms and refineries. The oil is sold at the field and the present price was $1.26 per barrel.

Parts of Kansas produce high producing wells and the drillers are always hoping to hit a good one.

Another well was being drilled while we were at the field.

Practically all of the farms, as well as the towns in this section of Kansas use natural ga for cooking, lighting and power, as it is very cheap.

We remained at Chanute until Tuesday when we again headed for territory further south via. Girad and Pittsburg for Miami, Oklahoma.

In southern Kansas and northern Oklahoma we saw hundreds of zinc and lead mines and the huge piles crushings or "chat" from these mines resembled small mountains and we drove for miles through the valleys formed by chat. It resembles course gravel and ranges in color from pure white to light brown and is used on the roads and certainly makes a fine gravel road. In fact the best gravel roads we found were in Kansas and Oklahoma. It looked to us like there was enough chat in that section alone to surface all of the roads in the United States.

We arrived at Miami, Oklahoma and ate dinner at that busy little city which borders on the mining district. From there we headed east toward the Ozarks and saw lots of fine farming country, later getting into the fruit and truck gardening section as we neared the Ozarks. Our route took us through beautiful Neosho, then to Monett, Marionville and then again south to Galena skirting the Ozarks on the west through to Reed's Spring.

We were now in the real part f the Ozark Mountains and the scenery was beautiful a we drove up and down winding hills, covered mostly with oak trees and green with underbrush and thickets, and frequently crossing small streams.

Now we got our first glimpses of "hill billies," in tseir small log or rough lumbre cabins. The men in the Ozarks take life easy and it around smoking. The women and children go barefoot The climate is mild in the winter and so these people can get along on very little. They keep a few pigs which roam the hills, a cow or two and a few chickens and the women raise a little garden and a few potatoes. If the weather gets a little chilly it don't take long to chop down some trees and kindle a few logs in the stone fire-place.

On the streets in the small towns in the hills we always saw groups of men sitting around on boxes and store steps, smoking or chewing and perhaps discussing politics. It s certainly a great life for anyone born with a tired feeling.

Just to say, we had been in Arkansas we drove to Blue Eye, just on the border and then came back north through the eastern part of the Ozarks and stopped at Hollister for the night.

Note: Because of lack of space we will continue this story next week when we will try to tell of moer interesting country around the Ozark region.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The vacation days are now over and it is time to turn our attention again to the work of the Church and the Kingdom with renewed energy. Sunday therefore has been set aside as "Rally Day" in our church. We are inviting you to come one and all, both young and old, to the worship services Sunday both at Liberty and Klemme.

Special music is being arranged for both morning and evening services in the form of choir singing, male quartet and a solo by Prof. M. F. Penrod

The subject for the morning sermon will be "God's Challenge to the Church."

The Rally Day program in the Sunday School and Epworth League will be on the following Sunday.

Leaguers Had Social Time

About thirty young people of the Epworth League enjoyed a very fine social time on the Liberty Church lawn last Wednesday evening. The social was held in honor of the young people of our League who are soon to depart for school. After playing games fr an hour or two a lunch was served in the basement of the church.

Quarterly Conference Friday

Friday night at 8:00 o'clock the fourth quarterly conference will be held in Klemme. All members are urged to attend. Dr. Lease, the District Superintendent will be present to conduct the business of the hour.

REFORMS TO BUILD NEW BRICK CHURCH

NEW STRUCTURE TO COST BETWEEN $25,000 AND $28,000

Work On New Church Homo Will Begin Early Next Spring

For several months the members of the Klemme Reformed Church have been thinking seriously of the growing need for more room and some time ago appointed a building committee of seven men to carry out investigations as to whether an addition or a new building would answer the requirements.

This comittee composed of W. C. Schmidt, Albert Barz, Julius Priebe, John Bock, Fred Becker, Henry Stromer and Henry Thieman made many trips to other towns where they looked over both church additions and new buildings. They looked over plans and figures and studied the situation from every angle. At the special meeting of the congregation held Monday, the 26th of August, the building committee made their recomendations and submited facts gathered during the summer. The congregation whereupon voted to build a new church of brick, to cost between $25,000 and $28,000 with the provision that 85 per cent of the money must be pledged before the building is started. The Times is pleased to announce that this mark has already been reached, and the balance will be raised without any difficulty.

The members and friends of the church have been iberal in supporting the movement and it is now assured that building operations will begin early next spring.

Another general meeting will be held about the first of October to discuss plans for the new church. However it is very likely that the new building here will be built along lines similar to the new church at Plymouth, Iowa, which is of the most modern construction and design and appeals to all who have visited it.

Rev. Calvin Grosshuesch, pastor of the Reformed Church has done wonderful work during the short time he has been here and the membership roll has grown to a list of over two hundred confirmed members. Each Sunday the church is crowded beyond capacity and likewise the Sunday school, the Bible Class and other organizations have grown under his supervision. The summer Bible School was a great success this summer and promises to further expand. This growth thruout the several organizations in the church needs more room and a new building will solve the problem.

Rev. Grosshuesch is to be highly complimented on the splendid work he is doing both in his church and in the community. He is especially to be complimented for his good work with the young people. Likewise the Times wants to compliment the men of the building committee for their fine work accomplished in the past few months and the time they have spent in looking after the best interest of their church.

The new Reformed Church will be a real asset to the entire community and one for which we can all feel proud. Better churches mean better communities and by building up our churches we are building a better community in which to live.

KLEMME SCOUTS USHER AT THE NORTH IOW AFAIR

Nine Scouts of Troop 56 went to Mason City Monday to act as ushers at the North Iow aFair.

These Scouts will be given credit for the time spent toward earning a Civic Service Bar, which requires 72 hours of service rendered without pay.

The regular meeting of Troop 56 will be held Monday evening at the Parish House at the usual time. Parents, or any boys interested in Scouting are always welcome visitors at these meetinsg.

4-H CLUB AWARDS ARE LISTED HERE

ELL WINS FIRST ON TOWNSHIP BOOTH DISPLAY

Ell Township Also Placed First In With Demonstration Team

The biggest 4-H Club Show ever held in Hancock County was held t Garner, Tuesday and Wendesday, August 20 and 21. 104 head of livestock was exhibited and thirteen township Girls Canning Clubs put on exhibits and demonstrations.

In the Girls Canning Club Department, exhibits and demonstrations were put on by 13 different townships as follows: Bingham, Madison, Ellington, Concord, Garfield, Britt, Orthel, Erin, Liberty, Ell, Twin Lake, Amsterdam and Magor. On the township booths, the winnings were as follows:

1st—Ell Township
2nd—Magor Township
3rd—Liberty Township
4th Madison Township
5th—Bingham Township.

The demonstration teams in the above named townships with the exception of Ellington, competed on Wednesday and Ell Township, represented by Winnifred Hampel and Emma Goll, won first and were declared the Champion Demonstration Team from Hancock County and were sent to the State Fair to demonstrate there. Second place went to Britt township, represented by Leona Fisher and Elizabeth Havlik. These two girls will receive a trip to the Cl buConvention at Ames. The subject of the Winning Team was "A Balanced Meal Without Meat!"

Healthiest Girls Scores 99.25

In the Health Contest, Helen Terwilliger, a representative of Garfield township scored 99.25. She will represent Hancock County as their Champion Health Girl at the Iowa State Fair.

In the Music Memory Contest, Magor Township scored 100 per cent, and were awarded a portable phonograph.

In the Individual Record Club Contest, Ruby Beer of Magor Township won first and Madonna Dominy of Twin Lake won second. These girls will get trips to the Girls Club Convention at Ames.

Officers Elected For Next Year

The girls clubs held their annual business meeting and election of officers on Wednesday afternoon during the Achievement Show and the following officers were elected.

Doris Gelner of Madison Township, President.

Fern Smith of Erin Township, Vive-President.

Elizabeth Havlik of Britt Township, Secretary-Treasurer.

Dorothy Trulson of Britt Township, Historian.

Mildred Hampel of Ell Township, Reporter.

The Livestock exhibits were bigger and better than ever. Nine mares and colts were shown in the Colt Club. The winnings on the mares were as follows:

1st, Curtis Greiman, Garner; 2nd Bredlow Bros., Garner; 3rd, Bernard Greiman, Garner.

The winnings on the colts were as follows:

1st, Alfred Goll, Garner; 2nd, Richard Brouwer, Garner; 3rd, Eugene Greiman, Garner.

Champion Colt and Mare, Alfred Goll, Garner.

28 Head Baby Beeves Shown

In the Baby Beef contest, 28 head of baby beeves were shown consisting of 13 Angus, 10 Shorthorn and 5 Herefords. In the Angus class the winnings were:

1st, Robert Lawhorn, Garner; 2nd, Burtis Greiman, Garner; 3rd, Wallace Caldwell, Kanawha; 4th, Julian Anderson, Kanawha.

In the Shorthorn Class, the winnings were:

1st, Lee Williams, Corwith; 2nd, Wayne Chambers, Corwith; 3rd, Robert Greiman, Garner; 4th, Arnold Hampel, Garner.

In the Hereford Class, the winnings were:

1st, Robert Lawhorn, Garner; 2nd, Wayne Lewison, Kanawha; 3rd, Ronald Greiman, Garner; 4th, Wayne Chambers, Corwith.

Robert Lawhorn's Hereford Calf was declared Grand Champion Baby Beef.

In the Dairy Heifer club, the winnings were as follows:

Holstein Cow, 1st Geo. Knaupp, Jr., Garner.

Guernsey Cow, 1st, Richard Reed, Crystal Lake; 2nd, Cecil Kirschbau, Britt; 3rd, Raymond Kirchbau, Britt.

Holstein Senior Yearling, 1928 club. 1st, Dale Brede, Garner; 2nd, Geo. Knaupp, Jr., Garner.

Guernsey Senior Yearling, 1928 Club. 1st, Raymond Kirchbau, Britt 2nd, Mae Kirchbau, Britt; 3rd, Richard Jenson, Britt; 4th, Mavis Jenson, Britt.

Grade Holstein Senior Calf, 1928 Club. 1st, George Knaupp, Garner; 2nd, Alton Upmeyer, Garner; 3rd, Verne Berhow, Britt; 4th, Victor Greiman, Garner.

Grade Guernsey Senior Calf, 1928 Clu9. 1st, Richard Reed, Crystal Lake; 2nd, Mavis Jenson, Britt.

Purebred Holstein Senior Calf, 1929 Club. 1st, Dale Brede, Garner; 2nd, Billie Utterback, Garner; 3rd, George Knaupp, Garner

The Champion Guernsey heifer of the Show belonged to Richard Reed of Crystal Lake and the Champion Holstein Heifer belonged to Dale Brede. Dale's Heifer was also declared Champion Dairy Heifer of the Show.

In the Ewe and Lamb Club, there were 3 ewes and 3 lambs shown and the winnings were: Ewe, 1st, Geo Knaupp, Garner; 2nd, Robere Brede, Garner; 3rd, Arnold Hampel Garner.

Ewe Lambs. 1st, Robert Brede, Garner; 2nd, Robert Brede, Garner 3rd, Arnold Hampel, Garner.

Ram Lamb. 1st, Arnold Hample.

In the Fat Lamb Club 5 lambs were shown, as follows: 1st, Dolores Cook, Goodell; 2nd, Virgil Prilipp, Meservey; 3rd, Leo Kearney, Goodell.

Four litters were shown in the Sow and Litter Club as follows: 1st, Alfred Jurgemeyer, Garner; 2nd, Bernadr Byers, Garner; 3rd, Fred Griffen, Garner.

Seven Gilts were shown: 1st, Bernard Byers, Garner; 2nd, Alfred Jurgemeyer, Garner; 3rd, Alfred Jurgemeyer.

Seven Boar Pigs were shown: 1st, Bernard Byers, Garner; 2nd, Alfred Jurgemeyer, Garner; 3rd, Bernard Byers.

Seven Market Pigs were shown: 1st, Neil Taylor, Forest City; 2nd, Robert Pletcher, Crystal Lake; 3rd, Leonard Pletcher, Crystal Lake 4th, Ruth Caldwell, Kanawha.

In the Corn Club, Wayne Chambers of Corwith took first on a hil of corn, single ear and ten ears.

In the Livestock Judging Contes the winners were: 1st, Arnold Hampel; 2nd, Bernard Byers, Garner 3rd, Geo. Knaupp, Garner; 4th Richard Reed, Crystal Lake; 5th, Victor Greiman, Garner.

In the Boys Health Contest, Richard Reed of Crystal Lake won and will represent Hancock County at the State Fair.

More interest is being shown 4-H club work in Hancock County and prospects are that next years Achievement Show will be more successful.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

Services for next Sunday are as follows:

10:00 a. m. German service.

11:00 a. m. Sunady school.

The Bible Class will meet on next Tuesday evening.

The Choir will meet Saturday evening.

The Confirmation Class will commence Saturday, September 14th at 9:00 a. m. Pupils will recite the first five questions and answers at this time.

Attending Synod Meeting

Rev. Calvin Grosshuesch and Mr. Herman Schuldt left Tuesday for Wheatland, Iowa, to attend a Synod Meeting. They expect to return to Klemme again Saturday.

AVERY FARMERS PICNIC LABOR DAY

AVERY FARM BUREAU PICNICS ON LABOR DAY

V. A. Cook Lawn Is Scene Of Farm Bureau Gahtering

The Avery Township Farm Bureau picnic was held at the home of Mr. and Mrs. V. A. Cook on Labor Day, Monday, September 2nd.

At noon a cafeteria picnic dinner was served from tables placed on the lawn.

The following program was presented:

1. Community singing, led by Mrs. J. J. Cook, assisted by Rev. Bainbridge.

2. Two negro songs, "The Levy Song," and "Mistress Shady," (in costume) Delores Cook and La Von Sherwood.

3. A Talk on "Weeds," by Mr. Porter of the Extension Service at Ames.

Mr. Porter discussed the various methods of noxious weed eradication, and emphasized the use of chemicals, especially mentioning sodium chlorate.

4. A report on Achievement day at Garner by V. A. Cook.

5. A solo, "Back to Indiana," by Rev. Bainbridge of Goodell.

Rev. Bainbridge played his own accompaniment on the organ. He has a strong voice, which carried well, although the wind was blowing a gale.

6. A talk by W. L. Lawhorn, of Garner, president of the Hancock County organization.

7. Two songs, "Sonny Boy," and "Mother O' Mine," by Mrs. Cooper of Centerville.

Mrs. Cooper is a prima donna. It was an unusual privelege to hear such a gifted singer. Her songs were rendered in a sympathetic manner and displayed unusually finished technique.

8. A poultry talk by E. H. Smith of the Iowa Poultry Improvement Association.

In the care of chickens Mr. Smith emphasized sanitation, feed and ventilation. He urged the farmer to make the care of the poultry a part of his daily round of chores, because of the profit derived therefrom.

Various contests followed the program.

In the nail driving contest for women, Miss Blank won first prize, and one woman went home with a black fingernail!

J. J. Cook received the blue ribbon in the hog calling contest. His voice was strong and his facial expression gave him a high score.

Mrs. Mike Kearney and Mrs. Howard Barger divided honors in the husband calling contest.

J. J. Cook won a second blue ribbon in the milking contest.

North Avery won over South Avery in the tug of war.

Anna H. Paulson, of Britt, demonstrated cleaning and dressing chicken by the bloodless method.

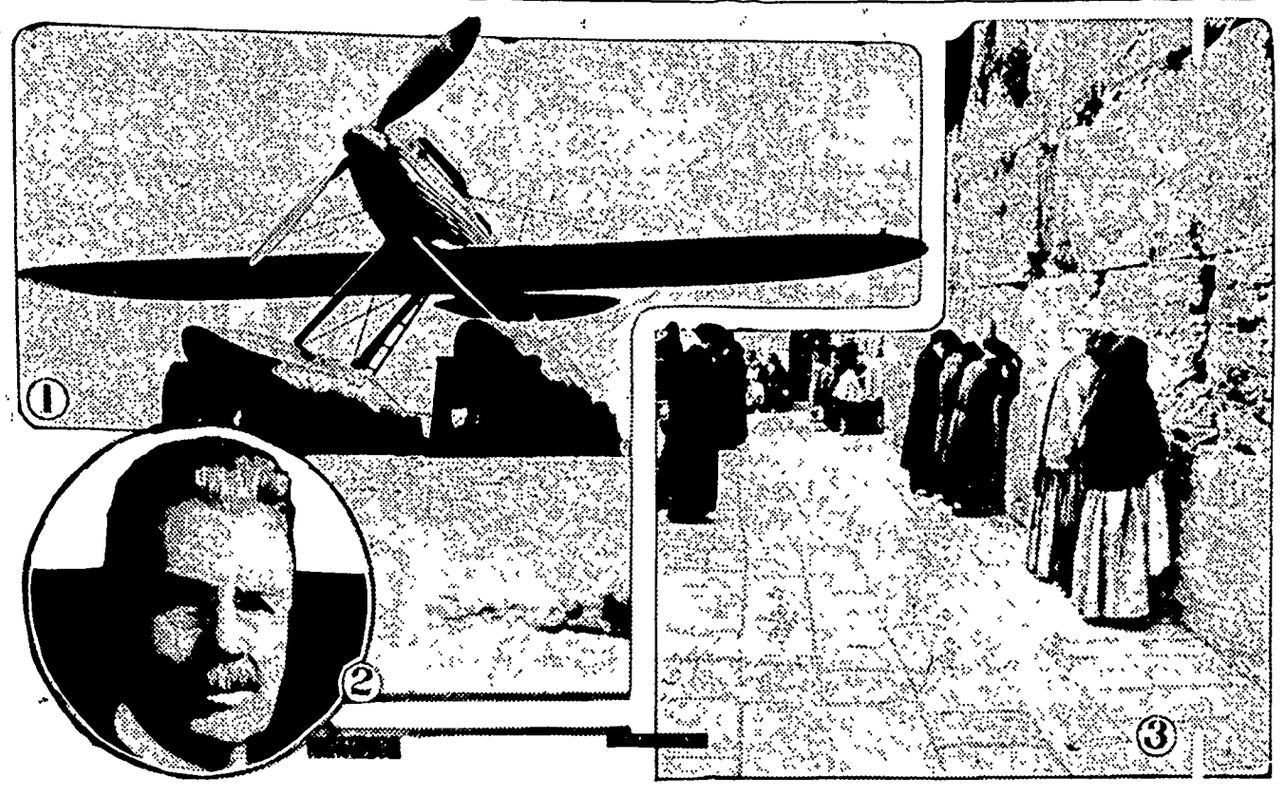
Mr. E. H. Smith explained how to stick and pick chickens easily.

The married men defeated the unmarried men in a game of kitten ball by a score of 20 to 9. County Agent L. T. Nutty went home with a black eye as a result of the game.

Although a strong wind was blowing all day, making it difficult to hear, the interest of the crowd was held throughout the program. The contests created much merriment. The kitten ball game was enthusiastically applauded on the side lines. Several guests were present. One man came from the eastern part of Franklin county, that he might hear the poultry talk.

The crowd dispersed at a late hour in the afternoon.

Mr. and Mrs. V. A. Cook had everything well planned and arranged, which assured the success of the picnic.



1—British Schneider cup race entry which in tests attained a speed of 350 miles an hour. 2—Gerrit J. Diekema of Michigan, appointed American minister to Holland. 3—Famous Wailing Wall in Jerusalem where the attacks by Arabs on Jews of Palestine started.

NEWS REVIEW OF CURRENT EVENTS

Graf Zeppelin Arrives at Lakehurst, Completing Trip Around World.

By EDWARD W. PICKARD

WITH its arrival at Lakehurst, N. J., the Graf Zeppelin completed its epochal trip around the world, in the course of which only three stops were made for refueling—at Friedrichshafen, Tokyo and Los Angeles.

The Zeppelin made a smooth landing at 8:07 o'clock Thursday morning, having circled the globe in 21 days and 7 hours, breaking all previous records. It had flown approximately 20,000 miles and was in the air about eleven and one-half days.

While the huge dirigible displayed most excellent qualities in the way of safety, speed and cruising ability, the lion's share of the credit for the feat must be given to Dr. Hugo Eckener, the airship's indomitable commander and chief pilot. His passengers and crew are giving him unstinted praise for the skill he showed throughout the globe-encircling trip.

Every southern Californian who could get there greeted the Zeppelin at Los Angeles, which was reached on Monday after a flight across the Pacific enlivened only by an electric storm encountered soon after the departure from Tokyo. As it passed down the California coast the airship on Sunday had circled over San Francisco. The getaway from Los Angeles was not easy and quantities of ballast and extra equipment had to be dumped to give it enough lifting power. As it was, the dirigible barely avoided running into a network of high power electric wires near Mines field.

An interesting story comes from Japan to the effect that the Zeppelin's safe crossing of the Pacific prevented the "seppuka" or suicidal atonement of the five officers and twelve enlisted men of the Japanese navy who held themselves blameable for the slight accident that the airship suffered in being taken from the hangar at Kasumigaura airport. Such action by the Japanese would have been in accord with their ancient custom, and the wives of the men might have followed them in death.

CLEVELAND was "up in the air" all week, enjoying the airplane cares and exhibitions of flying and the big aircraft exposition. Among the star attractions was Mrs. Louise McPhetridge Thaden of Pittsburgh, who won the women's derby that started at Santa Monica. Fifteen of the nineteen ladybirds who started finished the race. Marvel Crosson was killed, as related last week, and three others were forced out by mishaps. Gladys O'Donnell of Long Beach, Calif., won second place and Amelia Earhart, transatlantic flyer, was third. Colonel Lindbergh and his wife, who is now a student flyer, were interested and interesting visitors.

The United States will have no representative in the Schneider cup races in England, for Lieut. Alford Williams was unable to complete the tests of his plane in time and withdrew. Italy's best racing flyer, Captain Motta, was killed while testing one of his planes, and the British were asked on that account to postpone the races, but refused because the financial sacrifices would be too great.

"FROM Dan to Beersheba," and a great deal farther in all directions, Palestine and the neighboring countries were aflame with revolt. Arabs were massacreing Jews in a score of cities, towns and villages, the native police and military forces were impotent, and Great Britain was rushing warships, troops, marines and airplanes to the Holy Land to restore peace if possible.

The trouble, which has been simmering for months, broke out with clashes between Arabs and Jews in Jerusalem, especially at the Wailing Wall where Jews have prayed for centuries, and which is the last remaining fragment of Solomon's temple. The rioting spread rapidly, to the Slaboka rabbinical college and a Jewish school at Hebron, where the Jews killed included a number of Americans, and then to many other places in Palestine. Latest reports, made indefinite by strict press censorship, said the Arabs of Transjordinia and Syria were rising in revolt, demanding their "complete rights" and the abrogation of European control in those lands. Upon Great Britain fell the burden of meeting the situation, and she responded swiftly. Her troop carrying planes carried hundreds of soldiers from the Palestine ports inland, and her bombing planes went into operation against the Arabs at Jerusalem and elsewhere. At Haifa, where Arabs were attacking the Jewish quarter, the British marines were said to have fired on both Arabs and Jews, killing and wounding many.

Leaders of American Jewish organizations called on President Hoover and Secretary Stimson and asked that they take every necessary step to protect the lives and property of American nationals. They were assured of the deep sympathy of both Mr. Hoover and Mr. Stimson for the Palestine sufferers and were told that Great Britain was doing everything possible to restore tranquil conditions. Then they called on Sir Esme Howard, British ambassador, and were given the same assurance by him.

GERMANY'S five creditor nations reached a tentative agreement by which Great Britain would get something like 80 per cent of the demands set forth by Chancellor of the Exchequer Philip Snowden, and it looked as if the conference at The Hague would be successful. Then Gustav Stresemann, German foreign minister, spoiled it all by announcing that Germany could not make the sacrifices called for by the arrangement and would not surrender its share in the surplus of the Dawes plan payments between April and September of this year over the payments called for by the Young plan. He said the Germans, in the Paris conference, had gone to the limit of their country's possibilities when they accepted the schedule of annuities under the Young plan. They were now asked to make another sacrifice in order to facilitate an accord among the creditors as to the distribution of reparations money which after all does not concern the German government.

Broadly the agreement reached by the creditor nations and Great Britain gave the London government 40,000,000 marks out of 48,000,000 asked (about $9,600,000, against $11,040,000). Of the 40,000,000 marks, 36,000,000 were said to represent unconditional commercializable German annuities, nearly all of which had been allotted to France in the Paris draft of the Young plan. The third phase of the agreement was concessions to Britain in payment in kind. Among these was the agreement by Italy to buy an additional 1,000,000 tons of British coal annually for three years for the state railroads on the reparations account.

"LINCOLN the Debater," a bronze statue of heroic size, was unveiled at Freeport, Ill., the scene of the most famous of the Lincoln-Douglas debates in August, 1858. Ten thousand persons attended the ceremonies and listened to Senator George W. Norris, who delivered the chief address. The Nebraskan took the opportunity to make a hot attack on the electric power trust, the system of Presidential elections, the abuse of power by federal judges and the building of big armies and navies. During the 1928 Presidential campaign, Senator Norris was mentioned as a possible third party candidate. Referring to the present system of electing Presidents, he charged that election of an independent candidate for President is possible in theory but absolutely impossible in practice. He argued that the electoral college should be abolished.

LAWRENCE D. TYSON, United States senator from Tennessee, died in a sanitarium near Philadelphia where he had been under treatment for several weeks. He was just completing his first term in the senate. Tyson was born in Greenville, S. C., sixty-seven years ago and was graduated from West Point in 1883. While commander of cadets at the University of Tennessee he studied law and later practiced in Knoxville. He served as a colonel of volunteers in the Spanish-American war and then went into the Tennessee legislature. During the World war he distinguished himself as a brigadier general commanding a brigade of Tennessee and Carolina troops attached to the "Old Hickory" division, which saw service in France.

One of the outstanding German figures in the World war, Field Marshal Limon von Sanders, passed away in Munich. He was the cavalry officer to whom Mohammed Reshid V, sultan of Turkey, by arrangement with Kaiser William II, intrusted in 1913 the reorganization of the Turkish army. He remained in the Turkish defenses at Gallipoli in 1915 and after the British retirement organized the Turkish fighting forces in Asia Minor and conducted operations in 1918 in Palestine. The Turkish debacle, however, nullified his efforts.

CHINA and Russia seemed to be marking time last week in their Manchurian quarrel, though the propaganda agencies of both nations were active. The Soviet radio station broadcasting from Khabarovak, Siberia, kept telling the Chinese that America and France were plotting to set up an international commission to control the Chinese Eastern railway, and considerable anti-American feeling was created in Harbin until the newspapers there printed a true statement concerning President Hoover's efforts under the Kellogg pact to prevent a Sino-Russian war.

There was another bloody outbreak of the Mongolian Nomads in western Manchuria, scores of Chinese being slain, and naturally the Chinese authorities blamed the Russians for instigating it.

Extreme heat of defective shells caused an explosion that destroyed the Chinese government's largest arsenals in Nanking and the conflagration spread to other buildings. The property damage was estimated at $1,500,000.

GOVERNORS of the public lands states held a conference in Salt Lake City and received a message from President Hoover in which he suggested that the surface rights of remaining unappropriated public lands should be transferred to the states. Western senators in Washington heard this proposition with surprise and disfavor, looking on it as somewhat of a gold brick, inasmuch as the mineral rights which the President would retain in the hands of the federal government furnish the revenues which the public land states long have wished to get hold of. They contended that the revenues from the surface rights would be insignificant. As Senator Borah said, those lands are "chiefly desert and mountain territory and a jack rabbit could hardly live on them."

SOVIET peoples commissars have adopted a three shift day and seven-day week for Russian industry, according to the Moscow Isvestia. According to the plan each worker gets every fifth day free, but various shifts in the factories will keep producing day and night. The factories will only be closed five times a year for the observance of the greatest revolutionary holidays. Besides abolishing Sunday completely and destroying the influence of the religious sects on the working class, the Isvestia finds the new plan will also assist communism and destroy the old forms of life. Even the family will be abolished and the workers will live in socialized houses with perhaps a segregation of the sexes.

IF THE prohibition law is to be enforced in New York city, the federal authorities must do all the enforcing, according to Police Commissioner Grover A. Whalen. After a conference with county prosecutors, magistrates and police officers; the commissioner notified Federal Prohibition Administrator Campbell of that district that he flatly refused to take the responsibility for local dry enforcement. He also refused to order the police to proceed against speakeasies under the state nuisance law.

"If you are unwilling to discharge your sworn obligations to the federal government," Mr. Whalen said, "or wish to make a confession of your inability to effectively direct the activities of your department, for which a large proportion of a $36,000,000 appropriation is alloted, the admission should be primarily to your superiors in Washington instead of 'passing the buck' to the state law enforcing officers."

BAD HABITS ARE CAUSE OF WASTE

Careless Drivers Pay No Attention to Warnings of Coming Trouble

Bad driving habits and improper care of the car are usually responsible for abnormal consumption of gasoline, according to Frank N. Nutt, research engineer, who cites the causes of these faults.

Letting the engine run at high speed while idling in traffic. Many drivers have this bad habit.

Poor Acceleration.

Uneven acceleration, that is, stepping on the accelerator unsteadily.

Racing the engine in spurts when waiting for the traffic "go" signal.

Driving with fouled spark plugs. This wastes about 20 to 25 per cent of the gasoline used for every plug that is out of commission.

Dashing up to a stop street and then jamming on the brakes. Also this is hard on a car and is a dangerous practice.

Wear Out Brake Linings.

Dragging brakes waste gasoline and wear out brake linings.

Driving too long in first and in second gear before shifting to high.

Careless drivers frequently pay no attention to simple warnings of coming trouble in their car, Mr. Nutt added. What would usually amount to a minor repair if attended to at once often is permitted to grow into a large one. This is why the periodical car inspection and overhauling is necessary to keep cars in the best operating conditions.

Tired Feeling Follows Long Automobile Drive

After driving a car 250 miles or more in a day, that tired feeling does not come from a very marked muscular fatigue but is rather the result of nerve fatigue, reports the touring bureau of the Chicago Motor club.

The statement is based on the results of tests recently made upon ten persons who had driven 250 miles. The tests comprised determination of the carbon dioxide combining power of the blood, inasmuch as the presence of carbonic acid in the system is a leading product of fatigue, and a blood count. The latter was taken to determine the number of white cells in the blood. The white corpuscles multiply when poison contaminates the system, and are extremely active in eliminating it.

The tests revealed an average decrease in carbon dioxide combining power of 15 per cent, and a 25 per cent increase in average white-cell count. These results clearly indicate nerve fatigue, rather than muscular exhaustion.

A large part of this enervation can be averted, the touring bureau declared, by starting the tour in good physical condition.

Storage Battery Failure Renders Engine Useless

The failure of the storage battery means the failure of the entire car and its neglect will render the engine as useless as if the "gas" tank were empty. Keep the battery within its maximum charge at all times, and never permit it to stand in a discharged state. Do not charge or discharge the battery too quickly. Care must be taken to keep the top clean and before filling it with distilled water, wipe the surface well before unscrewing the filter caps. It is a good plan to rub the lead terminals with a rag on which is some vaseline, as this will protect them from being corroded by any acid which might be spilled. To keep the plates covered with water is most important.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q.—Why should a car never be parked with bright headlights turned on?

Ans.—It drains the battery and is a source of annoyance to other drivers.

Q.—What are the causes of uneven tire wear?

Ans.—Bent axle, bent steering knuckle, broken spring, bent spindle, dragging brake, loose wheel.

Q.—What is the inevitable result of the use of the wrong grade of oil?

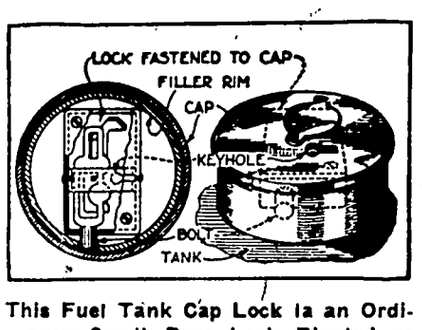
Ans.—Loose bearings and loss of power.

Q.—What is the cause of spark plug fouling and how does it evidence itself?

Ans.—Using a plug of incorrect size, length or design; engine operating at very low temperature; carburetor mixture too rich; long runs with carbureter choked or partly choked; oil pumping; continual short distance driving in cold weather. Fouling evidences itself by causing the engine to miss and loss of power, especially on hills.

Locking Gasoline Tank Excellent Safety Plan

Gasoline thieves will be foiled by the fuel tank cap lock shown in the illustration. This is an ordinary small cabinet door lock which should be riveted, or screwed and riveted, to the under side of the tank cap. Make sure that the lock does not project far



This Fuel Tank Cap Lock Is an Ordinary Small Door Lock Riveted or Screwed in Place Under Cap.

enough to interfere with placing the cap on the tank. Mark where the bolt of the lock comes when the cap is tight down and cut a slot in the inside of the opening into which it may drop when the key is turned.—Popular Science Monthly.

Motor Inspection Every Six Months Necessary

A semiannual inspection of motor vehicles is one of the new laws adopted by state of Massachusetts. This will force unsafe, cheap used cars from the highways. The law provides for periodical inspection of all motor vehicles and trailers to determine whether they are properly equipped and maintained in good working order as required by previous sections of the state laws. This applies to brakes, horns, lights, mirrors when required, use of green light on extension of trucks of three tons or over, tail lights, and general equipment.

AUTOMOBILE HINTS

Thirty miles an hour is the most economical driving speed.

* * *

Don't cover up the tools with luggage in packing the car for the tour.

* * *

Modern version: When you must choose the lesser of two evils, hit the pedestrian.

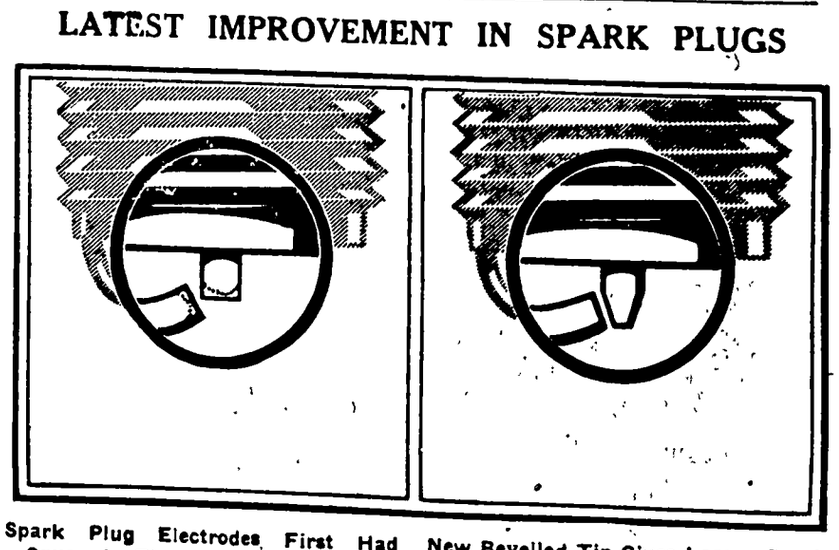
* * *

When and if the meek inherit the earth, it is not known who will drive the 10 ton trucks.

* * *

Rim bolts can be removed with ease if a few drops of oil are applied each time tires are changed.

LATEST IMPROVEMENT IN SPARK PLUGS



Spark Plug Electrodes First Had Squared Tips and Later Were Rounded.

New Bevelled Tip Gives Larger Spark, More Power and Greater Fuel Economy.

If you examine the lower end of the latest spark plugs on the market, you will notice that the center electrode is now bevelled at the point instead of being cut off square or with a round tip, as in the past. The change, slight as it appears to be, is proving a highly valuable contribution to motor efficiency and economy.

There have been three successive shapes of electrode ends, since the early days of automotive history. At first, both center and ground electrode wires were cut off square. With this shape, the spark passing across the gap between the two ends was small, since the volume of current was concentrated to the point where the edge of the center electrode directly opposed the ground electrode. In order to make this opposing surface broader and compel more current to leap the gap in the form of a spark, engineers next rounded off both electrode ends. But while this enlarged the opposing areas and resulted in temporarily increased efficiency it was found in practice that the surfaces were subject to corrosion, with a resulting tendency for the gap to widen and the spark to become diffused and weak and not perform its whole duty.

Bevelling the central electrode end lessens the tendency to corrosion, assures a more permanent gap width, gives greater spark intensity and strength, yields more power and smoother engine performance and results in important economy through reduction in fuel waste.

FARM STOCK

GOOD SIRES WILL RETURN PROFIT

Bull Will Influence More Calves Than Five Cows.

(By J. J. MOXLEY, Extension Live Stock Specialist, Kansas Agricultural College)

In the opinion of Kansas cattlemen a good sire is worth 20 per cent the value of the cow herd. The same live stock raisers figure the sire will influence more calves than five cows during his lifetime.

The bull represents the corner stone for a foundation of successful cattle production. Closely connected with him is the right kind of cows. They should represent the good, big beef type.

In the Minnesota car lot baby beef contest, where the weight of a carload of calves at 15 months was the method of determining the winning load, calves out of the biggest, beefiest cows and sired by medium to big bulls were the ones which ranked at the top.

Giving consideration to a demonstration in Clay county the past year, a group of cows which would class as "good cows" were compared with those which were classed as medium in the weight and value of the calves. The good grade cows had calves weighing 80 pounds more than those out of the medium grade cows. Their calves were worth $4 per hundred more—making a difference for the year of $15.91 more in favor of the calves out of the good grade cows.

From every angle in the cattle production business, a good sire is a necessity and a good cow herd is a great help in the production of beef that will return a profit.

Proper Care of Horse's Feet Often Neglected

An important but ofttimes neglected job is to trim the feet of farm horses. In dry weather the feet become tough and hard and it is difficult to do anything with them. However, following a rain, or a spell of damp weather, they will cut easily and it is no great effort to get them into shape for the season's work. Most farmers own a rasp which can be used to file down the rough, unsightly edges of the hoofs which have grown during the winter. Few farm horses are expected to work on cement or concrete roadways and they do not have shoes. A little judicious trimming at this time will give the horse better grip on the ground and more confidence to go at heavy pulls. The colts, also, should not be forgotten for the care which you give the feet of a colt may govern to a large extent the conformation of his legs at maturity.

Find Lambs on Pasture Are Most Profitable

Lambs produced on pasture are more profitable, is the conclusion of Purdue university agricultural experiment station after two years' work. When ewe and lambs were both fed on grain and hay the profit per lamb amounted to $4.11, and when both were pastured on timothy, oats and alfalfa pastures, the profit per lamb amounted to $9.81. "The market finish of the two sets of lambs was the same," said Claude Harper, sheep specialist.

"Does it pay to feed lambs on pasture?" is a question often asked by Hoosier farmers. Purdue found that lambs developed on pasture returned a profit of $9.81 and lambs fed grain on pasture returned a profit of $9.97 per lamb above feed costs.

Red Clover Excellent Pasture for the Hogs

Red clover makes an excellent pasture for hogs and ranks close to alfalfa as a forage. From the standpoint of the average farmer or hog feeder, it will probably be the most used forage crop particularly because it fits better into almost any system of crop rotation than does alfalfa. However, it will not usually support quite so many head per acre, nor will the forage season be quite so long, but if not pastured too closely and not allowed to go to seed, it will generally produce an abundance of good forage all summer. An acre of clover should furnish ample pasture for from 8 to 16 shotes if properly handled. Clover is high in protein and will replace a large part of the tankage or similar feeds, necessary to get maximum growth.

Cure for Worms

Tetrachlorethylene, in single doses, has been found to be approximately 100 per cent effective against the sheep stomach worm, and is also very effective against the hook-worm and some of the other round-worms found in the small intestine of the sheep. The drug is given in capsules, in doses of five cubic centimeters. The animal should not be fed for 12 hours before treatment. If possible, the drug should be administered by a veterinarian.

This photograph, taken by the United States Department of Agriculture in Hertford county, North Carolina, shows a number of these features suggested by the extension agent. The low shrubs near the brickwork have been used to screen the porch foundations without interfering with the effect of the gay flower boxes that take the place of guard rails on the veranda. Reasonable care will keep this exterior planting in pleasing condition all through the growing season.

Eggplant With Sausage Cakes New Combination

Here's a good combination of flavors and for some people, a new way of using eggplant. The bureau of home economics suggests this method of preparing it:

1 large eggplant — ½ tsp. salt
1 lb. sausage meat

Wash and pare the eggplant and cut it into cubes. Form the meat into flat cakes and brown on both sides in a heavy skillet. Remove the meat, pour off the excess fat, add the eggplant and salt, and let the eggplant cook in the fat for about ten minutes. Then put the eggplant in a shallow baking dish, place the sausage cakes over it, cover, and cook in a medium oven for about 30 minutes, or until the eggplant is tender. Serve from the dish in which cooked.

Covering Creosote Stains

Creosote stains on walls are hard to do anything with and it is pretty hard to keep them from showing through after a time. About the only thing one can do is to cover them with two thin coats of shellac, then size and paper or paint over them in the usual way. Two thin coats are better than one heavy one, as the tendency for the shellac to peel is not so great.

DOMESTIC RABBIT GOOD YEAR ROUND

Different From Cottontail With Its Limited Season.

(Prepared by the United States Department of Agriculture.)

Relatively few housewives in the eastern part of the United States are acquainted with the delicious flavor of domestic rabbit meat. Most of them have been accustomed to think of rabbit in terms of the cottontail rabbit, which is available only during a short open hunting season, or of the jack rabbit, which is generally considered more of a pest than an article of diet. Domestic hutch-raised rabbits may be eaten the year round, and there are now hundreds of domestic rabbit farms throughout the country where the animals are being raised for the market. The rabbit-raising industry is most flourishing in the West, particularly in California, but increasing interest in it is developing in the Eastern states also.

Hutch-raised rabbits are carefully bred and fed for table use. They eat rolled cereals, alfalfa hay, and leafy vegetables. The nature of their food makes the meat sweet, tender and excellently flavored. It can be better compared with chicken than with wild rabbit. Rabbits raised in small hutches or on fur farms are cleanly in habits and can be produced under sanitary conditions.

Just as with poultry or with various cuts of meat, young, tender rabbits may be fried or roasted, while the older ones require longer, slow cooking. The bureau of home economics has co-operated with the bureau of biological survey in conducting experiments in the various methods of preparing domestic rabbit meat for the table and makes the following recommendations:

Young, tender rabbits may be fried or broiled, or if just a little larger than the frying or broiling stage, smothered according to the method Southern cooks use for chicken. The older, larger rabbits may also be used for short orders by parboiling whole, then cutting into pieces suitable for serving, and frying in batter. Or they may be simmered and served with dumplings or used in chop suey or salad in the same way as chicken. Recipes will be furnished by the United States Department of Agriculture upon request.

Fresh Tomatoes Served in Many Different Ways

While fresh tomatoes are in season, one may try innumerable good ways of serving them without having to duplicate the dishes one prepares in winter time with canned tomatoes. Tomatoes every other day at least, all summer long, differently served, will assure the family of an abundance of vitamines and a certainty of appetizing flavor in the menus. Try these broiled tomatoes on toast with bacon for lunch on a warm day. The recipe is from the bureau of home economics.

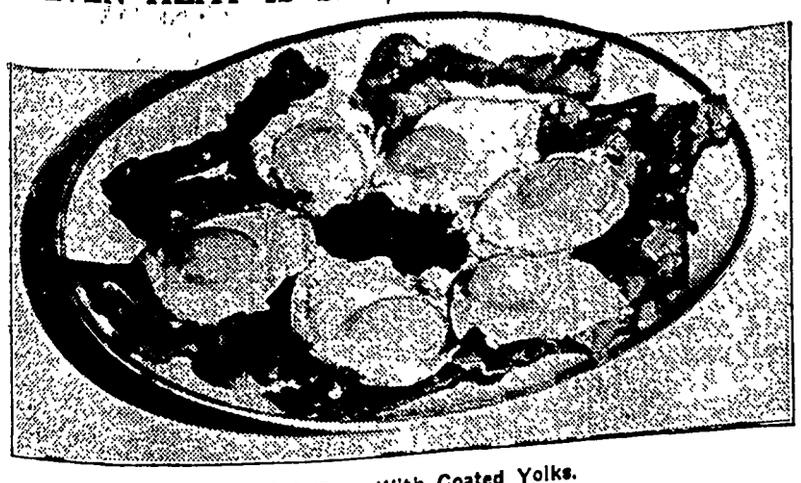
5 firm ripe tomatoes — Salt
½ lb. sliced bacon — Pepper
Butter — 8 slices buttered toast

Cook the bacon until crisp in a skillet or under the flame of the broiling oven. Drain on paper. Wash the tomatoes and remove a thin slice from the stem end. Cut the tomatoes in half and put them in a shallow pan. Sprinkle with salt and pepper and dot with butter. Cook in the oven until softened and then place them under the flame of the broiling oven until browned. Remove carefully and put on the golden-brown, buttered toast. Arrange the bacon around the toast; garnish with parsley and serve at once.

To Keep Silver Neatly

It is easier to keep your flat silver put away in an orderly fashion if the spoons, knives and forks each have their own compartments. Some of the new chests of drawers have, as an interesting innovation, small drawers at the top in triangular arrangement to hold flat silver. These take the place of the usual large, single silver drawer.

EVEN HEAT IS SECRET OF FRYING EGGS



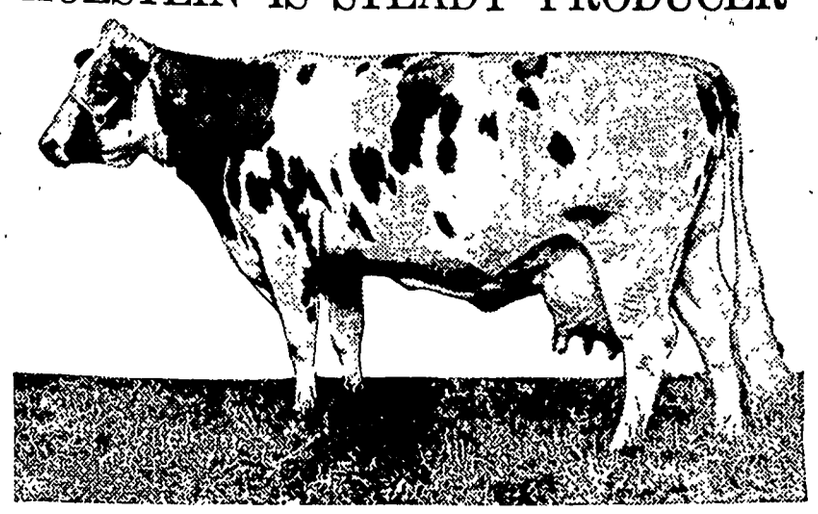
Fried Eggs With Coated Yolks.

(Prepared by the United States Department of Agriculture.)

Moderate, even heat is the secret of frying eggs so that they are tender and tasty, as it is of cooking all egg dishes. While any well-flavored fat may be used for frying eggs, ham and bacon drippings are prime favorites. Moderate temperature is likewise the secret of cooking ham and bacon. Do not let the fat become so hot as to smoke and produce scorched flavors in the drippings and disagreeable odors in the kitchen, warns the bureau of home economics. Whatever kind of fat is used, have it moderately hot when the eggs are slipped into it, and cook slowly and carefully over a low fire. The eggs may be turned so as to cook them on both sides, or some of the hot fat may be dipped up and poured over the yolks until a coating is formed. When the white is delicately jellied the eggs are cooked enough. The white should not become tough.

An egg fried in a little butter makes an excellent hot toasted open-faced sandwich. After the egg is slipped onto the toast, pour over it the melted butter from the skillet. Cooked until firm throughout, an egg fried in butter can be shredded fine to make a palatable garnish for soup, spinach, or other dishes.

HOLSTEIN IS STEADY PRODUCER



Mt. Vernon Beaty Mead Lady, High Producing Holstein.

By producing 10 gallons of milk containing 2.6 to 2.0 pounds of butterfat daily for 365 days, Mt. Vernon Beaty Mead Lady, a five-year-old Holstein-Friesian cow, owned by Carnation Milk Farms of Seattle, Wash., becomes the 98th Holstein cow to produce more than 30,000 pounds of milk in a year. At the same time, she qualified as the 137th Holstein to produce more than 1,000 pounds of butterfat in a year. This is more than four times the production of the average cow.

Feeding babies their daily milk supply would be a simple matter with such a cow as this, as "Lady" could provide 80 babies daily with fresh wholesome, easily digested milk of moderate fat content. Or she could meet both the milk and butter needs of 30 growing children or adults for a year or could keep the "soda" counter supplied with 160 milk shakes daily.

Production for Year.

The production of "Lady" is 30,049.6 pounds of milk containing 1022.4 pounds of butterfat (1,278 pounds of butter) in one year. For only 63 days did her milk production drop below 80 pounds daily, the lowest mark being 79.1 pounds and the highest 91.05 pounds. Her daily production of butterfat varied between 2.9 and 2.6 (3.6 and 3.3 pounds butter).

Marketed as whole milk at 14 cents a quart, nearly 14,000 quarts would bring $1,956 in one year. Sold as 30 per cent cream at 25 cents a half pint, this milk would bring $1,704 and in addition would provide 26,641 pounds of skim milk that, fed to 223 chickens producing eggs that sold at 30 cents a dozen, would be worth $1.27 a hundred pounds for feeding purposes and would bring the gross return to more than $2,000 for the one cow.

How steady was the production of "Lady" is indicated by the fact that as the year closed she was producing 82.6 pounds of milk containing 2.80 pounds of butterfat (3.5 pounds butter) which was her best average production during the last 10 months.

"Lady" is a good sized cow as she weighs 1,750 pounds, according to A. M. Ghormley, manager of the farms. In order to make this record, she ate 69 pounds of feed daily consisting of 3 pounds of beet pulp, 1 pound of molasses, 40 pounds of beets and mangels, and 25 pounds of alfalfa with green feed substituted for part of the alfalfa when available. This amounted to nearly 13 tons of feed in a year. In order to produce the total of more than 15 tons of milk, it was also necessary to provide more than 60 tons of water which, if carried in 12 quart milk pails, would require 6,000 containers or 16 a day.

On the national list for butterfat, Lady ranks 89th and is one of five Holsteins that have equaled this production in 1929. For milk production, she ranks 93rd on the national list of 98 Holsteins, no other cows of any dairy breed having produced more than 30,000 pounds of milk in a year.

Sketch of the Lady.

Lady was bred by R. E. Waugh of Burlington, Wash., and is now owned by Carnation Milk Farms. At the age of 4 years, 5 months, 21 days, she was credited with 500.2 pounds of milk on strictly official test containing 16.656 pounds of butterfat (20.8 butter) in 7 days. During the early part of the lactation just completed, she is credited on strictly official test with 603.7 pounds of milk containing 19.643 pounds of butterfat (24.5 butter) in 7 days. Her sire is Segis Pontiac Korndyke Mead and her dam is Lady Bettina Rag Apple. A sister, Mt. Vernon Segis Walker Mead, is credited with a senior-three yearly record of 27,493.5 pounds of milk containing 823.13 pounds of butterfat (1,028.9 butter).

Fundamental Problem in Farm Electrification

The one fundamental problem in the spread of farm electrification is to get the farmer now without electricity to have it installed on his place either through the individual electric plant or the power line. The use of electricity by the greatest number of farm people in the lightening of their daily tasks and improvement of their home life is of greater importance, it must be agreed, than getting a comparatively few farmers to use an excessive amount of current and neglecting the great bulk of farms now without electricity of any kind.

Use for Combine

In harvesting small grain with a combined harvester-thresher it is necessary to wait from seven to ten days longer than when cutting with a binder in order to reduce the moisture content of the harvested grain. As the grain gets dead ripe, it dries out very rapidly, and letting it stand even a day or so longer will frequently make a big difference, resulting in a higher grade of grain produced.

Sell Pigs Early and Store New Corn Crop

Finishing Porkers on Grain Late in Fall Is Mistake.

Limiting the amount of corn fed to March farrowed pigs during the summer and finishing them on the new crop in the fall has been a mistake every year since the World war, according to records compiled by swine specialists at the University of Illinois. Without exception, the drop in hog prices between September and December has been more than great enough to offset the advantage of feeding cheaper new corn in the fall. Last year when old corn was scarce and high in price, many hog growers were tempted to carry their pigs along as cheaply as possible, waiting for the new corn crop. By so doing, statistics show that the producers saved about $1.20 a head on the ration but that they took an average of $9.56 less per head in December because of lower prices. The net loss to the producers from holding was $8.36 per head.

One of the rules followed by leading hog growers for profitable pork production is that of early marketing. The average September price for light hogs at Chicago during the years 1923-27 was $11.44, the high point of the yearly cycle. The averages for December during that period was between $9 and $9.50.

Finishing young, spring pigs on the corn crop of the year before calls for crib room or storage space on the farm. Where crib room is limited, sheet steel cribs and bins can be erected quickly and conveniently, supplying a fireproof, ratproof and weatherproof shelter for corn and small grain. Ample storage room for all crops is a valuable asset on any farm and should be supplied.

Milk for Poultry Has Healthful Advantages

Milk can be used in many ways that will be of benefit to poultry. It can be used either sweet or sour; it is really more healthful sour than sweet.

There is nothing else that will aid in keeping growing chicks in prime condition more than sour milk or buttermilk given them as a drink or used in mixing up an occasional damp mash.

Another advantage in the use of milk is that it takes the place of flesh of some kind. When milk is not used one very naturally needs to use either beef scraps, beef meal, or fish scrap.

Poultry raisers keeping cows should use every particle of milk they have to spare in their poultry feeding. If they have a good deal of milk and not enough fowls to consume it, it will pay them to increase the poultry flock in proportion.

Liberal Silage Ration Stimulates Production

In times of drouth during the dog days when the grass turns white and vegetation is hard and woody, a liberal ration of silage will stimulate large production and will keep the cows in a good condition for fall and winter production. Those who have had the most experience will tell you that the silo should be used for summer as well as winter, especially by the dairy farmer. A crop safely stored in a silo is a sure and dependable asset to the stock keeper. As for the dairyman, every test has proved that silage is a most important item in economic milk production.

Agricultural Hints

Too many chicks under one hover causes stunted chicks. Give them room.

* * *

The greater part of crown and root injury of apple trees is started by low temperatures.

* * *

Tuberculosis in live stock costs American farmers between fifty and sixty million dollars annually.

* * *

With all things considered, the cheapest source of digestible carbohydrates is found in corn or cane silage.

* * *

Next winter's fuel supply should come from dead and down trees and from crooked and weed trees. Thus will the woodlot be improved.

* * *

The farmer who needs money from hogs most this fall is the one who can least afford such a loss as cholera may inflict. Vaccination is good insurance.

Ethylene Gas Speeds Ripening of Tomato

Found to Be Effective Accelerator by Growers.

Tomato growers who wish to hasten the ripening of their crop to take advantage of early markets will find treatment with ethylene gas an effective accelerator, according to Dr. R. H. Harvey, agricultural botanist, University Farm, St. Paul, inventor of this process which has recently been granted a patent. Many wholesalers and commercial growers now are using the ethylene method of ripening with notable success.

All that is necessary in the way of special equipment is a suitable room or chamber and a tank of ethylene gas equipped with a simple flow meter. The meter, plus enough gas to treat several carloads of tomatoes, will cost only about $30. The gas cost is negligible, ranging from about 40 cents to $1.00 a carload. The room or chamber should be closed off so as to make it practically gas tight. An ordinary plastered room, or cellar room, will work satisfactorily, providing cracks around windows are closed with adhesive tape and if it has a fairly tight fitting door. Some means should also be available for maintaining a temperature of from 65 to 80 degrees Fahrenheit.

Tomatoes should be picked when they are beginning to turn or when they are fairly well along toward maturity. In no case should they be picked so green that more than four days is required to ripen them by the gas process, Doctor Harvey says. They may be placed in the ripening chamber in baskets, crates, or other containers.

Storage Buildings Above Ground Are Now Favored

Most new common storage buildings for apples are being built above ground with insulated walls and ceilings. The floor is usually left as earth to keep fruit from shriveling in storage. Slatted floor racks of barrels are often used over the earth. Intake openings are cut at intervals of 10 to 12 feet around the building just above the floor level. These openings are usually 18 by 20 inches or larger to permit easy intake of air without too much loss from friction. Many storages in the past were built with intake openings too small to let in the cool air quickly at favorable times for ventilation and cooling. The total area of the intake openings is usually in proportion to one square foot of intake space to 700 cubic feet of storage volume. Stacks for outlets are built up through the roof. These are usually 3 by 4 feet or larger to permit free movement of air. They are placed about 20 feet apart the length of the building. The outlets are usually designed to figure at least one square foot of area to each 1,200 cubic feet of storage volume. It is a good fault to make them a little oversize.

Growing and Fattening of Hogs During Summer

The growing and fattening of hogs in the summer time without the use of some good pasture crop is usually an uneconomical practice. A saving of from 15 to 25 per cent of the total amount of grain and supplements may be expected through the use of forage. It may even be possible in some cases with an abundance of legume forage to obtain fairly satisfactory gains for a time on forage alone, but the greatest returns will be obtained when grain is fed in addition to the forage at the rate of three or four pounds per day for each 100 pounds live weight. When the grain feed is very much limited on pasture, naturally less grain will be used in making the early gains, but as in the experiment cited above, eventually a total of more grain may be required to finish the hogs and the time required will be longer.

Agricultural Squibs

Large horses are worth more than small horses both in value a head and value a pound.

* * *

A good thing to remember at this time of the year is that a wormy pig will never get big.

* * *

The season for camping and for forest fires is here. Help make it only the camping season.

* * *

Aphis are likely to attack almost every tree, shrub, or plant, and this year the pests are widespread.

* * *

Pigs of all classes respond to good forage. It is especially valuable in the ration of young, rapidly growing pigs.

* * *

Strawberry beds will develop stronger and more productive runner plants if side dressed with nitrate of soda and superphosphate.

* * *

Electricity on the farm for lighting alone is an expensive luxury; if used for labor-saving devices it becomes a desirable convenience.

* * *

It is not much trouble to get rid of lice on hogs, since either crude oil or the waste oil taken from the crank case of your car will do the job.

* * *

During the past two or three years hulled oats have attracted considerable attention among hog men as a feed for growing and fattening pigs.

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

Mr. and Mrs. George Buseman and family spent last Sunday evening at the Henry Buseman home.

OBITUARY OF MRS. LENA SWENSON DALGREN

Died At The Home Of Her Daughter, Mrs. Oscar Swanson

Funeral services for Mrs. Lena Swenson Dahlgren were held Thursday afternoon, August 22, 1929 at the home of her daughter, Mrs. Oscar Swanson, two miles east of this place, where she had been making her home for several years.

Lena Swenson Dahlgren was born on the 10th day of November, 1844 at Asskal Dalslan, Sweden, and she passed away at the home of her daughter, Monday morning, August 19, 1929 at the age of 84 years, 9 months and 9 days.

About a year ago Mrs. Dahlgren had a severe attack of the flu from which disease she never fully recovered. She has been confined to her bed since Christmas, due largely to this illness which she sustained in the earlier part of the year

She was baptized in childhood and confirmed in the Lutheran faith.

In 1863 she was united in marriage to Magnus Dahlgren, who served his country all his life as a soldier. Those remaining are Mrs. Christina Stenwall, Gustaf, Lars, Carl, all of Norway; Andrew and Hilma Thorlund of Chicago, and Mrs. Oscar Swanson of Klemme. There also remain thirty-seven grand children, and eight grand children, besides a host of relatives and friends.

Some time after their marriage Mr. and Mrs. Dahlgren moved to Rolanda, Dalslan and at that place joined the Mission Church and remained members for many years. Mr. Dahlgren paged away in 1886 and the family remained on their farm until 1903 when they came to hte United States and made their home in Chicago with a son and brother. Mrs. Dahlgren came to Klemme in 1916 and had since lived with her daughter and family.

Mrs. Dahlgren was a true Christian mother, loved and honored by her family and friends.

Funeral services were conducted by Rev. Snyder of Belmond and interment was made in the Klemme cemetery.

Card Of Thanks

We wish to take this opportunity of thanking our neighbors and our friends for their kind assistance and sympathy in our time of sorrow and for the beautiful flowers contributed.

Mr. and Mrs. Oscar Swanson
and family.

Mr. and Mrs. Oscar Schuldt, of Chicago, visited with his mother her and with her folks at Alden over the week end.

NO CHARGE FOR ENTERING BAYSIDE FROM NOW ON

Commencing next Sunday, September 8, there will be no charge for entering Bayside Park, Clear Lake, according to an announcement made this week by operator Charles Ritz. The usual charge on Sunday has been ten cents but from now on, during September, everybody will be admitted free. Consequently the management expects a large crowd at the Park next Sunday.

All of the fun concessions will be in operation every Sunday during September and the bath house will be kept open until it gets too cold to swim. The roller skating rink is open every afternoon and evening, seven days a week, and Mr. Ritz plans to operate the rink until about October 15.

A number of organizations will have all day picnics at Bayside during this month and it is the plan now to keep the Park open later than heretofore.

SCHOOL OPENS WITH LARGEST ENROLLMENT IN HISTORY

There Are Seventy Nine Enrolled In High School This Year

Another school year has opened with the largest high school enrollment ever recorded here. But one less than eighty have come to s for instruction and we are delighted with th interest shown. Our large Freshman class of last year has become this year's Sophomore class with an enrollment no les than it was last year. In fact it has grown altho one or two of last year's class failed to put in an apperaance, much to our regret and we doubt not to their own a few years hence. We are keenly disappointed that some cannot appreciate their need of the training a present day high school furnishes. We are sorry that even a few parents remain who are ot able to maintain their children in school until the secondary school work is completed or are unaware of the serious handicap their children will suffer by their failure to complete such a course. It is a consolation, however, that boys and girls of our community are urged by so many here to attend.

Our grade teachers report a total enrollment of 85, 44 boys and 41 girls. Our high school has enrolled according to our Principal's report 29 boys and 50 girls. Let us hope that none of these are quitters, that all remain the year through and make an honest effort to do creditable work.

We are pleased with the interest manifested in a school orchestra. Eleven of our high school students have instuments or have expressed a willingness to secure them. Ten of our grade students have displayed an interest in suhc work and some parents we have talked with are very enthusiastic abuot this form of school activity. We would suggest that parents interested delay the purchase of instruments until they have consulted with the superintendent or Miss Ford, who has been engaged to direct our orchestra. In this way the way may be paved for securing a better balanced orchestra. At present there are too many violins and too few of other necessary instruments. Let Miss Ford advise in the matter.

Miss Trumbell has created no little interest in public speaking. She has such a class in high school this semeter with an enrollment of 22. We have a fine Freman class again of 22, 11 boys and the same number of girls. Miss Corle reports 16 in first grade, really too many to get the most out of them all. We wish some of them might have been older before they were enrolled. With ten or more in grade 2, Miss Corle has the largest enrollment of any of the grade rooms.

We would suggest that children delay starting for school in the morning before the 8:30 bell and at noon before the 12:45 bell. The class rooms are not opened until these bells are rung and teachers are there. Only those children coming from the country should expect to enter the building before these bells and then only in the halls. Most of our parents will willingly co-operate with us in this effort to maintain order and wel being here we feel sure.

We would suggest also to parents that excuses be sent us promptly for abence or tardiness of children. It is only through their receipt that we can be certain that they know of the absence.

Lets all pull together this year for a fine school.

—M. F. Penrod, Supt.

NOTICE OF SALE UNDER CHATTEL MORTGAGE

To Arthur S. Moulton, Fern Moulton and to all others whom it may concern:

You and each of you are hereby notified that the undersigned Sheriff of Hancock County, Iowa, has taken into his possession under and by virtue of a certain chattel mortgage made and executed by Arthur S. Moulton and Fern Moulton to S. A. Harvey, dated March 1, 1928 and filed in the office of the Recorder of Hancock County, Iowa, March 5th, 1928, Doc. 587, File No. 10, the following described personal property, to-wit:

The entire pool hall stock consisting of one National Cash Register, pop, malt, cigars, cigarettes, candies, four pool tables, six chairs, one cigar case, one wall case, and all pool hall equipment and all future additions to said stock and pool hall equipment kept for sale or used in connection with the pool hall business now located on Lot four (4) in Block ten (10) in the original town of Klemme, Iowa.

and that the same will be sold at public auction on the premises above described at Klemme, Iowa, upon the 14th day of September, 1929, at 2 o'clock P. M. to the highest bidder for cash.

That said sale is made to foreclose the above described chattel mortgage which was given to secure the payment of a certain note held by the above named S. A. Harvey upon which there is now due and owing the sum of Six hundred ($600.00) dollars and interest at the rate of 7% from April 1, 1929, the said note being payable in monthly payments and because of default in said payments the Mortgagee has elected to declare the whole sum due and payable and to foreclose his said chattel mortgage as therein provided

You may redeem said property at any time prior to date of sale by paying in full the amount due together with interest and costs including attorney fees.

Dated this 22nd day of August, 1929.

E. H. WAHLERT, Sheriff of Hancock County, Iowa.
By Bruce Orr, Deputy.

(Pub. Sept. 5-12-1929)

Eck Zeidler took in the North Iowa Fair Thursday.

Harry Buss is helping out at the Ford Garage for a few days.

Emil Pringnitz's boy who broke his arm a couple of weeks ago, is getting along fine.

Ethel Wellemeyer will again be a student at Cedar Falls this coming year. She will go to Cedar Falls Sunday to resume studies.

Wallace Pavey and family took in the North Iowa Fair Tuesday afternoon and evening.

Another Times Feature

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Mr. and Mrs. Otto Lemke took in other little pleasure trip the week end, going first to Manson, Iowa to visit Walter Lemke and wife, then on to Sac City to visit the Poorte family. As they were so far west they decided to go on further and landed in Holstein and had dinner with Rev. Gauger and family Sunday, and also attended morning service. They then came home through Sioux City, arriving Monday afternoon.

Mr. and Mrs. Elemr Schaefer and baby, and Mr. and Mrs. Ed. Schaefer and Mabel spent Tuesday and Wednesday in Shenandoah, Iowa.

Mr. and Mrs. Emil Beier visited at the Albert Riemer home in Garner Sunday.

Miss Mabel Schaefer is teaching in District No. 5 this year and is boarding at the home of her brother Elmer, making the trip to and from school on horse back.

Mr. and Mrs. Paul Stille and daughters returned from a short visit with Mr. Stille's brother, Herbert in Colorado, Tuesday.

Rueben Lemke, Clarence Havercamp, Wilson Greiman and Donald Rowe left Sunday for a few days at the Minnesota state fair.

Mr. and Mrs. Roy Schaefer started off for a vacation trip Friday, going to Shenandoah to see how Henry Field acted behind the mike while selling pruens and overalls. They returned Monday.

Mr. and Mrs. Floyd Franklin were visitors at the North Iowa Fair Tuesday.

Mr. and Mrs. Herman Bridges and children were dinner guests at the O. E. Carlson home Sunday.

Mrs. Ed. Schoenwetter and children and Francis Tanner visited at the O. E. Carlson home Friday.

Irene Carlson and Fern Stille were Clear Lake shoppers Thursday.

Mr. and Mrs. Lew Abele and daughter were Sunday callers at the J. J. Stille home.

Mr. and Mrs. Art Schoenwetter and Ethel were North Iowa Fair visitors Wednesday.

A large crowd attended the ice cream social held at Liberty church Tuesday evening, put on by the King's Herald society.

Communion Services were held at the Liberty Church last Sunday. On next Sunday will be Rally Day and Rev. Whyte hopes for a large crowd to be present.

Herman Gast was chosen by the Church Board and Laymen to represent Liberty Church at the General Conference this fall held at Eagle Grove.

Billie Utterback, the lad who has been making his home at the E. G. Beier home the past year, is on a vacation at Mt. Pleasant and Des Moines with his mother, sister and aunts.

Mrs. Jim Lilly and son, Gene, of Cedar Rapids, visited at the R. R. Lemke home last week.

Mr. and Mrs. J. J. Lemke visited at the Will Beier home in Goodell Sunday.

Violet and Teddie Schaefer spent the week end visiting at the Ben Ridder home.

Red Carlson and sister, Irene and Helen, Ethel and Lorraine Lemke were State Fair visitors last Friday.

Miss Meta Lemke is muhc improved in health since her recent operation and will teach the Manual school west of Garner the coming year.

Mrs. Rose Tanner and daughters Frances and Florence had their household goods moved to Klemme Monday. They will live in the Musfelt house the coming year. Loule Knoke moved the furniture for them.

George Stille is still improving nicely from his injury received Saturday night in an auto accident. His eye is still bad tho it is hoped the sight will not be injured.

Agatha Stieman worked at the Elmer Schaefer home last week.

Mr. and Mrs. Chas. Smith and children of Mason City spent Sunday and Monday at the Elmer Schaefer home.

Mr. and Mrs. Ralph Ludeke and children, Mr. and Mrs. Henry Ludeke and Paul, Mr. and Mrs. Fred Schlichting and daughters, and Mr. and Mrs. Art Schoenwetter and Ethel visited at the Geo. Schoenwetter home Sunday.

WELLEMEYER BEAUTIFYING VACANT STORE LOT AS PARK

Little Park Near Store Will Be A Beauty Spot In A Few Years

Arthur Wellemeyer is laying out a small park between his store and the Lau Sons, store and the vacant lot in a few years promises to be one of the beauty spots in Klemme.

Mr. Wellemeyer is doing much of the preliminary work at this time such as laying out the flower beds, along the sieds and back of the lot with beds in the two farthest corners. The park will be in the shape of a "U" with the opening on Main street and walled in on the east and west sides by the two stores, and fenced at the rear by a wood fence.

Climbing vines will eventually scale both buildings and fence, and along the sides will be long flower beds of perenials, while at the corners at the rear will be hollihock beds. At the rear and center will be located a grape arbor.

Mr. Wellemeyre estimates it will take about three years for all of the vines and plants to reach their maturity.

Another Times Feature

GOODELL AND VICINITY ITEMS OF INTEREST

(By Special Correspondent)

Mr. and Mrs. J. J. Cook and Dolores were Mason City shoppers on Thursday.

Martin Kearney returned from Williams Thursday where he was looking after farm interests.

Mr. and Mrs. Jay Griggs and daughter, Nellie, were Mason City shoppers Tuesday.

Miss Wilma Trumbell of Belmond was calling on relatives and friends here last Wednesday.

Mrs. Geo. Griggs had dental work done in Belmond Monday.

Mrs. Leon Sherwood and daughters Iris and La Vonne were Mason City shoppers Monday.

A number from here attended the Barbeque at Thornton Thursday

Mrs. George Vance and Mrs Tony Bollar papered the Geo. Griggs house in town last week.

John Costello was a Klemme caller Wednesday.

Harve Christensen was a business caller in Mason City Thursday.

Mr. and Mrs. A. C. Carpenter attended the state fair in Des Moines from Monday until Friday.

Mr. Manning of Clear Lake has been hired by the school board to help fill the vacancy of Supt. Tinkle caused by his illness. It is hoped that Mr. Tinkle will be able to be in school soon.

Ed Hemingway attended the state fair Wednesday.

John Savogue went to Des Moines Monday.

Miss Iris Sherwood was an overnight guest at the home of Eunice Wesenberg, Wednesday.

Mr. and Mrs. Jay Griggs took their daughter, Mae, to Iowa Falls Friday where she teaches school in the first grade. They also visited with relatives while there.

Mr. and Mrs. Virgil Cook are enjoying a visit from her parents Mr. and Mrs. Herrick of Los Angeles, California.

A special program was given on Sunday in the U. B. Church; at the noon hour a picnic dinner was enjoyed by a large crowd. The program was in charge of Rev. Bainbridge and Mrs. Cooper. A soprano soloist from Centerville, Iowa. Mrs. Cooper has a wonderful voice and her singing was greatly enjoyed by the congregation.

Mr. and Mrs. Thada of Thornton attended Church services here Sunday.

Mr. and Mrs. Mayhew of Ventura visited relatives and friends here on Sunday.

Rev. and Mrs. F. C Scott of Des Moines are visiting friends here this week.

Avery township Farm Bureau held an all day meeting at the Virgil Cook home Monday. At the noon hour a picnic dinner was served

Some from this vicinity attended the opening dance at Lake Cornelia Monday evening.

Obituary

William Earl Sandrey, twenty-one, a nephew of Haryy and Frank Sandrey of near Klemme, and a son of Mrs. Cora Gray, of Granville, N. Dak., was fatally injured in an auto accident near Granville Friday evening, and died the following morning at 7:30 o'clock.

Funeral services for the young man were held in Granville at 2:30 Monday afternoon at the Congregational church conducted by Rev. C. W. Davis and the remains were then shipped to Clarion, owa, for burial in the family lot beside the father and sister of the young man

Mr. Arthur Wellemeyer, Klemme funeral director, met the party at Clarion Tuesday afternoon at 2:30 and Rev. H. E. Whyte of the Klemme Methodist Church conducted the services at Evergreen Cemetery, near Clarion.

William Earl Sandrey was born on the home farm, 5½ miles southeast of Granville on July 25, 1908, and had reached the age of 21 years, 1 month and 5 days. He entered the primary grade of the Granville school at the age of seven and continued attendance there for several years. Latre he accompanied his mother to Rochester, Minn., and attended the grades there for two years. Returning to Granville he completed his schooling and graduated with the class of '28 and then spent three months at Rugby, returning to Granville last fall to work during harvest and threshing and he continued to follow farm work until his death.

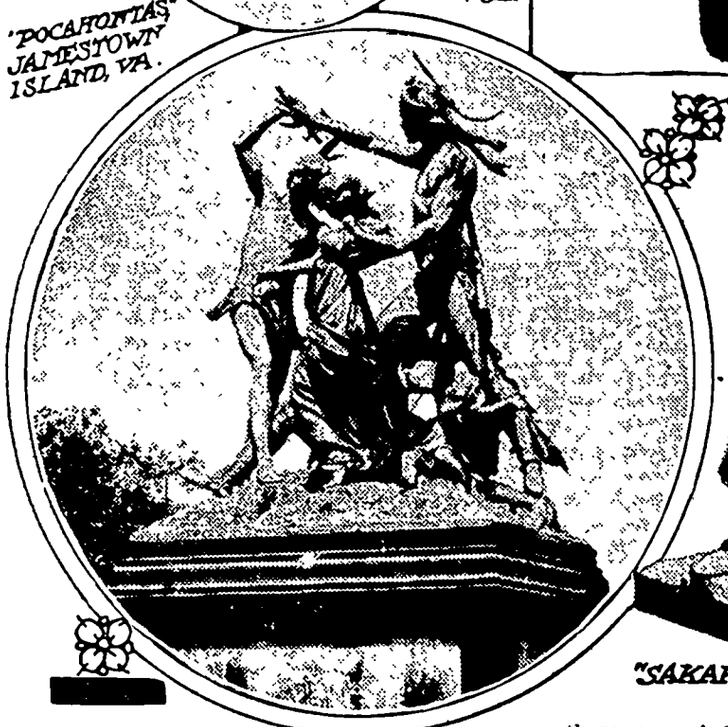
William was a young man of fine character and was held in high esteem by all. He was a conscientious student and his daily contact with associates was courteous, kindly and considerate. In his more mature years he was handicapped more or less by ill health but bore his suffering with patience and fortitude.

He was the only son in a family of seven children His father and an older sister preceded him in death and he is survived by his mother and five sisters. The surviving sisters are: Mrs. Ethel Bailey, San Diego, Cal.; Mrs. Lee Love, Rugby, North Dakota; Mrs. Ted Soloman, Minneapolis, Minn.; Mrs. Joseph McMahon, Wolf Point, Montana and Miss Josephine Sandrey of Granville.

Memorials to a Vanished Race

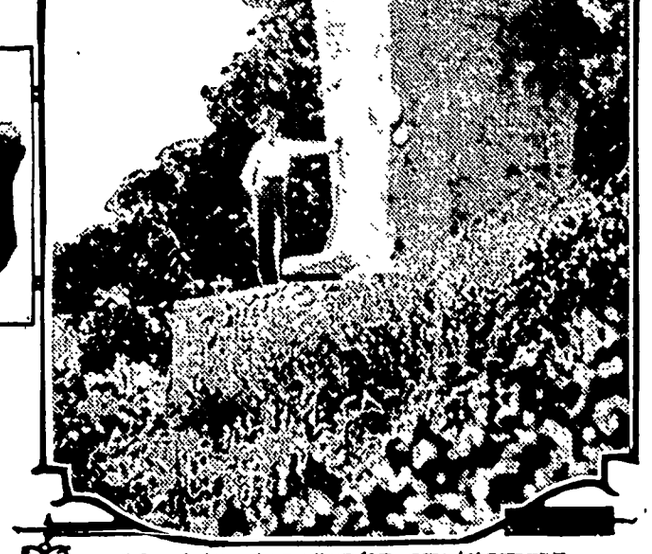
"POCAHONTAS" JAMESTOWN ISLAND, VA.

"THE BUFFALO KILLER," DENVER, COLO.



"FORT DEARBORN MASSACRE" MONUMENT, CHICAGO

"SAKAKAWEA," PORTLAND, ORE.



"BLACKHAWK," NEAR OREGON, ILL.

By ELMO SCOTT WATSON

THIS year marks the tenth anniversary of the establishment of a day for honoring the memory of the original inhabitants of this continent—the American Indian. It was in 1919 that the Illinois legislature authorized the observance of Indian day on the fourth Friday in September of each year. Since that time the idea has spread to other states and all over the country the day is marked with various ceremonies.

In connection with this event, it is interesting to note how many permanent memorials have been erected within recent years to perpetuate the fame of some individual red man or of the Indian as a race. The past year has seen the addition of several to an already long list of such memorials. Outstanding among these have been the two Indian equestrian statues of heroic size which were made a part of the main project of the monumental Grant park decorative scheme, the twin bridges across the railroad tracks at the foot of Congress street, on the lake front of Chicago. Characterized as "two of the ugliest but most impressive Indians ever cast in bronze," these statues, modeled by Ivan Mestrovic, the great Yugo-Slav sculptor, idealize the fighting spirit of the American Indian as not done before.

Other memorials to a vanished race (and that term is used purposely, because the primitive Indian is not merely the "vanishing race," but very definitely a "vanished race") include the life-like bust of Chief Oratem, of the Achkinkeshacky tribe, which was recently presented to the Bergen County Historical society in New Jersey; the monument to Chief Straw of the Delawares, unveiled at Strawtown, near Noblesville, Ind.; and a massive granite boulder erected at Surrey Courthouse, Virginia, which recalls to the people of that state their indebtedness to an Indian named Chanco. A bronze tablet on that boulder tells his story. It reads: "In memory of Chanco, the Indian who lived with Richard Pace at Pace's Paines in this county and who, on the night before the massacre of March 22, 1622, informed Pace of Opechancanough's plot and thus saved the Jamestown colony."

And these are only a few of the many memorials to the American Indian which have been erected in every state in the Union. An entire book could be written about these memorials and the heroic deeds to which they testify. This article, therefore, cannot hope to contain a complete list. In New England alone, for instance, a plan was set on foot several years ago to erect one hundred monuments to all the tribes and to a number of individual Indians who lived in that section of the country. Just the other day it was announced that a memorial of a different sort from the usual was to be established on Mount Hope in Rhode Island as a shrine to perpetuate the memory of King Philip, the great Wampanoag warrior. On that historic ridge will be built a fireproof museum for housing objects of historic Indian value and it will be a shrine, an archeological sanctuary for new England history. Massachusetts long ago honored the memory of King Philip's father, Massasoit, with a huge bronze statue of "the great Sachem of the Wampanoags, protector and preserver of the Pilgrims," which was erected at Plymouth during the Pilgrim tercentenary in 1921.

The visitor at New Harbor, Maine, will find there a reminder of another friend of the Pilgrims. It is a granite monument with a bronze tablet bearing this inscription: "Samoset, an Indian Sagamore of Pemaquid who welcomed the English at Plymouth, gave a deed of the land where this stone was quarried, and of that where it stands, to John Brown of New Harbor 15th July, 1625, and acknowledged it before Abraham Shurte, it being the first deed properly executed in New England." One other New England statue which should be mentioned before leaving that part of the country is the famous bronze by Cyrus E. Dallin, "The Appeal to the Great Spirit," which stands before the museum of fine arts in Boston. This was the last of a series of four statues made by the famous sculptor more than twenty years ago which represented the racial tragedy in which our national life began. The first "The Signal of Peace" stands in Lincoln park, Chicago, and represents the friendly meeting of white and red man. "The Medicine Man" in Fairmount park, Philadelphia, depicts the red man's suspicion of the invader while "Protest" shows the warfare of the tribesmen against settlers. "The Appeal to the Great Spirit" illustrates the surrender of the Indian, not to human enemies but to a higher friend. One other of Dallin's symbolical sculptors should be added to the list of his masterpieces. It is "The Scout" which stands in Penn Valley park in Kansas City, Mo., an appropriate locale, for this was the eastern terminus of the Oregon and Santa Fe trails and the mounted Indian is looking over the vast empire where he made his last stand before the onrush of the white settlement of the West.

The recent unveiling of the Chanco monument in Virginia is a reminder that Pocahontas, one of the two great Indian heroines in American history, was not the only one whom Virginians have reason to hold in grateful remembrance. The statue of Pocahontas, which stands on Jamestown island, is perhaps the best known of all Indian statues. To see the memorial to another Indian heroine you must go clear across the continent to City park in Portland, Ore. There stands Sakakawea, her hand outstretched to the west, pointing the way as she did more than a hundred years ago when she guided Lewis and Clark on their famous expedition into the wilderness. North Dakota also has honored the memory of this Indian girl with a statue which stands on the grounds of the state capitol at Bismarck. Virginia, however, is not the only state which had a Pocahontas. Near the town of Benton, Tenn., stands a cairn of stones bearing a marker with the following inscription: "In Memory of Nancy Ward, Princess and Prophetess of the Cherokee Nation. The Pocahontas of Tennessee, The Constant Friend of the Pioneer, Born 1738—Died 1822."

In the Congressional cemetery in Washington, D. C., stands a monument which is not only unique in that burying ground of notables of our nation. It is also a memorial to an Indian warrior and statesman said by many to be the greatest of all his race known to the white man and honored at the time of his death with a military funeral accorded only those ranking as general officers of the United States army—the only red man in history to have been paid such a tribute. Engraved on the plain shaft that marks his burying place are these words: "Pushmataha, a Choctaw Chief lies here. This monument to his memory was erected by his brother chiefs, who were associated with him in a delegation from their nation in the year 1824 to the government of the United States. Pushmataha was a warrior of great distinction. He was wise in council, eloquent to an extraordinary degree, and on all occasions under all circumstances, the white man's friend. He died in Washington on the 24th day of December, 1824, of croup, in the 60th year of his age."

It is to the credit of the white man, at least, that not all of the monuments which he has erected have been to friendly Indians. Some of them perpetuate the warlike deeds of Indians who were in their day the bitterest enemies of the encroaching whites. One of these stands in the courthouse yard at Point Pleasant, W. Va., and bears witness to the greatness of Cornstalk, the Shawnee, who led his warriors in the first and greatest "all-American battle" at Point Pleasant at the mouth of the great Kanawha in 1774 when native white frontiersmen under Gen. Andrew Lewis strove mightily with native red men under Cornstalk. Although defeated at that battle, Cornstalk's prowess and generalship won the highest praise from his enemies, who later were the most sincere mourners of his death at the hands of treacherous and cowardly whites while he was detained as a hostage. A memorial in a Pittsburgh park recalls another great Shawnee who fought under Cornstalk at Point Pleasant. He was Catahecassa, but known along the frontier as Black Hoof, a warrior whose fighting days extended from Braddock's defeat in 1755 through the defeats of Harmar and St. Clair, until Mad Anthony Wayne finally broke the power of the Indians and peace was signed in 1795.

No part of the United States is richer in Indian memorials than the great Mississippi valley which was for so long the beloved homeland of several powerful Indian tribes. Near Columbus, Ohio, stands a monument to the memory of Leatherlips, a Wyandot chief, who was executed by his own people on the site of the monument in 1809. This memorial was erected by the Wyandot club, an organization dating back to pioneer days, because of the fact that, although the Wyandots claim that the old chief was executed for practicing witchcraft, it was the opinion of the settlers that it was done because Leatherlips was too friendly with the whites. Chicago, the metropolis of the Mississippi valley empire, is especially rich in Indian memorials. In addition to the Mestrovic and Dallin statues, it has also a monument which perpetuates not only the story of a terrible Indian massacre but also a noble act on the part of a red man. This is the Fort Dearborn Massacre monument on the lake front, capped by the stirring group which depicts Black Partridge, the Pottawatomie, saving the life of Mrs. Helm, wife of one of the officers in the fort, from the deadly tomahawk of an infuriated Indian brave.

West of Chicago the traveler will see, on a high bluff above the Rock river, a solitary majestic figure outlined sharply against the natural beauty of field and woodland in the background. Although this statue, the work of the noted Chicago sculptor, Lorado Taft, is popularly believed to be that of Blackhawk, the great leader of the Sacs and Foxes, its maker has declared that it is neither a representation of that leader nor of any single tribe. It symbolizes the Indian, a spirit unconquered while still a conquered race. It is one of the first large monuments to be made of concrete.

Still further west is another statue by the same sculptor which tells the story of another great Sac and Fox leader. This is the bronze figure of Chief Keokuk which stands in the Iowa city which bears his name. Oshkosh is an honored name, the name of a chieftain of the Menominee Indians and several years ago, in a beautiful setting in Menominee park, the citizens of Oshkosh, Wis., erected a statue in honor of his memory.

Out in Colorado is another city which bears the name of a great Indian chief. He was Chief Ouray of the Utes, an Indian who repeatedly proved his right to the title of "Friend of the White Man." A few years ago a part of their debt of gratitude to him was paid by the unveiling of a monument to Ouray and his wife, Chipeta, on a tract of land near Montrose which was a part of the original Chief Ouray ranch.

And these are but a few of the many memorials to the vanished race. As westward the "star of empire took its way" it took with it the Indian and the sorrowful fate which has been his, and is symbolized in one of the most famous of all Indian statues—the bowed figure of an Indian warrior, mounted upon a horse whose drooping head is pointing toward the setting sun—James Earle Fraser's "The End of the Trail."

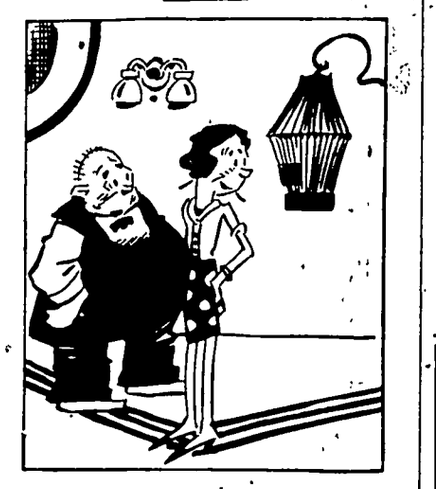
Just a Little Smile

SOME PEAS!

Locust Samson had been born and reared in the backwoods, and was a grown man before he made his first visit to the city. He went to a hotel for dinner and, as an appetizer, was served a dish of large olives. Locust looked them over carefully and then motioned for the waiter.

"Ah don' wants 'ter bothah you," he said in an awe-struck voice, "but ah'd shoah like to see de pods dem peas come in."—Open Road.

SMALL BILL



Hubby—What have you got to pay for that canary bird?

Wife—Oh, the bill for that kind of bird is very small.

Brave Boy

"I cannot sing the old songs,"
She sang, with face awry;
"And since you can't," said brother,
"I wish you wouldn't try."

Jury No Place for Him

Judge—Why are you so sure this man is disqualified for jury service when you haven't even asked him a question concerning his views?

Lawyer for the Defense—The fact that he looks actually intelligent ought to convince you that he doesn't belong on a jury, your honor.

The Big Expense

His Son-in-Law-Elect—What do you consider the heaviest item of your household expenses?

Old Longwed—According to my wife's expense account "sundries" cost me more than all the rest put together.

Valuations

"Aren't you sorry for a man who has to pay alimony?"

"Not if the woman is homely," answered Miss Cayenne. "Whatever the alimony may be, the man is likely to feel that he is getting off cheap enough."—Washington Star.

WHAT STOPPED HIM?

She—Don't you dare kiss me—or I'll slap your face.

He—Don't think it's fear stops me.

New Responsibilities

This world is rather funny
As legacies redouble.
With every bunch of money
You get a bunch of trouble.

The Price of Peace

"Pa, what's hush money?" asked the kid.

"It's the ten you give a wife so she can go buy what she wants and quit gabbing about how abused she is," growled his dad.

Mental Dyspepsia

Gertie—Poor Bertie! I'm afraid he suffers from matrimonial dyspepsia.

Reginald—What's that?

Gertie—Oh, you know—his wife doesn't agree with him.

Makes It Different

"No, I cannot train you for the stage, you have no voice."

"But I would willingly have trained and paid three times the fees."

"What? Say that again. Your voice sounds better already."—Der Wahre Jakob.

Puzzled

"I've come to the conclusion that women are puzzles."

"So have I; in fact, I've had to give several of them up."

FAMILY DOCTOR LEARNED THIS ABOUT CONSTIPATION

Dr. Caldwell loved people. His years of practice convinced him many were ruining their health by careless selection of laxatives. He determined to write a harmless prescription which would get at the cause of constipation, and correct it.

Today, the prescription he wrote in 1885 is the world's most popular laxative! He prescribed a mixture of herbs and other pure ingredients now known as Dr. Caldwell's Syrup Pepsin, in thousands of cases where bad breath, coated tongue, gas, headaches, biliousness and lack of appetite or energy showed the bowels of men, women and children were sluggish. It proved successful in even the most obstinate cases; old folks liked it for it never gripes; children liked its pleasant taste. All drugstores today have Dr. Caldwell's Syrup Pepsin in bottles.

For Barbed Wire Cuts
Try HANFORD'S
Balsam of Myrrh
All dealers are authorized to refund your money for the first bottle if not suited.

American Meat Products

When Rabelais described Gargantua's meals, his imagination seemed to outstrip all possibilities. But Uncle Sam's menu would make Gargantua seem an ascetic. Americans last year ate more than 9,000,000,000 pounds of pork, alone. Their total production, not including importation of dressed meats was 16,955,000,000 pounds.

Time to Leave

Mr. Staylate (to fiancee)—If I had enough money I'd travel.

Her Father (from next room)—Just how much do you need?

Recent studies at the University of California indicate that almonds and almond meal may have value in dietary treatment of diabetes.

If a man bites a dog, it's news; but that's a silly way to get your name in the paper.

MOST people depend on Bayer Aspirin to make short work of headaches, but did you know it's just as effective in the worse pains from neuralgia or neuritis? Rheumatic pains, too. Don't suffer when Bayer Aspirin can bring complete comfort without delay, and without harm; it does not affect the heart. In every package of genuine Bayer Aspirin are proven directions with which everyone should be familiar, for they can spare much needless suffering.

BAYER ASPIRIN
Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

WHAT WILL IT DO?
Women are saying: "Pinkham's Compound keeps me fit to do my work." "I was nervous and all run down. Now I eat better and sleep better—". "It helped my thirteen year old daughter."—"I took it before and after my baby was born." —"I am gaining every day."
Lydia E. Pinkham's Vegetable Compound

PARKER'S HAIR BALSAM
Removes Dandruff—Stops Hair Falling
Restores Color and Beauty to Gray and Faded Hair
60c. and $1.00 at Druggists
Hiscox Chem. Wks. Patchogue, N.Y.

FLORESTON SHAMPOO—Ideal for use in connection with Parker's Hair Balsam. Makes the hair soft and fluffy. 50 cents by mail or at druggists. Hiscox Chemical Works, Patchogue, N. Y.

THE HEATHER IN BLOOM

(© by D. J. Walsh.)

ELLEN WALLACE fastened the quaint old amethyst brooch carefully and her husband regarded her with satisfaction.

"You look nice, Ellen," he remarked, "the smooth black silk gown, surely plain but of the best quality and her soft bands of silvery hair. "How I wish I could take over to Edinburgh; there are"—voice held a note of pathos—"one of the old friends left. I'd like to show you Edinburgh castle by moonlight. I remember one night I was in the hotel across the street from the gardens that lie just below the hill that is topped by the pile of gray stones and—"

Ellen pinkened. She glanced sharply at the pile of gayly tinted travelers that the old man had been studying. "Eric, you are getting restless. Ever since that $2,000 was left you have wanted to squander it on foreign travel. Of course"—her face softened as she regarded the fine, lined face of the old Scotchman—"that queer place with the steep streets paved with rough cobble-stones and the outlandish people with their kilts and bagpipes will always seem like home to you and I'd like to see Jock Bruce who lives alone on the heath with his collie dog for company, but I can't defraud my kin. Dick is my brother's son and I want to leave that $2,000 to him intact."

Eric sighed as she talked. It was true. Ever since the money had so unexpectedly arrived he had been thinking of Bonny Scotland. An almost uncontrollable homesickness for his birthplace had seized him and he longed to feel the deck of an ocean liner beneath his feet and hear the watch boom out the bells. "It is your money, Ellen, but do you think that Dick really needs it? We have only a few years left at most and he is young. With youth one has enthusiasm—a future—the old have only their memories."

"Dick will do better soon," defended Ellen, although there was an odd lightness in her mind even as she spoke. "Sometimes I feel that Lucy must be extravagant or possibly quarrelsome for they—"

Eric nodded comprehendingly as Ellen's loyalty prevented further criticism of her kin, but he smiled inwardly as he listened to her belief in her in-law's culpability. Lucy was only a niece by marriage, consequently she must be at fault. Eric was convinced that Dick, the in-law to him, was worthless, lazy young fellow, who would probably never amount to anything, but he knew to voice his belief to Ellen would bring down a storm of angry words and would really grieve her. Therefore, he puffed away at his pipe and resumed his study of the fascinating travel folders. Two thousand dollars would give them a year abroad. "If I could only earn some money," thought the old captain restlessly, but the empty sleeve precluded such ambitions.

Ellen went on her way, but so perturbed was she from the thoughts aroused by Eric's speech that she completely forgot to telephone, according to her invariable custom, to Lucy announcing her arrival. Lucy lived at the other end of the town, and Ellen hated to go into a drug store and spend the necessary nickel. Long habits of thrift remained with her and a nickel dropped into an outside telephone seemed wasteful to her. She wanted to leave Dick as much as possible. "How they will enjoy our little cottage when we are through with it," she reflected tenderly. Every board and nail in the tiny place was surrounded by old memories of their happy youth. Eric had been the kindest of husbands and had worked and cherished her with all his strength. Most of the cottage had been built by his own hands—before the loss of the left arm. Here her sparkling blue eyes dimmed as she remembered his grief at having to give up active work to depend solely on his pension. This with the cottage sufficed, for they were accustomed to plain living, but now doubts assailed her as she recalled the longing in his face when he spoke of Scotland and his kinsmen. After all the money had been left to them to use and he wanted to travel. She remembered a time when she had craved a plush coat, although her dark cloth jacket was perfectly good. Eric had worked nights and earned enough to surprise her with the plush garment, and on her wedding anniversary she had worn the warm, silk-lined coat that enveloped her with fragrant warmth.

She was torn with doubts as she went up the steps of the rented house where Dick lived. The place looked shabby and uncared for, greatly in contrast with Ellen's neat cottage. "I would love to cross the ocean," she thought wistfully, Eric's wanderlust had seized her, but duty looked grimly ahead.

"I tell you I won't go and call on the Smith's baby. I don't care if they do get another doctor. The old woman can't last forever and that $2,000 will go a long way. Why should I wear myself out walking and working. The world owes me a living. I'm sorry I let her spend all that money to put me through medical college. I hate the work. When she drops off, I'll buy a racing car and—"

Ellen's veined hand was pressed wildly against her heart. Dick's voice, rough and shrill with anger, floated out from the open window and her breath came in little gasps. The pounding in her ears dulled his voice, but her extraordinarily sharp ears still heard clearly above the sound of her heartbeats.

"I wish," cried Lucy forlornly, "that you had no money coming to you; then you might brace up and make a living the same as other men do. Here we are in this run-down house with no prospects because you expect to step into the dear little cottage that your uncle built himself—"

There was an ugly snarl in Dick's laugh. "Dear little cottage," he mocked. "Do you think you're ever going to settle down in that? The inheritance will be absolutely mine and you'll never use that. I'll sell it the minute I get the place. Houses are at a premium now. I know a sure thing that I'll bet that—"

Ellen could not see the steps for the blinding tears that clouded her vision. Stumblingly she hurried down the street and into the drug store at the corner, where she went to the phone booth.

"Eric, come down here and get me," she said when his pleasant voice answered. "I—have had sort of a shock—take care of those travel folders because—" Here a tiny ripple of joy ran through her halting speech. After all it was not too late. She could give Eric his heart's desire with no thought of duty to intervene. "We are going to Scotland very soon, and Eric"—unconsciously her hand was pressed against her heart—"I misjudged Lucy. Our little home shall be left to her instead of—that is"—a new hesitancy crept into her tone, she had discovered that her judgment was not infallible—"if you think best."

"Whatever you like," he returned, as he always did. "Ellen, I'll bring the folders with me. Think, I'll be able to show you the Scotch heather in bloom on the hillside."

Ju-Ju Founded on Faith in Omens and Charms

Light is thrown on the mystery of Ju-Ju—the strange system of magic practiced in Africa—by Mr. St. Barbe Baker, the well-known explorer, in the Kodak magazine.

Four hundred years ago, when Portuguese missionaries first arrived on the west coast of Africa, Mr. Baker writes, one of their number gained a considerable following from amongst the people of Benin. This was too much for the Ju-Ju doctor of the time, who retaliated by murdering the missionary. He removed the clothes from the dead man and donned the white cassock and a cross which had hung round his neck.

When the cassock wore out the ancient Ju-Ju man smeared his body with a white chalky substance which he found on the banks of the stream. This custom of smearing the body with a chalky solution has come down to the present day, and is still employed by the descendant of the Ju-Ju man. Not only so, but the same cross is religiously worn whenever he is taking part in Ju-Ju ceremonies.

The bushman recognizes the existence of a devil and attributes most troubles to him and to propitiate him he gives him "chop" (food). In the old part of Benin City, outside many a house at one side of the entrance it is a common sight to see a little niche in the wall containing an effigy of the devil. It may be observed that the bushman has the humor and the sense to keep the devil outside his house.

The Ju-Ju man claims to have a remedy for every ill. Charms are worn against sickness or accident, against snake bites or twins. The Oba claims to have power over the elements, and to make the weather fine or wet at will.

Ju-Ju may be both good or bad, just, as magic may be white or black, but by the white man it is generally regarded as the mumbo-jumbo, or fetish—the belief in omens and charms. It is, in fact, the name which covers the unknown and the unknowable.

Too Bad

The auditor of one of the big picture companies had come out from New York to give the studio pay roll its annual pruning. He went down the list, department by department, noting with a smile the names of his many friends. Finally he hit one department which boasted two unfamiliar names.

"What are these two names doing on your pay roll?" he asked the head of the department, poising his blue pencil in air.

"'Them two?' repeated the head of the department. 'Oh, them are the guys what do the work.'"—Los Angeles Times.

Egg Oddly Preserved

Why an egg buried 12 years should have remained fresh until it was dug up is interesting Fayette City, Pa. The egg was unearthed in a cemetery by Frank Lowers and N. E. Murphy while they were replacing the headstone over the grave of Pierce Kendall. Knowing that it must have lain under the stone since the burial 12 years ago, they saved it for examination. Both the yolk and the albumen were as fresh as if the egg had been laid a few days before.

New Police Duties

Police at Seattle, Wash., assumed new duties—the care of two ducklings. The two bits of fluff were recorded as "two small ducks, age uncertain." They came from the pockets of a man arrested for a minor offense and under police procedure must be returned to the man when his jail term ends. In the meantime the police have a new job.

DAIRY FACTS

FEED COWS GRAIN WHEN ON PASTURE

Keeps Up Milk Flow for Fall Production.

The better dairyman knows that it pays to feed his cows in the summer as well as in winter, says G. W. Tailby, Jr., of the New York State College of Agriculture. For the past ten years dairymen in all parts of New York state have been feeding their cows better in the summer.

As an example of results from record-keeping and better feeding, Mr. Tailby spoke of a dairyman in Oswego county who, five years ago had 16 cows which produced 5,335 pounds of milk with 174 pounds of butterfat; the next year 17 cows produced 6,843 pounds of milk with 233.5 pounds butterfat; the third year 13 cows produced 5,777 pounds of milk with 197.4 pounds of butterfat, and the fourth year 14 cows produced 9,579 pounds of milk with 318 pounds of butterfat.

During the first summer the cows were fed no grain during June or July, and only four pounds a cow a day during August. During the fourth summer, the cows received an average of four pounds a day, and were fed somewhat according to production, although they were still underfed. The 9,579 pounds average for the fourth year was at least partly due to better summer feeding.

One dairy herd improvement association member said recently, "I find that it pays to keep the cows in the barn until June 1. Then the grass has a good start and has some substance in it. My cows have good pasture for June, but I continue to give them a little grain, about four pounds a day. Soon after July 1, I begin to cut green alfalfa for them and also increase the grain. This holds up the milk flow and keeps the cows in condition for next fall."

Cows Require Liberal Amount of Water Always

Unless cows are given a constant supply of pure, fresh water, the milk supply will be seriously impaired. Cows' milk is about 87 per cent water; unless she gets plenty of water, milk formation will not be carried on. A cow will drink anywhere from 10 to 15 gallons of water per day and more during warm weather.

In summer time the dairy water supply should be protected so that it does not become stagnant or sour. Disease germs taken in through that water may be carried into the milk. In winter time see that the water is slightly warmed before it is given to the cows. Ice cold water is not productive to the heavy drinking which helps milk production.

Individual drinking cups for cows seems to be the ideal solution of the dairy water supply problem. Dairymen have found that the installation of individual drinking cups pays for itself in a comparatively short time in increased milk flow. When a cow has water at hand all the time, she will constantly drink it.

Grain Supplement Must Be Furnished in Summer

Should grain be fed to dairy cows on pasture? Since spring and summer grass is relatively low in nutrients, a cow producing 25 to 30 pounds of milk per day must eat about 150 to 300 pounds of grass in order to get enough feed for her daily requirements. Since this is practically impossible, a grain supplement must be given. For cows producing 20 to 35 pounds of milk per day, a mixture of the ordinary farm grains such as oats, corn, wheat bran, and barley fed at the rate of one pound of grain to four to six pounds of milk produced per day will be sufficient. For cows producing more than 35 pounds of milk per day, the ration should contain a high protein concentrate mixture.

Most Important Factor in Lowering Milk Cost

The Ohio station several years ago showed that corn silage saved the dairy farmer 10 cents a pound on the cost of producing a pound of butter, and 40 cents on the cost of producing a hundred pounds of milk. Several other experiment stations have shown figures that range from 6 to 15 cents saving on the cost of butter and from 25 to 75 cents on the cost of a hundred pounds of milk. Many of the early cow testing associations also demonstrated that the silo was one of the most important factors in lowering the cost of milk.

Classes of Feeds

Feeds are roughly divided into two classes, based upon physical characteristics and composition: (1) Concentrates, such as farm grains and milk by-products. These are heavy in proportion to volume and contain a small proportion of fiber, or woody material. (2) Roughages, such as hay, straw, silage, grass, and roots. Feeds of this class are bulky. Roughages that are high in water content, such as fresh, green grass, roots, and silage, are termed succulent feeds.

For hot weather breakfasts *try* the *Wake-up Food*—quick new energy

IDEAL BREAKFAST for warm weather—the Wake-up Food, Post Toasties! So rich in the energy you need, yet so light and tempting to appetite. And so easily digested that it releases its rich store of energy quickly for either work or play! That's why it is called the Wake-up Food.

During these warm days serve it for breakfast or luncheon or supper. That family of yours can't help but like it—tender hearts of choice white corn, delicately flaked and deliciously flavored and toasted crisp. And how they'll benefit by its quick energy!

Remember, there's just one way to get the Wake-up Food—ask for Post Toasties in the red and yellow, wax-wrapped package.

Muskrat, Once Thought Nuisance, Now Valued

In the early days of the fur trade it was the practice in Canada for trappers to keep foxes or other wild fur bearers, caught in warm weather, until the fur was prime, and from this custom has arisen the modern industry of fur farming.

In recent years the development of muskrat farms has progressed rapidly, particularly in western Canada. Marsh lands, hitherto considered almost worthless, have suddenly increased in value.

At one time the muskrat was looked upon as a pest and was disregarded by the trapper unless a great number could be taken with little trouble. Today this little slough dweller is one of the chief factors in maintaining a high total value for our annual fur production and in commercial importance heads the list of fur-bearers taken in Canada. This growth in popularity is due to two valuable properties—namely, the pelt's long-wearing qualities and its suitability for dyeing.—Exchange.

Diamond Cut Diamond

"You have to meet whisper with whisper."

McCabe G. Winslow, the Denver prohibition leader, was defending whispering campaigns.

"It's like the case of the crook," he went on. "A crook, you know, consulted a lawyer, told him what he'd done, and promised him $2,000 for an acquittal. The lawyer said:

"'You've committed a crime, no doubt about that. I can get you off, though. Get some witnesses, and I'll get you off.'

"The crook got some witnesses, and the lawyer got him off.

"'And now,' he said—'now that Ive won your case for you, how about the $2,000?'

"'That's all right,' said the crook, 'Get some witnesses.'"

Many Telephones

The telephone is rapidly catching up on the population of the country and in the five-year period from 1922 to 1927 increased four times as rapidly as the population. In the latter year there were 18,522,767 telephones in use and the total calls sounds like a national debt, with the figures set at 31,614,173,621. The District of Columbia, with 144,985 phones, outranked 19 states.

Never Owed Anything

"All that I am," exclaimed the politician, "I owe to my mother."

"Well," exclaimed a voice from the back of the hall, "doesn't it feel great to be out of debt?"—Tit-Bits.

A Happy Meeting

"Pardon me, but we have certainly met before." "Heavens! How much do I owe you?"

At any rate, precocious children haven't the inferiority complex. Be thankful for that.

Silk Coated With Metal

Silk, wood and cotton used in the construction of airplanes are made more durable and more efficient by a metal coating process which has been recently discovered. The thin plating of metal on these materials makes them more readily withstand the rough treatment they are likely to encounter in the air service.

Books Kreisler's Hobby

When Kreisler, the great violinist, recently received the degree of LL. D. from Glasgow university, in Scotland, his bobby was revealed. It is books. In his large library at Berlin, Germany, he has amassed many quaint and curious volumes, including many rare Latin works, which he reads as well as buys.

Saving Paint

"M'dear, I wish you'd go light on the cosmetics this month."

"Why so?"

"I've got to paint the house."

Family Discipline

"Your mother brings you up very strictly, Hans."

"Yes, but she is stricter with father."

In a play by amateurs, no matter how many bad actors, there is sure to be one who is promising.

Making His Point

An Irishman, who had been advised by his attorney to plead guilty as a first offender, stood in the dock.

"Are you guilty or not guilty?" asked the judge.

"Guilty, yer Honor, and I've got witnesses to prove it."

How's Your Oats ?

Most of the talk these days is abuot the harvest, threshing or how the oats is turning out, so we think it is a good time to tell you about the part we take in harvesting and marketing your crops.

Until a few years ago most of the oats, barley and other small grains were sold to local elevators and shipped to distant points where it was manufactured into various commodities, one of the most important of which was stock food. This stock food was then sent back and sold to the farmer for use on the farms of Iowa and the neighboring states.

Now the method of handling the small grain has changed and the part used for stock food is ground in local mills for the farmer. In other words, the farmer is selling his small grain "on the hoof."

To handle the feed grinding business successfully, these mills must be located at advantageous points within easy hauling distance of their customers and must be equipped to grind feed rapidly and economically.

The first of these mills experimented with various forms of power to operate the machinery but it was soon determined that electrcility was the most economical power for this purpose, and today practically all of these feed mills are equipped with electrically driven machinery.

Our Company has taken an active interest and been an important factor in the development of the feed grinding business in the territory it serves.

The first feed mills were widely scattered and of limited capacity, but the demand for general feed increased by leaps and bounds and today we are serving 51 feed mills in almost that many towns in Iowa, Minnesota and Nebraska. The capacity of these mills varies from 25 Horespower to 117 Horespower with an aggregate capacity of over 3,000 Horespower. These mills manufacture millions of pounds of feed each year which are used on the neighboring farms to produce billions of pounds of pork, beef and poultry which find a ready market all over the world.

We also furnish current to handle grain in elevators in practically every town we serve.

This handling of the grain crop is only one of the many ways in which electricity is performing its duty as an efficient and economical servant of the communities we serve.

MORE GIRLS THAN BOYS IN K. H. S.

NO CHANCE FOR FOOT BALL IN KLEMME THIS YEAR

Other News Of Interest To Parents And Students Of K. H. S.

The second week of the school year finds us well begun in our school work with class rooms crowded in high school and a good spirit prevailing.

Our boys, under Mr. Carpenter's leadership, are going through their physical training exercises with zip and zest. Mr. Carpenter is a foot ball enthusiast and is teaching our lads some of the fundamentals of the game which they seem to relish. Some in our community have wished we might have a foot ball team but the odds seem to be against us in point of numbers, especially of boys. Here, as in most schools to day, the girls are far more numerous with us than boys. Over sixty per cent of our high school being girls. This coupled with the fact that very few schools, almost none, of our size are playing football, we would be compelled to play only schools having a decided advantage over us in point of numbers. Our State Board of Control of Athletics reprting on foot ball ver the state informs us that very few schools enrolling less than 100 in high school can finance the game without difficulty. Corwith, much larger than Klemme, does not attempt foot ball, and Kanawha, a Class A school, does it with difficulty. As we have less than 80 in our high school and less tham forty per cent of these boys we would need not a little courage to venture into this field of sports.

Orchestra Will Be Popular

Miss Ford, our orchestra director, has found a ready response to a call of those interested in such an organization. She will meet those having instruments on Thursday evening of this week. Violins are the prevailing instruments and alto and baritones are scarce.

Seniors Buy Class Rings

Our Seniors have placed their order for class rings with Mr. Vesterby of the Josten Mfg. Co. This hiuse has been furnishing Klemme Seniors class rings now for the past four or five years and this year gave the class a 10 per cent discount. This discount has been promised succeeding classes.

Twevle Girls In D. S. Class

Our Frehman Girls, under the directiin of Miss McGinnis, have been canning tomatoes and carrots. With a class of twelve girls this year our domestic science room is well filled and we predict a fine showing will be made. Mr. Carpenter reports every bench taken in the manual arts room for Freshman boys.

The party for the new teachers was held Friday evening of last week in our school gymnasium and all present seemed to have a rollicking good time.

Many Rural Students This Year

As usual practically half of our high school is composed of non-resident students. This year we have enrolled from outside our district in high school 37 pupils. They are as follows: Ethel Baack, Norma Baack, Nellie Stromer, and Esther Greiman from Ell Twp. Dist. No. 4; Elsina Albers, Norma Wille, Edith Swanson and Mitchell Bock, from Ell Twp. District No. 8.

Vergie Meinders, Lynford Back, and Edwin Thieman from Ell Twp. Dirict No. 7.

Wm. Sandrey and Kermit Schlei from Twin Lakes Twp. District No. 1.

Emma Kothenbeutal and Gladys from Twin Lakes, Dist. No. 2.

Barbara and Karna Peterson if Twin Lake, Dist. No. 5.

Jane Dutheridge, Gertie Trampel and Clarice Johnson from Avery, Dist. No. 2.

Carrie Swalve, Lois Church, Francis Buseman and Wilbur Arnold of Avery, District No. 3.

Edna and Truman Nelson of Avery, District No 5.

Clarence Lemke and Venner Priebe, Liberty No. 7.

Bernard and Ethel Pringnitz, Mildred Gast, Helen, Lorraine and Ethel Lemke, all from Liberty No. 8.

Floyd Greiman, Liberty No. 6.

Dorothy Carolus and Mildred Schoenwetter of Liberty Ni. 9.

August Josten has enrolled with us as an irregular student, taking a course partly in eighth grade and partly in high school.

More books were needed than we had ordered but hurried second orders have now been filled with but a few exceptions.

Our Senior Class has already been reduced in size just this year. Willa Wareham after enrolling with us, perhaps as a little joke, decided to start housekeeping for herself and another. We liked her as a student and predict she will do her full share toward making a good American home. We hipe the rest of the girls of her class may be able to resist the lure of men until their high school course is completed.

KLEMME AUXILIARY ELECTED NEW OFFICERS

Legion And Auxiliary Will Have A Joint Picnic September 22

The Klemme Legion Auxiliary met at their hall Tuesday evening, September 3rd and elected new officers for the coming year.

The following ladies will serve as officers of the organization: Mrs. Paul Grange, President; Mrs. W. F. Pavey, Vice-Pres.; Mrs. P. W. Johnson, Secretary; Miss Marie Blank, Treasurer; Mrs. E. J. Arnold, Chaplain; and Mrs. W. F. Lau, Historian.

Will Have Joint Picnic

An invitation was extended by Mr. and Mrs. Lassahn to have a Legion and Auxiliary picnic at their country home on the 22nd of September, which was accepted.

All members of both organizations and their families are urged to be present.

MR. L. T. NUTTY RESIGNS JOB OF COUNTY AGENT

Walter Weis, Of Garner, Will Begin Duties December First

Mr. L. T. Nutty, who for several years has faithfuly and well filled the office of County Agent, has resigned, effective December 1st.

Mr. Nutty has been one of the outstanding County Agents in the State and has done much for the farmers and people of Hancock County. We understand that he has a fine posiiton with the state department.

Walter Weiss, an Ames graduate and now teaching in Garner, has been secured to take the office of County Agent and will begin work in that capacity December 1st.

Mr. Weiss is well qualified for the work and has specialized in agriculture and work along that line.

KLEMME GIRL SECRETLY MARRIED SINCE JUNE 18th

Florence Stokesbarry And Bussel Blair Stole March On Friends

News has just reached Klemme of the marriage of Miss Florence Stokesbary to Mr. Russel Bair, of Des Moines, which took place June 18th and since has been kept a secret.

The Bride is the eldest dauhgter of Mr. and Mrs. George Stokesbary of this city, and was a graduate of the Klemme High Scholl with the class of 1928. Since that time she went to Des Moines and took up a business training course and later was employed with the Bell Telephone Co. at Des Moines. She is a popular young lady and has a large host of friends who extend congratulations.

We know nothing of the young man of her choice.

POULTRY RAISERS TO HEAR EXPERTS

FARM BUREAU WILL SPONSOR MEETING FOR POULTRYMEN

L. T. Nutty Announces Plans For Meeting On September 18th

L. T. Nutty, County Agent, announces a meeting of importance and interest to poultry raisers of this section, to be held Wednesday, September 18th at the Court House in Forest City.

This meeting is one of fifty-two being held over the state and is for the purpose of discussing with farmers the poultry laws which influence the marketing of poultry, poultry diseases and their prevention by sanitation methods. The meeting is sponsored by the Hancock County Farm Bureau, the State Department of Agriculture and the Extension Service of the Iowa State College.

According to Mr. Nutty the farmers of this community will have an unusual opportunity to hear officials of the state department of agriculture and poultry marketing and poultry husbandry specialists.

B. O. Browlee of the State Department of Agricultrure will discuss the reason for th emeeting and give a sumary of the laws of Iowa and city ordinances of New York and Chicago, which have a vital influence on poultry production methods.

A competent representative will discuss poultry marketing problems, sale of poultry by grades, market channels used for Iowa poultyr, the kind of poultry being discarded under inspection service at eastern markets and the selling of poultry.

A member of the agricultural extension service of Iowa state college will discuss common poultry diseases and the new Iowa poultry sanitation program to prevent disease. He also will explain the method of making post mortem examination and assist in a demonstration on birds brought into the building.

An interesting exhibit of poultry which compares good market poultry and poultry unfit for market is being prepared by State Inspector Guy Thomas.

After the general meeting the state officials and poutlry experts will be present to answer qusetions and give personal interviews for interested producers.

Poultry producers in this territory cannot affod to miss this meeting.

KLEMME GIRL MARRIED TO AUSTIN, MINN. YOUNG MAN

Miss Willa Warham, who has been making her home in Klemme with her grandparents, Mr. and Mrs. C. D. Smock, and Mr. Leo McNally, of Austin, Minn., were married at Garner Friday by Rev. C. H. Van Metre.

The young couple left Sunday for Austin, Minn., where they will make their home.

GIRL KNOWN HERE SERIOUSLY INJURED IN AUTO ACCIDENT

Niece Of Mrs. Wm. Bell Had Arm Amputated Following Wreck

Mrs. Wm. Bell has received word that her neice, Miss Etta Hitt, of Clinton, Ill., was seriously injured in an auto accident when the car in which she was riding was struck by another car on a bridge. Miss Hitt had her arm outside of the car and when the car she was riding in was struck her arm was crushed between the concrete railing of the bridge and the car door. It was necessary to amputate the arm. Reports are that she is getting along well at this time.

Miss Hitt is quite well known in this community.

Marie Lewis and husband to F P Foll and L E Wilson, Wty deed date 8-5-29, $1.00 lot 11, block 10, orig Kanawha.

A G Koerner and wife to Hancock County, Iowa, Easement for Public Highways, date 8-28-29, $25 on tract in NW corner of NW¼ NW ¼ 31-95-23.

E H Wahlert, Sheriff to Chicago Joint Stock Land Bank, Sheriff's deed date 8-30-29, $13056.24 on SW ¼ 24-97-25.

COUNCIL PROCEEDINGS

Klemme, Iowa,
August 5, 1929.

Regular meeting of the Town Council held at the Town Hall.

Four members of the Council were present.

Minutes of last meeting read and approved as read.

Motion made and seconded to allow the following bills:

Fred Hoppe, 23 hours labor tiling	$ 11.50
Ervin Schwartz, 23 hours labor tiling	11.50
A. E. Finn, 4 hour labor	2.00
Harold Jost, Mowing Park 6 times	30.00
Lloyd Lau, mowing weeds	5.50
W. M. Kirkwood, Kerosene and Gasoline	2.75
League of Iowa Municipalities, Dues	10.00
Board of Supervisors, Hancock Co, Road Grading	125.00
Central States Electric Co. July Lights	3.88
Central States Electric Co. July Power	16.00
Community S. S. Co., 100 Gallons Gasoline	19.50
H. H. Stoltenberg, July Salary	75.00

Bills allowed.

Bill of Central States Electric Co. for street lights June and July not allowed for the present.

Motion made and seconded that H. H. Stoltenberg be given a $10.00 raise in salary beginning Aug. 1st.

Budget for 1930 completed and mailed to County Auditor.

Motion made to adjourn.

A. J. Kudje, Clerk.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Mthodist Church ..... etc ...

The Rally Day services in the Church last Sunday met with a fine response. A special day program is planned for the Klemme Sunday school this coming Sunday, and you are invited to attend, both young and old.

There will be regular preaching service Sunday morning at both the Klemme and the Liberty church.

In the evening we will have lantern slides showing our mission work in South East Africa.

FALL TERM COURT BEGINS SEPT. 23

JURORS DRAWN FOR THE NEXT TERM OF COURT

Petit Jurors Will Report Octobre 1; Grand Jury September 24th

Following is the list of petit jurors drawn for the September term and are to appear at 10:00 a. m., October 1st:

James Mackin	Britt
Dorothy Olson	Kanawha
A. G. Koerner	Klemme
Leonard R. Nelson	Miller
Earl Michelson	Kanawha
Della Hrubes	Britt
H. R. Gibbs	Klemme
Campea Benner	Britt
Walter Kester	Garner
Mrs. H. R. Vickerman	Britt
Archie Nelson	Kanawha
R. R. Ritter	Hayfield
Henry Christianson	Britt
Mrs. H. C. Armstrong	Britt
Wm. F. Greiman	Goodell
Fannie Becker	Garner
Joe Schuldt	Klemme
Albert Chizek	Garner
Al Hutchinson	Woden
Leonard Prochaska	Garneer
Bert Mathews	Garner
Clarence Kluckhohn	Klemme
Joe Brcka	Garner
John Pinkerton	Britt
J. H. Junker	Woden
Joe Finn	Goodell
Fred Saathoff	Woden
J. E. Stille	Klemme
Harm Sonius	Woden
Ray Veldhouse	Kanawha

Hancock County Grand Jurors

The following grand jurors for the year 1929 will report for duty at 10:00 a. m. September 24:

H. R. Stromer	Klemme
Frank Block	Forest City
Orvin Friedow	Britt
Tom Murray	Britt
Clarence Keil	Forest City
S. J. Schutjer	Britt
Christian Rasmussen	Garner
H. B. Rine	Corwith
W. W. Allaben	Goodell
Jacob Husinga	Woden
J. R. Cosgriff	Kanawha
Roy Schaefer	Garner

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English Service.

1100 a:. m. Sunday school.

The Young People's Bible Class will meet Tuesday evening at 8:00.

Both choirs will meet Saturday evening.

The Confirmation Class will commence at 9:00 o'clock Saturday morning.

This school now offers a three year course. All pupils should enroll Saturday and attend regular.

SPECIAL SCHOOL ELECTION

A Special Election will be held in the Center School House, Liberty Township on Monday, September 16. 1929, for the erection of a 3 rod school road beginning on the NE¼ of Section 9 running directly north to the Township line.

Polls will be open from 1:00 o'clock until 3:00 o'clock p. m.

1tc Joseph Schuldt, Secretary.

PUBLIC SALE OF OLD SCHOOL HOUSE IN LIBERTY

The old school house in District No. 2, Liberty Township, will be sold on the grounds, Wednesday, September 18, 1929, at 1:00 o'clock p. m. to the highest bidder.

1tc Joseph Schuldt, Secretary.

The fire siren sounded an alarm Friday shortly before noon which called the fire department to the home of Mrs. Henry Lemke. Oil driping from a stove onto a rug became ignited and started a blaze, but which was extinguished before the department arrived, and caused but little damage.

MILDRED JOHNSON GIVES PARTY FOR YOUNG GIRLS

Three Girls Have Birthday And So Are Honored On Occasion

Miss Mildred Johnson gave a birthday party in honor of three members of her Sunday school class at the Parish House Monday evening after school hours. Those to be honored were Novella Bredbenner whose birthday was September 8th; Marie Stille, September 9 and Irene Marshall, September 8th. All of the girls were twelve years old on those dates.

Miss Mabel Smith was the guest of honor.

After a game period was enjoyed refreshments were served. All expressed that a good time was enjoyed.

NOTICE OF SALE UNDER CHATTEL MORTGAGE

To Arthur S. Moulton, Fern Moulton and to all others whom it may concern:

You and each of you are hereby notified that the undersigned Sheriff of Hancock County, Iowa, has taken into his possession under and by virtue of a certain chattel mortgage made and executed by Arthur S. Moulton and Fern Moulton to S. A. Harvey, dated March 1, 1928 and filed in the office of the Recorder of Hancock County, Iowa, March 5th, 1928, Doc. 587, File No 10, the following described personal property, to-wit:

The entire pool hall stock consisting of one National Cash Register, pop, malt, cigars, cigarettes, candies, four pool tables, six chairs, one cigar case, one wall case, and all pool hall equipment and all future additions to said stock and pool hall equipment kept for sale or used in connection with the pool hall business now located on Lot four (4) in Block ten (10) in the original town of Klemme, Iowa.

and that the same will be sold at public auction on the premises above described at Klemme, Iowa upon the 14th day of September, 1929, at 2 o'clock P. M. to the highest bidder for cash.

That said sale is made to foreclose the above described chattel mortgage which was given to secure the payment of a certain note held by the above named S. A. Harvey upon which there is now due and owing the sum of Six hundred ($600.00) dollars and interest at the rate of 7% from April 1, 1929 the said note being payable in monthly payments and because of default in said payments the Mortgagee has elected to declare the whole sum due and payable and to foreclose his said chattel mortgage as therein provided

You may redeem said property at any time prior to date of sale by paying in full the amount due together with interest and costs including attorney fees.

Dated this 22nd day of August, 1929.

E. H. WAHLERT, Sheriff of Hancock County, Iowa.
By Bruce Orr, Deputy.

(Pub. Sept. 5-12-1929)

H. C. MEYER, BRITT IS NOW THE COUNTY ATTORNEY

Henry C. Meyer, of Britt, formerly a member of the Board of Supervisors and more recently Auditor of Hancock County, has been appointed by the Board to fill the office of County Attorney, following the resignation of Mr. V. S. White.

Mr. Meyer recently completed a law course and was admitted to the bar. His experience in county affairs should qualify him for his new office.

RELATIVES GIVE SURPRISE ON BIRTHDAY ANNIVERSARY

Mrs. Sylvan Johnson and Harry Buss were pleasantly surprised at the Sylvan Johnson home Sunday, it being their birthday. A group of about thirty relatives brought well filled baskets and a picnic dinner was served at noon.

Tony Ahrenkeil and family, of Goodell visited in Klemme Wednesday evening.

1—President Hoover congratulating Dr. Hugo Eckener on the world-circling flight of the Graf Zeppelin. 2—Col. Charles Lindbergh being made an honorary member of the "High Hat" squadron of navy flyers at the Cleveland air meet. 3—The Junior rifle school at Camp Perry, Ohio, where boys and girls were instructed in marksmanship.

NEWS REVIEW OF CURRENT EVENTS

Anglo-American Agreement on Naval Limitation Getting Nearer.

By EDWARD W. PICKARD

RAMSAY MACDONALD, prime minister of Great Britain, told the assembly of the League of Nations in Geneva that he and Ambassador Dawes in their many conversations concerning naval armament limitation had reached an accord on seventeen of the twenty points under consideration, and that he hoped to be able very soon to announce a full settlement. But dispatches from Washington and Geneva indicated that the three points unsettled were vitally important and that on these Great Britain and the United States were still far apart. They involve cruiser tonnage and the comparative fighting values of vessels armed with 6-inch and 8-inch guns. General Dawes sent a long communication to the State department and it was considered at a White House breakfast attended by Secretary of State Stimson, Secretary of the Navy Adams and the members of the navy general board. Cruiser tonnage figures were not made public, but it was learned that the British cruiser requirements, though less than in 1927, were still far above the tonnage figures favored by President Hoover and would not give parity for the United States even if all our fifteen cruisers are built. The British insist they must have a large number of small cruisers, outside of the parity figures, to protect the world's sea lanes and protect British shipping.

Both Mr. MacDonald in Geneva and American officials in Washington were hopeful that the points of difference could be adjusted, and the prime minister said that as soon as this was accomplished he would formally announce his intention of visiting the United States to confer with President Hoover and Secretary Stimson.

Aristide Briand, premier of France, invited the chief delegates of the European nations in the league to a meeting, for the purpose of hearing his plans for a political, economic and social federation of European powers. He wished the delegates to submit the scheme to their governments and ask for their suggestions. Briand made it clear that the proposed federation is not aimed against the interests of the United States of America. Both Ramsay MacDonald and Dr. Gustav Stresemann seemed to like Briand's plan.

THAT the League of Nations would adopt the Kellogg pact outlawing war as its policy was a probability, made strong by the fact that such a course was said to be favored by Great Britain, France, Belgium, Germany and Japan. In his opening speech before the assembly Premier Briand declared the pact was really framed in the ideals of the league; and, following him, Foreign Minister Hymans of Belgium advocated a closer linking of the pact with the covenant of the league. He held the former was infinitely stronger than the covenant because it interdicted all wars of aggression while the covenant of the league left the door open for war when the council was unable to reach unanimity as to the identity of the aggressor. "The covenant is already old," he said. "The Kellogg-Briand pact embodies progress."

ADHERENCE of the United States to the World Court for International Justice came a big step nearer when delegates of forty countries belonging to that tribunal unanimously accepted the Root protocol, which was later approved by the assembly of the League of Nations. The United States government was officially notified of this action.

FOREIGN MINISTER STRESEMANN of Germany and his fellow delegates to the reparations conference at The Hague reported the results to the German cabinet and received the unanimous approval of the other ministers. The cabinet agreed to take all necessary measures to make the German people realize that The Hague agreement really represents a step forward, and not a defeat as the German nationalists are trying to label it.

In his address before the league assembly Premier Briand of France declared that at the reparations conference he would have been untrue to peace and concord if he had allowed "several millions of money" to prevent France from helping to liquidate the problems of the great war. Had he held back on concessions he would not have been entitled to be welcomed back to France. The nations must be ready to make concessions.

Orders for evacuation of the Rhineland by the British and Belgian forces have been issued, and the French are preparing to get out as soon as they can conveniently.

VIGOROUS action by the British brought about a partial cessation of the hostilities in most parts of Palestine and the Arabs were beginning to realize that England meant to make good on her pledge to protect the Jews there. But all around the Holy Land there was seething revolt among the Moslems. Floods of propaganda proclamations were scattered among the Arabs of bordering states calling on them to engage in a holy war to help their fellow Moslems in Palestine.

The British colonial office appointed a commission to investigate the race war, but announced that "no inquiry is contemplated which might alter the position of this country in regard to the mandate or the policy laid down by the earl of Balfour in the declaration of 1917 and embodied in the mandate, of establishing Palestine as a national home for the Jews."

FOR a few days it seemed likely that negotiations, conducted in Berlin, would bring about an agreement between Russia and China concerning the Chinese Eastern railroad and perhaps end the threat of war. But the plan failed, at least temporarily, and both nations continued to concentrate their forces on the Manchurian frontier. A late dispatch reached London from Tientsin saying that 3,000 Soviet soldiers had invaded Sinkiang, Manchuria, and were marching on Ili. In the region about Manchouli the Chinese were establishing their first line of defense, but it was believed that in case of serious Russian invasion they will fall back on the passes in the Great Khingan mountains, which have been strongly fortified. Several thousand Russian troops were moved two miles across the border in the vicinity of Manchouli, and there were repeated clashes in that sector.

Both the United States and Great Britain have rejected the Chinese demand that they surrender their extraterritorial rights in China, but in both cases the prospect is held out that such action may be taken later when the Nationalist government has progressed so far that there will no longer be need for the foreign courts.

CAUGHT in a terrific storm over the waste lands of the Southwest, the big Transcontinental passenger plane, City of San Francisco, bound from Albuquerque to Los Angeles, was destroyed probably by a lightning bolt and its five passengers and crew of three were killed. The dead were Mrs. J. B. Raymond of Glendale, Calif.; A. B. McGaffey of Albuquerque, M. N.; Campbell of Cincinnati, Harris Livermore of Boston and William H. Beers of New York, passengers; J. B. Stowe and A. E. Deitel, pilots, and C. F. Canfield, courier.

Another aviator killed by lightning was Maj. John H. Wood, noted speed pilot and president of the Northern Airways company. His plane exploded over the desert south of Needles, Calif., and he went down to his death with its wreckage. His mechanic escaped with a parachute.

Pilot T. G. Reid, at the Cleveland air races, set a new record for solo endurance flying and then presumably fell asleep, for his plane crashed and he was instantly killed. Lady Mary Heath, who also crashed at Cleveland and was terribly injured, was reported as having a chance for recovery. Jimmy Doolittle, crack flyer of the army corps, was practicing for stunts at the Cleveland show when, in a tremendous dive, both wings of his plane crumpled; he went over the side with his parachute and landed unhurt.

Piloted this time by Capt. Ernst Lehmann, the Graf Zeppelin made the return trip to Friedrichshafen with speed and safety. The huge airship was welcomed by premiers and other officials of all the German states and an immense throng of private citizens; President von Hindenburg was prevented from being present by the death of his sister. The Zeppelin's round-the-world flight from its home port was made in 20 days, 4 hours and 13 minutes, establishing a new record.

After conferences at Akron, Ohio, Dr. Hugo Eckener said the Goodyear-Zeppelin and German Zeppelin corporations would join in establishing transoceanic dirigible lines. It will require from two to four years to place the ships in operation.

REPUBLICANS of the senate finance committee formally reported to the senate their tariff bill; and the opponents of the measure spent several days jockeying for the best position from which to attack it. The radical Republicans, led by Borah, determined to try to have tariff revision limited to agricultural products, and in this they counted on the support of many Democrats. The radicals also sponsored a joint resolution introduced by Senator Blaine of Wisconsin authorizing all members of congress to have unlimited access to secret corporation income tax returns while the tariff bill is pending. The Democrats through Senator Simmons made it known they would try to obtain the same results by a resolution directing the finance committee to get the income tax information from the treasury.

FOUR hundred officers and men, picked as the best of the army's engineering forces, were ordered by Secretary of War Good to duty in the jungles of Central America to survey the route of the proposed Nicaraguan canal. Their findings and report will go far toward determining whether or not the government will undertake to build that waterway, the estimated cost of which is about a billion dollars. The survey, which will require two years, will be supervised by the interocean canal board appointed by President Hoover.

CHICAGO mourns the death of two of her best citizens, Judge Frank Comerford of the Superior court, and William E. Dever, former judge and mayor. Judge Comerford, who was in the prime of life, was justly regarded as one of the city's most valuable jurists—courageous, wise, honest and a determined upholder of the dignity of the courts. Elected to the Illinois legislature when but twenty-six years old, Comerford was expelled from that body because of his attacks on corrupt members, but he was sent back by his constituency. Physical disabilities kept him out of the army when war was declared, but he was active in other ways in his country's service. He was elected to the bench in 1926, and presided in several notable cases. Mr. Dever, who lived most of his life in Chicago, was classed as a truly great citizen. He was a leader of Democrats for many years and his record both as judge and as mayor was excellent.

Frederick F. Proctor, builder of New York's first vaudeville theater and originator of the vaudeville chain, passed away in Larchmont, N. Y. He rose from errand boy and circus performer to the high position in the theatrical world which he relinquished last May when he sold his chain of more than twenty theaters to another corporation.

MRS. CALVIN COOLIDGE was given the honor of christening the new light cruiser Northampton Thursday, when it was launched at Quincy, Mass. The name of the 10,000-ton vessel was selected to honor the former President, whose home is in Northampton, Mass. He was unable to be present, however. Secretary Adams represented the Navy department, and Mrs. Coolidge was accompanied by a large delegation of Northampton citizens.

LOUD SPEAKERS ARE NEW FAD IN GERMANY

A limousine fitted out with a powerful loudspeaker on Lake Templin, Germany. It is not uncommon for private car owners to place loudspeakers on their cars in Germany.

OPERATION COST FOR AUTOMOBILE

Average of $293 Was Spent by Each Automobile Owner in 1928.

An average of $293 was spent by each autoist in the United States during 1928 in the operation and maintenance of his car, according to figures compiled by the American Motorists' association, in co-operation with the Automobile Club of Illinois. Of this sum, $101, or 34 per cent, was expended for fuel and lubricants, this being the largest item in the autoist's annual operation and maintenance bill.

Cost $1.14 Per Day.

The $293 figure does not take into account depreciation. The average life of a passenger automobile, according to computation of the federal government, is approximately seven years. During 1928 the average retail price of passenger cars in the United States was $875, which based on a seven-year life expectancy, would mean an average depreciation of $125 per year. From this figure, plus the average upkeep cost of $293, it will be seen that the general average cost of operation, plus depreciation, was $418 per year, or approximately $1.14 per day. The comparable figure for 1927 shows that the average cost of operation, plus depreciation, was $365 for that year, or $1 per day.

The second largest item on the autoist's maintenance bill is for labor incident to repair work, the autoist expending in 1928, for this item, an average of $82. His replacement parts cost him $55, while his average tire bill, during the year, was $34. An average of $21 was expended for accessories, which with the $101 spent for gasoline and oil, make up the total of $293 as the average cost of maintenance for each motor vehicle for 1928.

Comparing Cost.

Comparing the cost of operation in 1928 and 1927 the association's figures show that last year the cost was 28 per cent more than during 1927, when the average operation cost was $229. Comparative figures, between the two years, however, it is pointed out by S1. Mayer, president of the Automobile Club of Illinois and vice president of the A. M. A., do not indicate that operation costs are necessarily increasing, the difference being explained primarily by the fact that with better highways available each year the average autoist uses his automobile proportionately more.

Change in Automobile Front Is Now Advised

Because of the high mortality of pedestrians being hit by automobiles, Dr. Timothy Leary, medical examiner of Suffolk county, Massachusetts, suggests that the front of the present motor car be changed so that it would not mean death to every human being who came into its path. He says the victims of skull fractures who do not die frequently show mental deterioration, sometimes with a complete change in character, and may be converted from intelligent, capable characters into inefficient semi-invalids. Crippling injuries other than those due to skull fractures add to the indictment.

Cooling Fluid Favored for New Motor Vehicle

There is a chance that when the automotive engineer starts thinking seriously of reducing wind resistance in the design of the car, one of his first thoughts will concern the new cooling fluid developed for airplane engines of the water-cooled type.

A tremendous reduction in the size of radiators for this type of plane engine has proved entirely feasible. That such an eventuality might come in motordom is by no means out of the question.

It will mean leaving the anti-freeze in the radiator the year around. Some motorists do it now, through indifference, not wisdom!

THE MOTOR QUIZ

(How Many Can You Answer?)

Q.—What product ranked first in the export of manufactured articles?

Ans.—Automotive products, with a value of $500,174,431.

Q.—What was the amount of the motor vehicle tax collected in 1927?

Ans.—About $808,000,000.

Q.—What state has the most automobiles in proportion to the population?

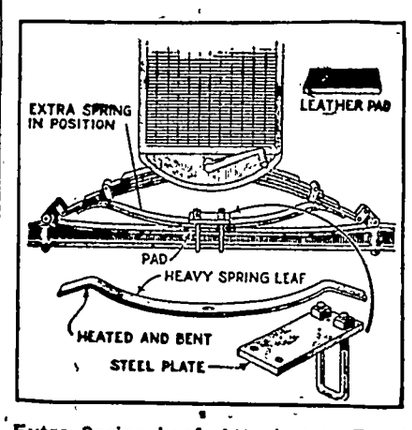
Ans.—California, with one car for every two and seven-eighths persons.

Q.—When an engine can be cranked easily by hand, yet the starting motor works sluggishly, what trouble can be looked for?

Ans.—Discharged battery, worn brushes or dirty armature. Examine ignition system.

Preventing Front-Spring Breakage in Light Cars

Frequent breakage of front springs in light cars can be prevented by the provision of a heavy spring leaf, bent to the shape shown and attached to the front axle by means of two U-bolts and a tie plate A, leather pad, placed between the extra spring leaf and the axle, provides a certain amount of resiliency.—G. A. Luers, Washington, D. C., in Popular Mechanics Magazine.



Extra Spring Leaf, Attached to Front Axle, Supports Front Spring in Light Car.

Practical Suggestions for Curing Sick Auto

When a car lacks its usual snap and get-away, check for the following:

Manifold gasket leaks.

Improper valve clearance.

Leaks past piston rings.

Faulty carburetor adjustment; high or low float level.

Shortage of fuel due to clogged line or screens.

Fouled or improperly gapped spark plugs.

Worn or improperly spaced breaker points.

Early or late ignition timing.

Dragging brakes.

In practically every case loss of power and poor get-away are cured by attention to the above, Frank Nutt, research engineer, says.

AUTOMOBILE NOTES

A wrong tilt of the front axle will cause hard steering and wheels to shimmy.

* * *

Sticky valves and a lean mixture make a poor combination and often a dangerous one.

* * *

Somehow we cannot see that equipping autos with radio is going to make driving any safer.

* * *

A man never knows how careful he can be until he starts breaking in a new automobile or wearing a pair of white shoes.

* * *

A jay-walker in an automobile-congested street ought to be grateful for the euphemism under which his case is ticketed at the hospital.

* * *

The number of automobile tire casings increased in the United States from 6,600,000 in 1913 to 77,900,000 in 1928, the Rubber Manufacturers' association reports.

BESS, THE DRESSY TYPIST

(©, by D. J. Walsh.)

FOUR-THIRTY o'clock on a smothering summer afternoon in a downtown office five floors up, so darkened by the tall building across the narrow alley that electric lights must burn all day long. Most office working girls know that dead alive feeling when they are tired out and it seems too late to begin some new task, yet there is a whole half hour before release.

But fifteen minutes later—how different! A sudden wake-up, closing of desks, busy mirrors and powder puffs and squirming about to look for new runs in their chiffon stockings. Cheerful exchanges of "What you goin' to do tonight?"

Voices in the adjoining room and the pleasant fragrance of a cigar proclaimed the return of Mr. Fred Argyle, the debonair son of the wholesale jeweler at the head of this firm. Bess, the dressy typist, hummed the latest dance hit as she quickly sorted and clipped together her many papers. The clerk, Lillian, eyed her critically from the top of the sleek brown bob to the shapely pumps, then announced, "I see Bess has another heavy date with our Freddy tonight. All dolled up. You're a fast worker, Kid." With sly undertones.

"Guess again," tossed Bess, slipping the cover over her typewriter which, each evening, she removed to a small desk by the window, leaving her table clear for other work next morning. Now she lifted the heavy machine and, with a deft swinging motion, made the exchange.

"Look here, my young lady!" Fred Argyle had stepped in and his tones were cross. "Some fine day that thing will slip from your fingers and go right out that open window. Kindly practice your juggler's art somewhere else!" "How should I know it's a window? It lets in neither air nor light!" Bess knew the other girls were snickering into their discreet "vanities," but she soon bade them good night as though nothing had occurred. She walked the two miles home to avoid the jammed cars and to enjoy any possible breeze on the way through the park. But the more she recalled that episode the hotter she grew. "Juggler's art!" And she had not even been aware how she did handle the typewriter; anyway that came most easily. She had observed that Fred had never yet offered to lift it for her. He was too lazy to even reach across his own desk for the extension phone—some one must always run and shove it over to him! At his present rate, by the time he reached thirty his physical profile would resemble that sunfish she had seen at Field museum.

A week and more passed with no further mention of the matter. She felt that Lillian was trying to hide a little triumph—or trying to display it. Young Argyle was off on one of his frequent trips for the company. Bess refused to acknowledge to herself that she had developed a slight uneasiness, and so handled the machine with more care—strictly on the sly and taking great pains that no one should notice it.

Then on Saturday, near quitting time, the stenographer stepped in from the outer office with a letter she intended to type herself, but, instead of her usual last-minute haste she deliberately placed her ear against the edge of the closed door and raised a hand for silence.

Wondering, the other girls watched until she tiptoed to them, whispering, "Fred is back, but something's wrong: They're searching frantically through the safe." Then she stole back to hear more. Lillian followed. Bess made a move to join them—heard steps—and hastily picked up her already covered typewriter instead.

Fred opened the door so suddenly he nearly upset the two girls there, but he seemed too agitated to observe them. "Did any of you see—" he began. A scream from Bess, a grating sound, her body perilously out the window—Fred there, his arm clutching her back. Then his angry "Didn't I warn you that would happen!"

Well, it had. The culprit crumpled down on a chair, too dazed to utter a word, unconscious of the chattering all about her, of the girls' earnest efforts to excuse and comfort her. Then vaguely aware of a short, testy argument between Argyle senior and junior about police efficiency. Next Fred at the telephone with orders to have something radio broadcast immediately—great stress on the big cash reward offered to aid in the return of something. Rising from the phone, "You'll find, dad, that cash offer will bring quicker results than any police detectives could."

What did all that matter to her? But the typewriter, a new one they had bought recently at her own request; they had permitted her to choose it; its price would come out of her salary, of course, even if they did not fire her. But remorse and chagrin cut her far worse than did that prospect.

Meanwhile Lillian, at the window, had reported that no one was hurt. "Gee, but the crowd! Blocks the alley at both ends! There's a rusty little Ford, though, that sure got its nose broken—typewriter landed square on its engine. People trying to pick up the scattered keys. A cop's having a hot spiel with the man in the lizzy." Then presently, "For the love o'crying out loud! What's that cop arresting the man for! Ain't he had trouble enough with his car all busted!" And Lillian jammed on her hat and ran out to get particulars at closer range.

Slowly Bess roused herself to go also. She had to wait for the elevator and when it came up out stepped an officer leading a defiantly cursing young man whom he ushered directly into the jewelry office, closing the door in Bess' face as she would have followed him.

Instinctively she remained there and, amid a buzz of voices, presently heard the officer saying, "Yes, I had heard your broadcast not two minutes before. Now, this bird didn't seem near as mad about the accident as he was anxious to get away—that made me suspicious. So I searched him and—here're your gems."

Not wanting them to find her hanging around, Bess hurried off. Her head was aching now and she longed to get away, anywhere; so, on an extravagant impulse, she hailed a taxi. "Where to, miss?" "Oh, Greenvale cemetery. Peaceful there and no crowds." After dismissing the cab Bess strolled a long time amid the quiet beauty, where both her parents lay. Gradually it dawned on her that her careless accident had been the direct cause of the recovery of the firm's stolen jewelry, and she even began to see the ridiculous angle of the affair.

Bess really dreaded to give up her position there, so prudence and pride seesawed a long time before she decided what course to pursue. Then she hurried back to town and to the savings bank, where her very modest account reposed, and withdrew an amount covering the cost of the typewriter. This she inclosed with an extremely dignified letter stating her regret and her resignation; registered it and went home, knowing it would reach Mr. Argyle early Monday morning. Pride had conquered.

Already, the late afternoon papers were featuring the "Amazing Jewelry Theft and Recovery!" Beside the portrait of the thief was her own, smiling at her mockingly. Bess went home in a sort of miserable trance and took her headache early to bed.

She moped down to breakfast Sunday morning, not feeling much better. There by her plate was an exquisite bouquet of roses—also a special delivery letter. With her expectant family watching, she eagerly tore this open, disclosing the firm's check for the sum they had offered in their broadcast. Also a happy-looking scrowl: "Dear Bess, you've got to forgive my ugly grouch. We always knew you could handle a typewriter! Please do stay in tonight. I want to tell you so. FRED."

Treasure Island Ever Real to Youthful Mind

Two rough men they were, and as the boy looked upon them one of them appeared to be an old chap with a peg leg and a patch over one eye and a wicked gleam in the other. They came up from the lake shore to the vacant house where the boy was at work tending the lawn, and when he ran from them they gave chase until he hid in a patch of vines. Afterward when he had told his story, policemen and grownups came to search the nearby territory and to question the wide-eyed lad, until some scoffer suggested that possibly he had seen Long John Silver, whereat they laughed and went their way.

He spoke more truthfully than he knew, did the one who asked about Long John, for certain it is that the boy had seen the wily old pirate himself. Another might only have observed a couple of ordinary individuals bent on ordinary business, but not this young watcher. The lawn where he stood was Treasure island and the house behind him was the blockhouse. The brush about him was peopled with rascals who carried long cutlasses and flintlock pistols, and as sure as you're born it was Old John himself who came tapping up the gravel way from the shore.

For Treasure island is not an uncharted patch of green on some ocean, as kindly R. L. S. would be the first to say were he here. It is a quite real spot in the heart of youth, which is the abiding place of strong deeds and stronger men, put there by one who carried some of boyhood's fancies over the borderland of manhood. So a common patch may be a Montana trail with Sitting Bull skulking behind an elm tree.

The searchers will not find Long John. Not unless the boy lends them his eyes, and that he cannot do—for which they should not scoff but be sorry.—Seattle Times.

Landslide on a Town

Any one who has ever visited Quebec cannot help recalling that a cliff separates the upper and lower towns. Houses of the lower town extend up to the cliff base, while on the cliff crest rest the fortifications. In 1800 a mass of rock slipped from the cliff face beneath the citadel and crashed over the houses beneath it. The result was very disastrous, for at that time the greater and most important part of the town was situated under the frowning cliff. Many persons were killed.

Started Baldheaded

A customer in the barber chair thought to nip in the bud any sales talk on dandruff cure, new hair tonic or shampoo when the barber started in with the remark:

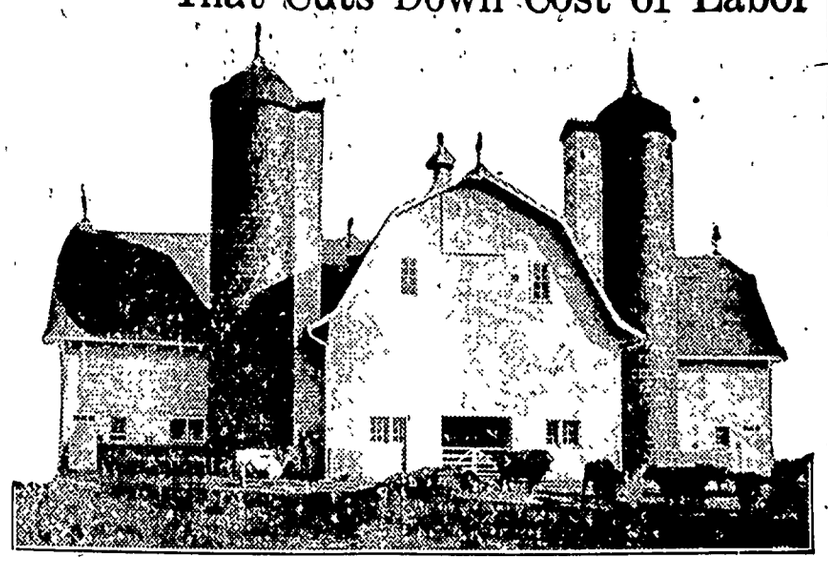
"Your hair is getting thin, isn't it?"

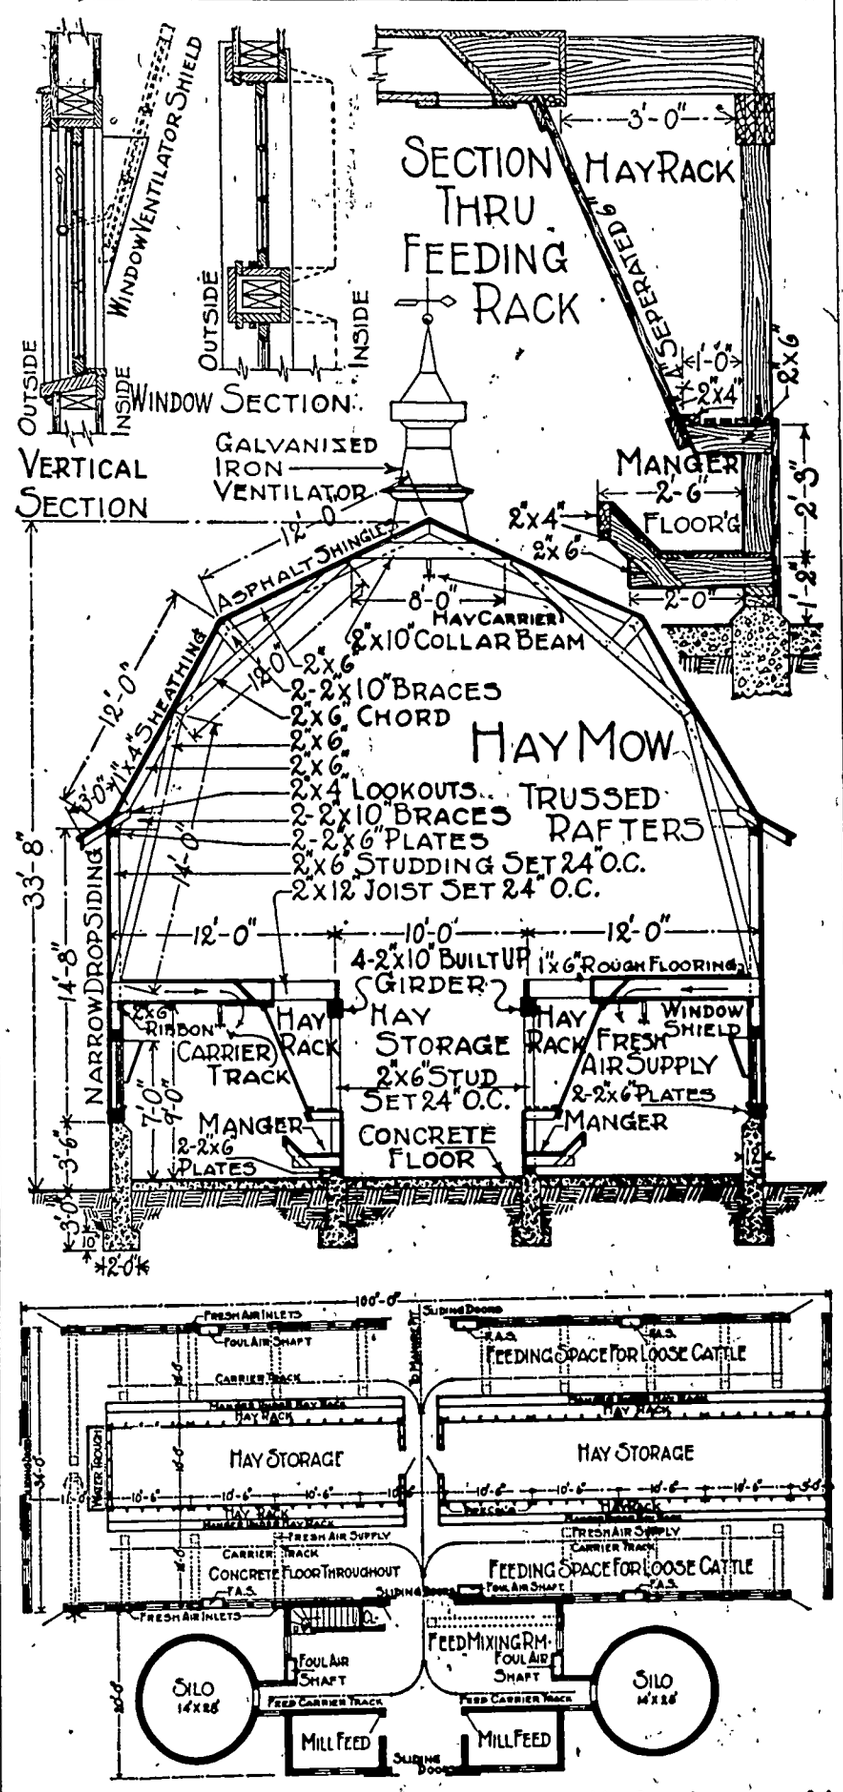
"No; the fact is, I've more hair now than I had twenty-five years ago."

"Why you don't look to be a day over twenty-five now," was the reply.

"Well, the truth is, I was twenty-five years old last week."

Beef Cattle Feeding Plant That Cuts Down Cost of Labor





By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

With fat cattle selling, when this was written, at $17.00 per hundred, the raising and feeding of beef animals is most profitable. However, the feeding operations on the farm will bring a greater return where there is equipment to cut the labor cost and to house the animals so that the feed they consume be used to the best advantage.

Herewith is reproduced an exterior view of a modern beef feeding plant. Also there are floor plans showing how the exterior is arranged and a cross-section giving some of the details of construction.

The barn is "T" shaped. The main structure is 34 feet wide and 100 feet long. The stable floor is open and is provided with hay racks and mangers running through the center. These racks are built up so that hay is stored in the racks, making an abundant supply constantly available to the animals.

At the front of the barn are the feed storage and mixing rooms with twin silos, one on either side. These silos are 14 feet in diameter and 28 feet high. They are connected with the feed room by an enclosed chute to which overhead carrier tracks run. These tracks extend into the stable and are so located that silage is carried to the mangers on either side of the hay storage racks.

The barn is of tight weather-proof construction and is equipped with a suction ventilation system. It provides a warm comfortable place for the feeder stock to stay in the winter time. Comfortable animals use their food to put on weight and fat instead of to provide heat to protect them from the cold as is the case when they are in the open during the severe winter time.

Simple Method Given to Test Heating Plant

A simple test which any home owner can make when his new home is turned over to him by the contractor will show whether the heating system is functioning as it should, that is, if the circulation of vapor, steam or water is uniform and positive to all parts of the radiator heating system.

The test is this: Start a fire under the boiler and then see if all the radiators heat up uniformly and promptly. There should not be more than from three to five minutes' difference between the time the radiator farthest from the heating plant warms up and the time that the radiator nearest the boiler warms up.

The home owner should inspect his new plant to see that all dampers are true and tight. The heater base must be tight and grounded to the floor so that no air leakage into the ash pit can occur at this point.

Narrow Flooring Best to Prevent Shrinkage

As a rule, the narrower any kind of floor is the better it will be, provided good workmanship is used and materials are all right in themselves.

The reason for this is that the shrinkage across a narrow piece is less than it is for a wide one, and that the cupping of the wider piece due to drying out of the wood is greater than in the narrower piece.

Special Varnish Needed for All Outside Work

A special grade of varnish, which costs a little more than the ordinary variety, is needed for outside work around a home. This varnish is made so that it will resist the ravages of the weather. The varnish must be able to withstand heat and cold in order that it will protect the wood and not turn white.

POULTRY FACTS

LAYING HOUSES IN NEED OF CLEANING

Scrape and Scrub Various Utensils Made Use Of.

Information to poultrymen concerning fall cleaning of poultry houses is given in a statement just issued by Hoyt M. Wells, poultryman for the Colorado Agricultural college.

"The laying house for the pullets should be given a thorough cleaning," says Wells. "All dropping boards, roosts, nesting boxes, feeders and drinking containers ought to be scraped and scrubbed with a good disinfectant. Roosts may be painted with a carbolineum product to control red mites. Old litter should be removed from the floor, and if the floor is wooden or concrete, it should be scraped and sprayed with a good disinfectant.

"White-washing walls and ceiling will give greater sanitation and provide more light in the house in wintertime. White-wash may be applied best with a force spray pump."

This mixture gives good results: Slack lump lime with water to the consistency of cream. Take five quarts of this, add one pint of good coal tar disinfectant and one quart of kerosene, stir thoroughly, and add an equal amount of water. Strain the whitewash through a fine screen or a piece of burlap before using it in the sprayer.

"Window lights should be cleaned and broken ones replaced. Sweep down all muslin curtains, and replace with new muslin those that are too dirty or torn.

"This is the best time of the year to repair the roof, or put on a new one. Check over all seams on patent roofing for leaks.

"A good deep litter should be put in the laying house next, and new nesting material in the nest boxes. Remove old litter and replace with bright, clean straw every four weeks or oftener, if necessary."

Scratching Found Not Essential to Fowls

Three flocks of Rhode Island Reds and three White Leghorns at the University of Illinois indicated that hens do as well when fed grain in boxes as when they are obliged to scratch for it in deep litter. This method has the advantage of being much cleaner and more sanitary.

One lot of each breed was fed dry mash in hoppers and scratch grain morning and night in straw litter. A second lot received dry mash in hoppers, but the grain was fed twice daily in shallow troughs. For the third lot the scratch grain was ground and mixed with the mash and the whole ration self-fed in hoppers.

No high records were made, but the egg yields were not affected materially by the methods of feeding. The test ran for 41 weeks.

The grain mixture was shelled corn, 70 pounds and oats, 30 pounds. The mash was made up of 17 pounds each of ground corn, ground oats, wheat bran and flour middlings, 25 pounds of dried buttermilk, 5 pounds of bonemeal and 2 pounds of salt.

Poultry Facts

Shut up the broody hens each night.

* * *

Infertile eggs do not spoil as readily as fertile eggs do.

* * *

Eggs are a food which is quickly and easily digested.

* * *

Cleanliness is next to Godliness. In the chicken business it spells success or failure.

* * *

A little extra feeding now may give you more late summer and fall eggs. Hens won't eat much in the real hot weather, and a bit of extra weight put on them now will help them to lay later on.

* * *

Don't forget the water pans. Eggs are not produced without a constant supply.

* * *

For the gosling a mixture of corn meal, bran and ground oats mixed with the table scraps and moistened with milk or water to a crumbly consistency is satisfactory.

* * *

Records kept by poultry flock owners show that culling of flocks and marketing of unprofitable layers and surplus broilers are highly profitable practices.

* * *

Eggs from hens have a higher rate of hatchability than those from pullets, and produce larger and more vigorous chicks.

* * *

Charcoal is good for turkey poults—sweetens up their digestion. It's a good idea to keep a pan of it where the poults can help themselves.

* * *

If there are mites in the poultry house keep the chicks outside. The mites can live for six months to a year without the chicks, but the chicks can't live six days with the mites.

Kill Rats Without Poison

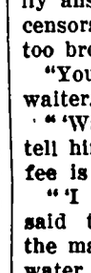
A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee. Insist upon K-R-O, the original Squill exterminator. All druggists, 75c. Large size (four times as much) $2.00. Direct if dealer cannot supply you. K-R-O Co., Springfield, O.

K-R-O
KILLS-RATS-ONLY

CLEAN OFF A BOG SPAVIN



or thoroughpin promptly with Absorbine. It is penetrating but does not blister nor remove the hair. You can work the horse at the same time. $2.50 at druggists, or postpaid. Describe your case for special instructions. Write for valuable horse book 4-S free.

A user writes: "Had one horse with bog spavin on both hind legs. One bottle Absorbine cleaned them off. Horse now going sound and well."

At Druggists—only 25c

The Answer

Lee Shubert, discussing the suppression by the authorities of a French play, "Maya," that he had put on in one of his theaters, said to a Jacksonville reporter:

"The trouble? That question is easily answered. The trouble is that the censorship is too narrow or the play too broad.

"Your question reminds me of the waiter. A guest said to him:

"'Waiter, go to the manager and tell him I want to know why the coffee is so weak today.'

"'I can answer that question, sir,' said the waiter, 'without bothering the manager. There's either too much water or not enough coffee in the beverage.'"

Castor Oil in Demand

New York city now is consuming more castor oil than at any time in its history—but not as a medicine. Hundreds of tons of castor beans are arriving almost every fortnight in Brooklyn from India and, according to M. C. Brown of the Bush Terminal, they are mainly for conversion into lubricating oil for airplanes. The sudden new demand for castor oil, he says, also has provided additional jobs for many persons in India, where the cultivation of the castor plant is being increased.

The Awakening

"Her ideal is shattered."

"Oh? How is that?"

"She married it!"

Spring openings make a hole in the married man's pockets.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

PHILLIPS Milk of Magnesia

THE BANK'S PART IN THE FARM PROBLEM

By H. LANE YOUNG
Member American Bankers Association Agricultural Commission

ONE of the most discussed and least understood questions regarding the farmer's problems is the part the bank has played, or is to play, in financing the farmer. The basis of co-operation between the two, however, is a very simple one.

H. Lane Young

Both sides are subject to criticism for the condition that exists today. The major share of the blame rests on those banks that have failed through disregarding fundamental principles in loaning other people's money, that have encouraged the farmer to expect bank loans without first putting his business on the earning basis which would justify a bank to lend him money.

One of the underlying reasons for the failure of so many country banks has been the existence of too many banks With the limited business of the commmunity divided among too many banks it was impossible for them to make enough money to justify the employment of officers with the proper ability to manage the bank successfully. Then the scramble for business was so hard that good judgment and foresight were forgotten in granting loans, with the resultant failure of the weaker institutions.

In the future, banks are not going to loan the money of their depositors without the kind of security that can be immediately realized upon in case the loan is not paid, or unless the applicant presents a sound and successful record of business operation—whether that business be manufacturing, merchandising, or farming.

Farming-Banking Interdependent

This is a perfectly obvious attitude, because country banking cannot be successfully and profitably carried on unless farming is successfully and profitably operated—the two businesses are dependent upon each other. There is no longer any question that the time has arrived for these interdependent businesses to reach a common ground of understanding of the requirements that both must meet for their mutual welfare.

There is no doubt but what the future prosperity of the farmer and the basis of cooperation between banker and farmer is the intelligent diversification of crops. It is necessary, however, to have the right conception of diversification.

The mistake that many farmers have made in attempting to diversify has been to invest too much money, time and land in a new and untried crop—sometimes a hazardous crop, or one for which no immediate market has been developed, resulting in a loss of the initial effort and discouragement of future efforts on a more conservative basis.

Disregarding the primary and essential principle of farming—namely, increasing earnings by decreasing the cost of production through the practice of building up soil by crop rotation and intensive cultivation, is responsible for a large share of the farmers' trouble today.

As An Agriculturalist Sees Farm Board's Job

The new Agricultural Marketing Act approaches farm relief from a materially different point of view from that of former bills before Congress in recent years, says Dean H. L. Russell of Wisconsin University College of Agriculture in the American Bankers Association Journal.

"It contains a new idea, fraught with the greatest possibilities—the organization of a Federal Farm Board," he says. "It has been possible for farm cooperatives to borrow from Federal-aided institutions before, and at a materially lower rate than city business men had to pay for working capital, but this is the first set-up made by the government in which a commission has been carefully chosen to give undivided attention to an effort to solve the problems of a farm group.

"It is hard to conceive of a higher degree of responsibility than must be assumed by this commission. No board ever created by congressional action has been clothed with as wide plenary powers. It is authorized not only to advise but to execute, to plan and put its plans into effective action, to buy and hold, to dump, to dip into the Federal treasury to accomplish its ends with what would be almost unlimited resources to any private commercial concern. The board's only job is to succeed, and no governmental agency even during the war time emergency had a wider latitude.

"Many will think the farm relief program will be universally applicable to the individual land owner or operator. Such procedure is far from the case. Aid is to be extended through cooperative organizations by making it possible for such groups to obtain cash advances to hold crops so as to permit of more orderly marketing.

"While the primary relation is with cooperatives, the individual or unorganized farmer will also profit by the activities of his organized fellows. If a stabilized program of merchandising is able to eliminate the surpluses that exert such depressing influence on prices the general price relation should be improved. If this occurs the individual farmer should also benefit.

"It is here the government is proposing a novel attempt in economics. Through stabilization corporations for each commodity it is proposed to make possible the handling of the surplus so as to lessen its disturbing influence on prices. With non-perishable products such a program is, of course, conceivably possible, but one wonders what would happen if a stabilization corporation had to handle a perishable crop in great quantities.

"Is it going to be possible for a stabilization corporation to stabilize? It would be one thing if it had merely to stabilize the American situation, but often that situation is complicated with world conditions. Perhaps the very fact that such a stabilization corporation is in position to function may have a steadying effect on the market.

"Markets respond to psychological stimuli as do individuals. The very fact that the government has now definitely stepped into the breach with all of its resources available to make the new plan work will exert undoubtedly a strong stabilizing effect.

"It would be presumptuous to forecast what the ultimate effect of the new act will be. It can, however, be definitely stated that in the present plan much of the philosophy that had been so drastically criticized as economically unsound has been eliminated. The existing plan is worth trying. It will undoubtedly cost the Federal treasury no inconsiderable amounts of money, but if it produces the hoped-for result it will have been well worth while."

BANKING FINDS THE WAY TO SAFER ERA

By FRANK W. SIMMONDS,
American Bankers Association

In considering the banking situation throughout the country, the fact should be kept in mind that while one bank in ten failed during the past eight years, it is far more important that nine banks out of ten, operating in the same general field, serving the same communities and meeting almost identically the same problems, weathered the economic storm of readjustment successfully. This achievement cannot be ascribed to any element of luck, but rather to consistent adherence to sound banking principles and profitable practices. Through worthy and efficient management they met the issues and problems confronting them, squarely and successfully.

Banking is regarded as the keystone of our entire business structure, hence bank failures are rightly regarded as intolerable public calamities that must absolutely be prevented. The three major objectives of all inter-bank organizations, whether local, county, district, state or national, are to make banking safer for all concerned and, through increased efficiency in bank management and supervision, to lessen or eliminate all forms of losses so that greater rewards may accrue to banking and better service to the public. There is definite evidence throughout the country of a strong and growing spirit of cooperation among bankers and banking organizations, which is resulting more and more in strengthening the work of all.

Clearinghouse associations among banks in city, county or district groups undoubtedly constitute the chief line of defense against bad banking practices. They have demonstrated that they are the principal factor in bringing about reformation in banking regulations, improvements in banking methods and the observance of sound banking principles. For many years the primary purpose of a clearinghouse association was the clearance of checks, but today it is the clearance of banking ideas and the solution of banking problems. Clearinghouses supply the local machinery essential for setting up and putting in practice necessary standards and uniformities. There are now 435 clearinghouse associations in cities, towns, counties and groups of counties in the United States.

Men today are more intelligently group-minded than ever before. Banking is combining the best elements of competition with sound group action. By virtue of this combination, individual thought has much wider possibilities of expression. In general, group action has not stifled but has stimulated individual thinking and initiative. Better inter-bank organization and relationships afforded by clearing houses would have undoubtedly saved many institutions that have suffered failure in the past. The clearinghouse activities of the American Bankers Association are conducted for the purpose of encouraging ever widening cooperation along fundamental principles and practices among banks through clearinghouse associations Bankers in every city, county or district can, through the agency of a clearinghouse, promote better, safer and more profitable banking and also serve their communities better.

There never was a time when successful bankers were so alert to the value of team work for putting the entire banking structure in prime condition. Sound bank management is the order of the day. Constructive cooperation is more than a sentiment it is an economic necessity, a matter of enlightened self-interest, and successful bankers more and more are utilizing the agency of constructive group action in developing and establishing necessary standards and uniformities in banking practices. Each year banking is becoming more of a science and attaining higher professional standards.

WHY Welding of Steel Girders Is Liked by Builders

The welding process as applied to the construction of buildings has many advantages. It not only eliminates the noisy rat-tat-tat of the riveter, always a source of disturbance to the surrounding district, but is said to be cheaper, quicker and more reliable. One electric welding outfit can do the work of four men using the riveting-gun method.

Fewer tools are required and no rivets are used in the welding process, both items representing another saving.

The only tool used in the process is a welding machine.

Before actually welding together two girders they are first bolted together in order to fix them in a secure and accurate position. This is done usually by means of angle iron supports and clamping plates.

With the girders in position, the welder is started. Steel is fused with steel and becomes a solid mass which hardens almost instantly, after which the bolts and angle irons are removed. Careful tests have shown that welded girders will stand up better than those riveted together.

Why Paint Clings to the Surface of Wood

Laboratory authorities claim there is good reason for believing paint does not really adhere to wood, at least after the paint has dried out thoroughly, but that it hangs on chiefly by gaining mechanical grips in minute openings in the surface of the wood

The degree of "paintability" of certain woods depends upon whether the openings are few or numerous, small or large. The effect of wood grain on paint tenacity is noticeable on wood having wide annual growth rings and in which there is a sharp contrast between spring wood and summer wood The summer wood is much dense. than the spring wood, so that paint scales off the former more quickly. The laboratory report states that if some way were found to make paint adhere better to wood, the durability of paint on all woods would likely be improved and that the differences in their painting characteristics would largely disappear.

Why Wood Petrifies

Petrification of wood through the replacement of the wood tissues by silica or other minerals occurs only after long burial under favorable conditions. Water charged with dissolved minerals infiltrates through the wood and particle by particle takes the place of the organic matter. This does not occur within a short period, nor does it occur while the wood is exposed to the atmosphere. The belief that standing fence posts sometimes petrify evidently arose from the fact that fossil or petrified wood is often used for posts. Many persons who see these posts of petrified wood mistakenly suppose that they petrify after being set. Slabs of limestone are used for fence posts in many states. In Kansas there is a layer of limestone so well adapted to such use that it is locally known as "fence post limestone."

Why the Dollar Mark

Authorities differ as to the origin of the dollar mark. In Notes and Queries it is stated that the Spanish real was formerly current in the Southern states, and that accounts in that part of North America was kept in dollars and reals. As a distinguishing mark in the books, a cancelled figure 8 was used, or sometimes the 8 was put between two slanting lines, thus—/8/. When the United States adopted the dollar as the money unit, it was found convenient to continue the old mark. Another origin traces the dollar mark to the Mexican pillar dollar, on the reverse of which is the representation of two pillars or columns connected by a scroll. Another theory is that the sign is the union of the two capital letters U. S., meaning United States.

Why Brighter Bindings

Library workers have found that little-read books often become more popular when dull-colored or soiled covers are replaced with brighter-bindings, says Popular Mechanics Magazine. A special cover, coated with a material similar to a chemical finish used on automobiles, has been introduced. It is waterproof, finger-marks and stains may easily be washed off, and it can be obtained in a wide variety of colors and designs.

Why We Say "O. K."

It is impossible to state definitely how or by whom the expression "O. K." was originated. Some authorities ascribe it to Aux Cayes (pronounced o-kay) in Haiti, from which the best tobacco and rum were imported to this country in Colonial days. The name of that port was often written as O. K. and this came to signify quality in other goods besides tobacco and rum.

Why "8" Is Lucky

According to the Pythagorean philosophers, "8" was the number of justice because it divides evenly. As the first cube it was believed to be representative of the corner stone and hence plenty.

Why to "Unknown God"

Several altars to "an unknown god" were built in Athens. They were erected during a plague, since the Athenians did not know what god was offended and needed propitiation.

How Air Aids Diagnosis

That his system of pumping rarified air into the brain has been successful in determining the exact location of tumorous growths through X-ray photographs, is the claim of Dr. Max Ludin, director of the X-ray department of a hospital at Basel, Switzerland. The discovery is being studied by scientists of Europe. Dr. Ludin says that these pictures of the brain, after the air has been pumped out, show the healthy cells as white stains, and the diseased ones as black. In locating growths in the spinal column, Dr. Ludin injects, instead of air, a fluid that photographs well. The fluid runs down the spine until stopped by the growth.

Concerning Canaries

The biological survey says that the actual origin of the canary as a cage bird is obscure. It seems probable that captive canaries were first secured from the Canary islands, but it is doubtful that this stock has furnished ancestors of all our birds of this kind. The serin finch of middle and southern Europe is so similar that it may often have been captured and accepted as a canary and interbred until all distinguishable differences were lost.

Thoughtful Driver

Policeman on Point Duty—Why didn't you put out your hand when you turned this corner?

Pretty Little Motorist—Well, you see, it's this way. I've just been out with Jack, and he gave me the most thrilling diamond ring—isn't it a beauty?—and I knew only too well that if I put out my hand the headlights of the car behind would shine on the diamond and dazzle the driver, then anything might happen!

How Dust Creates Beauty

The more dust, the more sumptuously the clouds are bathed in rose and gold and fiery red. Storms that raise tons of dust into the skies in arid regions sometimes seem a trying cross for the people to bear. But there is a wonderful compensation. High in the air the tiniest dust grains atone for the sins of their coarser fellows. Nowhere else do the skies burst into such a glory of color at dawn and sunset, nor does the approach of twilight cast such magical, soft-hued shadows that can transform bare, rugged mountains into fairylands.—National Geographic Society Bulletin.

How Famous Rose Got Name

The original name of the American Beauty rose was Mme. Ferdinand Jamin, and it was introduced by Ludechaux in 1875. It was renamed in America in 1886 from a specimen in George Bancroft's garden, from which the original label had been lost.

East River Now Heated by Big Power Plants

Back in 1776 the East river at New York city froze sufficiently to allow an army to cross over the ice in safety. But nowadays the stream obstinately refuses to freeze, even when the temperature reaches its lowest extreme.

One reason for the warmness of New York's adjacent waters may be the action of the nine power plants along its shores. For every ton of coal consumed in making steam for the turbines, about 400 tons of water—which is drawn from the river—are needed to condense the steam back into water after it has served its useful purpose. The water is heated about 25 degrees before it returns to its original habitat and at least 400,000 tons of water pass in and out of the power plants every hour. It has been computed that this has the effect of raising the temperature of the whole river at least 10 degrees, in spite of the strong tidal current which changes its waters twice daily by influx from Long island sound and New York harbor.

Easy for Woman to Find Parking Space

It was a busy corner and there were parking space for just one car. A gentleman espied the space, counted it his own and proceeded to ease his car into it. To do this he had, it seems, to back, turn, wheel, run forward, shift gears, and attack on the right and left flanks.

While he was going through this very elaborate maneuvering, a woman driver arrived and cleanly usurped the parking space by the absurdly simple method of driving her automobile straight into it without flourishes or trouble.

A moment or so passed and then the gentleman realized for all his strategy the position was lost. "Say, sister . . ." he began, and he was still talking as the woman snapped the door of the car and got lost in the crowd afoot.—Baltimore Sun.

First Sailboats

The paintings and sculptures in the early records of Egypt show regularly formed boats constructed of sawed planks of timber propelled by numerous rowers and also by sails. These vessels were long galleys with one mast and a large square sail which was sometimes of linen and sometimes of papyrus. The oldest authentic record as to these sailing vessels is the illustration of one of them used as a decoration of an Egyptian ampbora (in the British museum), judged to have been made about 6000 B. C. It is noted, however, that these boats could sail only with the wind. The science of sailing against the wind was unknown for thousands of years. They sailed only when the wind was favorable. The oarsmen worked when the winds were unfavorable.

The Time Test

Two Scots were discussing the domestic troubles of a friend.

"That woman leads puir Sandy an awfu' life," said one.

"Humph! what else could ye expect?" asked the other. "He only coorted her for seven years, an' I hold that nae man can understand a woman in that time. Now I coorted Maggie Deans for twenty-twa years—"

"And did complete happiness follow this lengthy courtship?" asked an Englishman seated opposite.

The speaker was given a scornful glance by the "ardent wooer," who replied: "I found oot at the end o' that time that I didna much care for the woman, an' cried aff!"

Now Indispensable

Twenty-eight years before George Washington was born, the first American newspaper was established. Increasingly, during the 200-odd years that have intervened, the newspaper has become a matter of course in American home.

In this day and age one can scarcely conceive a world without newspapers. They are a very part of the fabric of daily life, universally in demand—a running record of world events, human achievements, pathos, tragedy, scientific progress—every conceivable activity.

What's the Use?

He went to California, the weather was terrible. They said it was unusual.

He went to Florida, the weather was terrible. They said it was unusual.

He went to Michigan, the weather was terrible. They said it was unusual.

He came back home, the weather was terrible. But nobody lied about it.

Different Now

"Times have changed," remarked the man who had been reading of a new record made in the air.

"Yes," replied the other, "those nonstop flights used to be made by absconding bank cashiers instead of aviators."

For Non-Stop Writing
Parker Duofold
Get One Here for the New School Year

For a flying start in the new school year, come in to our pen counter and select your Parker Duofold.

Here's a pen that will help you do your work quickly and easily *via Pressureless Touch.* It gives your thoughts free reign—enables you to write without effort—without fatigue.

Non-breakable barrels—28% lighter than rubber and holding 24% more ink than average pens.

Take your pick from our complete assortment of colors, sizes and points.

$5 and $7, in colors; $7.50, $8.50 and $10 in Moderne Black and Pearl.

Pencils to match, $3 to $5.

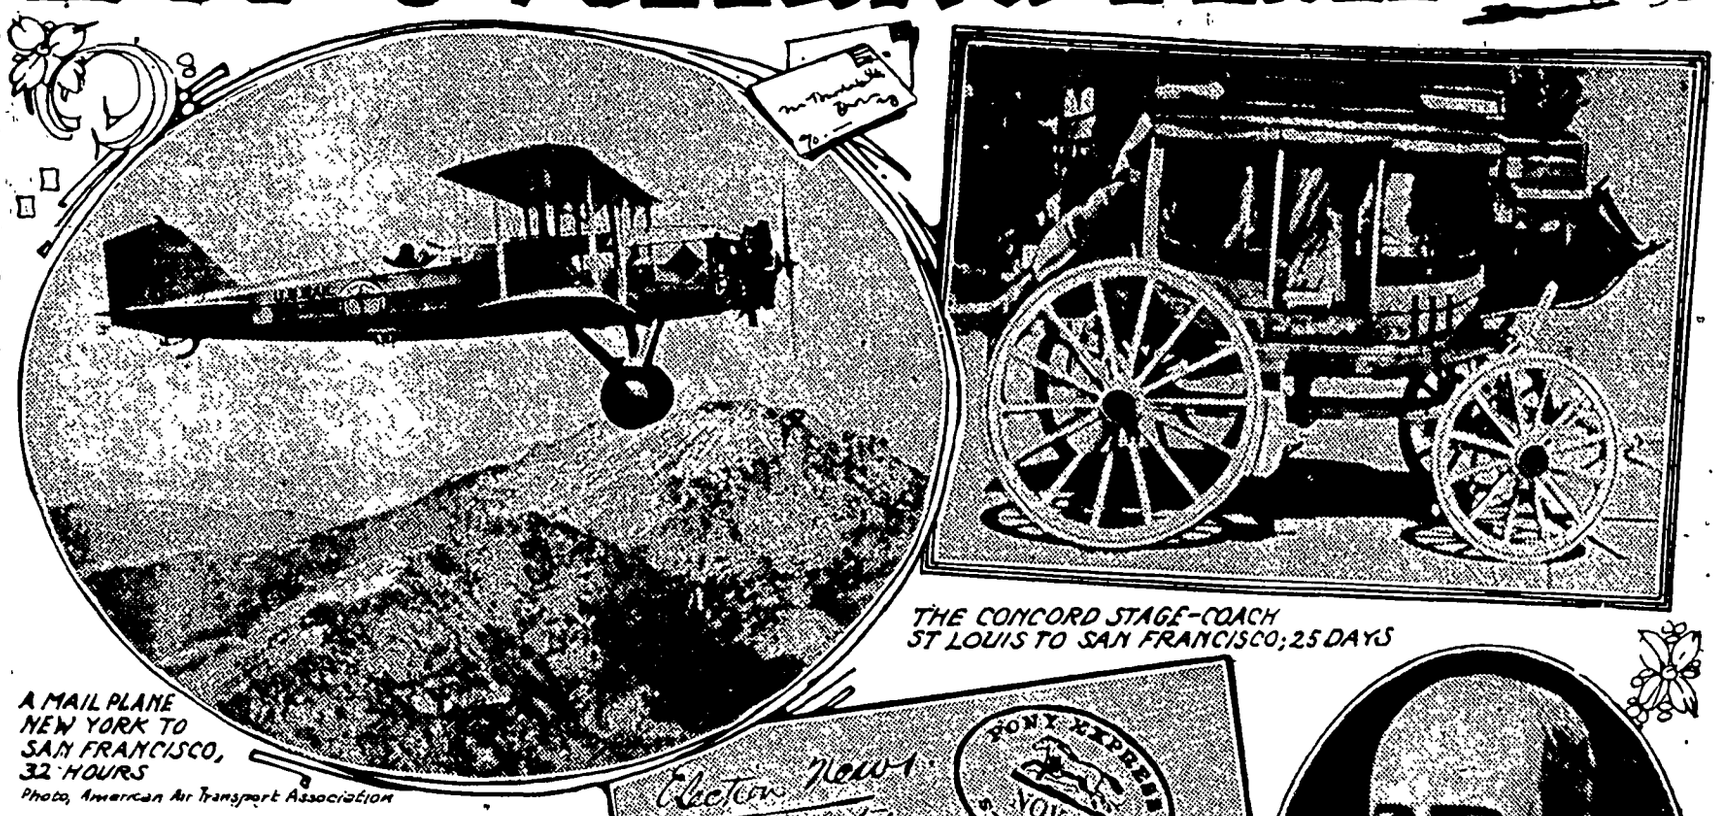
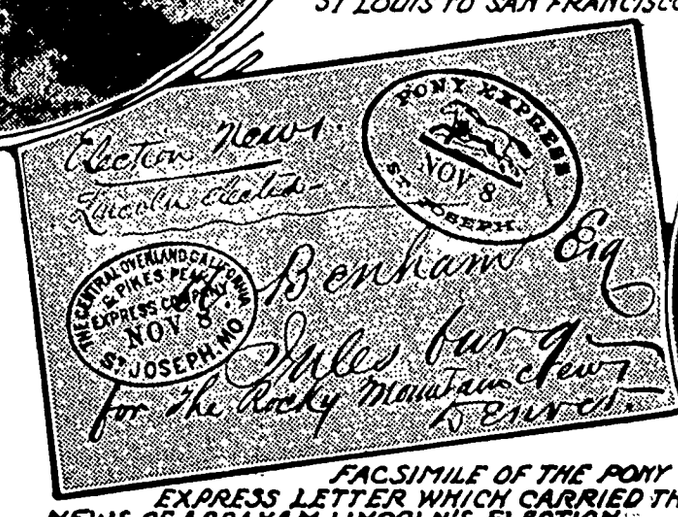
The Overland Mail



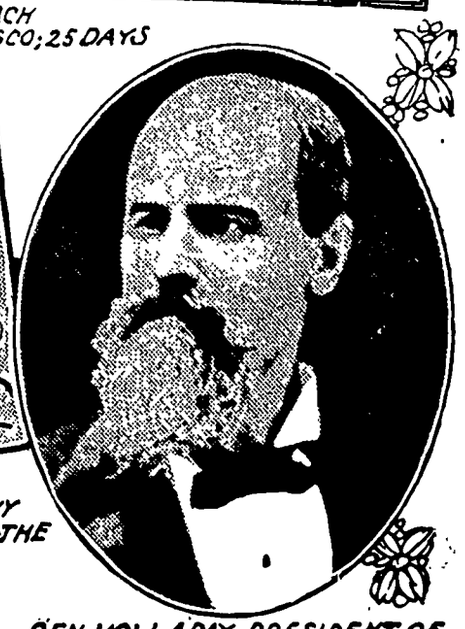
A MAIL PLANE NEW YORK TO SAN FRANCISCO, 32 HOURS

Photo, American Air Transport Association

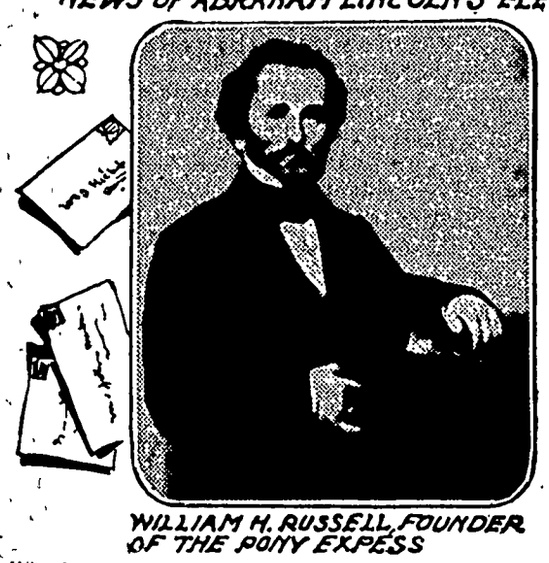
THE CONCORD STAGE-COACH ST LOUIS TO SAN FRANCISCO; 25 DAYS



FACSIMILE OF THE PONY EXPRESS LETTER WHICH CARRIED THE NEWS OF ABRAHAM LINCOLN'S ELECTION



BEN HOLLADAY, PRESIDENT OF THE OVERLAND STAGE LINES



WILLIAM H. RUSSELL, FOUNDER OF THE PONY EXPRESS

By ELMO SCOTT WATSON

A MAN in New York can mail a letter this morning which his friend in San Francisco will be reading tomorrow evening. For 32 hours is all the time that it requires for the air mail to span the continent. Yet less than 75 years ago if a man in New York mailed a letter to a friend in San Francisco be would be lucky if that letter were delivered in much less than 32 days!

The story of the overland mail is the story of another of those astonishing changes which characterize the history of communication and transportation in this country during the last century. Today we look upon the delivery of our mail—our letters, our newspapers and magazines, and our packages of merchandise—at our doors as so much a matter of course that it is difficult for us to realize that there was ever a time when it wasn't a comparatively unimportant event in our everyday lives. And least of all, perhaps, do we realize how important a factor the establishment of a transcontinental mail service was in the history of our nation.

To realize that, consider these words of Leroy R. Hafey of the State Historical Society of Colorado in the preface to his book "The Overland Mail," published by the Arthur H. Clark company of Cleveland: "The growth and extension of the overland mail service is a reflection of the conquest of the West. In tracing this topic one encounters most of the agencies of frontier expansion and sees at work the processes of empire building. The packhorse and the stagecoach were but temporary expedients in the western mail service, as the railroad age had hardly begun. But in the growth of the West they played their part, humble and transient though it was. Along with the buffalo and the wild Indian, the overland stage has gone, but for the history of the fifties and sixties it will remain as one of the typical and significant institutions of the Trans-Mississippi West."

September 15 of this year is the anniversary of an important date in the history of the overland mail. For it was on that date 71 years ago that the first mail coaches left St. Louis and San Francisco simultaneously for their long journeys nearly three-fourths of the way across the continent. As early as 1846, far-seeing statesmen in this country who recognized the fact that American settlement would inevitably reach from the Atlantic to the Pacific also recognized the fact that some method of regular communication with our far-flung boundaries would be necessary. In a message to congress in that year, following the ratification of the joint occupation treaty with Great Britain, which gave us possession of the southern portion of the Oregon country, President Polk said: "It is important that mail facilities, so indispensable for the the diffusion of information, and for binding together the different portions of our extended Confederacy, should be afforded to our citizens west of the Rocky mountains."

The result of this recommendation was a bill in congress, providing for a mail service to Oregon by ship from Charleston, S. C., to Chagres, across the Isthmus of Panama and then to Astoria, Ore., by ship. But only $100,000 a year was appropriated for this purpose and nothing came of it. However, under the terms of an act concerned primarily with naval development and the building up of a steam marine, capable of conversion into warships, should the need arise, a regular mail service over this route was established. The acquisition of California at the close of the Mexican war and the discovery of gold there increased the demand for a regular mail service and greatly stimulated its development. Concerning this Hafey writes:

The coming of the mail steamer was for most people undoubtedly, a more important occasion. Its approach was announced by the hoisting of a large black ball on Telegraph Hill in San Francisco. Upon its arrival, reporters hurried from the wharf with their budget of news for the press. "Extras" were immediately published, while the month-old eastern newspapers sold readily for a dollar apiece. To obtain letters, positions were taken in the long line before the delivery window of the post office. The line began to form the day or night before receipt of the mail and late comers often purchased front positions from men and boys who made a business of coming early to hold a place that would subsequently demand a good price. This long line of expectant faces, this long drawn-out agony of suspense, the strong demonstrations of joy or sorrow upon receipt of the long-delayed news from loved ones—are dramatic pictures of the days when the mail service was the only connecting link between the East and the West, the old home and the new.

The letters for which these men hoped were doubly precious because of the fact that the first postage rate to the Pacific coast was 40 cents for a single letter. By 1851 this had been reduced to six cents but in 1855 it was raised to 10 cents and there it remained until 1863. It usually took a month for mail from New York to reach San Francisco and it was not until February, 1858, that a new record was set—21 days 2 hours and 13 minutes from New York dock to San Francisco wharf! Dissatisfaction with the ocean mail route, with the rates and with other abuses charged against the government-subsidized mail line led to a strong sentiment for an overland mail service, the first steps toward which had been taken early in the gold rush days.

The first attempts to establish an overland mail and passenger line met with failure, although as early as April 17, 1848, the already renowned Kit Carson had carried the first United States mail, sent by military authorities, overland from the Pacific to the Atlantic. During the next decade, however, mail service to intermediate regions was established, even though the government was not yet ready to launch a transcontinental service. The settlement of Utah by the Mormons, the steady stream of emigration along the Oregon trail—homeseekers to the Oregon country and gold seekers to the California diggings—and the constant extension of the frontier line westward across the Great Plains all tended to concentrate attention upon the mail stage as a precursor of the railroad and a promoter of settlement and to quicken the demand for such a service overland.

The result was that in 1857 by an act of congress an overland mail route was authorized and the famous Butterfield Overland Mail, named for John Butterfield, head of the company which got the six-year government contract, came into being. The route chosen was a southern one, from St. Louis via Fort Smith, Ark., El Paso, Texas, Tucson, Ariz., Fort Yuma, and Los Angeles to San Francisco, a total distance of nearly 2,800 miles. Of the inauguration of the service Hafey writes:

On September 15, 1858, the first mail coaches left Saint Louis and San Francisco simultaneously for their long overland journeys. The arrival of the mails, ahead of schedule time, were occasions of great public rejoicings. In Saint Louis the first mail was escorted through the street to the post office by a long procession led by brass bands. In San Francisco salutes were fired, an immense meeting held and enthusiastic speeches made. . . .

Upon the arrival of the pioneer stage, Mr. Butterfield, elated at the success of the great enterprise, telegraphed the President of the United States: "The overland mail arrived today at St. Louis from San Francisco in twenty-three days and four hours. The stage brought through six passengers." President Buchanan replied: "I cordially congratulate you upon the result. It is a glorious triumph for civilization and the Union. Settlements will soon follow the course of the road, and the East and West will be bound together by a chain of living Americans which can never be broken."

For all of the importance of the Butterfield stage line, however, the most romantic era of the overland mail came in the sixties with the establishment of a central transcontinental route. One of the factors in its establishment was the Colorado gold rush and it brought into the limelight the "Napoleon of the West," William H. Russell, a member of the the firm of Russell, Majors and Waddell, already famous for their freighting operations across the plains. His first company, the Leavenworth and Pikes Peak Express company later became the Central Overland California and Pikes Peak Express company and was probably the greatest single factor in settling and building up the rich Rocky Mountain region.

It was Russell, too, who established the famous Pony express, a service whose achievements marked a new era in overland communication. The establishment of this service resulted from the rivalry between the Butterfield and the Central Overland stage lines for getting the government contract for carrying the mail to the Pacific coast. It was launched in April 3, 1860, with a start from both ends of the line—San Francisco and St. Joseph, Mo. The Pony express not only cut the time for the overland mail from 23 days to 10½ days but it also added a new type of hero to the galaxy of pioneers. "The riders were the pick of the frontier," writes Hafey. "They were young men, selected for their nerve, light weight and general fitness. They were armed, but generally depended upon the fleetness of their ponies for safety from Indian attacks. The life of the rider was exciting and his work often dangerous. It was no fit position for a tenderfoot or a coward. Over the level prairies and through the mountain fastnesses the rider must know the path or make it. Hostile Indians might be in ambush, but he must not hesitate. Day and night, in sunshine or storm, the precious burden must go on. If a rider galloped into a station and found that his 'relief' had been killed or disabled, then he must do double service. In the two minutes allowed for the transfer of rider and mail pouch from the foam-flecked horse to the fresh and eager pony, he stretched his weary muscles and then was off on the road again. 'Buffalo Bill' covered one such double stretch when he rode continuously for 320 miles in 21 hours and forty minutes."

The Pony express service was in existence only a little more than a year. Its usefulness came to an end on October 24, 1861, when the first transcontinental telegraph line was completed. "The pony was fast but he could not compete with the lightning," says Hafey. "The Pony express was inaugurated as an advertiser and demonstrator of the Central route, rather than as an immediate money making scheme. . . . As a financial undertaking the project did not succeed. . . . From the standpoint of the nation the Pony express was eminently successful. It demonstrated the practicability of the Central route and marked the path for the first transcontinental railroad. By shortening the distance between the Atlantic and the Pacific coasts it helped to unite the Pacific coast and the Rocky mountain region to the Union during the first ominous year of the Civil war. It showed the conquest of the West in one of its most spectacular phases, and is an act in the great western drama that will always be recalled and re-enacted as one of our precious heritages."

Even after the telegraph had put the Pony express out of business, the transportation of the mails across the continent by stage coach continued and grew in importance marked by the keenest competition between the Butterfield and the Central Overland California line. Eventually the latter line won out and the Central route became the most important one. There then appeared upon the stage another outstanding figure—Ben Holladay, who acquired the Central Overland California line in 1862 and renamed it the Overland Stage lines. The service also embarked upon a new era of peril, for during the Civil war and immediately afterwards the Indians were almost constantly on the warpath and repeated attacks upon stagecoaches almost threatened to wipe the business out of existence. Under such conditions the same type of brave men who had made the Pony express famous were needed for stage drivers and this business contributed its quota to the roll of western heroes.

Holladay himself was a fit leader for such men for he is described as a man of "indomitable will, fiery and irascible when crossed, and a westerner all through." His character and his influence upon the men who worked for him is best described in an incident told by Mark Twain. A young man who had traveled on one of Holladay's stage coaches later visited the Holy Land. There a companion tried to impress upon him the greatness of Moses. "Jack, from this spot where we stand, to Egypt, stretches a fearful desert three hundred miles in extent —and across that desert that wonderful man brought the children of Israel!—guiding them with unfailing sagacity for forty years over the sandy desolation and among the obstructing rocks and hills, and landed them at last, safe and sound, within sight of this very spot. . . . It was a wonderful, wonderful thing to do, Jack! Think of it!"

"Forty years? Only three hundred miles?" was the reply. "Humph!" Ben Holladay would have fetched them through in thirty-six hours."

Eventually, however, Holladay disposed of his overland mail holdings and his successor was the famous Wells Fargo company. But just as the completion of the first transcontinental telegraph marked the end of the Pony express, so did the completion of the first transcontinental railroad mark the end of the Overland stage coach. When the "Golden Spike" was driven at Promontory Point in Utah in 1869, the rumbling old Concord coach became a symbol of a west that had passed.

Wit and Humor

A FAIR QUESTION

"Mamma, what's this?" asked little May, picking up a calendar her father had brought home.

"It's a calendar, dear. It's something by which we tell the time of the year or month or week."

May turned it over carefully for a minute or two. "Mamma," she inquired anxiously, "where do you wind it up?"

IT'S CRACKED UP

Tom—"California is not what it's cracked up to be." Joe—"Oh, I don't know—it's had earthquakes enough."

Peace and Money

The money obligation sets
A pace, while men rebel—
If everybody paid his debts,
In peace we all might dwell.

No Mistake

Employer (dictating an answer to letter from unknown correspondent, whose epistle gives no clew to age, race, gender, or marital condition)—Is Shirley a man's name or a woman's?

Secretary—It may be either.

Employer—Dear "It," then?

Secretary—Why not "Dear Shir"?—Christian Register.

Once Is Enough

The Stranger—I'm a costume designer. I have prepared an illustrated article on what the styles will probably be for the next two years.

The Editor—Can't use it. Two years ago I ran what proved to be a true forecast of today's styles for women and got pinched for it.

Passing of the Boss

"I used to think you were a political boss."

"I was," answered Senator Sorghum. "But I accepted a fairly good job. And anybody who accepts a political job ceases to be a political boss right there."—Washington Star.

He's a Great Reminder

"What was your big hurry?" demanded the judge.

"Well, to tell the truth, your honor," replied the honest motorist, "there was no hurry at all—but I didn't realize it until I found the speed cop alongside of me."

HAD LANDED HIM THEN

"Jim was like a fish out of water when he asked me to marry him."

"Of course, you had landed him then."

Going to Play Golf

"I'm going to play golf," I said.
The silent lad strode on ahead.
I heard him mutter from afar—
"Big boy! You only think you are!"

Believe It or Not

"You seem to have read all the best literature. How do you find time for it?"

"I use the time I used to spend combing and brushing my hair for reading now," replied the bald-headed man.

From the Chestnut Tree

First Commuter—How do you manage to catch your train each morning?

Second Commuter—I eat my breakfast before I go to bed at night.

A Cold Douche

He (dreamily)—Would that I were a star in yon heavens.

She (icily)—I'd rather see you a comet.

He (tenderly)—Why?

She—Then you'd only come around once every fifty years.

Mercy!

Father—What the heck! Isn't there a ladder around this house?

Mother—I heard daughter say she had one in her stocking.

* * *

any stockmen fail to balance their ons because they feel it necessary eed what they have at hand.

* * *

here pastures supplement grain ons for hogs, a saving in concen- e feed is made, the ration is im- ved from a dietetic angle, health- ess is promoted, and the hog is ught to a marketable age at a er cost than where grain feeding en or dry lot prevails.

* * *

n many farms a small flock of p should be profitable. It does cost a great deal in either money abor to keep a flock of sheep, and e is a double return from them e form of mutton and wool.

Insecticides Do Not Kill Insects

Certain Types of "Trick" Preparations Should Be Guarded Against.

(Prepared by the United States Department of Agriculture.)

Thousands of pounds of insecticides, fungicides and disinfectants are sold annually in complete harmony with the insecticide act as enforced by the food, drug and insecticide administration, United States Department of Agriculture, but certain types of "trick" preparations are also being offered for sale and should be guarded against, say federal officials.

Many Are Warned.

Farmers, suburban dwellers, housewives, and others, are warned by the administration against buying preparations to be added to feed and drinking water which their makers say will control external parasites on poultry and other animals consuming them.

Neither should anyone be misled by the theoretically plausible claims made for preparations designed to be absorbed by the sap of trees to control fungous diseases and to kill insects on and in the trees.

Preparations to be hung in the home to drive away all household pests, purify the air and to prevent disease are also branded as useless by the officials.

One of the misbranded preparations sold to control lice, mites, ticks and fleas on poultry and other animals by being taken into the system with the food and drinking water, officials of the administration found could be bought for 18 cents a gallon. This preparation, retailed in small containers, netted the producer $64 a gallon. Neither this mixture nor any of the many similar mixtures could produce the results claimed for them.

Control Diseases.

Liquids, powders, and capsules to be placed in a hole in the tree, under the bark, or in the soil, and paints to be applied to the trunk of the tree, have been examined for their alleged powers to control fungous diseases and to kill insects when, according to the advertising literature, the substances are taken up by the sap and carried to all parts of the tree.

Not only is the value of these "remedies" very questionable, the administration reports, but many of them actually harm the trees. They may cause serious damage to shade and orchard trees, and in case of the latter, endanger the crop through failure to control insects and diseases.

Housewives are especially cautioned not to believe the glittering promises made for attractive little cases containing a chemical, which, when merely hung in a room, will drive away or kill moths, ants, roaches, flies, and mosquitoes, and at the same time disinfect the room, purify the air, and prevent disease.

Increased Production With Egg Prices High

Poultrymen, by careful attention to the breeding and management of their laying flocks, have effected a definite change in the egg market. According to H. L. Shrader of the United States Department of Agriculture, this is evident as to both seasonal and annual production.

"The market receipts of fresh laid eggs during the late summer and fall months have been increasing the last few years," he comments. "This means that the pullets are being hatched and are maturing earlier, but it also denotes improved efficiency, because the birds are laying more eggs when prices are highest."

From the standpoint of the consumer this tendency is of definite value. "Already we have noticed," Mr. Shrader says, "that the increased production in the season when eggs were formerly scarce has prevented prices from soaring to extremely high levels."

Spoiling of Silage in Winter Can Be Lessened

Spoiling of silage during the winter can be lessened by treating the inner walls of the silo with a solution which keeps out air. The mixture consists of one pound salt, two tablespoonfuls of alum, one teaspoonful of lye and four gallons of water, plus enough cement to make it the consistency of paste.

In some cases, the inside of the silo doors are lined with paper or the cracks filled with clay to keep out air.

Another scheme is to sow oats or cane at the top of the silo. These grains sprout quickly in the warm silage and the matted growth serves as an insulator excluding the air.

Supers Should Be Added Often as Bees Require

Supers should be added just as often as the bees require this extra storage space for honey. Usually the beekeepers find it necessary to add the first super during the latter part of June. The second super is usually added along about the end of the first week in July. From then on till the end of the season the supers should be added rather frequently. If it is a poor season for honey production, then it may not be necessary to add any supers.

Dehorning Cattle Is Favored for Feeders

Bruises Detract Greatly From Appearance of Carcass.

(Prepared by the United States Department of Agriculture.)

"Feeder cattle having horns do not feed out so well as dehorned cattle," say W. H. Black and V. V. Parr of the bureau of animal industry, United States Department of Agriculture, in Farmers' Bulletin 1600-F, Dehorning, Castrating, Branding and Making Beef Cattle, just published for free distribution by the department. "Badly bruised carcasses," they go on to say, "are usually found in shipments of horned cattle. Bruises detract greatly from the appearance of the carcasses, thus lowering their sale value. Besides the damage done to meat, the hide is frequently damaged. Dehorned cattle usually bring from 25 to 75 cents a hundredweight more than horned cattle of similar quality and condition."

The authors also make recommendations as to castration, spaying, branding and earmarking of beef cattle. The bulletin also includes simple plans for construction of dehorning and branding chutes, including a chute with a movable side, known as a "squeeze," for holding the animal securely.

On the range it is common to brand calves while still small enough to be handled by ropes, but the authors suggest the advisability of constructing corrals with a chute adapted for working with yearling or older cattle, and a smaller chute for handling calves. Under such an arrangement it is possible to dehorn, castrate or spay, and brand the animals at a single operation.

For dehorning, the authors mention the application of caustic to stop the growth of the horns on calves, and saws and dehorning clippers for more mature cattle. They mention precautions for preventing infestation of wounds by screw worm flies.

Farmers' Bulletin 1600-F is a revision and expansion of, and supersedes Farmers' Bulletin 949. It is written in simple and condensed style, and illustrated. It may be obtained free on application to the United States Department of Agriculture, Washington, D. C.

Health and Vigor Are Important in Culling

At least once during the summer or early fall the poultry flock should be culled to get rid of the birds that are not paying for their keep. Health and vigor are of first importance in culling poultry. Hens in good laying condition have bright red combs and wattles. Good layers have combs that are very waxy in texture. In yellow-shanked breeds, the beak and shanks of the heavy layers are ordinarily pale yellow or white. The public bones of a good layer are thin and flexible and when the hen is in laying condition they are wide apart. The skin of a good layer is soft, pliable, and of good texture and the back is wide and long. Another important point is the time of molting. Poor layers usually molt earlier than good ones. Heavy layers generally do not begin to molt before September or October. Culling not only improves the breeding quality of the flock, but if done early enough will save feeding costs and spread the marketing of surplus hens over a longer period than if the culled hens are all marketed late in the fall.

Agricultural Squibs

The woodland enhances the value of the entire farm property.

* * *

Potato aphids may be controlled in the field by the use of contact sprays.

* * *

Of course it costs more per acre to get high yields, but then it costs less per bushel or pound.

* * *

The white grub, pilfering offspring of the ordinary, blundering June bug, is due again next year.

* * *

The Japanese barberry does not carry rust, hence it is perfectly safe to plant for shrubbery clumps.

* * *

Sodium chlorate has proved to be a successful method for the eradication of wild morning glory and Canada thistle.

* * *

Practically all of the coal-tar preparations put on the market as fly repellents are effective for several hours after the application has been made.

* * *

High protein wheat usually commands a premium. The premium may be secured by farmers under condition they know the protein content of their wheat.

* * *

Stop smut losses in wheat by treating the seed with copper carbonate dust. The poison chemical disinfects the seed by killing the smut spores that may be clinging to it.

* * *

The wheat weevil will be one of the farm problems for next winter, for there are thousands of bushels of wheat going into the bins on the farm. The season has been such that the common weevils have had an opportunity to lay their eggs on the grain while standing in the fields.

No Appeal From Verdict of Chinese Death Squad

Whatever may be said about China as being backward, at least there is one modern note struck with more than visible insistency in the nation's capital. Nanking has brought the old-time execution squad thoroughly up to date. A familiar sight in ancient China used to be the squad of honor which percolated through the streets with drawn execution sword, meting out summary justice (or injustice in some cases) upon all who disobeyed the law. Gilbert and Sullivan used to sing about the snickersee. But this has been put away. The execution squad now carries rifles. It is to be seen in Nanking—seven men and an officer. The leading man, as they wend through the streets in single file, bears a flag upon which is inscribed in Chinese characters a warning to observe the law. There are several such squads on duty 24 hours a day, and its word is life or death to offenders. It supplements the police force, but its action is far more swift and deadly.

Ever Young

Howard Chandler Christy, about to sail for Rumania to do a portrait for Queen Marie, marveled at the billions spent on powder and rouge, beauty and massage creams, lip sticks and what not. Then he laughed and said: "If Shakespeare were alive today, he'd give us a Seven Ages of Woman. I suppose it would run like this:"

"The babe,
The child,
The girl,
The young woman,
The young woman,
The young woman,
The young woman.'"

Do You Remember?

An old-timer is one who can remember when newspaper photographers had to blush and stutter a timid request for the ladies to raise their skirt a little higher to make an interesting picture.—Pathfinder Magazine.

One You Like to Sidestep

Blinks—You never seem to enjoy meeting Growley.

Jinks—Say, that pest can think up more unpleasant things than a wife, to talk about.

By placing the speaking likeness of a woman in a locket it can be shut up.

Keep school shoes looking new

Summing It Up

The maxims that have helped me most are these; "Play Ball," "Get Busy," and "Saw Wood."

Provoking, that on the finest Indian summer day you may not feel like going to the country.

Lucky Fellow

"How did you come to beat your wife?" "Quite by accident! She usually beats me."

The business man may not care to increase his figure but how he does like to increase his figures!

Traffic cop gets summons

Even he can't get away with it

"DON'T try to put anything over on Nature," is the way a cop would express it. "Sooner or later she'll get you. Give you a ticket and lay you up in a place where you'd rather not be. Even cops can't get away with it. Like everyone else, if they don't pay attention to the warnings they get a summons that lands them in the doctor's office.

"What the doctor advises is Nujol. Says Nujol will regulate you just like *you* regulate traffic. Keep things from getting in a jam. And the doctor is right. Just ask the healthiest men on the Force. If *they* need Nujol—with all the exercise *they* get—what about the fellows that roll by in their cars?

"Just take a tip from me. You may have the best intentions in the world. But everybody gets tied up at times. Nature can't always take care of things without help.

"Our Medical Chief tells me that Nujol isn't a medicine. It contains absolutely nothing in the way of medicine or drugs. It's simply a pure natural substance (perfected by the Nujol Laboratories, 2 Park Avenue, New York), that keeps things functioning at all times as Nature intends them to. Normally. Regularly. It not only keeps an excess of body poisons from forming (we all have them), but aids in their removal."

Nature's law O. K.

Start Nujol today. It won't cost you much—not more than the price of some smokes. Worth a try, isn't it?

You'll find Nujol at all drugstores. Sold only in sealed packages. Get some on your way home today.

Lydia E. Pinkham and Her Great Grandchildren

IF Lydia E. Pinkham were alive today she would be 109 years old. Her descendants continue to manufacture her famous Vegetable Compound and the integrity of four generations is behind the product. By accurate record, this medicine benefits 98 out of every 100 women who report after taking it. You can be almost certain that it will help you too.

HILL BILLIES AND THE OZARK MOUNTAINS

Our description of the trip to the Ozarks will be cintinued in the next issue of The Times. We were delayed this week on account of rush work and so did not set all of the type we had intended for this week. —Editor.

ESTRAY NOTICE

Young roan bull, weight about 700 lbs. came to my place about a week ago. Will the owner please get him at once and pay costs? Mrs. C. A. Arnold, Klemme, Iowa. 2tp

Henry Barz filled his silo Tuesday and Mrs. Barz prepared a big dinner for the workers. However, when the noon hour came the following from town seemed to be active workers—around the table: Mr. and Mrs. George Born; Lena Schroeder and Max Barz and R. A. Jorgenson and family. Besides these Mrs. Albert Barz and children were present. The children drove out at noon from school and enjoyed a fine dinner. Ye Editor and family certainly enjoy these fine country dinners.

Miss Lucile Kraus is enrolled as a student at Cedar Falls this year.

Paul Grange and family were at Ruthven Sunday visiting relatives.

Wort Loeger, of Dumont, is visiting relatives in this community.

Mrs. C. A. Arnold was at Mason City on business yesterday.

The Klemme Firemen held their regular meeting at the hall Friday evening.

Mr. and Mrs. C. F. Keraus entertained company from Minnesota on Thursday evening.

Art Kudje is having a fine improvement made on his house as he is having his front porch enclosed.

Miss Ethel Wellemeyer has returned to Cedar Falls where she is again enrolled as a student.

FOR SALE—Yearling pure bred Poland China Boar. Peter Trampel. Goodell, Iowa. 1tc.

Edwin Book drove to Des Moines Sunday for a visit wiht his sister Stella.

Sunday was Mr. and Mrs. Wallace Pavey's twentieth wedding anniversary.

Mr. and Mrs. Herman Schuldt and children were at the Charley Fritzel home for dinner Sunday.

Joe Johnson is painting his residence this week. A lighter color of paint now adorns the place.

Miss Viloa Freie entertained the Larkin Club last Thursday afternoon.

Mr. and Mrs. Fred Blank and daughter, of Morrison, Iowa, spent Sunday at the Tom Blank home.

Mr. and Mrs. Lew Nweberger and daughter, Pearl, and son, Lester, drove to Dumont Monday for a visit.

E. A. Kramme, contractor, has finished the job of widening the old concrete bridge a half mile east of town near the Albert Barz farm.

Mrs. J. N. Day accompanied Mrs. J. E. Baumgartner and son of Mason City on an auto trip to South Dakota last week for a visit.

Mr. and Mrs. Fred J. White of Estherville visited at the P. Grange home Tuesday. They brought Dorance a fine pet dog.

Miss Mildred Johnson leaves this week for Chicago to continue her study in music at the Northwestern University.

Maurice Greiman, who is a student at Ames will soon return there to complete his course. He will graduate in the spring.

Asa Arnold, who was a student at Drake, last year, expects to enter the University at Iowa City this fall.

P. M. Wilson drove to Des Moines Monday to take his daughter, Miss Gladys back to college. She is a student at Drake.

Mr. and Mrs. George Thieman and family; Mr. and Mrs. Herman Thieman and Mildred; and Mr. and Mrs. Henry Thieman and family attended the North owa Fair Tuesday.

The Ell and Avery Threshing Ring had their meeting at the Henry Thieman home Friday night. After the business meeting, ice cream and cake was served.

Miss McNulty of Belmond began instructing her piano pupils at the R. A. Jorgenson residence Wednesday. She has a large class in Klemme.

Mr. and Mrs. John Larson and son, Elmer drove to Chicago Sunday. Elmer wil enter college there this fall and will take up an engineering course.

Mr. and Mrs. Henry Barz and children; Mr. and Mrs. George Barn and George Thieman —and family were dinner guests at the Fred Neuh ring home Sunday.

Mr. and Mrs. Alber tBarz entertained Mrs. Lena Schroeder and Max Barz; Fred Barz and family; and Walter Rosendahl and family for Sunday dinner.

Bert Auchampach, of Ventura, was a Klemme caller Saturday. Mr. Auchampach doesn't get over this way as often as he used to when he farmed near here.

Mrs. Worthy Usher, of Rowan, visited several days the past week with her parents, Mr. and Mrs. Tom Blank. Mr. Usher drove up Sunday and spent the day.

Mr. and Mrs. Sylvan Johnson and Mr. and Mrs. Frank Miles were at the Minnesota State Fair a couple of days last week. The Johnson children stayed with their grandmother, Mrs. Elka Buss.

Mrs. P. M. Wilson and daughter, Gladys, drove to Hampton Friday to attend a bridge party. They also visited Marian Waterman at the hospital and found her getting along fine.

The Aid Society of the Methodist Church will meet at the Parish House next Friday, September 20 at 2:00 o'clock. All members are asked to bring a picnic lunch as all are hostesses at this meeting. An election of officers will be held so every member is urged to be prseent. Member are also asked to bring the penny bags or send them to the Secretary, Mrs. Gram

CARPENTES QUITS AS SCHOOL COACH

CLASSES HELD ELECTION OF OFFICERS FOR SCHOOL YEAR

Damper Put On Driving Cars During Noon Hour, Board Rules

Mr. Carpenter tendered his resignation on Tuesday of this week giving as his reason a nervous condition of health necessitating change of employment. Mr. Carpenter was a capable and interesting chap and generally well liked by his students. He gave promise of being a good coach and we are sorry his condition prevented his carrying on here: We are hopeful of securing another man within a few days to fill the position left vacant.

Class Officers Are Elected

Class organization in high school resulted in the following students elected to office:

Senior Class, President, Raymond Barz; Vice-Pres., Clarice Wellemeyer; Secretary, Lela Bachman; Treasurer, Valeria Koerner.

Junior Class, President, Clarence Lemke; Vice-Pres., Frances Tannar; Sec., Lorrajne Lemke; Treasurer, Bernard Pringnitz.

Sophomore Class, President, Ethel Barz; Vice-Pres., Kenneth Kluckhohn; and Secreatry-Treas., Gracka Quandt.

Board Makes New Ruling

We solicit the willing co-operation of parents in a ruling made by our Board just this week in respect to cars driven to school by those from a distance. It was the conviction of the Board and Superintendent that students leave cars parked at the school house at noon. This will eliminate much of the danger from and temptation to idle and fast driving about our streets during this period of the day. In the event any parent wishes his son or daughter to use the car for a necessary errand, permission will be gladly granted upon a written request presented to the superintendent if signed by the parent. Parents may at times be saved in this way unnecessary expense of operation and repair.

Former Student Returns

We were very gald to welcome back on Monday morning of this week Ethel Schoenwetter who has come to continue her work in the Sophomore year. We believe Ethel will give a good account of herslef and we are mighty glad to see her continue with her class. Her's is the largest class in school with an enrollment of twenty-seven. How fine it would be if they could all remain until graduation. One of their number of last year's enrollment, it seems, has failed to appreciate the relation of high school attendance to her future happiness and maximum usefulness. Many an adult beyond school age today advises her to take advantage of high school instruction and but very few will approve of her neglecting opportunities others earnestly covet.

Rev. Grosshuesch Visits School

Rev. Grosshuesch was a welcome guest at our school on Monday a. m. of this week and participated in the devotional exercises. He is held in very high esteem by both faculty and students.

Orchestra Work Under Way

Miss Ford has her orchestra at work, both in sections and together. We believe she is able to do well her part toward building up a good musical organization in our school and we hope by their regular attendance at practice and rehearsals student members may do theirs. We are not yet convinced that an orchestra of much merit can be developed without individual work done outside one or two ensemble periods a week. We believe there should be individual practice and for beginners some private lessons.

BIRTHDAY SURPRISE PARTY IS GIVEN FOR MRS. THEMAN

Mrs. George Thiemann was pleasantly surprised Sunday at the noon hour when a group of her relatives and friends came in with well filled baskets to help her celebrate er birthday.

Those present at this occasion were the following:

Mr. and Mrs. Hrman Thiemann and family; Mr. and Mrs. Henry Thiemann and family; Mr. and Mrs. C. J. Wille and family; Mr. and Mrs. G. A. Goll and daughter, Emma; Mr and Mrs. Henry Barz and family; Mr and Mrs. Fred Nuehring and family; Mr. and Mrs. Geo. Born, Mr. and Mrs. Julius Priebe and family; Mr. and Mrs. Herman Priebe and family; Mr. and Mrs. Henry Josten and family; Mr. and Mrs. Elmer Schupeltz and daughter, Irene and Grandma Schupeltz and daughter, Anna from Lane, South Dakota; Adolph Kramer; Alfred Rowe; Mr. and Mrs. Paul Goll; Mr. and Mrs. Chris Blumer, and Miss Mildred Stille.

Everyone enjoyed a good time, and all had both dinner and supper.

Mrs. Thiemann received many useful presents and all wished her many more happy birthdays.

BLUMER-BAACK REUNION WAS HELD LAST SUNDAY

A reunion of the Blumer and Baack families was held last Sunday afternoon and evening at the home of Mr. and Mrs. Herman Baack northeast of Klemme.

Those who came to spend the afternoon were the follow'ng:

Mr. and Mrs. John Lemke and Jonas Priestly; Mr. and Mrs. Walter Blumer and children; Mr. and Mrs. Jacob Blumer and children; Mr. and Mrs. Emil Blumer and children; Mr. and Mrs. Tim Waddingham and children; all of this vicinity, and Miss Minnie Blumer and Mr. and Mrs. Wilson of Jewell, Iowa.

For refreshments during the afternoon home ground musk melons were served

Those who came to spend the evening were: Mr. and Mrs. August Baack and son; Mr. and Mrs. Martin Brinkman and children of Klemme; and Mr. and Mrs. Wm Baack and daughter, Dolly; and Mr. Fred Baack of Mason City.

There were thirty-eight persons present durign the day and all report having had a fine time.

HARLOW HELPS BADLY CUT IN AUTO ACCIDENT SUNDAY

When a car turns over the occupants are usually injured, but the opposite proved bad for Harlow Helps Sunday evening when he was injured after the car turned over.

Harlow had been at the C. V. Marshall farm, northwest of Klemme, last Sunday afternoon and was returning home in his Chevrolet coupe, accompanied by Robert Marshall.

Harlow says he was driving along about 30 miles per hour when his car struck a bad rut and threw it over into a ditch. The boys recieved a few minor bruises but were not greatly injured. They went back to the Marshall farm to get help to right the car and get it up on the road. The car was not badly damaged outside of a broken window and bent fenders. The men got the car up on its wheels and as the weight of the car made it rebound the broken glass struck Harlow above the right wrist, cutting a moonshaped gash about five inches long and to the bone. First aid was applied and a tournaquet used to check the bleeding. Harlow was immediately brought to town for surgical attention.

At this time he is getting along well and the deep wound is healing nicely.

Mr. and Mrs. W. L. Sherwood took their daughter, Iris, to Des Moines Saturday where she entered Drake University for the second year. They returned home Sunday via Hampton where they stopped at the hospital to see Nada Wesenberg of Goodell, and Marian Waterman of Klemme. Mr. Sherwood had the same room last year that Marian Waterman is occupying.

PETIT JURY WILL REPORT OCTOBER 1

TOTAL OF 135 CASES ON THE COURT CALENDAR

Sixty New Cases Have Been Filed For The September Term

Hon. M. H. Kepler, Judge, from Northwood, Iowa, wil preside at the September term of the District Court in Hancock County, which is scheduled for Monday, September 24.

Grand Jury Meets Sept. 24th

The Grand Jury will appear for duties asigned that body on Tuesday morning, September 24th at 10:00 o'clock.

The Petit Jury will not appear before the Court until Tuesday morning, October 1st, at 10:00 o'clock.

Many Cases On Calendar

There will be plenty to do at the September term of Court as there is now a total of 135 cases on the docket which includes fifty-six old causes, sixty new causes, and nineteen probate causes.

The "old causes" are all of those cases which were not disposed of at prior terms of court and are being carried over. "New causes" are the cases which have been filed since the May term of Court in this county. "Probate causes" are those dealing with wills, estates, guardianships and so forth.

New Cases For September Term

Following is the list of the new cases which were filed with the County Clerk for the September term of Court in this county:

Minnie Wefald et al vs J. A. Medlin. Plff. asks judgment for $1,423.20 for rent.

Elisa K Miller vs Charles Miller et al. Plff. asks that title be quieted.

C. K. Moe vs J. M. Fisher. Plff asks judgment on notes.

First Trust & Savings Bank, of Peoria, Illinois vs James A. Ward et al, Plff asks judgment on notes.

F. A. Chisel vs A. H. Anderson, plff asks judgment on notes.

H. P Zerfass vs C. W. Spaid, ea al plff asks judgment for $128.82 and for Landlord's Writ of Attachment.

Ole Gjerde vs Julia Gjerde, plff asks that he may be divorced from deft.

B. F. Benson vs M. Hegg et al, plff asks for a temporary writ of injunction on SE¼ of Sec. 1 Amsterdam Township, Hancock county.

Traders Bank of Lexington, Mo., et al vs Agnes M. Korn, plff asks a judgment for $3331.50 on note.

L. A. Andrew, Rec vs Gus Zobel, plff asks judgment for $250 and a Landlord's Writ of Attachment.

George A. Rich vs William Larson et al. Plff asks judgment for $600 for rent due.

L. A. Andrew, Sup vs B. R. Gillett, et al, plff asks judgment on note for $2100.00.

Anna Peterson Overbeck vs W. B. Sherman, plff asks judgment for $1480.00 and Writ of Attachment.

Minnie Heise, et al vs William E. Gourley et al. Plff asks judgment for $41080.00 on note.

Mark F. Miller et al vs Charles Miller et al. Plff asks judgment on note for $53,000.00.

C. H. Schissel vs T. J Imlay, et al, plff asks judgment in the sum of $261.75 on account.

J. A. Ramage vs William Brophy et al, plff asks judgment for $546.00 and for a Landlord's Writ of Attachment.

J. A. Ramage vs Augusta Johnson et al. Plff demands judgment for $250.00 and for Landlord's Writ of Attachment.

Herman F. Markworth et al vs State Savings Bank, of Woden, Ia., and H. O. Swingen, plff demands judgment for $2,292.53 on claim against insurance.

The Gilstrap Farm Loan Co. et al vs Carl and W. J. Plowater, Inc. Plff demands judgment in the sum of $580.00 for check.

Wray Hallett vs David Spencer et al. Plff asks for absolute and unqualified ownership of real estate, NW¼ of Sec. 1, Township N 87½ rods; & SE¼ of NE¼ of Sec. 2 in Township 97 N. of R. 24, W. of 5th P. M. of Hancock County, Iowa.

Harvey Harberts vs Tom Rothe, plff asks judgment on note for the sum of $97.50.

Lowell L. Forbes vs Richard Dimond, plff asks judgment for $844.99 and foreclosure of mortgage on SW¼ and W½ 95, N. Range 25.

Frank Kumstat vs Joseph Kudje. Plff asks judgment on notes for the sum of $2,616.99.

R. V. Wilcox vs Erwin Monument Works et al, plff asks judgment for $553.35 on an account.

H. S. Harris vs Roy Van Winkle, plff asks for $136.98 on lease of property, S½ NE¼, Sec. 12, Township 94, N. Range 23, W. of 5th P. M.

George Schnurr et al vs C. J. Monson, plff asks for Writ of Injunction restraining deft from preventing or interfering with plffs.

Otto Jacobson vs F. G. Colby, plff asks judgment for $175.00 on check on which payment has been stopped.

Modern Brotherhood of America vs H. I. Prusia, et al, petition for foreclosure of real estate mortgage and for $5,169.50 on note.

D. D. Ross, et al vs Charles Engstler, plff asks judgment for the sum of $379.10.

United State Fidelity et al vs Clarence A. Burgardt, et al, plff asks judgment for $2,588.24, action on a bond.

The First National Bank of Austin, Minn., vs Earl J. Sanford et al, plff asks judgment for $235.32 on note.

Gusta B. Freeman vs Leta L. Minor. Plff demands judgment for $1,063.30 on notes.

A. S. Harris vs Roy Van Winkle, plff asks for a writ of replevin.

J. B. Chodos vs Henry Smidt, plff asks judgment for $119.05 on note.

Rex Shannon vs George C. Hejlik et al, plff asks judgment for $290.00 and for attachment.

Fredericke Sofia Andreasen vs Andrew C. Andreasen, plff asks for divorce from deft and $300 as temporary alimony and $1500.00 as permanent alimony.

Horace L. Lawhorn vs O. W. Larsen. Plff asks judgment for $333.85 on note.

W. C. Pyle, Rec., et al vs C. L. Hartzel, plff asks judgment against deft for $53.96 on note.

L. A. Andrew, Rec et al vs Henry Glawe, et al, plff asks judgment against deft in the sum of $160.00.

W. C. Pyle, Receiver, et al vs Otis Anfinson, plff asks judgment against defendant for $30.00 on a note.

W. C. Pyle, Receiver, et al vs C. C. Horstman, plff asks judgment on note for $225.89.

W. C. Pyle, Receiver, et al vs Martin Gregerson, plff asks judgment for $61.00 on not.e

W. C. Pyle, Receiver, et al vs G. A. Burns, plff asks for judgment on a note for $118.16.

Champlin Refining Company vs O. C. Johnson et al, plff asks that assesment as fixed by Board of Review of Kanawha be set aside etc.

James Kofron et al vs Board of Supervisors of Hancock County et al. Plaintiff's appeal to District Court from proceedings, findings, and orders of Board of Supervisors of Hancock County, refusing to establish and construct the sub-drainage Dist. No. 132 of Drainage Dist. Nos. 1 and 2, of Hancock County.

Modern Brotherhood of America vs H. I. Prusia, et al, plff asks for judgment for $5,646.50 on notes, and foreclosure of mortgage.

F. M. Hanson vs William Bell. Plaintiff asks judgment for $211.74 on note.

J. N. Sprole et al vs Matt C. Kudje, plff asks judgment for $1,470.06 on notes.

Lee Hawkins vs E. C. Gifford, plff asks judgment on note and account for $378.67.

Grand Lodge Anceint Order United Workmen of Iowa vs John Ridden, et al. Plaintiff demands judgment for $6241.67 on note and also foreclosure of mortgage.

L. A. Andrew, Rec vs Hancock County, Iowa, and John Suurballe, Treasurer of Hancock County. Plff's ask to release mortgage so he can convey real estate free and clear from the lien.

R. N. Reuber vs Lucy M. Schneider, plff asks judgment for $1,063.33 and Writ of Attachment.

J. N. Sprole et al vs Peter Green, plff asks judgment for $79.12 on a note.

Clayton Knoll vs Thomas Mrazek, plff asks judgment for $250.00 for collision.

The Boyt Company vs Otto C. Schroer, plff demands judgment for $345.61 on an account.

M. H. Wolcott vs Adolph Schlichting, et al. Plaintiff asks for judgment on account of $258.75.

Kelly-Springfield Tire Co. vs A. W. Noonan & Son, et al, plff asks judgment for $145.81 on account.

Grain Belt Insurance Co. vs C. J. Monson. Plaintiff asks judgment for $117.15 on a certain contract.

Morris National Bank, of Morris, Minn., vs F. W. Zeiger, et al. The plaintiff demands judgment on notes for $3,542.44.

OZARKS MTS. AND HILL BILLIES SEEN

A CONTINUATION OF OUR STORY OF OZARK COUNTRY

Lake Taneycomo Is Resort Center Of The Shepherd Of The Hills Place

We had stopped for the night at a hotel at Hollister in the Ozarks and found that Hollister was without a doubt the prettiest little town we have ever seen.

The town had recently been "remodeled," and all of the business places on their main street, which faced a park and the Missouri Pacific depot, had been all built of brown cobble stones, which certainly presented a unique and beautiful appearance.

Hollister is the home of The Ozark School, supported by the Presbyterian church and is the only high school in the county and in the vicinity. The town is also at the head of beautiful Taneycomo Lake, the playground of the Ozarks.

Taneycomo Lake is formed by a dam across White River, near Forsyth and the Lake is about thirty-seven miles long and winds through the hills, deep down in the valleys

A large power plant is located at Powersite which supplies electric power to towns hundreds of miles away.

We made an early morning drive around the lake and saw the sun rise over the hill tops, a beautiful sight to behold. Bright rays of sunshine, rose colored and the deep valleys at the same time dark with the vanishing blackness of night.

In this part of the Ozarks we saw some pines and cedars.

We headed for Rockaway Beach at the north bend of Taneycomo Lake where we really got the best view of the Lake. There are beautiful cottages along the shores, some perched high up on the hills overlooking the lake. All along the lake the hills rise abruptly from the shore ine and the scenery is very beautiful. The lake abounds with all kinds of fish. Trout are found in many of the Ozark streams.

As we left the lake region we drove into a more prosperous part of the Ozarks and were in the truck garden spot of Missouri. We saw large fields of tomatoes and the crop was being harvested and we passed many a wagon load of tomatoes, the farmers taking them to the canneries, of which we saw a great number.

We had also seen the last of the old rail fences, which were quite numerous in the hillier section of the Ozarks.

There are many small streams to cross, but very few bridges. These streams we had to ford, but luckily the water wa low and the bed of the streams were rocky so this was but a small matter. Had we been caught in a rain we would have had to wait for the water to lower before we could cross.

On our way back to Kansas City we chose the route leading up thru Ozark City, Springfield, and Sedalia to Kansas City. The scenery was fine over the entire route, but the roads were rather rough and rocky.

Someone has described the Ozarks as follows: "The Ozarks, The Land of a Million Smiles," what magnetic dure has the Ozark region? Well, to begin with, it has mountains. But they aren't just mountains—they are friendly hospitable hills, in vivid contrast to the cold, austere peaks of grandeur of many noted ranges. No bleak, granite walls to excite cold wonder, but lazy, rolling mountains clad in the colorful rainment of heavy, green foiage and nodding wild flowers. Mountains which now and then ambitiously rise in beautiful peaks and then, their efforts spent, contentedly recede in graceful hills, protecting rich, fertile valleys."

But Iowans need not drive six or seven hundred miles to see scenery similiar to the Ozark region. We have it right here in Iowa along the Mississippi River in northeastern Iowa in the vicinity of McGregor and all along the river. That region could be termed "The Ozarks of Iowa."

We have often thought it would be well to "see Iowa first" and then look around the rest of the world as we have plenty of scenery in Iowa, but it is more scattered about.

Other states advertise their attractions, but Iowa with all its natural beauty seems to be content to remain in the background, as far as drawing tourist and sight-seers is concerned.

However, with the establishment of the proposed national park in northeastern Iowa, extending into Minnesota, the world will soon find that Iowa offers wonderful scenery and a vacation paradise.

METHODIST CHURCH NOTES

H. E. Whyte, Pastor

Next Sunday, September 22 is the last Sunday of this Conference year We are planning to make it a day of real spiritual blessing, and worship fellowship.

The theme for Sunday morning will be "Capitalizing New Spiritual Resources for the Church."

There will also be preaching service in the evening at 8:00 o'clock.

Sunday is Rally Day for the Epworth League. It is hoped that there will be as fine a response as we have had the last two Sundays in Church and Sunday School.

All the Young People of High School age who belong to our church and constituency are urged to come to the 715 P. M. meeting.

1—The $17,000,000 cruiser Houston at anchor after its launching at Newport News, Va. 2—Picture, transmitted by wire, of wreckage of the T. A. T. air liner City of San Francisco, in the loss of which in New Mexico eight persons perished. 3—William E. Brock, sworn in as senator from Tennessee to fill out the term of the late Senator Lawrence D. Tyson.

NEWS REVIEW OF CURRENT EVENTS

Hoover and Senate Act in Case of Propagandist of Shipbuilders.

By EDWARD W. PICKARD

INTERFERENCE by individual citizens or corporations in the foreign relations of the United States is not to be tolerated by the President or the senate, and proceedings were started last week designed to put an end to that practice. The matter came to the fore when one William B. Shearer, in a suit for remuneration, revealed that he had been employed by American shipbuilding concerns to attend the futile three-power naval limitation conference of 1927 and by propaganda to frustrate the plans for reducing naval armaments. President Hoover immediately issued a statement scathingly denouncing Shearer and his employers and ordered the Department of Justice to investigate the man's activities. The senate followed suit and adopted unanimously a resolution by Senator Borah directing the naval affairs committee to make an inquiry into the alleged employment of Shearer by shipbuilding corporations and the part played by them in the collapse of the conference at Geneva. Under the resolution the inquiry was limited to that, though Senator McKellar of Tennessee suggested it might be found wise to enlarge the scope of the inquiry to include all kinds of propaganda in the naval armament controversy. This course also had been urged by various persons outside of the senate who, while not defending the alleged activities of Shearer, condemned the propaganda of pacifists and other "little navy" persons.

Senator Robinson of Arkansas, the minority leader, said: "No question is raised as to the right of any or all parties to carry on propaganda within the limits of lawful action, but this involves a question of interference in what is essentially the foreign relations of the United States. There is no purpose to confuse the transactions mentioned with the long continued controversy as to whether the United States should have a large or a small navy."

The Arkansas senator declared no senate investigation could end that controversy or stem the flow of propaganda on that and virtually every major piece of legislation brought before congress. It was expected, however, that the investigation would end interference by interested citizens or corporations in the country's foreign relations, he said.

The corporations named by Shearer in his suit for $257,655 were the Bethlehem Shipbuilding corporation, the American Brown Boveri Electric corporation and the Newport News Shipbuilding and Drydock company. Eugene G. Grace, president of the Bethlehem Steel corporation, in a letter to President Hoover, admitted Shearer had been employed by the shipbuilders to attend the conference as an observer, but said this was done without his knowledge and that when the board of the Bethlehem corporation learned of Shearer's anti-disarmament propagandist activities his employment was terminated. The American Brown Boveri corporation issued a statement to the same effect.

MEANWHILE President Hoover and his chief advisers in international affairs were considering new proposals from the British government for establishing a tentative naval reduction agreement and preparing an answer thereto, which was cabled to Ambassador Dawes Thursday night. The British plan called for reduction of the British cruiser fleet to about 340,000 tons on condition that the United States would limit its 10,000 ton 8-inch gun treaty cruiser tonnage to eighteen ships, instead of the twenty-three now carried on the American building program.

Under this arrangement Britain would have fifteen 8-inch gun cruisers and the United States eighteen. Great Britain proposed that this disparity in big gun cruisers would be made up by allowing the British government to retain four older 7½-inch gun cruisers and maintain an advantage in cruiser tonnage amounting to approximately 40,000 tons of small 6-inch gun so-called police cruisers.

In London it was announced that Prime Minister MacDonald had decided to sail for the United States on September 28 to confer with President Hoover and Secretary of State Stimson.

PREMIER BRIAND'S proposals for a federation of European powers was enthusiastically received by the delegates of 28 nations to whom he explained his scheme, and they decided to try to bring the idea into force. Almost the only objection raised was that the plan might result in a loss of sovereignty of the individual states; and some of the statesmen emphasized that the union should be mainly economic. The French premier was asked to draw up a memorandum on his scheme to be studied by the European governments, and after they have replied a conference of all European nations will be called to consider the plan.

HAVING elected Peru, Yugo-Slavia and Poland to seats in the council, the assembly of the League of Nations considered and debated a number of important matters. These included a proposal by Louis Loucheur, of France, for the rationing of coal and sugar among the nations; an appeal by Count Apponyl, of Hungary, for revision of the Trianon treaty to return to his nation some of its citizens now placed as minorities in Rumania, Yugo-Slavia and Czechoslovakia; and a plan to place under the supervision of the league the international bank created under the Young reparations plan.

Dr. C. C. Wu, Chinese minister to the United States, proposed that the league advise its members to reconsider the extraterritorial treaties which, he said, shackle the Chinese republic and rob it of its sovereignty. The agenda committee voted against Wu's plea for adoption of a resolution for revision of treaties that have become inapplicable, on the ground that it opened up a question of too vast an importance, and the Chinese delegation threatened to withdraw from the assembly.

THOUGH war between Russia and China has not been declared, and may not be, nevertheless an actual state of war exists on the Manchurian frontiers and many deaths already have resulted. The Russians have been attacking with artillery and bombing planes and the Chinese have retaliated sharply. There was desperate fighting for several days for possession of the city of Pogranichinaya on the eastern border, and at first it was claimed the Chinese had won there, but later advices said they had been driven back 40 miles to Mulin, and that Pogranichinaya had been reduced to ashes. Soviet gunboats made determined efforts to force their way up the Sungari river, but it had been mined by the Chinese. Each side blames the other for the aggressive actions, and actual conditions are rather clouded. Negotiations for peaceful settlement were still going on in Berlin.

WHEN the great tariff fight really got under way in the senate, the regular Republicans in that august body met defeat in the first test vote. Senator Simmons' resolution directing the finance committee to obtain from the Treasury department information contained in the income tax returns of tariff beneficiaries was adopted by a vote of 51 to 27. The thirty Democrats all voted for the measure and were aided by 21 Republicans, including all the so-called radicals and several others. The information sought is to include profits or losses, gross sales, inventories, merchandise bought and costs of manufacture; including materials, wages and salaries. Senator Reed Smoot and others argued in vain that the resolution was offered with a view to delaying action on the tariff bill.

Senator Norris introduced a resolution calling for immediate consideration of the case of Senator-elect Vare of Pennsylvania, and this, too, was said to be intended to delay the tariff measure, but on motion of Senator Watson the Vare matter was put over until the regular session in December. So the tariff battle continued.

EXHAUSTIVE inquiry into the disparity between prevailing wheat prices in the United States and Canada and also into the alleged congestion of wheat storage facilities by speculators who seek to depress prices for the incoming crop was announced by the federal farm board. It is being conducted by experts of the bureau of Agricultural economics of the Department of Agriculture at the request of the board, which hopes to obtain facts upon which to base future policies as well as to relieve the immediate emergency.

ONE of the most peculiar swindles of recent times was perpetrated on New York banks by Charles D. Waggoner, president of a bank in Telluride, Colo. Through code telegrams ostensibly signed by Denver banks, he obtained from the New York institutions certified checks for half a million dollars, most of which he had placed to the credit of his own bank. It was a kind of a Robin Hood stunt, for he says it was done to make it possible for the people of Telluride to recover the losses they have met through the manipulations of New York financiers. The latter, he asserts, bought three of the largest mines in the Telluride district and closed them to prevent competition, throwing most of the town's inhabitants out of employment and wrecking his bank deposits. Waggoner was arrested in Wyoming and said he expected to spend a long time in prison but was contented with the success of his ingenious scheme.

REV. O. J. KVALE, Farmer-Labor congressman from Minnesota, who succeeded Andrew J. Volstead, was burned to death when his summer cottage near Battle Lake, Minn., was destroyed by flames. Mr. Kvale, an ordained Lutheran clergyman, was the only Farmer-Laborite in the house, to which he was elected in 1922.

Arthur Bullard, former Washington correspondent, for a time chief of the Far Eastern division of the State department and associated in various capacities with the League of Nations, passed away in Geneva after a short illness. He was one of the best informed Americans on questions connected with the league.

Louis Marshall of New York, noted lawyer and Jewish leader and philanthropist, died in Zurich, Switzerland, following an operation. He had been taking an active and prominent part in the Zionist movement.

FLIGHT LIEUT. H. R. D. WAGHORN won the Schneider cup for the British when he drove the supermarine Rolls Royce plane around the Isle of Wight course at an average rate of 328.63 miles an hour, breaking all records for speed. His record, however, was smashed a few days later when A. H. Orlebar, in the same plane, flew four times over a straight three kilometer course at a speed of 355.8 miles an hour. One lap was made at the truly terrific rate of 368.8 miles.

CLAUDIUS H. HUSTON of Tennessee, skillful politician and old-time friend of President Hoover, was unanimously elected chairman of the Republican national committee to succeed Dr. Hubert Work at a meeting in Washington.

OF SPECIAL interest to the central South was the offer of President Hoover to hold up work on the Mississippi flood control project on the floodways extending from the Arkansas river to the Gulf of Mexico if the Southern congressmen interested requested it. Senator Robinson of Arkansas and Senator Ransdell and Representative Wilson of Louisiana concurred in this plan. This will permit the administration to consider the controversies involving payments for flowage rights and other features of the project. Property owners have protested against the ruling under which they can obtain no compensation for flowage rights unless actual damages are caused.

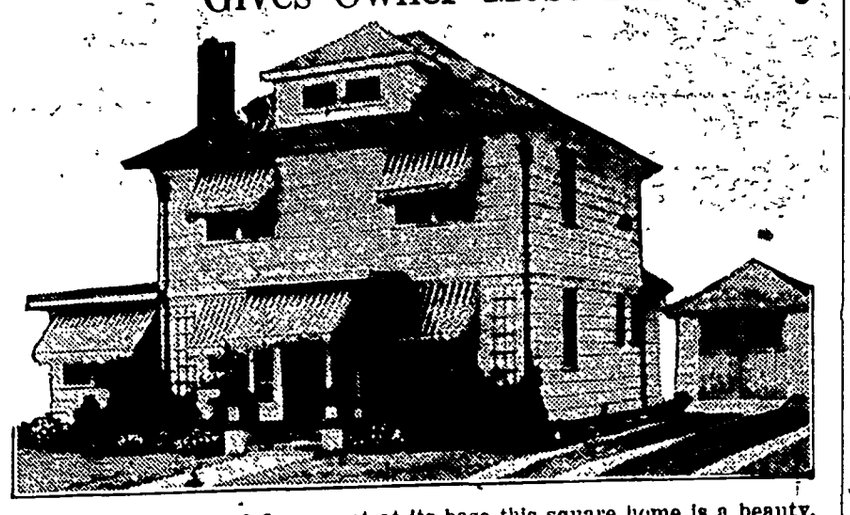
Square Type Six-Room House Gives Owner Most for Money



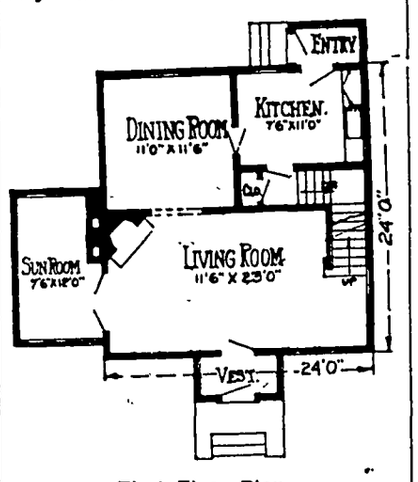
With shrubbery and flowers set at its base this square home is a beauty. It is 24 feet wide and 24 feet deep and has a living room extending the full width of the house. The house contains six rooms but all of them are large and comfortable.

By W. A. RADFORD

Mr William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

Prospective home builders who are seeking to get the most for their money are wise if they select a square or rectangular building design because "corners cost," as some one has aptly expressed it. When a design is used which has straight foundation walls, there is a minimum of materials and labor.

Reproduced here is a design for a very attractive square, hip-roof house.

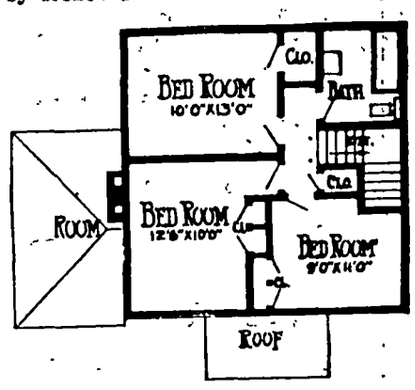


First Floor Plan.

This home is 24 feet square, exclusive of the porch and sun room. It is of frame construction with clapboard siding and its plainness is taken away by the porch and the dormer in the hip roof.

The house contains six rooms besides the sun room. Downstairs there are living room, dining room and kitchen and upstairs are three good sized bedrooms and a bath room. In addition there is a basement the same size as the house.

The entry leads into the center of the living room, which is 23 feet long and 11 feet 6 inches wide. The living room is connected with the sun room by french doors. The sun room is 7



Second Floor Plan.

feet 6 inches by 12 feet. A cased opening between the living room and dining room provides a nook into which is set the fireplace. An open stairway runs out of the opposite end of the living room to a central hall on the second floor. The three bedrooms and the bathroom are corner rooms, which gives plenty of light and ventilation.

Equipped with awnings as shown in the exterior view of the house and with plantings about, this makes a most attractive home for town or country. It is economical to build and will provide the average family with a comfortable home.

Ancient Formula Used by Our Modern Painter

We moderns often find ourselves feeling a bit superior towards the poor mortals who eked out an existence back in the Middle or Dark ages, but occasionally we find that some things have not changed so much after all. In ancient times it was the practice of artists to paint their pictures on panels of wood instead of canvas. This necessitated careful preparation of the surface to secure perfect smoothness and protection from atmospheric conditions. It is interesting to note that the following procedure recommended by Eraclius in his "First Metrical Book" believed to have been written in the Tenth century, does not differ greatly from the modern method of preparing wood panels for decoration.

"First make the wood very smooth, by scraping and rubbing it down with shave grass. If you cannot shave down the inequalities in this way, and do not wish to cover it with leather or with cloth, grind dry white-lead upon a stone, but not so finely as if you were going to paint with it; then melt wax over the fire in a vase, add tiles finely ground, then mix it with the white-lead you have ground, stirring it frequently with a stick, and so let it cool; then heat an iron, and with it melt the wax into the little fissures until they are level, and then scrape the rough parts with a knife. When you have made it smooth mix plenty of white-lead, very finely ground, with linseed oil, and lay on an excessively thin coat of it wherever you intend to paint with a brush, made of ass-hair, adapted for that purpose. When this is done lay on, as you did before, another and thicker coat of it—not thicker by having a greater quantity of color but by having less oil in it; for you must take care never to lay on the color too fat, for if you do this, and lay on a great deal of it, when it begins to dry wrinkles will form on the surface of it."

The modern painter, while he uses sandpaper instead of having shave grass and also white-lead putty instead of the mixture recommended by Eraclius, still mixes his paint with "white-lead very finely ground with linseed oil." However, the modern painter has found that after the sandpapering has been done a priming coat should be applied before puttying and the second and third coats then applied. This has been found to be the best method of filling and puttying.

Make Basement Dry

Two coats of good cement paint are usually enough to transform the dingiest of basements into a cheery, pleasant place. If your basement has the "damp" habit, see that it snaps out of it.

Concrete First-Floors Are a Fire Protection

A considerable proportion of house fires originate in basements—around heating plants or in stores of fuel, ash, trash or other inflammable material. The simplest fire barrier is a concrete floor; aside from the fire safety such a floor guarantees, it adds structural rigidity to the house and offers great possibilities in decorative floor treatment.

Fire may also enter through the roof which is exposed to flying embers. Fire-safe shingles or tile eliminate the hazard and add materially to the beauty of the home.

While fewer fires are transmitted from the exterior walls, real fire safety implies fire-resistive construction in those parts of the house. Fire-stops in walls, unburnable stairways, proper design of fireplaces and chimneys—these are a few of the details the modern builder includes in his fire preventative.

Automobile Influences Modern Home Designs

Discussing the present day designs of homes, Joseph Holtzman, Detroit builder, contended they had been influenced, as regard their beauty, by the automobile, just as "in olden days when the 'coach and six' were our best transportation means our houses reflected the designs of the 'coach and six.'"

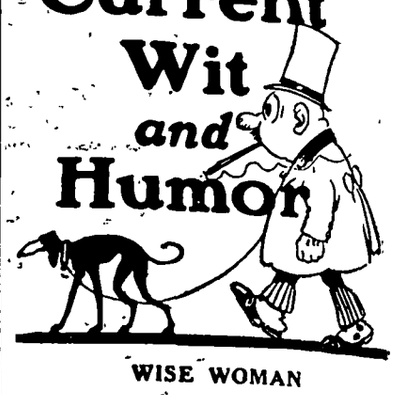
"Our architecture today is typical of our age and day, but it is the beginning of an era denoting the creation of the typical American home," he continued. "Aviation, which is our next step in transportation, will not materially change the designs. The airplane is a very graceful thing. It has the 'lines' of the bird, slender, well fashioned, poise; a perfect design. The coming of aviation will not affect our new architecture, except to better it if anything."

Kitchen Planning Saves Many Needless Steps

Some kitchens are so large there is space for everything, but one has to travel a long distance to bring together desired working utensils. Other kitchens are so small and one piece has to fit so skillfully into another that one is always unpiling to get the utensil needed.

In the small home this cannot always be avoided. By planning the cupboard spaces and making a survey of our kitchen goods much can be done, however, to make even a small kitchen cupboard convenient. We may not wish to compete with factory products nor do we wish to work at top speed, but we can adapt ideas from their convenient arrangement of tools in relation to the work to be done.

Current Wit and Humor



WISE WOMAN

"We can't afford a trip this year, so John is going to spend his vacation at home," sighed Mrs. Black.

"We can't afford one either," snapped Mrs. White, "but you can bet your sweet life we are going to take one anyway. You don't catch me spending two weeks getting up three meals a day and having my husband hanging around the house messing it up faster than I can pick up after him."

Greater Wealth

Two small boys were boasting about the wealth of their respective fathers.

"My father," said one, "has so much money that he doesn't know how to spend it."

"That's nothing," retorted the other, "my father has got so much that my mother doesn't know how to spend it."

FINE IDEA

First Suburbanite—I think I have solved the problem in regard to chickens and gardens.

Second Suburbanite—Let me in on it, will you?

First Suburbanite—I planted imitation seeds in my yard and fooled the chickens.

One Born Every Minute

The fool who rocked the boat
No more the craft is tossing;
But the whole year 'round we have the boob
Who races a train to the crossing.

Such Nerve

Tailor—Sir Twombly, for two years I have waited patiently for the money you owe me on the coat I made. I cannot wait any longer.

Sir Twombly—The very idea. You have the impudence to present a bill for £20 on a coat which has long since gone out of style?

HELP!

"Does your bride know anything about cooking?" asked the old friend, meeting a recent groom.

"Well," he grinned, "I heard her calling up her mother the other day to ask if she had to use soft water for soft-boiled eggs and hard water for the hard-boiled ones."

Hot Weather Thought

Full many a man, both young and old,
Has gone to his sarcophagus
From pouring water, icy cold,
Down his hot oesophagus.

How Is He at Charades?

"How does that new member play?"

"Well, he's singularly bad in doubles and doubly bad in singles."

Many Kinds

"Do you keep powder here?" asked the city young lady at the village store.

"Yes, madam," said the shopkeeper. "Washing, baking, custard, plate, face, tooth, insect, and gun!"—Pearson's.

Just Her Luck

Hortense—She says she has dozens and dozens of very close friends.

Marjorie—O, she has—not one of them will spend a cent on her, my dear.

Fifty-Fifty

Mrs. Spendit—I saw the sweetest little Pekingese at the dog show. I wish you'd buy him for me. Only $100 and thoroughly house-broke.

Her Husband—House-broke is he? He's got nothing on me. I'm flat broke!

A Defiant Husband

First Wife—How are you and your husband getting along?

Second Wife—Oh, I can't do a thing with him this week. He knows I've got a blister on my trigger finger.

WHERE NOTHING EVER HAPPENS

(© by D. J. Walsh.)

MILLY REDMOND felt that the time had come when she could invite Dorothy Keane to visit her. She had been putting it off until they could afford the new living room suite and a rug for the little guest room. For Dorothy was so critical of the way folks lived. She had always been used to everything nice. The rent of the Keane's apartment for a single year equaled half the entire price of the simple home Tom and Milly had bought. It was still a question, of course, whether it was cheaper to rent their home or buy it. But for the Redmonds in Pineville there was no alternative. You could live in a few rooms over Dave's barber shop or some such place or you could buy or build your own dwelling.

Dorothy eagerly accepted Milly's invitation. It was already becoming very hot in the city and she longed for a breath of country air. Besides, her husband was away on a week's business trip and that left her all alone. Dorothy and Jack had no children. Neither did they have a maid, a dog, a parrot or a Persian cat. Therefore, being alone meant for Dorothy solitude in its fullest sense.

Milly went to the station to meet Dorothy, driving the little car herself, with six-year-old Junior tucked in beside her. Junior shared his mother's excitement for the arriving guest. He kissed Dorothy prettily and she told him that he had grown a lot in the year since she last saw him.

Milly's dinner was delicious. Afterward she and Dorothy washed the dishes while Tom put Junior to bed. Fragrant air came in at the open window over the blue enameled sink. A catbird sang in the budding lilac tree. Over on the hill a cowbell tinkled musically. A boy whistled "Home, Sweet Home," as he went through the lane. A dog barked.

"How peaceful!" murmured Dorothy. "But—" and she gave a little shiver, "the awful stagnation of it all!"

"Stagnation?" inquired Milly.

"Yes. For you and Tom. With your youth, wit, ambition you ought to be in the thick of things. Where there are things going on."

"There's Tom's work as chemist at the big creamery," said Milly thoughtfully, scouring out a saucepan. "He's pretty busy. And I find enough to do."

"Nevertheless, it's stagnation for you both," said Dorothy. "One day like the other, peaceful, serene. Cowbells tinkling, birds singing, breezes blowing. All very lovely and soothing. But, oh, my dear, that isn't life! Nothing ever happens in a place like this.

Milly grinned. "Maybe things will take up a bit tomorrow. We shan't let you get too dull," she promised, thinking of the party she intended to arrange the next evening.

Next morning Dorothy, assisting in the house work by dusting the living room, heard first a cry, then a slam. She ran to the cellar door. And there at the foot of the steep, narrow stairs was Milly lying with the contents of the coal bucket scattered about her.

It was only a twisted ankle and a bruise or two but it sent Milly to bed for the rest of that day. At the moment when she had planned to summon her guests by telephone she lay flat on her back trying to give Dorothy necessary bits of counsel—not to bother with Tom's lunch, he'd pick up a sandwich and cup of coffee downtown; just to give Junior a bowl of bread and milk. Mrs. Fry would come in and help with the dinner. The ice man always came right in without knocking; he'd learned where the ice box was and how much ice it took to fill it.

"Just leave everything to me," said Dorothy, gayly. "Remember I am two years older than you and have had more experience. I'm awfully glad to be truly useful, dear. You know, I'm always terribly active at home." Giving Milly one of the new books she had brought, she took another and settled down to wile some of the time away before lunch.

Clang! Clang! It was the fire bell augmented by the creamery siren hoot! Clang! Folks running by. Boys on bicycles, shouting. Milly rose up in bed.

"Dorothy! That's the creamery distinct. I can't move. Go and see if the creamery's afire."

Dorothy dashed forth. She asked a boy, a man, two girls where the fire was. They paid no heed, merely ran on. She followed. When she reached the creamery she found a crowd, a fire engine, smoke, noise. The creamery was all right, but the chimney of the house next door was blazing. Tired, but, disgusted, she returned home to reassure Milly.

The telephone bell was ringing. It was Mrs. Fry. She couldn't come that day because her man had a stitch in his side and she was poulticing him with wormwood and vinegar. Someone at the back door. Mrs. Coons calling to borrow an egg. She had to hear all about Milly and stayed ten minutes. Front door bell. A man selling brushes. Telephone again. Somebody wanted Milly's recipe for fruit bread. The ice man. Dorothy had hooked the screen door and he couldn't get in. Front door again. Mrs. Robbins asking if Milly would make a cake for the firemen's social. Junior rushing, hungry, noisy, with a stray yellow puppy in his arms. Could he keep the pup till somebody claimed him? Dorothy thought nobody would claim such a disreputable canine specimen. Milly merely laughed. Last time he had brought home two cats, a garter snake and a lame hen.

Noon passed. Junior returned to school. The puppy, warmed and fed, ceased whining. Dorothy washed the dishes and sat down to plan the menu for dinner. She'd have to do some marketing. Putting on her hat and coat she took Milly's green basket and went downtown. But marketing in Pineville was quite another thing from marketing in a big city. Dorothy couldn't find what she wanted, the prices didn't suit her and the salesmen thought her impudent when she demanded green peas and cantaloupe.

She was hurrying home, not very well pleased with her purchases, when a white-haired woman with big black eyes darted out of a house she was passing. Grabbing Dorothy by the arm the woman shouted, "Come with me!" With a grip of steel she dragged Dorothy into the house, slammed the door upon her and fled.

Dorothy found herself in a large, dim room. Before her, in an old-fashioned armchair, sat an aged man with a large head and red face. He was making queer noises in his throat. Suddenly he lurched forward, clawing at Dorothy. She screamed, tried to get the door open. Was it locked? No, merely stuck. She wrenched it open and tore out of the house into the street and to safety.

She had dropped her market basket when the aged man lurched toward her. Her heart was bursting when she reached home—to find drawn up before the door a blue sedan from which four smartly dressed women were alighting. Friends of Milly's driving through the town and stopping to make a call.

It was more than an hour later before she could get Milly's ear and tell her what had happened.

"Oh, that was old Mr. Tinker," Milly said carelessly. "He was having a fit. The woman was Mrs. Jones, his housekeeper. She merely wanted you to stay with him while she went after the doctor. They have no telephone. Send Junior after the basket when he gets home from school."

Somebody at the back door again. A simple-faced young woman in a dirty apron leading a grimy little boy by the hand.

"This is Georgie Ross," she said, pleasantly. "Mrs. Ross is having another baby. She's got five under school age. She hasn't got much room and the neighbors are looking after the kiddies—"

Dorothy accepted the child. He had to be bathed. Milly told her to dress him in some of Junior's outgrown garments. Dorothy, who knew nothing about children, had a bad time. So did Georgie, who resented her ministrations. But at last he curled up beside the puppy and there was peace.

It was eight o'clock before Dorothy, exhausted, flung herself upon the davenport to rest.

"Do you often have such days as this?" she called, through the open door into Milly's bedroom.

"Why, it was lots worse than this the day they thought Bill Kipp was kidnaped," replied Milly. "Or the day Clemmy Peters ran away with her father's hired man. Or the day they got ready to take Mrs. Hess to the poorhouse and it was found that she had twenty-seven lard pails full of money in the attic. Or the day—"

"Oh, hush!" groaned Dorothy.

It was a good thing she didn't see Milly grin.

Make Observations of Will-o'-the Wisp Cases

Two close-up observations of the will-o'-the-wisp, those weird and elusive flames that appear over marshy ground, have been put on record by German observers.

H. H. Sven, a German scientist, observed one night in November, 1927, near an iron mine in Bohemia upon a swampy tract of land, four small bluish phosphorescent flames. They were of the height of a candle flame and a diameter of about an inch and were constantly hopping up and down. Near them appeared a flame of about three feet in height of a yellowish green color and diameter of about a foot. Their light was sufficient to read the face of a watch and to make notes, but the flames had no heat when touched. After the phenomenon had lasted 15 minutes they went out.

In the vicinity are several springs with radio active water. Upon returning to the place in the daytime Mr. Sven could find no trace of the source of the flames. He learned, however, that while will-o'-the-wisps appear to be independent of air temperature they are dependent upon air pressure; the higher the pressure the less the light.

W. Schulze, during the war an officer in the German army, described the following: In September, 1914, his battalion was withdrawn from the front lines and had to recross the River Muerthe. During the afternoon artillery had also crossed. The route led through dense woods and had become almost impassable because of heavy rains. Schultz saw on both sides of the route, where a corduroy road had been attempted, pale greenish and yellowish thin flames shooting up and down from about 12 to 18 inches high. More accurate observations could not be made, but the flames were doubtless produced by the great pressure caused by the passage of artillery, combined with heat and rain. Gases apparently streamed from the moist earth and caused the flames. —Kansas City Star's Science Service.

SPECIALLY BUILT RED CROSS AMBULANCE

A specially built ambulance, designed by the Stockholm firm of Arvid Stedt, which was accepted by the Swedish Red Cross by Prince Carl, brother of King Gustaf. Prince Carl is president of the Swedish Red Cross.

"MORTALITY" OF AVERAGE MOTOR

"Life" of Average Automobile Put at Six Years and Nine Months.

The "life" of the average automobile is six years and nine months, while the average cost of operation, for a four-cylinder passenger car is 6.43 cents per mile, and for a six-cylinder machine is 8.40 cents per mile, based upon an average mileage of 11,000 miles per year, according to the American Motorists' association, in co-operation with the Automobile Club of Illinois.

The "mortality" figure is based upon replacement data furnished by automobile manufacturers. The cost per mile is computed from detailed cost accounting records covering 800 typical automobiles, operated in various parts of the United States.

Maintenance Largest.

The largest single item in the composite "average" automobile, for both the four and six cylinder machines, was maintenance, followed in both types by depreciation and gasoline consumption. Following is a comparison of the operation costs of the "average" medium four and six cylinder types:

Items	Cents per mile Four cylinder	Cents per mile Six cylinder
Maintenance	1.72	2.14
Depreciation	1 39	2.09
Gasoline	1.31	1.52
Tires	.64	.80
Garage	.44	.44
Interest	.36	.71
Oil	.22	.20
Insurance	.21	.26
License	.14	.24

The above figures are computed on a mileage of 11,000 miles per year, getting an average of 17.53 miles per gallon of gasoline for the average four-cylinder car and 13.19 miles per gallon for the average six-cylinder car.

Operation Cost.

For the light four-cylinder model, the average operation cost is shown to be 6.02 cents per mile; the heavy four-cylinder average type is 7.20 cents per mile; the light six type is 7.38 cents per mile, and the heavy six-cylinder type is 9.45 cents per mile.

Rear Collisions Caused by Locking of Wheels

Lack of proper understanding of a certain situation causes many rear-end collisions. The driver applies the brakes, starts to slide and discovers that he cannot steer to the right or left so as to avoid striking the car ahead.

If he could stand out on the street and watch his car during this process he would see that the inability to steer is due merely to the fact that the front wheels have locked. They slide straight ahead regardless of whether they are cut sharply to the right or left.

The remedy is to release the brakes the instant the car won't steer. It may be safer to be able to steer to one side than to stop.

AUTOMOBILE NOTES

Discolored celluloid window lights can be cleaned with alcohol.

* * *

Applying the new paint with horizontal strokes of the brush is one way to keep the job from looking streaky afterward.

* * *

Some chassis lubrication systems require oil, others grease. The car owner never should try to substitute the one for the other.

* * *

California now leads all other states in the number of automobiles in proportion to population, with one car for every two and seven-eighths persons.

* * *

Because cars in Great Britain are taxed heavily according to horse power, over 65 per cent of all cars registered there are less than 14 horse power.

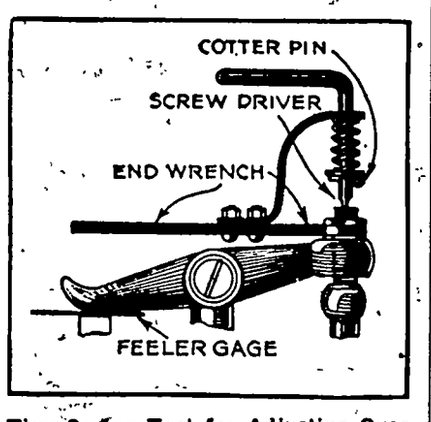
Problem to Solve

During 1928 nearly 25,000 persons were killed and more than 700,000 suffered serious personal injury as a direct result of the failure to adequately cope with the problems of motor-car traffic, according to the American Motorists' association. The total economic loss due to the destruction of property, to congestion and to other causes incident to inadequate traffic facilities is estimated by the association to be not less than $2,000,000 annually.

Valve Adjusting Tool Is a Timesaver for Mechanic

The illustration shows a home-made tool that will be a time saver for either the garage mechanic or the motorist who does his own repairing in adjusting overhead valves that are fitted with a slotted bolt and a lock nut. It advantage is that you do not have to remove the screwdriver from the slot each time you test the clearance between the valve stem and the end of the rocker arm. The spring holds it securely in the slot.

To make this tool, take an end wrench that fits the lock nut. Bend a piece of three-sixteenth-inch cold rolled stock into form, as shown, and



Time-Saving Tool for Adjusting Overhead Valves Fitted With Slotted Bolt and Lock Nut.

bolt the end to the end wrench after drilling a hole for the screwdriver bit. A cotter pin, a washer, and a spring complete the assembly.

To use the tool, fit the wrench over the lock nut while pulling the screwdriver bit up against the spring. Let the screwdriver edge drop into the slot, loosen the lock nut, test the clearance while still holding the wrench in place, turn screwdriver to change clearance, and when you have it right hold screwdriver in the correct position with one hand while you tighten the lock nut with the other.

This tool has saved much time in the repairing of cars with overhead valve motors.—Popular Science Monthly.

Slow "Creepers" Spoil Summer Holiday Season

The motorist, who gives no thought to the backing up of traffic he causes by pausing to make a left turn in a crowded street during rush hour travel, surrenders the nuisance palm to the driver who blockades travel on narrow country roads, especially on Saturday and Sunday afternoons and evenings, declares Arthur Goulson, general manager of the Federal Motor club.

"The car owner who takes his family out for a holiday drive, and seeks the country roads to escape city congestion, generally has his day ruined by motorists who refuse to drive their cars at the pace set by all others in a traffic line," said Mr. Goulson.

"It may be that these creepers are sincere in the belief that they are careful drivers determined to avoid being party to an auto crash, but, as a matter of fact, proved by accident statistics, they are continually inviting collision and possible injury.

"When a creeping car delays all automobiles behind it, then the other drivers begin to seek opportunity to speed by. Motorists coming from the other direction do not like this. Some of them refuse to slow up. The result is a crash that includes, as a rule, the car of the 'creeper.'"

ORCHARD GLEANINGS

AUTUMN WORK IN FRUIT ORCHARD

Most Important Job Is Protection Against Rodents.

Dealing with autumn work in the fruit plantation, M. B. Davis, Central experimental farm, Ottawa, Ont., says:

There are a few items of ordinary routine which need to be attended to each autumn by the fruit grower, and occasionally one or more get overlooked in the hustle of harvest operations, with consequent ill results the following year.

One of the most important of these is the protection of young trees against the ravages of mice. As mice may be expected in greater or less numbers every winter, young trees should be regularly protected against them. Mice usually begin working on the ground under the snow, and when they come to a tree they will begin to gnaw it if it is not protected. A small mound of soil from 8 to 12 inches in height raised about the base of the tree will often prevent their injuring it, and even snow tramped around the tree has been quite effective, but the cheapest and surest practice is to wrap the tree with ordinary building paper, the price of which is merely nominal. Tar paper is also effective, but trees have been injured by using it, and it is well to guard against this when building paper will do as well. After the paper is wrapped around the tree and tied, a little earth should be put about the lower end to prevent the mice from beginning to work there, for if they get a start the paper will not stand in their way.

In the strawberry plantation, do not forget the straw mulch. This covering of old coarse hay, rushes, or straw, should be put on just after freeze-up. Place it over the rows to a depth of about two inches. If the plantation lies on the flat it is advisable to run a shallow furrow between each pair of rows to take care of surplus water in the late fall and early spring. Ice over the plants is a great menace to strawberries, and these furrows assist very materially in reducing that risk.

While the majority of growers in the East do not need to protect their raspberry plantations, there are some localities where a winter injury is experienced. In such cases bending the canes down and placing a few shovels of earth on the tips to keep them in a recumbent position is sufficient. This permits the snow to cover the canes and bring them through safely.

Where the snowfall is light or variable it may be necessary to completely cover the canes with several inches of soil. This is frequently done in the prairies, and should be done just before freezing-up sets in.

Better to Store Fruit Under Proper Shelter

It is better to store fruit under some shelter rather than directly in the sun as some growers do. The same thing applies to the packed fruit. It should be kept as cool as possible and should never be piled in the open where it will be exposed to the sun. After packing, fruit should be rushed as quickly as possible to the refrigerator car or cold storage. If delay is necessary a cellar, above-ground common storage, or a shed should be used.

The results of experimental work show that apples soften more in a week at outside fall temperatures than in several months in cold storage.

Horticultural Facts

Red or pink raspberries propagate from suckers.

* * *

Washing often improves the appearance of apples, preliminary studies indicate.

* * *

Fire blight in pears can be controlled by cutting off the affected limbs as soon as they show up.

* * *

The degree of predisposition to canker infection resulting from early or slight aphis attacks is not entirely known.

* * *

If you find in your fruit small, slender, whitish maggots thicker at the rear than in front, probably they are the maggots of the Mediterranean fruit fly.

* * *

On average soil and on light soil, an apple orchard will produce larger crops of larger apples if the soil is kept cultivated. On heavy soil, the sod mulch system works very well.

* * *

Wire protectors will be very necessary this winter if the rabbits keep as active as they have started out to be.

* * *

Trees that have been badly injured should be bridge-grafted at once and the wound waxed with paraffin.

* * *

Watch for them, either the walnut or tent species. If the trees are small pick them off; if fair size, take a cloth soaked in gasoline on the end of a pole and rub the nest well.

There are two kinds of madness. One produced by human infirmity, the other by a divine release from the ordinary ways of men.—Plato.

For Best Results In Home Dyeing

You can always give richer, deeper, more brilliant colors to faded or out-of-style dresses, hose, coats, draperies, etc., with Diamond Dyes
And the colors stay in through wear and washing!

Here's the reason. Diamond Dyes contain the highest quality anilines money can buy. And it's the anilines that count! They are the very life of dyes.

Plenty of pure anilines make Diamond Dyes easy to use. They go on evenly without spotting or streaking. Try them next time and see why authorities recommend them; why millions of women will use no other dyes.

You get Diamond Dyes for the same price as ordinary dyes; 15c, at any drug store.

FAMILY DOCTOR MADE MILLIONS OF FRIENDS

Fifteen years after his graduation, Dr. Caldwell became famous for a single prescription, which now, after forty years, is still making friends.

Today Dr. Caldwell's Syrup Pepsin is the world's most popular laxative. Millions of people never think of using anything else when they're constipated, headachy, bilious, feverish or weak; when breath is bad, tongue coated, or they're suffering from nausea, gas, or lack of appetite or energy.

Dr. Caldwell's Syrup Pepsin is made today according to the original formula, from herbs and other pure ingredients. It is pleasant-tasting; thorough in the most obstinate cases; gently effective for women and children. Above all, it represents a doctor's choice of what is safe for the bowels.

KLEMME LOCALS

Mr. and Mrs. Clarence Kluckhohn and Eugene, and Mr. and Mrs. Fred Kluckhohn visited Marian Waterman at the Hampton hospital Sunday.

Mr. Geo. E. Saunders, of Emmetsburg, called on Klemme friends Tuesday evening. Mr. Saunders had charge of the State Savings Bank here for some time after it closed.

Mr. and Mrs. Art Kudje and children and Mr. and Mrs. F. W. Kluckhohn and Carmen were visiting at Hampton hospital Friday with Marian Waterman.

Mr. and Mrs. Elmer Schuetpelz andbaby, Mrs. Schuetpelz Sr. and Mrs. Herbert Stille of Lane, South Dakota, came Saturday for a visit at the Henry Thieman home and with other relatives and friends.

Workmen have been busy the past few days making some needed repairs on the First National Bank Building. Water would soak thru the walls in places. Parts of the brick walls were taken out and repairs made where necessary.

Juanita Pavey was forced to miss school for the first time since she started on account of a slight case of mumps. She mised Thursday and Friday. Juanita is now in the fourth grade.

G. Gobeli brought a last year's potato to the Times Office that is a dandy. The potato is as firm and fresh as the day it was stored last fall. Gobeli claims the championship on potato storage. If you have a better sample, bring it in.

Mrs. John Day who accompanied Mrs. John Baumgartner and son, John, of Mason City, to South Dakota on a visit, returned to Klemme Saturday afternoon. Mrs. John Baumgartner and son returned to their home Sunday.

Dr. W. F. Missman, Mr. and Mrs. R. A. Jorgenson and son, Buster, and Mrs Mary Waterman drove to Hampton Sunday to see Marian Waterman at the hospital She was making a good recovery and feeling fine.

Deputy Sheriff Bruce Orr was in town Saturday to close up the affairs of the pool hall, of which Pete Moulton was the former proprietor. S. A. Harvey, holder of the mortgage, bid in the place. We have not learned what Mr. Harvey expects to do with the business.

Leonard Lau left Saturday evening for Washington, D. C. to resume his studies at Gallandat University. This will be his last year in this special chool. This summer he has been working for the Cook Electrical Co. at Chicago, and was in this vicinity for a month's vacation.

Marian Waterman came home this Wednesday afternoon from the Hampton hospital where she had an appendix operation. She celebrated her seventh birthday in the hospital Tuesday and the nurses made her a birthday cake with seven candles on it and they had a party. When she came home the next day she had another birtday cake baked by Mrs. Cris Gram.

The W. F. M. S. of the Methodist Church met at teh home of Mrs. Martha Bredbenner last Thursday evening. At the election of officers Mrs. R. W. Elder was chosen President; Vice-Pres., Mrs. R. C. Ludeke; Secretary, Mrs Lester Stille and Treasurer, Mrs. Henry Ludeke. Mrs. A. D. Gimer was elected corresponding Secretary of the organization. Mrs. C. A. Arnold, who had been President for the past three years, missed but a half meeting during that time. Following the buisness meeting refreshmetns were served.

Miss Mildred Johnson left last Thursday for Chicago where she has a position. Miss Johnson had been pianist at the M. E. Church for the past year, and in recognition and appreciation of her services, the congregation took up a special collection and presented her with $15.

R. A. Jorgenson and Dr. W. F. Missman attended the Scout Leaders meeting and banquet held at Mason City last Thursday evening. At this meeting it was decided to again conduct an inter-trop area-wide contest which begins September 30th and runs eight weeks. It was also decided to conduct two training courses this fall for Scout Leaders; one to be conducted in the four districts for new men, and the other to be an advanced specialization course in Red Cross First Aid which will be held at Mason City. Mrs. Jorgenson and son, Buster accompanied the men to Mason City and took in the show at the Cecil.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
Hancock County, ss.

To All Whom It May Concern:

YOU ARE HEREBY NOTIFIED, That an instrument of writing purporting to be the last Will and Testament of William Becker deceased, dated Dec. 4, 1919 and Codicial dated Auguet 9, 1922, having been this day filed, opened and read, the 4th day of Oct., 1929 is fixed for hearing proof of same at the Court House in Garner, Iowa, before the District Court of said County or the Clerk of said Court; and at 2:00 o'clock P. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, September 7, 1929.

CHRIS J. JOHANSEN,
Clerk of District Court.

The Move for Naval Reduction

Pride of Uncle Sam's Navy—U.S.S. "Texas"
Underwood & Underwood Photo

By ELMO SCOTT WATSON

AMONG the international problems which confront the world today, none is more outstanding than that of limitation of naval armament. Public interest has been focused sharply upon it recently by the move made by Great Britain and the United States to take the lead in a reduction which will be real as well as apparent. Back of this movement is the desire of the taxpayers of the five nations, known as the "naval powers," for relief from the enormous burden to which naval armament contributes so heavily; and back of it, too, is the realization that along the path of disarmament lies one hope for world-wide peace.

For these five "naval powers"—Great Britain, the United States, France, Italy and Japan—are spending enormous sums each year in the race for naval supremacy or naval parity. France spends approximately $54,000,000; Italy, $60,000,000; Japan, $118,000,000; Great Britain, $290,000,000 and the United States, $320,000,000. The British expenditure means that, out of every dollar which the Englishman contributes to the upkeep of his government, more than seven cents goes to help make good the boast that "Britannia rules the waves." And here in the United States it is costing Mr. Taxpayer better than nine cents out of every dollar he pays for taxes to help challenge that boast. Each year every citizen of the United States pays an average of $30 to the support of his government and each year he pays nearly $3 to the upkeep of the navy. It is nearly a third of the amount he contributes to the maintenance of the schools in which his children are educated and more than one-third of the amount which he contributes to the churches. It is vastly more than he spends for parks and other public recreation places, for libraries, for art galleries, for museums and for any number of other things which contribute to his life, liberty and pursuit of happiness.

Now, of course, a nation which has a coast line and foreign possessions to protect, as have all the "naval powers," feels that it needs a navy and no one will deny that need. But proponents of naval reduction point out that all navies are too large for this reason: when the nations engage in a ship-building race as has been the case in the past, what happens is that their relative naval strength remains unchanged and the possession of more and larger ships does not mean any greater security for that nation. It simply means an increased burden upon the taxpayers.

The move for naval reduction, which seems likely to reach a climax this year or early next year, is not a new one. It began eight years ago and since that time the United States has consistently been a leader in the direction of limitation of naval armament. In 1921 President Harding invited the "naval powers" to discuss that subject. The result was the Washington armament conference where was reached an agreement on the now-famous "5-5-3-1" basis—a limitation on battleships to 525,000 tons for Great Britain and for the United States, to 315,000 tons for Japan, and to 175,000 tons for France and Italy. No agreement was reached on the limitation of cruisers and submarines.

The next move was made in 1927 when President Coolidge called a conference of the five powers at Geneva to reach an agreement, if possible, on these two classes as a preliminary to the League of Nations preparatory commission for the disarmament conference. France and Italy declined to attend the conference, but it was attended by representatives from the United States, Great Britain and Japan. The conference, however, ended in a deadlock in August, 1927, due mainly to the fact, it was said, that it was a conference of "seamen and not statesmen" and to the refusal of the British admiralty to surrender actual supremacy.

A year later Sir Austen Chamberlain, the British foreign secretary, announced in the House of Commons that an agreement had been reached between England and France as to the basis of naval limitation which would be submitted to the next meeting of the preparatory commission. When the terms of the agreement were made public the United States declined to accept the compromise offered and in explanation of its rejection, the State department said:

The position of the government of the United States has been and now is that any limitation of naval armament to be effective should apply to all classes of combatant vessels. The Franco-British agreement provides no limitation whatsoever on six-inch gun cruisers, or destroyers or submarines of 600 tons or less. It could not be claimed that the type of vessels thus left without limitation are not highly efficient fighting ships. No one would deny that modern cruisers armed with six-inch guns, or destroyers similarly armed, have a very high offensive value, especially to any nation possessing well-distributed bases in various parts of the world. In fact such cruisers constitute the largest number of fighting ships now existing in the world. . . .

The government of the United States has earnestly and consistently advocated real reduction and limitation of naval armament. It has given its best efforts toward finding acceptable methods of attaining this most desirable end. It would be happy to continue such efforts but it cannot consent to proposals which would leave the door wide open to unlimited building of certain types of ships of a highly efficient combatant value and would impose restrictions only on types peculiarly suited to American needs. . . .

The American proposal at the Geneva conference was, for the United States and the British empire, a total tonnage limitation in the cruiser class of from 250,000 to 300,000; and for Japan from 150,000 to 180,000; for the destroyer class for the United States and the British empire from 200,000 to 250,000, and for Japan from 120,000 to 150,000 tons; for the submarine class for the United States and the British empire 60,000 to 90,000 tons and for Japan 36,000 to 64,000 tons. It was further stated by the American delegation that, if any power represented felt justified in proposing still lower tonnage levels for auxiliary craft, the American government would welcome such proposal.

The purpose of these proposals was that there might be no competition between the three powers in the building of naval armament, that their respective navies should be maintained at the lowest level compatible with national security and should not be of the size and character to warrant the suspicion of aggressive intent, and, finally, that a wise economy dictates that further naval construction be kept to a minimum.

The next and most important movement toward limitation took place early this year soon after the new administration had gotten under way. The Coolidge administration having failed to solve the problem along "technical lines," the Hoover administration began seeking one along "broad political lines." One of the most hopeful signs looking towards its success is the speed with which the negotiations have progressed. On April 22 of this year Hugh Gibson, ambassador to Belgium, in an address before the preparatory disarmament conference at Geneva told of President Hoover's desire to lend the administration's active support of a constructive limitation program and proposed the now famous "yardstick" method of attaining practical parity between the United States and Great Britain. In the meantime the elevation of Ramsay MacDonald to the premiership in England had given a promise of more liberal policies in Great Britain and a weakening of the reactionary tendencies of the admiralty, whose being in the saddle has resulted in England's insistence upon her continued supremacy.

On June 8, Premier MacDonald let it be known that he planned to visit Washington to confer personally with President Hoover on the naval problem. This announcement made a decided hit with the American public and the increasing Anglo-American friendliness was furthered by the appointment of General Dawes as American ambassador to Great Britain, the warmth of his reception there and the speed with which the new ambassador and the English premier took up the disarmament problem. On June 18 Dawes and MacDonald, speaking at two different meetings in England, uttered joint statements in regard to the naval negotiation in which both emphasized that the problem was to be approached from the broad viewpoint of policy and mutual confidence. Both men emphasized the fact that their conversations on the naval problem were in no sense a preliminary to an Anglo-American alliance which could be used as a threat against other nations, but that the two countries were simply joining in mutual confidence and friendliness to take the lead in bringing about a solution of this important problem. In fact, it became known that before making his speech, Mr. Dawes had submitted it to the representatives of the other three powers and that they, while not officially approving it, are fully in sympathy with its aims. Further than that the MacDonald-Dawes discussions have been extended to include the representatives of France, Japan and Italy with the result that a five-power naval conference looms as a strong possibility in the near future.

Although there has been considerable speculation as to the points upon which the conference will be held and many guesses already have been made as to its probable success, nothing definite is yet known about any of these matters. The spirit in which the preliminaries have been entered for such a conference promises well for the success of the undertaking. On both sides of the Atlantic there is a feeling that something definite in regard to limitation of naval armament is about to be accomplished. Its failure may well be a cause for despair for as Ambassador Dawes in his speech said:

"Congress has already by law committed the United States to an immediate naval program involving over $250,000,000, giving, however, to the President power to suspend it in the event of an international agreement for the limitation of naval armament."

On May 31, last, the secretary of state of the United States said: "I have in my possession a memorandum from the director of the budget showing the cost of the program commended by the Navy department in case the policy of naval reduction which the President advocated is not adopted. That memorandum shows that the authorized and contemplated naval program for the construction of new ships alone amounts to $1,000,000,000.

"When it is borne in mind that the foregoing figures involve a construction program of only one nation and that, if it proceeds, other nations will be compelled to follow suit, the burden of unproductive expenditure which will be imposed upon the economic world within the next fifteen years can to a certain extent be realized."

POULTRY

DAMP FLOORS ARE MENACE TO FOWLS

Owners Who Tolerate Them Are Inviting Big Losses.

Damp floors in poultry houses are inexcusable, in the opinion of E. R. Gross, agricultural engineer at the New Jersey Agricultural Experiment station. Poultrymen who tolerate them are inviting heavy losses in their flocks and a general reduction in the efficiency of the birds that survive.

A dry wooden floor may be made of two layers of boards with building paper between, the top layer to be a good grade of matched flooring, so that it may be kept clean. Many poultrymen find it desirable to keep the floor 12 to 18 inches above the ground and to leave the south foundation wall open for air circulation. The other sides should be closed tight to keep out cold winds.

For a dry concrete floor, either of two methods may be used. The first is as follows: Build the foundation walls; level the ground inside, do not remove any soil; fill in with 6 to 8 inches of coarse sand, gravel, or cinders; and place 3½ to 4 inches of concrete floor on top. In this construction, be sure the foundations are high enough for the fill of cinders and the floor. This raised floor with insulating fill will be dry.

The other method is to lay a two-course concrete floor with a layer of roofing paper between.

Sometimes the floor itself is not the cause of dampness. Then the remedy must be sought in a study of the care of the house ventilation, litter, or sunlight admitted.

Highly Concentrated Foods Hurt Turkeys

The turkey has a rather large digestive system and long intestines, accompanied by an ever-present appetite, so that if birds are compelled to satisfy this appetite on highly concentrated foods, indigestion is almost certain to result.

If this is not immediately relieved death will follow, and usually salts or, better still, castor oil will effect a cure.

Plenty of green food is essential to young turkeys, such as alfalfa (if quite tender), clover, lettuce, chopped onion tops and dandelion leaves. All green food supplied to turkeys should be cut a little way up from the ground to avoid black-head contamination that may chance to lurk in the soil.

Fertile Eggs Reason for Paltry Returns

Nature intends the egg to hatch a chick. To get the best food results from eggs we have to defeat nature's purpose by producing infertile eggs. A fertile egg is just as good as an infertile one if it is used at once, but it won't hold up under summer market conditions.

Sell or confine the roosters as soon as the breeding season is over. The hens will lay just as well without the male in the flock. Using early hatched cockerels is a good breeding practice on the farms. Selling them as soon as your hatching season is over saves a feed bill of from 90 cents to $1.50 each. If you have particularly valuable males, confine them.

Difficult to Decide Sex of Young Poults

It is difficult to be absolutely sure of the sex of young turkey poults. The males will usually "shoot the red" and show development of the fleshy growth on the head a little sooner than the females, and they are also likely to grow more rapidly than the females.

With the Bronze variety of turkeys the sex can also be detected by the plumage color as soon as they are well feathered. The breast of the females show the characteristic white tips to the breast feathers, while the males will show dark tips.

Changing Breeds

Several years ago it was common advice to avoid changing breeds of poultry. That was before the days of the large hatchery when poultrymen established a flock with a few settings of eggs, possibly bought at a high price, and then spent several years in developing their own flocks. A change meant starting all over. In many cases birds of both breeds would be retained and soon a pure-bred flock became a flock of crosses followed by a flock of mongrels.

Birds Not Wanted

Most poultry keepers realize that there are two courses open to them in regard to unwanted males. One plan is to destroy them as soon as they can be distinguished; and the other is to feed them well right from the first day and so bring them to a fleshy condition. The latter practice is sound so far as the early cockerels are concerned, but very few poultry keepers approve of it for later broods. Some poultrymen do not hesitate to can all surplus fowls.

Favor Vaccination

While the last serious outbreak of olera occurred in 1926, proper pre- tions should not be neglected this mer. Plowing under old hog lots vents the spread of the germs ich might be lurking in the refuse und the lot. The ground should be nted to some crop for a season be- e placing hogs on it again. Hog ses should be cleaned out and thor- hly disinfected by spraying with a ndard disinfectant solution at least ce each year.

Plant Lice Have Odd Life Cycle

Little Insects Often Do Serious Injury to Different Crops.

(Prepared by the United States Department of Agriculture.)

Aphids, or plant lice, which often do serious injury to the plants they infest, have a curious life history, which Dr. P. W. Mason of the bureau of entomology describes in the 1928 Yearbook of the United States Department of Agriculture, issued recently.

"If we examine a branch of a tree or other plant which is infested," says Doctor Mason, "we will see the aphids, in most species grouped together in colonies, usually either on the under side of a leaf or along a twig. They may be greenish, brownish, black, or of other color, depending on the species, or even covered with a mealy powder or long waxlike filaments.

Unusual Life History.

"These insects have a very unusual life history; one differing from those of almost all other insects. The egg is laid in the fall of the year, usually on the bark of the twig. With the coming of warm weather in the spring this egg hatches into what is known as the stem mother. There are no males until the next fall. The stem mother gives birth to living young, without the necessity of fertilization. These young are all females, and, when mature, give birth to other living young. This continues throughout the summer, there being numerous generations. In each generation there are usually some which are winged and others which are wingless, each form being fully mature. As the spring advances the number of winged forms increases, until, in the case of many species, they fly away to an entirely different kind of plant. Plants so chosen are known as summer hosts; on them new colonies are started, and there may be several generations on them before the return migration to the winter host. On the latter the true sexes which have been produced mate and the eggs are laid.

Forms of Aphids.

"Thus we see that there are several forms of aphids, such as the stem mother, the wingless viviparous female, the winged viviparous female, the male, and the egg-laying female. These may vary considerably from each other in appearance and have often been described as distinct species."

Mixed Fertilizers Paid in Wisconsin Corn Test

One hundred and twenty-five pounds of 4-10-6 fertilizer dropped in the hill at corn planting gave an increase of 18 bushels and gave a quality of corn that would be considered by the Wisconsin experiment station on a field near Madison. The field had recently had a crop of clover and was considered to be average corn land for that section of Wisconsin.

Prof. E. Truogg, of the University of Wisconsin, says there is a real need for the determination of the right time and method of application of fertilizers. In further studies of the way to distribute fertilizers, the manufacturers of farm machines and fertilizer companies and representatives of the Mid-West experiment stations are co-operating on a plan to study the proper methods of application and distribution of fertilizers. The project has a far-reaching importance and is being watched with a great deal of interest by farmers and agronomists all over the country. Professor Truogg is chairman of the joint committee.

Agricultural Notes

Limestone is worth as high as $40 per ton when applied to soils in many sections.

* * *

Pasturing sweet clover in the fall cuts down the storage of the plant food in the roots.

* * *

Wool should never be tied with binder or sisal twine or wire. Use four-ply paper twine.

* * *

Hay making has not been given the attention in the past which the importance of the crop deserves.

* * *

A fence post rots nearest the surface of the ground because the growth of the fungi causing rotting requires heat, light, moisture, and food.

* * *

Farms on which weeds are kept under control have less plant disease than have other farms where uncultivated areas grow up into a luxuriant mass of weeds.

* * *

A single female fly will lay from 150 to 600 eggs which hatch in less than 24 hours, and in very warm weather a generation of flies may be produced in two weeks or even less.

* * *

Not only is the hay crop one of the most valuable from the money standpoint, but present day feeding methods have also made it one of the most necessary to the live stock producer.

* * *

The Hessian fly is widespread over the wheat belt this summer. Every farmer should know that the pest may come back in sufficient numbers to do great damage to the fall sown wheat. Plow under all infested stubble, being sure all tops are covered.

Vacation Trips

Bizarre Float in the Carnival at Nice.

(Prepared by the National Geographic Society, Washington, D. C.)

WHEN millions of Americans leave for three days, three weeks, or three months at the beach or the lakes, on the farm or in the mountains, they are hitting an age-old trail.

Laps, of Lapland, and the Bakhtiari, of West Persia, take the vacation trail to a cool summer climate, and it is called a migration because they have to go. The Athenian gentleman went to Olympia and called his recreation interval the Olympic games. In China and India popular thought satisfies the vacation impulse by religious pilgrimages. Some people, not yet entirely accustomed to pleasure for pleasure's sake, go to health springs, "bads," or spas, but it is a vacation, nevertheless, and a salutary one.

Olympic games of ancient Greece were probably the first vacation excursions. Before their organization, 800 years before the birth of Christ, traveling was risky. The mountains might invite in summer, but if a man loved life, he stayed in his own little kingdom, though he cooked and boiled and baked in the sun. In Greece, for one month following the first full moon after June 21, every four years, a general peace proclamation went out through the states of Greece, permitting contestants and hordes of excursionists to go safely to the beautiful vale of Olympia.

Rome marked its conquests not with lead plates or flagpoles, but bath houses. Many of the innumerable health springs of Europe, gathering places for multitudes for the cure of disease and the enjoyment of rest or sport, boast of Roman origin at the hands of the "amphibian legionnaires." The site of Bath in England attracted one of the largest Roman settlements by its famous springs. "Bad" in German means "bath," and towns with "bad" before or after the names are almost as frequent as "Main Streets" in America. This word "spa," for health spring resort, has its origin in the Belgian town Spa, once the most famous in Europe.

Resorts of Royalty.

The prince of Wales goes in for outdoor life on a Canadian ranch; the king of Spain summers at San Sebastian, the Spanish counterpart to Biarritz; whereas Peter the Great of Russia, and monarchs of Austria and Sweden, soaked in and drank chemically-scented water in Spa. King George, of England, goes to the seashore or to the Scottish moors for a vacation, but his ancestral namesakes went to the pumphouse of Bath.

In the hills west of Peiping (Peking) are the ruins of one of the most beautiful summer resorts the world has seen, the summer palace of Manchu emperors. The Jade fountain, a fine large spring, has been the site of summer palaces for Chinese sovereigns since the Tenth century. But the most beautiful was that built by the poet emperor in 1661. Jesuit priests described to him the beauties of Versailles palace and he wove some of the designs into his own plans. A Jesuit supervised the development of the palace enclosure. Here the emperor took his ease on a royal barge floating on a sapphire lake in the midst of which rose an artificial mountain girded with marble bastions.

Climbing Fujiyama is the cherished Japanese idea of a vacation. Although the numerous hot springs of the nation attract thousands annually, Mount Fuji is their mecca. Every true Japanese expects to climb it once in his lifetime. It is sacred to both Shinto and Buddhist believers; to the former it is the beautiful goddess "causing flowers to bloom brightly," to the latter it is the folded bud of the sacred lotus. The desire to climb the perfect snow-white cone of Fuji has given rise to vacation lotteries throughout Japan. The lucky ticket gives its holder sufficient funds to ascend the supreme altar and salute the sun as it turns the sea of cotton, as the Japanese call the cloud roof, into a fleece of gold.

Lucky are the Mohammedan pilgrims bound for Mecca when their shifting calendar brings the hollest time for this journey into the spring, for that is the most delightful season in the desert.

Playgrounds by the Sea.

Each nation has its Atlantic City. Peruvians go down to Barranca on the Pacific the French in Algeria go to Tlemcen in the hills back from the Mediterranean, Athens listens to French operettas in Phaleron on the bay, where galleys of ancient Athens were sheltered. Egyptians desert the muddy Nile for Ramleh, a few miles from Alexandria and on the edge of the delta's fan. The Lido, an island near Venice, is the famous ocean resort of Italy; and the east shore of the Baltic is one vast bathing beach during the brief summer which that region enjoys.

One of the best known of the world's playgrounds is the Riviera—that sun-drenched shore of the Mediterranean, where France and Italy meet. Nice, chief town of the Riviera, is often cavilled at as too boisterous, too crowded, but it continues despite all that to be the capital of Europe's winter playground. Cannes draws to its villas and hotels those of quieter tastes. Mentone lures its invalids, while all the other scores of resorts along this sun-bathed Mediterranean coast draw to themselves apropriate groups of those in search of pleasure, rest, or health. But Nice is the meeting place for all as well as the place of temporary residence for thousands who find this bustling city and well-equipped resort, rolled into one, exactly to their liking.

Nice's gaiety rises in crescendo to the carnival which takes place just before the beginning of Lent each spring. This more or less historic celebration, a type for numerous festivals around the world, began as a modest fiesta many years ago. It became an organized celebration in 1871, and has drawn increasing crowds since. It must be admitted, too, that it has grown in rowdyism. There are quiet-loving souls who leave Nice for the carnival just as there are those who flock there for it. The celebration centers about the battle of flowers in the Promenade des Anglais. There are parades that feature the ludicrous as well as the beautiful, and the inevitable dominos, masques, street songs, street dances, horns and confetti.

Many English in Nice.

There is a considerable English colony at Nice. It dates back many years as one might surmise when he learns that the Promenade des Anglais has borne its name since 1821. Some of the earliest of the seekers of winter sunshine from the British Isles were in the modest Riviera town that year when an unusual cold snap ruined the orange crop. They clubbed together and gave the unemployed natives work by building a road along the seashore—the Promenade des Anglais. A wag has said that this roadway was built by the unemployed and has been used by the unemployed ever since. The chief boulevard and shopping street in Nice is the Avenue de la Victoire. With its smart shops and smartly-dressed shoppers, it is a typical Parisian boulevard in miniature form.

New Nice, with its wide streets and bright buildings, has grown over a large area, almost obscuring quaint Old Nice. One finds the old town in a seemingly compressed quarter across a little torrent from the newer city, between the stream and a buff-like promontory, Castle Hill, which was the acropolis of the earliest settlement. On one side of the stream are narrow, crooked streets, houses centuries old and here and there ruined palaces. It is a medieval-looking place, but is inhabited by thoroughly modern mechanics, tram drivers and other less opulent inhabitants of the city. On the other side of the stream lies the new city with its avenues and promenades, theaters and casinos, sweeping up hill inland to a zone of hotels, palaces and villas.

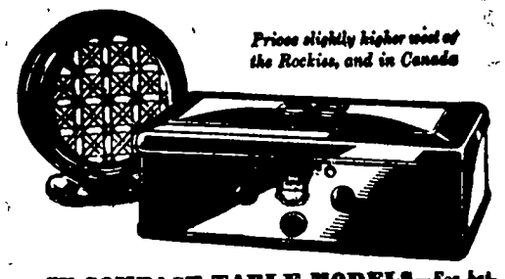
Although many criticize Nice for its modernity and its too-rapid growth, all agree that its setting on a spacious, sparkling bay enfolded by green and lavender hills, is superb. To see the city and its surroundings at their best one should ride over the famous Grande Corniche road. From Nice it climbs to a high shelf (the name means "great cornice or shelf") on the island hills overlooking the entire region both seaward and off to the snow-capped alps. Napoleon built the road between 1805 and 1812 to facilitate military expeditions toward Italy. Now it is given over almost entirely to pleasure traffic. Over it "during the season" whiz char-a-bancs and motor buses and private cars. After warm weather brings an end to the season this road of incomparable views is almost deserted.

ATWATER KENT RADIO

HERE IT IS...*from the* LEADER OF RADIO

***New Screen-Grid, Electro-Dynamic* BATTERY SET**

of course it's an Atwater Kent!



Prices slightly higher west of the Rockies, and in Canada

YOU families who haven't electricity—who use batteries to run your radio—how you will relish the news that Atwater Kent has ready for you a completely new battery set with all the very latest proved improvements.

It, too, is Screen-Grid.

It, too, is Electro-Dynamic. It, too, has the power to leap across the map and bring in those far-off stations. It, too, has the depth and richness of tone, heretofore thought possible only in house-current sets.

It comes from the same 32-acre factory built by the good-will of 2,550,000 owners of Atwater Kent Radio. It's made with the same painstaking care that keeps an Atwater Kent working without time out for trouble. For months it's been tested—and tested—and tested again, on farm after farm, in state after state.

It's the modern battery set that *you* have been asking Atwater Kent to make. You can have it in the compact table model or your choice of fine cabinets designed and made by the leading furniture manufacturers of the country. And, best of all, you pay only a moderate price.

IN COMPACT TABLE MODELS—*For batteries*, Model 67 Screen-Grid receiver. Uses 7 tubes (3 Screen-Grid). Without tubes, $77.

For house-current operation, Model 55 Screen-Grid receiver. Uses 6 A. C. tubes (3 Screen-Grid) and 1 rectifying tube. Without tubes, $88.

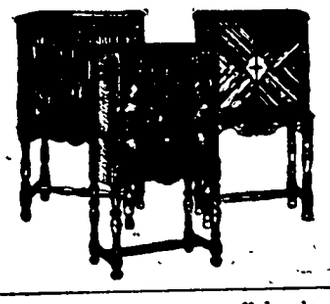
Electro-Dynamic table-model speaker, $84.

ON THE AIR—Atwater Kent Radio Hour, Sunday Evenings, 9:15 (Eastern Daylight Time), WEAF network of N. B. C. Atwater Kent Mid-Week Program, Thursday Evenings, 10:00 (Eastern Daylight Time), WJZ network of N. B. C.

ATWATER KENT MANUFACTURING CO.
A. Atwater Kent, Pres.
4764 Wissahickon Ave. Philadelphia, Pa.

IN CABINETS

The best American cabinet makers—famous for sound design and sincere workmanship—are cooperating to meet the demand for Atwater Kent Screen-Grid Radio in fine cabinets like these.



Find New Composition Helps in Tree Surgery

A composition somewhat like putty in its consistency has been recently found of value in filling broken or splintered woodwork. It has several advantages over putty and other materials designed for this purpose in that the woody composition may be cut, carved and treated as wood, whereas this cannot be done with putty. By some modification the same idea has been successfully applied to tree surgery. Concrete has been used for the purpose of filling cavities in trees caused by rot, but because of the constant motion of the tree trunk this has a tendency to break away from the sides of the cavity and in order to hold it in place it is necessary to insert metal strips. The wood composition does not do this and really acts to a great degree like the wood of the tree trunk, contracting and expanding in the same manner, so that it is quite durable. The material was that used by a Philadelphia tree surgeon who gave the new filler a long and severe test before making any announcement of the discovery.

Globe House Not Popular.

Although it has commanded world-wide interest the globe-shaped house invented by a German has not been taken seriously in Germany. There has not been a single duplication of the one shown last year at the Dresden exhibition, Germans preferring the present style of houses with corners.

Contagious?

Seymour—I found out that Patricia has a fever blister.

Oswalt—How did you find it out?

Seymour—I got it from her own lips.

Reckless

"Some fellows are foolish enough to rock the boat."

"This guy would rock an airplane."

After a man swears off he is apt to keep right on swearing.

Wise is the man who derives happiness from his delusions.

Three Generations Endorse It

"When I was a young single girl I took Lydia E. Pinkham's Vegetable Compound because my mother did and she gave it to me. After I married I took it before my children were born and afterwards, and I have eight living children. I am now a grandmother and still take it and still recommend it when any one is tired and run-down."—*Mrs. Alfred Iverson, St. Edwards, Nebraska.*

Lydia E. Pinkham's Vegetable Compound

Protect your hands with

Cuticura Soap

Always in view, your hands should be as attractive as possible. To prevent redness and roughness caused by daily tasks, use Cuticura Soap every time you wash your hands; always dry thoroughly . . . Assist with Cuticura Ointment if necessary.

Will Clash With Hayfield

Supt. Hunt of Hayfield has invited our kitten-ball team to play there on Friday evening a game against Hayfield High School. Many are arranging to go and we hope the team and new coach may have the support of a large number of boosters. The game will begin shortly after 4 o'clock. We find our lads play a better game when accompanied by a lot of wideawake boosters. Let's go!

LAURA ANN STEWART

Laura Ann Stewart was born in the state of Illinois June 29, 1842, and died at the home of her daughter, Mrs. J. W. Strain, September 12 age 87 years, 2 months, 13 days.

In early childhood she moved with her parents to Green county, Wisconsin, where she grew to womanhood.

On February 27, 1867 she was united in marriage to Byron Patton.

In the early seventies they moved to Franklin County, Iowa, making the trip in a covered wagon. Here she lived and made her home for some fifty years, but there came a time about 7 years ago, when her good health began to fail her, and she then came to live with her daughter, Mrs. J. W. Strain, where she received the best of care. Two years ago she suffered a slight stroke and since then was confined to her bed.

When a young girl she joined the Baptist Church and was a faithful member until the end.

She is survived by two children, Emmett W. Patton of Steele, North Dakota, and Mrs. J. W. Strain of near Klemme; also 3 grandchildren and several great grand children.

Two children preceded her in death, they are Nellie A., who died in infancy, and Dr. D. W. Patton, who died a few years ago.

Saturday morning at 11 o'clock Rev. H. E. Whyte conducted a short service at the J. W. Strain home, 8 miles north east of Klemme, where relatives and neighbors were gathered, after which the remains and the flowers were taken in the Wellemeyer hearse, and accompanied by relatives and friends in cars, the procession drove to Geneva, Iowa, where funeral services were held at 1:30 p. m. in Grandma Stewart's home town church, where she attended for half a century.

Interment was made on the family lot in the beautiful cemetery at Hampton, Iowa.

KLEMME SCOUTS GIVE RETURN PARTY TO CAMP FIRE GIRLS

Strenuous Game Period Ends With Lunch Served By Scouts

Last winter the Camp Fire Girls royally entertained the Boy Scouts and so last Friday evening the Boys of 56 returned the favor, and the Girls says they did it in fine style.

The entire affair was planned and carried out in detail by the Scouts themselves and the evening's program consisted of a program of active scout games and stunts which kept all in a hilarious uproar until mess cal sounded from the kitchen at the high cbool and all filed in to get their share of the fine lunch which was served cafeteria style.

Miss Marie Blank, leader of the Camp Fire Girls, assisted by some of the Camp Fire Girls, insisted on helping the Scout in the kitchen and their help was greatly appreciated.

All report a wonderful time.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Since next Sunday, September 29 is Conference Sunday, there will be no services of any kind at either the Klemme or the Liberty Church.

The Annual Conference session is held at Eagle Grove this year and will be within easy driving distance for anyone who might wish to attend.

We are glad to announce that our Rally Service in the League last Sunday evening was a fine success. There were forty-seven young people present.

TO HOLD COURT OF HONOR OCTOBER 13

CRYSTAL LAKE WILL BE SCENE OF AERA WIDE GATHERING

Klemme People Are Nrged To Attend Court Of Honor Oct. 13

The North Iowa Council, Boy Scouts of America, will conduct the fourth outdoor area-wide court of honor at Crystal Lake Sunday, Oct. 13. The first f this series was conducted at Belmond in 1926, the second at Pilot Knob in 1927, and the third at Rockford in 1928.

At these courts of honor, Scouts from all over the area come together to receive recognition for their achievements in the field of Scoutcraft. In the past, as many as 1,000 awards have been made at a single area-wide court of honor. The court of honor committee anticipates even a greater turnout of advancing scouts at th eCrystal Lake meeting.

The Crystal Lake meeting will be presided over by W. P. Butler of Mason City, chairman of the area court of honor committee. He will be assisted by O. J. Wardwell of Northwood, representing district one, composed of Worth and Cerro Gordo cunties; the Rev. C. E. Luce, Rckford, representing district two, composed of Floyd and Butler counties; Hal Luick of Belmond, representing district three, composed of Franklin and Wirght counties; and the Rev. C. H. VanMetre, Garner, representing district four, composed of Hancock and Winnebago counties.

Preceding the court of honor, a picnic will be held for all scout-leaders and their families. The court of honor meeting will start promptly at 3 p m.

These court of honor meetings, like all of the scout gatherings, are open to the public.

Klemme People Will Attend

Parents and friends of Scouts in Troop 56, Klemme, are urged to make plans now for the Court of Honor. Fair weather has been promised for the day and ideal picnic grounds abount at Crystal Lake so that family and group picnics could be greatly enjoyed.

Klemme Scouts are at work and the aim of Troop 56 is "100 per cent attendance and advancement at the Crystal Lake Court of Honor."

LIGHTS FOR THE PIGGIES, BUT DARKNESS FOR THE PEOPLE

Animals At Klemme Stock Yards Wil Enjoy Electric Lights

A fine improvement has been made at the Klemme stock yards this week and which will be greatly appreciated by live stock shippers. The Rock Island has had a crew of electricians on the job installing electric lights in the stock yards.

Each of the chutes will be lighted by a two hundred candle power electric light, while one hundred candle power lamps will light up the various alleys and pens, and the scale.

This improvement will greatly lighten the work of stock shippers who in the past were forced to work in semi-darkness with the light of lanterns, which slowed up the job of loading.

Why Not Lights For The People?

Now that the piggies and baby beeves are priveleged to bask in the rays of bright lights, we wonder if the mighty Rock Island Officials might not stoop low enough to offer us lowly humans a little light at the depot. We, who ocasionally use the depot as a waiting place, esepcially in the winter, should be treated at least as well as the hogs. The depot in winter is about as dark a place as can be found, lighted only by a smoky old kerosene lamp.

We are in favor of startnig a movement to put humans on the same plane as Klemme pigs.

NORTHWEST IOWA M. E. CONFENCE AT EAGLE GROVE

Klemme People Invited To Attend Conference There Sunday

The fifty-eighth annual session of the Northwest Iowa Conference of the Methodist Episcopal chruch began at Eagle Grove Tuesday, Sept. 24 and runs through until September 30th. Bishop Thomas Nicholson of Detroit, Mich., is presiding.

Other officials are as follows: the Rev. J. B. Walker, Sac City, secretary; the Rev. J. A. Barkley, Sergeant Bluff, statistician; the Rev. H. O. Ward, Manson, treasurer; the Rev. W. G. Muhleman, Eagle Grove, entertaining pastor; the William H. Lease, superintendent of Iowa district; the Rev. E. C. McDade, superintendent of Fort Dodge District; the Rev. J. H. Edge, superintendent of Sheldon District; the Rev. T. S. Bassett, superintendent Sioux City District.

Full arrangements were made for the entertainment of the many ministers and delegates who are attending the conference.

Klemme Is Represented

Rev. and Mrs. H. E. Whyte left Tuesday for Eagle Grove to remain there for the entire conference.

Tom Nelson, Jr., E. J. Arnold and Herman Gast are the delegates from Klemme for the local church and the Liberty church.

Klemme and Liberty Methodist are especially invited to attend the conference Sunday. Many are already planning to leave from here early aud wil take a picnic lunch with them and spend the day at Eagle Grove.

FARM BUREAU TO HOLD ANNUAL MEETING OCTOBER 2

Meeting Will Be Held At Britt And Picnic Dinner At Noon

The annual meeting of the Hancock County Fram Bureau will be held at the Memorial Hall at Britt on Wednesday, October 2.

Mr. R. K. Bliss of the Extension Service and Miss Daisy V. Williams, Secretary of the Iowa Farm Bureau Federation will be there to address the meeting. The speakers are both among the foremost leaders of the Farm Bureau work in Iowa and the Farm Bureau is extremely fortunate in securing them for their annual meeting. Every farmer in Hancock County can well afford to make a special effort to attend the meeting.

The regular business meetign of the organization will be completed in the forenoon. This will take up reports of the various officers and other things that come before the annual meeting. The afternoon will be given over to the program of speaking.

Picnic dinner will be served at noon. Coffee will be furnished by the Farm Bureau.

BIRTHDAY SURPRISE GIVEN FOR MRS. C. E. JOHNSON

Wednesday, September 25 was the birthday anniversary of Mrs. Clarence E. Johnson, but to make her birthday a pleasant one relatives and friends decided that a surprise party a little ahead of the time would be a more complete success. Accordingly the following packed baskets, filled high with a variety of good things and headed for the Johnson home Tuesday evening:

Mr. and Mrs. Joe Johnson, Gertrude, Irene and Arthur; Mrs. John Johnson, Bertha and Doris; Mr and Mrs. Art Kudje, Jackie and Pat; Mr. and Mrs. George Johnson and children; Mr. and Mrs. A. D. Gimer, Harl, Blanche, Thomas and Thelma, and Grandpa and Grandma Gimer.

It is needless to state that a very fine feed was enjoyed and all had a fine time.

Mrs. Johnson says it was certainly a complete surprise.

FOR RENT—

The Pabst 200 acre farm 3½ mi. N. E. of Klemme. All buildings will be overhauled next summer. See Mr. Arnold at First National Bank. 2tc

ELECT OFFICERS FOR ELL COMING YEAR

ELL TOWNSHIP LADIES PLAN HOME PROJECTS FOR YEAR

Election Of Officers Held At Meeting At Greiman Home

The ladies of Ell T wnship, interested in Home Project, met at the home of Mrs. Fred Greiman, Wednesday afternoon. Officers for the new year were elected.

The project for 1929-30 will be Foods and Nutrition.

Miss Johnston Demonstrates

Miss Johnston, assisted by Mrs. Schubert, conducted the meeting, and explained the work and also gave a demonstration on how to prepare and can chicken by bloodless method. Miss Johnston also gave the ladies patterns to make toys for the children.

Officer Are Elected For Year

Mrs. C. J. Wille is the newly elected chairman of Ell Township, and Mrs. R. W. Elder publicity chairman.

The Leaders were elected for the different school districts and are as follows: District No. 1, Mrs. E. V. Christenson; No. 2, Mrs. H. Yohn, No. 3, Mrs. Fred Grieman; No. 4, Mrs. W. J. Anderson; No. 5, Mrs. A. Bowers, No. 6, Mrs. E. Rosendahl; No 7, Mrs. Wm. Schlawin; No. 8, Mrs. Fred Becker, and No. 9 Mrs. Carl Wille.

The first meeting will be Saturday, October 5th at the home of Mrs. Chas. Griffen. Every leader put forth every effort to attend this meeting—make your District 100 per cent.

AVERY TOWNSHIP LADIES HOLD ORGNIZATION MEETING

Mrs. C. A. Arnold Was Re-elected As Township Chairman

An organization meeting was held at the home of Mrs. C. A. Arnold Wednesday, September 18 with Miss Myrtle Johnson as home demonstration agent.

The purpose of this meeting was to discuss the project which is second year Nutrition, and also election of the township chairman, publicity chairman and the local leaders. The township chairman Mrs. C. A. Arnold was reelected again for another year and the local leaders are as follows: District One, Mrs. Paul Goll; District Two, Mrs. Fred Bachman; District Three Miss Grace Blank; District Four, Mrs. Harry Carpenter; District Five, Mrs. W. L. Sherwood; District Six, Mrs. J. H. Sims; District Seven, Mrs. Harry Ostendorf; District Eight, Mrs. William Gealow; District Nine, Mrs. Eli Hetland.

Miss Johnston gave a demonstration on how to dress a chicken the bloodless method and also how to can it. She gave each lady a pattern to make a toy for the children.

The next meeting will be held on Friday, October 25th at Mrs. C. A. Arnold's home. The first subject to be studied will be Diet for Expectant Mothers and Infant Feeding.

Each lady will be requested to bring her own sandwiches, dishes, fruit or a creamed vegetable.

NEW SET OF BUILDINGS BEING ERECTED ON ULRICH FARM

Lloyd Ulrich Will Reside On New Farm Next Year

George Ulrich has divided his large farm northwest of Klemme in Liberty township and will make it into two smaller farms. To do this Mr. Ulrich is having an entire new set of buildings, house, barn, etc., built on his land about a half mile north of the home place.

Mr. Ulrich's son, Lloyd will farm the new section, and Walter Bredlow will reside on the home place.

KLEMME SCOUTS LEARN ABOUT IMPORTANT FIRST AID

At the meeting of Troop 56 Monday evening, the greater part of the evening's program was devoted to the study, demonstration and personal practice of artificial resuscitation, one of the most important things to know in first aid. This branch of first aid will be practiced until every Scout is proficient in its use and can work with groups without losing a second in perfect rithm required. Dr. Missman had charge of this work, assisted by the Scoutmaster.

Scouts of Troop 56 next week will review first aid and given further instruction which will lead to Scouts being able to pass this first class requirement.

An area wide inter-troop contest gegins Sept. 30th and runs for 8 weeks. Troop 56 is out to cop off first honors.

To win the contest there must be perfect co-operation by every member of the troop, and parents of the Scouts in Troop 56.

LLOYD LAU DRIVING A NEW MODEL ON DRAY LINE

Lloyd Lau has equipped his dray wagon with new model power to replace old King and his side kick who for ten or twelve years have given good service and never missed a shot.

The new power plant weighs about thirty-four hundred, has eight cylinders, color dark brown.

He bought this fine team from Albert Schmidt and it is as fine a team as has ever pulled a wagon.

Lloyd is a good horseman, keeps his team in fine condition and knows how to treat a horse right. A horse that belongs to Lloyd can consider himself a lucky animal.

COUNTY ROAD IMPROVED AT HIGHWAY JUNCTION

Corner At East Edke of Klmeme Is Also Made Wider

Men have been at work the past week putting the finishes touches on the junction of the road leading west out of Klemme where it meets the Wilson Highway.

At that point the corners have been widened out considerable and as a result of the work done the corner is now tri-angular shaped with wide, rounding corners. It is a fine improvement and makes a good entrance to the road into the town.

Another improvement on corners is made at the turn east of Klemme at the northwest corner of the Albert Barz farm. This corner likewise is greatly widened out to conform with county road building.

The gravel on the roads is beginning to pack down, and with a few fall rains should put the new gravel roads in good shape for the winter.

LADIES AID ELECTED NEW OFFICERS FOR COMING YEAR

The Ladies Aid Society of the M. E. Church held their regular meeting at the Parish House last Friday afternoon. The ladies brought along good things to eat and all enjoyed a supper following the meeting.

The following officers were elected for the year: President, Mrs. C. M. Gram; Vice-Pres., Mrs. C. F. Keraus; Secretary, Mrs R. A. Jorgenson; Asst Sec, Mrs. W. F. Pavey; Treasurer, Mrs. R. W. Elder.

The Aid took in $439.61 during the past year. This amount does not include the "penny bags" which may run the total up to about $465.00. Friday $19.35 had been turned in from the penny bags, but there were a number still outstanding.

The Aid enjoyed a profitable year and feel it was a year well spent.

MOTHER WINS THE BATTLE

(© by D. J. Walsh.)

ALLIE PECK had run all the way from home to her sister Lizzie's. She entered, breathless, to find Lizzie sitting at ease with a paper-covered novel in her hand.

"Mom's give out!" was Allie's despairing wail. She sank into a chair and began to cry.

"What you talking about?" demanded Lizzie, who, like Allie, was plump and husky-looking and dark-eyed.

"Mom's give out, I tell you. Heart's all gone to pot. And she's got asthma besides. Doctor says she can't live no time the way she is."

"Good land a-livin'!" gasped Lizzie.

They sat staring at each other helplessly. For the first time in their lives they were called upon to face a problem without the aid of mom herself. After a few moments, seeing that there was no help to be had from her sister, Allie wiped her eyes and rose to her feet.

"I'll go back with you," Lizzie said. She looked around the disordered room, consigned it to its fate, grabbed her coat and followed Allie outdoors. Together they hurried back through the streets until they came to the Peck dwelling, which was only half a run-down old building rented dirt cheap.

In a small cluttered bedroom lay mom on a none-too-clean bed. On one side of her lay a year-old boy sucking his bottle. On the floor sat a grubby-faced little girl of two-and-a-half, hugging a ragged teddy bear. Two other children under school age were squabbling over a bag of popcorn.

"Well, here I am," mom said, piteously. She was a tiny woman of sixty-three with anxious eyes and a grim mouth. Mom had borne eleven children, six of whom were living. She had had two husbands, both of whom were dead. Without any great help from either of these men she had struggled to bring up her children. She had stood 16 hours a day over the washboard and ironing board. She had had neither good clothing nor good food nor a comfortable place to sleep. Rest, peace and pleasure knew her not. Nearly all of what she earned went to help somebody out of a tight corner. Her family were always in tight corners. Now she lay in her daughter's room, dependent, helpless and despairing, with a wornout body and flagging breath and a heart that thumped and wiggled and threatened to stop. The doctor had been stern in his command that little old mom, who had always taken care of everybody, should now be taken care of.

There was a council outside, the house that afternoon. The children gathered in—the boys, Bill and Ed and Grif, and the girls, Allie and Liz and Conny. What was to be done? The doctor had been there again. This time he said the house must be cleared out and mom kept quiet—her life depended upon it.

Allie sat on the grass and wept. Liz clung to the clothes line and groaned. Connie sniffed softly. Ed smoked and Grif chewed gum. Only Bill seemed to be thinking constructively. Bill was a war cripple who drew a pension. He wasn't married. It was all he could do to take care of himself and even then he often had to call in mom to help him.

"Well, sir, it's up to us," Bill said. "Mom's stood by us folks through thick and thin. She's fed us and clothed us and got us up to be men and women. Now she's used up. We got to come across and help her to die comfortable, anyhow, if we can't do no more for her. It's no place for her here at Allie's with four kids sprawlin' over her the whole enduring time. It's no better where the rest of you live than it is here. As for me, I've only got a room, and I share that with another fellow. Folks, here's the long and short of it. Mom's got to go to Miss Clinton's."

Astonished looks, gasps, stirrings of objection. Miss Clinton kept a swell private hospital where they had trained nurses and things.

"Yes, sir!" said Bill, thumping the ground with his cane, "If mom's got to go she's going right. We'll pool together every last cent we can rake and scrape and send her to Miss Clinton's."

Clearly it was the only thing to do under the circumstances. The six children and their partners in matrimony scared up every last cent they had and it was just enough to keep mom one week at Miss Clinton's. After that—but they were too grieved to look ahead.

Toward night the doctor came and they moved mom round the corner to the big house that had been a private residence before it was a hospital. The boys carried mom on a cot, tenderly, solemnly. The others followed in a tearful procession. But mom scarcely knew anything that was going on now. She was too far gone.

Mom was put to bed in a sunny room with pink and gold fixings. Under her were fine coil wire springs, a spring mattress. She lay between sheets of the finest, smoothest texture. She was highly covered with a fleecy blanket. An alcohol rub made her feel rested. She had a new nightie with sprigs of pink flowers on it. There were roses on the stand beside her bed. And outside the open window in the swaying boughs of a green tree a bird sang.

The food was delicious. Mom could eat anything. Her stomach had never been crowded with rich viands. She enjoyed her asparagus, chicken, hot broth, eggs and tea which had real cream in it. She had ices, too, colorful things in tall thin glasses. Too sick to feel selfish or to worry about anything, she lay and took what was brought to her by the smiling, gentle-handed nurse. Peace, beauty, luxury enfolded her. She folded her thin hands and drew sighs of blissful comfort.

Nobody was allowed to see her. Her heart was much too weak. She did not speak, only she smiled faintly in apology or gratitude when anything was done for her.

The week passed. Again there was counsel. Where was more money coming from? Mom mustn't be moved. Mouths tightened, eyes grew stern with purpose.

Ed went out and sold his fiddle. It was a good fiddle and he loved it. But if he hadn't fiddled so much at local dances he might have had a good job this long while. The price of the violin went toward mom's fund. And Ed took his job. Lizzie decided to do some of the washings mom had been obliged to give up. Conny got back some regular cleaning jobs that she had turned down. Allie put her home in order and took a roomer. Grif and Ed settled down to the first real work of their lives.

Money came, mom's expenses were met the second week. The third week there was a good bit left over. The fourth week there was no question that mom could stay at Miss Clinton's all summer if she had to. Truth was, mom was picking up. The folks noticed the change in her every time they went to see her—color, added flesh, a new hopefulness. Mom wasn't going to conclude her existence after all.

There came a day when mom was declared fit to leave the hospital and go about her business. Then it was Miss Clinton spoke right to the girls who had come to conduct mom away.

"Can't let her go, can't spare her," smiled Miss Clinton. She patted mom's tight little hand. "She's going to stay here with me and help round at easy jobs and earn good wages."

Mom nodded joyously. "Yes, I be," she said. "And just as soon as ever I kin, girls, I'm going to pay you all back for what I've cost you."

"Mom!" cried Liz and Conny and Allie in one indignant breath, "Don't you dare! After all you've done for us. No, sir! We're doing well enough. You keep every cent you earn for yourself."

Mom stayed at Miss Clinton's. It was fun to work there. She might in time almost get strong again, though she couldn't last a week at the washtub, as Miss Clinton knew.

It was pleasant to go visiting the children. Some of them were buying homes and paying for them. They were all fixing up to beat the band. Everybody seemed to be getting a lot out of living these days. Mom wondered and wondered how it had all happened.

Time of Little Moment in Lives of the Mayas

One vast difference between those wondrous people (the Mayas) and ourselves is that they had all the time in the universe, and we're always hurried. In the Maya tongue are words for time periods tremendously longer than any we can find a name for.

One of their time units was 256 years. Another comprised 460 billion days! These and many other periods all had names. Yet, for all their prodigality with time, they measured it with exquisite precision. Not content with one calendar, they had at least three—computed by the sun, the moon and Venus.

They had twelve months of thirty days each, also eighteen months of twenty days; and they knew all about how to arrange the extra days, left over. Every day in the year had four names. The Maya time adjustments were far more accurate than the Gregorian system we ourselves use.

Their great cycle corresponded to the 1460-year Sothic cycle of the Egyptians, but the Egyptian calculation had an error of twelve days for the cycle, while the Maya system was precise to the very small fraction of a day.

The Maya lunar calendar was like the Metonic cycle of the Greeks, but the Mayas used it with far greater ease. In the very dawn of their history, their calendars had been for many centuries functioning. Their perpetual day count was cosmic in its sweep, dating back to a zero of October 14, 3373 B. C.

Without telescopes or chronometers they could predict eclipses and solve the most intricate astronomical problems. In these, as in so very many other ways, they far excelled the Spaniards who called them savages and butchered them wholesale.

With only stone monuments to serve as sighting lines for the naked eye, night after night their priest astronomers scanned the heavens and developed a mathematical system so complex that you would have to be almost an Einstein to grasp it at all.—George Allan England in the Saturday Evening Post.

Nothing

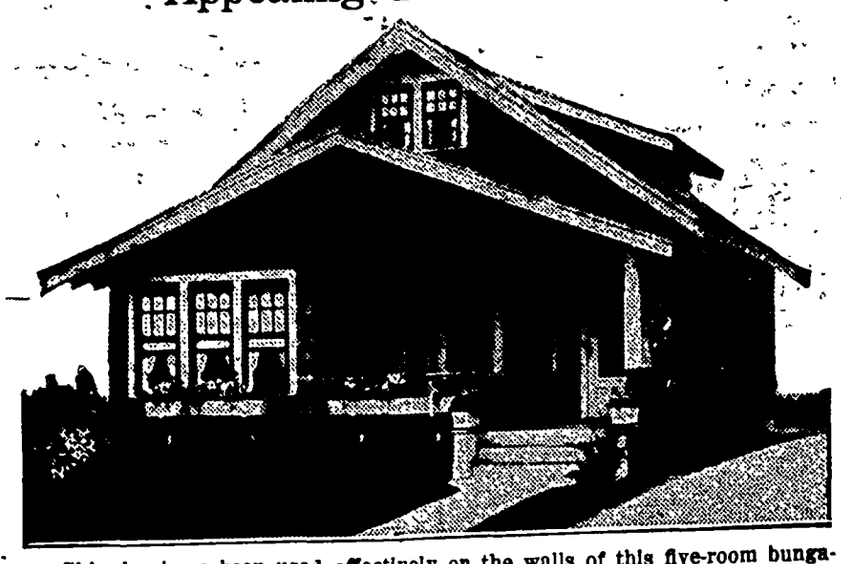
A youngster was starting to school and learning to spell.

"What does A B C spell?" he asked of his mother.

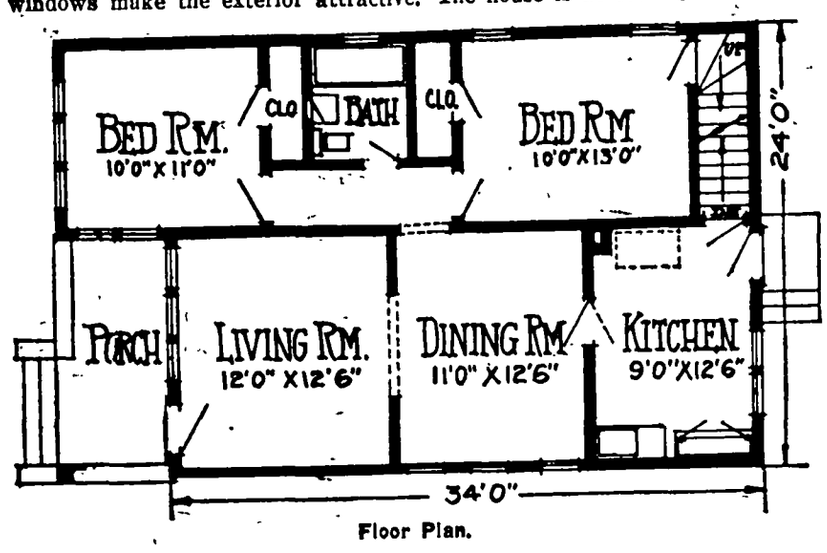
"Nothing," she said.

"Well, does X Y Z spell anything?" he again asked. And again the answer was "nothing." A small girl who had stood by, listening intently, remarked dryly, "It seems like there's a lot of ways to spell nothing."

Minimum Effort in Housework an Appealing Feature of Bungalow



Shingles have been used effectively on the walls of this five-room bungalow. The unusual lines of the gable in the porch roof and the well-balanced windows make the exterior attractive. The house is 24 feet by 34 feet.



Floor Plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

When city builders devised the apartment building to provide for several families on one building site, the fact that all rooms of the home were on one floor made a very pronounced impression on housekeepers. There were no stairs to climb and the rooms were arranged in a manner so that work could be done with the least amount of effort. It was because of the popularity of the city apartment that architects designed what is now known as the bungalow house. In the bungalow as in the apartment all of the rooms are on one floor and are arranged so that the housework is simplified.

Shown in the accompanying illustration is a design for a shingled bungalow that is most effective. The unusual lines of the gable and the porch roof and the well-balanced windows make the exterior attractive. This house is 24 feet by 34 feet and is of frame construction set on a concrete foundation. It contains five rooms—living room, dining room and kitchen on one side and two bedrooms with a bath between on the other.

The gables set in the roof are high enough for a great amount of attic space which through the use of so-called wall boards or insulating boards can be partitioned off into a playroom or bedrooms that will be available when needed.

The floor plan which accompanies the exterior view of the house shows the arrangement of the rooms and their sizes. It will be noted that the three rooms which are used in the daytime are together and are separate from the bedrooms. The bathroom is located in the center of the house and opens off a hall which connects the two bedrooms. This hall is reached by a door through the dining room.

An unusual feature of this home is the bedroom at the front. This is an unusually attractive room having five windows.

Stippled Wall Modern Method of Decorating

How many housewives face housecleaning season with the wish: "If only I could think of some way to renovate these old walls!"

Various paints, papers and fabrics may have been used, one after another, when something novel but not too expensive is wanted.

Today the tendency in wall-treatment is toward stippled, palm-finished, texture-and-glazed, "antiqued" and other rough-surfaced effects for walls and ceilings. These can be produced with sand-floated or lime-putty-finished gypsum plaster. But what is wanted is a material that will give these effects without replastering, over old walls, that is washable and possible for the housewife herself, or her husband, to apply.

There are several materials available which meet these specifications. They are paints which come as dry white powders which, when mixed with water, become plastic. Then dry pigment or oil paint of any desired hue or shade or tint is stirred in, and the material is brushed onto the wall.

But, while flat wall paints and calcimines are liquid, these materials have body.

So, before they dry, these can be stippled with an ordinary stippling brush, or given a scroll texture with the fingertips, or a palm finish can be produced with the palm of the hand, or the brush, putty-knife or even the heel of a kitchen spoon to produce any distinctive texture that may be wanted.

If one of these plastic paints is to be applied over new plaster or wallboard, it is best to size the surface first with a good grade of varnish size. If it is to be put onto old papered walls, the paper should be removed first; cracks should be patched and the sizing brushed onto the walls when they are dry.

Where it is desired to make the walls washable, a final coat of size should be added to the outside of the decorated surface. Then soap and water will not affect either the texture or the color of the plastic decoration.

The variety of texture-tone combinations possible with such materials is limited only by the imagination and skill of the decorator. They also lend themselves to "two-toning," glazing and similar rich effects.

Plumbing and Heating

Plumbing and heating supplies include innumerable products, sizes and types.

Check Losses of Heat Through Room Ceilings

Engineers have found that 62 per cent of the heat escaping from houses leaves through the roof or top story ceiling.

That is where the great heat losses occur in winter, and where the excess heat of summer penetrates to make upstairs rooms unbearably hot. The roof is the place that is cheating home owners of comfort and of fuel money every year.

It is only necessary to hold one's hand over a hot radiator to establish the fact that heated air rises, and as this heated air strikes the ceiling it transmits its heat on through to the attic. Because the heated air is always found at the ceiling line the temperature difference between the outside and the inside is greater there than along the walls. And this temperature difference is the factor that governs heat losses.

Furthermore, there is less resistance to the flow of heat at the ceiling line than in the walls, for only a thin layer of plaster separates top floor rooms from the attic, and above this there is little to stop heat from escaping. In many otherwise well-built houses one can actually see daylight through the spaces between rafters at the eave line in the attic.

It is very difficult to make construction tight at this point, and when winter comes the cold air enters through these openings and the heat created at great expense is lost.

Not only does heat pass through openings, it penetrates readily the layer of shingles and roof boards, which offer only a meager bar to its passage, and seeps out over the whole roof surface.

Stenciled Wall Popular as Interior Decoration

Many architects and builders fail to appreciate the great possibilities of stencil designs in interior decoration.

In the purchase of a home it is a well recognized principle among builders that particular appeal must be made to the prospective woman buyer. The home is her domain and she usually casts the deciding vote in the purchase.

There is nothing which makes a stronger appeal to the innate desire for beauty and individuality in the average woman than to find these qualities in the interior decoration of the home. In most cases the cost of such desirable results is prohibitive. For this reason the stencil should be particularly welcome to architects and builders.

Newest Dress Fabrics Composition of Metal

Flexible fabrics containing layers of metallic foil have been perfected by German manufacturers, and women soon may go to dances and the opera in stunning evening gowns of metal, while their escorts will be clad in a modern adaptation of the suits of armor worn by knights of old, says the San Francisco Chronicle.

The new "cloth" is made of thin sheets of aluminum, resembling tin foil or gold foil, and coated on both sides with protective material not unlike the plastic substances used in manufacturing rayon. This fabric is said to be almost as light as silk, tough as leather, waterproof as leather and bright and heat-reflecting as aluminum. Of this material raincoats, umbrellas, and even dresses and business suits may be made. Not only striking frocks for women, but also beautiful effects in household decorations will be obtainable in the new fabrics, according to the makers.

Devotion and Recreation

Members of the baseball team in Roanoke, Mo., go to Sunday school in the morning and to the baseball diamond in the afternoon. Responsibility for dividing the Sabbath day between the church and baseball is due to Eddie Lockridge, pitcher and star. He is active in church work and while not believing it is wrong to play ball on Sunday, has contended too much time is given over to the sport that day. In placing his position before his teammates Lockridge compromised with the understanding the team would go to Sunday school in the forenoon and play ball in the afternoon.—Indianapolis News.

Coal From Ice Fields

Every once in a while some scientist undertakes to figure out the amount of coal available, but it seems to be generally agreed among polar explorers that the world's greatest untouched coal fields lie in the Antarctic. There have been several reports of the presence of coal in the Antarctic regions and it is expected that they will be confirmed by Byrd.

Recovered His Horse

Anthony Wasko of Towanda, Pa., knows his horse and his horse knows him. It had been missing for a week. Anthony discovered a cave-in of an abandoned coal mine shaft where the horse had been grazing. He called down the shaft. The horse answered him and Anthony went for block and tackle. The horse was pulled out unharmed.

Perfection in Samplers

The old-fashioned sampler consisted of a square of perforated canvas, the rows of perforations being equally spaced. Designs were stamped on the canvas and filled in with different colored worsteds, the stitches forming little "x's." On the finest canvas this would almost give the effect of a painting.

Paris Rubbish Profitable

Nearly 800,000 tons of rubbish are being collected and incinerated every day in Paris. The waste gases given off in burning it are being used to produce electricity, and a big revenue has been derived from turning the clinkers into bricks.

Nor Measles

Teacher—Can you define heredity for us?

Jimmy—Er, yessum. It means if your grandfather didn't have any children, then your father prob'ly wouldn't have any and neither would you, prob'ly.

Getting a Husband

"What a girl needs in life is some good right arm to protect her."

"And if she doesn't happen to land a good right arm, a southpaw will do."

Matrimonial matches are frequently ignited on money boxes.

The Right Way to Redye Fine Silks

Textile makers always use special dyes for silk or wool. They know that is the best way. The makers of Diamond Dyes are the first to enable home dyers to follow this plan.

Next time you want to dye some of your more valuable articles of silk or wool, try the *special* Diamond Dyes *in the Blue Package.* They will give these materials clearer, more brilliant colors than any "all-purpose" dye. And they are just as easy to use as ordinary dyes. Like the *white package* Diamond Dyes, these dyes contain an abundance of the highest quality anilines. The *blue package* dyes silk or wool only; the *white package* dyes, or *tints*, any material. Either package; 15c, drugstores.

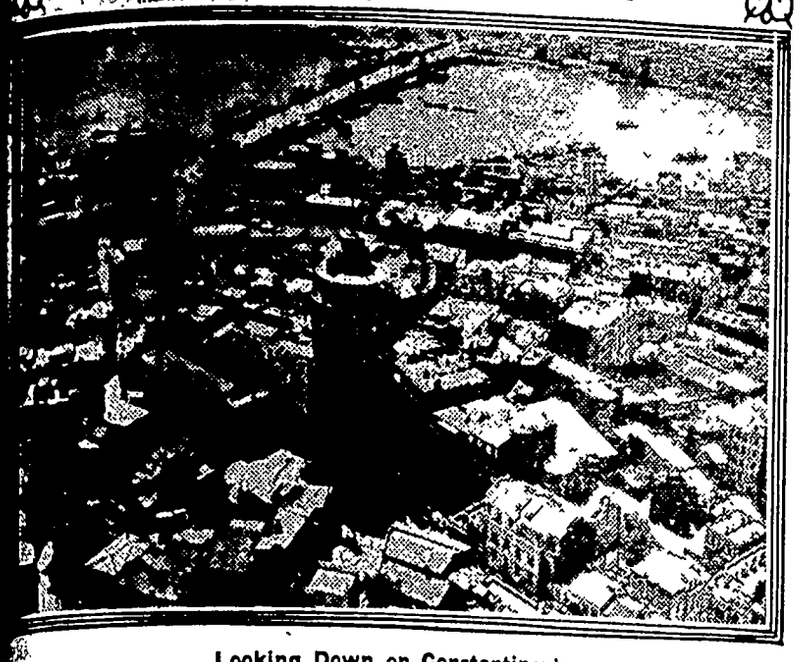
Clean, smooth color restored. Scuffs concealed instantly. The lustre of leather revived. 50 wonderful shines—50 cents. Colors for black, brown, tan and white shoes—a neutral polish for others.
BARTON'S DYANSHINE SHOE POLISH

FLYING OVER HISTORY



Looking Down on Constantinople.

(Prepared by the National Geographic Society, Washington, D. C.)

THERE are few opportunities anywhere in the world to see so many historic sites in half a dozen hours as during the brief plane trip from Constantinople to Athens.

The route is paved with geography; with history, which is geography in action with mankind; and with mythology, in which elemental geographic forces are given childishly human characteristics.

Poets and historians, ladies and their Leanders, Argonauts and Anzacs, have mosaicked with meaning this age-old route that the air traveler, combining it between breakfast and luncheon, would need that last-minute-before-drowning clairvoyance to take in even the broad outlines of the picture on the rift between West and East, Europe and Asia, sailor and nomad, Greek and barbarian, between what was known and what was off the map.

The battleship Agamemnon, leading the allied fleet into the Dardanelles, A. D. 1915, churned the very waters that bore to the siege of Troy Agamemnon's thousand ships, launched by a woman's face, almost as many years before the Christian era. Xerxes, Alexander, and the Turks, their exploits separated by centuries, all crossed the Hellespont at the same point. The northeasters that cool or chill both Bosporus and Gallipoli, and the treacherous currents which inspire gruesome gossip are the same that Strabo and Herodotus described.

The plane is fitted with pontoons and rises from the Bosporus. Behind, the Genoese castle of Anatoli Kavak, only a moment ago outlined against the Black sea, has flattened out against a northern tip of Asia Minor. As a point is rounded, with the palaces and embassy gardens of Therapia below, the view extends to the Golden Horn.

By the time the strait between Rumeli and Anatoli Hissar is reached the plane is so high above Mohammed the Conqueror's "Cutthroat Castle" that the ground plan, said to be a chirograph of his Arabic name, is just a comfortable eyeful.

The ground plan of Robert College takes on rare symmetry. In its center a football game is being played by two tribes of vari-colored ants. Now the Constantinople Woman's college is reached, its buildings aligned into one imposing facade.

The coal-pockets that smudge the view below Arnaut Koi sweep south toward the glittering jewel-box mosque of Orta Koi and the roofless ruin of Cheragan—palace, prison, and parliament house.

Looking Down on Stamboul.

There is a slight haze above Stamboul, the Seraglio palaces are visibly isolated from the teeming city; and the cornucopia curve of the Golden Horn—despite its fame, a mere nick in the eastern edge of Europe, is clearly cut between close-rooted slopes, rock-marked by fire and mournful with cypresses rising above marble-skeletoned cemeteries. The fabled seven hills unite into one main, curving ridge.

Now the plane is almost over fat-domed Sancta Sophia; and the six minarets of the Sultan Ahmed mosque, like needlelike from the ground, seem squat towers. The obelisks in the Hippodrome, Byzantium's antique pleasure center, have no height, but their shadows stretch wide across a park the perfection of which was never before so evident. One wonders when architects will begin to design structures to be beautiful from the air, as landscape gardening already is.

Outside the left windows the Princes Islands bathe in sun-spread quicksilver and the Gulf of Ismid loses itself beyond.

Off the right wing the landward wall of Byzantium, starting imposingly with the Seven Towers, dwindles away till its battlements are lost behind a hill overlooking the Sweet Waters of Europe.

Now one looks straight down on the Sea of Marmora, unexpectedly large and full of valleys. Around a tiny bay on the north edge, marble cliffs or slag slopes, white as chalk, describe a horseshoe curve.

Now Europe edges in from the right, with the ridge of Tekir Dagh, emphasized by cumuli, stretching down to the backbone to Gallipoli. What a place to study geography! The two most famous straits of olden times, where Helle drowned and Io, Hera's rival, forded the Bosporus.

Now the upper entrance to the Hellespont has been reached, with Gallipoli on the opposite shore. Just under the hull is a level hill where there used to be a Turkish fort.

A little farther on Lapsaki comes into view. It used to be Lampsacus and was famous for its wine and Priapic worship. The town, being made of mud and stone, may have moved about a bit, but the name has hovered right there since the days when Themistocles was its monarchos and the idea of hereditary monarchy was new.

Lapsaki has its own little marina, but the main town stands back from the water, its reddish-brown roofs arranged in seemingly perfect squares. The junction of land and water here is of extreme beauty, the shoreline edged with a greenish blue breaking away to the royal purple of the deeper water.

The ship seemingly increases its speed over the narrows where Leander swam to see Hero and set an example for Lord Byron and others. On a bridge of boats Xerxes crossed here to invade Europe. A century and a half later Alexander returned the compliment.

Beyond the Gallipoli peninsula one can see Suvla Bay and below is the old tower of Chanak Kalessi, until recently ringed with modern forts. Across the narrow neck of water is the trefoil fort of Kilid Bahr, a stalkless ace of clubs spiked down with a tall central tower.

And here is Troy, immortalized by Homer and Vergil, described by Strabo, a rain soaked, soggy plain, cut by mere brooks and utterly without dramatic quality.

The whole outline of Tenedos may be seen as one flies along, its central portion cultivated, its shoreline notched by ways to which the Greeks withdrew, leaving the wooden horse outside the Trojan walls.

The Isles of Greece.

There are pitch-black clouds ahead, their lower sides festooned with waving wisps of rain like Spanish moss. The plane swoops down to 2,000 feet. The long line of Lemnos fills the horizon at the right, and through the opposite window Lesbos (Mytilene) detaches itself from the flank of Asia Minor. Only indistinct suggestions of land lie ahead.

Skyros shoulders her blood-red, craggy cliffs toward the ship's path. When the flight has lasted three hours an Acropolislike plateau on Euboea shows itself. For the first time the plane dives directly toward the land to find a low, narrow pass above cultivated fields, salmon pink amid gray rock and lush green and dotted with circular stone threshing floors near the Gulf of Petali.

Then comes the supreme thrill; for there, sweeping round in a perfect curve like a gold-edged scimitar laid against the blue, is the Plain of Marathon. Hoary-headed Parnes looms beyond, and Pentelicus, neighbor of Athens and mother of her marbles, suggests how short a flight remains; yet how long that run for Phidippides, bringing news that the Medes and Persians were in flight and that Miltiades had won!

A wheel of spokelike roads, cutting the fertile Mesogaias, centers in Markopoulon. At least a dozen pleasant villages are in sight at once, pearl gray, amid crop and plow-stippled fields pushed to the limit of man's endurance against the dull skeleton of Attica.

Now the Saronic Gulf is below, opalescent tints showing on an oyster-shell-shaped beach. What seems to be the mainland to the left is really the island of Salamis. From Marathan to Salamis, a ten-year struggle for the Persians, and the flyer can cover it in the sweep of an eye!

A brightly tinted new town, its landscape gardening reduced to the proportions of a painting, grows below as the plane descends. Little Lykabettos spears up to the right, and the Acropolis begins to assume a fraction of its wonted dignity, as the very heart and center of Greek life.

There is a bus terminus, and down the plane comes, flashing past new villas and deserted piers. One final glance for the flyers at that historic plain between Parnes and Hymettos, and down their ship splashes like a duck, in Phaleron Bay, to the east of Piraeus.

Fresh Vegetables Saved for Winter

Are Far More Desirable for Table Use Than Canned Products.

Assurance of a fresh and healthful supply of garden vegetables for the winter months may be obtained economically by winter storage, it is pointed out by A. W. Binkley, of the department of horticulture at the Colorado Agricultural college.

Such root crops as potatoes, beets, carrots, parsnips, winter radishes, turnips and rutabagas may be stored easily, and in their fresh state they are more desirable than canned products.

Storing Root Crops.

Medium-sized, matured and perfectly dry roots, with the tops not cut too closely, are best for storing, it is stated. Only first grade vegetables should be stored.

One of the most satisfactory methods of storage for the small family is outlined by Mr. Binkley, as follows: Provide boxes of sufficient size to hold the quantity of vegetables desired. In the bottom of the box place a layer of fine moist sand (not wet), two inches deep. Place a layer of vegetables, then another layer of sand one inch deep. Continue until the box is filled, and place the box in a cool cellar. When the top layer of sand begins to dry out, sprinkle it with water to keep it moist.

Storing in Piles.

Vegetables may be stored in piles and covered with moist sand if there is enough room in the cellar, or they may be stored loose in bins in the cellar when larger quantities are to be stored. Cellar air must be kept moist by sprinkling the floor or by evaporation of water from vessels of water. Other methods and details concerning storage of onions, squash and pumpkins may be obtained by writing the Horticulture department at Colorado Agricultural college.

Practical Way to Keep Up Small Farm Orchard

This is the season when many of us wonder whether to cut down the old apple trees in the back yard or farm orchard or whether to really take them in hand and help them to produce decent fruit. We really should do one or the other, says a writer in the Illinois Farmer. Unsprayed, unpruned neglected fruit trees are a disappointment and an irritation to the owner and a source of disease and insect infestation to the orchards of neighbors who do care for their trees. Little fault can be found with the busy man on the average farm beset with surplus of work and shortage of help if he fails to take time to spray a few trees at the periods required for effectiveness. The farm spray ring is the only practical way we know to maintain the small farm orchard.

Many communities have such organizations and those communities always seem to have a local supply of good apples. Most of these spray rings are operated by farm bureau organizations. It is no heavy financial burden for a dozen or twenty farmers to provide equipment and materials for proper spraying and employ a man to do the job at the time it should be done, while it is usually out of the question for one farmer with 10 to 50 trees to do the same thing individually.

Reasons for Mulching Crop of Strawberries

There are several reasons for mulching strawberries. Perhaps the most important is that it makes clean berries by keeping grit and dirt off of them. It helps to prevent growth of grass and weeds; and also tends to conserve moisture. In the colder climates it hinders heaving and breaking of roots by alternate freezing and thawing. Any clean material free from seed of noxious weeds may be used for mulching provided it will not pack down and smother the plants nor blow away due to coarseness and being light.

Agricultural Hints

Calves will do well on pasture when it is available.

* * *

In 1927, 25,000 miles of new highways were laid in America.

* * *

A campaign against the weedy vacant lot will benefit the community as a whole.

* * *

Crops on marshes are more subject to injury from frost than those on upland soils.

* * *

Among the field roots commonly grown, carrots are the most firmly anchored in the soil.

* * *

Generally alfalfa is not considered to be desirable for silage except when conditions make the curing of hay impossible.

* * *

Sheep manure is a very rich manure, containing in its pure state about twice as much plant food constituents as cow manure.

* * *

Bloody milk in cows is caused by the rupture of small blood vessels, by direct injury or violence, and by the presence of small bleeding warts in the milk cystern.

"A Good Old Bread Recipe and Gold Medal 'Kitchen-tested' Flour"

Mrs. R. H. Wilkinson, Edinburg, Ill.

WIN FIRST PRIZE

for

MRS. R. H. WILKINSON

(Blue Ribbon Winner Home-Baked Bread, Edinburg, Ill., County Fair)

"At our county fair in Edinburg, Ill., last August I won 1st Prize for home-baked bread in the class open to everybody. I didn't use a celebrated cooking school recipe, but one taught me by my mother. My daughter also won 1st Prize for home baked bread in her class at the same fair—using the same recipe and no other than my favorite Gold Medal Flour! Proof, I say, that to get prize winners every time, use Gold Medal 'Kitchen-tested' Flour."

TODAY thousands of women have learned how to get perfect results with *all their baking*—"Blue Ribbon" cakes and pastries, bread and biscuits, every time!

New-type Flour Banishes "Luck" in Baking

They use a new-type flour for all baking purposes—GOLD MEDAL *"Kitchen-tested"* Flour—that simplifies baking remarkably and banishes the cause of most baking failures.

Failures, experts found, were mostly due to the fact that two sacks of the same flour often *acted* differently, even with the same recipe . . . it was not *uniform* in oven action.

So now all GOLD MEDAL is *"Kitchen-tested"* before it comes to you. As each batch comes through the mill it is tested by actual baking—bread, cakes, biscuits,

pastries—in an oven just like yours. Only flour which acts the same perfect way every time is allowed to go out to you. Thus you know in advance exactly what *your* results will be.

Special "Kitchen-tested" Recipes in Every Sack

(Changed every 3 months)

Please accept (free of charge) simplified recipes for the world's 12 most famous baking creations. Recipes for the daintiest cakes, the finest cookies, the most popular pastries known. Each one is "simplified" until it is remarkably easy, too. All 12 of these simplified *"Kitchen-tested"* recipes are inside every sack of GOLD MEDAL *"Kitchen-tested"* Flour. You can get a full set today—simply ask your grocer for GOLD MEDAL *"Kitchen-tested"* Flour. WASHBURN CROSBY COMPANY

GOLD MEDAL FLOUR

"Kitchen-tested"

Always sold in trade-marked sack—never in bulk

The Style

"Is the furniture in their home modern?"

"Sure! It's all antique."

C'est Ca?

Peggy—Going abroad?

Polly—Yes, I think I need a new French phrase.

Fixing the Detour

"What? The main road to Blinksville is open all the way?"

"Yes, we had to open it until we get the detour fixed."

Solitude is as needful to the imagination as society is wholesome for the character.—Dryden.

Extreme of Boldness

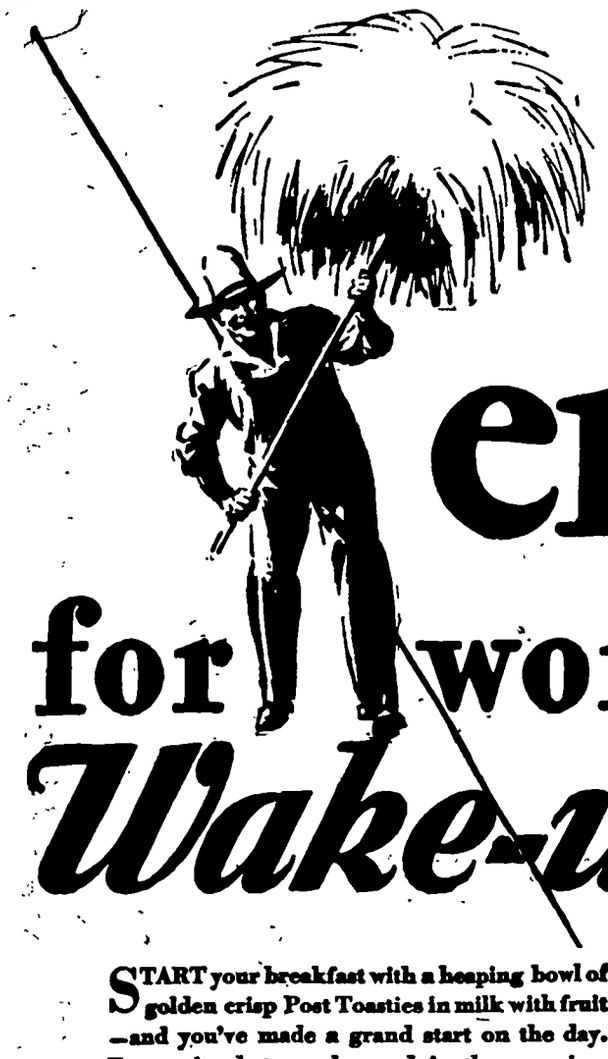
"She certainly is a bold thing."

"Terribly. She even high-hats her milliner."

The Pessimist

"I've got half a mind to get married."

"Well, that's all you need."



New energy for work in this *Wake-up Food*

POST TOASTIES

START your breakfast with a heaping bowl of golden crisp Post Toasties in milk with fruit—and you've made a grand start on the day. Energy is what people need in the morning. Here in Post Toasties, the Wake-up Food, is the kind of energy that gets to work for you quickly. It's called the Wake-up Food just for that reason!

And it's so good for boys and girls and grown folks because it is so easy to digest. They all just naturally take to that wholesome, delicious corn flavor.

Tumble the crisp flakes right out of the package into the bowl—they're easy to serve. Don't forget—there's just one way to get the Wake-up Food. Ask your grocer for Post Toasties—in the red and yellow wax-wrapped package.

HOW

STUDY OF SOAP BUBBLES HELPS THE SCIENTISTS—Blowing bubbles, once an exclusively childish pastime, now is a research activity of vast scientific significance. The lowly soap bubble has already demonstrated its usefulness as a replica of the internal combustion engine, as a miner of gold and other precious metals; as an object in studying the properties of light, and, for the first time, defines the rates at which gases explode.

Formerly regarded as an extremely simple thing, science has disclosed that the soap bubble represents a complicated process. This is true to such an extent that the heat division of the bureau of standards is consulting this flimsy mixture of soap and water to determine the exact behavior of our motor car and airplane engines. In fact, when the bubble is filled with a charge of explosive gases, Uncle Sam accepts it as a perfect internal combustion engine—operating without bearings, cylinder or piston.

The gaseous bubble is fired by a spark from the center The extreme delicacy and transparency of the soap film permit a continuous photographic record to be made of the progress of the explosive reaction, from the instant the ignition spark passes to the moment the reaction is completed. The photographic records, ordinarily obtained by virtue of the light from an electric spark, indicate that the behavior of the bubble is not haphazard and erratic but is in conformity with a well-ordered scientific process.

Popular Mechanics.

How Maggots Get Into Meat Left Uncovered

It was once universally believed that maggots are produced on dead flesh by abiogenesis or spontaneous generation, namely, nonliving matter produced living maggots. Aristotle taught spontaneous generation and stated as an observed fact that some animals spring from putrid matter. This belief persisted through the Middle ages and was not disproved until 1668, when an Italian named Francesco Redi established the fact that every living thing comes from a pre-existing living thing. Redi exposed meat to the air during hot weather. It soon began to putrify and was covered with maggots. He then placed similar meat in a jar covered with fine gauze and exposed it in the same manner. The meat began to putrify as before, but no maggots appeared on it. Blowflies, however, swarmed over the wire screen on the jar and in a few days the gauze was covered with maggots. This proved that the maggots were not generated by the corruption of the meat, but were hatched from eggs laid by the flies, and that the putrefaction of the meat was caused by smaller bodies which passed through the screen from the air.

How Paper Is Fireproofed

The bureau of standards says that a measure of fireproofing for papers can be obtained by spraying them before passing through the presses with ammonium chloride, ammonium phosphate, ammonium sulphate, or sodium borate, whichever is best adapted for the particular product. Paper so treated should not be considered as incombustible or greatly fire-retardant, since it will char and burn at the high temperatures incident with fires in buildings, although it will not ignite or support combustion as readily as the untreated paper. The more fire-resistive papers are usually made from asbestos fibers with a small admixture of ordinary paper, and a binding composition, such as glue and borax. They are rendered suitable for writing upon by calendaring. Special inks are prepared for use with such papers, both paper and ink standing up well under protracted exposure at temperatures that would completely consume the ordinary combustible papers.

How Salt Lake Was Formed

Scientists say that the physiography of the surrounding country shows clearly that the basin occupied by Great Salt lake is one of many left by the drying up of a large Pleistocene lake, which has been called Lake Bonneville. Well defined wave-cut cliffs and terraces show two distinct shore lines of this early lake, one the "Bonneville shore line," about 1,000 feet above the present lake, and the other, the "Provo shore line," about 625 feet higher than the present lake.

How to Tell Platinum

One of the most important properties of platinum is the fact that it is not easily attacked by acids. Pewter, on the other hand, is composed of tin and lead, with sometimes an addition of copper and antimony. All other metals are easily attacked by nitric acid or hydrochloric acid. The metal could be simply tested with one of these acids.

How Much Is a Micron

One micron represents one one-millionth part of the usual atmospheric pressure, which is 14½ pounds per square inch The interior of the usual incandescent lamp represents a vacuum down to about 150 microns.

SEAS NOT COLORED AS NAMES INDICATE

Tourists who have returned with stories of how red was the Red sea and what a lovely coal color was the Black sea should listen to French philologists and historians who have just discovered that the seas in question are neither red nor black. It appears that the word for major in Turkish is the same word as black, according to Dr. Jean Brunhes, member of the institute. Minor and red are also the same word. Furthermore, the maps that Marco Polo used were all marked Major sea and Minor instead of Black sea and Red sea. Of course certain brilliant red fish are netted daily in the Red sea and likewise there is in the water of the Black sea a carboniferous deposit which makes it look a little black. The Turks who gave these seas their names were to a large degree subject to Mongolian or Chinese influence. The old Chinese used to consider black as symbolic of north and red symbolic of south. Except for the fish and the aforesaid deposits, the tourists are not left with a leg to stand on.

Gladly Offered Life to Save Commander's

A young sailorman, Reuben James, after whom a United States destroyer is named, saved the life of Stephen Decatur, widely known naval officer. The incident occurred in a gunboat action in the war with the pirates of Tripoli. During the encounter young Reuben James stuck close to his commander's side, warding off the attacks made on Decatur from behind. When his right arm was disabled by scimitar cuts be shifted his cutlass to the left and fought on. Soon this arm was useless, too, and the weapon dropped from his hand. At that moment he saw a pirate lift his scimitar to strike Decatur's head as he lay on the deck locked in a death struggle with the Tripolitan captain. As both Reuben James' arms were useless, he deliberately put his own head in the way and caught the stroke aimed for Decatur. It was a mighty blow but the hard-headed sailor was back at his post in three weeks and lived to a ripe old age.

Drop in Meat Eating

The average American ate about 5 pounds less meat last year than he did the year before, and 8 pounds less than in 1926, a summary prepared by the Department of Commerce indicates

There has been a steady decline in the amount of beef and veal consumed, while pork has climbed but insufficiently to balance the loss in beef products. Lamb and mutton have held about even. Beef consumption has dropped from a per capita figure of 63.6 pounds in 1926 to 51.7 in 1928, while pork has risen from 65.7 to 73.9. Lamb and mutton have stood at approximately 5¼ pounds and veal has dropped from 8.2 pounds to 6.8 pounds.

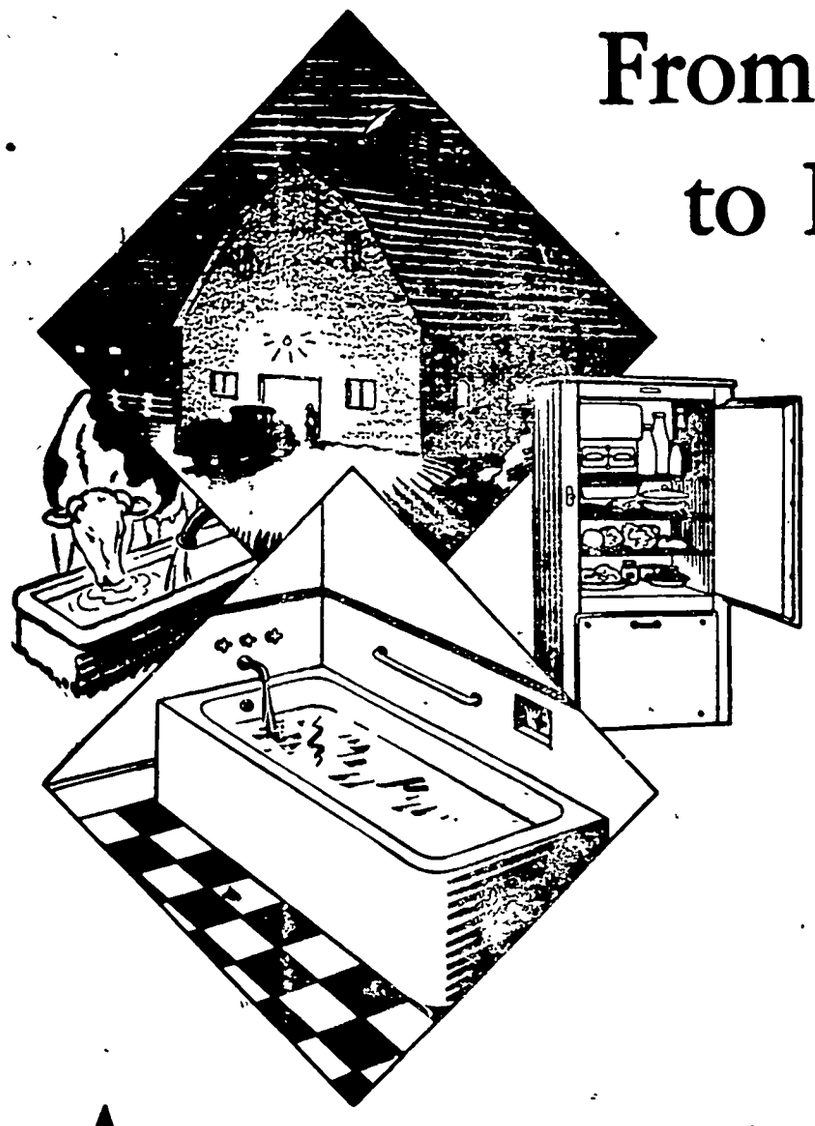
From BARN to BATH TUB



A farmer friend who owns two General Motors cars went to the city the other day and stopped in to see some cousins. They showed him around their new roof garden apartment, eighteen floors above the street, and proudly pointed out their Frigidaire in the pantry

"Well," chuckled our farmer friend, "Mother has a garden full of old-fashioned flowers that she'd never trade for theirs . . . and as for the refrigerator, we have a bigger Frigidaire than they have!"

He also mentioned his Delco-Light power system and his DL water pump, which give him every other city convenience. As he often says himself, his farm is "General Motorized from *barn to bath tub!*"

It is perfectly true that General Motors, through its various units, offers even more to the farm family than to the city family. By applying methods of automobile production to home electric lighting and power plants, water pumping systems, and automatic refrigerators, General Motors can make the reliable kind of product that a farmer wants, at a price he can afford.

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$695. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful Fisher Bodies. Also sedan delivery. Light delivery chassis. 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

PONTIAC. 7 models. $745 — $895. Now offers "Big six" motoring luxury at low cost. Larger L-head engine; larger Bodies by Fisher. New attractive colors and stylish lines.

OLDSMOBILE. 8 models. $875—$1035. The Fine Car at Low Price. Now offers further refinements, mechanically and in the Fisher Bodies — also eight optional equipment combinations in Special and De Luxe line.

MARQUETTE. 6 models. $965—$1035. Buick's new companion car, designed and built by Buick. Six cylinders. Fisher Bodies. Its price puts Buick quality and craftsmanship within reach of more families.

OAKLAND. 9 models. $1145—$1375. Oakland All American Six. Distinctively original appearance. Splendid performance. Luxurious appointments. Attractive colors. Bodies by Fisher.

VIKING. 3 models. $1595. General Motors' new "eight" at medium price. 90-degree V-type engine. Striking Bodies by Fisher. Unusual appointments. Also optional equipment combinations.

BUICK. 14 models. $1225—$1995. Three new wheelbases, 118-124-132 inches. The greatest Buick of them all. Many new mechanical features. Fisher Bodies with new lines.

LASALLE. 14 models. $2295 — $2875. Companion car to Cadillac. Continental lines. Distinctive appearance. 90-degree V-type 8-cylinder engine. Striking color combinations in beautiful Bodies by Fisher.

CADILLAC. 26 models. $5295 — $7000. The Standard of the World. Famous efficient 8-cylinder 90-degree V-Type engine. Luxurious Bodies by Fisher and Fleetwood. Extensive range of color and upholstery combinations.

(All Prices f. o. b. Factories)

ALSO

FRIGIDAIRE Automatic Refrigerator. New silent models with cold-control device. Tu-tone cabinets. Price and model range to suit every family.

DELCO-LIGHT Electric Plants—& Water Systems. Provide all electrical conveniences and labor-saving devices for the farm.

CLIP THE COUPON

General Motors (Dept. A), Detroit, Mich.

What goes on behind the scenes in a great automobile industry like General Motors? The inside story is told in a little book with lots of interesting pictures. AVERY TWIN LAKE NEWS ITEMS

(By Special Correspondent)

Miss Leona Buseman spent several days last week at home.

Miss Jennie Albers is assisting at the Albert Schmidt home.

Ronald Tandy was a Belmond caller last Saturday evening.

Edwin Josten was a Goodell caller one day this week.

Elmer Schlei called at the Owen Neuhring home one day recently.

Herman Priebe called at the Emil Lau home Wednesday morning.

Mr. and Mrs. George Buseman and family visited at the Henry Buseman home Sunday evening.

Bennie Beek and friends attended the Mission Feast at Elltown on Sunday evening.

Henry Buseman helped with the work at the Rob Roths farm Wednesday of this week.

Rev. Ackerman of Ackley was entertained to dinner at the Herman Priebe home Tuesday of this week.

Herman Priebe was a caller at the Julius Priebe home Tuesday forenoon.

The old school house in Twin Lake Dist. 1 was sold last Saturday to David Schwichtenberg.

Mr. and Mrs. Dick Swalve and son, Clarence visited at the Ben Swalve home Sunday evening.

Alvin Albers spent Sunday with his parents, Mr. and Mrs. Fred Albers and family.

Mr. and Mrs. Dick Swalve and Florence were Mason City shoppers Friday afternoon.

Mr. and Mrs. Herman Priebe and son Verner visited at the Henry Thieman home Sunday evening.

Mr. and Mrs. W. M. Schubert and family of Britt visited at the Emil Lau and Wm. Lau homes Sunday.

Mr. and Mrs. Albert Schmidt and family visited at the Wm. Lau home Sunday afternoon.

Mr. and Mrs. Elmer Schuttepelz and family, Grandma Schuttepelz, visited at the Herman Priebe home one evening last week.

A Farm Bureau Meeting of Avery Township will be held at the home of Mrs. Henry Church this Friday evening, September 27th.

A great number from this vicinity attended the Mission Feast at Elltown Sunday, both during the day and also the evening.

Mr. and Mrs. Dick Swalve and Mr. and Mrs. Gilbert Schaeper and son Bennie, drove to West Bend on Sunday to view the Grotto.

Mr. and Mrs. Albert Schmidt and family and Miss Jennie Albers visited at the William Lau home Tuesday evening.

Mr. and Mrs. Henry Buseman and family drove to Alexander Sunday to visit at the Rank Buss home. The ladies are sisters.

Mr. and Mrs. George Albers accompanied by Mr. and Mrs. Dick Swalve drove to Wellsburg and other points of interest in Iowa on Tuesday of this week.

A Farm Bureau Meeting was held in the old school house of Twin Lake No. 1 last Friday evening. A fair sized crowd attended. Amnog the speakers were Rev. Grosshuesch and Miss Dorothea O'Krueg. Other entertainment included several musical numbers by Herbert Greiman and Erwin Priebe.

Albert Priebe and Harry Larson left Monday morning for Marion, South Dakota on business. They expect to return in a few days.

LIBERTY TOWNSHIP

Mrs. Schuldt of Garner visited at the Lew Abele home Sunday.

Oscar Carlson was a Britt caller Monday.

There will be no church services of any kind at the Liberty church this Sunday.

Mr. and Mrs. Will Suckow are the proud parents of a fine baby boy since last Friday.

Mr. and Mrs. Herman Gast and children visited at the Ralph Jensen home at Ackley Sunday.

Mr. and Mrs. Ed. Schoenwetter and children were visiting at the Oscar Carlson home Sunday.

Karls Kropp, Bub Gates and Carl Reimer are doing some tiling on the Art Schoenwetter farm this week

Floyd Franklin hailed hay last week. He wil move on a farm near Garner in March.

Mrs. Rose Tanner and daughters, Mr. and Mrs. Ben Neiman and children were dinner guesst at the Clarence Tanner home Sunday.

Mr. and Mrs. Will Lemke and Mr. and Mrs. J. J. Lemke attended the Eastern Star Lodge at Garner Friday evening.

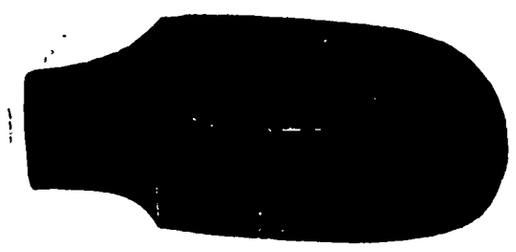
Mr. and Mrs. Albert Lange took their son Ray to Ames Sunday where he will enter the State College for the coming year.

The W. F. M. S. will hold their next meeting on Oct. 2 at the Liberty church. This will be the first meeting of the year.

Mr. and Mrs. J. J. Lemke visited in Jewell Sunday. They took Jonas Priestly back. He has been working on the Lemke farm the past summer.

Mr. and Mrs. Ralph Whitney and daughter, Mr. and Mrs. Orville Whitney and Mrs. Wayne Whitney of Britt were entertained at the Will Lemke home Sunday.

Mr. and Mrs. Emil Blumer and children, Mr. and Mrs. Ben Reir and Lois, and Mr. and Mrs. E. Beier and Billie were dinner guc Sunday at the Will Krause home in Garner



GALENA BRAND HUSKING GLOVES AND MITTENS

We are again stocking this famous piece of goods that has given such wonderful wear and satisfaction during the past few years. There are none better on the market—that's why we handle them. Get your supply now. We call your attention to several special items for huskers:

Jacobs' Special At ..... 15c Pair
Jacobs' Special (A Better Grade)..... 20c
YANKEE DOODLE No. ½, Double Thumb
KANT RIP, Double Thumb Mitten
Famous PT6 Two Thumb Glove

The above gloves and mittens can't be beat for the money. Real Wear, Lots of Satisfaction in every pair!

We also carry a line of leather thumbed gloves and mittens. They sure do give good wera!

ALSO—A full line of Husking Hooks and Pegs, all kinds of Wrist Bands, Thumb Stalls, Etc.

NEWS REVIEW OF CURRENT EVENTS

Powers Are Busy With Plans for Limiting Armaments and Insuring Peace

By EDWARD W. PICKARD

REDUCTION of armaments and other plans for insuring the peace of the world and so saving the lives and money of its inhabitants are occupying the international mind these days largely to the exclusion of other matters. Chief of the week's developments in this line was the virtual conclusion of the conversations between Ambassador Dawes and Prime Minister MacDonald of Great Britain with enough agreement reached to make certain the calling of a five-power conference on naval reduction. England will issue the invitation, it was announced, to the United States, France, Italy and Japan, and the meeting probably will be held in London, starting in the second week in January. Mr. MacDonald completed his arrangements to sail for the United States on September 28 to confer with President Hoover and Secretary of State Stimson, and it was assumed that this consultation would result only in furthering the plans for the big meeting.

Dispatches from Washington asserted that President Hoover already had agreed to accept a limitation of the number of 10,000-ton cruisers the United States may build, in addition to a limitation of aggregate cruiser tonnage, which is the point for which the British contended in the futile Geneva conference of 1927. Whether America's big cruisers shall number 18 or 21 is to be decided later. It may be, too, the British will put over their former proposition that there shall be no replacements of capital ships before 1936, when the Washington treaties expire. The extremists in the matter of national defense are rather worried by these reported concessions, and cannot see how the United States is to attain naval parity with Great Britain, but Americans in general probably regard the negotiations with complacency.

President Hoover in a radio address sought to reassure those who might be apprehensive for their country's safety. He declared that naval and land armaments should be held down to the barest necessities for defense purposes, in the interests of peace, and that unless this policy is adhered to, preparedness may become a threat of aggression and a cause of fear and animosity throughout the world. The proposals now under discussion by the great powers, he said, "would preserve our national defenses and yet would relieve the backs of those who toil from gigantic expenditures and the world from the hate and fear which flows from the rivalry in building warships."

Dealing with the troubles that may confront the five-power conference, the London Daily Telegraph says:

"It is from France and Italy, rather than from Japan, that the greatest difficulties are feared. These two powers may draw together temporarily for the purpose of objecting to holding the conference in London and of weaving causes for delay, but they have been engaged since 1920 in a naval race of a very strenuous and severe character with one another.

"It is not generally appreciated that France has been working on a building scheme which does not reach its maturity until 1942 and which comprises 18 cruisers, 90 destroyers, 67 ocean-going submarines and 48 coastal submarines. Italy's building program was further increased only last year by the addition of 13 ships to cost an additional $45,000,000, but its principal strength lies in its fast destroyers and motor torpedo craft."

LORD ROBERT CECIL presented to the disarmament committee of the League of Nations the British plan calling for reopening of the question of trained army reserves in any scheme for world disarmament, and was supported by the German delegation. The French, Italians and Japanese argued that this question had been definitely laid aside last spring and that the present time was inopportune for reopening it.

Since the great powers in the League of Nations have rejected France's proposal for an international standing army, and Great Britain refused to help form an international navy, the league is now thinking of forming an international air force to help in compelling the world to be peaceful. Col. Clifford Harmon of America, president of the International League of Aviators, suggested the scheme last December and was sharply rebuked by Lord Cushendun of England; but he did not give up, and seems to have gained some support from Premier Briand of France and other diplomats. Last week both the French and the Germans introduced before the disarmament committee resolutions defining the juridical status of the planes of such an international force over various countries. The French measure said that the international commission for aerial navigation is preparing plans and urges the freedom of flying over all states, granted that they are the league's machines.

The German resolution said that, having learned that the international commission for aerial navigation is studying the legal position of league aircraft, the question must give rise to an important issue that the various governments will require an opportunity to study after they have received complete information on the project. Count von Bernstorff for Germany thought the French viewpoint could not be accepted. Harmon's plan provides for a fleet of bombing planes to attack and break up mobilization in an aggressive country by smashing bridges, tunnels, railways, and other lines of transportation in order to prevent the attacker from invading a neighbor country.

The league assembly shelved until next year a proposal to assist nations threatened by war with international loans guaranteed by all powers in the league. One of its committees also carried toward completion plans for lowering of customs barriers and reductions of economic impediments to trade, an essential preliminary being a world tariff truce of three or four years.

BRITISH and Belgian troops quietly began the evacuation of the Rhineland, and some of the French troops were withdrawn, though it is expected France will maintain a rather large force there up to the last minute. Wiesbaden is to be made the headquarters of the interallied Rhineland commission, whose staff will be greatly reduced.

CHINA says it is getting tired of the Soviet Russian raids on Manchurian border towns and that unless they cease the Nationalist government will drop its defensive tactics and adopt other measures, confident that it will receive the support of world opinion. The Chinese troops are enraged by the tales of atrocities practiced by the Russians, as brought to Harbin by fugitive Chinese merchants from the border regions and cannot be restrained much longer. Foreign Minister C. T. Wang has protested through the German government against the internment by the Russians of Chinese who are not Communists or members of Russian trade unions and demanded their immediate release. While gathering large bodies of troops and quantities of munitions on the Manchurian frontiers, the Chinese are collecting a mass of evidence to prove to the world that Russia has been violating the Kellogg pact. Denials of this by Moscow do not have great weight with those who are aware of the Russian propensity to misrepresent—to put it mildly.

SOON after Col. R. W. Stewart was ousted by the Rockefellers from the chairmanship of the Standard Oil Company of Indiana there were rumors that he was going to form a combine to fight the American oil kings. These have been revived now, for the colonel sailed for Europe last week and it was admitted he would visit Sir Henri Deterding, oil magnate of Europe and director general of the Royal Dutch Shell company whose products already are sold all over America. If a combine of Standard's competitors does result, it may bring the Royal Dutch Shell and its ramifications, the Sinclair companies, the Prairie Oil and Gas and subsidiary pipe line company and the Continental Oil company all under a unified control. Rumors in American financial circles were that Stewart had enlisted the Morgan interests. It looks as if a merry oil war were in the offing.

Harry M. Blackmer, the American oil magnate who fled to France to avoid testifying in the Teapot Dome cases and is still over there, was fined $60,000 for contempt of court by Justice Siddons of the District of Columbia Supreme court. His lawyer gave notice of appeal, and Blackmer's $100,000 in Liberty bonds, seized some time ago, remains in the custody of the federal marshal in Washington.

CAPT. JOHN M'LEOD brought his motor vessel Shawnee of Nova Scotia into Halifax with two shell-holes in its hull, and declared these were caused by two of four shells fired at close range by the U. S. coast guard cutter No. 145 when the Shawnee was 26 miles off New York, bound from Bermuda to Halifax in ballast. He said the No. 145 had all its lights doused and that after the firing it called the coast guard Gresham, which later was relieved by another vessel, and that he finally outdistanced his convoy. McLeod said he would make formal protest through Ottawa. The Shawnee is alleged to have been engaged in rum running.

DOWN in the Carolinas the inhabitants apparently are determined not to have Communists from other regions interfering with their labor troubles. The radicals from New York who went down there to aid the striking textile workers are having a rough time, what with kidnapers and whippers, and in a mob attack on persons on the way to a strikers' rally at Gastonia, N. C., one woman was shot to death. For this murder and for various floggings numerous arrests have been made, and the state authorities seem to be doing all in their power to restore order; but the Carolinians are in an ugly mood and further bloodshed is expected.

PRESIDENT HOOVER'S appointment of Henry F. Guggenheim as ambassador to Cuba to succeed Noble B. Judah, resigned, meets with general approval. The new ambassador is one of the leading figures in American aviation, being president of the Guggenheim fund for the Promotion of Aeronautics. During the war he served in the naval aviation forces in both France and Italy and rose to the rank of lieutenant commander.

BRIG. GEN. LYTLE BROWN, one of the greatest of American engineers, was appointed chief of army engineers with rank of major general to succeed Major General Jadwin, retired, and simultaneously with making known this selection, President Hoover announced plans for the reorganization of the office Brown takes. High ranking officers will be placed in entire charge of important projects and held definitely responsible for the successful completion of these special assignments.

General Brown is fifty-seven years old and was born at Nashville, Tenn.

NEW YORK is to have a lively mayoralty campaign with five candidates. Congressman F. H. LaGuardia, extreme wet, won the Republican nomination, but the dry Republicans began laying plans to put up a dry candidate. The Democrats renominated Jimmy Walker, and Richard Enright, former police commissioner, was put up by the Square Deal party, attacking Tammany control of the police department. The fifth candidate is Norman Thomas, running as a Socialist, and he is expected to be stronger than his party because of dissatisfaction with both LaGuardia and Walker.

MERGER of two of New York's biggest banks, the National City and the Corn Exchange, was arranged and approved by the directors. The consolidation brings together total resources of $2,386,066,401, making it the largest bank in the world.

SAFETY PROGRAM ON LARGE SCALE

Auto Fatalities Show Increase of 29 Per Cent in Five Years.

Pointing out that motor vehicle fatalities throughout the nation had increased 29 per cent in the five-year period between 1924 and 1928, the accident prevention department of the Chicago Motor club announces plans for an intensive safety program on a scale far greater than ever before in the history of the club.

"While the motor club is taking every known means to reduce the number of accidents in which adults are involved, we shall center our efforts to save children from injury or death," the announcement said. "After nearly ten years passed in fostering the school boys' safety patrol, we are convinced that that method is the most effective means yet devised for protecting the youngsters. Our safety staff has recently been doubled, and with the added personnel we shall be able to achieve 100 per cent organization of patrols throughout our territory.

Work of Patrols.

"The majority of schools in that region has had patrols for a number of years. The large staff will make regular visits to the schools, not only for the purpose of organizing patrols, but to insure their operation in accordance with regulations, and to make effective addresses on safety to the student bodies.

"The distribution to school rooms of monthly safety posters, illustrated in two colors, is another phase of safety education that we shall enlarge. Last year we issued about 25,000 every month. We hope to double that number during the coming nine months of the school year. The posters portray a simple but effective lesson in safety, and most teachers require the children to write compositions based on them. Subjects on which the juvenile mind must give sufficient thought to write are not soon forgotten.

"Ways and means whereby the highway sign service has been perfected have been discovered, thereby permitting the club to co-operate 100 per cent with all communities desiring this service.

High Spots of Safety.

"The foregoing activities are but the high spots of the present safety plans of the club. They are not to be considered in the form of a 'drive' or 'campaign;' instead of being a temporary effort, they are being waged consistently and persistently at all times. The outstanding difference between past and future activities is that the latter will be far more widespread than the former."

AUTOMOBILE NOTES

Automobiles in use outside of the United States now equal the registration in this country in 1919.

* * *

Twenty-five miles an hour is "reckless driving" if the road is crowded, is the opinion now entered in the state laws of Indiana.

* * *

"Oh, gosh!" muttered the motorist who had just been struck from the rear by the fast freight. "It always makes me ill to ride with my back to the engine."

Did You Know

That it is regarded by many that some of the misfiring laid to the carburetor is due to location of the spark plugs in too cool a place? The spark, thus, has too large a gap to jump.

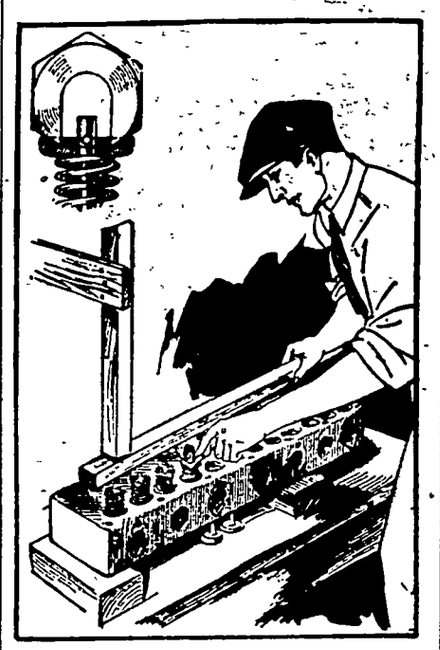
That a considerable amount of pedal play improves the operation of the hydraulic brakes on some makes of car?

That gasoline consumption at high speeds may be twice as great as at the most economical speed—the normal rolling speed of the car?

That brake faults frequently ascribed to linings sometimes are due to warpage and scoring of the brake drums?

Slotted Nut Assists in Valve Spring Assembly

For removing or replacing the vales in an overhead-valve auto motor, the simple tool shown in the drawing will be found very handy, and any motorist can make it in a few minutes. It consists of a large nut, slotted at one side so that it forms a U-shaped spanner. By placing this over



Using a Slotted Nut and a Wooden Lever to Compress Auto-Valve Springs.

the valve stem, with the legs set firmly against the spring-retaining washer, and applying pressure by means of a wooden lever, as indicated, the spring can be compressed to permit removing or inserting the pin.—G. A. Luers, Washington, D. C., in Popular Mechanics Magazine.

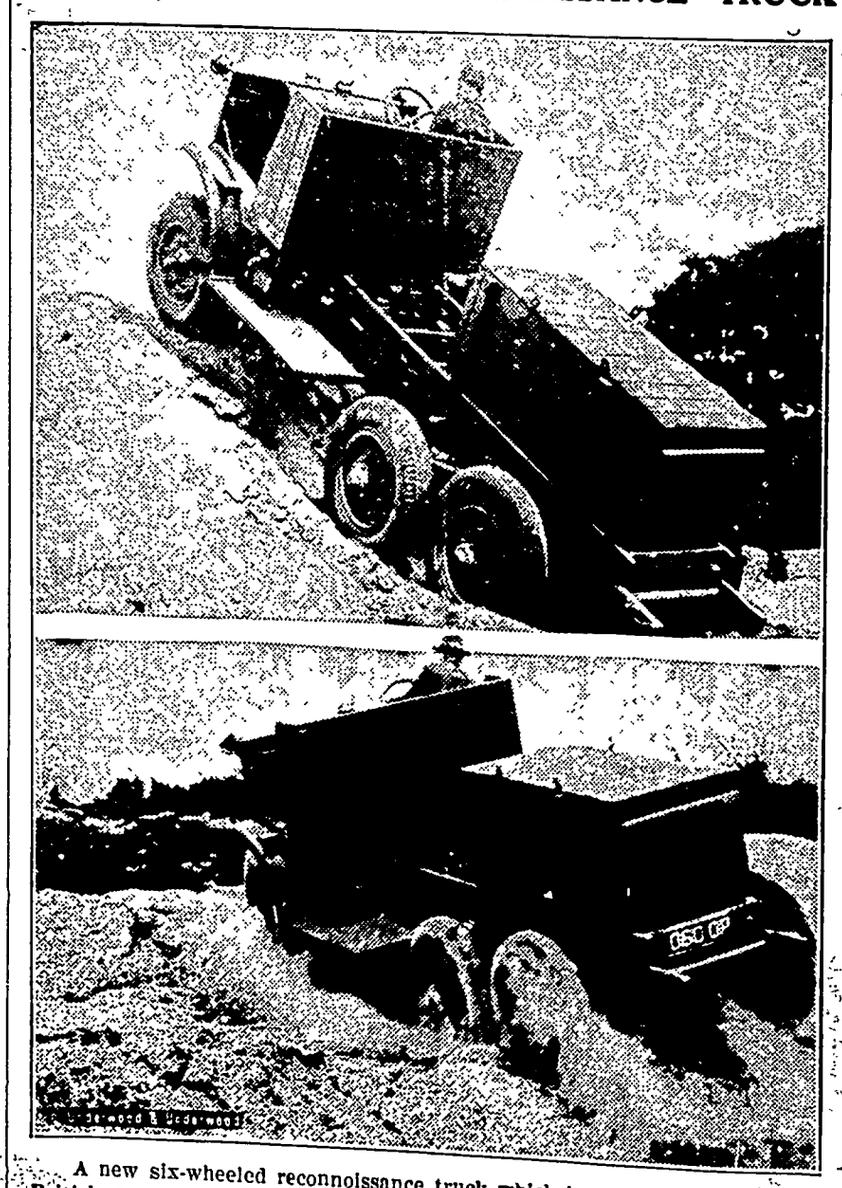
Items for Medicine Kit When on Long Car Trip

When leaving on an extended motor trip it is advisable to take along a few simple remedies to be used in case of an emergency.

Experienced campers recommend that the tourist's medicine kit should contain the following:

Roll of antiseptic bandage, a pair of small scissors, absorbent cotton, healing salve, court plaster, castile soap, vaseline, adhesive plaster, glycerine suppositories, a few flaxseed, to remove cinders from eye; an eye cup, powdered boric acid, for eye wash; castor oil capsules, epsom salts, bicarbonate of soda, quinine capsules, citronella oil, to ward off the mosquitoes; camphor for chapped lips and hands; anti-cholera tablets, for diarrhea, and iodine applicators for bruises.

NEW SIX-WHEELED RECONNOISSANCE TRUCK



A new six-wheeled reconnoissance truck which has been accepted by the British army after successful completion of tests during which it demonstrated its ability to cover exceptionally rough ground at a much higher speed than those now in use.

Horticultural News

CURBING RABBIT APPETITES HARD

Rodents Nibble at Fruit Trees and Alfalfa Crop.

(Prepared by the United States Department of Agriculture.)

"An everlasting appetite with four legs to carry it around," was the description a western farmer gave in referring to jack rabbits that had been nibbling young fruit trees in his orchard and mowing his carefully-irrigated alfalfa.

The rabbit's healthy appetite is one of its weaknesses as well, for in winter when much of its food is covered with snow, the jack rabbit will eat alfalfa hay or rye heads poisoned according to methods worked out by the biological survey of the United States Department of Agriculture. In community poisoning operations great quantities of this bait are mixed at central points and distributed to farmers, who take responsibility for spreading the poisoned food in localities where the "jacks" congregate.

Elsewhere farmers have gathered to "drive" the rabbits over large stretches of territory, with lines of men advancing and scaring them toward a central corral made of rabbit-proof fence with V-shaped wings to direct the rabbits toward the place of slaughter.

Jack-rabbit meat has not been considered good for much except as poultry feed. Recently, however, a demand has grown for rabbit pelts, which are used in the manufacture of felt hats. Some men have become expert and can skin about 200 rabbits a day. The skins sell on the average of about 75 cents a pound, or 10 cents each, so that when the supply is ample, as the result of a "drive" or of poisoning operations, a man can make good wages at the game.

Other methods of rabbit disposal include wholesale shooting by individuals or by organized groups, such as gun clubs or farmers' organizations.

Hogs and Apple Trees Are Good Combination

Some time ago the question was asked as to best means for protecting apple trees in an orchard where hogs were to be pastured. Years ago when in charge of a stock farm where we had a number of brood sows there was also an old orchard and wishing to clear out the railroad worms and give the hogs the benefit of grass feeding we plowed between the trees and after sowing rape, clover and barley turned in the hogs, writes G. M. Twitchell of Maine in the Rural New Yorker.

They ran there until cold weather with no trouble to the trees simply for the reason that every day, with some corn in my pocket and a hoe in my hand, I went over that orchard and if there were any signs of an approach to injury on trunk or roots I lifted the sod elsewhere and scattered a little corn to toll away. It required a few minutes daily, but at the end not a tree had been injured, the fruit was greatly improved, and the trees brought back to far better condition.

Had the hogs once got at work on a tree probably it would have been difficult to check them afterwards, but looking after them daily, and tolling away from any sign of overwork about a tree saved from all injury. This with plenty of growing rape, clover and barley kept them contented and rapid growth was insured.

Standard Apple Package Is Most Practical Plan

There is a persistent feeling among growers that a standard package should be adopted, at least for each main producing section, and the use of other types discouraged or prohibited. Suppose we consider a few of the most largely used packages, their advantages and disadvantages.

1. The barrel is the best known standard for apple measure. It is quickly packed, requires fewer expert workers, is easily loaded, stored and transported, is a comparatively cheap package and is consequently the most economical package in which to supply apples to the general market. Firm varieties like Baldwin, Greening and York can be packed in barrels so that the retailer will often pay as much per pound for the apples as if packed in other packages. On the other hand the proper filling and heading of a barrel is expert work which is too often roughly done, much of the fruit being ruined and the pack unfit for the best trade. For the more tender varieties it has proved to be too large a package to carry the fruit without excessive injury, or to be displayed and handled by the retailer.

Wraps Save Apples

Adam McWilliam, Stark county, Illinois, last fall wrapped every apple in oiled paper before he put it into storage for the winter. The oiled wraps are inexpensive, easily used, and prolong the period apples may be kept by reducing the loss of moisture from the surface, and preventing rots from spreading. These are important considerations in the storage of apples on the farm where storage quarters usually are both warmer and drier than they should be.

THE STORY of COLUMBUS in PICTURES

1

2

3

4

5

6

7

1.—"Sail on! Sail on!"—The three caravels of Columbus pushing westward across the Atlantic ocean on his historic voyage of discovery. In the lead is the Santa Maria, the largest of the three, measuring about 80 feet in length, 25 feet in breadth and 15 feet in depth, with a capacity of 200 tons. It was commanded by its owner, the cosmographer, Juan de la Cosa. It carried two pilots, a grand constable, a physician, an archivist, an interpreter versed in several tongues, a large number of the 90 seamen and the commander of the expedition, Christopher Columbus. Second in line is the Pinta, commanded by Martin Alonso Pinzon and piloted by his brother, Francisco Pinzon. The third ship is the Nina, named for its owner and pilot, Pero Alonso Nino, and commanded by Vincent Yanes Pinzon, brother of Martin and Francisco.

2.—"The Landing of Columbus" (from the famous painting by H. B. Hall in the United States Capitol in Washington, D. C.). On Friday, October 12, 1492, seventy days after the date of their sailing, Columbus and his men, after having traveled 3,230 nautical miles across the ocean, reached an island in the West Indies, off the coast of North America. Clad in armor, over which he had thrown the crimson robe of an admiral of Castile, Columbus threw himself on his knees, kissed the earth and returned thanks to God for the successful end of his journey. Then rising, he drew his sword, unfurled the royal standard and assembling around him the two captains, the notary and the other officials, he solemnly took possession of the land in the name of the Castilian monarchs, Ferdinand and Isabella. "I gave the name of San Salvadore in commemoration of his Divine Majesty who has wonderfully granted all this. The Indians call it Guanahan," wrote Columbus.

3.—"Departure of Columbus" (from De Bry's "Voyages," 1690). At sunrise on August 3, 1492, Columbus set sail from Palos, Spain, for his great adventure. Recently there was unveiled at Palos a gigantic monument, the work of an American sculptress, Mrs. Harry Payne Whitney, which commemorates the embarkation of the expedition. The monument consists of a 70-foot statue of Columbus surmounting a 44-foot base and shows the great navigator standing with arms resting on the traverse of a great cross, his eyes directed westward, just as he stood on the deck of the Santa Maria 437 years ago.

4.—"Columbus Pleads His Cause Before King Ferdinand and Queen Isabella." Early in his career Columbus conceived the idea of reaching India by sailing directly westward across the Atlantic ocean. He appealed in vain to the kings of Portugal, Spain, England and France to fit him out with the ships necessary for an expedition, but in spite of all his rebuffs he persisted in his attempts. In January, 1492, he appeared again at the court of Spain and was given a hearing by Ferdinand and Isabella. But again he was dismissed from the court and departed sorrowing over what seemed to be the end of his great dream. Two leagues from Granada, however, he was overtaken by a messenger from Isabella with orders for his return. Almost overcome with joy, he hastened back and was told that the Castilian monarchs would comply with all his demands.

5.—"The Tomb of Columbus in the Seville Cathedral." Columbus died in Valladolid, Spain, May 20, 1506, and was buried in a monastery near Seville. In 1536 his body and that of his son were removed to Santo Domingo and buried in the cathedral there. When Haiti was ceded to France in 1796 the bodies were removed to Havana, Cuba, and remained there until the Spanish-American war of 1898. At the close of that war, which ended Spanish dominion in the New world, the remains of the great explorer were carried back to Spain and placed in the magnificent tomb in the Seville cathedral which has become a shrine for visitors from all parts of the world.

6.—"Columbus as a Boy" (from the statue in the Museum of Fine Arts, Boston). Although there is much dispute as to the nativity of Columbus, the best authorities state that he was born in Genoa, Italy, about 1446. He was the son of a wool-comber, but he wished to become a sailor and the statue depicts him as he set on the dock at Genoa, dreaming, perhaps, of the day when he would go to sea and become a famous captain.

7.—"The Earliest Engraved Likeness of Christopher Columbus" (from McLaughlin's "History of the American Nation").

Wit and Humor

THE SUBSTITUTE

He (returning home from long journey)—And pray, how did you feel during my absence? You will have missed me very much.

She—Oh, no! Every night I took some of your old clothes and scattered them about the floor, then I burnt a few cheap cigars in your study, trampled mud out of the street all over the stairs; and then it felt just as if my sweet, darling husband were at home."—Reynold's Illustrated News, London.

Other Folks' Business

"So you advise a young man always to mind his own business?"

"I won't be so positive about that," said Senator Sorghum. "A first-rate politician has the art of convincing most everybody that he is attending to their business better than they could do it for themselves."—Washington Star.

BETTY'S HALLUCINATION

"You say the newly married couple aren't very well together?"

"Unfortunately it's true."

"Let's see, it was a case of love at first sight with Betty, wasn't it?"

"Yes, and now she's beginning to think she ought to have her eyes tested."

We're Lucky, Fellers!

If women were not dumb
Man's chances would be slim
Of ever finding one
Who'd love and marry him.

As Others See Us

Mr. Eaglebird—How do you like this land of the free and home of the brave?

Lord Blessus—What I admire about your country is that the women are free and the men brave enough to stand for it.

Better Outside

Lily—Weren't you invited to Pansy's coming out party?

Rose—No, and I wasn't sorry after I saw the sort that were going in.

SHE MADE JAMS

"When she has charge of it does your wife try to preserve your car?"

"I've never known her to try to preserve the car, but she often makes traffic jams."

Temperament

The climate's ups and downs we see
With feelings far from gentle.
This old thermom has proved to be
Too wildly temperamental!

Grave Error

Applicant—Well, 'ere I am to see abaht that job you advertised.

Boss—I see. Do you think you can do the work?

Applicant—Work? Lor' lumme, I thought you wanted a foreman!—London Answers.

And There You Are!

Blinks—I get tired of the crowds and the hurry of the city.

Jinks—So do I, but the lonesomeness and the monotony of the country would drive me nutty.

Lot in Their Favor

Blinks—How are you going to like your new neighbors?

Jinks—All right, I think. My wife watched the moving vans unload and there wasn't a sign of a piano, radio, phonograph or a saxophone case among their belongings.

Within the Law

Doctor—Do you assimilate your food, Aunt Liza?

Aunt Liza—No, Ah doesn't, sah. Ah buys it open an' honest, sah.—Pathfinder.

NEVER wait to see if a headache will "wear off." Why suffer when there's Bayer Aspirin? The millions of men and women who use it in increasing quantities every year prove that it does relieve such pain. The medical profession pronounces it without effect on the heart, so use it as often as it can spare you any pain. Every druggist always has genuine Bayer Aspirin for the prompt relief of a headache, colds, neuralgia, lumbago, etc. Familiarize yourself with the proven directions in every package.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

To Avoid Infection
Use Hanford's
Balsam of Myrrh
All dealers are authorized to refund your money for the first bottle if not suited

Don't waste words when talking to a woman; cut your story short and let her do the talking.

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

PHILLIPS Milk of Magnesia

WOMAN SICK THREE YEARS

Helped By Lydia E. Pinkham's Vegetable Compound

Little Rock, Ark.—"I was sick for three years after my last baby came. I could hardly walk and could not eat nor sleep as I should because I was so nervous. I took seven bottles of the Vegetable Compound and used that number of bottles of Lydia E. Pinkham's Sanative Wash and I am feeling just fine. I have a large family and do the work for all. Your Compound made me a well woman, and I have a happy home now. I always try to keep a bottle of the Vegetable Compound in the house and I tell everyone about it for I know it will help them."—Mrs. H. A. Adams, R. F. D. 5, Box 63, Little Rock, Arkansas.

Bilious?

Take NR—Nature's Remedy—tonight. You'll be "fit and fine" by morning—tongue clear, headache gone, appetite back, bowels acting pleasantly, bilious attack forgotten. For constipation, too. Better than any mere laxative.

Safe, mild, purely vegetable—

NR TO-NIGHT

At Druggists—only 25c

When Otto Pringnitz and family arrived in town Wednesday evening and parked their car, they discovered oe of their white chickens had stolen a ride to town and was perched on top of the car.

Dr. Carlson came over from Mason City this morning to conduct a tonsil clinic at Dr. Zinn's office. Those who had their tonsils taken out were John Dhanke, Marylin and Lindford Back and Harvey Barz.

The Epworth League Rally was a fine success at the Methodist church Sunday evening. Miss Mabel Schaefer was the leader. Clarice Wellemeyer and Blanche Gimer sang a duet, "Cread." Gracka Quandt gave "Glow Worm," as a piano solo.

Mrs. W. F. Spooner of Tama, Ia., is visiting with her sister, Mrs. Henry Church this week. Mr. and Mrs. Henry Ward and daughter, Betty, and Mrs. Henry Church and daughter, Lois, drove down Sunday to get her.

New cars have been blossoming out in Klemme the past few days. Conrad Quandt is the owner of a new Willys-Knight; R. A. Jorgenson a new Essex, Albert Carolus a new Pontiac and we are informed that Einar Salling has purchased a Hudson sedan.

Pete Merkel's Ford and August Baack's Chevrolet locked horns on the Main street Monday morning. In the mix-up the Merkel car came out best with but a bent rear fender, while Baack's car received a twisted front axle and the fenders bent on the right side. The accident happened when the Merkel boy boy was backing out from the curb and struck the Baack car which was coming down the street.

Mr. and Mrs. Albert Lange and Mr. and Mrs. Sumner Trumbell took Claire West and Ray Lange to Ames Sunday where the boys will enter Iowa State College as Freshmen. Ray expects to pursue an Economics and Agricultural Course. We were not informed as to what Claire expects to take up. These are too mighty fine young men and we expect they will good at the College.

SCHOOL-COMMUNITY BAND IS ORGANIZED

SCHOOL BAND WILL BEGIN ON LESSONS NEXT WEEK

Mr. Storer, Of Mason City, Will Direct School-Community Band

By Supt. M. F. Penrod

Mr. Storer, who is to lead our beginners band, was here on Wednesday evening of this week and several of our boys came for a try-out on the several instruments which he brought with him.

There will be several on hand on next Wednesday evening to start their first lesson with Mr. Storer. Cornets, clarinets, slide trombones, mellophones, baritones, bass horns and drum, perhaps a piccolo or two and also one or two alto saxophones. This will be a rare opportunity for yung boys and girls or even men or women who wish to begin work on an instrument for either band or orchestra. With some aid promised us by our school board this band is assured and thoe who contemplate membership in it should procure at once the instrument of their choice and get started with all of the other beginners. Music is getting more and more attention in the public schools of today and those who have ability along this line cannot begin any too soon.

High School graduates who play well many times are offered scholarships in colleges and save themselves a considerable outlay. As college expenses today range from $500 to $1,000 a year a scholarship is an attractive reward for one's ability in such a delightful activity.

Played Close Game Friday

Our boys played Hayfield High School boys a game of kitten ball over there last week end but Hayfield had more experience at the game and won. It was a good game and we should turn the table here on Friday when they play us a return game. The score was a small one. They beat us by a score of 2 to 1.

Girls Practice Yelling

Our girls have been doing their part, practicing their yells and also songs fo boosting the work of the team. This all helps and if they keep it up we predict a good showing.

Manual Training Tools Good

Our coach and Kenneth Patet took some tools to Mason City Saturday fr repair and went for them again on Wednesday. Mr. Breitske has a large class in manual arts this year and tools in good shape will insure a better quality of work.

New Equipment Added

Our Board has been discharging well the trust reposed in them. This summer they have had our school building repainted, installed some new blackboards of slate, and made some other minor improvements on the interior. As our encyclopedias had become out of date, in accordance with recommendations of our State Department at Des Moines, two new sets were purchased; one for the high school and one for the grade school. We were requested also to procure a set of maps for United States History which has been received.

An order for some school magazines has been filled and our annual order for library books has been placed.

Other School News Of Interest

One of our Sophomore boys had the misfortune of breaking an arm this week while cranking his Ford. We refer to Paul Sampson. He is now recovering from the same at Emil Patet's

Our Seniors have received their class rings which are very attractive.

Our Freshmen were given the final act of their weekly ceremony of initiation last Friday night. It was in the form of a party to which they were all requested to attend and we understand all were accepted into full membership of Klemme High.

They should rank well with the other classes of our school and give a good account o themselves. We hope they can all remain until the finish of their four year high school course.

Heiden Making Good

It may interest friends of Mr. Heiden to learn he likes his work very much at Springfield, Ill. where he now has undre his control more than 180 junior high school boys doing work in manual orts. Mr. Heiden is peculiarly well prepared for such work and we are glad to see him secure it. Mr. Lewis of Frederika has promised us a visit soon and we shall be glad to see him again.

Graduates Attend College

Of our last year's graduates we find Oral Gibson has enrolled at Morningside; Clair West and Raymond Lange at Iowa State College at Ames; while Lucile Kraus and Mabel Schuldt are taking a Normal Training course at Cedar Falls. We learn that Elmer Larson will, in December of this year, begin work in Chicago in Coin's Electrical School. Marie Carson is teaching a rural school not far from Klemme, while Kenneth Gast and Laurence Greimann are eahc doing duty on their father's farm. Glenn lange is also spending the year at home .No doubt these boys will leave later for other fields of action but if they should not they will give a good account of themseves, we believe, in their own home communities. We also need good men in our rural sections. Professional and industrial pursuits should not attract all of the worthwhile individual from the farm homes.

MESERVEY MAN MARRIES GIRL IN LIBERTY TOWNSHIP

Miss Amalia Hueneman And Mr. F. Lemke Married Friday

Miss Amalia Elizabeth Hueneman, daughter of Mrs. Mathilda Hueneman, who reside four miles north of Klemme, and Mr. Ferdinand Lemke, of Meservey, were married at the Reformed Parsonage in Klemme on Friday, September 27, 1929, Rev. Calvin Grossnuesch officiating.

The bride is popular young lady of this community During her girlhood days she lived in Garner with her mother and attended the schools there until 14 years of age when she moved with te family to te farm near Klemme. However, she continued her studies at Garner and graduated from that school. Later she attended La Crosse, Wis. Normal Training School, and aga'n later attended owa State College summer schools. She chose teaching as her profession and taught for a time in rural schools later teaching one year at Wesley, two years at Meservey and four years at Ventura.

Mr. Lemke is a young farmer and has lived with his mother on her farm near Meservey. Mr. Lemke is an industrious young man and has already demonstrated his ability as a good farmer. The young couple will reside on the farm.

At present they are at Louisville, Kentucky, on a honeymoon trip and taking in the Legion convetion in session there.

The Times extends congratulations.

REV. WHYTE RETURNED TO KLEMME

The people of this community are glad to know that Rev. H. E. Whyte has been returned to the Klemme-Liberty charge for at least another year.

Rev. Whyte has done fine work here the past year in both charges.

The people of Klemme and vicinity welcome Rev. and Mrs. Whyte for the second year and are glad the Conference returned them to our community.

Eckard Zeidler is enjoying a visit from his father and mother who came Wednesday morning from Wyoming. They live at Manhattan, Kansas.

FARM BUREAU LAYS PLANS FOR YEAR

COMMITTEE MET AT GARNER TO PLAN YEAR'S WORK

Five Major Projects Planned For The Coming Year

A meeting of the Farm Bureau Program Committee was held last Thursday at Garner and plans were made for the educational activities of the Hancock County Farm Bureau for the year 1930. Five major projects were selected and the development of these projects will be given the majority of the time of the Farm Bureau workers. They are as follows:

Boys And Girls Club Work

Boys aud Girls Club Work has always been considered a major project in the Farm Bureau and next year they will develop a Girls Bread Club, Baby Beef, Dairy Heifer, Market Pig, Sheep, Colt clubs and are planning to have a county wide 4-H Club Show in the fall of 1930. The Club Work dur'ng the past year will be very successful and the prospects are that there will be more interest than in the past.

Home Project Work

The Farm Bureau women of the county will study the second year Foods and Nutrition. This will be put on by the training school method and will be in charge of a Home Demonstration Agent who will be employed in cooperation with Cerro Gordo Cunty. The following lessons will be given starting in October, 1929 and finishing in May 1930. The summer months will be spent on club work and the Home Demonstration Agent will have charge of this:

1. Diet for the Expectant Mothers ond Infant Feeding.
2. Diet for the Preschool Child.
3. Diet for the School Child.
4. Meal planning for the whole family.
5. Meals for Special Occasions.

Cooperative Marketing

The Farm Bureau stands ready to assist the local and county cooperative associations such as the elevators, creamerie and hipping asociation, especially in their accounting and business practices, marketing methods, etc. The Farm Bureau will assist in developing work that will aid cooperative marketing of farm products at any time. It is hoped that additional interest can be created in this work due to activities of the Federal Farm Board.

Weed Eradication

The Farm Bureau will put forth every possible effort to create interest in the eradication of noxious weeds and will demonstrate control methods in every township during 1930.

Community Development

The Township Farm Bureau and monthly Farm Bureau meetings will be developed. Membership work will be continued with the Farm Bureau Federation Organization work.

Standard townships will be encouraged and a goal set for 10 standord townships for 1930. A meeting of the township leaders will be held to help work out programs. The Farm Bureau extends cooperation to the county Superintendent of Schools and hopes to be of assistance to him in rural school work and also cpoperates with the Smith-Hughes Vocational Agricultural schools of the county.

In addition to these major projects, there are many other projects in which the Farm Bureau will be active such as Soils Service, Shelterbelt planning, Cow Test Associations Farm Accounting, Cream Scoring, Dairy Feeding Schools and Water Supply and Sewerage Disposal.

FOR RENT—

The Pabst 200 acre farm 3½ mi. N. E. of Klemme. All buildings will be overhauled next summer. See Mr. Arnold at First National Bank. 2tc

BETTER HEALTH AIM OF PROJECT WORK

SECOND YEAR FOODS AND NUTRITION TO BE STUDIED

Farm Bureau Women Have Plans Made For Year's Work

Hancock County women will soon have the opportunity of securing the second year nutrition work that is to be conducted in the county through the Farm Bureau organization by Miss Johnston, Home Demonstration Agent.

When your neighbor greets you with a "How do you do today?" Can you always answer, "Very well, thank you," or if you are honest about the way you feel, must you nearly always admit some ailment no matter how small? Are you satisfied with your health if you can manage to continue work, or is your ideal a 100 per cent body every day? In these days we cannot afford to be satisfied with anything less than the latter.

The average length of life in this county according to the latest statistics is only about 58 years, tho even this represents a great increase during the last decade and, in fact, during the last half century. Doctors say twenty years could be added to this figure if all persons would apply the hygenic knowledge which is now available evep if no further important discovery in medical science should be made. As our knowledge of health increases, doctors admit more and more that 75 and 90 per cent of our ailments are due to improper food and other bad health habits.

Probably no part of our daily hygiene needs improvement so much as do our food habits. Not one-tenth of American families have a balanced diet in their three meals a day. Farm people, as well as people in town, have failed to realize the importance of well-chosen foods because those who exercise strenuously are generally able to eat incorrectly with impunity. Yet, at any hospital center there are great numbers of middle aged or younger people from rural districts with gastro-intestinal and other trouble caused by a faulty diet.

Farmers have found that giving their hens their daily salad produces fresh eggs all the year round. People have been slow to change their own food habits in spite of all such present evidence from animal feeding that there are definitely right ways to eat.

Leaders in the work will receive the first lesson in October. Sixteen training schools will be held in the different parts of the county during the month. The women attending these schools will hold similar meetings in their district of each township later. The first subject presented should be of interest to every woman. The Infant Feeding Lesson will include information on food for the mother and baby that will protect the health of both and promote normal development of the baby. Why do so many children have bad teeth? Is it a matter of inheritance? These are some of the things that will be discussed.

Bulletins, charts, menus, etc. will be distributed at every lesson. A printed lesson guide will be given to every leader. Reports will be collected at every meeting to show the progres of the work.

Be on the watch for notices of the meetings to be hed by the leaders in their various school districts. The district meetings are for every one and there is no charge for any part of the work. If you do not know the leader in your locality call or write your township chairman. The township chairman are as follows:

Bingham—Mrs. John Patton, Woden

Crystal—Miss Marie Peterson, of Britt.

Madison—Mrs. Guy Geddes, Garner.

Ellington—Mrs. Bert Olson, Forest City.

Concord—Mrs. Anton Rasmussen, Garner.

Garfield—Mrs. Chas. Grau, Garner.

Britt—Mrs. Axel Trulson, Britt.

Orthel—Mrs. Walter Fox, Britt.

Boone—Mrs. Ray Hunsley, Britt.

Erin—Mrs. H. V. Caldwell, Kanawha.

Liberty—Miss Frieda Schuldt, Klemme.

Ell—Mrs. C. J. Wille, Klemme.

Avery—Mrs. C. A. Arnold, Klemme.

Twin Lakes—Mrs. S. A. Barber, Kanawha.

Amsterdam—Mrs. John R. Cosgriff, Kanawha.

Magor—Mrs. Henry Steinlicht, Corwith.

All the cooperators which were officially nominated at the Organization meetings held with Miss Johnston wil come to these training schools from 10:00 a. m. to 4:00 p m. There will be a covered dish luncheon served at noon; each lady is to bring one covered dish, sandwiches for herself and dishes for herself.

4-H CLUBS WILL BANQUET AT BRITT SATURDAY EVE

Plans are being male for the 4-H Girls and Boys Club Banquet to be held at the Momorial Hall at Britt on Saturday evening, October 5th at 7:00 p. m.

Every club member in the county is urged to attend this banquet. Parents and friends are also invited. Miss Florence Forbes and Mr. John S. Quist of the Club Department will be here.

Tickets will be on sale the night of the banquet but all club members are requested to leave word at the Farm Bureau Office by Thursday, Oct. 3, the number attending from their township. Others planning to attend should notify the Farm Bureau Office of the number by the same date.

The 4-H Club Banquet has come to be one of the outstanding club events of the county. A good program has been arranged.

Don't forget to tatend!

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The Annual Conference Session held at Eagle Grove this year was well planned and well administered. Those who attended will long remember it, not alone for the fine manner in which all visitors were cared for by the entertaining church, but likewise for the high moments of instruction and inspiration all of which were the more enriched by the fine spirit of brotherhood and fellowship which always prevails at such gatherings.

As pastor and wife we are glad to return to the Klemme-Liberty charge for another year. There is great work to be done, and it is our common task.

The Church is a corporate body, and its highest efficiency depends upon the loyalty, devotion, and cooperation of its entire membership and constituency.

All services will be running according to schedule Sunday. Let us start the new Conference Year with real enthusiasm.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English service.
11:00 a. m. Sunday school.
The Young Peoples Bible Class meets at 8:00 p. m. Tuesday.
Choir at 8:00 p. m. Saturday.
Confirmation class on Tuesday and Saturday.

TATTOO BRANDS SHOULD BE REGISTERED

The regulation has been passed by the packers requesting that all tattoo brands be registered. This means that it is necessary for this to be done in order to receive the 10c premium on hogs from accredited counties. October 1st is the final date when the 10c premium will be paid unless the brand is registered. Any hog raiser wishing to register his tattoo brand can do so at the Farm Bureau Office at Britt at no cost.

AVERY FARM BUREAU ELECTS OFFICERS

AVERY FARM BUREAU HOLDS ANNUAL MEETING

V. A. Cook Elected President For The Coming Year

The annual meeting of the very Township Farm Bureau was held at the beautiful new home of Mr. Mary Church, Friday evening, Sep.. 27, with a large crowd in attendance.

Howard C. Barger township chairman, was in charge of the meeting. The following officers were elected for the year 1930: President, V. A. Cook; Director, W. R. Prelipp; Secretary-Treasurer, J. H. Sims.

L. T. Nutty, county agent, gave a detailed explanation of the county Farm Bureau program for 1930, closing with an able discussion of the aims and acomplishments of the Farm Bureau organization.

Mrs. Ed. Hemmenway, teacher in District No. 5, represented the Avery Township teachers in a response to the welcome extended the teachers by the Farm Bureau organization. Mrs. Hemmenway ended her impressive talk with a poem, which suggested that the patrons, instead of criticising, should try to improve our schools by cooperating with the teachers.

A short program followed:
Piano Solo, by Lois Church.
Iowa Corn Song, stanzas by the teachers, chorus by all.
Solo: "Our Farm Bureau," by Stanley Pals, accompanied by Delores Cook.
Piano Solo "March" Deloers Cook.
Reading, "In School Days," by Mrs. C. A. Arnold.

Mrs. Arnold suggested that the first lines of the poem:

Still sits the school house by the road,
An idle beggar sunning,—

do not apply to Avery Township for the old school houses are being removed and are being replaced by new buildings, which d not have to beg for occupants.

The evening's program was closed with conundrums and stunts by the following township teachers:

District No. 2, Wava Bachman.
Dist. No. 4, Bridget Nolan.
Dist. No. 6, Loney Kroeger.
Dist. No. 8, Edith Halfpop.

District No. 5 was represented by Delores Cook and La Von Sherwood who sang a duet.

After the refreshments the teachers had a conference in regard to socializing country schools.

The women cooperators held a committee meeting to discuss the first project meeting, which will be held at the home of Mrs. C. A. Arnold, Friday October 25.

Wm. Gealow played several selections on the harmonica, accompanied by Harry Gealow on the piano.

The evening was pleasantly and profitably spent, although many of those present, had to go home in the rain.

FARM BUREAU LEADERS MET AT GARNER SEPT. 26

Ten Townships Were Represented At This Meeting

A meeting of the old and new township project leaders of the Hancock County Farm Bureau was held at the Farmers National Bank at Garner on Thursday, Sept. 26. There were 17 ladies present representing 10 different townships.

The ladies held an early session and then met with the Men's Division of the Farm Bureau in the afternoon to help the 1930 Farm Bureau Program of Work.

A new county Chairman of Women's Work was nominated and she will be elected at the Anuual Meeting on October 2nd.

Mrs. Ernest Schubert, County Chairman, introduced a new feature of exchanging flower seeds, bulbs and perennials at this meeting.

—Mrs. Ed. Oxley, Publicity Chrm.

1—British troops saying farewell to the Rhineland as they begin evacuation of the occupied territory. 2—Curtis D. Wilbur in his robes as judge of the U. S. Circuit court, Ninth district. 3—Champion fife and drum corps of the American Legion from Miami calling upon President Hoover on its tour of the country.

NEWS REVIEW OF CURRENT EVENTS

Chairman Legge Makes Plain to Senators His Farm Board Policy.

By EDWARD W. PICKARD

ALEXANDER LEGGE, chairman of the federal farm board, intends that the money put at the disposal of the board shall be handled "with a reasonable measure of safety," and he doesn't wish his appointment to be confirmed under the mistaken impression that any other policy will be followed. If the senate does not approve of this policy, Mr. Legge is perfectly willing to give up his office and return to his home in Chicago and his private business.

So much, and a lot more to the same purpose, the chairman told the senate committee on agriculture which was considering his appointment. The Democratic and radical Republican members of the committee questioned Mr. Legge sharply for many hours and made plain their displeasure because the board in the two months of its existence had not more rapidly organized stabilization corporations and placed at their disposal large funds with which to enhance the prices of farm products. Senators Brookhart of Iowa and Wheeler of Montana were especially vexed by the failure of the farm board to take steps assuring the stabilization of wheat prices during the present crop season. Senator Wheeler said that if the board had announced that a stabilization corporation would be prepared to operate the farmers would have held their wheat. Senator Frazier of North Dakota said the farmers of his state had lost from 25 to 40 cents a bushel on wheat because of the failure of the board to take action.

Mr. Legge explained that stabilization corporations would be organized as rapidly as it is possible to determine that they can operate with a reasonable prospect of success. It is intended, he said, that the grain marketing corporation, which was organized at Chicago conferences, shall act as a stabilization corporation. He explained that steps toward the formation of this corporation were taken within nine days after the board organized.

Wheeler intimated that the board's loan to the Sun Maid Raisin Growers' association was made for the benefit of a Wall street house that floated the bonds of the Sun Maid Raisin corporation, but Mr. Legge effectively scotched that idea by explaining that the loan prevented the financiers from foreclosing on the company's property. He also took the wind out of the sails of those who sought to attack him personally in the matter of his connection with the International Harvester company by a detailed statement of earnings and market values of that concern's stock and of his financial interest in it.

SHIPBUILDING company officials for whom William B. Shearer attended the Geneva arms limitation conference in 1927 all virtually disowned him in their testimony before the senate investigating committee, agreeing in stating that they attached small importance to his reports and none at all to his claims of influence there. In his final report to his employers Shearer asserted his work in Geneva resulted in the collapse of the conference. He said: "This advance campaign and the accuracy and authentic data released by me automatically made me leader of the unofficial fight to the extent that the American officials referred the press to me, as they were bound to secrecy, with the result that the attempt to deliver the United States was defeated by a complete expose, which is now acknowledged."

SENATOR HOWELL of Nebraska stirred up a hornet's nest when in the senate he declared the liquor laws could be enforced in Washington if the President desired it, since he is "all powerful in the capital" and could oust the district commissioners if they neglected their duty. Mr. Hoover responded promptly with a statement that Mr. Howell had impugned the integrity of the district officials, and called on the senator for "definite facts" supporting his charges of prohibition violations in the district.

Reiterating his charges Tuesday, Senator Howell admitted he was unable to give the time and place of violations but said it was "unfair to expect a senator so to do." Senator Brookhart then came to his rescue by telling of a convivial party he said was given in Washington by a New York stock broker in honor of newly elected senators and others some time ago. He declared there was a flask of liquor for each guest, and later he said he would gladly face a grand jury and tell all about the party, giving the names of those present—which caused considerable alarm. There was indication that this function might be investigated by those who are probing the doings of lobbyists, for, according to Brookhart, there was much discussion of pending railroad legislation.

Mr. Howell, in continuing his attacks, charged as one instance of the failure of local enforcers that the Carlton club, one of the most exclusive night clubs in the capital, has never been raided or closed up, although four dry agents reported witnessing Volstead violations at numerous tables. Later he said he would seek to have Gen. Smedley D. Butler, commandant of the marine corps base at Quantico, detailed to Washington for a "clean-up job." General Butler recently compelled the town authorities of Quantico to enforce the prohibition law by ordering the marines not to enter the town until the speakeasies and bootleggers were driven out.

HARRY F. SINCLAIR'S appeal to the President for commutation of sentence having been denied on recommendation of Attorney General Mitchell, the imprisoned oil magnate issued a statement calling on Mr. Mitchell to make public all of the record in his plea. His principal reason for asking for freedom, Sinclair declared, was that he had been jailed for jury shadowing—which had not before been prohibited by statute or rule of the court. "Observation of a jury became contempt of court only when I engaged in it," he declared.

"In effect," Sinclair said, "the statement of the attorney general can be summed up to mean that I should remain in jail because I was acquitted of an alleged offense for which he feels I should have been convicted."

FOR the first time President Hoover took a hand in the tariff fight when he issued a statement urging the retention of the flexible tariff, which he asserted is "a protection for the sound progress in our economic system and for the future protection of our farmers and our industries and consumers." He gave at considerable length his reasons for this assertion, taking direct issue with the Democrats and radical Republicans who seek the repeal of the flexible tariff. Senator Pat Harrison of Mississippi predicted the President would be defeated on this proposition.

EVERY American was interested in the wedding of Maj. John Coolidge, son of former President and Mrs. Coolidge, and Florence Trumbull, daughter of Governor Trumbull of Connecticut. The ceremony took place in the bride's home town, Plainville, Conn., and though the families tried to make it a simple affair, it was attended by a number of distinguished persons and the details were read with avidity throughout the land. The wedding gifts nearly filled one half of the second floor of the Trumbull home and included a big silver bowl and candlesticks from the foreign envoys in Washington. Mr. Coolidge gave "a substantial check" and Mrs. Coolidge presented a solid mahogany bedroom suite of colonial design and a check for $250, which she received for her poem, "The Open Door," inspired by the fifth anniversary of the death of her other son, Calvin Coolidge, Jr.

JACKSON REYNOLDS, president of the First National bank of New York, and Melvin A. Traylor, president of the First National bank of Chicago, American representatives on the commission that is to set up the bank for international settlements provided for in the Young reparations plan, have sailed for Europe, where they will meet their European colleagues. The effort to put the bank under complete control of the League of Nations failed for the time being in Geneva, but something in that line may come up at later sessions of the league assembly. Since it was specified by the Young commission that the bank should be dominated by financial and not political interests, Messrs. Reynolds and Traylor did not confer with President Hoover before departing.

RAMSAY MACDONALD, prime minister of Great Britain, occupying the imperial suite on the liner Berengaria, sailed for the United States for his conference with President Hoover. He is bringing no staff of experts with him because, as he told the English, the technical points of the proposed plan for a five-power naval limitation conference have already been settled and all that is needed is a diplomatic agreement. In the conversations with Mr. Hoover, besides the naval conference, other matters entering into Anglo-American relations will be discussed, one of them possibly being certain changes in the ship liquor treaty negotiated in 1923.

LAST week it was Russia's turn to issue an ultimatum, so the Soviet government warned the Chinese Nationalist government that any further Chinese attacks on the Russian population along the Manchurian border would result in immediate and decisive action by the Red army.

Gen. Chang Fak-wei, reactionary commander of the Cantonese "Ironsides" division, who was dismissed by the Nanking government, led his troops in a rebellion that for some days looked very serious. But toward the end of the week the Nationalist authorities announced the revolt was broken and Chang's soldiers surrounded at Lichow.

Letters from missionaries tell of the massacre, late in August, of 3,000 rebellious Moslems in the remote Kansu province. The victims were gathered at Taochow under a pretext and all males between the ages of fifteen and fifty were slaughtered.

POLITICAL quarrels in Austria, which for some weeks have been threatening civil war, were further complicated by the resignation of Chancellor Streeruwitz and his Christian Socialist cabinet because certain elements in their party could no longer be restrained. Johan Schober, head of the Vienna police, was made chancellor and he selected as minister of war Gen. Karl Vaugoin, who has made the army a powerful conservative force. Both these men are bitter foes of the Socialists.

The coalition government of Czechoslovakia which had held office since last February also resigned. Parliament was dissolved and new elections were called for October 27.

ACCORDING to reports from Calcutta, Amir Habibullah, otherwise Bacha Sakao, the water carrier and bandit who made himself king of Afghanistan, was assassinated. Recent advices from Peshawar stated unrest was increasing in Afghanistan, owing to Habibullah's inability to raise money, and a counter revolution was threatened.

COLONEL LINDBERGH'S latest feat was a flight from Miami to Cuba, Trinidad, British Guiana and Dutch Guiana for the purpose of opening a new aerial route. He was accompanied by Mrs. Lindbergh and several others and the trip was without undue incident. Coming back from Paramaribo to Port of Spain, the colonel turned his plane westward for flight to Maracay, Venezuela. From there his homeward course included Curacao, Maracaibo, Barranquilla, the Canal Zone and again Cuba.

PROMINENT among those whom death claimed were Cardinal Dubois, archbishop of Paris; Gen. Harry F. Hodges, builder of the Panama canal locks, and Miller Huggins, manager of the New York Yankees of the American league.

"COLLEGE ON WHEELS" REACHES PACIFIC

Coeds enrolled in the summer courses of Catawba college, Salisbury, N. C., have reached Los Angeles in their tour across the United States, bringing their own baggage, dining cars, "pullmans," library and everything necessary to camping and classroom. Placing special emphasis on courses in geology, physical and commercial geography, the students receive eight units of college credit for the tour to the Pacific coast under the extension division of their university. The photograph shows the cavalcade of cars in the "college on wheels" as it entered Los Angeles.

CLEANERS USEFUL ON AUTOMOBILES

Small Device Removes Dirt and Dust Before Reaching Carburetor.

(By H. G. KAMRATH, Research Engineer.)

Stirring up a whirl of dust as he approached swiftly on a gravel road, the motorist came to a stop in front of a country store. His car was covered with dust—there had been no rain for two weeks.

"Enough dust to injure your engine," the venerable storekeeper, who had come out, remarked.

"No," the motorist replied as he started away, "air cleaner takes care of that."

Something New.

"Air cleaner?" the storekeeper pondered inquiringly, turning to me.

"Yes," I replied, "aren't you familiar with air cleaners? Car builders for several years have been using them to prolong the engine's life."

"No," the storekeeper admitted, "but I do know from what I've seen and heard that cars nowadays go very much farther before it is necessary to overhaul the engine I can remember when overhauling was almost a weekly routine."

So being on my vacation and having plenty of time, I told him much about this interesting engineering development.

"The air cleaner," I explained, "is a small device that attaches to the carburetor. It removes dirt and dust before it reaches the carburetor and does its work so thoroughly that damage from this cause is negligible. However, if the dirt and dust were permitted to enter the engine, it would form on the cylinder walls and becoming mixed with the lubricating oil, serious wear would result.

Two Kinds of Cleaners.

"Two kinds of air cleaners are used on automobiles, the centrifugal type and the 'oil wetted.' In the former, dirt and dust are separated from the air by means of centrifugal force, the principle being exactly the same as that used in the well known cream separator. The latter type is a circular can filled with thin copper wire mesh, which is wetted with oil. The dust in the incoming air adheres to the oily surface and is thus prevented from entering the engine.

"Recently engineers inspected an automobile that had been run 26,000 miles. No valves had been replaced or ground, no new rings or pistons had been put in, not an engine bearing had been taken up. None of these things was necessary; no bearing knocks; oil and gasoline mileage satisfactory. In fact the engine was just nicely run in. The air cleaner, together with the oil filter, made this possible."

AUTOMOBILE NOTES

Automobile drivers may look around the corner with a periscope recently placed on the market in Berlin.

* * *

The Netherlands East Indies has become automobile struck and last year 8,829 American-made cars were shipped there.

* * *

To take care of the many automobiles at the Winged Foot tourney, many trees were cut down to provide parking space.

* * *

Automobiles shipped by rail brought a revenue of $193,798,936 to railroads in 1928, according to the National Automobile Chamber of Commerce.

* * *

The East North Central states have 25 per cent of the motor vehicle registrations, while the Middle Atlantic states rank next with 22 per cent.

* * *

The idea of some car owners that it is all right to drive on a flat tire to the nearest service station is costly. It is not a chance worth taking in this day of balloon tires.

Sick Car Diagnosis

When a car lacks its usual snap and get-away, check for the following:

Manifold gasket leaks.

Improper valve clearance.

Faulty carburetor adjustment; high or low float level.

Shortage of fuel due to clogged line or screens.

Fouled or improperly gapped spark plugs.

Worn or improperly spaced breaker points.

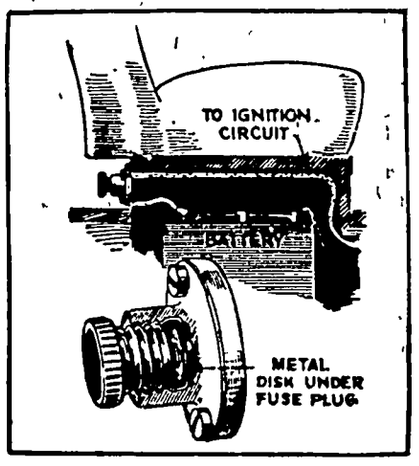
Early or late ignition timing.

Dragging brakes.

In practically every case loss of power and poor get-away are cured by attention to the above.

Concealed Ignition Wire Foils Automobile Thief

The auto ignition lock shown in the illustration embodies a simple method of making an auto thief pass up your car in preference to one that will start more easily. After he has shorted out the ignition switch he does not anticipate looking for another break in the wiring. An ordinary cleat socket is screwed in some inconspicuous position, as indicated, and is connected in the storage battery circuit. Of course, the wires leading to the socket must be well concealed.—Popular Mechanics Magazine.



Concealed Battery Wire Foils Automobile Thieves.

"Dark Car" Menace Very Dangerous to Motorists

There is a serious menace confronting every driver that could easily be avoided if car owners would use a little bit of thoughtfulness in the late evening, says the National Automobile club. This is the menace of the "dark car" whose owner has failed to turn on his lights as soon as darkness approaches.

Twilight becomes a definite menace when many drivers are negligent of one of the simplest precautionary measures in the decalogue of motoring. "Turn on your light" has become one of the most frequent signals to be seen on the roads of late.

It is not only an eerie thing, but a dangerous thing as well to suddenly see looming out of the obscurity ahead one of these "dark cars" whose driver seemingly is "cat eyed" and therefore does not require the assistance of his own lights or the lights of approaching cars.

Must Have Auto Under Control at Crossings

The Supreme court of Nebraska has ruled that it is the duty of the driver of an automobile to have it under such control that when he reaches a point to see and hear an approaching train he can stop his car and avoid a collision at the crossing. The court held that failure to do so is negligence more than slight and will defeat recovery of damages on the part of the automobilist. This is a rule the railroad companies have been asking for, in view of the large number of automobile accidents at grade crossings, a large percentage of which could have been averted through the exercise of even ordinary care on the part of the driver of the car.

ORCHARD GLEANINGS

TREES DAMAGED BY MANY PEST

Harm Done by Mice Unde Protection of Heavy Snow

(Prepared by the United States Departme of Agriculture.)

In many states, mice, rabbits, a pocket gophers do considerable da age to orchards, especially to you fruit trees, during the fall and wint months. This injury is serious enou to warrant the protection of all you fruit trees against danger for at le the first six or eight years aft transplanting.

Meadow mice as a rule make the runways on the surface of the grou under grass, leaves, or other shelte ing litter. They gnaw the bark trees to about six inches abo ground. Pine mice make their ru ways underground, much as moles and attack the roots of trees. Cle cultivation of the entire orchard w eliminate these mice, but where th is not considered practicable a sm area cleared away from around ea tree will help. This method can be everywhere depended upon, ho ever, as the mice often damage t trees under the protection of de snows. Poisoning has been found the biological survey of the Unit States Department of Agriculture be the most generally effective meth of control.

To prevent rabbit injury it is nec sary to wrap the base of tree trun to a height of 18 or 20 inches. Po try wire, old newspapers, gunny sac or patented wire wrappers may used. Cloth or paper or tar-pap wrappers should be removed early spring before growth starts. Poison baits may also be used against rabb if they do much damage.

Pocket gophers work undergrou gnawing the roots of the young tre and oftimes evidence of damage is found until some of the trees killed and others badly injured. T same general methods that are us to kill pocket gophers in alfalfa fie should be applied, and thorough er ication should be accomplished b in and around the orchard, because pocket gophers are allowed to win near by they are likely to feed the roots.

Detailed information concerning control of these and other injuri rodents may be obtained upon requ addressed to the United States D partment of Agriculture, Washingt D. C.

Time to Store Apples Is Difficult Proble

The sooner apples are brought a low temperature and put into cle cool storage after picking the bet they will keep. Piling apples in orchard, if only for a day or two, practice still followed on some far is one of the greatest promoters of and poor keeping. Only sound fr should be stored, for a bruised broken skin will enable decay org isms to get a foothold and destroy fruit.

Go over the storage room and cl out anything that may impart a f eign odor to the fruit. The odor fr vegetables, meats and the like will absorbed by apples and give them musty or otherwise unpleasant ta If the room can be thoroughly clean aired and possibly whitewashed, keeping of the fruit will be enhan and its good quality preserved. winter supply of apples deserves ev chance for "making good"—pies sauce.

Horticultural Notes

The rabbits have done very seri damage to some young apple chards this summer.

* * *

The oriental fruit moth is one the newer insects that is causin great deal of concern.

* * *

The use of nitrogenous fertili is very important and quite e tive in the sod mulch orchard.

* * *

The thorny, snaky, trailing vine the dewberry are part of its in ance as a profitable plant to gro

* * *

If a twenty-year-old apple orch is to produce maximum results will need plenty of soil area and bow room."

* * *

Currants are propagated almost tirely by means of cuttings from vigorous shoots of the cur season's growth.

* * *

In late fall and winter the presen wilt in the raspberry patch may ascertained by the presence of canes.

* * *

An instrument known as fruit sure tester is now being used to termine the hardness and softnes apples and other fruits.

* * *

Crown gall is generally man as swellings or tumor-like galls the crown and underground part the plant, although aerial galls not uncommon.

THAT THORNY ROSE

(©by D. J. Walsh.)

PRUDENCE PARKER, small, dark and rather plain, stooped and carefully removed a luscious looking pie from the oven. Turning, she smiled at her companion and in a tone which expressed great satisfaction remarked:

"As my old neighbor Mrs. Peck says, 'That pie will eat well.' Tom's very fond of pie, especially blackberry pie, and this is the first one we've had this season."

"Yes," her companion said as she sniffed the delicious aroma, "but if you had stayed in the city you could have bought ready baked blackberry pies this very long while. I can't understand you, Prue." Rose Breen's voice showed slight irritation. "You used to be so crazy about the theater, crowds, bridge parties, clubs. You and Tom had more dates than any other young married couple in our set and now you seem to be contented to settle down in this poky town with only your car to remind you that you ever really lived. It must be deadly dull, especially for Tom, who is so handsome. Now confess, dear, wasn't it chiefly because Tom was so handsome and—well, of course there was Bernice Carrier. Bernice and Tom were such a fine looking couple until you came along, you sly young thing, and married him out of hand." Rose's voice contained something deeper than simple inquiry. "And, by the way, I heard just before I left town that Bernice is coming back. Mark my words, mark my words, Tom and Bernice are bound to see each other. It will take more than blackberry pie to keep them apart." With a provoking laugh Rose retired to the back porch to write a letter.

Prue, keeping on with her work, pondered what Rose had just said. Rose had appeared unexpectedly the day before. She explained that she was on her way east and decided to stop over for a day or two. Prue was delighted to see her. The women had known each other for five years. But the acquaintance begun at club meetings and parties had never ripened into anything like a fast friendship. Prue's thoughts wandered from Rose to Tom. Her marriage to Tom had been the one bright event in a rather drab girlhood. Tom was big, good natured, popular and, as Rose had said, handsome. During the early days of her married life Prue had thought very little about Tom's looks. As time went on, however, she heard more and more often such remarks as "Prue, you plain little thing, how on earth did you get such a good looking husband?" Or after a long and speculative look, "You must watch Tom, dear. He is such a handsome man." To be sure, it was said in a jesting way and nearly always provoked laughter. After a time Prue found herself watching. She began to dread meeting strangers. She wondered if they, too, weren't thinking how Tom ever came to marry her. It never occurred to her to come back with "Tom chose me from all the other girls—it was he who sought me." It all ended by the whole thing getting on her nerves that her health suffered and plain little Prue only became the plainer.

It was by the advice of the family physician that Prue finally went to the country for a long stay. Tom spent week-ends and holidays with her. Soon he found a position that paid better than his old one.

Was she dull? Prue asked herself the question. How could she be with Junior and little Mary growing into fine, sturdy children. She had her garden, chickens, neighbors, home, and, best of all, the close companionship of Tom. Her eyes turned to the pie. She had arisen at sunrise and stolen out into her garden to pick the berries for the pie, hours before Rose had opened her eyes long enough to become aware that the sun was assuring another wonderful late summer day. Prue thought of the moment when she had paused with pail brimming full of berries to sniff the pungent smoke which was arising from her own kitchen fire. Tom had awakened and missed her and had arisen and started the breakfast fire. Prue had been happy so long that she had unconsciously settled into the comfort of never doubting that her happy time would last forever—until day before yesterday. Rose's coming had somehow brought a change. Already Tom seemed different.

A shout from outside aroused Prue from her thoughts.

"What do you think?" Junior shouted as he flew up the steps, "Daddy stopped at the schoolhouse and left this note. He said he'd give me a quarter if I'd hurry right home after school and give it to you."

Prue took the note and read it.

"Prue, I'm going away—I'll be back —some day. Tom."

"Oh, Prue!" Rose cried at her elbow. "Just what you might expect. Tom has gone to meet Bernice—aren't men brutes?" She put her arms about Prue. But somehow Prue evaded the caress. She tucked the note in her pocket and went in. Rose and the children followed. Rose could not find the slightest trace of disturbance in her voice as she said:

"Run along, children, and make ready for dinner. Daddy won't be with us this noon and that means, Junior, you have his piece of pie." To Rose she said with a smile: "That is the rule with my menfolks. When either falls to appear on time to a meal the other gets his dessert."

Two days passed with not a word from Tom. Prue maintained her usual pleasant manner. Her house, her children and guest were taken care of as carefully as ever, only the increasingly dark circles around her eyes gave a hint of what she was suffering.

It was the third evening after Tom's unexpected departure. The children had gone to the movies with some of their friends. Prue and Rose were sitting on the back porch in the moonlight. Rose had had it on her mind all day to speak very plainly to Prue. Why, the woman must be crazy to let her man run away and leave her without making some sort of an effort to either bring him back or at least try to find him—

"Prue," she began, and her voice was low and vibrant with meaning, "what are you intending to do? You must know you can't sit here forever without making some effort to bring Tom to justice. Think of your children, Prue! You must think of your children—" She was interrupted by a cheery voice speaking from inside the house. It was Tom. He had come into the house from the front and finding no one there, and hearing voices had wandered onto the back porch.

"Why must Prue think of her children?" he shouted. "Good heavens! They're the only thing she ever does think of except her home and me and a million other things. How's everybody?" And coming out on the porch he threw himself upon the steps at his wife's feet, took up her hand and kissed it.

Prue couldn't speak. But Rose said sarcastically:

"I guess Prue had been thinking a good deal about Bernice for the past few days—

"Bernice who?" Tom demanded. "Anyone been trying to put something over on you, Prue?" His voice was belligerent.

"Now don't play innocent, Tom," Rose said, as Prue still remained silent. "I meant of course Bernice Carrier—"

"If she's been thinking about Bernice Carrier I don't wonder," said Tom. "If I'd heard about her earlier I'd have thought about her, too. A man was telling me on the train coming out tonight. It's all in the evening papers. You know, she and her first husband parted. Some jealous old scandal-monger made trouble, I guess. Bernice got a divorce and has just married again. She and her husband were on their honeymoon and something happened to their car. They went over to the bank. They never got near here at all. Gosh, I'm a tired man. I've done more figuring the last few days than ever before in my life. John Hitt dropped in at the office unexpectedly and carried me off in his car. He wanted me to clear up a little question of survey that I knew about when I worked for him. He wouldn't even let me have time to come home for a clean collar. So I stopped at the school and left a note with Junior. Tomorrow we have a telephone put in so I can call you up if such a thing happens again. But I knew, Prue, you'd understand. I don't suppose there happens to be a pie in the cupboard, does there?"

"Yes," Prue's voice had a happy little ring. "There's a blackberry pie, Tom. I've baked a fresh one every day since you went away."

"Good old girl!" Tom jumped to his feet and bounded whistling into the house.

Next morning at the breakfast table Rose announced that important and pressing business made her immediate departure necessary. An hour later she was gone.

Moral: Don't Be in Hurry to Judge Other Fellow

The porter comes through the car and shouts "All windows down for the tunnel!" So you reach over and put down your window and you look around and other people are putting down their windows. At last all the windows are down except the one in front of you.

The man sitting in that seat acts as if he didn't hear. Maybe he's deaf. Or maybe he's just one of those hard-headed people who never do what they are told. Anyway, it will be very disagreeable sitting where you are with that window open and the smoke coming in. If one window is open, all of them may as well be open.

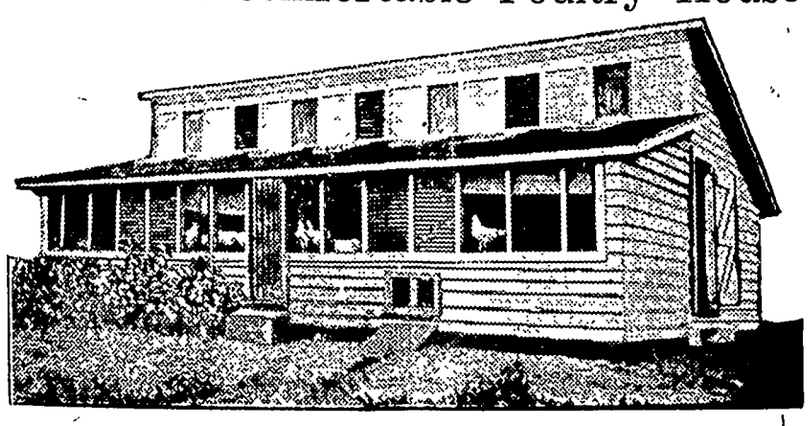
Why doesn't the idiot put his window down? He hasn't got a right to keep it up. The porter or somebody ought to make him put it down, but nobody seems to notice. There is always one person like that who spoils things. Nothing is too bad for a man who doesn't put a window down when you are going through a tunnel. There certainly are a lot of disagreeable people in this world.

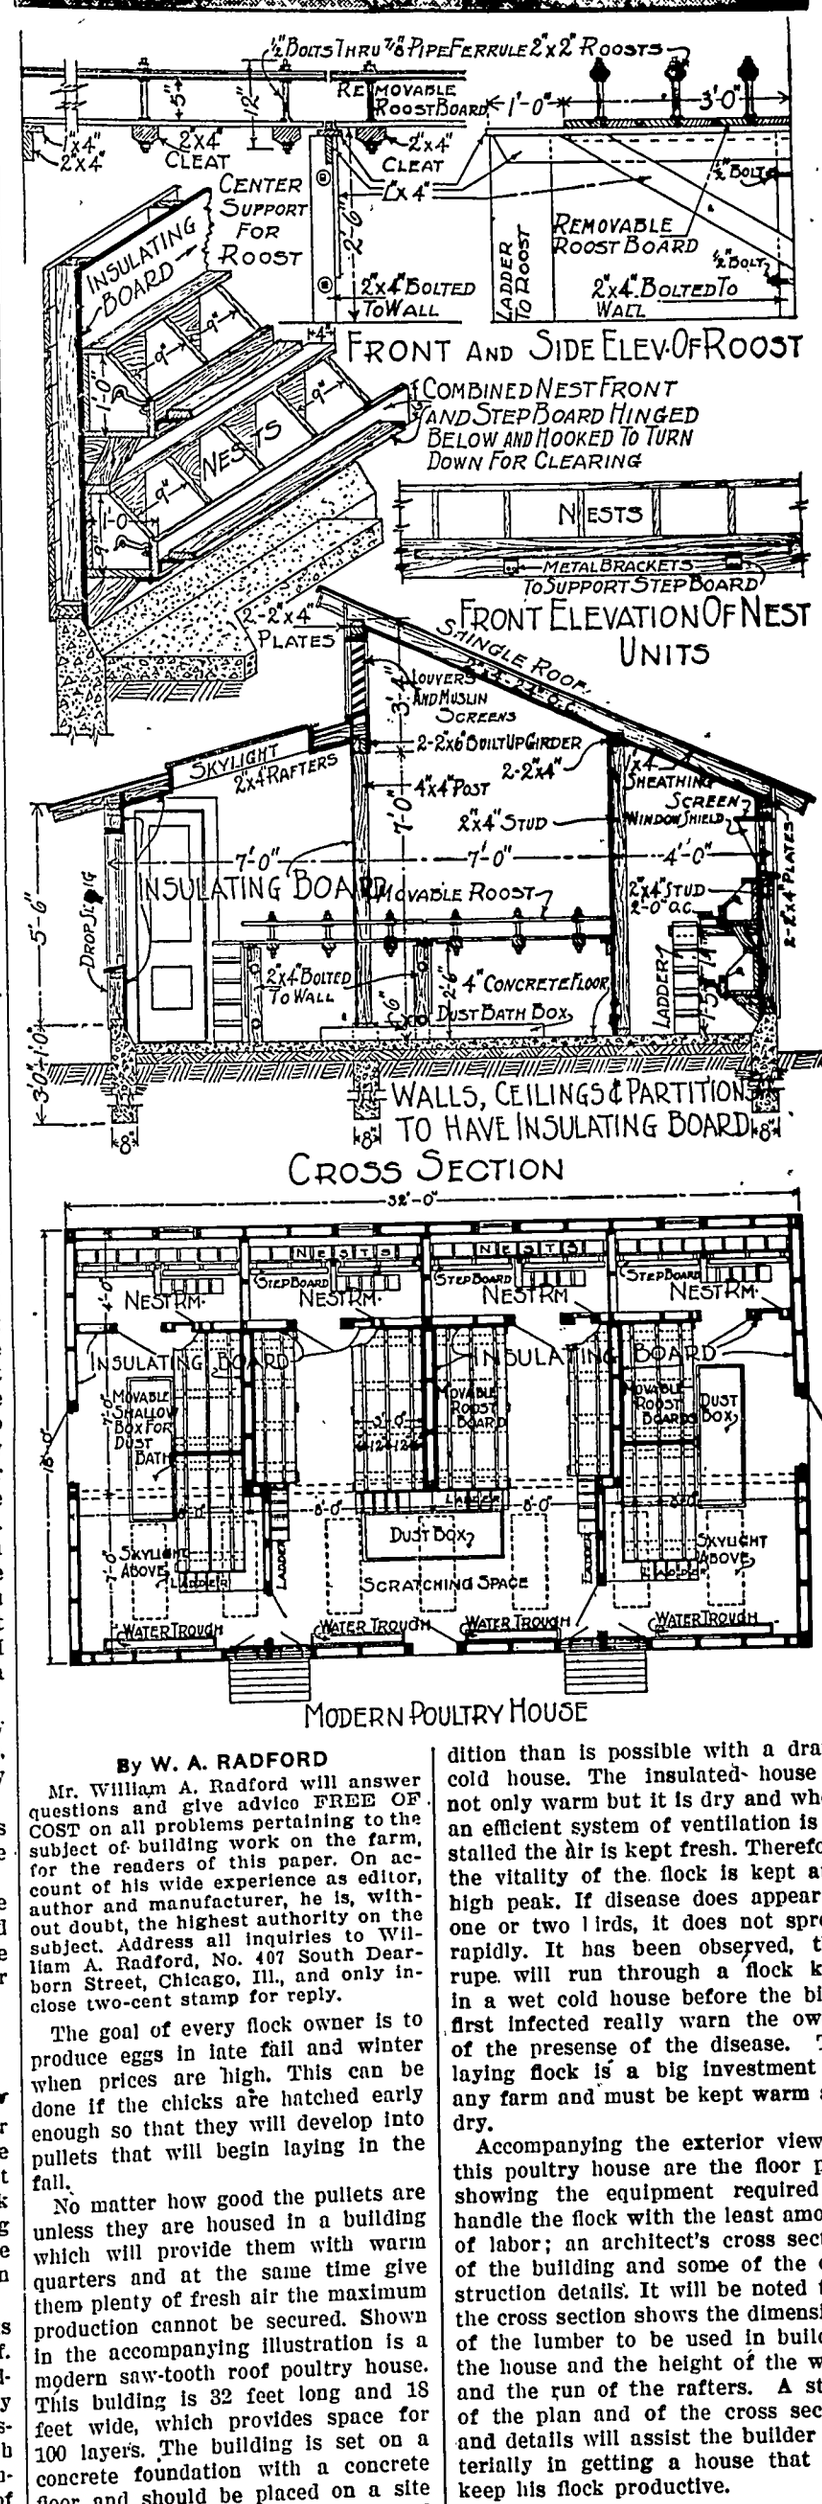
Perhaps you ought to touch him on the back and say, "Hey, put down that window!" But he might get angry and say something back and cause an altercation, which would be unpleasant. You can see from the back of his head that he is mean and selfish. No use getting mixed up with a man like that. Serve him right if the smoke from the tunnel choked him. But he won't suffer as much as the people behind him. If this were a boat, he would rock it.

You would like to give people like that a piece of your mind. That's the trouble with things in this country. Everyone imagines he can do what he pleases regardless of the other fellow.

And here is the tunnel. Confound him! But no, he's putting down the window. He's got it down. Perhaps he isn't so bad, after all. Oh, well!—Baltimore Sun.

Maximum Egg Production Insured With Comfortable Poultry House





By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

The goal of every flock owner is to produce eggs in late fall and winter when prices are high. This can be done if the chicks are hatched early enough so that they will develop into pullets that will begin laying in the fall.

No matter how good the pullets are unless they are housed in a building which will provide them with warm quarters and at the same time give them plenty of fresh air the maximum production cannot be secured. Shown in the accompanying illustration is a modern saw-tooth roof poultry house. This bulding is 32 feet long and 18 feet wide, which provides space for 100 layers. The building is set on a concrete foundation with a concrete floor and should be placed on a site so that it extends east and west and faces the south to get the benefit of all the sunshine available during the shortest days of the year and the early winter.

Probably no building will waste more money for the flock owner than the poorly built laying house. Every poultry owner who has watched egg production drop when a cold snap comes on can testify to this. The same flock, same feed, the same degree of health bring a heavy egg yield in the properly constructed house, whereas in a house where there are drafts and low temperatures egg production will be cut materially, for the food the hens consume in a cold house goes to sustain body heat rather than to produce eggs.

To combat this condition farmers are paying more and more attention to the construction of poultry houses and to the materials used in them. Not only are the walls of the building constructed so as to be weatherproof but are insulated against cold. This insulation also makes the house cooler in summer and a great many owners use them for brooder houses in the early spring.

The insulated laying house is a profit maker in another sense. It keeps the flock in better physical condition than is possible with a drafty cold house. The insulated house is not only warm but it is dry and where an efficient system of ventilation is installed the air is kept fresh. Therefore, the vitality of the flock is kept at a high peak. If disease does appear in one or two birds, it does not spread rapidly. It has been observed, that rupe will run through a flock kept in a wet cold house before the birds first infected really warn the owner of the presense of the disease. The laying flock is a big investment on any farm and must be kept warm and dry.

Accompanying the exterior view of this poultry house are the floor plan showing the equipment required to handle the flock with the least amount of labor; an architect's cross section of the building and some of the construction details. It will be noted that the cross section shows the dimensions of the lumber to be used in building the house and the height of the walls and the run of the rafters. A study of the plan and of the cross section and details will assist the builder materially in getting a house that will keep his flock productive.

Seasoned Lumber Brings Strength and Durability

With over 90,000,000 Americans living in frame houses, it may truly be said that our civilization is built on wood. Unfortunately not all the lumber produced is put to use under proper condition of seasoning and assembly, and many millions of consumers suffer severe losses through failure to obtain maximum service.

Wood in its original state contains more moisture than is desired. Drying increases strength and durability, and reduces weight, so decreasing freight charges. Seasoning of lumber is in reality a refining process, just as is the impregnation with preservatives.

Harmony in Rooms

If we should carefully select a harmony of colors for the different rooms so that there would be a natural transition from one to the other, then not only would the small house or apartment gain in beauty and healthfulness, but the rooms themselves would appear larger. The expanse of doors in such a case will fulfill their proper function, the house gaining in size.

Scraps of Humor

LITERAL TRUTH

Theatrical agents sometimes have to be rather cruel. One day a somewhat faded woman called to apply for the position of chorus girl.

"Sorry," said the agent, tactfully; "you're too late."

The applicant burst out in abuse, ending with, "I don't believe I'm too late at all."

"Oh, yes, you are," said the agent. "About fifteen years."

Socks Don't Fit

"My wife and daughter have gone in for this darnfool ankle sock fad, but I have one consolation," remarked the married man.

"Yeah? What's that?" asked his bachelor friend.

"My socks are too large and too full of holes for them to ever want to swipe," he replied.

COOKBOOK FOR 2 NEEDED

Young Husband—Emma, the food doesn't taste right. Why don't you make use of the cookbook I gave you yesterday?

Young Wife—My dear boy! I can't do that. You see, there are only the two of us and all the dishes described are calculated to serve six persons.

Back to Earth

The aviator soars on high
Afar from mortal sight.
We still encourage him to fly
But how's he going to light?

A Dangerous Pair

Mrs. Pryer—The Joneses are always running somebody down.

Mrs. Guyer—Both of them?

Mrs. Pryer—Yes, both of them. He with his car, and she with her tongue. —New Bedford Standard.

More Recent Experience

Etaoin—I know that girl well. She sat on my lap when she was little.

Shrdlu—I know her better. She sat on my lap last night.

WHITTLING HIM AWAY

"I believe she's figuring on doing away with her husband."

"Wouldn't doubt it. Why she's got him worn to a frazzle now."

Just Pardners

A pretty good firm is Watch & Waite
And another is Attit, Early & Layte,
And still another is Doo & Dairet
But the best is probably Grinn & Barrett.

A Poor Excuse

Her Father—Why were you not at the lecture this evening?

She—I have an excuse.

Her Father—O, yes. I saw it.

Think of This

A young reporter was being called to account about an interview with a champion pugilist.

"A lot of stuff about his weight, reach and what not," stormed the sporting editor. "Not a word about his favorite poem."

Between Two Forces

Higgins Peewe seems such an evenly balanced fellow.

Wiggins—He should be. In business the profiteers hold him up and at home his wife holds him down.

A Public Servant

Thief—I hope you will be lenient with me your worship. I have a good many dependent upon me for their support.

Magistrate—Children?

Thief—No, your worship; detectives. —Blackpool Times.

Perfect Service

"Can you recommend the insurance company with which you are insured against accidents?"

"Rather! I have been insured ten years and never had an accident."

For Best Results in Home Dyeing

You can always give richer, deeper, more brilliant colors to faded or out-of-style dresses, hose, coats, draperies, etc., with Diamond Dyes. And the colors stay in through wear and washing!

Here's the reason. Diamond Dyes contain the highest quality anilines money can buy. And it's the anilines that count! They are the very life of dyes.

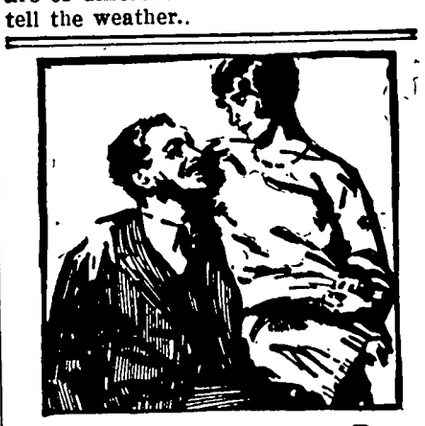
Plenty of pure anilines make Diamond Dyes easy to use. They go on evenly without spotting or streaking. Try them next time and see why authorities recommend them; why millions of women will use no other dyes.

You get Diamond Dyes for the same price as ordinary dyes; 15c, at any drug store.

HUNT HIDDEN GOLD

The genuine Spanish "GOLD DIGGER" Compass, useful in locating hidden or buried Gold and Silver ONLY: Coins, jewelry, ores; etc., above or below ground. Simple to operate. Lasts a lifetime. SEND NO MONEY. Pay Postman Special Introductory Price Delivered for Agent's Sample; $2.72 for Standard Type or $5.27 for Double Strength Type. No duty or additional postage. *If not satisfied after Twenty-Four Hour Trial money refunded.* Wonderful testimonials; many telling of finds. Beware imitations. Order immediately and JOIN TREASURE HUNT. *Interesting proposition to agents.* D. S. Bland, "Apartado 1426", Mexico City, Mexico.

Those who don't notice that clouds are of different kinds can never foretell the weather..



Makes Life Sweeter

Next time a coated tongue, fetid breath, or acrid skin gives evidence of sour stomach—try Phillips Milk of Magnesia!

Get acquainted with this perfect anti-acid that helps the system keep sound and sweet. That every stomach needs at times. Take it whenever a hearty meal brings any discomfort.

Phillips Milk of Magnesia has won medical endorsement. And convinced millions of men and women they didn't have "indigestion." Don't diet, and don't suffer; just remember Phillips. Pleasant to take, and always effective.

The name Phillips is important; it identifies the genuine product. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

Dizzy? NR TO-NIGHT TO-MORROW ALRIGHT

Start thorough bowel action when you feel dizzy, headachy, bilious. Take NATURE'S REMEDY—NR Tablets. It's mild, safe, purely vegetable, and far better than ordinary laxatives. Keeps you feeling right. 25c.

For Sale at All Druggists

Masterpieces of Pen and Brush Forgotten

A pine tree brings forth many seeds but among the millions that it scatters over the mountainside perhaps but one may survive—treasured, say, by a squirrel, stored underground, springing to life when the uncertainties of existence deprive the squirrel of need for food.

Charles Wesley, it is said, wrote 6,000 hymns, but from this 6,000 probably but one has assurance of immortality—"Jesus Lover of My Soul." Wordsworth was prodigious in sonnets but of the thousands he drafted he published but a few more than 350 and of these less than half a dozen have taken root in popular memory. La Farge burned many of his drawings, left between 50,000 and 60,000, and some critics say he will be fortunate if one of them be remembered a few hundred years from now. Raphael painted scores of madonnas, doubtless sketched hundreds that he never painted, and the world really treasures two—the "Sistine Madonna," and "Madonna della Sedia." The "Sistine," it might be remarked, was not thought much of at the time of its painting, a critic then dismissing it with four lines of comment.—Detroit News.

Legal Knots Untied by Chinese Solomon

In a village near Peking, China, four tradesmen clubbed together to buy cotton. To protect it from rats they procured a cat, and agreed that each of them owned one of the animal's legs.

Soon afterwards the cat hurt one of its paws, and the owner of that particular leg bound it up with a rag soaked in oil. But the cat went too near the fire, the bandage ignited, and the terrified animal rushed amongst the bales of cotton, which flared up and were destroyed.

The three owners of the uninjured legs sued their partner for loss and damages. The judge ruled thus:

"Since the cat was unable to use the injured leg, the cotton was set on fire by the action of the three uninjured legs on which the cat ran among the bales of cotton. Consequently these three legs were guilty, and their owners must pay damages and costs."

Turkish Trade Unions

The oldest trade unions in the world are in Constantinople. Here every worker, no matter what his calling, belongs to a guild. These guilds are very powerful, having been in existence for many centuries and possessing special privileges granted to them for services rendered to the state in times of crisis. To this day in Constantinople, no shoemaker of the guild of shoemakers may be punished except by special officers appointed by members of his own calling; the favor having been conferred upon the fraternity by one of the sultans of the Sixth century. The guilds regulate wages, length of working day, and even control the "pitches" of the vendors.

Good Job

A young lawyer had a foreign client in police court. It looked rather black for the foreigner, and the lawyer fairly outdid himself in trying to convince the magistrate that his client was innocent.

The lawyer dwelt on the other's ignorance of American customs, his straightforward story, and enough other details to extend the talk fully 15 minutes. His client was acquitted.

In congratulating the freed man the lawyer held out his hand in an absent, though rather suggestive manner. The client grasped it warmly.

"Dot was a fine noise you make," he said. "Thanks. Goo'by."

Metals Found in Scotland

The precious metals exist in several Scottish counties. The ancient Celts made their wonderful brooches, and other trinkets of native gold, probably gathered from the beds of streams. In the Sixteenth century the metal was extensively mined in Lanarkshire. Pennant describes a nugget weighing one and a half ounces which was discovered on Crawford Muir. Some years ago, a local writer, Doctor Watson, collected a fair amount of gold in small grains from the Wanlockhead district.

Popular Scottish Stone

One of the stones that has never waned in popularity is the Cairngorm. This splendid stone is a variety of rock crystal found in the Cairngorm mountains in Inverness-shire, Scotland, and also in the Grampians. In color it ranges from light orange to deep brown. The Cairngorm is made into various articles of jewelry, which find a ready sale, especially amongst tourists visiting Scotland. From time immemorial it has been used to decorate the dirks and brooches worn with Highland dress.

Teacher's Helper

A kindergarten teacher, who was obliged to leave the room for a few moments, returned just in time to see one mischievous little chap sneaking up the aisle toward the front of the room.

"What are you doing, James?" the teacher asked.

James hesitated a moment; then he replied hopefully:

"I was just coming up front to see if everybody was good."

WHY

Silver Quarter Is Called "Two Bits."

"Bit" has been applied in England to coins for centuries. It was one time thieves' slang for money in general. Thomas Dekker so used the term in "A Knight's Conjuring: Jests to Make You Merie," which was first printed in 1607. Later "bit" came to be applied to any small silver coin. Even yet the British use it in such phrases as "sixpenny bit." Our use of the term in "two bits," meaning a quarter of a dollar, originated in the West Indies, especially Jamaica, where "bit" was originally applied to small silver coins forming fractions of the Spanish dollar. It was applied specifically to the real, which was equal to one-eighth of the dollar then in use. Examples of the term in that sense date back to the Seventeenth century. When the Spanish dollar disappeared from circulation in the United States, a quarter was called two bits, and a half dollar four bits. Twelve cents and a half is never called a bit, although in some sections of the country fifteen cents is called a long bit, and ten cents is a short bit.—Pathfinder Magazine.

Why Sleeping in Open Promotes Good Health

Contrary to old-fashioned ideas sleeping in the open is not harmful and night air is now held to be invigorating. When the sun sets and night falls night air is the only kind obtainable and it is considered far better have plenty of night air than to breathe foul or stale air. Night air acts as a tonic, says Dr. Harvey Wiley, authority on health. One of the sins of civilization, he claims, is the invention of the house. If there were no houses there would be no tuberculosis, he asserts. Tuberculosis, however, is not the only disease the house is responsible for. Cutting off the proper supply of fresh air reduces the vitality of the body to such an extent that not only tuberculosis germs, but germs of other infectious diseases may more rapidly take hold. This problem can be best handled, he says, by making use of sleeping porches. Every house, whether in the crowded city or in the country, has one or more porches. These porches can easily and should be fitted out as sleeping porches.

Why Variation in Wind.

The weather bureau says that owing to the friction at the surface of the earth, the air near the ground always has less velocity than the air a few hundred feet above it. In the daytime this faster air is mixed up with the surface air by convection induced by surface heating. In this way the surface air is given a greater velocity than it would have if not mixed with the upper and faster wind. At night, when there is no surface heating and no convection, the upper wind, except when quite strong, glides over the lower air, which is held relatively quiet by surface friction. When the upper winds are very strong they mix with the lower air by mechanical turbulence and the surface wind remains as strong by night as by day.

Why Anomaly of Frost.

Frost forms only when the temperature of the object on which it occurs, and the immediately adjacent air, is at or below the freezing point, 32 degrees Fahrenheit. The temperature of the grass, for instance, especially in low spots and on still, clear nights, may be 32 degrees Fahrenheit, or lower, while that of the air a little distance away, and 20 to 30 feet higher, may be 40 degrees Fahrenheit, or over. This explains the anomaly of frost at 40 degrees Fahrenheit. It was 40 degrees Fahrenheit, say, where the thermometer was, but not where the frost was.

Why We Say "Piping Hot."

"Piping hot" is a relic of the ancient custom of a baker blowing his pipe in the village street as a signal to his customers that his bread was at that moment hot from the oven. The baker was evidently an unpopular member of the community in those far-off days, for in the minds of those of a superstitious nature he was synonymous with the devil! So we get the term "baker's dozen." The devil's dozen—13—was the number of witches supposed to gather in evil conclave at set periods, and the spiteful minds of the ill-willed readily substituted "baker" for "devil."

Why Mirage Forms.

A mirage is due to conditions existing in the atmosphere. As a result of deviation of the rays of light caused by refraction and reflection, objects seen with the eye appear in unusual positions and often multiple or are inverted. One cause of a mirage in the desert is the diminution of the density of the air near the surface of the earth, often produced by the radiation of heat, the denser stratum being thus placed above instead of, as is usually the case, below the rarer

Why Bubble Is Round.

A soap bubble is round because it has a surface tension which causes equal pressure in all directions. The soap bubble is covered with a film, and the tendency of liquids covered by such a film is to assume a spherical shape.

Why Known as "Pirate."

The Latin word "pirata" means to "attack or assault," and the Italian "piratare" means to "rob by sea." The English word is derived from these.

SNAPPY SHOTS

A short life may be complete.

Gossip is the tool of cowards.

God gives all things to industry.

Today is yesterday's pupil.—Franklin.

A bad temper leaves its handwriting on any face.

Some headaches are natural and some are acquired.

Sooner or later, the majority is proved to be wrong.

One who says it with flowers will pretty soon say it orally.

If the funny story can't be told in two minutes, don't tell it.

Fortune usually has gloves on when she knocks at a man's door.

When a girl tells a man he looks intellectual, she hopes he is.

Some people use very poor material when they make up their minds.

Some of the most humane men don't put a bit of sentiment in it.

Indulgent mothers are the ones who permit their children to annoy others.

Most men think they look splendid in a dress suit; and most of them do.

Crayon portraits went out because the enlarged photograph filled the bill.

Housekeeping was a bugbear until the little flat left nothing to housekeep.

Weakness of prophecy is that when one hits the bullseye once, he tries to do it again.

Downtown is the paradise of cats. All men are kind to them and dogs are extremely scarce.

Don't indulge in irony except with intelligent people; they are the only ones who will understand.

Drop a nickel in the toy bank today and have 5 cents' worth of exercise trying to get it out tomorrow.

Rats Sacrifice Leg to Escape Drowning

For years the residents of Orrs island, Maine, were puzzled by the prevalence of three-legged rats. It remained for Jack Woodle, a New Meadow clamdigger, to solve the mystery. Clamdiggers often in gathering up their spoils leave a few live clams or quahogs scattered about the flats. The rats while scampering about in search of food frequently put a foot into an open shell. The shell closes instantly with a viselike grip. Woodle came across several rats so held. Watching, he saw the frightened rats drag the shellfish along for a few minutes, but the rough nature of the flats soon tired them. Rather than be drowned by the incoming tide, these rats deliberately gnawed away the member imprisoned and freed themselves.—Indianapolis News.

Park and Deer Herd Belong to College

Prof. Stewart Gordon, the new president of Magdalen college, Oxford, says a writer in the London Daily Chronicle, will have at least one unique distinction. He will be the ruler of the only college in the world which possesses a real deer park. The Magdalen college deer are sometimes supposed to be descended, like those of Epping forest, from the original wild fallow deer associated with Robin Hood and his romantic outlaws, but the original herd, if it ever existed, must have been consumed for food during the siege of Oxford in the Civil war. There is no mention of the deer in the college accounts until the beginning of the Eighteenth century.

Not Interested

When Carl von Hoffman returned with thousands of feet of film from Africa, where, with his movie camera, he had spent two years studying various interior tribes, he thought the stuff might be of financial interest to the movie people.

He sought out the director of the "educational" department of one of the big screen concerns and asked him if he was in the market for especially fine ethnological pictures.

"No," said the director, "we never go in for religious stuff."—Panorama.

Luck's Other Name

Julius Rosenwald, Chicago capitalist, said modestly on his sixty-fifth birthday that he imputed his success to luck.

"I'm convinced," he went on, "that it's luck, or opportunity—the same thing—that makes our Rockefellers."

Then Mr. Rosenwald laughed and ended:

"Of course a great many men fail to recognize opportunity because she is always disguised as hard work."

Their Mistake

"Where's your new license?" demanded the officer, eyeing the 1928 plate.

"Why, officer, we're just on the way to the courthouse now to get it," exclaimed the grass widow and widower in the car, with one voice.

R. A. Jorgenson and Jay Griggs were fishing at Clear Lake Saturday p. m. They were in luck and came home with some nice perch.

Lloyd Tinkle is spending a short time with his parents. He is teaching school near Dubuque, but on account of illness in the district the school was closed.

This community is glad to know Rev. and Mrs. Bainbridge will return to Goodell for another year, to have charge of the United Brethern Church. They have returned from the Conference which was held at Marshalltown.

School Notes

Goodell school had their first fire drill Tuesday afternoon.

Gertrude Quigley was absent Friday from school.

The Sophomore, Junior and Senior Classes gave an iniation and welcoming party for the Freshmen Friday night. On account of the rain several of the Freshmen were unable to be present. An enjoyable time was had by those present.

Marjory Avery was absent from school Monday morning on account of illness.

AVERY

Miss Bonnie Bachman was absent from her school duties due to illness

Mr. Jhon Bachman's mother, Mrs. Chris Hanson, of Concord, was operated on Thursday.

Robert and Gilman Marshall were business callers at Garner Tuesday evening.

Mr. and Mrs. Fred Bachman and family were visitors at the Robert Roths home Monday evening.

Mesdames Frank and Rob Roths were visiting at the Fred Bachman home Sunday afternoon.

Miss Dorothy Marshall is assisting with the work at the D. A Marshall home for a week or so.

Mr. and Mrs. Henry Helps and sons Harlow and Dwight and daughter, Dorothy, were business callers at Mason City Tuesday.

Mr. and Mrs. Peter Trampel and sons Harmen and Clarence left Friday afternoon for Kamrar to visit relatives.

A Farm Bureau meeting was held at the Mrs. Henry Church home on Friday night which a large crowd attended.

Mr. and Mrs. Edwin Josten and baby daughter, Marcelle, drove to Fenton Sunday for a visit with Mrs Josten's mother, Mrs. Schlei, who is sick.

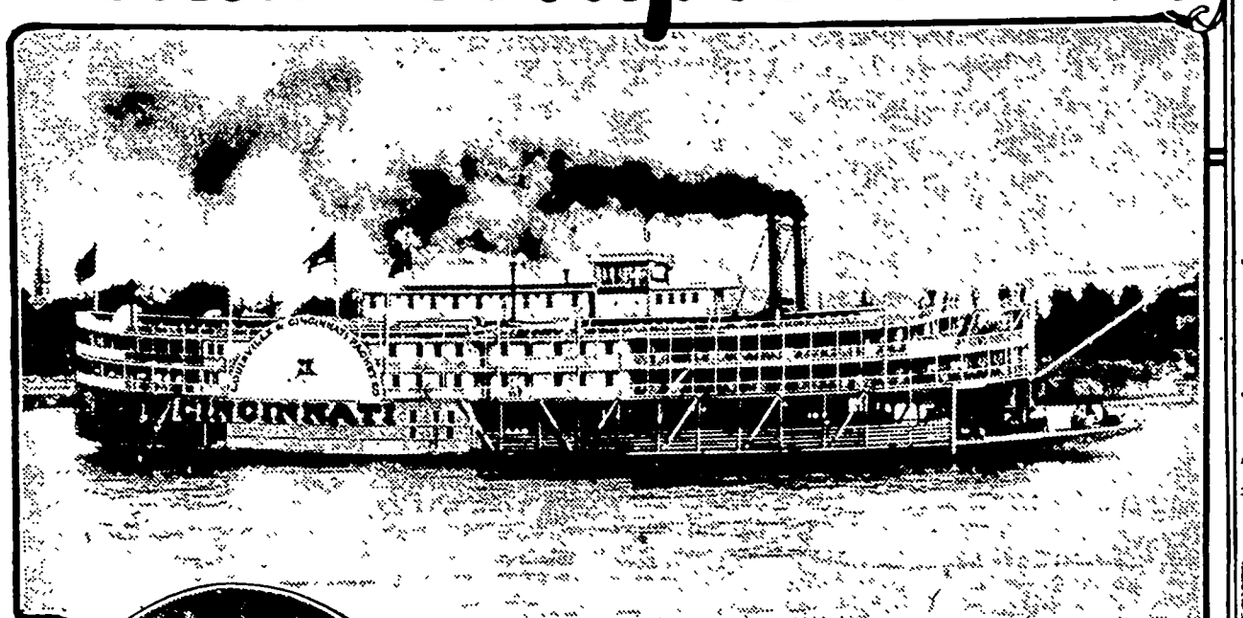
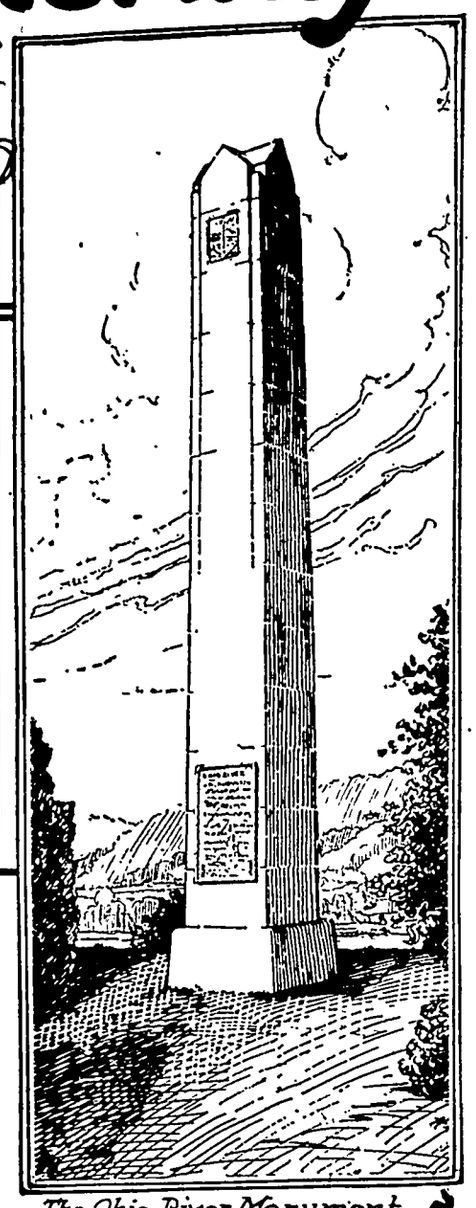
First Link in Inland Waterways Chain Completed

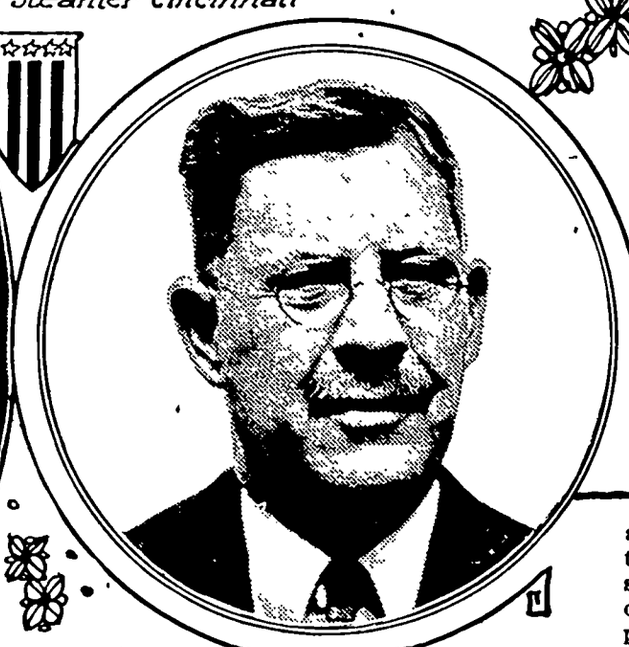


The Steamer Cincinnati



The Ohio River Monument

President Hoover



Oscar F. Barrett

By ELMO SCOTT WATSON

WHEN President Herbert Hoover unveils and dedicates a monument, erected high upon a cliff in Eden park in Cincinnati, it will mark not only the completed canalization of the Ohio river from Pittsburgh to Cairo, Ill., but it will mean also that there has been forged the first link in the chain of inland waterways which the United States proposes to establish. For thus will the first important step be taken in a project which the President has declared will "contribute to the wealth and economic progress of every section of the Union, contribute to the unity of the nation and is of concern to every one of our millions of farms and homes."

The dream of a vast inland waterways system which now appears to be approaching realization, is not a new one. More than 150 years ago George Washington, visiting the Ohio river country as agent for Virginia officers who had been granted western lands for their services in the French and Indian war, caught the first vision of the importance of this natural highway into the little-known interior of the continent. In 1783, after a tour from his camp at Newburg into central New York where he had explored the headwaters of the Mohawk and the Susquehanna, in a letter to the Marquis de Chastellux, he wrote: "I could not help taking a more extensive view of the vast inland navigation of these United States and could not but be struck by the immense extent and importance of it, and of the goodness of that Providence which has dealt its favors to us with so profuse a hand. Would to God we may have wisdom enough to improve them. I shall not rest contented till I have explored the Western country, and traversed these lines, or a great part of them, which have given bounds to a new empire."

After the Revolution he did explore the western country again to have his faith strengthened in the importance of the inland waterways to the nation which was then in the process of building, and he wrote to Henry Lee: "Open all the communications which nature has afforded between the Atlantic states and the western territory, and encourage the use of them to the utmost . . . and sure I am there is no better tie by which they will form a link in the chain of Federal Union." Of Washington's part in the development of our inland waterways, Archer Butler Hulbert in his volume, "The Paths of Inland Commerce" in the Yale University Press "Chronicles of America" writes:

Some of the pictures in Washington's vision reveal, in the light of subsequent events, an almost uncanny prescience. He very plainly prophesied the international rivalry for the trade of the Great Lakes, embodied today in the Welland and Erie canals. He declared the possibility of navigating with ocean-going vessels the tortuous 2,000-mile channel of the Ohio and Mississippi rivers; and within sixteen years ships left the Ohio, crossed the Atlantic, and sailed into the Mediterranean . . . he approved and encouraged Rumsey's mechanical invention for propelling boats against the stream, showing that he had a glimpse of what was to follow after Fitch, Rumsey and Fulton should have overcome the mighty currents of the Hudson and the Ohio with the steamboat's paddle wheel. His proposal that congress should undertake a survey of western rivers for the purpose of giving people at large a knowledge of their possible importance as avenues of commerce was a forecast of the Lewis and Clarke expedition as well as of the policy of the government today for the improvement of the great inland rivers and harbors.

When the stream of immigration began to pour into the lands beyond the Alleghenies in the early days of the Republic and the new country began to make itself felt as a vital part of the nation and a great political force in the national government, there began an era of internal improvements forced upon the government by the westerners. The most striking manifestation of this movement was in the development of waterways and the '20s and '30s became very definitely "the canal period" in our history. By 1825 New York had completed her Erie canal from Albany to Buffalo at a cost of $7,000,000. Ohio and Illinois caught the canal fever even before the New Yorkers had completed their project and the result was the Ohio canal and the Illinois-Michigan canal. All of these had a profound influence in building up the new country, none more strikingly than the Erie canal. Over it poured a stream of immigration to the west, and back from the borderlands a little later began streaming the commerce which was to build up New York city from a population of 124,000 in 1820 to 203,000 in 1830.

What was true of the Erie canal in New York city was no less true of the Illinois-Michigan canal and Chicago. There is no doubt that this waterway contributed immeasurably to the growth and prosperity of Chicago in its early years and started it on its way to becoming the metropolis of the Mississippi valley. But the "canal period" came to an abrupt close and the decline of waterway transportation began when the first "iron horse" began puffing along the crudely constructed roadbed of the earliest railroads. Although water transportation was to continue in an important role in the development of the Mississippi valley and the trans-Mississippi regions, the railroads became the major factor in transportation of people and of commerce and they continued to do so down to the present time. The revival in recent years of the sentiment for inland waterways development has resulted from economic shifts due to the World war. The large advance in railroad rates as a result of higher wages and higher costs of materials and operation since the war has turned the attention of the American people to the necessity for finding some method for reducing transportation costs. The development of inland waterways holds out a hope for finding that way.

It is altogether fitting that President Hoover should dedicate the monument which marks the completion of the first step in developing the inland waterways system. As secretary of commerce in the last two administrations, upon him devolved the leadership in solving the problems of transportation and commerce in the United States and as an engineer by training he brought to the task of developing the inland waterways system, which is so largely an engineering problem, the understanding necessary to that solution. Speaking before the Mississippi Valley association in St. Louis in November, 1927, President Hoover, then secretary of commerce, declared that "The national mind until the past two or three years has conceived waterways development as local projects of some immediate nearby improvement instead of a wide vision of a comprehensive system of twelve thousand miles of connected inland water transportation reaching from the gulf to the northern frontier and from the lakes to the Atlantic."

He then outlined the plan which he characterized as "the greatest engineering undertaking in history," for such a comprehensive system as is now going forward under his administration as President. The principal points in that plan are two-fold: first, the Mississippi system, to deepen the 9,000 miles of the Mississippi and its tributaries to a minimum depth of six to nine feet so as to permit modern barge service; second, the Great Lakes system: to construct the St. Lawrence shipway from the Lakes to the Atlantic, thus opening the lake ports to vessels from all over the world over 3,000 miles of deep waterways. Minor points in the plan are the stabilization of lake levels and deepening of channels so as to permit full ship-loading within the lakes, the extension of intra-costal waterways and, the continuous development of our harbors.

Included in the Mississippi system will be the deepening of the Missouri river to Kansas City and as far above that point as traffic warrants, the connecting of Lake Michigan with the Mississippi river by a nine-foot channel and the canalization of the Ohio which has just been completed. In the latter the construction of 50 locks and dams by the federal government at a cost of about $125,000,000 will now assure navigation on the Ohio a nine-foot stage the year round. It is in celebration of this fact that the Ohio river dedication, sponsored by the Ohio Valley Improvement association, will be held throughout the Ohio valley, during one week in October.

According to plans for the celebration announced by President Oscar F. Barrett of the Ohio Valley Improvement association, the steamer Cincinnati, which has been chartered by the association as the flagship of the pageant, will leave her home port at Cincinnati, heading upstream for Pittsburg, where the commemorative ceremonies will begin. Pennsylvania will hold its gala affair at Pittsburgh, Gov. John S. Fisher presiding. The historic significance of the Ohio river will be stressed at this city, situated at the juncture of the Allegheny and the Monongahela rivers which mingle their mountain waters to form the Ohio. Gov. Howard M. Gore will officiate at the West Virginia dedicatory services.

At Cincinnati President Hoover will unveil and dedicate the Ohio River monument. Myers Y. Cooper, governor of Ohio, will introduce the President and will officially represent his state in the exercises. The monument is a granite obelisk 26 feet above its base bearing four bronze tablets.

On the north face of the monument, a plate bears the following description:

A. D. 1670—A. D. 1929, River Ohio, so called by the Iroquois on account of its beauty—descended by Sieur De La Salle; discovered by the French explorer, La Salle, about 1670 and claimed by him for Louis XIV of France; seized by the British as the result of the French-Indian war 1755-1762; descended by George Washington in 1770; included in the territory of the United States as the result of the Revolutionary war and Treaty of Paris 1776-1783; saved to the Union by General William Henry Harrison in the War of 1812; The first steamboat "New Orleans" piloted by Captain Nicholas J. Roosevelt was launched at Pittsburgh in 1811. For more than two hundred years it was the great highway to the west of the American pioneer; this monument was dedicated by Herbert Hoover, President of the United States, to mark the completion of the canalization of the river to a depth of nine feet, from Pittsburgh to Cairo, a distance of nine hundred and eighty miles.

The tablet on the south face records the organization and work of the Ohio Valley Improvement association.

On the east face is a testimonial to John L. Vance of Gallipolis, Ohio, first president of the organization, which for 35 years has sponsored the improvement of the Ohio river.

On the west face the tablet bears a part of the work done by Albert Bettinger, Cincinnati, to the accomplishment of regulating the flow of the Ohio river to assure navigation on this stream, a nine-foot stage the year round.

The day after the dedication of the monument Kentucky will stage its demonstration which will feature the importance of the river development to the Southland. Gov. Flem D. Sampson will welcome President Hoover and the members of the Ohio Valley Improvement association in behalf of his commonwealth.

The thirty-fifth annual convention of the association will be held aboard the steamer Cincinnati when she ties up at the Evansville (Ind.) public landing. The business sessions of the organization will occupy the day over which President Oscar F. Barrett will preside, with Gov. Harry G. Leslie as an honored guest. Lock and Dam No. 53 at the foot of Grand Chain will then be dedicated as this part of the system was the last to be constructed.

Cairo, at the confluence of the Ohio, will conclude the celebration with a river regatta, races, fireworks, and a program of speeches by high state officials, of which Gov. Louis L. Emmerson will be the principal figure. He will keynote the improved Ohio river's significance to the progress of the West, and convey to the delegates the greetings of Illinois. Then he will wish the river voyagers a safe journey home as the steamer Cincinnati will subsequently travel the last leg of her 2,000-mile trip back to her home port, Cincinnati.

A FAMILY DOCTOR'S LAXATIVE IS BEST

Your health is too important! You cannot afford to experiment with your delicate bowels when coated tongue, bad breath, headache, gas, nausea, feverishness, lack of appetite, no energy, etc., warn of constipation. This applies not only to grown people, but more particularly to children. That's why a family doctor's laxative is always the safe choice.

Dr. Caldwell's Syrup Pepsin is prepared today under strict laboratory supervision from fresh laxative herbs and other pure ingredients, and exactly according to Dr. Caldwell's original prescription.

Today, millions of families rely on Dr. Caldwell's judgment in the selection of their laxative. For Dr. Caldwell's Syrup Pepsin, in bottles ready for use, sold in all drugstores, is now the largest selling laxative in the world!

Some grown folks are harder to amuse than some babies.

Nature is feminine, therefore she is bound to have her way.

Heed Early Warning!

Don't Let Kidney Trouble Get a Firm Hold.

DOES every day find you lame and achy—suffering nagging backache, headache and dizzy spells? Are kidney excretions too frequent, scanty or burning in passage? These are often signs of sluggish kidneys and should not be neglected.

To promote normal kidney action and assist your kidneys in cleansing your blood of poisonous wastes, use *Doan's Pills*. Endorsed the world over. Sold by good dealers everywhere.

Doan's Pills
A Stimulant Diuretic to the Kidneys

Life looks rosy for him

Health worth more than fortune

THE baby to be envied is the one who is born with an inheritance of perfect health, to begin with. And who's lucky enough to have a mother who knows how to build up this fortune.

"Perhaps I'm old-fashioned," she'll say to the doctor who pronounces her child physically 100% at a baby show, "but this health certificate means more to me than all the stock certificates in the world. If my baby grows up strong and well, I'm willing to leave it to him to make a career and fortune for himself.

"Already I'm teaching him the value of regular habits. Regular sleep, regular meals, regular functions. He's never once been off schedule, not even when he was cutting teeth or traveling to the country. I make sure of that by giving him Nujol regularly."

Nujol works so easily and naturally that it won't upset a baby under any conditions. It keeps everything functioning properly. It not only prevents any excess of body poisons (we all have them) from forming but aids in their removal. It is safe and sure. Nujol was perfected by the Nujol Laboratories, 2 Park Avenue, New York.

Heir to millions

Just try Nujol for your baby. Give it to him regularly for the next three months. See if it doesn't make things much easier for both of you. Certainly it could do no harm—for Nujol contains no drugs or medicine. Your druggist carries it. Be sure you get the genuine. Sold only in sealed packages.

FARM STOCK

TLE ARE FINE BUILDERS OF SOIL

r Forage From Fields d Turn It Into Profit.

ttle the personal preference of farmer is the chief factor in Some men like beef cattle, dairy. At any rate there ought an appropriate sized herd of on every farm. Cattle are soil rs. They gather up the forage the far fields, turn it into beef ry products, and deposit the re- back upon the same soil. An- look around your own commu- will convince you that the farms hich cattle are handled continual- e the leading crop producers. are little troubled with disease, require as little care and atten- as any other animals upon the For the farmer who has nat- inclinations for dairying, there is anch of the farm business which ns a steadier all-the-year-around e. At the same time the milk do much to help solve the hog g problem, and keep the hens e. In fact, I am strongly of the on that for the small type farmer, cially, a few good milch cows. e old sows and a flock of hens, e just about the best "hook up" ble for a satisfactory existence. himself and family, says a writer exchange. On the average size of from 120 to 160 acres, it must ed altogether upon the way the er handles his cows as to how y he can keep. I would say, how- , that an ordinary farm of this sort t to support from ten to twenty ; furnish adequate pasture dur- the summer, and feed during the ter. I once had a little German hbor who kept 25 head of cattle good shape on 40 acres, raised ugh corn to mostly do him, always hogs to sell, and hauled his cream town in a ten-gallon can. This n's case, however, was most un- al, and few of us might even hope do as well.

sing Proposition to Feed Hogs Corn Alone

f you fed corn alone to a 125- ad pig, it will require 642 pounds feed to bring him to a weight of 5 pounds. If you feed corn and nkage, it will require 334 pounds of n and 32 pounds of tankage. If feed oats and tankage, it will take 3 pounds of oats and 35 pounds of nkage. If you feed barley, it will quire 439 pounds of barley and 30 unds of tankage.

It is evident from the above that it a losing proposition to feed corn ne, or in fact to feed any of the eals mentioned alone. Corn and nkage or barley and tankage will ve you the best results of any of the eds listed. If you have plenty of ts available, it may pay you to feed mall amount of oats. Wheat should e sold rather than be fed to hogs.

maller Central House Now Meets With Favor

The rapid advance of sanitary meth- ds in hog production has created a stinct tendency toward smaller cen- al hog houses, and more use of mall individual houses which can adily be moved about. The central g house has much in its favor in e way of convenience and probably ill always be used to a certain extent uring the coldest months of the year hen it is difficult to feed and care r animals that are scattered all over e place. Such a house has the dis- dvantage of creating about it an un- anitary condition of the hog lot, hich can scarcely be prevented even ith the greatest care. Such a hog ouse also is necessarily remote from asturage.

mprove Market Lambs by Simple Operations

Because lambs which have been cas- rated and docked are better devel- ped and are more uniform and attrac- ive on the market than other lambs pecialists are urging a more general doption of these practices. The fact hat the largest part of the return rom farm flocks is derived from the ale of lambs makes it desirable to ave the lambs in the best possible narketable condition.

Ram lambs and undocked lambs are discriminated against on the market because they are less well developed and lack a uniform and attractive ap- pearance. It is impossible to obtain as large gains or as good condition on lambs that have not been castrated.

Horses' Sore Feet

A horse that has cracked hoofs should have the hoofs soaked with an application of linseed oil. This may be kept on his foot by binding moist- ened clothes about the hoof.

Cut a small groove over the part of the hoof that is splitting, between the crack and the soft part at the top of the hoof. Be careful not to cut this too deep. Put an application of tar in this depression. This will prevent injury to the foot and prevent any germs entering.

Storing Spuds to Improve Quality

Increase Demand for Crop by Proper Winter Conditions, Says Expert.

Store your potatoes properly and increase their eating quality, advises Prof. E. V. Hardenburg, of the department of vegetable gardening at the New York State College of Agriculture. In order to obtain better prices every potato grower should be careful to improve the eating quality of potatoes and increase the demand for them. This can be done by proper storage conditions, says Professor Hardenburg.

Cure New Potatoes.

Freshly dug potatoes are subject to skinning and bruising, which may result in enormous shrinkage from water loss and decay. To avoid this, cure new potatoes by letting them stand a few hours in the open before placing them in storage. This allows the surface to dry and harden and thus become resistant to possible bruising in later handling. Furthermore, bruised tubers will keep better if they are not stored immediately at low temperatures.

From 38 to 40 degrees Fahrenheit is the best storage temperature, according to Professor Hardenburg. Temperatures below 36 degrees Fahrenheit are likely to result in some accumulation of sugar and a sweetish taste in the tubers. To prevent sprouting, the temperature should be kept below 41 degrees Fahrenheit.

Use Moderate Humidity.

Use a moderate humidity, advises Professor Hardenburg. He recommends a humidity of from 85 to 90 per cent since it will prevent condensation of moisture on the tubers and the walls and ceiling of the storage room, and at the same time will also prevent drying of the tubers.

Ventilation is important to remove foul air and moisture which may be given off by the stored tubers. Darkness is also essential. Tubers exposed to light turn dark and become bitter.

Asphaltic Coating for Silos Quite Efficient

Asphalt is one of the best coatings for stopping leaks in silos and water-tanks, but this has been handicapped by the fact that the walls must be dry and fairly warm if the asphalt was to make a good bond. There is now on the market an asphalt coating which can be applied to a wet surface, so that the silo can be coated on the inside a few feet at a time as the silo is filled. Apparently the bond is just as strong as with the ordinary asphalt applied to a dry surface. This property of adhering tightly to a damp surface is also important in stopping leaks in tanks and cisterns, as it is a fact that this type of asphalt does not make the water taste or smell.

Cover on Strawberries Best After Hard Freeze

Strawberry plants are usually best covered after the ground freezes hard. A moderate mulch may be put on even before that between the rows, but the tops should not be covered enough to bury them deeply, otherwise they are very sure to smother out during the winter. The great object of covering berries is not to protect them from the cold, as they will stand this without difficulty, but to prevent the freezing and thawing of early spring, which throws the roots of the plants out of the ground. If the bed is kept covered it does not thaw until the time for growth to start, so this danger is overcome. Covering also retards blooming early, so that the flowers are killed by frost.

Agricultural Hints

Plant diseases thrive on weedy farms. Swat the weeds.

* * *

Alfalfa requires a fine, firm seedbed for good germination of the seed and rapid growth of the seedlings.

* * *

The whole question of the eradication of weeds by the use of chemicals is still in the experimental stage.

* * *

One of the essentials of a good silo is an impervious wall, one which will exclude air and retain the moisture in the silage.

* * *

Only reliable sources of seed potatoes are dependable. Growers should demand disease-free stock for their spring planting.

* * *

Vacant lots are frequently a source of foul weed seed. Weeds and grasses should be kept mowed on vacant lots so that they will not produce seed.

* * *

E. S. Savage of the animal husbandry department of Cornell university says that one of the best investments on a dairy farm is to give extra grain to good cows.

* * *

Mudholes, manure piles, swamps, and the muddy banks of streams in the pasture help to deposit a lot of bacteria on the teats, udders, and adjacent parts of cows.

* * *

"Safe," "sure," and "cheap" are terms which may be applied to dairy cows when home-raised, provided they are of good breeding, from healthy cows, and well grown.

FARM POULTRY

FEEDING PULLETS FOR WINTER EGGS

To Be Good Producers Fowls Should Be Well Developed.

The profit or loss in winter egg production of pullets depends upon the care and feeding they receive. For pullets to be good producers during the winter months they should be uniformly developed, have good frames, and be in good flesh before they begin to lay. It is therefore necessary that they receive a good ration which will fill them out and also store up an abundance of fat, according to H. M. Wells of the Colorado Agricultural college.

Feed a good growing mash or a laying mash that is supplemented with a grain mixture of two parts by weight of corn and one part of wheat, advises Wells. A laying pullet during the winter months will draw upon her reserve supply of fat and the feed she eats will go toward the development of eggs; otherwise if she does not have this fat reserve she will utilize the feed she consumes to supply her body wants and keep her warm, and only the surplus will go toward the production of eggs.

It would be profitable, if one has the room, to grade the pullets according to size. Make two or three grades of pullets, namely, those that are coming into bloom (comb becoming red) and are laying well developed, would be put in the laying house and fed a laying mash with the grain ration recommended above. The next smaller grade of pullets should be given all the growing mash they will consume, and this should be supplemented with a moist mash at noon. This moist mash consists of the growing mash moistened with milk to a crumbly consistency. By following this method, the more backward pullets will be brought into production before extreme cold weather sets in.

To secure the maximum results in production from pullets, it is advisable to keep them housed separately from the hens.

Air Outlets Prevent Colds and Diseases

All poultry houses should have an air outlet from the highest point in the house, for without this air-vent moisture collects. The fresh air that enters the house becomes warm and rises, and as warm air holds more moisture than cold air can hold, it will cause dampness in the poultry house unless it has a chance to go out. Otherwise it condenses under the roof and drops to make the litter moist and to cause a damp hen-house, which leads to colds and other troubles for the birds and a gradual loss of vigor on their part and loss of money on the part of their owners.

These facts, and many others, on ways to house poultry at low cost are given in a Cornell bulletin, written by H. E. Botsford and sent free to poultrymen of New York. It tells how to remodel old buildings—even large disused barns—and how to construct new houses.

Plan Poultry Houses With Eye to Future

Save dissatisfaction, regrets, many useless miles of walking and finally the sale of an unhandy place, by planning over and over the proposed placing of the buildings.

Try to plan out the ranch as it will be at the end of five to ten years' development, and put the first building where it should be at the end of that time.

Every building that must be moved is a dead load of effort, time and temper.

Figure to save steps by having tasks that can be done going and coming, driveways that save using carts, wheelbarrows and man power—and locate feed room centrally.

If water must be carried, try to cut down the distance and plan on running water as a part of the progression of plant.

Use Lice Powder

Body lice on hens are best treated by some good louse powder such as sodium fluoride, Persian insect powder, and a dozen more or less, good commercial powders. The main point is to get the powder clear to the skin.

To do this, hold the hen in the left hand, head downward. Force a small handful of powder, about the equivalent of a level teaspoonful in measure, through the long, soft feathers that cover the abdomen and clear down to the skin.

Needed Minerals

The Ohio experiment station has been doing some work of late years with minerals for poultry, with a very simple mineral mixture composed of raw bone meal finely ground, 60 parts, ground limestone 20 parts containing 95 per cent calcium carbonate, sodium chloride or salt, 20 parts.

The above named experiment station concludes that these are the mineral elements that are most needed for the most profitable production of eggs and health of the hen.

BETTY CROCKER WILL BROADCAST EACH WEDNESDAY AND FRIDAY FOR 26 WEEKS

Noted Cooking Expert on Air at 9:45 A. M.

Starting Wednesday, Oct. 2nd

New Recipes, Salads, Cakes, Breads, Meats, Economical Menus, One Dish Meals, Unusual Desserts, Party Refreshments, Shortcuts in Housekeeping

By *Betty Crocker*

BETTER see that your radio set is "tuned up" before next Wednesday—for Wednesday at 9:45 marks the opening, for the fifth year, of the most famous radio cooking school in the country!

Betty Crocker's radio cooking talks have brought new ideas and wonderful new dishes to thousands of homes. Quick meals, easy meals, hot meals, cold meals—pies, cakes, biscuits, hot breads, puddings—meat dishes, salads, sandwiches—company dinners, breakfast suggestions, luncheon plans, buffet suppers—how to use up odds and ends, how to buy, how to save steps in housekeeping.

In short, a regular domestic science course is brought right into your home for 20 minutes twice a week for the next 26 weeks!

Thousands of women say it is the most practical home service program on the air. So be sure to listen in to these talks—or, better still, invite your friends and neighbors to hear them with you.

GOLD MEDAL FLOUR

"Kitchen-tested"

Horse Made Welcome

An unexpected overnight guest at a Penacook (N. H.) tavern, caused the landlord to hustle to find accommodations. W. L. Batcheler, of Manchester, and his horse arrived and the latter attracted by far the most attention. It was the first horse to be put up at the tavern during the regime of the present owner. He did not wish to turn away so distinguished a patron as Mr. Horse, so provisions were made for his comfort at some sacrifice. A car was backed out of one of the stalls in the garage and the animal led in. Two boards were fastened up to which the horse's halter could be tied, and he was fed and left in state.

Dorothy's Mother Proves Claim

Children don't ordinarily take to medicines but here's one that all of them love. Perhaps it shouldn't be called a medicine at all. It's more like a rich, concentrated food. It's pure, wholesome, sweet to the taste and sweet in your child's little stomach. It builds up and strengthens weak, puny, underweight children, makes them eat heartily, brings the roses back to their cheeks, makes them playful, energetic, full of life. And no bilious, headachy, constipated, feverish, fretful baby or child ever failed to respond to the gentle influence of California Fig Syrup on their little bowels. It starts lazy bowels quick, cleans them out thoroughly, tones and strengthens them so they continue to act normally, of their own accord.

Millions of mothers know about California Fig Syrup from experience. A Western mother, Mrs. J. G. Moore, 119 Cliff Ave., San Antonio, Texas, says: "California Fig Syrup is certainly all that's claimed for it. I have proved that with my little Dorothy. She was a bottle baby and very delicate. Her bowels were weak. I started her on Fig Syrup when she was a few months old and it regulated her, quick. I have used it with her ever since for colds and every little set-back and her wonderful condition tells better than words how it helps."

Don't be imposed on. See that the Fig Syrup you buy bears the name, "California" so you'll get the genuine, famous for 50 years.

Speaking of Figures

"Why do I see you walking so much lately, Fred?"

"I'm reducing."

"Reducing! You're not fat. What are you reducing?"

"Expenses."—Boston Transcript.

Beauty is only skin deep—and the same may be said of freckles.

The Brute

"What does he like for his breakfast?" "Anything I haven't got in the house!"

Don't quarrel with the cook until after you have dined.

Scientific Age

"Why did you let that pretty waitress go?" "She couldn't discuss calories or vitamines."

The secrets a woman jots down in her diary are counterfeits.

Needless Pain!

Some folks take pain for granted.

They let a cold "run its course."

They wait for their headaches to "wear off."

If suffering from neuralgia or from neuritis, they rely on feeling better in the morning.

Meantime, they suffer unnecessary pain. Unnecessary, because there is an antidote. Bayer Aspirin always offers immediate relief from various aches and pains we once had to endure. If pain persists, consult your doctor as to its cause.

Save yourself a lot of pain and discomfort through the many uses of Bayer Aspirin. Protect yourself by buying the genuine. Bayer is *safe*. Always the same. All drugstores.

BAYER ASPIRIN

(Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid)

VERNOR URGES OUNTRY LIFE WEEK

OCLAMATION GIVES INFORM-ATON ON AGRCULTURE

nty Agent Endorses Governor's Proclamation

Below the Times is this week pub-ing the Proclamation on Country te Weew, issued by Governor Jno. ammill and endorsed by County ent L. T. Nutty:

O THE PEOPLE OF IOWA:

After eight years of *untiring* eff-t in which Iowa citizens have tak-a leading part, the government the United States has passed leg-ation which promises to place the ricultural Industry on a basis of *nomic* equality with other indus-es. In order to accomplish this rpose a Federal Farm Board has en created and large sums of mon have been made available. The t step in the Federal plan for e fulfillment of its pledge is to ild farm organizations stronger d more effective.

The success of this plan ,therefore ends upon agricultural organiz-ions. The responsibility for build-g thee organizations is placed arely upon the agricultural in-stry. This is, therefore, a time for ion on the part of our State. ortunately, through the earnest ef-rts of farm leaders over a long eriod of years, owa has a good undation upon which to build. here are at present in the State ap-roximately 700 cooperative eleva-rs, 500 cooperative livestock ship-g associations, 280 cooperative reameries and more than one-third our farm population belong to the rm Bureau and other general rm organizations. It is of the reatest importance that all of these rganizations should be enlarged d strengthened.

Every citizen of the State is vit-lly interested in this program. The elfare of all our people both rural d urban depends primarily upon ricultural prosperity. The events the past few years leave no doubt to the truthfulness of this state-ent. There should be and must be, herefore, the most cordial coopera-ion between city and country in-erests if the greatest progress is to e made.

In view of the tremendous impor-ance t othe future of Iowa of a *horough organization of our* agri-ultural industry, it is indeed for-nate that the American Country fe Association is holding its 12th nnual Conference at owa State ollege, Ames, Iowa, October 17 to 20. The theme of this conference is ural Organization. The best minds d leadership of the country will e present at that time. May we not onfidently hope that as Iowa has aken the leadership in formulating national agricultural policy, that e will now take the lead in mak-g that plan effective.

Iowa people can look to the fut-re with the greatest optimism. owa has great natural resources, e most important of which is soil rtility. Properly handled, the soil ill go on producing indefinitely. Because of this fertile soil and the telligence of her people, the labor f one farmer in owa produces more han twice as much as that of the verage farmer throughout the Un-ted States. Iowa produces commodi-ies which the world wants and must have. As our population in-reases these commodities will be more and more in demand. In food production, our future is assured.

Now, the chemist calls our atten-tion to another source of wealth and that is the utilization of agri-ultural wastes. Through the aid of chemistry and engineering, it is now possible to convert waste material like cornstalks, corn cobs, straw, nut hull, etc., into profitable manu-factured articles such as wood sub-stitutes, paper, furfural, rayon, etc. This promises to be a most import-ant industry within a few years.

Let us not forget that added in-come is important only as it aids n building a higher type f civiliza-tion. Hand n hand with our econom-ic development must go the build-ing of finer and better homes, com-munities, schools, roads, libraries, churches, hospitals, and all those things which go to make life most worth while. God has given us a soil of boundless resources, rich be-yond compare, upon which, if we but do our part, can be built and supported, the highest rural civiliz-ation that the world *has* yet known. This challenge for united effort has come to Iowa leadership.

THEREFORE, I, JOHN HAMMILL, Governor of Iowa, do hereby pro-claim the week of October 14 to 20 inclusive, as

COUNTRY LIFE WEEK

and earnestly urge all farm organ-izations, Chambers of Commerce, luncheon clubs, schools, federated clubs, parent-teacher associations, churches and all agencies through-*out the state to* arrange programs calling attention to the great possi-bilities within our grasp that can be achieved through concerted ac-tion.

In witness whereof, I have here-unto set my hand and caused to be affixed the Great Seal of the State of Iowa.

Done at Des Moines, this 13th day of September, A. D. 1929.

(SEAL)

By the Governor

JOHN HAMMILL, Governor.

ED. M. SMITH, Secretary of State.

RED CROWN ETHYL DEMON-STRATION IS ANNOUNCED

Wm. Kirkwood, proprietor of the Standard Oil Service Station here informs The Times that this com-munity will be favored with a free lecture and demonstration at the Opera House at Garner this Friday *evening*, October 11 at 7:30 o'clock.

In this demonstration a high-compression motor will be used. This motor has been so designed that it will measure the efficiency of an anti-knock gasoline and it will be possible for those attending this meeting to actually see and hear the results.

Many of the new model cars now coming on the market are equipped with high or semi-high compression motors which will not operate as ef-ficiently *on the ordinary* motor fuels as the older type engines.

Mr. H. E. Hanson, Manager of the Mason City Division of the Stan-dard Oil Company has made it pos-sible for persons in our community to see this demonstration.

Mr. Kirkwood says that persons who have heard the lecture and seen the motor work, say that it is well worth the time of owners f automotive equipment to see.

Mr. M. W. Burns, the lecturer, has spent *many years in* the study of refined oil and gasoline and is prepared to furnish his listeners with valuable information in regard to gasoline and their effect to var-ious automobile motors.

4-H CLUB BANQUET WAS REAL SUCCESS

4-H Club Members Were Addressed By Gov. John Hammill

Two hundred thirty five 4-H Club members and friends attended the fourth annual 4-H club banquet at Britt Saturday evening. This was al- most 100 more than ever attended before, which shows that interest in 4-H club work *promoted* by the Farm Bureau, is on the increahe.

Reports were given from each club. Hancock county has a Girls Canning Club in each township and also has a Baby Beef, Dairy Heifer, *Colt*, Market Pig, Sow and Litter, Fat Lamb and Ewe and Lamb clubs with a membership totalling 315.

Hammill Addresses Club

Governor John Hammill attended the banquet and gave a very fine ad-dress. Among the other speakers were J. S. Quist and Miss Lulu Tre-goning from the Club Department of the Extension Service and also remarks were made by a number ot the Farm Bureau county officials.

The 4-H club work has come to be one *of* the most important Farm Bureau activities and this banquet is one of the big club events.

Mrs. R. W. Elder entertained the W. F. M. S. at her home last Thurs-day afternoon All report a fine time

DATES SET TO HUNT PHEASANTS

OPEN SEASON IN NORTHERN IOWA OCT. 30, NOV. 1, 2

Three Birds, Either Male or Female Is Bag Limit Each Day

W. E. Albert, state game warden, last Thursday announced an open season on pheasants in twenty-four northern Iowa counties for three days, Wednesday, Oct. 30; Friday, November 1 and Saturday, Novem-ber 2.

Bag Limit Three Pheasants

On each of these three days hun-ters will be permitted to bag three pheasants, regardless of sex. Shoot-*ing will be lawful from thirty min*-utes before sunrise to sunset on the three days of the special open sea-son.

Skips One Day

Mr. Albert intentionally skipped one day in the open season to give the birds a sporting chance with the hunters. Since no open season was declared last year, the birds are quite tame. Giving them one day between the first and last two days of shooting provides an opportunity for the birds to protect themselves.

Huntin gof pheasants will be per-mitted in the following counties, in each of which petitions seeking the open season have been filed with Mr. Albert:

Black Hawk, Butler, Cerro Gordo, Clay, Dickinson, Emmet, Floyd, Franklin, Grundy, Hamilton, Han-cock, Hardin, Howard, Humboldt, Kossuth, Lyon, Mitchell, O'Brien, Osceola, Palo Alto, Sioux, Winneba-go, Worth and Wright.

ANNUAL MEETING HELD LAST WEDNESDAY AT BRITT

Hancock County Has Nearly Eleven *Hundred Members* Enrolled

The annual meeting of the Han-cock county Farm Bureau wa sheld at the Legion Hall at Britt Wednes-day, October 2. Mr. R. K. Bliss, Director of the Agricultural Exten-sion Service at Ames and Miss Daisy V. Williams, Sec.-Treas. of the Iowa Farm Bureau Federation of Des Moines were the principal speakers on the program. They both gave very interesting talks. Director Bliss *brought out* the value of the educa-tional activities of the Farm Bureau and Miss Williams discussed the ac-tivities of the Iowa Farm Bureau Federation, and tressed the value of unitedness on the part of the farmers on state and national prob-lems.

Reports of the various Farm Bur-eau officers were given. These re-ports showed the organization to be in better condition in regard to membership than it has been for a *number* of years and it has 1062 paid memberships with a possibility of bringing this up to 1100 before the end of the year. The other re-ports in regard to educational ac-tivities of the Farm Bureau showed that a good program has been car-ried on throughout the year nd that the various project work such as boys and girls club work, home project work, crops, soils and live-stock work had been well develop-ed.

In the election of officers for the ensuing year, W. L. Lawhorn was chosen as president; John Chambers of Corwith as vice president; Fred Missal of Britt a secretary and Wm. Nall of Britt as Treasurer. Mrs. Paulson of Britt as Girls Club Chairman.

COMMUNITY PLAY

Stop! Listen! There will be a Community Play and school bazaar Thursday evening, October 24th at Dist. No. 9, Liberty twp, 6 miles west of Klemme. Candy, pies and many other useful articles made by the parents and pupils will be sold. Ladies please bring pies. Everybody invited. Dalia Stromer, teacher; George Schoenwetter, director. 2tc

BAND REHEARALS STARTED IN K.H.S.

MR. STORER OF MASON CITY DIRECTS SCHOOL BAND

Other Happenings Of Interest Dur-ing The Past School Week

By Supt. M. F. Penrod

Our school band started off with a lot of enthusiasm on Wednesday night of this week. Mr. Storer lemonstrated that he is a real teach-er of beginners on wind instruments.

This is a real opportunity for the ones who would like to learn to play in a band. Very few of those en-rolled have yet done much on their instruments and by beginning now they can build from the groud up and have plety of company. Boys who could not play a note went a-way able to play simple strains and took with them assignments to practice on at home. There are others in town who contemplate joining the organization and we pre-dict a beginning is being made to-wards a first class town band. Any boy or girl with music ability can ill afford to lose this tine chance to begin an activity that will yield a lot of pleasure to them in the future as well as potential economic re-turns.

Still Time For More Beginners

Any others contemplating a be-ginning at this time should not de-lay but see us at once about instru-ments they can best use and be ready for next Wednesday night's practice. Mr. Storer will be here a-gain on that date for the second lesson and no one wants to get be-hind the procession in which he is moving.

Klemme High Beats Hayfield

Hayfield boys came last Friday afternoon for a game of kitten ball but left here disappointed, with the small end of an 11 to 3 score. We had hoped for a game with Crysta Lake this next Friday afternoon but as yet it is not assured.

Teachers To Be Given Re-ception Next Week

We understand that our teachers, both old and new, are to be given a welcome party by the parents of our school children on Thursday night of next week at 8:00 o'clock in our school gymnasium. Mr. Well-meyer wil give the address of wel-come while Miss Wilma Trumbell will respond for the teachers. The girls glee cub directed by Miss Mc-Ginnis will furnish music for the occasion and last but not by any means the least, there will be some-thing to eat, some light refresh-ments. Some games will probably be played and an opportunity given for parents to get acquainted with their children's teacher or teachers. In the interests of the children there shoudl be this acquaintance. With a close acquaintance of parent and teacher misunderstandings are less likely to arise and are more easily corrected in case they do arise.

Faculty Entertained At Lake

Our faculty were royally enter-tained on last Sunday afternoon on the shores of Clear Lake by Messrs. Clarence Waterman and R. A. Jor-genson and families who maintain a cottage there. After a splendid dinner of chicken and a lot of other good things we were each treated to a ride in the Editor's speed boat. The day was most ideal for the out-ing and a delightful time was had by us all. We very much appreciate these expressions of good will and courtesy toward our teachers by these two families. They seem to know how to make us all feel at home.

Juniors Planning Program

Our Junior Class sponsored by Miss McGinnis are planning a un-ique program in the near future to which the public is invited. It will no doubt be early in November. A lot of fun is anticipated. Most of us relish wholesome nonsense and can be counted upon to be there to enjoy it all. They may tell us more about it later.

First Six Week Period Ends

This week ends our first six week period of the new year and we hope our students make a good showing. Report cards will go to parents the middle of next week and they will reveal the progress made to date.

METHODIST CHURCH NOTES H. E. Whyte, Pastor

Morning worship service, Klem-me at 10:00 o'clock.

Morning worship service, Liberty at 11:15 o'clock.

Sunday School, Klemme at 11:00 o'clock.

Sunday School, Liberty at 10:15.

Epworth League Sunday evening at 7:1? o'clock.

Evening Worship Service at 8:00 o'clock.

Choir practice Thursday evening at 7:30 o'clock.

A fairly good crowd was present last Sunday evening to hear the re-ports given by the delegates to the Laymens Meeting of the Annual Conference. The reports were given by Prof. M. F Penrod and Tom Nel son and were very interesting.

A short time will be given at the morning worship at the Liberty church by delegates from that con-gregation.

NORTHWOOD MAN BUYS THE HARVEY POOL HALL HERE

Expects To Remodel And Will Open For Business Next Week

C. F. Thompson, of Northwood has purchased the pool hall and equipment in Klemme owned by S A. Harvey.

Mr. Thompson states that he ex pects to do some remodeling of the place before he opens up for bus iness about the first of next week.

Mr. Thompson and his wife an their two children, Maurice an Mildred moved into the apartmen over the pool hal Monday. Th children are both of school age an entered the Klemme schools Tue day.

COURT ADJOURNED FRIDAY AFTER QUIET SESSIO.

Two Trials Were Settled By Jur During September Term

Judge M. H. Kepler adjourne court subject to call, Friday whe he left for his home at Northwood.

During the September term Chri Gillstrap won a jury verdict of the sum of $222.48 against the W. J Plowaty Co. The case involved the settlement for a car load of potato es.

Henry Nannega, of near Klemme ndicted by the grand jury on charge of assault with intent to d great bodily injury was tried befor a jury. After listening to the evi dence Thursday and the pleas o attorneys Friday morning the jur retired and when they reporte found Nannenga guilty on a lesse charge, that of assault and battery Judge Kepler fined him $25.00 an costs. The party on whom the as sault was committed was Henr Keeper, of Klemme.

One divorce was granted, that o Ole Gjerde vs. Julia Gjerde, a de sertion case. Not being contested a divorce was granted.

A number of judgments were rendered and a number of minor matters disposed of.

SEPTEMBER REPORT OF THE GABNER-KLEMME C. T. A.

The September report of this as-sociation shows that the grade Hol-stein cow belonging to Carl Wol wood, Jr., produced 62 pounds butt-erfat and the grade Holstein belong-ing to Christian Rasmussen produc-ed 60.9 pounds butterfat.

The two high herds of the associ-ation belonged to Fred Kothenbeu-tel who had 13 cows producing an average of 29.6 pounds butterfat, and Ralph Upmeyer who had 9 cows producing an average of 28 pounds butterfat.

The Association had 222 cows in milk and 73 dry cows.

—Howard Horne, Tester.

AREA WIDE COURT OF HONOR SUNDAY

SCOUTS FROM NINE COUNTIES WILL RECEIVE AWARDS

Klemme People Are Urged To Take Picnic Dinners Next Sunday

Boy Scouts of the North Iowa Area Council which includes the counties of Winnebago; Hancock; Wright; Worth; Cerro Gordo; Mit-chell; Franklin; Floyd and Butler, will, according to information re-ceived from the Area Headquarters at Mason City, enjoy an Annual Oc-tober Court of Honor Sunday after-noon at Crystal Lake, te miles nort.. of Britt next Sunday, October 13th. The Court of Honor will begin promptly at 3:00 p. m.

Hundres of Boy Scouts from the local Council wil receive honors an awards for advancement made sinc the last session held at Camp Roosevelt the latter part of August.

100% Klemme Attendance

The Klemme Scout Troop in charge of Scout Leaders plans to attend 100% both in attendance and ad-vancement. Everyone connected with Troop 56 has completed one or more merit badges an will receive awards at the Court of Honor.

According to W. P. Butler of Ma-son City, Chairman of the Area Court of Honor Committee, this An-nual meeting will be a most inter-esting affair. He assures a snappy, inspirational and worthwhile pro-gram. Several special features of scouting will be presented in addi-tion to the awarding of Boy Scout honors in every degree.

Nice After Church Drive

The trip to Crystal Lake will be a nice "after church" drive. Hun-dreds of Scout families plan to take picnic lunch. The public is cor-dially invited and the Crystal Lake Scouts, Leaders and parents will furnish coffee and lemonade.

Over 2,000 persons attended a similar affair at Rockford last year in spite of rainy weather, and over 3,000 at Pilot Knob in 1927. The first Outdoor Court of Honor was held at Belmond in 1926 with near-ly 3,000 spectators.

The Court of Honor Committee is composed of W. P. Butler, Chair-man; Hugh H. Shepard, W. Earl Hall, Rev. Jewell Pickett and Ralph Stanbery, Mason City; O. J. Ward-rell, Northwood, Chairman District One Court of Honor Committee; Rev. C. E. Luce, Rockford, Chair-man District Two Court of Honor Committee; H. F. Luick, Belmond, Chairman District Three Court of Honor Committee and Rev. C. H. Van Metre, Garner, Chairman Dis-trict Four Court of Honor Commit-tee.

Let's have Klemme well repre-sented with a full quota of Scouts, parents and friends. Everyone is welcome.

CO-OPERATORS MET SATURDAY TO STUDY NUTRITION

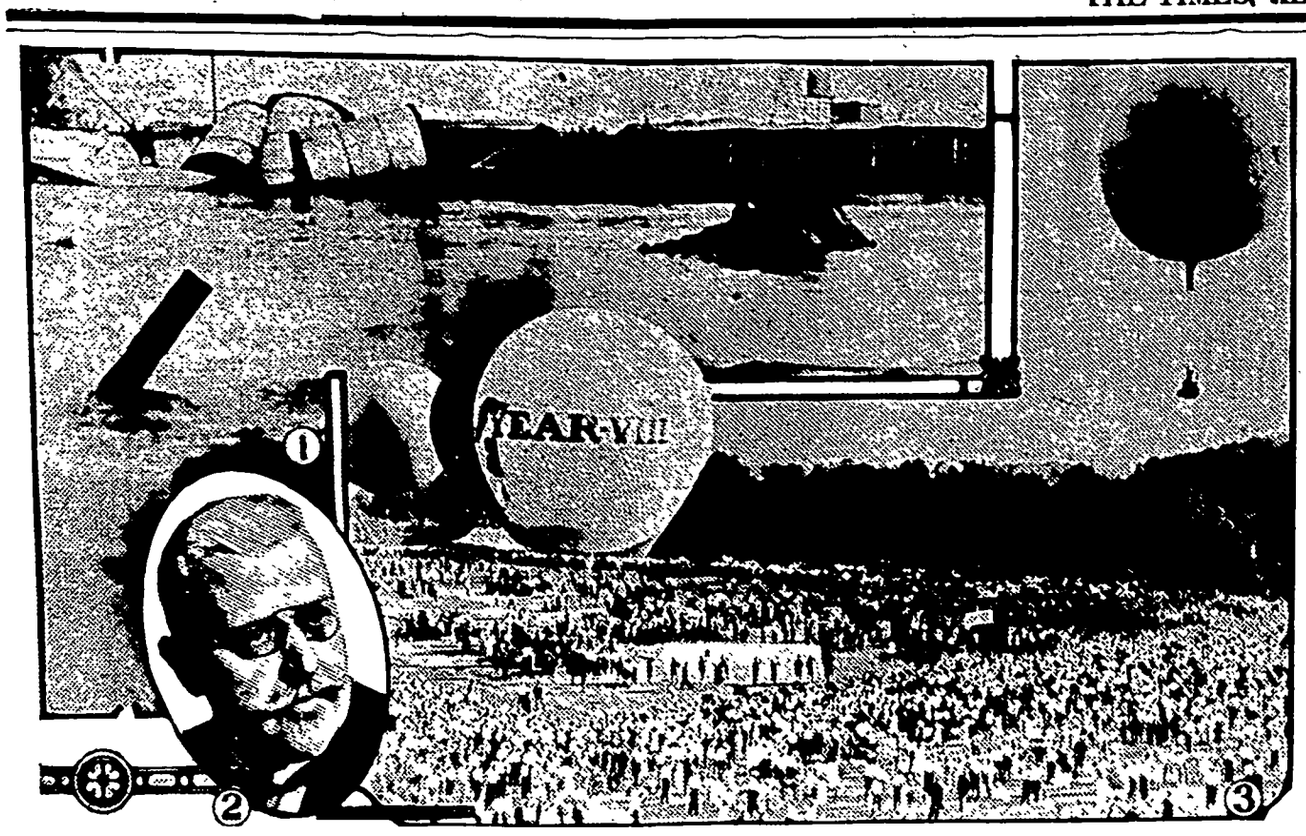
The Co-operators of Ell Township met Saturday, October 5th, at the home of Mrs. Charles Griffen for their first lesson on foods and nu-trition. How, when ,and what to feed the child of pre-school age, the value of milk, fruits and vegetables in the diet were some of the topics for study.

It has been said "Kitchen Sinks are the healthiest members of our families," because we pour the best of our vegetables into them.

The amount of milk to be used is one quart for children and one pint for adults every day.

Nutrition is very important and proved very interesting to the seven Co-operotors present. These Co-op-erators will hold meetings in their districts soon.

The next training school will be held at the home of Mrs. C. J. Wille November 26.



1—Scene on South Carolina side of the Savannah river during the destructive floods in the southeastern states. 2—Johann Schober, foe of Socialists, who has been made chancellor of Austria. 3—Start of the international balloon race from St. Louis for the James Gordon Bennett trophy.

NEWS REVIEW OF CURRENT EVENTS

Democrats and Radicals of Senate Defeat Hoover on Flexible Tariff.

By EDWARD W. PICKARD

THIRTEEN Republican senators, nearly all classed as "radicals," united with the Democrats last week to administer a decisive defeat to President Hoover in the tariff bill battle. By a vote of 47 to 42 the senate adopted the Simmons amendment to the measure taking away from the President the power to make changes in the duties under the so-called flexible tariff provision which has been in effect for seven years. Mr. Hoover had urged that this feature of the bill be retained, but the majority of the senators decided that it represents a delegation of the taxing power by congress to the executive and might lead to further usurpation of the powers of the legislative branch of the government. Anyhow, that was their story and they stuck to it, although unbiased observers thought their action had more of a political basis. The President's position in the matter had the approval of nearly all the big farm organizations, but the radical Republicans, most of whom claim to represent agricultural states, disregarded this fact and took advantage of the opportunity to hit Mr. Hoover. The Democrats are not at all sure of keeping a solid front on the rate schedules, so they made this showing on an administrative feature, only four of their members voting against the Simmons amendment.

Under the amendment adopted, the President would be required to transmit promptly tariff commission reports to congress, adding his own recommendation if desired. Sole authority to make changes in duties would be vested in congress. To prevent the opening up of other tariff matters congress would be prevented from considering any amendments to bills embodying tariff commission recommendations which were not germane to the particular item. Senator Johnson said the tariff would be "infinitely more flexible" under the amendment than under the present law. Of course the house may reject the amendment.

ONE hundred and seventy-five convicts in the Colorado state penitentiary at Canon City mutinied, murdered half a dozen guards and barricaded themselves in one of the cell houses, defying the warden's forces and a detachment of National Guardsmen. The convicts had few guns but plenty of ammunition, and before they were conquered it was found necessary to use machine guns, dynamite and finally a .75-millimeter field piece from the rifle range at Golden. During the fierce battle Warden F. E. Crawford himself was badly wounded. The mutineers, who were led by one Danny Daniels, demanded unrestricted freedom, threatening the death of guards they had captured if this were refused. The state forces would not listen to any such proposals. The warden's men were reinforced not only by the militia but also by police from Denver and other cities and hundreds of armed citizens.

WILLIAM B. SHEARER, the "observer" for American ship building concerns at the Geneva naval conference of 1927, was a voluble and sensational witness before the senate committee that is investigating propagandist activities, and after hearing him the committee adjourned its sessions until the visit of Prime Minister MacDonald is concluded. This probably was wise, for Shearer had brought into the record and handed to the committee a document which would be internationally startling if it were genuine. This purports to be a letter addressed to David Lloyd George and was said to be "reeking with hostility to the United States." Shearer attributed it to Sir William Wiseman, whom he called the chief British spy in the United States during the war and who is now with Kuhn, Loeb & Co. of New York. He said it was given him by a Mr. Summers of Los Angeles, who received it from a Mr. Wheeler, who got it from Ben McLenden, who extracted it from the files of the British consulate in New York during the war; and that he showed it to navy officers and to the then Senator Reed of Missouri, and it played an important part in shaping the naval policy of the senate.

Sir William Wiseman denounces the document as a "clumsy, absurd forgery." W. S. Summers of Los Angeles says he knows Shearer but knows nothing of the letter. L. B. Wheeler, formerly a federal secret service operative, says he never knew Shearer; and A. C. Merrill, a Navy department expert, has given an opinion that the document is spurious. All of which did not seem to abash Shearer. Several well-known newspaper correspondents who were at the Geneva conference and whose names were dragged into his story by Shearer, have declared that gentleman's statements to be lies.

BRIG. GEN. F. P. CROZIER of England, right hand man of Lord Robert Cecil in disarmament efforts, sent to Ambassador Dawes a letter stating that in 1927 a man calling himself "Sherman" offered him large sums of money to cease his advocacy of a reduction of the British army and navy, and that in the newspaper portraits of Shearer he recognized likenesses of that man. Shearer denies having approached General Crozier, saying he had not been in England since 1918 and never heard of the general.

When the committee resumes its hearings it will call Sir William Wiseman, Former Secretary of State Kellogg and others whose names have come up in the inquiry. Under a resolution introduced by Senator Caraway the senate, through its judiciary committee, also will start an investigation of all lobbies operating in congress.

GERMANY lost its foremost statesman last week when Dr. Gustav Stresemann, foreign minister, died of a heart attack following a stroke of paralysis. He had been in poor health for months but recently had so far recovered as to be able to take part in the reparations conference at The Hague and the session of the League of Nations assembly in Geneva. Doctor Stresemann, who was born in Berlin in 1878; was president of the German People's party, a member of the reichstag and was several times chancellor of both the empire and the republic. It was he who put into effect the policy of reconciliation with Germany's former foes and who brought his country into the League of Nations. He was looked upon as the backbone of the present Mueller cabinet and Berlin politicians doubted whether the coalition government could be held together without him.

THAT tropical hurricane that swept westward from the West Indies, after killing some twenty persons and doing great damage in the Bahamas, struck Florida with devastating force, tearing its way upward from Key West to Pensacola and then veering over to the Atlantic coast region and dissipating itself in furious rain storms. The Floridians, being forewarned, had taken all possible precautions, but the property losses were considerable though the deaths were few. The rains in the Carolinas and Georgia added to the already serious flood situation there, the Savannah and other rivers having risen to stages unequaled in many years. All the way up to New England the storm crippled land and water transportation and wire service.

RAMSAY MACDONALD must have been gratified with the reception accorded him by the officials and people of the United States. The prime minister's ship, the Berengaria, was escorted into New York harbor Friday morning by the cruisers Memphis and Trenton, and at quarantine he and his party were taken in hand by Mayor Walker's welcoming committee and landed at Battery Point. There they were met by Secretary of State Stimson and British Ambassador Sir Esme Howard and then a procession was formed to the city hall, where Mr. MacDonald was granted the freedom of the city. Soon thereafter the party took train for Washington, where the prime minister and his daughter Ishbel went first to the British embassy. On Saturday Mr. MacDonald became the guest of President Hoover at the White House and the conversations on Anglo-British relations and naval reduction, the purpose of the visit, began. The social program arranged in the National Capital included functions at which Ishbel was the central figure.

While the prime minister was on the high seas, Arthur Henderson, minister for foreign affairs, and Valerian Dovgalevsky, Soviet ambassador to France, got together and signed an agreement for full resumption of diplomatic relations between Great Britain and Russia, including an exchange of ambassadors, and for the settlement of questions outstanding between the two governments. This agreement is subject to the approval of parliament.

QUESTIONING of the members of the federal farm board was continued by the senate committee on agriculture and the board was subjected to further criticism for not using huge sums of money to force up the prices of this season's wheat crop. Samuel R. McKelvie, of Nebraska, the wheat member of the board, had a sharp clash with Senator Brookhart on the question of whether or not the board was authorized to fix prices, the Iowa solon insisting it was.

Mr. McKelvie said that the board members hope that the new grain marketing corporation which is in process of organization at Chicago, will be ready to operate in such a manner as to stabilize wheat prices next year. It was the opinion of the board, he said, that it was not feasible to commence stabilization operations this year. In Chicago William H. Settle, chairman of the organization committee, said the grain marketing corporation would be completed within a week. At the call of the farm board the wool growers of the nation held a meeting in Chicago to discuss plans for a similar central marketing and financing agency for their industry.

THE American Legion, in annual session in Louisville, held the greatest parade in its history and then got down to business, adopting a lot of resolutions most of which concerned the care of disabled veterans and like matters. Woodlawn post of Chicago won first place in the drill team competition and Electric post of Milwaukee won the band contest. Boston and Los Angeles sought next year's convention and it was awarded to the Massachusetts city on the first ballot.

O. L. Bodenhamer of El Dorado, Ark., was elected commander unanimously. He was a school teacher who enlisted as a private in 1917 and was discharged two years later as a major. Mrs. Donald Macrea of Council Bluffs, Iowa, was chosen national president of the American Legion auxiliary.

LEADERS in the prohibition cause to the number of a score met in Washington and organized the "cooperative committee for prohibition enforcement" which is intended to coordinate the activities of the country's numerous dry organizations. The headquarters will be in Washington and the chairman is Patrick H. Callahan of Louisville. The committee proposes to lay a scientific groundwork for a campaign of education as to the benefits of prohibition.

President Hoover appointed John R. McNab of San Francisco as head of a special body which will study and formulate changes in federal administration and judicial machinery. In announcing the appointment the President said the recommendations of this group would be submitted to congress for the more effective enforcement of the laws under the Eighteenth amendment.

FRITZ VON OPEL of Germany, wealthy automobile builder and race driver, made the first flight in a plane propelled by rockets as was the car he recently tried out. He flew for about six miles at terrific speed and then, the rockets being used, came down in a crash that wrecked the plane though he escaped uninjured.

Coste and Bellonte, the French pilots who started from Paris eastward on an endurance flight, were believed, toward the end of the week, to have landed in some remote Siberian forest.

Shingles Give Attractive Touch to Modified Dutch Colonial Home

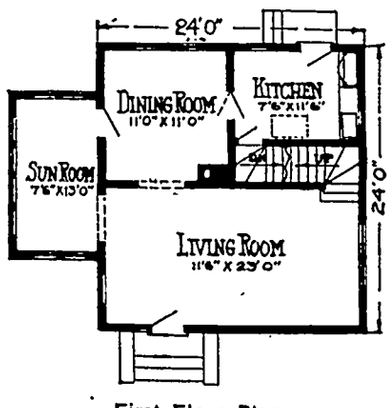
While this shingled home has an appearance of the Dutch colonial, it will be noticed by the floor plan that it is slightly different. At the front are the living and dining rooms but the central hall is absent. This home contains five rooms and a sun parlor at the end.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

One reason for the popularity of the Dutch colonial type of architecture is that it gives an attractive exterior with very little, if any, waste of inside space. The roof lines are broken by dormers which extend the length of the building on both front and back so that the house appears small, but is in reality a two-story home.

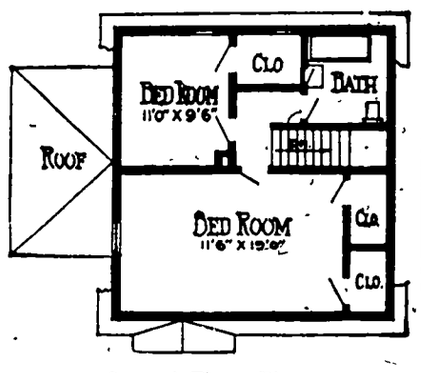
While the shingled home shown in the accompanying illustration has the appearance of a Dutch colonial, it will be noted by the floor plan that it is slightly different. In the true Dutch colonial the living room usually runs at one end through the depth of the house; the entrance door is in the center and the dining room and kitchen on the opposite side. In this design the standard colonial floor plan has been changed so that the entrance door is at one end and leads directly into the living room which extends



First Floor Plan.

the length of the house rather than the depth.

The floor plan which accompanies the exterior view of the home shows the arrangement of the five rooms the house contains and the size of each one. It will be noted that the living room is 23 feet long and 11 feet 6 inches wide. At one corner runs the stairs to the second floor. Through a cased opening is the dining room, 11 feet square, and to the right of it is the kitchen, 7 feet 6 inches by 11 feet 6 inches. A fine feature of this home is a sun room, which is 13 feet long by 7 feet 6 inches wide. Almost continuous windows make it a light, airy sitting room. It is connected with the living room by a cased opening and



Second Floor Plan.

there is a doorway into it from the dining room.

The stairs lead to a central hall on the second floor off of which open two bedrooms. The one at the front is unusually large, being 11 feet 6 inches wide by 19 feet long with two closets at the end. The other room is a corner room 11 feet by 9 feet 6 inches with an unusually large closet off of it. The bathroom occupies the other corner of the house.

This home is exactly 24 feet square, exclusive of the sun room projection. This size makes it suitable for a rather narrow lot but, of course, the larger the lot the better, for it is the surroundings and plantings which make the home attractive.

In construction the house is built of frame and has its outside walls covered with shingles. The use of shingles enables the home builder to get some very attractive effects, as shingles may be had in the silvery tone, which is so attractive in homes near the seacoast. The salt sea air in time turns the ordinary unpainted shingle into a silvery tone.

This is a very fine home building design for a small family. It is not expensive to build and is most attractive from the exterior and provides a roomy, comfortable home.

Treatment of Basement Walls to Keep Water Out

A remedy for wet cellars seems to be sought by a great many people who have bought small homes within the past few years. The best remedy, of course, is to "lock the door before the horse is stolen." In other words, waterproof the foundation at the time the house is built so that water will not have a chance to get in. Since this is not possible in homes already built, the following methods are suggested:

The most satisfactory method of keeping out dampness and ground water is to prevent its entry into the foundation wall by a waterproof coating on the exterior face of the wall. This coating may take the shape of one inch waterproof cement trowelled onto the wall, or if serious water conditions are discovered a tar paper and hot pitch membrane may be required to assure keeping out the water. Either of the above would require that the ground around the house be excavated sufficiently to allow a workman to apply this coating.

It is feasible where the water is not under heavy pressure, i. e., where there are no springs, but only surface water to contend with, to apply a waterproof coating on the inside of the foundation wall thus avoiding the upsetting of the grounds around the house. The most generally adopted method is the one-inch thickness of waterproof cement trowelled on similarly to the job suggested for the exterior face of the wall. This is not such a substantial solution of the problem, due to the fact that the foundation wall is damp even though the coating does keep moisture from penetrating to the interior of the cellar.

Color Schemes in Homes

Woods vary in shade from light to dark brown or red. The color scheme of the room should be kept in similar tones or warm colors. Contrasting colors can then be used in some of the furnishings to give the room animation.

Remodel the Basement if More Room Is Needed

When the needs of a growing family get to the point where a little extra space would save a great deal of wear and tear on dispositions, go to the basement and ponder. Even if there is money with which to build an addition, even if architecture and ground make this possible, consider the possibilities of cellar conversion; to build an addition to the house is not economic when the removal of trash, usually a fire and health menace, from the cellar and the expenditure of a little thought, time and money will provide extra living space.

If the need is for additional sleeping accommodations, a sleeping porch built over the open porch or sunroom will probably solve the problem; but if the need is for a study room for the children, or a rainy day playroom, a den or office for dad, or space for entertaining, then a few extra electric outlets, a partition perhaps and some paint judiciously used below stairs will probably do the trick.

Good-Looking Sidewalls and Roof Are Important

Every home is more or less beautiful while the materials are new and paint is fresh. Too many soon look shabby and need continued repainting. The condition of sidewalls usually determines the appearance of a home. Then, too, nothing is shabbier than a cheap-looking or dingy roof. Stained shingles laid over old sidewalls cost less than two good paint jobs.

Use of Varnish Stains, Enamel Interior Finish

Varnish stains color the wood and let the grain show through. Enamels give a solid coat of color that is rich and satiny in its texture. The range of colors is wide and manufacturers give explicit directions for securing any tint or shade desired. Of course, the most satisfactory finishes are absolutely waterproof and can be washed without injury to gloss or color.

An Apology

Rippy—"McBoob boasts that his wife made him all that he is." Dippy—"That is not boasting; it's apologizing."

Acidity

The common cause of digestive difficulties is excess acid. Soda cannot alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children, too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

PHILLIPS Milk of Magnesia

COULD NOT SLEEP NIGHTS

Helped By Lydia E. Pinkham's Vegetable Compound

Fairhaven, Mass.—"I am taking Lydia E. Pinkham's Vegetable Compound during the Change of Life and I think it is a wonderful tonic. When I feel nervous and run-down my husband gets me a bottle right away. It is a great help to me and I think that if other people would only take it when they feel all run-down and take it as the directions say, they would find it a great benefit. My worst symptoms were nervousness and tired feelings. I could not sleep nights and I did not care about my work. I was so nervous I would cry if anyone looked at me."—Mrs. Ada Besse, 196 Washington Street, Fairhaven, Mass.

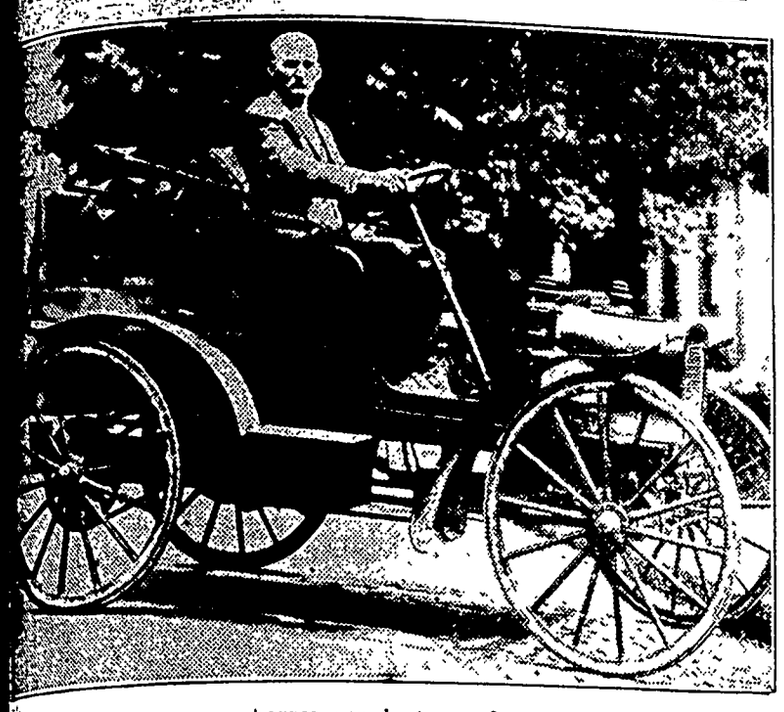
Feel Good

Most ailments start from poor elimination (constipation or semi-constipation). Intestinal poisons sap vitality, undermine health and make life miserable. Tonight try NR—Nature's Remedy—all-vegetable corrective—not just an ordinary laxative. See how NR will aid in restoring your appetite and rid you of that heavy, loggy, hopeless feeling. Mild, safe, purely vegetable—

NR TO-NIGHT

At Druggists—only 25c

AGED HORSELESS SPEEDER STILL IN USE



Not many years ago horses ran in terror from this horseless carriage William F. Wolfe, Upland, Ind., the driver, went more than 250 miles in this speeder to attend the recent Ohio state fair. It was made in 1900, has six speeds forward, and six in reverse, goes 15 miles on one gallon of gas and has a top speed of 10 miles an hour.

SWEARING NO CURE FOR PARKING ILLS

Paved Areas Must Be Built to Bring Full Motoring Utility.

(By E. E Duffy.)

Whether going or coming or not going at all, the automobile occupies a certain amount of space. Oddly, the motorist frequently experiences the greatest difficulty in finding this space when he wants to park. Somehow or other parking spaces always seem to be filled, or else two curt words on a signboard compel him to move on.

Sedans are no longer buggies and the space once devoted to the "hitchin' rail" is inadequate. Parking in city and town today is no small problem, and unfortunately little has been done by municipalities to create open-air stopping places for cars. The parking problem is no joke—and one answer to it is found in a new facility, the establishment of paved parking areas.

Build Parking Space.

In Chicago, the Lincoln park board is making an effort to unscramble its traffic situation by constructing two concrete parking spaces. These will be 320 feet long by 130 feet wide, accommodating 300 cars. At Coney Island there is a concrete parking space 1,350 feet long by 705 feet wide, large enough to accommodate more than 5,000 cars.

A fair-sized city in Illinois realized that it was not getting its share of rural business. Farmers were going elsewhere to do their buying. City officials and business men conferred. Shortly a group of old buildings was torn down and a spacious parking place was provided. Not content with this, the city built a new bridge across a stream which had always been a traffic barrier. Today, probably no city of its size is getting more rural trade than this progressive Illinois community.

The handling of the automobile is a city problem and many municipalities have decided that the provision of parking places is likewise something in which the city government has a deep interest. Vacant city property of low earning capacity might well be turned over to the convenience of the motoring family, which just about includes everyone. In some cases it may be practicable for the city to purchase land for the establishment of parking areas.

Full Utility of Car.

The full utility of the automobile will not have been attained until the motorist can stop within the near neighborhood of his destination. This is something that most motorists are denied at present. The creation of municipally or privately owned parking areas naturally entails some expense which, with the expense of operation and maintenance, justifies low parking fees.

One way of relieving traffic congestion, which harasses city governments more than any other one thing, is to get the cars off the streets. Paved parking areas will do that.

Proper Type Spark Plug Most Important Factor

To maintain efficient engine performance in cars, buses or trucks, it is essential that the proper type spark plug be used.

The same type spark plug will not meet all driving conditions and all reputable manufacturers include in their lines many different types or spark plugs to meet different operating conditions. Attention to the matter of the proper selection of spark plugs for particular service go a long way toward insuring trouble-free performance.

An illustration of this point is cited in the case of a bus that had been operated with complete satisfaction on a level route, but when it was transferred to a different route where practically all of the highway was through hilly country, the engine developed preignition. The difficulty was immediately corrected with the installation of spark plugs of a cooler type especially designed to overcome preignition.

New Light Code Signals Will Help Color Blind

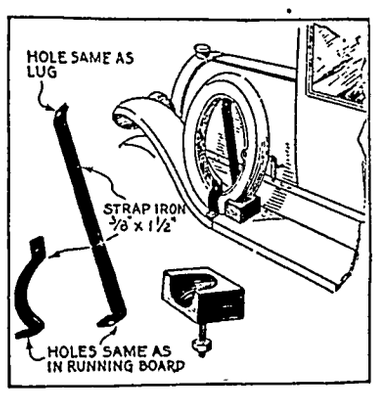
The standard recommendations for a uniform system of traffic lights approved by the American engineering council aim to help the color-blind driver.

The code suggests arrangement of traffic lights when in a vertical bank so that the red is on top, yellow light below it, if used, and green on the bottom. If the lights are set up in a horizontal row it recommends that the red be placed at the left, yellow in the middle and green on the right.

The theory is that many traffic accidents can be prevented if color-blind drivers can depend upon the position of the lights, rather than their color.

Tire Holder Arranged on Any Running-Board

The illustration shows a convenient and simple running-board tire holder that can be made from a block of wood, some strap iron, and five bolts.



A Wooden Block, Strap Iron, and Five Bolts Compose This Running-board Tire Holder.

As shown, the arrangement is for a rim fitted with four lugs, but it will work with other numbers of lugs, if necessary. Make sure that the tire is held rigidly in place.—Popular Science Monthly.

Alarm Clock Will Warn When Parking Time Up

The business men of Appleton, Wis., who drive to their offices and park in front of their business places, have put one over on the city authorities who limit parking in the office district to 90 minutes.

The business men have thought of a novel scheme. They set alarm clocks in their cars to ring at the end of 90 minutes. When the startling sound of the clock interrupts the calm routine, a mad rush is made for the curb. Into their cars the big butter and egg men hop, drive them around the block and park them in the space next to the one they had used before.

And calm again reigns for another 90 minutes.

AUTOMOBILE FACTS

Ralph De Palma has been driving racing cars for the last 22 years. He has been badly hurt several times.

* * *

Longer wear and efficient operation of the driving gears of a speedometer may be had if lubricated once each week.

* * *

"Civilization is at the crossroads" again, according to an economist. And with cars coming at it from all directions.

* * *

Eighty-five per cent of all farms in Illinois have automobiles, 13.3 per cent have two or more autos and 11.9 per cent have motor trucks.

* * *

A black smoke issuing from the exhaust is an indication of too rich a gasoline mixture, while a bluish smoke discloses an excess of oil passing the rings.

* * *

The proportion of people to automobiles in the country is now given as 5.6 to 1, except in the case of the fraternity house coupe, where the ratio still is 12 to .7.

* * *

It isn't the prevalence of cars on the streets and highways that makes the trouble; it's the lack of prevalence of sense behind the wheels that causes the difficulty.

LIVE STOCK

VALUE OF TRENCH SOIL IN FEEDING

Many Advantages Outlined by Colorado Expert.

Advantages obtained by feeding silage to live stock, and suggestions for constructing an inexpensive trench silo are outlined by E. J. Maynard, associate animal husbandryman at the Colorado Agricultural college.

Years of experimental feeding have clearly indicated that corn or cane silage is a valuable growing and fattening feed for live stock.

Siloing the crop offers a method of conserving it indefinitely and also renders hard woody portions of stalk soft and palatable. Where nearly 50 per cent of dry bundle fodder may be wasted when fed directly to live stock, practically 100 per cent of the same crop converted into silage will be consumed. Thus silage offers an enormous saving to live-stock feeders.

With all the favorable results secured with silage there are very few silos in the non-irrigated regions. This is believed to be principally due to the cost of building silos and the cost of filling them. A remedy to this situation has been found in the trench silo and machinery for cutting up forage crops into wagons in the field.

The trench silo is usually built with scrapers. It is generally from 12 to 14 feet wide, about 6 to 8 feet deep and as long as necessary to hold the crop. If possible, it should be built in gravelly, well-drained soil, and the sides should slope gradually toward the center.

The cut-up forage is packed into this trench silo by driving over it with teams or a tractor. It should be moist enough to pack well. It can be sealed best by covering it with about a foot of dirt. The silage is fed from one end, where the feeding surface is kept as even as possible.

Plans for building trench silos may be secured from the extension service of the agricultural college.

Health Certificate Is Necessary for Horses

Most states demand a health certificate made out by a licensed, accredited veterinarian to accompany horse stock when entering the state. Some demand a test of the animals for glanders and others only a health certificate. Cattle usually have to have a tuberculin test. To make sure you are starting right when desiring to enter any state with live stock, it is always best if time permits to address a letter to the state veterinarian of that state and address it to the capital city of that state. It will almost always fall into the hands of the proper party who can advise you of the exact requirements of that state for live stock coming from your part of the country and of the very latest rulings, for these change from time to time.

Minerals Valuable for Hogs in Winter Season

Minerals are particularly valuable for hogs when there is no green feed available, and when the hogs are being fattened on corn with vegetable proteins being used to supplement the corn. Minerals are not quite so essential where the hogs are on some good forage or when the corn is being supplemented with tankage, fish meal, or dairy by-products. However, from practically all available evidence, it has been found beneficial to feed some minerals no matter what other feeds are used, and the addition of the minerals has resulted in a saving of feed, particularly of the high-priced protein feeds.

Live Stock Facts

Cattle pasture usually goes at the rate of $1.50 per month per head.

* * *

If you get the whey free of charge, it can replace your tankage in feeding hogs.

* * *

Seven sheep are considered an animal unit as equal to one cow or one horse.

* * *

Vaccination is recommended when cholera is present anywhere in the community to immunize the pigs from the disease.

* * *

Most cases of stomach worms in sheep, if not too far advanced, can be treated successfully by drenching with a weak solution of bluestone.

* * *

Young pigs must be kept away from tuberculosis infected poultry, since they are susceptible to the poultry form of the disease.

* * *

A great many hogs shipped to the markets having government inspection are retained because they have contracted avian tuberculosis.

* * *

If the sheep producer wants to get top prices for his lambs they must have good mutton type, fine quality and excellent finish. They must be well finished, but not be over-fat

Apply Limestone Year in Advance

Has Better Chance to Be Available for Plant Use of Many Crops.

To "get the most for our money" spent for limestone for clover fields, growers should apply it at least a year in advance of seeding the clover or alfalfa.

To do this, many farmers are applying lime this winter to land that will be used for corn next spring, then, in a year, they plan to seed their alfalfa or clover, reports C. J. Chapman, soils specialist at the Wisconsin College of Agriculture.

Mixes Lime With Soil.

Chapman finds this a good practice for the cultivation of the corn during the growing season tends to mix the lime thoroughly with the soil and puts the land in excellent condition for seeding the following spring.

Some Wisconsin farmers are also applying ground limestone or other forms of agricultural lime as a top dressing to hay lands or pasture, Chapman says, but its effectiveness when used this way is negligible until the soil has been worked up the second time.

"Ground limestone becomes available only through reactions with soil acids. It is not soluble in water and in order to act with acids it must come in contact with soil particles," he says.

When lime is applied on pasture or hay lands, it does not become mixed to any extent with surface soil. It is plowed under when the land is fitted for corn or small grain, and it is not until the land is again plowed that the lime is turned back to the surface and worked into the soil.

Other Effective Agents.

Air slaked lime, finely pulverized marl, wood ashes, paper mill sludge, and finely ground limestone are effective the first year when they are applied in sufficient amounts and thoroughly worked into the soil by disking and dragging.

The finer the limestone is ground and the more thoroughly it is worked into the soil within the surface six or eight inches, the faster it will react with soil acids and the more effective it will be in supplying lime to growing crops and correcting the acidity.

Plant Oats on Top of Silo to Exclude Air

A farmer who has had wide experience finds that spoiling of silage during the winter can be lessened by treating the inner walls of the silo with a solution which keeps out air. The mixture consists of one pound salt, two tablespoonfuls of alum, one teaspoonful of lye and four gallons of water, plus enough cement to make it the consistency of paste.

In some cases, the inside of the silo doors are lined with paper or the cracks filled with clay to keep out air.

Another scheme is to sow oats or cane at the top of the silo. These grains sprout quickly in the warm silage and the matted growth serves as an insulator excluding the air.

Plan to Remove Supers and Keep Bees in Hive

When the time comes to remove the supers they will contain many bees, sometimes lots of them. The frames and combs can be taken out one by one and the bees brushed off, but the simplest way is to insert the inner cover between the brood body and the supers with a bee escape in the oval hole. The bees will pass down through the bee escape and in 10 or 12 hours there will be no bees in the super; they can pass through the bee escape, but they can't get back—it's a one-way road. These bee escapes cost but a few cents and they save quite a lot of fussing.

Agricultural Squibs

Pigs full-fed corn on pasture need only one-half gallon of skimmed milk per day.

* * *

Larkspur is poison to cattle, and dangerous on ranges until it has passed the flowering stage and is in seed.

* * *

Exhausted and overworked horses and mules are liable to have indigestion, colic or diarrhoea or become foundered.

* * *

If pasture is short or if the pigs are being fattened in the dry lot they should be given a gallon of skimmed milk per pig per day.

* * *

Pigs and sheep often get sunburn, sunscald or rape poisoning by coming in contact with rape or alsike clover while the pastures are wet.

* * *

Authorities on crops and soils tell us that about three-fourths of the fertility value of the cornstalks is returned as manure when the silage is fed to live stock.

* * *

Many people have observed cattle chewing bones, an indication of a condition that may develop into what is known as loin disease. This disease is often called creeps, which is caused largely by a lack or the non-assimilation of phosphorus.

POULTRY

CARE OF PULLETS INFLUENCES EGGS

Fowls Should Be Developed Gradually to Save Vigor.

Their care and management largely determines the egg production to be expected from pullets through the winter months.

To force the growth of pullets by the continuous use of a heavy protein diet is poor parctice, says O. C. Ufford, extension poultry specialist of the Colorado Agricultural college. They should develop gradually so as to have body vigor for the long and continuous period of heavy egg production.

The normal growing period for breeds of the Leghorn type is from five to six months when properly managed and fed, Ufford points out. Plymouth Rocks, Wyandottes and Rhode Island Reds require from one to two months longer for their normal growth.

A good plan of management is to hatch early and start feeding a growing mash when the chicks are three or four weeks old, and continue it until they are three or four months old. When the pullet's comb begins to turn a bright red is good indication to cut down on animal food. After this, a slower growth of the egg organs is desired. It can be secured by elimination of the milk and the meat meal in the mash.

For one to two months prior to the time it is desired to bring the pullets into production, Ufford recommends a ration as follows: Corn meal, 35 pounds; ground wheat, 50 pounds; ground barley or oats, 10 pounds, and bone meal, 5 pounds. With such a ration they will put on body weight and fat. They will go into winter egg production with greater vigor and vitality as a result.

Laying Hen Has Full, Warm and Glossy Comb

The comb of a laying hen will be large, full, glossy, and warm. It may be red in color, or it may be somewhat pale. On the other hand, the comb of a non-laying hen will be small, cold, pale and more or less scaly with a white dandruffy scurf.

In handling birds during the summer months, great care should be taken, too, not to frighten them or cause them to be overheated during the culling process. Very often poultrymen mishandle their birds during the culling operation and injure egg production more than they save by the culling. A good time to do this present production culling is after dark.

Review Poultry Flock to Discover Defects

This is a good time to resolve to strengthen the weak places, in the past season's work. Make a careful analysis of this year's poultry work and find out which phases have been profitable, and which phases have not. Were the chickens hatched too late? Did they become infected with internal parasites? Were they overcrowded in the house? Did you discontinue feeding mash during the summer and bring on an early molt and did the hens net you $1 each above all costs? Information is available on all of the above points.

Poultry Notes

Proper ventilation will help keep poultry houses cool.

* * *

Making the day longer by artificial light, so the layers can eat more, helps fill the winter egg basket.

* * *

Pullets lay best when they are confined in the house during the winter months and fed a laying mash.

* * *

Poultry houses which are too high are usually cold and drafty in winter. This may be remedied, easily and cheaply, by putting in a straw loft.

* * *

If your chickens are subject to winter sickness it may be because they aren't getting enough fresh air.

* * *

Corn should not be fed on the ear, but should be shelled. It should be fed in the litter, and may be cracked when convenient.

* * *

As green feed disappears and the garden stuff is cleaned up, the laying hens will need some other sort of green feed. Many practical poultry keepers depend upon green, leafy alfalfa during the winter months.

* * *

Remember that stock allowed to range over clean ground, away from contamination, makes the healthiest and best winter layers.

* * *

Extra space for the pullet flocks is far more important to the poultrykeeper than the reservation of the cockerels for table purposes.

* * *

Keep eggs in a cool and rather moist place. If artificial refrigeration is available, a temperature of about forty degrees Fahrenheit is preferable.

Current Wit and Humor

COWARDS BOTH

Mr. Meeker had crawled under the bed when he heard the burglar. He held his breath and waited. Then, after a long pause, he felt some one trying to crawl in beside him.

"Is that you, Henrietta, dear?" he whispered.

"No," was the answering whisper. "I've just had a look at her. I'm the burglar. Move up!"—Hamilton Spectator.

Pure Slanders

A Hollywood film hero had been extravagant in the way of wives, having acquired five and having been promptly divorced by each and all of them.

To the prospective sixth he made a tender declaration of his love.

"But, say," said the girl, cautiously. "I hear your character isn't any better'n it ought to be, honey."

"Pooh!" said the hero; "don't you believe all the yarns you hear about me. They're mostly old wives' tales."

RED HOT

He—Mazie is a red-hot mamma.
She—Well, she's nobody's fuel.

An Idealism

Some day we'll get the map all right,
With neatly drawn designs,
So clear that none will start a fight
To change the boundary lines.

Go Easy

"Young man," said her father, "I don't want you to be too attentive to my daughter."

"Why—er—really," stammered the young man, "I had hoped to—er—"

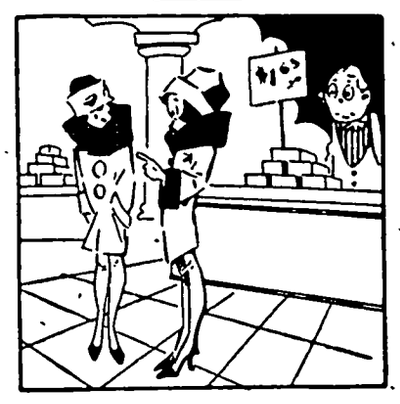
"Exactly, and I'd like you to marry her, but if you're too attentive to her you won't have money enough to do it."

The Whole Barnyard

Mrs. Pester—I see the Heehaws had to give up their apartment. I wonder why.

Her Husband—Keeping domestic animals in it, I reckon. According to the neighbors he's a jackass, his wife's a cat, his son's a puppy, and his daughter's a bird.

WAY TO SUCCEED



Friend—If you want something from your husband and don't succeed, try, try again.

Wife—I can beat that, my dear—cry, cry again is the way to succeed.

Things Missed

We cannot make bargain with blisses,
Or catch them like fishes in nets;
But sometimes the things that life misses,
Help more than the things that it gets.

What's the Use

Traffic Cop—Hey, you can't make a turn to the right.

Lady Motorist—Why not?

Traffic Cop—Well, a right turn is wrong here—the left turn is right. If you want to turn right turn left and then—aw, go ahead!

A Receipt Needed

Jean—Have you heard that Donald's lost his memory altogether?

Sandy—Well, well, how unfortunate! And to think I just gave him back the $5 I borrowed from him last week.

How It Happened

After years away a New Yorker tried to locate an old friend and finally found him far out in the suburbs.

"How did you happen to move away out here?

"Oh, it was gradual. I moved five times before I got away out here."

His Choice

Father—Which would you rather have, a little brother or a little sister?

Little Jakey—If it's all the same to you, papa, I'd rather have a white rabbit with red eyes.

Dependable Motor Oils—

POLARINE *and* ISO-VIS

You can depend on either of these two motor oils to lubricate your car as it *needs* to be lubricated. They are both *sturdy*, rich oils.

Because they are *sturdy* they will hold up under the trying conditions of country driving.

Because they are *rich* they will keep a cushioning film over every bearing surface.

Iso-Vis, the most sensational advance in motor oil, maintains a constant body—wears and wears and WEARS, lubricating at highest efficiency all the time. Many motorists run 1000 miles and more without draining the crankcase.

Polarine needs no introduction—for 20 years this dependable motor oil has been giving satisfactory service in millions of cars. If you want dependable lubrication for the least money, buy Polarine and drain the crankcase every 500 miles.

Polarine and Iso-Vis are made in different grades—use the grade made for your car.

STANDARD OIL COMPANY

[Indiana]

Temporary Fences Save Time, Labor and Money

THEY cut labor costs by letting the stock do much of the harvesting. They turn into money much forage so often allowed to go to waste, enable you to rotate stock and hogs over different fields and maintain fertility. Live stock as well as hogs salvage much grain left in the field.

For instance—dividing either permanent or temporary pastures, hogging off part of your corn, turning in on legume crops—all these practices are profitable and all can be followed through using a few stretches of temporary fence here and there on the farm.

Temporary fences can be quickly erected on Red Top Steel Posts. With a Red Top Driver these drive easily through hardest soil at the rate of 200 to 300 a day. And after using them for temporary fences they can be withdrawn and used in your permanent fence line—makes your fence post dollar do double duty.

Come in and let us show you the advantages of the Red Top Post that make it the most dependable and economical post for you to use for all purposes.

Atwater Kent Reputation

YOU families who haven't electricity, you have read of the new house-current Atwater Kent Screen-Grid sets—with their amazingly deep, rich and clear Electro-Dynamic tone, with their immense power and needle-point selectivity—with *all* the new improvements. Here's NEWS for you! Now you can get the same set in a battery model!

The same tone! The same unerring accuracy. The same choice of beautiful cabinets or compact table model. The same day-after-day dependability that has already sold 2,550,000 Atwater Kents and has put this new one into first place.

Listen to it! Try it! It will stand up to any test—for it has been tested thoroughly not only in the factory, and all over the country, but right *here*. We *know* how good it is!

Hear it today! Here!

Model 67 battery operated set. Uses 7 tubes (3 Screen-Grid). Less tubes and batteries, $77.
Also for high line electric power: **Model 55,** for alternating current, using 2 Screen-Grid tubes, $88 less tubes; **Model 60,** for alternating current, using 3 Screen-Grid tubes, $100 less tubes.
Electro-Dynamic table speaker, $84.

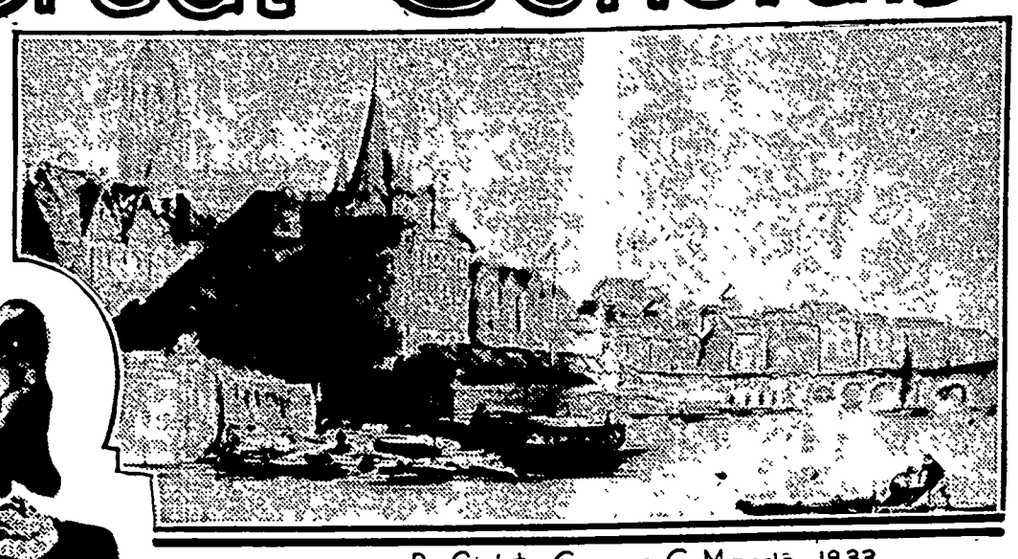
Some Artists Who Became Great Generals

By Cadet William Tecumseh Sherman, 1838



By Cadet George G. Meade, 1833

By Cadet U. H. Grant, 1841

And the Story of One Who Didn't—But Who Rose to World-Wide Fame as a Painter.

By ELMO SCOTT WATSON

IF EVER you visit the United States Military academy be sure to ask that they take you to the classrooms where the cadets receive their instruction in drawing, for a thrill awaits you there. Hung upon the walls of those classrooms is a remarkable collection of pen sketches, water colors, crayon drawings and wash drawings. The subjects of these pictures may not interest you very much but if you step closer to one of them to see who was the artist who made it you will have a surprise in store.

For instance, there is the one which pictures a Greek warrior of the ancient days. Down in one corner of the picture is a barely decipherable signature—"J. Davis." Perhaps this doesn't mean anything to you especially until you see a typewritten sheet inserted in the other corner which reads as follows: "This picture, drawn by Jefferson Davis while a cadet at the U. S. M. A. was presented to me on August 13, 1924, by Sergeant Starr, retired, formerly of the service detachment, now on the police force of the State, War and Navy building at Washington. He informed me that when the old academic building (the one that stood on the site of the present west academic building) was torn down that the drawing fell in the hands of some friend of his from whom he afterwards obtained it and that he, Douglas Newton Starr, made the frame from a part of a bannister railing of one of the staircases in the old academic building, (signed) Fred W. Sladen, Major General, Superintendent."

So more than a hundred years ago this Greek warrior's portrait came from the pencil of a slender young Kentuckian, appointed to the military academy from Mississippi in 1824 and graduated in 1828, who had his first military experience as a second lieutenant of infantry in the Black Hawk war in 1832 and who, as a colonel of Mississippi volunteers in the Mexican war, distinguished himself at the battle of Buena Vista by an exploit which was to have much to do with his future career. For Jefferson Davis's greatest fame lies not in his career as a soldier but as a statesman. He was successively a member of the United States house of representatives, United States senator and secretary of war. And later, in 1861, the Confederate congress, remembering the hero of Buena Vista and Davis's services in the war portfolio in President Franklin Pierce's cabinet, selected him for the position of president of the Confederate States of America.

But the portrait of the Greek warrior made by Jefferson Davis is not the only one made by a cadet destined for future fame. Near it is a scene in an Indian camp of the old days. In the foreground a chief squats holding his gayly decorated pipe as he dickers with the white trader whose wares of blankets, knives and other trinkets are spread enticingly before him. Standing to one side is an Indian woman, papoose in arms, who seems much interested in the bargaining. The artist who depicted this scene was Cadet U. H. Grant, a graduate from the academy in 1841. Perhaps most Americans know him as U. S. Grant, those initials standing both for Ulysses Simpson and "Unconditional Surrender" but when he was at West Point he signed his name as U. H. Grant for Ulysses Hiram was the name which his mother had given him.

Close beside the drawing made by the future commander-in-chief of the Union forces in the Civil war is one made by a man who, next to Grant, was the greatest leader of the boys in blue. It is a classical subject, a Greek warrior slaying a centaur, and it is signed by Cadet William Tecumseh Sherman, a graduate in the class of 1838. Not far away is a painting of a different sort—a water color picturing a riverside city, perhaps an ancient walled town somewhere in Italy. It is a painting of rare beauty and one which might well have come from the brush of a dreamy-eyed artist. Looking at its soft coloring it is difficult to realize that the hand which held the brush that put this scene on canvas was the same hand which directed the movements of thousands of armed men on the bloody battlefield of Gettysburg, those hot days of July 1, 2, and 3, 1863. For this painting was made by Cadet George C. Meade of the class of '33, whose victory over the great Robert E. Lee, a fellow West Pointer, was still thirty years in the future.

By Cadet Jefferson Davis

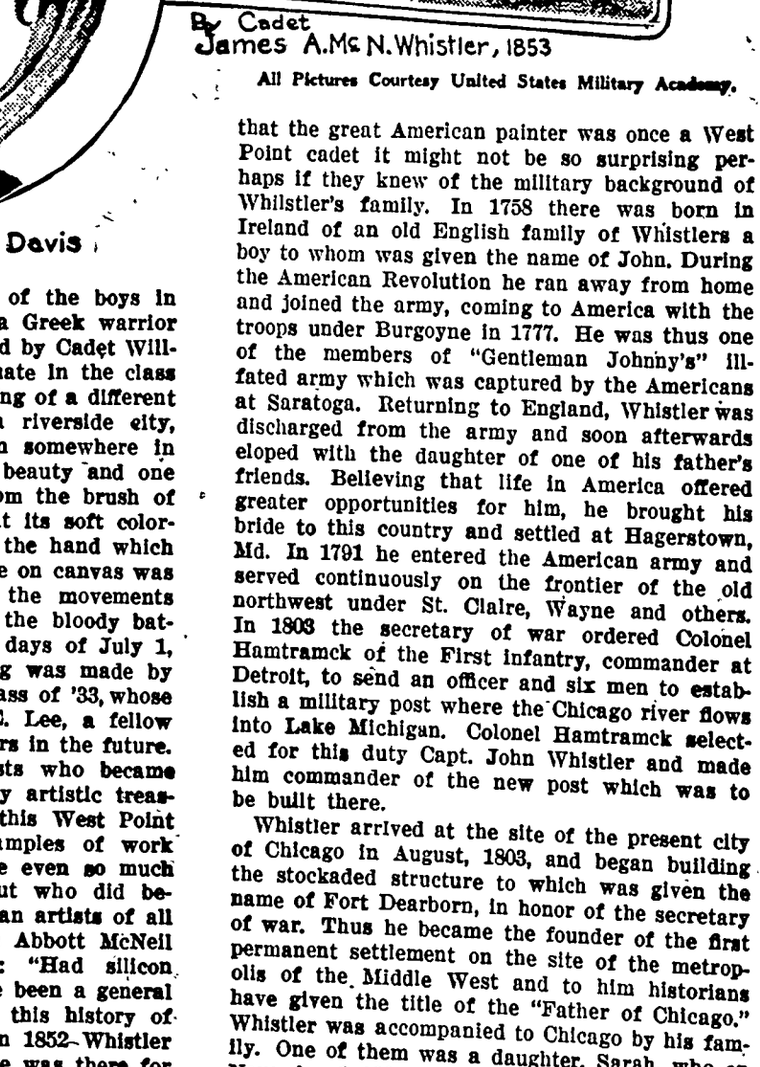
But these drawings by "artists who became great generals" are not the only artistic treasures which adorn the walls of this West Point classroom. There, too, are examples of work by one artist who never became even so much as a "shavetail" (lieutenant) but who did become one of the greatest American artists of all time. Once upon a time James Abbott McNeil Whistler humorously remarked: "Had silicon been a noxious gas I would have been a general today." Back of this remark is this history of a brief career at West Point. In 1852 Whistler was appointed to West Point. He was there for two years. Then came the fatal day when he and his classmates were taking an examination in chemistry. Was silicon a noxious gas or wasn't it? That was one of the questions confronting the future generals. Young Whistler guessed that it was. And he guessed wrong. It is probable that it was only one of several mistakes which he made in the examination. At any rate, he was "found"—that is, discharged from the academy for deficiency in chemistry.

Today a "Whistler" is one of the most prized possessions of public art galleries and private collectors, and the United States Military academy is the possessor of not only one but five genuine "Whistlers," and what makes them even more valuable is the fact that they are "early Whistlers." They are all copies of drawings and paintings which Whistler made from the work of recognized masters. One of them shows a group before the door of a medieval castle with the lord of the manor distributing alms to the poor. Even more interesting is another of his, showing two pretty Italian girls gossiping in a doorway. Although this was a copy, Whistler showed his independent genius in an interesting way. In copying the original he changed one of the girls from a brunette to a blonde so as to give variety to the picture and he painted in the shadowy figure of a young soldier at the end of the street so as to give the girls something to gossip about.

Surprising as it may seem to some Americans that the great American painter was once a West Point cadet it might not be so surprising perhaps if they knew of the military background of Whilstler's family. In 1758 there was born in Ireland of an old English family of Whistlers a boy to whom was given the name of John. During the American Revolution he ran away from home and joined the army, coming to America with the troops under Burgoyne in 1777. He was thus one of the members of "Gentleman Johnny's" ill-fated army which was captured by the Americans at Saratoga. Returning to England, Whistler was discharged from the army and soon afterwards eloped with the daughter of one of his father's friends. Believing that life in America offered greater opportunities for him, he brought his bride to this country and settled at Hagerstown, Md. In 1791 he entered the American army and served continuously on the frontier of the old northwest under St. Claire, Wayne and others. In 1803 the secretary of war ordered Colonel Hamtramck of the First infantry, commander at Detroit, to send an officer and six men to establish a military post where the Chicago river flows into Lake Michigan. Colonel Hamtramck selected for this duty Capt. John Whistler and made him commander of the new post which was to be built there.

Whistler arrived at the site of the present city of Chicago in August, 1803, and began building the stockaded structure to which was given the name of Fort Dearborn, in honor of the secretary of war. Thus he became the founder of the first permanent settlement on the site of the metropolis of the Middle West and to him historians have given the title of the "Father of Chicago." Whistler was accompanied to Chicago by his family. One of them was a daughter, Sarah, who on November 1, 1804, married James Abbott, a Detroit merchant. The wedding which was performed by John Kinzie was the first marriage of white people in Chicago. Another member of his family was a son, George Washington Whistler, then a toddling child three years old. When this boy grew up he was sent to West Point and was graduated from the academy at the age of nineteen. He was assigned to the artillery branch of the service and after his resignation from the army in 1833 he rose to eminence as an engineer. A year after Whistler's resignation from the army, a son was born to him at Lowell, Mass.

To this son was given the name of James Abbott McNeil Whistler, and it was this boy who achieved in the realm of art an even greater reputation than had his father in engineering. Although the connection of Whistler, the artist, with the history of Fort Dearborn and Chicago is not commonly known, one historian has said: "The very names he bore served constantly to advertise it." The Abbott part of it was in honor of James Abbott, Chicago's first bridegroom and the McNeil was in honor of Lieut. Col. John McNeil, commander of Fort Dearborn from 1821 to 1823. "The artist himself never saw Chicago, but with the exception of West Point there was no other place in the United States in which he was more interested," writes M. M. Quaife in "Chicago and the Old Northwest." He regarded his grandfather as the founder of Chicago and more than once lamented his failure to visit the place."



By Cadet James A. McN. Whistler, 1853

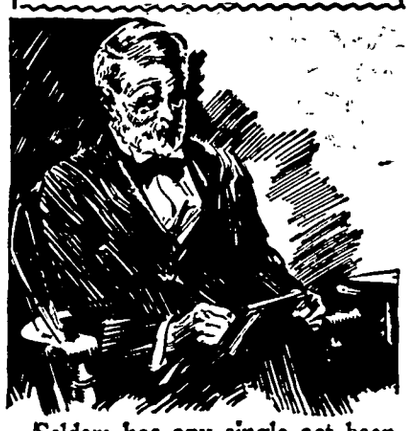
Years of Hard Work

Artist—This picture took eight years of work.

Friend—That's a long time to devote to one painting.

Artist—Well, it took six days to paint it and the rest of the time to sell it.—Swindon Advertiser.

ONE PRESCRIPTION MADE FAMILY DOCTOR FAMOUS



Seldom has any single act been of greater benefit to mankind than that of Dr. Caldwell in 1885, when he wrote the prescription which has carried his fame to the four corners of the earth.

Over and over, Dr. Caldwell wrote the prescription as he found men, women and children suffering from those common symptoms of constipation, such as coated tongue, bad breath, headaches, gas, nausea, biliousness, no energy, lack of appetite, and similar things.

Demand for this prescription grew so fast, because of the pleasant, quick way it relieved such symptoms of constipation, that by 1888 Dr. Caldwell was forced to have it put up ready for use. Today, Dr. Caldwell's Syrup Pepsin, as it is called, is always ready at any drugstore.

It is still undecided whether fishing for suckers is an obtuse or acute angle.

Kill Rat Without Poi

A New Exterminator that Won't Kill Livestock, Poultr Dogs, Cats, or even Baby Ch

K-R-O can be used about the home, barn or po yard with absolute safety as it contains no de poison. K-R-O is made of Squill, as r mended by U. S. Dept. of Agriculture, the Connable process which insures max strength. Two cans killed 578 rats at Ari State Farm. Hundreds of other testimonials

Sold on a Money-Back Guara Insist upon K-R-O, the original Squill minator. All druggists, 75c. Largesize (four as much) $2.00. Direct if dealer cannot you. K-R-O Co., Springfield, O.

THE CENTAUR CO. NEW YORK
35 DOSES 40 CENTS

Babies will cry, often for no apparent reason. You may not know what's wrong, but you can always give Castoria. This soon has your little one comforted; if not, you should call a doctor. Don't experiment with medicines intended for the stronger systems of adults! Most of those little upsets are soon soothed away by a little of this pleasant-tasting, gentle-acting children's remedy that children like.

It may be the stomach, or may be the little bowels. Or in the case of older children, a sluggish, constipated condition. Castoria is still the thing to give. It is almost certain to clear up any minor ailment, and could by no possibility do the youngest child the slightest harm. So it's the first thing to think of when a child has a coated tongue; won't play, can't sleep, is fretful or out of sorts. Get the genuine; it always has Chas. H. Fletcher's signature on the package.

Exact justice has never been defined and this may be why there are so many loopholes in the law.

Doing what they don't like has often been done by great men. Resignation is not for genius.

To Identify *Genuine* Aspirin

THE increasing use of Bayer Aspirin every year is proof that it has no ill effects. It is the accepted antidote for pain. It always helps; it never harms. Quick relief when you've a headache, or cold; or are suffering from neuralgia or neuritis. Rheumatic pains yield, too, if you'll only give these tablets a chance. But you want genuine Aspirin, so look for the Bayer Cross on every tablet. The box always bears the name Bayer and the word "genuine" printed in red. Proven directions inside.

Aspirin is the trade mark Monoaceticacidester of Salicylicacid

BAYER

GETTING TO FIRST BASE

(© by D. J. Walsh.)

AL JUSTICE looked around nervously and settled his slender little body into the tree clotch more firmly. How had ese kids so suddenly found out this was a good place to see the game? Most of them were about own age, but they showed no dliness after an indifferent e toward him. Hal knew that oked like a sissy, with his thick- spectacles and his pale cheeks. he didn't feel like one. Not a He loved baseball with a pas- quite as ardent as that of any erous corner-lot devotee. Hal n't play because of his eyes. His seemed to shut him out from a lot in this world.

could barely distinguish the They were little white blurs distance and the men on them animated four-pronged blotches, located first base and riveted es on the spot. The radio an- er, whom the boys could hear ly, would tell when the Bayshore took the field and Hal would every move of the first base-

boy's heart swelled. He always the hurt of it when he could his father play. He became in a hero worship that left no in his mind for pain or doubt. y, twelve-year-old Hal under- Lou Justice's bitter disappoint- over his son. A man could hard- lp resenting this timid, retiring who sometimes visibly trembled his father spoke to him.

'll never even get to first base," e had said bitterly and Hal eard him. The boy wanted so erately to please him that from self-consciousness he appeared awkward and diffident than he y was.

Hey!" Hal's thoughts were inter- ed by a freckled boy near him. t's Lou Justice and he's hit a e-bagger! Oo-oo, watch it go!"

He ain't gonna—yes, he is! No, he t! Beany, quit your pinching my ! He did! I told you so! Saw fore the old announcer did, too."

He brung in two men for the Cubs, ! An' just wait'll he gets on first begins clawin' 'em down! The denford Blues'll wish they was e with mommer."

proved to be the best game Hal ever tried to see. He had a much er idea of what was happening the boys' talk than from the an- cer's words. Somebody produced ir of field glasses and Hal got one f gl'mpse of the game through . It made him gasp. Gee! What could see if he had a pair of those gs!

He began to see that his father was ort of hero with these boys and quivered with pride. A brief logue toward the end of the game sted his attention. The freckle- ed boy demanded generally: "All you goin' to the meetin'?" A chorus assent answered him and Hal ed: "What meeting?"

The freckled boy glanced scornfully him. "You mean you don't know ut the meetin's Lou Justice holds er a game? He talks to us just ten utes and we gotta be under fifteen, An' tonight he holds a meetin' them that's older. My dad says it's e thing. He says Justice is a fine er to want to help kids instead runnin' around in s-society."

For some reason this news of his ther thrilled Hal even more than game or the screeches of admira- from his companions. He would along to the meeting. Maybe re'd be lots there so he wouldn't noticed.

"It's gonna be," some one said, "in Claybourne block—fourth floor. e gotta go up in elevators. Hoopee!"

Hal had never seen so many boys together in one place. The big ll was literally filled to the doors d still they kept coming. Pretty on everybody was standing to make re room, and presently Hal saw his ther on a platform well above them, that every boy could see his face. l's heart overflowed with pride. ars streamed from his shining eyes, t nobody noticed."

They stood wonderfully still, that wd of urchins, listening to the w, clear speech of the baseball yer. He used words they under- od. He seemed to be talking to ch one of them individually. Hal lt, in his own slender limbs, that he s stretching up to the stature of a n, for he was being talked to as if were a man. There wasn't a bit condescension in the friendly ce. At the last Justice told them let each one try to think of some- ing he could do before he went to d that night that a good man would —some little thing like holding the by or getting in the wood or smiling somebody you didn't like much.

As Hal sidled through the door he w his father talking with some other en, though he turned to glance often d smile at the boys streaming past m.

There were five elevators in the aybourne building, four in the front d one at the back. A half dozen ys who knew of the existence of e rear elevator detached themselves om the mass waiting about the doors. al followed them. He wanted to get of sight as soon as possible.

The rear elevator proved to be out of order and a workman at the open shaft door warned the boys back. They retreated obediently along the corridor, but one of them turned when he saw the workman step out of sight.

"I always did wanta look down a elevator shaft, an' now's my chance." He sped back while the others watched him uncertainly.

The thing all happened in a twinkling. The running boy clutched the elevator door as he tried to stop and it slid forward, swinging him by his own momentum into the shaft. His clutch slipped but he caught hold again and hung with his head just above the hall floor.

Hal had started running as soon as he saw the boy lose his balance. "Quick!" he commanded with a squeak of pure terror for the victim. "I'll grab him an' you grab me!"

It was done in a flash—five boys strung across the corridor floor, holding in safety the sixth who was all but helpless with fright. A painter on a step ladder, who had seen the whole thing, now overcame his paralysis and descended to drag the child in the shaft to safety. One boy, too frightened to obey Hal, had fled back to the assembly room sobbing, and the rescuers had hardly got to their feet when they were surrounded with men and the corridor was packing with curious children.

"I seen every bit of it!" the painter was explaining with awe in his voice. "I never see anything in my life move so quick as that kid in glasses. Why, he was ten foot ahead of the one next after him and it's God's own mercy that he weren't yanked into the shaft, too. He slid the last of the way on his front, just like he was making home base. Talk about your nerve!"

Hal hung his head in embarrassment, wishing desperately that he could get out of that place.

Lou Justice, his face first paling, then flushing, dropped a hand on the boy's shoulder.

"Hal."

"Do you know him?" asked one of the men in surprise.

"My son," answered Justice.

Hal heard a snort of astonishment near him and saw the freckled boy, his head thrust forward under a man's arm.

"Why—why, he was with us today an' he never said a word!"

"Why — golly, kids!" Language failed him.

They took a taxi home. It was growing dusk and Hal snuggled unashamed into the arm about him.

"To think," Lou Justice was scoring himself, "that he had to risk his life before I guessed his quality." Aloud he said: "I guess you made first base, old man."

The boy's breath caught with pure happiness. After a time he asked: "Dad, did you ever look through field glasses? A kid up in that tree today had some and I could see everything just as plain!"

The arm tightened and Lou Justice was glad of the darkness that hid his blush of shame. After this—binoculars and a grandstand seat. Yes, and the front row at the meetings.

Color Given to Sea by Various Skies and Floor

What holiday maker has not noticed the color of the sea and marveled at it?

Why is the sea blue today and green tomorrow? Why is it leaden-hued sometimes and slate-colored another day?

Water in vast bulk has, according to scientists, a natural blue color. But its hue is controlled and modified by the changing skies and the composition of the sea floor.

Looking out to sea, you sometimes see a distinct color line, about a quarter of a mile from shore. The nearer water is greenish and that on the farther side of the line blue.

This is due to the depth and character of the sea bed. The sand near shore is yellow, and this gives a greenish appearance to the water; the green becomes blue as the sea bed dips and the marine vegetation upon the bottom thickens.

What part does the salt in the sea play in determining the color? It is probable that it tends to intensify the blue. Both the Mediterranean and the Gulf stream, which flows like an individual sea in the Atlantic, are very salty and of a deep and beautiful blue in color.

Off the coast of China the sea is quite yellow. This is because tons and tons of yellow mud flow into it continuously from the great rivers of China.

So, too, with the Red sea. The peculiar color is in this case the result of rotting vegetable matter in the water. A similar peculiarity is to be found in some South American waters.

Why is the Black sea so named? Because its waters are astonishingly dark —though not really black, but rather purple in hue. There has never yet been any scientific explanation of this strange characteristic.

The part played by the sky in determining the changing color of our coastal waters is easily understood. Clear blue skies lend the sea their beauty; and purple thunder clouds transfer their frown to the face of the waters.—London Answers.

Meaning What?

Ministers' wives, as everybody knows, have a difficult lot in life, and a particular lady's lot so roused the sympathy of a friend that she remarked, "There ought to be a special place in heaven for ministers' wives." "Perhaps you're right," responded the minister's wife, "but I should rather go with my husband."—The Christian Register.

Horticultural News

KILL BORERS BY USING CHEMICAL

Paradichlorobenzene Useful in Controlling Pests.

Those fruit growers who have wormed their peach trees to rid them of borers will find the use of the chemical, paradichlorobenzene, a great relief in the control of these pests. Right now is the time to use the material. It is most effective when applied from September 25 to October 15 as a majority of the eggs of the borers have hatched by that time and maximum control may be secured.

"To apply paradichlorobenzene, pulverize it to the fineness of coarse salt or granulated sugar," advises W. Bruce Mabee, extension entomologist for the North Carolina State College of Agriculture. "Break the crust of the soil about the peach tree one or two inches deep. The gas given off by the chemical is heavier than air and will be effective only below the point of application. The earth should not be dug away from the tree, therefore. The gummy exudation should be removed and the required dose of from one-half to two ounces is sprinkled on the ground, around the base, not more than two inches from the trunk nor closer than one inch. Shovels of dirt are then piled and mounded slightly around the base of the tree so as to hold the fumes of the chemical. Pack the mound firmly with the back of the shovel. In the case of young trees the base should be uncovered four to six weeks later."

Mr. Mabee states that the amount to use varies with the size of the tree. For trees six years and older, one ounce is all that is needed. Trees three to four years old, will require about three-quarters of an ounce and a three-year-old tree should not have over one-half ounce. Mr. Mabee states that it is important to remember not to treat trees less than three years of age and do not use more of the material than is recommended.

Practical Suggestions for the Apple Growers

Certain suggestions to apple growers, the general observance of which he believes essential to the well-being of the apple industry, were recently made in a radio address of Dr. William A. Taylor, chief of the United States bureau of plant industry. These suggestions were:

"Stabilize annual production and improve average quality by better culture, pruning and pest control.

"Eliminate from commercial orchards as rapidly as practicable varieties of inferior quality and unattractive appearance.

"Refrain from planting additional acreage, except of most desirable varieties on sure-crop sites where production costs are low or market quality unusually high.

"Grade rigidly, handle carefully, pack tight, store promptly, sell effectively.

"For the small-scale grower in the more important producing districts, this last item may sound like co-operation. That is, in fact, what is indicated in many sections as the best bet in apple marketing."

Doctor Taylor called attention to developments among these lines in the last 20 years. Comparing present conditions with those of 1910, he said: "There are about a third fewer trees of bearing age now, and there are only about half as many young trees in orchards not of bearing age as there were in 1910."

This has not caused a decline in apple production, he said. It has resulted in more concentrated production in favored localities and on smaller acreage. Many trees have been replaced or top-worked with more desirable varieties. Bearing trees are geting better care and more intelligent attention.

Market Apples Should Be Picked Hard Ripe

For market, apples should be picked when hard ripe. Hard ripe means that the fruits have not softened to any extent, but are mature enough that they will soften and become eating ripe after picking. Picked too late these fruits soften either on the tree or soon after picking, and as a consequence break down and decay. On the other hand, if picked too early, they have poor color and eating quality when they are eating ripe, and are more subject to diseases in transportation and storage.

Borer Treatment

In preparing the peach trees for borer treatment, first remove all grass and weeds from around the trunks with a spade or hoe. Also remove all loose bark and gum from the trees. Pulverize the P. D. B. and apply it in a narrow ring one inch wide and about one or two inches from the base of the trees. Do not place the material in contact with the tree. Carefully cover the material with pulverized soil to a height of six to eight inches above the surface.

"I Could Never Get Along without 'KITCHEN-TESTED' Flour"

Mrs. Roy Smith Declares This New-Type Flour Banishes Baking Failures and Worry

Mrs. Roy Smith, Ansonia, Conn.

"I could never get along without GOLD MEDAL *'Kitchen-tested'* Flour," says Mrs. Smith. "When I use this new-type flour there's nothing to worry about, no matter what I make. I am sure that one who uses it need never worry about losing her husband if the old saying is true that, 'The way to a man's heart is through his stomach'."

Baking Failures and Worry Are Now Banished Forever

NOW when women bake they are always sure of perfect results—no watching, waiting and worrying until bread or pastry comes out of the oven.

They use a new-type flour for all baking purposes—GOLD MEDAL *"Kitchen-tested"* Flour—that simplifies baking remarkably and banishes the cause of most baking failures.

Failures, experts found, were mostly due to the fact that 2 sacks of the same flour often *acted* differently, even with the same recipe... it was not *uniform* in oven action.

So now all GOLD MEDAL Flour is *'Kitchen-tested"* before it comes to you. As each batch comes through the mill it is tested by actual baking—bread, cakes, biscuits, pastries—in an oven just like yours. Only flour which acts the same perfect way every time is allowed to go out to you. Thus you know in advance exactly what *your* results will be.

Special "Kitchen-tested" Recipes In Every Sack
(Changed Every 3 Months)

Please accept, free of charge, simplified recipes for 12 of Betty Crocker's most delicious baking creations. Recipes for the daintiest cakes, the finest cookies, the most popular pastries known. Each one is "simplified" until it is remarkably easy, too.

All 12 of these simplified *"Kitchen-tested"* recipes are inside every sack of GOLD MEDAL *"Kitchen-tested"* Flour. You can get a full set today—simply ask your grocer for GOLD MEDAL *"Kitchen-tested"* Flour.

Another Year

Fritz—Dad, you are a lucky man.

Father—How is that?

Fritz—You won't have to buy me any school books this year. I have been left in the same class.—Stockholm Kasper.

Los Angeles Boy Needed Help

Leroy Young, 1116 Georgia St., Los Angeles, is a "regular fellow," active in sports, and at the top in his classes at school. To look at him now, you'd think he never had a day's sickness but his mother says: "When Leroy was just a little fellow, we found his stomach and bowels were weak. He kept suffering from constipation. Nothing he ate agreed with him. He was fretful, feverish and puny.

"When we started giving him California Fig Syrup his condition improved quickly. His constipation and biliousness stopped and he has had no more trouble of that kind. I have since used California Fig Syrup with him for colds and upset spells. He likes it because it tastes so good and I like it because it helps him so wonderfully!"

California Fig Syrup has been the trusted standby of mothers for over 50 years. Leading physicians recommend it. It is purely vegetable and works with Nature to regulate, tone and strengthen the stomach and bowels of children so they get full nourishment from their food and waste is eliminated in a normal way.

Four-million bottles used a year shows how mothers depend on it. Always look for the word "California" on the carton to be sure of getting the genuine.

Two Sides to It

Obfusca—It takes a young man to make love interesting.

Ysabel—And an old one to make it pay.—Pathfinder Magazine.

Foolish Question

"Are you in debt?" asked the nosy one. "I told you I was married, didn't I?" snapped his victim.

Wonder What Firemen Said

Just because a fire alarm box was numbered 31, an Anaconda (Mont.) man thought it was necessary to pull the lever 31 times. All the apparatus in the city responded and the firemen found the man industriously yanking the little handle when they arrived to extinguish a small fire on the porch roof of a dwelling. He hadn't quite reached his total when he was interrupted.

In 1918 the United States public health service estimated that there were 120,000,000 rats in the United States.

The wise man always writes his love letters on a cake of ice.

Graves Vary in Depth

Graves in cities are usually 6 feet deep and in the country 4 feet.

Here's one granddaughter who takes advice from elders

Schoolgirl learns simple health measure

WITH all the talk there is nowadays about the independence of the sub-deb generation, your reporter got a great kick out of hearing a grandmother describe how her granddaughter was following a good old tried and true method of improving her general health.

"My granddaughter, Margaret," says Mrs. Zell of 6231 Catherine Street, Philadelphia, "read about Nujol, was interested in it, so sent for a sample." It seems she has been taking a tablespoon of Nujol once a day since and expects to continue this treatment. Already she has found an improvement in her general health, her system functioning normally where other remedies had failed.

That's one of the best things about Nujol. It is just as harmless for young girls, or babies even, as it is for adults. For Nujol contains no medicines or drugs. It can't upset you because it works so easily and regularly, in a normal fashion.

Starting right

Nujol was perfected by the Nujol Laboratories, 2 Park Avenue, New York City. It can be bought anywhere for about the price of a ticket to a good movie. Get a bottle of Nujol today and try it, won't you? In sealed packages.

DOINGS AT SCHOOL THE PAST WEEK

REPORT CARDS ISSUED FOR FIRST SIX WEEKS PERIOD

Juniors Working On Program To Be Presented November 1st

The reports of our students which parents have received this week will no doubt disappoint some. We believe they are lower than usual. Possibly many have not yet become adjusted to the confinement of the school room and its duties there since their freedom of the summer's vacation. Some of our better students are not doing as well as we believe they will do or can do after they get going. From the reports we frequently get from those who leave our halls for work in college or university we do not require enough of our students in high school. Some have said on their return here "You did not make us wor khard enough in high school and I now see plainly that if my work had been better done right here at home I would not have such a struggle in college." So many are entering our colleges these days without a proper foundation for carrying on there that it gives us pause and serious concern. Other superintendents at Hayfield Saturday commented upon the difficulty of getting high school students take their work seriously. We believe our parents here can be depended upon to encourage their children to get well their lessons. There will be few of them inclined to blame the teachers for the poor marks. We all welcome inquiries as to the difficulties of children and are very anxious to secure the necessary co-operation from the home in the children's interests. The boys or girls who will later attend college and there will be many, are deciding their success there y the quality of work done right here in our own local school today.

Juniors To Put On Program

Our Juniors are busy planning the program to which the public will be invited soon and will try to have it ready by November 1st. A lot of wholesome fun is assured those who come and enter into the spirit of the occasion.

"Profs" Have Dinner Together

The superintendent attended a dinner at Hayfield last Saturday. Supt. Hunt of that village invited the schoolmasters of our county to his home for a social time and a business meeting. An election of officers for the club for next year was held and the times and place of some of the county contests were decided upon. Supt. Wolfe of Kanawha was elected president, and Superintendent Hunt of Hayfield was our choice for secretary. Britt was chosen again for the basket ball tournament.

School Band Making Progress

Our school band is progressing nicely. After some individual or group instruction the first night the beginners have been assembled and last night were playing together. Cornets, clarinets, slide trombone, a baritone, a melophone, a French horn, bass drum, a snare drum and saxophones are making the music and we believe in a few more months or a year at most if none fail and drop out Klemme will have a pretty good young band.

The door is still open for others who would like to avail themselves of this fine opportunity to learn to play in such an organization. We believe parents should encourage children with musical ability to get into such activities. It furnishes a splendid form of diversion and way of spending one's leisure times. With the hours of leisure each young person is left with today, it is a matter of considerable moment as to how that leisure time is spent. If it is spent with others of serious purpose for their own and others there all is well. If the hours are spent in idleness with those of no purpose there is little or no gain and often great disappointment to parents.

LOCAL SCOUTS ARE OUT TO WIN AREA-WIDE CONTEST

Inter-Patrol Contest Being Conducted In Local Troop Also

Klemme Boy Scouts of Troop 56 are enthusiastic over the Area-wide Inter Troop Contest which is now beginning its third week or an eight week campaign.

Klemme Scouts are going into the contest in real earnest and are determined to take first place if possible. The standings of the 61 troops in the Council have not as yet been given out.

Local Contest Close

Along the same lines as the Area-wide Contest a local contest is being conducted in Troop 56 between three patrols: The Owls, Eagles and a patrol made up of the the men connected with the troop who call themselves The Peanut Pushers.

The losing patrol will give the winners a feed at the end of the contest.

Along with this contest the Scout who earns the highest number of points during the contest will be presented with a Marble's Woodcraft Knife and sheath by the Scoutmaster. Two or more other prizes for the next highest Scout will be presented by the Troop Committee.

Klemme Scouts and Scouters are glad to have with them Wm. Breitske, manual arts instructor and high school coach and a former Scoutmaster in charge of a troop at Waterloo. "Bill" is a valuable addition to Troop 56 and his help at the last meeting was greatly appreciated. "Bill" will take an active part in Troop 56.

The next meeting of Troop 56 is to be held at the high school gym. Boys of Scout age, and parents are welcome visitors anytime.

HANCOCK COUNTY SCHOOL MASTERS HELD MEETING

The second monthly meeting of the present school year of the Hancock County Schoolmasters Club was held at Hayfield Saturday.

After dinner the superintendents retired to the school building and held their monthly business meeting with Chairman A. A. Wolfe presiding. Supt W. J. Hunt, Hayfield, is the secretary and treasurer. Plans for all school activities were made and as far as possible dates et for the various contests and game.

Those attending the meeting from other towns were: Supt. and Mrs. Rankin and baby of Crystal Lake; Supt and Mrs. J. R. Mounce, of Garner; Supt. A. A. Wolfe and family of Kanawha; Supt M. F. Penrod of Klemme; Supt. and Mrs. Baker of Corwith, and Supt. and Mrs. Zwald of Woden.

FUNERAL FOR TWIN GIRLS WAS HELD FRIDAY

Funeral services were held last Friday morning at the home for the infant twin daughters of Mr. and Mrs. Harold Leitzinger. Rev. H. E. Whyte conducted the service. Interment was made in the Klemme Cemetery.

The little twins lived but a short time after birth last Wednesday night. They had been baptized and named. Shirley Jean was the first to die and Beverly Ann died Thursday.

Card Of Thanks

We wish to thank our friends and neighbors for their kind assistance during the past week and the many acts of kindness shown, and for their sympathy and help when we lost our infant twins.

Mr. and Mrs. Harold Leitzinger and family.

M. E. LADIES AID MEETS THIS FRIDAY AT PARISH HOUSE

The Ladies Aid Society of the M. E. Church meets this week Friday afternoon, October 18th at 2:30 p. m.

Mrs. John Day and Mrs. William Smith are the hostesses for this meeting.

COURT OF HONOR SUNDAY, OCT. 20

LARGE CROWD EXPECTED TO ATTEND SCOUT AFFAIR

Klemme Parents And Friends Are Urged To Accompany Scouts

The Area-wide Boy Scout Court of Honor, postponed from last Sunday, will be held next Sunday, Oct 20, at Crystal Lake. The Court of Honor committee, headed by W. P. Butler, Mason City, announces that the Orphean Orchestra of the First Methodist Church, Mason City, in charge of H. C. Brown, director, will begin a concert promptly at 2:30. The Court of Honor will begin at 3:00 o'clock.

One of the largest groups of candidates ever to appear for badges will receive awards at this court of honor. Two scouts will receive the Eagle Badge and four others will receive the Eagle Degree.

With the weather as nice as it is and the country at its prettiest, the Court of Honor Committee predicts the largest crowd in the history of these annual outdoor Curt of Honor meetings

Many families plan picnic lunches and the Crystal Lake scouts and committee will furnish coffee and lemonade to those that do.

Klemme parents and friends of Scouts are urged to attend this area wide Court of Honor. No doubt a large number of Klemme people will plan to attend. All are invited.

Practically all of the 61 troops in the area plan to attend the court of honor Sunday afternoon as a unit.

Troop 56, Klemme plans to be there 100 per cent attendance and also 100 per cent advancement, as all members of Troop 56 will be up for awards.

REFORMS SELECT PLANS FOR FOR NEW CHURCH

Forest City Architect Will Draw Up Plans For New Building

Mr. Thorwald Thorson, Forest City, was in Klemme Friday evening and met with the building committee of the Reformed Church.

A plan for the new church to be built next spring was decided upon and will be quite similar to the Methodist Church at Plymouth.

Mr. Thorson has built fifty-four churches in Iowa, Wisconsin, Kansas, Minnesota and South Dakota.

Near by churches which he designed are at Clear Lake, Plymouth and Crystal Lake.

It is planned to begin work on the new building as soon as weather permits in the spring.

KLEMME BOY SCOUTS TO STAGE BIG HALLOWE'EN PARTY

All Boys Of Community Between 9 And 15 Years Of Age Invited

According to suggestions from Scout Headquarters at Mason City for an Area-wide Hallowe'en Party, Scouts of Troop 56, Klemme will enter into the plan and will put on a big party for all boys in Klemme and vicinity between the ages of 9 and 15 years.

Arrangements are being completed and the Scout Hallowe'en Party will be held at the local High School Gymnasium and will begin promptly at 8:00 o'clock on Thursday evening, October31st.

All boys, aged 9 to 15 in Klemme are invited and are expected to get in on the fun. The program will consist of all kinds of games and stunts and will wind up with a feed served by the Scouts. The boy who does not take in this party is going to miss a big time.

No special invitations will be issued as this party is open to ALL BOYS in the community. Just come to the Gym on Hallowe'en and bring another boy with you if you like.

Ed. Buentenbach has purchased a John Deere 2-row corn husker, the first two row we know of in this community. He pulls the machine and wagon with his tractor and operates the picker with a power take-off. He put the machine into the field yesterday morning.

PURE BRED SALE HERE SATURDAY

R. C. LUDEKE TO HAVE POLAND CHINA SALE SATURDAY

This Is Ludeke's Tenth Big Type Hog Sale

Saturday, October 19th is the advertised date of R. C. Ludeke's 10th Big Type Poland China Sale of pure bred boars and Gilts at which time Mr. Ludeke will run forty choice boars and twenty gilts thru the sale ring.

Included in the offering are thirty spring boars, most of which are sired by "King Liberator," the Grand Champion 1,000 pound boar.

There are also some choice offerings sired by "Cerro Gordo," and the well known "Sun Ray."

Ten fall boars are to be sold at this sale. These are sired by the well known "Night Hawk, Jr."

The twenty head of gilts which will be seen in the sale ring Saturday are sired by "King Liberator," "Cerro Gordo," and "Sun Ray." This is a good opportunity for farmers and breeders to get gilts for their own herds or sows for winter sales.

The Ludeke sale is scheduled to begin promptly at 1:00 p. m.

Real Estate Transfers

James L. Manuel and wife to Florence E. Boutilier. Wty Deed date 95-29, $1.00 all of Lots 2,3,10, 11, 12, and W½ of lot 4 and W½ lot 9, all in block 1 Maple Hill Add Britt.

Cornie W. Schneider to Garner Motor Sales Company. Quit Claim Deed date 10-2-29, $1.00, on Lot 15 except south 6 block 24, Original Garner.

LIBERTY FARM BUREAU LADIES MET LAST FRIDAY

The Farm Bureau Ladies of Liberty township met ast Friday at the home of Mrs. Art Schoenwetter. Miss Myrtle Johnson was present and gave the first lesson in Second Year Nutrition, mothers and infants feeding, etc.

At the noon hour a picnic lunch was served and greatly enjoyed.

During the afternoon meeting Miss Johnson gave the women literature on the care of infants and their proper feeding.

Despite the bad weather and bad roads, seven ladies were present at this meeting. The next meeting of the training school will be held at the home of Mrs. H. A. Greimann, Friday, Dec. 6th.

ELL FARM BUREAU TO HOLD THEIR ANNUAL MEETING

You are needed at the annual township Farm Bureau meeting. In fact, we are expecting you.

The date and time as you have noted in previous announcements is October 24th. It's to be held at Ell Center School House at 8:00 o'clock.

We are going to do two things—transact some important business and a program has been arranged. At this meeting we elect new officers and decide upon the things we want to do next year.

And for eats, you will like coffee and sandwiches. Please bring one dozen sandwiches.

COMMUNITY PLAY

Stop! Listen! There will be a Community Play and school bazaar Thursday evening, October 24th at Dist. No. 9, Liberty twp, 6 miles west of Klemme. Candy, pies and many other useful articles made by the parents and pupils will be sold. Ladies please bring pies. Everybody invited. Dalia Stromer, teacher; George Schoenwetter, director. 2tc

FIRST NATIONAL BANK HAS ITS OWN CURRENCY

The First National Bank received a shipment of the new national currency in the $10 denomination the fore part of the week, with their own imprints on it.

The new $10 bills issued by the Bank here has the signatures of C. G. Waterman, Cashier, and F. A Arnold, President printed on them. as well as the Bank's name and the charter number.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English service.
11:00 a. m. Sunday school
The Bible Class will meet Tuesday evening at 8:00 o'clock.
The Senior Choir will meet Saturday evening at 8:00 o'clock.
The Confirmation Class meets on every Tuesday and Saturday.

Henry Ludeke and A. E. Katter did some buying and selling last week and now Mr. Katter owns the Henry Ludeke farm just west of Klemme, and Mr. Ludeke is the new owner of the Katter farm, when Mr. Katter formerly lived, north of town on the highway. The farm is rented for another year so the Ludeke family will not move on it until 1931. In the land deal Mr. Wm. Habercamp purchased some acreage also off the Katter farm, which adjoins his.

Ye Editor and family and Mrs. J. Jorgenson of Garner drove over to Clear Lake Sunday to visit the fox farm. They have 142 foxes there, and informed us that about half of them were sold. We thought maybe we might buy a couple for pets, and later have them made into ear muffs, but we changed our tune when they informed us we could have a pair for $1,500.00. Ouch!

Henry (Butch) Schroeder, accompanied by Grandma Schroeder, drove in from Chicago Wednesday evening to spend a few days in Klemme. Grandma Schroeder opened her house this morning, built a fire and was again at home to her many Klemme friends. They will take in the balance of the garden stuff and then close the house for the winter as Grandma will be in Chicago during the winter. She expects, however, to return to Klemme again to spend next summer.

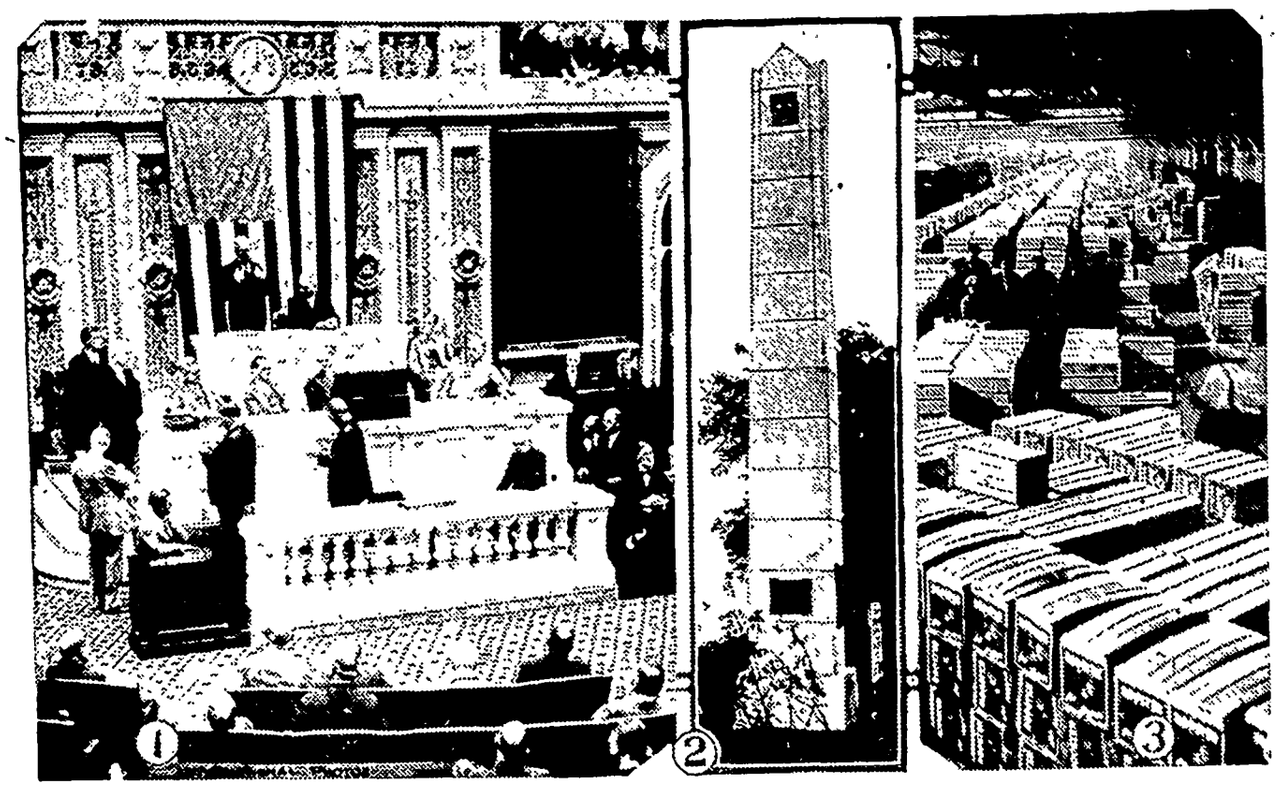
Mr. and Mrs. Wm. Schlawin, accompanied by Mrs. Ernest Schubert and Mrs. Fred Oxley, drove to Ames Wednesday of this week as delegates to the Farm Bureau convention and Country Life Week being celebrated this week. The convention will close with a banquet Saturday evening in the new Memorial Hall on the Iowa State campus.

Sunday was Wm. Bell's birthday and in honor of the event Mrs. Bell prepared a big dinner for him and his children were all home to help him celebrate. Those present were Fred Bell and family; Mr. and Mrs. Wm. Lassaahn, Jeff, Kenneth and Russell.

Miss Viola Freie has a new piano-accordian. The instrument is very beautiful, and has 120 basses, and the front panel is decorated with rubies. Miss Freie has already mastered several selections. She is an excellent piano player and no doubt will oon be able to furnish some fine entertainment on the accordian.

Mr. and Mrs. Ted Palmby lost their little baby which was born to them recently at Iowa Falls, at the home of Mr. Palmby's parents. Mr. Palmby was called to Iowa Falls Sunday. Mrs. Palmby and little daughter have been there for some time.

Mr. and Mrs. G. P. McCullough left for Norway, Iowa, Tuesday after visiting for ovre a week with friends here and with relatives at Garner. After a few days visit with Mrs. McCullough's relatives at Norway they will leave for their home at San Fransisco, Cal.



1—Prime Minister MacDonald of Great Britain addressing the American house of representatives. 2—Monument to the Ohio river, erected in Eden park, Cincinnati, to be dedicated by President Hoover on his trip to the Middle West. 3—New York docks jammed with rotting fruit and vegetables during the strike of the teamsters' and chauffeurs' union which shut off the city's supply of fresh food.

NEWS REVIEW OF CURRENT EVENTS

MacDonald Visit Ends and Naval Conference Is Called by England.

By EDWARD W. PICKARD

FIRST fruit of the momentous conversations between President Hoover and Prime Minister Ramsay MacDonald in the Virginia fishing camp and the White House was the invitation issued by Great Britain to the United States, France, Italy and Japan to participate in a naval conference in London next January. The proposal of the British government is in effect to reopen, revise and extend the navy limitation agreements reached at the Washington conference of 1921-22, with a view to gradual disarmament in accord with the spirit of the Kellogg pact in which all countries have renounced war as an instrument of national policy.

In order to give assurance that there will be no differences between Great Britain and the United States over cruiser tonnage to wreck this conference as occurred at the Geneva conference of 1927, the London government informs Japan, France and Italy that the two Anglo-Saxon nations have virtually reached an agreement based on parity of the two navies in all classes of ships.

There is no doubt that the invitations will be accepted, though there will be some opposition to holding the conference in London. America's acceptance was announced Thursday. France, it was believed, would make three reservations, asking that the work of the conference be disassociated with the Kellogg pact; that the proposals for abolishment of the submarine be dropped by England and America before the meeting opens, and that France have the right to call for a new ratio on cruisers, destroyers and submarines. It was understood that Italy would adopt practically the same attitude as France; and Japan was expected to accept the invitation without reservations. Each British dominion also was invited to send representatives to the conference.

When Mr. MacDonald's Washington visit officially came to an end he and Mr. Hoover issued a joint statement to the effect that in their conversations they had reached an understanding that the United States and Great Britain would co-operate to preserve the peace of the world, and that settlement of all disagreements between the two countries in the future should be sought on the assumption that war between them is unthinkable. Sincere acceptance of the Paris peace pact is reaffirmed, and confidence expressed in the success of the naval conference. One significant paragraph of the statement reads:

"The part of each of our governments in the promotion of world peace will be different, as one will never consent to become entangled in European diplomacy and the other is resolved to pursue a policy of active co-operation with its European neighbors; but each of our governments will direct its thoughts and influence towards securing and maintaining the peace of the world."

This is designed to quiet the apprehension, felt especially by the French, that the MacDonald visit would result in an actual alliance between America and Great Britain intended to force upon the rest of the world their interpretation of disarmament and peace. At every opportunity Mr. Hoover and Mr. MacDonald disclaimed any such intention, and in his remarkable address before the senate the prime minister specifically said: "We are not out for any exclusive alliance. You would reject it. So would I. It is not for the benefit of either of us."

The President and the prime minister discussed, in a general way other topics besides the naval conference. These included tariffs, the Anglo-American war debt, freedom of the seas and the British naval bases off the American Atlantic coast. It was agreed the last named matter should be the subject of further consideration after Mr. MacDonald has returned to London.

Socially as well as politically, Mr. MacDonald's visit was a great success. He and his daughter Ishbel were lavishly entertained, there were state dinners at the White House, the British embassy, and at the home of Secretary Stimson, and the prime minister was given the honorary degree of Doctor of Laws by the George Washington university. After the formal farewells in the Capital the British party left for Philadelphia and New York, secure in the belief that Mr. MacDonald's unprecedented adventure had accomplished extraordinary things for the two nations and for the world at large.

IRWIN B. LAUGHLIN of Pittsburgh, one of the "career" diplomats, has been appointed by the President as ambassador to Spain to succeed Ogden H. Hammond, resigned. Mr. Laughlin's last assignment was as minister to Greece, where he served from 1924 to 1926. Prior to his appointment Mr. Laughlin had been stationed in various diplomatic capacities at many of the principal capitals of the world. He began his career as private secretary to the minister to Japan.

ONCE again the Democratic senators and those radicals who persist in calling themselves Republicans scored on the administration senators in the tariff battle. This time by a vote of 44 to 41 the senate rejected finance committee amendments broadening the rights of manufacturers and wholesalers to intervene in customs disputes before the treasury and the courts. Later the senate rejected an amendment offered by King of Utah which would have granted independence to the Philippines, and debated another proposal to levy tariffs on imports from the Philippines and return the revenue thus derived to the islands until independence is granted. These proposals really were made for the benefit of the American beet sugar growers and domestic producers of vegetable oils.

The strength of the Democratic-radical combine led to forecasts that there would be a deadlock over the tariff bill in conference and that the measure would fail of enactment in the special session. There were those who said this result would not be entirely displeasing to the President and that the administration would not favor the revival of the bill in the regular session of congress.

ALBERT B. FALL, former secretary of the interior, appeared in Washington for his trial on bribery charges connected with the oil scandals, and refused to ask a continuance on account of his exceedingly poor health. But before the taking of testimony began he collapsed and a recess was ordered. The court designated Dr. Sterling Ruffin to examine him, but Fall refused to receive the specialist, explaining his action was on purely personal grounds and that Doctor Ruffin was the only physician in the country whom he would not permit to examine him.

THREE more loans were authorized by the federal farm board. The Florida Citrus exchange is to get a facilities loan of $2,800,000; and the Tennessee Cotton Growers' association and the South Carolina Cotton Growers' Co-operative association receive supplemental loans of $250,000 and $500,000 respectively. The advance to the Florida Citrus exchange will be secured by first mortgage on packing plants of local units.

REPORTS from India say that Kabul, the capital of Afghanistan, has been captured by the forces of Nadir Khan and that Habibullah Khan, otherwise Bacha Sakao, had fled by airplane. Evidently the story of the usurper king's assassination two weeks ago was at least premature. The troops of Nadir's brother are said to have scattered Habibullah's army and to have entered the capital, the inhabitants taking refuge in the hills.

SENATOR MORRIS SHEPPARD of Texas has put forward a proposal to amend the Volstead act so as to make the purchase of liquor a crime, as well as the sale of it. But the idea is meeting with strenuous objections not only from the wets but also from many of the dry leaders. Some thought it would nullify the whole scheme of prohibition, and others, like Senator Norris, chairman of the judiciary committee, held that it might completely break down prohibition enforcement. Mr. Norris said the plan, if adopted, would prevent 95 per cent of the prosecutions in prohibition cases, for in fully that number the testimony of buyers must be relied on for convictions. Senator Hawes of Missouri, a wet, said: "The matter of 'purchase' purposely was omitted from the Eighteenth amendment, and if it is to be brought up now the proper method would be by the submission of another constitutional amendment."

PREPARATIONS were completed for the investigation of lobbies operating in Washington by the senate. The subcommittee of the judiciary committee, which is to conduct the hearings, was named, as follows: Caraway of Arkansas, chairman; Borah of Idaho, Robinson of Arkansas, Blaine of Wisconsin and Walsh of Montana. Thus the inquiry is dominated by radicals, drys and pacifists and it is expected to go especially hard for the eastern high tariff interests, the big navy and other preparedness organizations and the wet associations. The tariff lobby was scheduled for first attention. Probably the hearings will last through the winter.

AMERICAN FEDERATION OF LABOR delegates opened their annual convention in Toronto with President William Green in the chair. The most interesting event of the week was the start of an attempt to bring the Brotherhood of Railway Trainmen back into the federation. Albert Whitney, chief of the brotherhood, was loudly cheered when he told the convention he saw no reason for the brotherhood to remain separated from the rest of the labor movement and that he intended to ask the lodges of the order immediately to vote on a proposal to affiliate.

For four days New York's supply of fresh fruits and vegetables was seriously curtailed by a strike of the teamsters' and chauffeurs' union, and freight yards and piers were jammed with rotting produce worth millions of dollars. The strike was called off when the Market Truckmen's association agreed to accept one of two propositions made by the union. The men were to get either more wages or shorter hours.

The workers' week has gone into effect in Soviet Russia and is said to be creating distressing confusion in industry.

DIEUDONNE COSTE and Maurice Bellonte, French aviators who started eastward from Paris for an endurance flight and were thought to have been lost in the wilds of Siberia, turned up in Manchuria near the Mongolian border, 4,846 miles from their starting point, breaking the world's straight line distance record. It took them about a week of foot travel to reach a place where they could get in communication with the outside world.

Colonel Lindbergh, with Mrs. Lindbergh and two archeologists, spent several days flying over the jungles of Yucatan, Guatemala and British Honduras. Their purpose was to explore unknown regions in the search for ancient Maya cities, and they were successful in discovering several extensive ruins not heretofore known. The Lindberghs then flew from Belize to Miami, Fla.

FEDERAL inquiry into liquor and vice conditions in northern Indiana has resulted in hundreds of indictments and arrests. Among the accused are the mayor of East Chicago and many police officers of towns in the northwest corner of the state. The charges include violations of the liquor, white slave, narcotic and auto theft laws.

COL. THEODORE ROOSEVELT arrived in San Juan, Porto Rico, and was immediately inaugurated governor of the island. The ceremonies took place in the new capitol building, and the governor was then escorted by a parade to La Forteleza, the ancient building that will be his official residence.

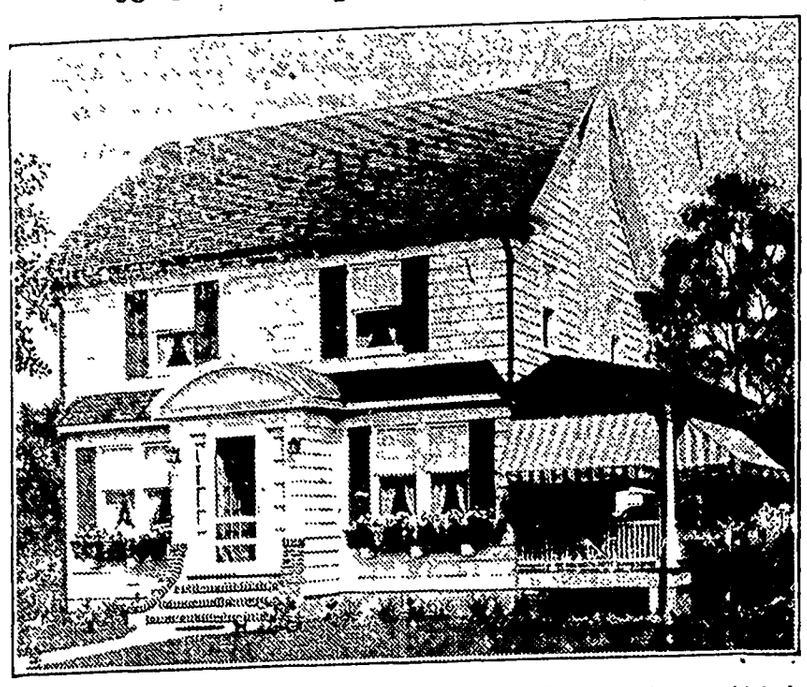
Dutch Colonial Type Will Appeal to All Prospective Home Builders



Wide dormers give the Dutch colonial air to this frame home which is 24 feet wide and 30 feet deep. The living room and dining room are both large. It contains six rooms and bath besides an entrance and breakfast nook.

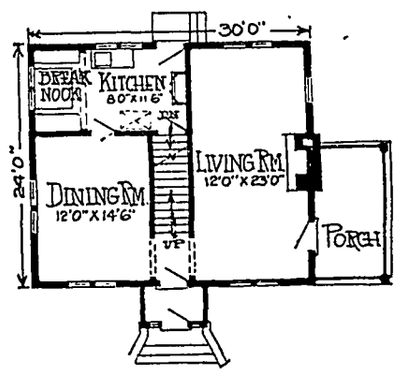
By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

Styles in homes run in cycles. Little did the designers of what we know as the colonial home realize that they were setting a style that would be most popular with home builders three hundred years later and would best meet the needs of an age when building costs would be such as to make it important that all the space in the house be utilized.

Also the designers of colonial homes little thought that their idea of making an unusually large living room would be adopted by twentieth century home builders. For it is undoubtedly this feature of the colonial design which appeals to modern home owners.

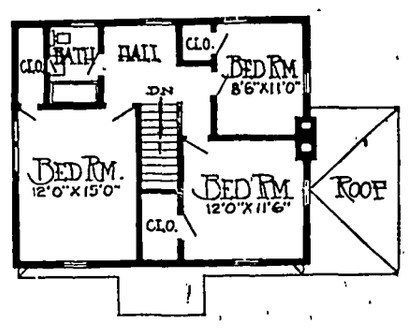
The home building design illustrated in connection with this article is one



First Floor Plan.

that will appeal to all prospective home builders who want an attractive roomy house at the lowest possible cost. For it is well known among professional builders that a home either square or rectangular, the outside walls of which are without jogs or projections, is the most economical to build. As will be seen by the floor plans of this house, it is 24 feet deep and 30 feet long, the foundation walls being exactly straight. This type of home requires a minimum number of lineal feet of foundation wall and likewise a minimum amount of roof, two features of homes which are costly.

This house is of the true colonial type with the exception of the slight roof projection extending out halfway



Second Floor Plan.

to the eaves, a built-in projecting entrance porch and an open porch at the end. Take off these three features and you have a nearly square two gable colonial house.

The house contains six rooms. The entrance door leads to a central hall which divides the first floor exactly into two parts. At the right through a cased opening, is the living room, 23 feet deep and 12 feet wide. At the left also through a cased opening is the dining room at the front, which is also 12 feet long and 14 feet 6 inches deep. Back of the dining room is the kitchen with a large breakfast nook at one end.

On the second floor opening off a central hall are three bedrooms and the bathroom. Each of the bedrooms is a corner room while the bath is conveniently located with relation to all of them. There is an abundance of closet space on the second floor, a feature that will appeal to all housekeepers.

This home is of frame construction with clapboard siding. It is set on a concrete foundation and has attractive brick steps. The fan shaped curve of the entrance porch roof is another desirable colonial home feature.

Basement Can Be Made Into Useful Quarters

Basements, if they are dry and well constructed, lend themselves to pleasant uses.

Many owners of small homes fit them up as radio rooms and workshops for the boys, or as dancing rooms with music provided by phonograph or radio. And there's no reason why this shouldn't be done to provide for "elbow room" for the whole family and to enhance the value of the property. Such a remodeling scheme can be worked out by the owner at small cost.

First, partitions should be laid out. Two-by-four timbers may be bolted to the cement floor, or, more simply, they may be laid on the surface and "shimmed" after the studs are put up, to hold the partition in place. Other two-by-fours should be nailed to the joists of the ceiling. Then studs should be erected between the two rows of two-by-fours and the surface material should be attached to these studs.

Few householders would care to undertake the work or the expense of lathing and plastering basement partitions and ceilings. If this is the case, wallboard may be used.

This can be bought in lengths sufficient to reach from floor to ceiling, thereby eliminating waste. Since it can be sawed and nailed just like wood, it may be put by the householder himself, and the ceiling may be finished in the same way.

This material can be decorated with paper, calcimine, flat wall paint or the heavy-bodied paints that give rough surface effects, so that the new basement rooms may be as attractive as those above stairs.

Effects in Brick

A "symphony in color" is a term that has been aptly used to describe the charming effects secured by builders of face brick homes. So many shades and textures have been made available that each home is given an individuality of its own through the clever and yet careful planning of the wall construction.

Insulation of Home Is Done by Many Methods

With the appreciation by the American home owner and home builder of the money-savings and comfort-giving possibilities of home insulation has come the development of various insulating materials until an exhibit of them would look almost like a schoolroom display of materials quaint and curious.

There is, for example, an insulating material made of a seaweed called "eel grass." Another is manufactured into a semi-rigid board from the waste fibers of sugar cane. Still another is what is called "spun limestone." Others are made from cork, wood fibers, gypsum, etc.

One of the most interesting is a cellular gypsum that comes in a powdered form and that is mixed with water before it is installed. When the water is mixed into this gypsum insulator a gas is released. This gas causes the mass to swell and rise very much in the manner that bread rises.

In this swollen state the material is installed. Then it "sets" (hardens). The result is an insulating blanket of a lightweight rock that is literally honeycombed with myriads of tiny dead air cells, which are the things that perform the service in insulation.

Virtualy all of the insulating materials mentioned are effective fuel savers and comfort givers when in use.

Weathervane Adds Interest to Chimney

In olden times the weathervane above a man's house was apt to designate his occupation. The fisherman would show a dolphin, the sailor a sailboat, the hunter a bow and arrow. But now that knowledge of wind and weather are scientifically given by newspaper and radio, weathervanes are less serious things, and usually point out the householder's avocation . . . his favorite pastime.

So the golfer chooses to put a miniature silhouette of himself above his house; the painter places a palette and brushes; the aviator may choose an airplane.

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

Before and After Childbirth

"I took Lydia E. Pinkham's Vegetable Compound before my first baby was born and I am taking it now for my weakened condition after the birth of my second boy. Although I never have put on any flesh I am feeling good now and the Vegetable Compound has helped me in every way. It is surely a wonderful medicine and I will be glad to answer letters for I recommend it highly."—*Mrs. Fred W. Davey, Madison, Kansas.*

Lydia E. Pinkham's Vegetable Compound

Pinkham Med Co., Lynn, Mass.

Trout thrive best in regions where the temperature does not rise above 68 degrees and where the daily variation is not great.

A man with advanced ideas gradually grows into amusing himself by startling folks.

Watch Your Kidneys!

Scanty or Too Frequent Excretions Demand Prompt Attention.

KIDNEY disorders are too serious to ignore. It pays to heed the early signals. Scanty, burning or too frequent kidney excretions; a drowsy, listless feeling; lameness, stiffness and constant backache are timely warnings.

To promote normal kidney action and assist your kidneys in cleansing your blood of poisonous wastes, use *Doan's Pills*. Endorsed by users everywhere.

Indian Summer

GRAN' POP SAYS HE USTER SEE LOTS OF INDIANS HEREABOUTS, AN' I FOUND AN ARROW HEAD RIGHT BY OUR CRICK, MYSELF. I'LL BET THERE ARE INDIAN GHOSTS ALL AROUND US AT THIS TIME O' YEAR. — POP SAID SO, TOO, AN' POP KNOWS
WALTERS

By ELMO SCOTT WATSON

BANG! goes another of our illusions! It is in regard to that pleasant period in autumn, known as Indian summer. And as usual, it is science which has disillusioned us. No less an authority than the United States weather bureau, basing its statement upon accurate meteorological observations, has this to say about that delectable season, famed for its genial sunshine and alluring haze:

Indian summer is the name applied in this country to a period of mild fall weather following a spell of unseasonable cold weather known as "squaw winter," such as occurred this fall. It is not a fixed season in the calendar.

In many years it is intermittent; that is, there may be several Indian summers in one autumn. Thoreau in notes on weather conditions at Concord, Mass., from 1851 to 1860, records the occurrence of Indian summers on dates ranging from September 27 to December 13.

In Europe as well as in this country it is popularly believed that a renewal of mild weather occurs every autumn, and the dates of its supposed occurrence are more definitely fixed than is the case in America. The period is associated with the names of various saints.

The mild period thus, is known in different parts of Europe as "St. Martin's Summer," "St. Luke's Summer" or "St. Michael's Summer," and tradition fosters the idea that it is always mild and warm, about the time of these various saints' days. Climatological facts, however, do not always square with this belief.

Indian summer has always been a favorite theme of artists and poets, especially the latter who, however, have usually been better verse makers than meteorologists. "When was the red man's summer?" asks Lydia Huntley Sigourney, "the Felicia Hemans of America" and one of the early Nineteenth century poets. Then, without trying to fix the date in one of her poems, she says it came

When the groves
In fleeting colors wrote their own decay;
When with heart
Foreboding or depressed, the white man marked
The signs of coming winter, then began
The Indian's joyous season.

John G. C. Brainerd, a contemporary of Mrs. Sigourney, is more specific in placing the season at the time

When the frost
Turns into beauty all October's charms.

Longfellow fixes the season about the first of November in a passage in his "Evangeline" as follows:

Then followed that beautiful season, called by the pious Acadian peasants
the summer of All Saints,
Filled was the air with a dreamy and magical light; and the landscape
Lay as if new-created in all the freshness of childhood.

Since election day comes in November, the following quotation from Whittier's, "The Eve of Election" also places Indian summer in that month:

From gold to gray
Our mild, sweet day
Of Indian summer fades too soon;
But tenderly
Above the sea
Hangs, white and calm, the hunter's moon.
In its pale fire
The village spire
Shows like the zodiac's spectral lance;
The painted walls
Whereon it falls
Transfigured stand in marble trance!

Stephen Henry Thayer puts it a little later in the month when he says that

It is in the autumn's dotage, mid November,
When skies, seductive, seem to woo the earth.

Other poets, however, are more concerned with what it is rather than when it is and have given us some charming descriptions. Sam Walter Foss, in his inimitable dialect, calls it "a piece of sweetmeat" in the following verse:

"Natur," the good old school-marm who pities our distress,
She gives her children every year a little glad recess;
An' ol' gray-headed boys and girls they feel their hearts thaw out,
An' life flows on as music'ly as water from a spout;
An' now the Ingin Summer time, 'ith all its rest is here,
A piece of sweet meat stuck between the slices of the year;
A sorter reign er jubilee 'twixt snow an' thunder showers;
A chunk of sweetness sandwiched in between the frost and flowers.

Nor were the early American poets the only ones who paid their tribute, as witness the following by Marian Isabel Angus:

INDIAN SUMMER

Indian summer broods today
Over the mellow autumn lands,
Soft wispy veils of amethyst
And amber pale stream from her hands.

Vines hang heavy with purple grapes,
Apple trees bend with crimson gems,
And in the woods the great oak trees
Are crowned with golden diadems.

Like topazes the pumpkins lie
Set in a ring of brown and green,
And mock the sun, while slender spears
Of goldenrod make gay the scene.

Nature is drowsy; her work is done,
Now she awaits her winter rest;
Harvest is over, the tired brown earth
Will sleep with red leaves on her breast.

And Minna Irving paints this gayly-colored word picture of

INDIAN BLANKETS

Sumac fires are burning brightly,
Ruby-red the embers glow,
Indian council fires rekindled
From the ash of long ago;
And the wind's a runner passing
With his feet in deerskin shod,
And a chief's tall feather tosses
In the dusty goldenrod.

Wild grapes ripen in the thicket,
Purple asters edge the stream,
And the braves to earth returning
By the moon's enchanted beam
Hang their red and yellow blankets
On the windy maple bough
When the frosty night is over,
For it's Indian summer now.

Another famous dialect poet, Frank L. Stanton, writing of Indian summer in his native state of Georgia, declares that

Injun summer suits me, soft night and stilly day,
And I could keep on dreamin' till I dreamed my life away.

And Cornelia R. Doherty calls it the season

WHEN THE ACORNS DROP

There's a whisper on the hilltop and a murmur in the wood,
There's a dream of golden glory everywhere;
On the beech a russet cover, on the elm a mottled hood,
While the walnut lifts her branches brown and bare.
Oh, the crows hold their meeting in the old oak's top,
And ho, for Indian summer when the acorns drop!

There's a bloom upon the meadow like the ghost of summer flowers,
But the forest and the valleys are aflame,
And on hillside and in hollow throughout all the misty hours
Descend the rustling drops of autumn rain,
Oh, the squirrel's at his feasting in the old oak's top.
And ho, for Indian summer when the acorns drop!

When the chestnut and the hazelnut put on a richer brown,
And the blackbirds all are gathered in a flock,
When mallow-in-the-marshes buttons up her yellow gowns,
Then it's time to heap the fodder in a shock.
Oh, autumn's on her waning, better gather in the crop!
And ho, for Indian summer when the acorns drop!

But not all the beautiful tributes to Indian summer have been in verse. Oliver Wendell Holmes, writer of delightful prose as well as poetry, in his essay on the seasons, says:

In October, or early in November, after the "equinoctial storms," comes the Indian summer. It is the time to be in the woods or on the seashore—a sweet season that should be given to lonely walks, to stumbling about in old churchyards, plucking on the way the aromatic silvery herb everlasting, and smelling at its dry flower until it etherizes the soul into aimless reveries outside of space and time. There is no need of trying to paint the still, warm, misty, dreamy Indian summer in words, there are many states that have no articulate vocabulary, and are only to be reproduced by music, and the mood this season produces is of that nature.

In "The Guardian Angel" he continues on that theme thus:

To those who know the Indian summer of our northern states it is needless to describe the influence it exerts on the senses and the soul. The stillness of the landscape in that beautiful time is as if the planet were sleeping, like a top, before it begins to rock with the storms of autumn. All natures seem to find themselves more truly in its light; love grows more tender, religion more spiritual, memory sees farther back into the past, grief revisits its mossy marbles, the poet harvests the ripe thoughts which he will tie in sheaves of verses by his winter fireside.

And in "Elsie Venner" he refers again to this season by declaring that "The real forest is hardly still except in Indian summer; then there is death in the house, and they are waiting for the sharp shrunken months to come with white raiment for the summer's burial."

The Good Press Agent

"Bernard Shaw is his own press agent," a publisher said, "and a better press agent never lived. Shaw counts that day lost which doesn't see him in the news columns on some excuse or other.

"The man is more resourceful than Willie Williams, who was the best press agent the West ever had. A great French actress came to Chicago once, and Willie Williams was put upon her trail. But she sternly said to him:

"'No publicity. I insist on being left alone. Remember, sir, no publicity.'

"Willie Williams laughed for joy.

"'Gee,' he said, 'what a story I can make out o' that!'"

First Oranges in Russia

The first oranges eaten in Russia were served on Potiomkin's table when he entertained Catherine the Great in 1791.

Evil in Imagination

Sorrow itself is not so hard to bear as the thoughts of sorrow coming. Airy ghosts that work no harm do terrify us more than men in steel with bloody purpose.—Thomas Bailey.

Cleaning Eyeglasses

A Washington optometrist suggests that one should grasp the glasses and not the nosepiece when cleaning eyeglasses. In this way the screws in the nosepiece are not loosened.

FAMILY SEEN BY RIDE ON SUNDAY

Start Soon After Dinner as Possible to Avoid Large Crowd.

For those men who complain that they see too little of their families, a Sunday afternoon motor ride is just the thing, according to Francis F. Beirne, writing in the Household Magazine. They will never complain again.

"The object, of course," writes Mr. Beirne, "is to start as soon after dinner as possible in order to get ahead of the crowd, but as every one has the same object in view, the crowd very logically meets on the highway. That is, all except the slowest cars, which by a strange contradiction get there first and lead the procession. But once in the lead, they seem to give up trying.

Mother on Rear Seat.

"The mother should be placed on the rear seat, so that nothing can occur behind her back There she can feel the fullest force of the jolt when the father shifts from high to second, keep a lookout for cars approaching from the right, left, front or rear, determine when to pass a car, detect the odor which smells like the brakes burning, separate the children before they come to blows and in between times reiterate her suspicion that one of the rear tires is flat. She would naturally offer timely and valuable warnings and make constructive suggestions to the father on what he is doing wrong, as a good helpmate should.

"Fresh air is famous for its beneficial quality. To insure a supply on the motor ride, all the windows of the car should be tightly closed on leaving home before the exhaust from the car ahead has time to get in its deadly work.

"After a time, even the best motoring grows monotonous. Energetic children may be expected to grow restless. However, they can find relief by burling inflammatory remarks at each other and by tampering with the door handles. They must be warned that if they persist, they will never be taken for a ride again. The threat must be made in as convincing a manner as possible and just as if it had not been uttered on every preceding ride and as yet had not been enforced.

Vacation Needed.

"Mothers who go for a ride," concludes the writer, "will return more than ever persuaded of the need of a vacation away from the children which is something gained. Fathers will have satisfied the yearning to see more of their children. If they are the wrong sort of fathers, they may even ponder the advantages to be derived if 'taking the family for a ride' had something of the meaning it has among gangsters in Chicago."

Motorist Should Think Before Leaving Trash

No motorist would think of cluttering up his front lawn with empty cans, wrapping paper and bits of garbage, yet that is exactly what some car owners do when they visit camping or picnic grounds, points out Charles M. Hayes, president of the Chicago Motor club.

"It would be well for motorists to remember that if they would place refuse after a picnic in the receptacles that are usually to be found for that purpose, the grounds would appear far more inviting to the next car owner that arrives," continued Mr. Hayes. "Leaving trash in the open is a sign of thoughtlessness and discourtesy. Picnickers who are imbued with a sense of the fitness of things and the rights of others will see to it that the ground they have occupied is clean before they leave."

Worry Over Water Loss Entirely Unnecessary

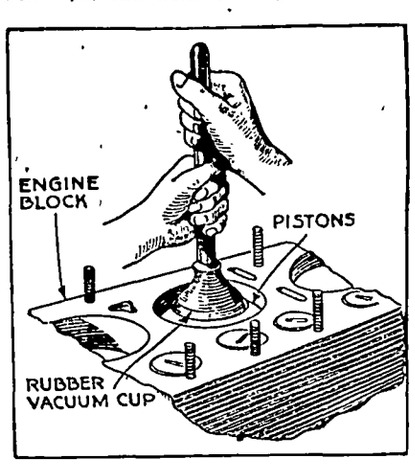
Worrying over loss of water in the radiator and cooling system has become part of the process of car ownership for many tourists. Despite all their efforts to keep the system filled and tight, a certain amount of water is lost daily, regardless of the length of the run.

It should be good news to such tourists that their trouble is merely the result of being too eager to keep the radiator full.

Whenever a car owner fills the radiator to the brim he is wasting his time. He's overlooking the overflow pipe into which the top layer of water spills when the car is bounced and the water is agitated.

Find Mysterious Knocks and Noises in Bearings

If mysterious knocks and noises in the motor make you doubtful about the condition of your connecting rod bearings, the next time you take off



Testing for Loose Wrist Pin or Connecting Rod Bearing With a Plumber's Force Pump.

the head to scrape the carbon and grind the valves press a plumber's force pump against the head of a piston, and attempt to move the piston up and down, as shown in the illustration.

Any appreciable motion indicates that either the wrist pin or connecting rod bearing is loose, and perhaps both.—Popular Science Monthly.

Jolts Show Trouble in Delicate Instruments

Isn't it strange how the person who is bounced off the seat when the car goes over an uncharted hole in the road will be surprised when the ammeter, the oil gauge or the clock temporarily goes out of commission?

Whenever the car has been over a particularly rough spot in the road and the instruments do not register properly, it is well to consider that their indicators, in the case of meters, may be slightly dislocated or thrown off their course, or that the hands of the clock may be stuck together.

AUTOMOBILE HINTS

There are 6,582,000 miles of highway in the world.

* * *

The average life of an automobile is six and three-fourths years.

* * *

Have the radiator contents checked at every stop for gas on the touring trip. The cooling job is exceptionally heavy.

* * *

It takes about 1,500 nuts to hold an automobile together, but it only takes one to scatter it all over the landscape.

* * *

Aside from the nation's highway bill, a total of $500,000,000 is spent annually for street construction and maintenance.

* * *

A bus 125 feet long is being built in a European factory instead of in Rhode Island in which case it would have been an interstate proposition from the start.

PLAN RECOVERY OF AUTOMOBILE OIL

Scientists of the bureau of standards at Washington are testing a new system of refining oil which has been drained from automobile crankcases and making it again usable. The plant consists of a still and condensor and a series of containers in which the various grades of oil are separated, which in turn is connected to a vacuum pump.

If the device proves as practical on a large scale as it is said to have in the tests, a new and important saving will be effected in motor car operation.

Dr. Winslow H. Herschel of the bureau is seen with the model plant which is being tested at the bureau.

Time isn't money; nearly every one has more time than money.

For Best Results in Home Dyeing

You can always give richer, deeper, more brilliant colors to faded or out-of-style dresses, hose, coats, draperies, etc., with Diamond Dyes. And the colors stay in through wear and washing!

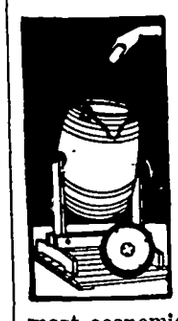
Here's the reason. Diamond Dyes contain the highest quality anilines money can buy. And it's the anilines that count! They are the very life of dyes.

Plenty of pure anilines make Diamond Dyes easy to use. They go on evenly without spotting or streaking. Try them next time and see why authorities recommend them; why millions of women will use no other dyes.

You get Diamond Dyes for the same price as ordinary dyes; 15c, at any drug store.

Record Gain in Butter Profits

Dairymen Who Use "Dandelion Butter Color" Say It's the Best Investment of All.



The biggest creameries in the country, who are most careful to cater to the whims of the public, are earning record profits by keeping their butter that appetizing June color everyone likes. Ninety per cent of them are doing it with "Dandelion Butter Color." It's the most economical and satisfactory butter color made. Half a teaspoonful colors a gallon of cream! It doesn't color the buttermilk. It's purely vegetable and tasteless. Approved by all State and National Food Laws. Large bottles, only 35¢ at all drug and grocery stores or write Wells and Richardson Co., Inc., Burlington, Vt., for a FREE SAMPLE BOTTLE.

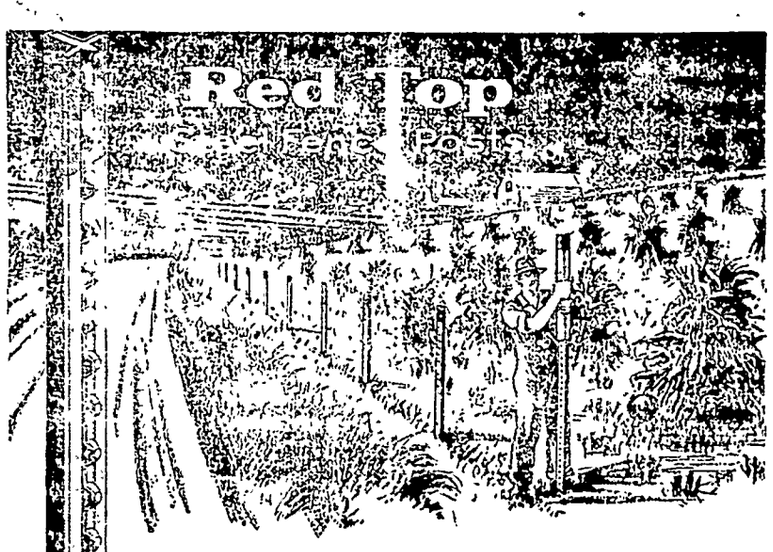
The Klemme Auxiliary will put on a Rumage Sale October 23rd, according to present plans. The ladies will undoubtedly call on you in a few days for articles you no longer need and which can be sold at the sale. All kinds of furniture, household articles, clean old clothing and what-not are all saleable articles.

"Dutch" Turgasen, who is attending school at Mason City, came home Friday. By all the shooting going on along the river we knew Dutch must be home and no doubt wild duck was served for dinner at the Kluckhohn home the next day.

FOR SALE—purebred Hampshire boars, cholera immune. 2 mi. north, 2 mi. east of Klemme; 2 mi. east, 3½ mi. south of Garner. Alfred W. Jurgemeyer, Garner, Phone525F35, Klemme. 2tc.

Rev. Grosshuesch, Reuben and Gertrude drove to Menno, South Dakota Sunday afternoon for a short visit with relatives. Mrs. Grosshuesch and children, who had been there for some time, returned home with them Tuesday.

Thanks! Just phone that item of news to The Times. Phone 1-2.



Fence This Fall—It's Easier

THERE is no time like the present to get at that fencing job which you have had in mind. Do it now—this fall—while you have more time.

It is no trick at all with Red Top Steel Posts. These drive easily through the hardest of soil and make it possible to take this fencing job out of your busy spring season. You'll be amazed how quickly the job can be finished, for with Red Tops you can build in a single day as many rods of fence as you could in a week in the old posthole digging days.

One man with a Red Top Driver can drive 200 to 300 Red Tops a day. It is easy to figure how short a job you can make of a complete fencing and repair program—right now—this fall—by using Red Top Steel Fence Posts.

Come in and let us show you the advantages of this post—the features that make it the strongest and most dependable post for you to use—for all purposes.

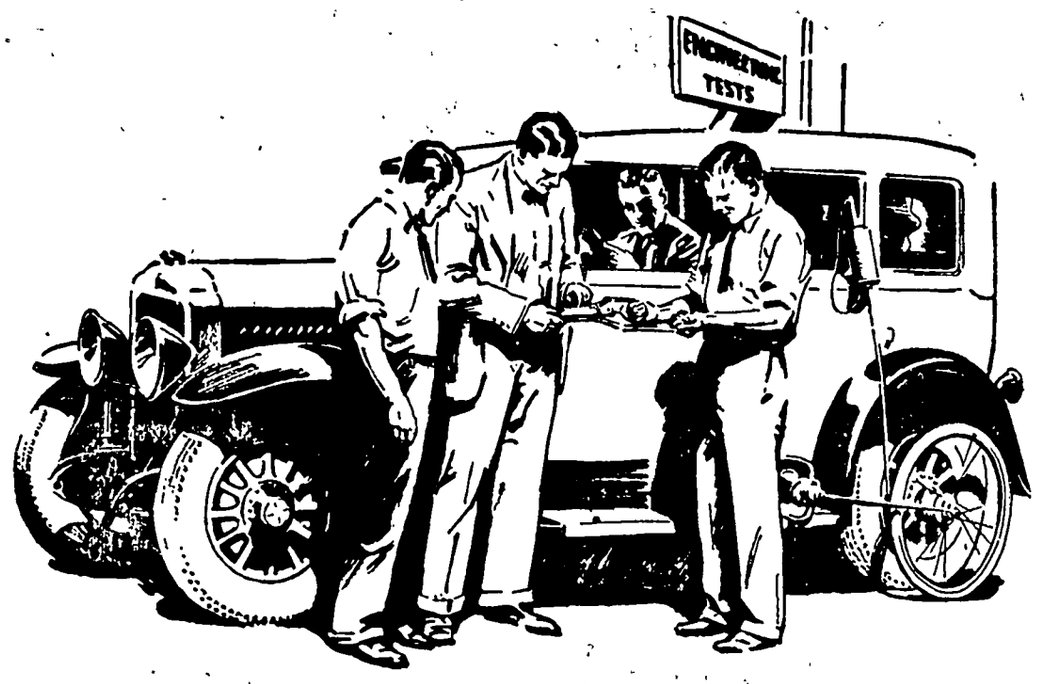
Men like these are testing your car



Types of the engineers at General Motors Proving Ground who are working for you. Drawn from a photograph. They are shown examining a specially devised instrument for measuring clutch pedal pressure.

It used to be the custom for a man who wanted to buy a car to take a mechanic with him.

Today, General Motors itself employs skilled automotive engineers to make it easy for you to select your new car. These men are working *for you* at its Proving Ground—the 1268-acre outdoor laboratory in Michigan where every kind of car is tested.

Before any General Motors car goes into production, a fleet of advance models is constructed and sent to the Proving Ground. There these advance cars must meet every test—tests far harder than you would make. Sometimes they are rebuilt, redesigned, retested many times until they are pronounced *right*, and ready to be put into production.

The tests involve speed, power, endurance, braking, riding comfort, handling ease; fuel and oil economy; body strength and safety—every phase of car construction and performance.

Buying a car is easy today—because these men at the Proving Ground are working for you to assure you of value when you select a General Motors car.

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$695. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful Fisher Bodies. Also sedan delivery. Light delivery chassis. 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

PONTIAC. 7 models. $745—$895. Now offers "Big six" motoring luxury at low cost. Larger L-head engine; larger Bodies by Fisher. New attractive colors and stylish lines.

OLDSMOBILE. 8 models. $875—$1035. The Fine Car at Low Price. Now offers further refinements, mechanically and in the Fisher Bodies—also eight optional equipment combinations in Special and De Luxe line.

MARQUETTE. 6 models. $965—$1035. Buick's new companion car, designed and built by Buick. Six cylinders. Fisher Bodies. Its price puts Buick quality and craftsmanship within reach of more families.

GOODELL AND VICINITY ITEMS OF INTEREST
(By Special Correspondent)

Mr. and Mrs. A. C. Carpenter were Belmond shoppers Wednesday.

Mr. and Mrs. George Zellie, Mrs. Saatoff and Jack Zellie were Mason City shoppers Wednesday.

Harry Carpenter has moved his tenant house to the farm he purchased where he will erect a set of buildings. The farm was formerly a part of the Geo. Ruka farm.

George Gosnold and two daughters spent Sunday with Mrs. Gosnold at the latter's mother, Mrs. Lamer.

Frank McNutt has been helping in the post office on account of illness in the Lamer home. The latter's daughter is still quite ill.

The farewell party held for Dorthea O'Krueg in the Church parlors was quite well attended, but many from the country were unable to attend on account of bad roads. A very enjoyable tim was had. A gift of cash was given her to be used in purchasing articles to furnish rooms to do light housekeeping in hre Mission work. She will soon return to Porto Rico as a Missionary.

Mr. and Mrs. Clement Houghton are the parents of a baby girl. She has been named Betty Jane.

Two young men from Oklahoma are husking corn for Ed. Hemenway and Mike Kearney.

Martin Kearney and Miss Lula Wilkins were callers at the M. Kearney home Sunday. Martin has just returned from Williams where he has been spending some time improving his farm.

Mr. and Mrs. Manning, Jr. of Clear Lake gave a musical entertainment in the U. B. Church Sunday evening. A large crowd enjoyed the program very much.

Mae Griggs came from Iowa Falls Saturday morning and spent the week end with her parents.

A good many have started to husk corn already.

Mrs. Sumner Trumbell of Klemme was visiting her mother, Mrs. Christie and sister, Mrs. Conklin Sunday.

Goodell School Notes

Miss Letha Van Nostrand is giving vocal lessons to the girls for a Girls Glee Club which will be organized in the near future.

Supt. Tinke has been visiting school several days and will soon be able to take up his school work again.

The first six weeks were up last Friday. Report cards were out this week.

See the new Stationery at the Times Print Shop. A special at 69c, with lined envelopes. 1tc

Mr. and Mrs. Albert Yahnke and daughter, Alva, of Garden City, Minnesota, drove in Saturday for a few days visit with Klemme relatives and friends and to see little Ardith Stokesbary at the Mason City hospital. The Yahnke family returned home Tuesday.

Try a cup of Barrington Hall Coffee at the White Lily Cafe. 2tc

Mr. and Mrs. F. W. Dingman and three daughters, of Fort Dodge, visited with Mr. and Mrs. Harry Smith Sunday. Mr. Dingman conducted a barber shop in Klemme a few years ago.

QUALITY and SERVICE are two words that mean much in the affairs of the average American. In conducting a creamery, quality and service means as much as in any other line of business. In order to pay our patrons top prices it is absolutely necessary that they enter into our plan with the proper spirit of co-operation and bring or send to us good, sweet cream... If you will do that, we will agree to give you the very best of service on our part and manufacture your cream into real quality butter and also assure you a better price than where sour, stale and tainted cream is delivered.

You furnish the quality and we will furnish th service, that isn't asking anything out of reason is it?

And we want you to know that we do appreciate your fine spirit of co-operation shown us in the past in helping us to build up ths fine home ndustry.

THE WILL IN THE GLASS JAR

(© by D. J. Walsh.)

THE motor sputtered obstinately as Judith Murray urged the old car up the hill. She had a load in behind—groceries, bags of feed and a crate of baby chicks which she had just got at the post office. The chicks peeped plaintively. She must get them home before the storm.

With a back-fire that nearly lifted all four wheels off the ground the motor died. But Judith was at the crest of the hill. She jumped out and began to crank. "Dead as a door-nail," she muttered with an anxious glance at the threatening sky. Her lips set in their fighting line.

Lightning split the sky, thunder rocked the earth. With a crash down came the rain. Leaving groceries and feed to take their chance under the leaky car-top Judith grabbed the precious crate and raced toward the only shelter in sight. An abandoned farmhouse stood close to the road. With desperate force Judith flung her slender body against the woodshed door. It opened unexpectedly and she and the crate entered headlong.

Judith straightened up, got her breath and looked about her. Against the farther wall were ranks of nicely cut and seasoned firewood—just as Aunt Polly Hawkins had left it. Indeed, it seemed as if the inner door must open and Aunt Polly herself appear, small, tidy and cheerful, chirping invitingly: "Well, well, here's that apple-cheeked gal of Henry Pierson's come for another cooky."

Long, long ago Judith had made it a practice to stop and see Aunt Polly as she went back and forth to the school across the creek. And always Aunt Polly had handed out cookies or doughnuts to the little girl, although Judith had plenty of those at home and had come wholly to see the fascinating little old lady and her delightful house.

A great longing came to her to get into the other part of the house. Of course the doors were all locked, but high up on the woodshed wall was a sliding half-window, which opened directly into the summer kitchen. Judith found the chopping block, moved it underneath the window and because she was tall and slim she managed to get through. She found herself in the small familiar room with its white-scrubbed floor and neat stove and a rag rug which seemed to caution: "Wipe your feet."

From the summer kitchen it was easy to enter the other rooms. And Judith went through them, one after the other, her breath catching painfully as she saw the exquisite order that had not been disturbed. Sugar box, jars of pickling spices, old-fashioned dishes were ranged upon the cupboard shelves with their lace paper edging. For up to the last hour of her life Aunt Polly, at ninety, had been active, interested, ordering her house to suit herself. On the parlor organ was a hymn book open at "Blest Be the Tie That Binds." Yet at that moment Aunt Polly's kindred were in a fight over her property—all except Peter Murray, Judith's husband, who, while he had as good a claim as any, would not enter into the fuss. Peter liked peace better than money, even now when things were going so badly with them.

The storm went up the valley, dying away in a few gentle drops. Judith came out of the house, bringing nothing with her, leaving the window just as she had found it. She even mended the doorlatch by driving in a nail or two with a stone. The chicks had been kept dry and warm. And the overhead motor, having cooled, started off obligingly.

Judith found Peter sitting on the front doorstep waiting for her. He had worried, she could see from his face. A few weeks before Peter had broken a leg and he was practically helpless, except for a little hobbling about on crutches. When she had taken care of the chicks, put away the groceries and fed the older fowls, Judith got supper. And then to stimulate Peter's appetite she told him how she had been in Aunt Polly's house.

"I bet that old pork barrel in the cellar is full of nice broadside this minute," Peter said, sighing. "Wish we had some of it, Ju. It would taste mighty good."

"It's a shame," Judith said, "that something isn't done. Aunt Polly has been gone two years and the quarrel continues. There must be a will, Peter, or a deed or something. Why, when you look around that house you just have to realize what a tidy old dear Aunt Polly was. Just think, Peter! The beds were all made up with starched pillowshams and counterpanes. I never saw the trace of a mouse or ant or spider anywhere."

"Bert Shaver says there isn't a scrap of paper," Peter replied. "He went to know being a lawyer. He's handled Aunt Polly's affairs. He's waiting for a speedy settlement of the property, but the other heirs distrust him."

"I do I," Judith said quietly, although in too low a tone for her husband to hear. It was from Bert that Peter had bought this little place.

Two mornings later she heard a strange voice outside and came to the kitchen door to find a big car in the yard. Peter hanging upon his crutches and Bert Shaver shouting orders. "Say, you make that payment on the dot or you get out!" Peter said little and Bert jumped into his big car and went racing away.

Peter was blue. Judith angry. They couldn't make the payment under the circumstances.

That afternoon she got into the car and went to town to get something that should tempt Peter's appetite. All she could think of was that barrel of salt pork in Aunt Polly's cellar. Peter should have some of it, whether it was right for her to take it or not.

She drove up to the old house, parked and got out. Entering as she had that stormy day, she was soon in the summer kitchen. She had opened the cellar door and was about to descend the steep dark stairs when she heard voices upstairs—Bert Shaver's and Gill Meacham's—she recognized them both. She paused, her heart pounding with excitement. What were the two men doing here.

"I've told Peter he can leave unless he makes that payment," Bert said. "He can't make the payment. Land isn't good for anything, but there's a ledge of rock on the hill that ought to open up into a good quarry. Ed Eaton says he'll take a chance on it, anyway. He'll pay a good price, too. Good gracious! There goes the old sugar bowl!" There was a smash. "Got to get rid of the evidence, you know," Bert chuckled. He was apparently picking up the pieces. "Well, Gil, we've hunted high and low. We can't find that paper. There was one, for I drew it up myself.

"Funny you didn't keep a copy or have it recorded," Gil said.

"She grabbed it before the ink was hardly dry. I couldn't get it away from her by main force, could I?"

"It was made out to you, you say?"

"Absolutely, Gil, that deed is somewhere in this house. But where? I have looked every inch of the place over—under the rafters, in the beds, under the carpets, I've seen her put things away in that old blue sugar bowl. Once when I was a kid I hooked some money out of it. Gil, I'm put out. I want that document worse than Butler did the Bible."

"So should I, if it deeded such a piece of property as this over to me," Meacham said dryly. "Well, I can't help you hunt any longer now, Bert. I got to go."

They went out by the back door to which Bert evidently had the key. When they saw Judith's old car in the road they were appalled. Frightened, she shut the heavy oaken door and barred it. She was in the cellar, safe. Even though they came back to find her she was safe.

But they did not come back. Perhaps Bert trusted to her not having heard all he said. The scoundrel! Her brown hands clenched as she thought of him. Trying to get rid of Peter, his own cousin, because Ed Eaton would pay more!

She sat down on the bottom step of the cellar stairs and tried to think. But thinking didn't help much in a crisis like this. Besides it was cold down there. She was getting chilled.

Wearily she rose and went to the pork barrel. Made of hickory, it had been used for many years and was so thoroughly seasoned through with salt and saltpeter and sales molasses and red pepper that it was almost capable of preserving pork without the pickling brine. Judith lifted the cover. Underneath was a stone. She lifted that. The pork lay pink and sweet. It was so dark that she had to feel rather than see it. How Peter would love it, fried for supper with flour gravy!

As she fished for a smallish piece of broadside her hand touched something else. A glass fruit jar, sealed, there in the pork barrel, snuggled under the thick, salty cuts! What in the world was a glass fruit jar put in a place like that for?

Judith left the pork and ran upstairs where it was light. The men had driven away. But it was no longer fear of them that made her tremble. She had seen through the glass of the old greenish fruit jar an important paper. And on that paper was her husband's name.

Judith opened the jar. The deed came out clean and dry. Bert Shaver had indeed drawn it. But it gave the property to Peter, not to him.

On the day when the Murrays were to be turned off their place for nonpayment they moved out to take possession of their new home. The sun was shining. Peter was laughing boyishly. And Judith was singing softly for joy.

Jealousy of Genius

One would expect genius to be the best judge of genius; but it is not so. This matter of recognition of the qualities of other men does not seem to be connected with the intellectual or even intuitive side of a man. An artist may have quickness and depth of vision, a wide sympathy with suffering humanity, an innocent and childlike ecstasy over the beauty of nature, and yet fail utterly to approve those same qualities when displayed by a rival who in reality is no rival.—Richard Church in the Spectator.

Her Usual Preparation

Little Lucy had been left at home to get her own tea. When her mother returned she found that the little girl had been rather liberal with the jampot.

"Lucy," she scolded, "you are a naughty girl. Just look at your face. Whatever would you think if you saw me with my cheeks and lips all smeared with red like that?"

The little girl considered for a moment, then said innocently:

"Why, I'd fink you was off to a dance, mummie."—London Tit-Bits.

Adrift With Humor

GO BACK, LAD

Matrimonial Agent—You don't like the photographs of any of these? I will show you one more and if that is not suitable I can do nothing for you. Now, how about this one?

Client—Yes, that is just the type lady I like.

Agent—Then what about an interview with her?

Client—Unfortunately she is my divorced wife.

Would Sell Something

"Now, ladies and gentlemen," said the auctioneer at a sale of old masters, "what am I offered for this superb Velazquez, probably the best Velazquez that ever came from the master's hand?"

There were no bids, so the auctioneer took up another picture.

"Very well, ladies and gentlemen," he went on, "I now offer you a Titian by the same artist!"

WILL PROBABLY SUCCEED

"Say, Jerry, are you really serious about taking up the saxaphone?"

"Sure! I'm tryin' to run the family out of our upstairs apartment."

Bringing the Bad News

The ticker tape comes rolling fast
And brings me deep regret..
It always lets me know, at last,
I have misplaced my bet.

Essentiality of Words

"Have you ever felt that you had talked too much?"

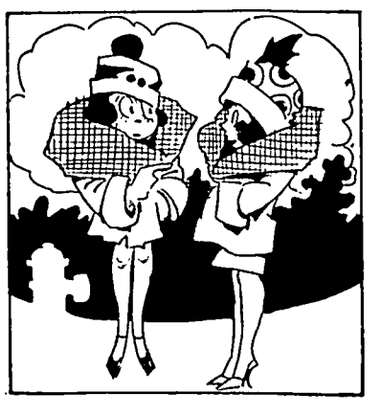
"Frequently," answered Senator Sorghum. "But what is a man going to do? You can't remain in reposeful silence. You got to say something in order to let the folks know you are alive."—Washington Star.

Less of a Sacrifice

Mother (after relating a pathetic story)—Now, Reggie, wouldn't you like to give your bunny to that poor little boy you saw today who hasn't any father?"

Reggie (clutching rabbit)—Couldn't we give him father instead?—Churchman.

AFTER THE FAST GIRLS



"So you don't think much of the handsome motor cop?"

"No—he's always chasing after these fast girls."

Too Bad

Grandpa in a speedy car,
Pushed the throttle down too far;
Twinkle, twinkle, little star,
Music by the G. A. R.

Before and After

Mr. Pester—Cleaning house just because a few women are going to drop in this afternoon? You never make such elaborate preparations when I entertain my friends.

His Wife—No, but I clean up five times as much after they leave.

Superior to Influence

"Do you play golf?"

"I claim to do so," said Senator Sorghum. "But the voice of the proletariat is against me. The caddie thinks differently."—Washington Star.

For the Laboratory

"Five hundred dollars for that old worn-out flivver of yours! Impossible! Who'd ever pay that?"

"The auto school. They wanted it for the students to practice on, and it certainly had everything that could be wrong with a car."

The Only Difficulty

She—Darling, do you think there can be people in the moon?

He—How could there be? Where would they go when there is no moon?—Kikeriki (Vienna).

DAIRY

GENTLE TEMPERED BULL IS TREASURE

Proper Handling of Calf Helps Animal Later On.

From time to time press reports tell of another "quiet" bull which went wrong and somebody was hurt, or killed. A really good-tempered bull is a treasure (and there are a few), but only a herdsman of 20 or 30 years' experience can be reasonably sure he knows a quiet bull. Proper handling of the calf which is destined to become a herd sire is the only known method of producing an animal which will be easy to handle when mature. Many a good bull has been sent to slaughter, and many a man met his death through careless handling or rough treatment when a bull was young. Miss Tucker, the experienced manager of a large herd of Red Polls in Worcester, England, offers some sage advice on this subject in a recent issue of the "Journal of the Red Poll Breed." Kindness should always be the keynote of the training of young bulls. They can be very aggravating, but on no account hit a bull, for he will remember it and sooner or later try to pay you back. If the bull has been frightened sooth him quietly, always aiming to maintain his confidence in you. The same person should always handle him, at least during his schooling. When old enough, see that the ringing is done properly and that the ring is well back. Never attempt to handle a bull with blood or any offensive smelling materials on your hands or clothes. Wash such things off or cover them with disinfectant. Teach him to let you handle his legs. If he has a tendency to kick let him hit the bristles of a wire broom. Never let him think that you fear him. If the bull persists in a surly mood, a sharp twist of the ring, and tieing his head higher than usual for a while should mend matters. Persistent kindness will always win, while ill-treatment will only make matters worse.

Price of Beef Checks Expansion of Dairying

The relation between the price of beef and the price of milk has an important influence on the number and age of the milk cows in the United States, according to the United States Department of Agriculture. This relation, says O. E. Reed, chief of the bureau of dairy industry, affects both the age at which milk cows are sold for slaughter and the number of beef-type cows milked. "Because of the present prices of beef," he comments, "dairymen are culling their low producers and aged cows to make room for the heifers just coming into milk. Indications are that for the next few years the price of beef will be an important factor in restricting the expansion of dairying, and the number of cows milked is expected to show little increase for several years. The gradual increase in the demand for milk due to increasing population seems likely to result in prices averaging sufficiently above feed costs to permit a gradual further increase in the production of milk per cow."

Cow Must Have Protein for Production of Milk

Practical experience is in accord with research work done at a number of experiment stations. In a comparison between linseed meal and ground soy beans when fed with corn and oats, ground beans produce fully as much milk and fat as when linseed meal is fed. This indicates that dairymen who must purchase a protein supplement may well consider the use of soy beans when the ground beans are as cheap or cheaper than linseed meal. The dairy cow must have protein to produce milk. As this is the most expensive ingredient in the ration the cheaper it can be procured the lower the feed cost is likely to be.

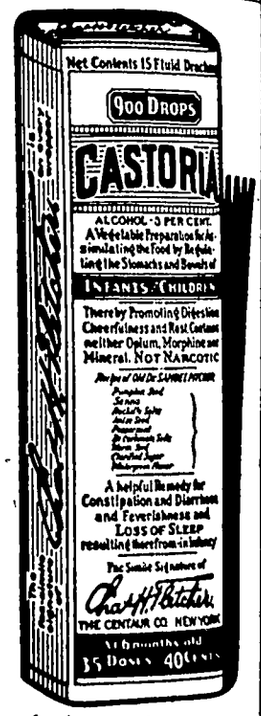
Remodeled Dairy Barns Render Better Service

Old barns made new by being properly remodeled or repaired will render good service to many dairymen who are now struggling along with poor equipment. Even a shed which is rebuilt so as to provide good floors, stanchions, ventilation, sunshine and warmth will be worth while. Dairy cows will pay better returns for improved conditions than practically any other type of live stock on the farm. In addition, the owner spends more time with the cows than with most other types of live stock, so that he will share in the added comfort and convenience.

Silage for Calf

Silage is not very good for calves under four months of age and then only the leafy parts should be fed in small amounts. Very often young stock is neglected and not kept in a growing condition. A heifer must be well fed with a light feed of grain. A cow in order to be able to consume large quantities of feed must be fed while young all the good roughage she will take so as to develop a large capacity for feed which will be needed when she comes in milk.

Restless Children



Net Contents 1½ Fluid Drachms
900 DROPS
CASTORIA
ALCOHOL—3 PER CENT.
A Vegetable Preparation for Assimilating the Food by Regulating the Stomachs and Bowels of
INFANTS CHILDREN
Thereby Promoting Digestion Cheerfulness and Rest Contains neither Opium, Morphine nor Mineral. NOT NARCOTIC
A helpful Remedy for Constipation and Diarrhoea and Feverishness and LOSS OF SLEEP resulting therefrom in Infancy
The Centaur Company
THE CENTAUR CO. NEW YORK
35 DOSES 40 CENTS

Children will fret, often for no apparent reason. But there's always one sure way to comfort a restless, fretful child. Castoria! Harmless as the recipe on the wrapper; mild and bland as it tastes. But its gentle action soothes a youngster more surely than some powerful medicine that is meant for the stronger systems of adults.

That's the beauty of this special children's remedy! It may be given the tiniest infant—as often as there is any need. In cases of colic, diarrhea, or similar disturbance, it is invaluable. But it has everyday uses all mothers should understand. A coated tongue calls for a few drops to ward off constipation; so does any suggestion of bad breath. Whenever children don't eat well, don't rest well, or have any little upset—this pure vegetable preparation is usually all that's needed to set everything to rights. Genuine Castoria has Chas. H. Fletcher's signature on the wrapper. Doctors prescribe it.

Unnecessary Pain!

Nowadays, people take Bayer Aspirin for many little aches and pains, and as often as they encounter any pain.

Why not? It is a proven antidote for pain. It works!

And Bayer Aspirin tablets are utterly harmless. You have the medical profession's word for that; they do not depress the heart.

So, don't let a cold "run its course." Don't wait for a headache to "wear off." Or regard neuralgia, neuritis, or even rheumatism as something you must endure. Only a physician can cope with the cause of such pain, but you can always turn to Bayer Aspirin for *relief*.

Bayer Aspirin is always available, and it always helps. Familiarize yourself with its many uses, and avoid a lot of needless suffering.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Hitting on All Eight!

Doctor Gives Hint to Lucky Salesman

IT'S a wise man that knows when he is slipping. Mr. R. F. Myers of 711 Rosedale Street, Baltimore, had the good fortune to get his tip straight from one of his doctor customers (he was selling for a pharmaceutical house) and since that lucky visit he has increased his business 50 per cent.

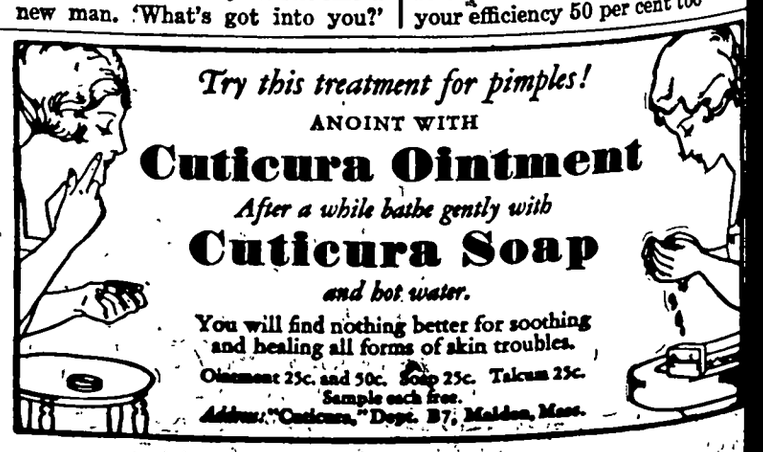
For two years he had been driving from town to town, and naturally this threw his elimination out of shape. He felt himself slipping. Cathartics only made him worse. Then one day he was calling on a wise old physician, and asked his advice. "What you need, my boy," said the doctor, "is a simple, easy, normal way to clean the poisons out of your system—we all have them—and with your kind of work they certainly cut down efficiency. Why don't you try Nujol?"

"Well, believe it or not," says Mr. Myers, "in a few days I felt like a new man. 'What's got into you?' asked the home office, 'your business has increased 50 per cent!'"

That's the great thing about Nujol. As soon as it begins to clean the poisons out of your system it makes you feel so well that you can almost always do a much better job.

Nujol is not a medicine and contains no drugs. It is perfectly harmless, forms no habit. It is simply bodily lubrication, which everybody needs. You, like everybody else!

Why put off good health any longer? Go into any good drug store and get a bottle of Nujol in a sealed package. Costs so little and means so much! Maybe you can increase your efficiency 50 per cent too



Try this treatment for pimples!

...HAS THE LAXATIVE IN YOUR HOME A DOCTOR'S APPROVAL?

Some things people do to help the bowels whenever any bad breath, feverishness, biliousness, or a lack of appetite warn of constipation, really weaken these organs. Only a doctor knows what will cleanse the system without harm. That is why the laxative in your home should have the approval of a family doctor.

The wonderful product, known to millions as Dr. Caldwell's Syrup Pepsin is a family doctor's prescription for sluggish bowels. It never varies from the original prescription which Dr. Caldwell wrote thousands of times in many years of practice, and proved safe and reliable for men, women and children. It is made from herbs and other pure ingredients, so it is pleasant-tasting, and can form no habit. You can buy this popular laxative from all drugstores.

Constipated
Instead of habit-forming physics or strong, irritating purges take—NATURE'S REMEDY NR—thesafe, dependable, all-vegetable laxative. Mild, gentle, pleasant—NR—to-night—tomorrow alright. Get a 25c box.

FARM STOCK

OHIO HOG GROWERS RETAIN OLD SOWS

Other States Use Greater Proportion of Gilts.

Swine growing practiced in Ohio differs decidedly from that in other states at least in one respect—the keeping of old brood sows from year to year to raise pigs, instead of producing the pigs from gilts which are marketed after they have raised one litter of pigs. Ohio is ninth among the states in the number of hogs on farms on January 1 this year, but near the top of the list when it comes to the number of brood sows kept from year to year. Many of the leading hog states west of Ohio produce the greater number of pigs from gilts.

This spring 75 per cent of the litters of Ohio pigs came from sows which previously had produced one or more litters, while in Iowa, Minnesota, North Dakota, South Dakota and Kansas, less than 20 per cent were from old sows, and more than 80 per cent from gilts farrowing for the first time. Only Pennsylvania ranked lower than Ohio this spring in the percentage of litters farrowed by gilts.

Ohio's swine growers this year saved an average of 6.7 pigs to each litter. The average for the country as a whole was only 5.7 pigs.

Live Stock Diseases Cause Tremendous Loss

A timely and very attractive poster has just been gotten out by the Iowa State Veterinary association, in which attention is called to the tremendous annual loss which the live stock industry sustains on account of disease. Among other things the poster suggests eight practical ways in which the farmer can help reduce the losses. These are:

First, select sound, healthy breeding stock; second, keep buildings and premises thoroughly clean and sanitary; third, feed well balanced, wholesome rations; fourth, isolate diseased animals promptly; fifth, use officially approved disinfectants; sixth, dispose of the carcasses promptly by deep burial, burning or rendering; seventh, vaccination against preventable diseases; eighth, consult your local veterinarian promptly.

These suggestions are all very good and there is no doubt that if they were methodically carried out millions of dollars would annually be saved to the live stock industry.

Influence on Quality and Quantity of Wool

Quantity may go hand in hand with quality in wool production. Investigations by the bureau of animal industry, United States Department of Agriculture, show that length of staple and weight of clean wool per fleece are associated with superior quality. The inheritance of the sheep, its feed, management and seasonal environment are the most important factors that influence quality and quantity of wool. Successful sheep raisers have found that rigid culling of aged ewes and light producers is a good practice for the immediate improvement of their flocks.

Comfortable House Is Essential for Swine

It is a time of year when hog houses come into their greatest usefulness. We may differ on the size and style of hog houses but we can be of one opinion on the desirability of eliminating or avoiding slippery floors, floors with large cracks or holes in them, low doors, narrow doors, high door sills, heavy banging doors, poor ventilation, and such like. We can agree that a pig can stand considerable cold weather if it has dry sleeping quarters. Comfortable quarters, therefore, are largely a matter of a tight roof, a well-drained floor, and proper circulation of air—ventilation.

Short Feed Supply

Farmers who must choose between selling young stock or good dairy cows are advised to sell off the former, as producing cows will usually pay better for purchased feed than the young animals. Where animals must be sold on account of lack of feed, it is usually best to dispose of them as early as possible, since in that way more feed is saved for the animals to be retained, while a prompt sale of those that cannot be carried gets them to market in a fleshier condition than if they are held.

Avoid Wormy Pigs

The ease of having the young pigs free from worms removes all excuses for having wormy pigs. Just before the pigs are due, one should place the sows on clean ground in a good disinfected house. The udders should be washed with warm water to which has been added any disinfectant. After the pigs are farrowed, they should be kept on ground that has not been contaminated. If the lot has not been used for hog pasture the past six months, there is little danger.

Make Repairs on Farm Machinery

Don't Wait Until Last Minute to Make Test of Farm Implements.

Trade cheap time now for valuable time later, says B. B. Robb of the New York State College of Agriculture. Go over the entire stock of tools and farm machinery and make sure that they are all in good condition and that repair parts are on hand which may be needed next summer.

Delay Is Expensive.

To delay seeding or harvesting while waiting for your local dealer to send away for repair parts is expensive and in the end the wrong part may be sent by mistake. Order now to avoid delay.

If equipment needs repairs make them now. If the plow points are dull or worn out put on new ones. The drag teeth or the disk harrow may need sharpening or a brace rod or an adjusting lever may be bent or broken. The harness or hayrack may need repairs—the mowing machine, hay loader or binder may have been put away broken.

Experience of One Farmer.

A certain farmer, says Professor Robb, broke the tongue of his disk harrow and let it lie in his shed all winter without repairing it. When it came time to harrow the corn ground he had to stop to mend the disk. This delayed him several days, then rains came on and in all he was delayed two weeks in planting his corn. That year an early frost came in the fall and his corn didn't mature. If he had been prepared the two weeks time he would have saved in planting would have matured his crop.

It takes no longer to make repairs now than later, Professor Robb says, and when time is two or three times as valuable later on, the farmer who does things now is making money.

Poultry Flock Should Be Culled Each Year

At least once during the fall the poultry flock should be culled to get rid of the birds that are not paying for their keep. Health and vigor are of first importance in culling poultry. Hens in good laying condition have bright red combs and wattles. Good layers have combs that are waxy in texture. In yellow-shanked breeds, the beak and shanks of the heavy layers are ordinarily pale yellow or white. The pubic bones of a good layer are thin and flexible and when the hen is in laying condition they are wide apart. The skin of a good layer is soft, pliable, and of good texture and the back is wide and long. Another important point is the time of molting. Poor layers usually molt earlier than good ones. Heavy layers generally do not begin to molt before September or October. Culling not only improves the breeding quality of the flock, but if done early enough will save feeding costs and spread the marketing of surplus hens over a longer period than if the culled hens are all marketed late in the fall.

Land Limed Years Ago Still Shows Its Effect

Reviewing recent soil experiments it was found that in all cases the soils where the lime was applied seven years ago, are less acid than the soils adjacent to them. Lime was applied at rates varying from one ton to three tons per acre, on the basis of acidity tests conducted in the fields at that time. Only five of the limed demonstration plots are now too acid to grow successfully a valuable legume. Only one of the check plots alongside, which were not limed, are sufficiently "sweet" to produce the same legume crop.

Agricultural Hints

Gather eggs regularly, twice each day, during excessively warm or excessively cold weather.

* * *

Candling is a good practice for the producer to cultivate. Every producer should know his eggs.

* * *

The individual hog-house has all the advantages of sanitation and convenience during the part of the year when pasturage is available.

* * *

Skimmed milk is an excellent supplement to grain for growing and fattening pigs, but it is not necessary to feed pigs all the skimmed milk they will consume.

* * *

Tuberculosis of poultry, though not so dangerous in many respects as the bovine form, needs greater attention by flock owners and by the public if the spread is to be checked.

* * *

If the removal of 500 pounds daily is not enough to keep the silage in good condition, then more should be fed per head or a few more cattle might be wintered on the silage on hand.

* * *

Parasites in mature sheep keep down wool production, as the fleeces are lighter, they check the milk flow in the breeding ewes, and they are the cause of a lot of light, thin lambs going to market every year.

POULTRY FACTS

SOY BEANS USEFUL IN LAYING RATION

Vegetable Protein Concentrates Used in Test.

Recent experiments with the use of vegetable protein concentrates have shown that a complete or at least a partial substitution may be made. The work has been largely with cottonseed and soy bean meal with little if any work on ground soy beans. The success of these vegetable protein concentrates depends upon two factors. First a larger amount is necessary in the mash because they do not run as high in protein as do meat scrap and tankage. Second, since they are low in mineral, additional mineral must be added to make up for this deficiency. The Missouri agricultural experiment station has fed the following mash to laying hens:

Bran	22 lbs.
Shorts	22 lbs.
Corn meal	22 lbs.
Cottonseed or soy bean meal	30 lbs.
Bone meal	4 lbs.
Salt	1 lb.

The above mash constituted about one-third of the ration. It was kept before the hens all the time and in addition a moist, crumbly mash was fed once daily. No meat or milk was employed in the diet. The balance of the ration consisted of corn and oats and regular methods of feeding hens were employed. Oyster shells or limestone rock was before the hens all the time.

Such a ration produced as many eggs per hen as did similar rations in which the mash contained 20 per cent meat scrap or tankage instead of the cottonseed or soy bean meal. The results were not satisfactory unless the bone meal and salt was added. A year's test with ground soy beans failed to produce quite as many eggs as did cottonseed meal. This may be due to the fact that the ground beans were higher in fat and as a result the ration was not properly balanced. A partial substitution may be made and the following mash is recommended:

Bran	24 lbs.
Shorts	24 lbs.
Cornmeal	24 lbs.
Ground soy beans	15 lbs.
Tankage	10 lbs.
Bone meal	2 lbs.
Salt	1 lb.

This should be kept in open troughs before the hens all the time and fed the same as any regular laying mash. It may be that a larger percentage of the beans may be used but it is advisable to await further investigation before following this practice.

Direct Sunlight for Layers Is Essential

A simple, inexpensive and effective way to secure direct sunlight for the layers is to fill in about ten square feet of space at the south side of the house with an eight-inch layer of cinders. The space may well be enclosed to keep the fowls from contaminated soil. In exposed locations it may be necessary to provide a wind break of some kind. Chickens dislike wind and will stay inside to avoid it.

Cinders are especially effective. Because of their dark color they absorb heat from the sun, causing any snow or ice to melt with the first appearance of sunshine. This permits the birds to get out on the warm, dry cinders and bask in the direct sunshine even though the ground is still wet and cold.

Feeding New Corn

Where there is a shortage of corn that is dry enough to grind, a mash that will serve quite well for a short period of feeding can be made up of the following ingredients: 100 pounds of ground oats, 10 pounds of tankage or meat scraps and one pound of salt. If barley is available, 50 pounds barley and 50 pounds of oats are better than using oats alone. This mash should not be fed as a permanent laying ration, however, but just as an emergency ration.

Pullets Begin Laying

As a rule, pullets lay more eggs during their first laying season than during any subsequent season. Consequently, if hatches are correctly timed so that plenty of pullets will be brought to maturity some time during the latter part of September, a banner winter egg season is bound to follow. Pullets hatched during February or March, according to breed, should begin laying just about the right time for winter eggs when prices are highest.

Gapeworms Kill

A poultryman in Washington, D. C., lost 75 per cent of several hundred chicks from gapes. Investigation showed that this loss resulted from the use of one of the poultryman's fields, for about 24 hours, as a resting place for a flock of turkeys being driven overland. The chickens became infested by gapeworms left by the turkey flock. In addition to producing the noticeable symptoms of gaping, by obstructing the windpipe the chicks did not thrive.

ATWATER KENT RADIO

SCREEN-GRID [BATTERY . . . OR HOUSE-CURRENT] ELECTRO-DYNAMIC

Tune in, sit back and listen—2,500,000 have done it!

No time out for trouble... no lost programs... in the millions of homes that boast Atwater Kent Radio. Atwater Kent owners don't worry about service because they so seldom need it. And they banished costly repair bills the day they decided to treat themselves to the world's leader in radio.

All you want in radio ... *without a bit of bother*

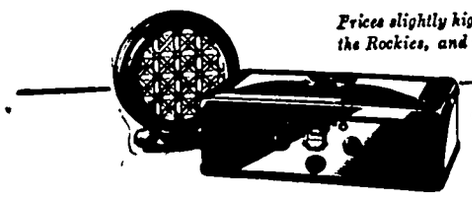
WHY will you find more Atwater Kents on farms than any other set? Why will an Atwater Kent owner tell you that the only set he would swap for it is another Atwater Kent? Because it brings in everything on the air as it ought to sound—with *trouble-free operation.*

And what a thrill you get every time you tune in, sit back, and listen to the mellow tone of the new Screen-Grid, Electro-Dynamic Atwater Kent Radio—the greatest in Atwater Kent's years of leadership. What a thrill when you sense its giant power, its fabulous reach, its needle-point selectivity.

See it, hear it, the next time you're shopping in town. Designed for central station current or battery operation.

ATWATER KENT MANUFACTURING COMPANY
4764 Wissahickon Ave. *A. Atwater Kent, Pres.* Philadelphia

Prices slightly higher west of the Rockies, and in Canada



In Compact Table Models—*For batteries.* Model 67 receiver. Uses 7 tubes (3 Screen-Grid). Without tubes, $77. *For house-current operation,* Model 55, Uses 6 A. C. tubes (3 Screen-Grid) and 1 rectifying tube. Without tubes, $88. Model 60, extra powerful, uses 7 A. C. tubes (3 Screen-Grid) and 1 rectifying tube. Without tubes, $100. Electro-Dynamic table speaker, $34.

DOINGS AT SCHOOL THE PAST WEEK

JUNIORS TO STAGE PROGRAM NEXT FRIDAY NIGHT

Songs, Comedy, Minstrels, Carnival Will Furnish Lots Of Fun

Miss McGinnis and the Juniors are working in haste in order to get their program ready for the public on Friday night of next week. We refer to the program mentioned in these columns previously. There will be a short but good program of instrumental music and songs, two short blackface comedies, and surprises of many kinds in store for those in attendance. The receipts of the carnival will be used to defray the expenses of a Junior Senior Banquet next spring. It has been two years since our school has had a carnival and we believe the public will enjoy another, especially a different and better one that they have yet attended. The program will be well worth the price of admission which has been set at 10 and 20 c.

Corn Husking And School

Parents of country children in school here are now in great haste to get their corn crop out of the fields ond more absence than usual has been recorded recently. Some children are working early in the morning and possibly smoe each evening and hard on Saturdays to avoid missing classes. We believe most of our parents will be as considerate as possible of their children's wellfare and will not keep them from school longer than is really necessary. Bright students can miss two or three days a week for two or three weeks. Students who rank just average or below find it very hard to make their grades if more than one day a week is missed.

Klemme Wins Over Goodell

Our boys journeyed to Goodell last Friday evening and plaeyd there a game of kitten ball. They were compelled to play a good brand of ball to win 3 to 2. Had the weather permitted or if it does there will be another such game here between the same two schools on Friday evening of this week.

Band Progressing Rapidly

Some surprise has been expressed at the progress our young band has made in the three nights they have been practicing. Our school orchestra is also making improvement under Miss Ford.

Scouts Will Give Big Party

Our Scout Organization and their leaders will use the school gym on next Hallowe'en evening, Thursday, October 30 and entertain invited guests (all boys in the community between the ages of 9 and 15) to a few hours of fun and refreshments. We are glda for the interest in this fine organization of American boys and wish to commend those who are giving liberally of both time and money to promote its program.

About School Report Cards

Expressions of disappointment of parents over grades some of the children received at school have reached us. We desire to add that we as teachers are also often disappointed that the marks must be so low but we believe every parent has a right to know the truth about the quality of work done by their children and would have a right to censure teachers for deceiving them by awarding marks not earned. If the children are doing a poor quality of work we believe parents have a right to know about it in order that they may be able to bring pressure or encouragement to bear toward a better quality of work. We invite those who feel their children are capable of earning better marks to come to their teachers whom we feel will be only too glad to suggest means toward improvement. If a parent can, by refusing to sign the child's six weeks report card, thereby spur him on to more serious effort and better work, we would approve of this. But since the teacher cannot always be certain, the parents have seen the quality of work the child has been doing without its return to her with their signature attached we owuld suggest that a note be sent or an interview obtained by the parent as early as convenient. Much can be done by wise teachers and sensible parents by co-operating in the interest of the child. A teacher can and will do much for a child whose parents take the trouble and time to get in touch with her and assure her of a helping hand.

Other School Notes Of Interest

Our high school studnets are making good use of the new Americana recently purchased by our Board. It is a very recent work and highly recommended for high school reference work.

Supt. Baggs has come and gone, leaving us some additional library books for our school which are sent us each year through his office and paid for from our share of state money, or a part of our share.

On Wednesday evening of this week Mr. and Mrs. Patet served an excellent 6 o'clock dinner to which our faculty were all invited. We enjoyed the new radio there as well as the fine dinner.

The coach and superintendent were invited to Editor Jorgenson's home Sunday evening for dinner and a social time. We also had a good time there as we always do at this home. The superintendent had another treat last Saturday when he was privileged to dine at the R. C. Ludeke home where a sumptuous dinner had been prepared for those attending the sale.

Paul Schuldt is back with us again in the fourth grade after being at home with a broken ankle accidently broken on our play ground a month or so ago.

METHODIST CHURCH NOTES

That the known bondholders, etc. are None.

R. A. Jorgenson, Publisher.

Sworn to and subscribed before me this 1st day of October, 1929.

C. G. Waterman.

(SEAL)

Next week Thursday evening the local Boy Scouts will entertain all boys of the community between the ages of 9 to 15 at a Hallowe'en party at the high school gym. If you are a boy and between the age of 9 and 15 COME!

CELEBRATED SILVER WEDDING SUNDAY

MR. AND MRS. HERMAN STROMER VICTIMS OF SURPRISE

Children Successfully Planned 25th Wedding Anniversary Party

Mr. and Mrs. Herman Stromer's children, assisted by Oscar and Ella Stork, nephew and neice of Mr. and Mrs. Stromer, from Minnesota and who are visiting here, planned and carried out a Silver Wedding Anniversary surprise in honor of Mr. and Mrs. Heman Stromer, Sunday.

Most of the plans and all of the delicious food had been prepared at the Aron Stromer home.

Shortly after the noon hour Mr. and Mrs. Stromer obseved that a few neighbors and friends were beginning to arrive, perhaps for an afternoon visit. The numbers seemed to increase quite rapidly but yet Mr. and Mrs. Stromer suspected nothing until more arrived and then "they tumbled" and knew it was a surprise party in honor of their 25th wedding anniversary.

The afternoon was pleasantly spent in visiting, and especially in reviewing events which happened twenty-five years ago. Later in the afternoon a delicious lunch was served to all. The guests presented Mr. and Mrs. Stromer a set of silver ware and a purse of money.

Mrs. Stromer was the daughter of Mr. and Mrs. Wm. Katter, and Mr. Stromer was the son of Mr. and Mrs. August Stromer. The couple were united in marriage at the Elltown Reformed Church by Rev. Gautermann, who was the pastor then.

They went to housekeeping on the home place, where they still reside. Four children were born to Mr. and Mrs. Stromer. They are: Aaron, who was ecently married, Vern, Harold and Nellie. The latter is a student in the Klemme High School.

Those who came to help Mr. and Mrs. Stromer celebrate were:

Rev. and Mrs. Schmid and children; Mr. and Mrs. Aaron Stromer; Mrs. William Katter; Alma, William and Arthur Katter; Mrs. Henry Schuldt and grand-daughter, Elinor, Mrs. Chas. Priebe; Miss Gertrude Macholl; Mr. and Mrs. Karl Krause; Mr. and Mrs. Chas. Stromer; Mr. and Mrs. Wm Greimann and daughter, Almyra; Mr. and Mrs. Henry Stromer; Mr. and Mrs. Julius Priebe; Ella and Oscar Stork of Eagle Bend, Minn.; Helmer Munkberg of Grasston, Minn.; Mr. and Mrs. Chas. Krause; Mr. and Mrs. Wesley Lenz and daughters, Norma and Lois; August, Joe and Frieda Schuldt; Herman, Emma and Naomi Ax; Mr. and Mrs. W. H. Greiman; Mr. and Mrs Chas. Goll; Mr and Mrs John Goll and daughters Marie and Mildred; Mr. and Mrs. Geo. Greimann; Mr. and Mrs. Otto Schlawin; Mr. and Mrs. Henry Kercheffer; Mr. and Mrs. W. L. Habercamp; Mr. and Mrs. G. A. Goll; and Arnold Hinzmann of Minnesota.

EPWORTH LEAGUE RALLY WAS HELD HERE MONDAY EVE

One Hundred Young People From Six Charges Attended

The Sub-District Epworth League Rally which was held h re in Klemme Monday evening was well attended, there being about one hundred present, including our own young people of the Methodist Church.

The sub-district includes six charges, and it is planned to have one of these Rallies about every six weeks throughout the yeor, going each time to a different charge until each one has had a Rally at their place.

These Rallies prove a fine way of creating new interest in League work, as a program and social time is planned for each gathering of this kind.

The visitors and the local young people reported a good time Monday night.

Is your subscription in arrears? Look at the date following your name, it will tell you when the paper is due.

MINSTREL SHOW HERE FRIDAY NIGHT THIS WEEK

The Auxiliary ladies have booked a high class colored show for this Friday night at the Idle Hour.

This minstrel has a good reputation and the management guarantees your money's worth. At any rate if it don't appeal to you after the first act, your money will be refunded.

Klemme has not had a colored show for some time, so this should draw a big crowd.

A colored orchestra will play for a dance immediately after the show.

AUXILIARY RUMMAGE SALE A SUCCESSFUL AFFAIR

The Rummage Sale put on by the Auxiliary ladies Wednesday afternoon and evening proved to be a drawing card and profitable as well.

Everything under the sun was offered for sale. There were lots of good clothing, for children and adults, games, trinkets, clocks, all kinds of dishes, flower bulbs, etc.

The sale of goods amounted to around $33.00, while about $25.00 was taken in at the lunch stnad. Here one could buy delicious hot beef sandwiches, coffee, pie etc.

The old clothing which was not disposed of will be packed into two boxes and each church given a box of clothing which they can use later when they receive a call for clothing.

The Auxiliary ladies worked hard to put over this sale and they did fine.

They wish to thank all who donated for this rummage sale, and also thank those who patronized it.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German service.

11:00 a. m. Sunday school.

The Bible Class will meet Tuesday evening at 8:00 o'clock.

8:00 p. m. Wednesday, meeting of Sunday school teachers and officers.

At this meeting reports will cover the months of August, September, and October.

The Confirmation Class meets on every Tuesday and Saturday.

8:00 p. m. Saturday, the Junior Choir will meet.

NOTICE OF APPOINTMENT OF ADMINISTRATOR

STATE OF IOWA,
Hancock County, ss.

NOTCE IS HEREBY GIVEN that the undersigned has been duly appointed and qualified as Administrator of the estate of Amelei Josten deceased, late of Hancock County. All persons indebted to said estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned for allowance, and file in the office of the Clerk of the District Court.

FRED A. ARNOLD.

Dated October 23, 1929.

Chris J. Johansen, Clerk
District Court.

(Pub. Oct. 24-30, Nov. 7, 1929)

Mr. and Mrs. Oscar Wenig and baby son came Saturday from Sheboygan, Wisconsin for a visit with Klemme relatives and friends. They will also drive to Nebraska for a visit with her parents, and will then return to Klemme to complete their visit. They are making the trip in their new Ford sedan.

Some of the "outsiders" who got in on the fine dinner Saturday at the R. C. Ludeke home Saturday, at which time Mr. Ludeke held his pure bred hog sale were: Prof. M. F. Penrod; Editor Jorgenson and family; Lester Stille and family; Mr. and Mrs. M. O. Barr and La Vonne; Gladys Schlichting; Mr. and Mrs. Wm. Ax and daughter of Swaledale; Harvey Stille and son, Keith; Mrs. C. A. Arnold and a few others. Mrs. Carl Suckow and children and Mrs. Elmer Ludeke and children of Garner, arrived later for a visit. Dr. Zinn was a "back-door" caller and had a cup of coffee and a piece of apple pie. We who were there always look forward to Mr. Ludeke's sales. Those dinners are sure fine.

GOODELL GIRL IS STRUCK BY AUTO

FIVE YEAR OLD GIRL KILLED GOING HOME FROM SCHOOL

Funeral Services Were Held Wednesday At U. B. Church

Evelyn Ruka, the five year old daughter of Mr. and Mrs. Earl Ruka was killed within sight of her home near Goodell and almost within sight of her father late Monday afternoon when she was struck by a car driven by Leonard Anderson, a farmer who lives near Eagle Grove.

Evelyn, who had just started to school this fall, was returning to her home, only a half mile away, with some of her school mates when she was struck.

Other children indicated that the little girl had stooped over to tie a shoe string and when she was doing that was not noticed by the on coming auto.

The girl's father, who saw the car coming down the road, testified at the coroner's inquest, that the car was not driving rapidly. The other children hurried to the Ruka home and notified the parents just as the body of the child was brot to the house by Anderson and Dale Hardy, fellow passenger with Anderson. A physician was callde immediately but the child was dead. The doctor said her neck was broken and she must have been killed instantly.

The child is survived by her parents, a brother and a sister.

Funeral services were held Wednesday afternoon at the U. B. Church at Goodell.

METHODIST SUNDAY SCHOOL GIVES REPORT FOR YEAR

The Methodist Sunday School Board met September 23, 1929 for their Annual Meeting. Reports were given by the following officers: S. S. Supt. Tom Nelson, Sec. Martha Bredbenner, Treas. Otto Lemke, Supt. Cradle Roll Mrs. Ralph Elder, and the following officers were elected for the coming year:

Members who missed four Sundays the past year: Mable Griffen, Nova Koerner, Wilbur Arnold.

3,500 WITNESS CRYSTAL LAKE COURT OF HONOR SUNDAY

250 Scoust And Leaders Received Advancement Certificates

The fourth annual outdoor Boy Scout Court of Honor was held at Crystal Lake Sunday afternoon This particular session found 250 scouts, leaders and troop committeemen receiving awards for advancement in the program of scouting.

A crowd estimated conservatively at 3,500 was present to witness the presentation of scout honors The Crystal Lake scouts and leaders counted well over 500 cars and about a dozen trucks, which brot anywhere from 15 to 40 scouts from the towns of the area. This crowd is the largest that has ever witnessed an area court of honor meeting.

Klemme Sets New Record

Troop 56, Klemme, is thought to have made a record when they appeared at the court of honor, both 100 per cent attendance of all scouts and scouters, as well as 100 per cent advancement for every member of the troop.

Klemme was well represented as a large number of parents and also friends of the troop attended the court of honor Sunday.

A strong wind blowing across the lake made it both cold and also hard to hear the program. A number left the grounds before the program was ended for this reason.

The Crystal Lake scouts and their leaders are to be commended for the fine way they had made all arrangements for the Court of Honor.

The Garner troop, under the direction of Paul Manor gave a fine demonstration of scoutcraft when they erected a forty foot signal tower in ten minutes.

The following awards were given. 30 second class and 19 first class badges; 52 second class merit badges; 239 first class merit badges to 83 candidates; 10 candidates received scout life guard and Red Cross swimming awards; one civic service bar; ten star and four life scout degrees; two eagle scout badges; four eagle scout degrees

Crystal Lake troop was presented with the Civic Service Cup which they received for a 100 per cent attendance last fall at a court of honor. Klemme was the first to hold this cup and had possession of it for three months last winter.

W. F. M. S. WILL MEET OCT. 30 AT PARISH HOUSE

The W. F. M. S. will meet at the Parish House on Wednesday, Oct. 30th at 2:30 p. m.

This is a special joint meeting and all members of both the Klemme and Liberty auxiliaries are urged to attend.

A special program is being planned and a large number is expected.

LOYAL WORKERS HAD DINNER AT PARISH HOUSE

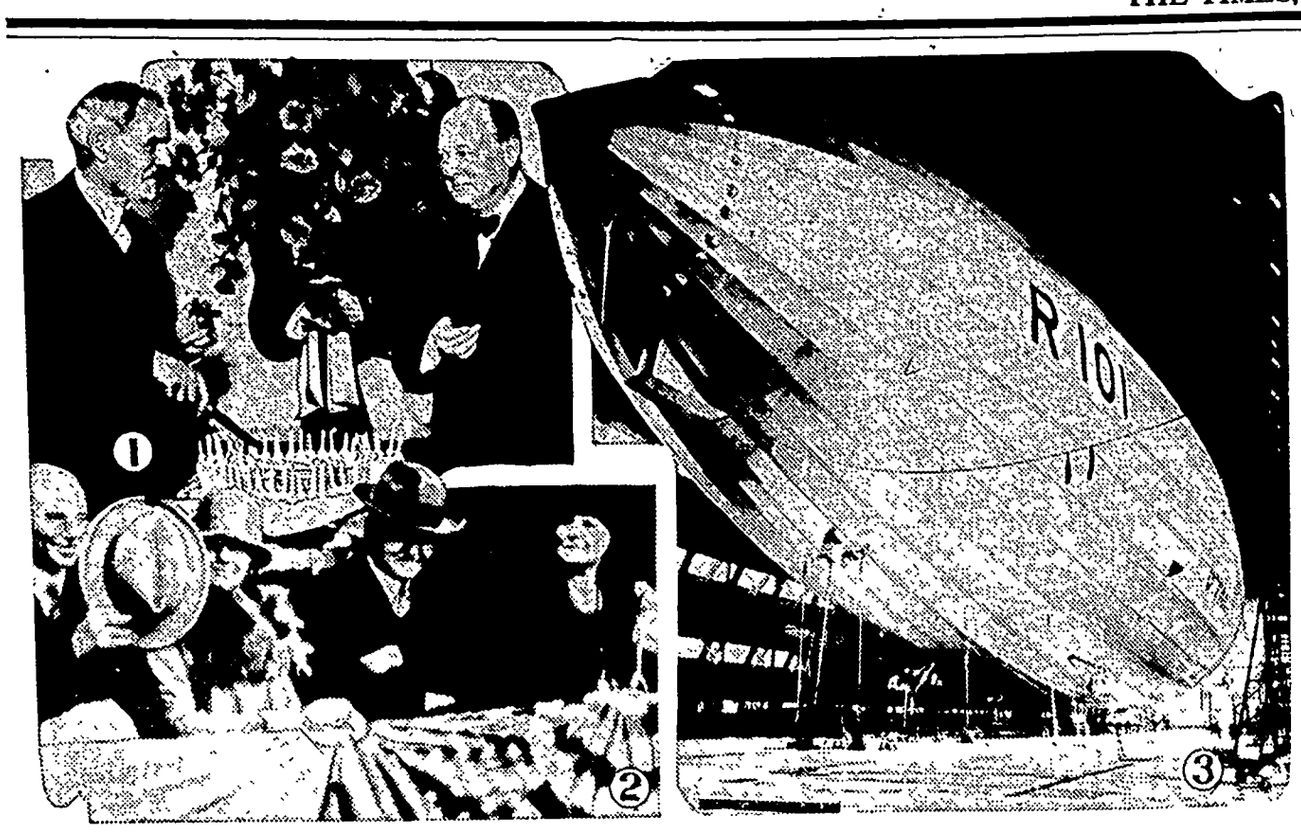
The following item should have appeared in the Times last week, but was not sent to us in time:

The Loyal Workers Sunday school class of the M. E. Sunday School, met at the Parish House on Sunday, October 13 for their annual election.

A fine dinner to which 95 were seated, was served by the ladies.

Mr. Ralph Elder was re-elected president; Mrs. Jennie Sampson as teacher, and Eric Josten, assistant teacher.

Thirty-two relatives of this vicinity and Garner staged a surprise birthday dinner on Lena Schroeder, Sunday. The dinner consisted of chickens and all the trimings that go with it. Those present were: Grandma Schroeder and son Henry of Chicago; Adella Schroeder, of Geneva; Will Barz and family, of Garner; Albert Barz and family; Henry Barz and family; Fred Barz and family; Walter Rosendahl and family; August Barz, and Emil Barz and son Max. The affair was a complete surprise and all had a fine time.



1—Prime Minister MacDonald and his political foe, Winston Churchill, greeting each other over Mr. MacDonald's cake on his sixty-third birthday. 2—President and Mrs. Hoover in their box at the deciding game of the world's series at Shibe park, Philadelphia. 3—Full length view of R-101, huge British dirigible that was successfully tested in flight.

NEWS REVIEW OF CURRENT EVENTS

Senators Begin Digging Up Facts About the Doings of the Lobbyists.

By EDWARD W. PICKARD

INVESTIGATION of lobbies in Washington was begun by the subcommittee of the senate committee on judiciary, and Messrs. Walsh of Montana, Caraway of Arkansas and Blaine of Wisconsin, the more radical of the inquisitors, made it clear that they intend to extract a lot of information concerning the individuals and organizations that try to exert influence on congress in relation to legislation of various sorts.

Alleged tariff lobbyists were the first to be called, and though some of them protested that information demanded was personal and not relevant to the inquiry, the recollection of the contempt proceedings against others who in recent times had refused to answer senate committee questions was potent, and the information sought was reluctantly given. On the opening day those quizzed included William Burgess, vice president of the United States Potters' association; Thomas O. Marvin, chairman of the tariff commission; E. B. Brossard, a member of the commission; F. L. Koch, chief of the ceramics division of that body, and Karl Langenbeck, his predecessor in that position. Burgess denied he was a lobbyist, saying he regarded himself as a legitimate representative of industry. Most of the facts elicited from this group of witnesses had to do with quarrels among them over the furnishing of information to the framers of the tariff bill, and to relations with importers.

Dropping the ceramics for the present, the committee took up the domestic beet sugar lobby, and the most interesting witness in this connection was H. A. Austin, secretary and treasurer of the United States Beet Sugar association. He said his salary was $8,000 a year and admitted that his organization spends about $70,000 a year in the dissemination of information concerning the industry and of propaganda. The latter, he said, was incidentally in favor of a high duty on sugar. Since the enactment of the 1922 tariff act, he said, the association has expended about $400,000 for those purposes. Classifying lobbyists in four groups, he claimed he belonged in the second class consisting of representatives of trade associations who present the case of their industry in an orderly way. For the third day the main witnesses were C. Eyanson, secretary of the Connecticut Manufacturers' association and Senator Hiram Bingham of the Nutmeg state, who had admitted that Eyanson was temporarily employed as his secretary and adviser during the consideration of the tariff bill by the finance committee and as such was admitted to executive sessions of the Republicaon members of the committee.

PROGRESS with the tariff bill in the senate was slow, and conferences between the Republican and Democratic leaders failed to speed it up. Smoot took to task the radical group for helping in the delay, and Borah, who wants to confine the tariff revision entirely to agricultural products, retorted that the measure could be passed in ten days if revised to suit agriculture.

WHEN the senate took up the confirmation of the members of the federal farm board the radical Republicans and Democrats talked in opposition for some seven hours, but all the appointments were confirmed by decisive majorities after Robinson of Arkansas, minority leader, had announced he would vote for them and let the entire responsibility for the board rest on the President. Thirteen votes were cast against Chairman Legge, twenty-seven against S. R. McKelvie, representing grain, and twenty against Carl Williams, representing cotton. Only Blease of South Carolina voted against the other five members. The attack on Legge was based on his former connection with the International Harvester company; McKelvie was assailed because of his alleged belief that most of the help in the grain belt must come from the farmers themselves, while the southern Democratic senators charged Williams with lacking the proper views on boosting the price of cotton.

IN AN official report to the senate concerning the investigation of alleged financial manipulations and creation of monopolies by the power corporations, the federal trade commission charges that its efforts are being hampered by the withholding of vital records. Big holding company groups also are delaying the commission by slow responses to the comprehensive questionnaire sent to them more than a year ago, the report says. Senator Walsh of Montana, sponsor of the investigation, indicated he would move to broaden the commission's authority if necessary.

AFTER months of preparation a combined force of special treasury agents, deputy United States marshals and New Jersey police executed a grand coup on the rum smuggling syndicate that has been supplying New York and vicinity with its imported—and cut—liquor. Secret indictments already had been returned by a federal grand jury in Trenton, and then the surprise attack was carried out with speed and skill along the Atlantic coast from the tip of Long Island to Atlantic City. Thirty-five places were raided, many arrests made and great quantities of liquor seized. Among the places taken was the headquarters of the syndicate, near Highland, N. J., a mansion formerly owned by Oscar Hammerstein, Jr. Its twenty rooms were fitted like a club. In the basement the raiders found tunnels leading to underground valuts in which liquor was stored and where a number of machine guns and a quantity of small arms were hidden. The cupola on top the mansion was equipped with telescopes and was apparently used as a lookout tower from where the smugglers could watch for their craft.

A mile from this mansion the raiders captured a hidden radio station from which orders in code were sent to the fleet of liquor ships and speed boats operated by the syndicate. The federal agents already had learned the code and one of them took the place of the arrested operator, to lure more of the big rum vessels to points where they might be taken by coast guard boats.

William J. Calhoun, prohibition administrator for New Jersey, who was in charge of the raids in his state, said the syndicate was a "million dollar outfit" which operated a fleet of six ships between St. Pierre and Bermuda and an auxiliary fleet of ten speedboats. Unofficial estimates placed the amount of liquor brought in at . 000 cases a week. Ever since the interception and solution of a code message months ago, every operation of the syndicate had been under close observation by the federal agents and every detail of its business was learned. The liquor organization was elaborate and its personnel well trained.

FRANCE, Italy and Japan all have accepted the invitation to a naval limitation conference issued by Great Britain. Paris and Rome consulted on the form of their replies, and the result appears in the Italian note which was made public in Washington. Secretary Stimson called it an unqualified acceptance, but it does not commit Italy to accept any agreement reached in London as complete in itself and prior to an agreement on general land and sea disarmament. Indeed, the Italian reply says:

"The aim of this conference, to which the powers signatory to the Washington treaty are invited, should be to elaborate a text to facilitate the task of the League of Nations preparatory commission and of the subsequent general disarmament conference."

As has been said before, it is believed neither France nor Italy will consent to the abolishment of the submarine, and France may not consent to naval parity with Italy because much of the French navy strength must be kept outside of the Mediterranean while Italy's is concentrated in that sea.

PRIME MINISTER MacDONALD, after a rest in New York and a visit to Niagara Falls, crossed over into Canada, where he was enthusiastically welcomed, and became the guest of Lieut. Gov. W. D. Ross in Toronto. In a farewell message to the people of the United States Mr. MacDonald said he was leaving this country "rich in the proof that while the Atlantic divides us, the cause of peace unites us." In Toronto he appealed to the American Federation of Labor to aid him in his disarmament and peace efforts.

SOVIET forces made the most extensive raid of the present trouble with China, pushing far into Manchurian territory along the Sungari river, occupying Linkianghsien and threatening Ilan and Fuchin and even Harbin. The Chinese fleet on the Sungari then got into action in co-operation with land troops and forced the reds to retire. The invaders had seven gunboats and twelve airplanes.

China's latest Civil war threat was lessened by the news that Feng Yu-hsiang, the disaffected general of 200,000 troops, had been detained at the capital of Shansi province by Commander Yen Hsi-shan who, it had been feared, would combine with him to overthrow the government of President Chiang Kai-shek.

HABIBULLAH KHAN, the water boy king of Afghanistan, is out of it and the country has a new amir in the person of his conqueror, Nadir Khan. The forces of Habibullah were driven from Kabul after the citadel had been reduced by heavy bombardment and their master fled, after which various towns and districts made their submission to Nadir, who was reported to have been proclaimed amir. Another dispatch, however, said he would call a national assembly to choose a king.

BRITAIN'S new airship, the R-101, biggest and probably best of all dirigibles yet constructed, took the air last week on its maiden flight, and for an hour it circled, dived, climbed and zigzagged over the London region in an elaborate test of its powers. The trial was believed to have been entirely satisfactory to her builders and her commander, Maj. G. H. Scott. The huge ship carries 14 passengers and a crew of 38 men. It has five power units, each self-contained in a car slung beneath the bag and each complete in itself, and replaceable without stopping the airship. The R-100, sister ship of the R-101, also is completed and ready for trial flights.

BY UNANIMOUS vote the American Federation of Labor, in convention in Toronto, decided to embark on a campaign for the unionizing of the southern states, pledging the forces and funds of organized labor for the effort. All crafts unions were directed to center organizers in the South in the coming year and a special fund was set up to back the campaign. This action was the direct result of pleas made by representatives of the textile workers who have been involved in such serious troubles in the Carolinas and Tennessee.

Notwithstanding the vigorous protest of the Detroit labor council president, who demanded the extension of United States immigration laws to Canadians, the federation indorsed the executive council's immigration report approving of commuting across the border. The convention, however, called on congress for further restrictions on immigration. It also declared against universal conscription in time of war, and asked for limitation of the power of courts to intervene in industrial struggles.

AMERICA'S most distinguished visitor of the week was Mme. Marie Curie, co-discoverer of radium and famous for her work with that element. She came over from France to receive from American admirers a second gift for the purchase of radium, to call on President and Mrs. Hoover and to pay her respects to Thomas A. Edison on the occasion of the golden jubilee of the electric light. Madame Curie is in poor health and therefore no strenuous program for her entertainment was arranged.

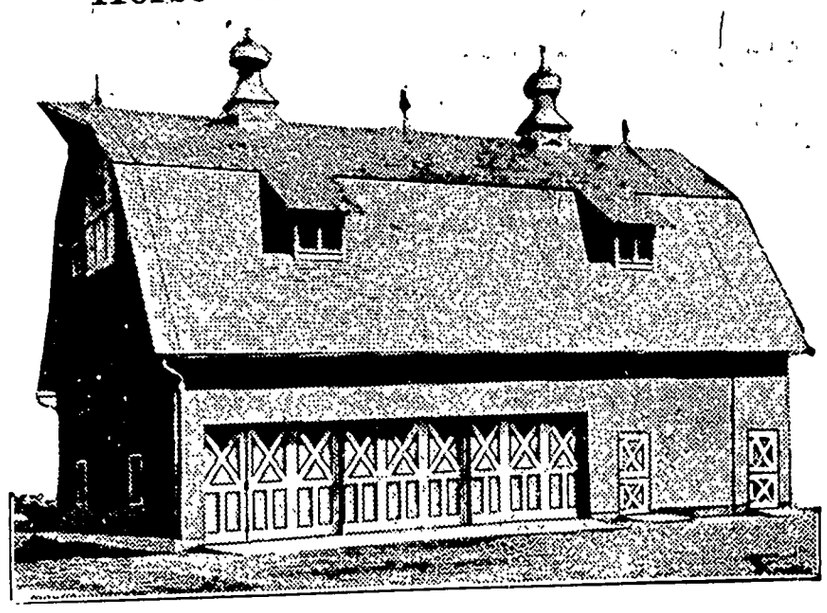
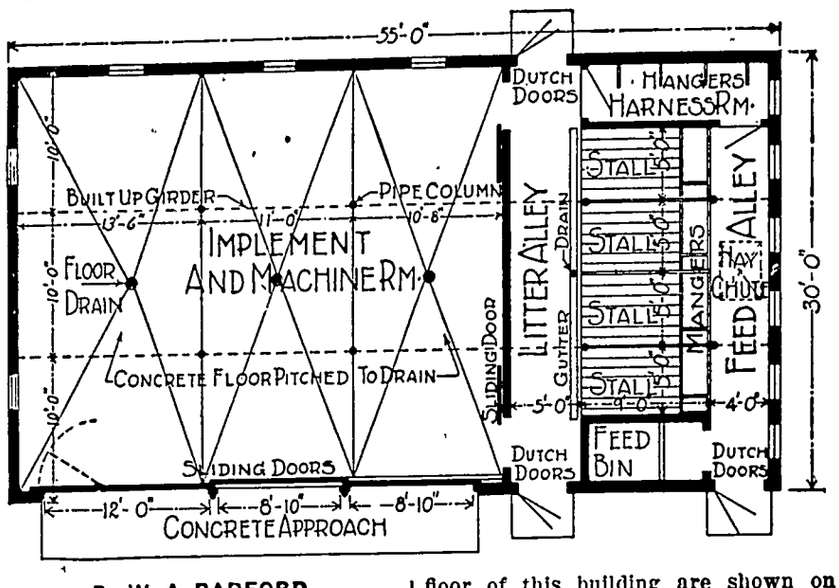
Cornbination Implement Shed and Horse Barn Profitable Investment



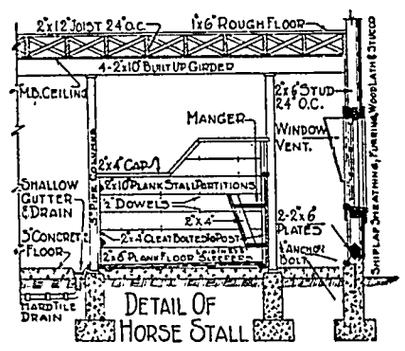


By W. A. RADFORD

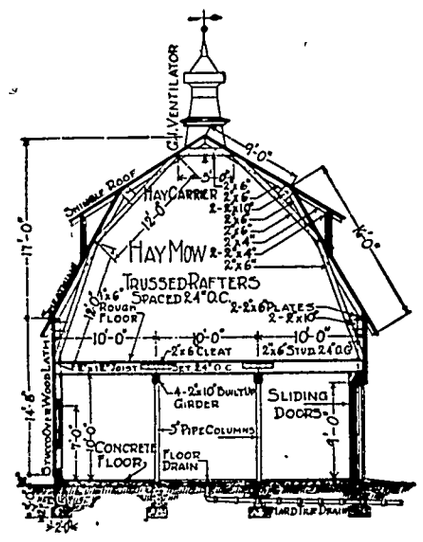
Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

Modern farms have two sources of power—the tractor and horses. Tractors and the machinery and implements which they haul cost money and the investment in this equipment on most farms is considerable. However, a great many farmers desire to supplement their mechanical power with horses. Both have to be housed. In the accompanying illustration is shown a design for a combination horse barn and machinery shed with a second or mow floor for the storage of roughage for the horses and for other live stock on the farm.

This is a most unusual farm building. However, the idea used by the



architect who designed this building will appeal to a great many farmers whose equipment is extensive and who also maintain a few head of horses. The details of the interior of the first floor of this building are shown on the plans accompanying it. There is a floor plan showing the space for implements and machines, which is approximately 30 feet by 34 feet. At one end is the stable floor which has been divided into a feed room, stalls for



four horses and a harness room. A cross-sectional view of this barn will give those familiar with building, a good idea of how it is constructed and of the types and dimensions of the materials used. There also is a cross-section of one of the stalls.

There is an old saying that more farm machinery rusts out than wears out. There is one good way to keep it from rusting out and that is to clean it thoroughly, grease the polished steel or iron parts, and put it away where it is safe from the weather when it is not in use. That is the idea of this building—to provide a safe weather-proof house for the machinery and also a place where it can be cleaned and cared for.

Concrete Floor Will Not Warp or Settle

Although it is subjected to more and harder usage than any other structural part of the house, the first floor usually gets a minimum of attention. As long as it holds up and the surface remains reasonably intact, it is given little or no thought by the house owner.

Not that a floor should be a constant care—far from it. But, unless it is a good, sound affair it may easily become a hazard and a source of various kinds of trouble.

A floor has two purposes. First, it must provide a strong, non-squeaking surface for walking feet and for furniture; if it is also beautiful, so much the better. Second, a good floor serves to tie the frame of a house securely together, adding strength to resist high winds and to minimize the evils of warping and settling—evils which ruin the hang of doors and windows.

A third function has recently been added to the other two. The modern floor must protect the occupants and furnishings of the house from the hazards of fire.

A large proportion of residence fires originate in basements, in the vicinity of the furnace, fuel stores, laundry stoves and heaps of "odds and ends" which, almost inevitably, accumulate below stairs. A pile of old and oily rags can be the source of a fire without any outside assistance. And a fire, once started, tends to work its way upward. If there is a definite fire-stop, a barrier beyond which fire cannot climb, the home is given an initial and vital protection from fire.

Recent experience on the part of progressive home builders has shown that the principle of the concrete floor, is used in commercial buildings such as hotels, hospitals and skyscrapers, can be applied with great success and economy to the small house.

Such floors perform all the functions of the perfect floor. They are structurally strong, thereby eliminating costly warping and sagging—not to mention squeaking. The upper surface may be finished in any desired fashion.

Conventional wood flooring may be placed over them snugly and without danger of distortion. Tile or linoleum has been used repeatedly. In some cases the upper surface of the concrete itself has been stained and polished to produce a truly beautiful color.

And the concrete is fire safe, a distinct asset from every point of view.

But, however the modern first floor is built, it should be considerably more important than a mere surface for walking or one from which the rugs may be rolled when there's music and somebody waiting to dance.

Store Heat in Water; Try to Cut Fuel Cost

By storing up heat in water, engineers of a Milwaukee company hope to provide a way without great expense for warming homes.

Their plan is to heat the water by electricity in highly insulated tanks at night and keep the temperature at a useful height during the day by a small amount of current. The hot water would be made to circulate through the house in much the same way that it does in an ordinary furnace-heating system.

The value of electricity as a heating agent is recognized, but in daytime, when current consumption is great and capacity is taxed at peak hours, sufficient electricity for heating purposes could not be delivered without the expense of erecting additional plants.

It is hoped that by the water-storage plan, no extra generators will be needed and the equipment used at night will be available for service during the day. The idea is to be tested out in competition with an ordinary furnace.

POULTRY

GIVE PLENTY OF ROOSTING PLACE

Pullets Need Room and Fresh Air to Develop Properly.

Give the pullets plenty of roosting space and encourage them to roost early, says L. M. Hurd of the New York State College of Agriculture. Roosting helps to prevent crowding and allows the individual chicken more freedom of action and better air. Uncrowded pullets make better growth.

Clean and disinfect the houses and supply them frequently with fresh litter. Shavings, oat straw, or sand make the best covering for the floor during the summer. When more than one house is in use take care that too many pullets do not form the habit of roosting in one building. The buildings should be at least 100 feet apart to help keep the birds evenly distributed. It is not advisable to try to house more than 125 growing pullets in one colony house.

Provide good ventilation on hot nights. In addition to the regular ventilators take out the glass sash in the front of the house. To prevent possible infestation from red mites paint the perches and side walls close by with carbolineum, or spray the colony houses several times during the summer with a mixture of equal parts of crude carbolic acid and kerosene.

When there are many hatches and several weeks difference in their ages provide each hatch with a separate range, or place the houses farther apart than for groups of the same age. Otherwise older pullets will annoy the young and prevent normal growth.

Fireless Cooker Good Idea for Egg Layers

Hens need warm water. It's cheaper for you to warm it on the fire than to make the hen warm it with expensive feed.

You can save lots of trouble by insulating the water pail. You can make a sort of fireless cooker by placing the drinking vessel in a box large enough to stuff two or three inches of straw, excelsior, or torn newspapers packed tightly below and all around the vessel.

Keep the material dry by covering it with tin, fitted closely under the top rim of the pail, and sloped slightly to the outside of the box so the spilled water will run off.

The water keeps warm several hours.

Profits Increased by Culling Flock Closely

Whether the poultry producer keeps pure breds or grades, he will increase his profits very materially by culling his flock closely every year.

Though the trap nest is the most accurate means of selecting the best layers in the flock, its use is only practicable for those who make poultry breeding a specialty.

The trap nest usually has no place on the general farm. On the average, the pullet laying year is more profitable than any other. Yearlings and two-year-olds are likely to be kept at an actual loss unless they are carefully culled.

Poultry Facts

The average fenced farm geese are the most profitable of all.

* * *

A dust bath aids materially in the elimination of body lice and should be installed.

* * *

Pure-breds usually lay eggs that are more uniform in size, shape and color and are more productive than mixed flocks.

* * *

Hens should stand a lot of dry still cold, but not drafts. There should be no opening in opposite walls, no even cracks, to draw a shivery current of air through the house.

* * *

Overcrowding in the poultry house discourages production of high priced eggs.

* * *

Feed hens balanced rations. Watch flock for sick birds and remove them on discovery. Keep house dry, warm and well ventilated.

* * *

The first rule in feeding the poultry flock in the winter is to be sure to feed plenty. Hens cannot lay in cold weather unless they have enough feed to keep them fat and thus have a surplus for making eggs.

* * *

Squash and pumpkin make a good succulent feed for poultry, helping to keep the bowels in good condition.

* * *

Increase the size of your poultry house to keep pace with the size of your flock. Poultry is not city bred and does not like crowded conditions.

* * *

Moist mash often helps to get more feed into the crops—a warm, slightly moistened mash fed at noon during cold weather. Liquid skim milk or buttermilk is especially valuable for moistening the mash.

JUST HUMANS
By Gene Carr

"WOTCHA MEAN, NO SCHOOL? Y'AIN'T GOIN' T'SPEAK NO ENGLISH LIKE ME, DEN!"

Mother's Cook Book

This would be a much more pleasant world if there weren't so many ways of making people unhappy.

By Baby Bunting,
Daddy's gone a-hunting,
Gone to get a rabbit skin
To wrap up Baby Bunting in.

RABBIT DISHES

AS CHICKEN and rabbit are so alike in flavor and food value, it may be cooked and served in the same manner. Rabbits feed on vegetables and nuts as well as grains and are really more particular about their diet than the fowl.

Two medium-sized rabbits will serve eight persons. Split down the front to the tail, after removing the head and feet. Divide into six or eight sections.

Stewed Rabbit.

Cover the rabbits with boiling water to which a tablespoonful of vinegar has been added, cook five minutes, add onion, one tablespoonful of salt, a clove of garlic and simmer two hours. Stock should always be saved when cooking young rabbits, for the broth may be used as chicken broth.

Rabbit Pie.

Take two stewed rabbits, five tablespoonfuls of flour, one finely chopped onion, two teaspoonfuls of salt, three tablespoonfuls of fat, two and one-half cupfuls of stock, one-half cupful of chopped parsley, and one and one-half cupfuls of mashed potato and pepper to season. Remove the meat from the bones and place in a well-greased baking dish. Melt the fat, add flour and seasonings and when thoroughly mixed add stock, onion and parsley. Stir until it boils; boil five minutes, then pour over rabbit. Spread with mashed potato and bake thirty-five minutes. Brown well at the last.

Tomato Sauce.

Take two cupfuls of tomatoes, one bay leaf, two tablespoonfuls of sugar, one-fourth teaspoonful of pepper, five tablespoonfuls of flour, one and one-half teaspoonfuls of salt, three tablespoonfuls of fat and one-half teaspoonful of stock. Cook tomatoes and seasoning ten minutes and strain through a sieve or colander, add the fat and flour cooked together, and cook five minutes.

Through a Woman's Eyes

by Jean Newton

ARE MEN "UNMANLY"?

THE reason why women hate men is that they are so unmanly!

That startling opinion is given in a recent magazine article by Ada Patterson, who claims that more women than men possess the qualities which we call "manly."

"A woman," we are told, "cannot love the average man if she knows him. To be what women consider 'manly,' he must be brave and strong and loyal and kind, and in all things adequate, which to every woman's sorrow, he most certainly is not." And for proof Miss Patterson points to the "unmanly" weakness of which most men are guilty—vanity, selfishness, love of flattery, illogicalness.

All of which accusations against men are true, of course—and yet we do not agree with Ada Patterson, surely we don't—that women hate and despise them. Whatever hating there is, I think, must be on the part of the half-baked woman, the young and inexperienced girl to whom "manliness" constitutes nothing less than godliness, and whose dream of her sweetheart or husband as a young god has been rudely interrupted by the emergence of a human man. A mature woman like Ada Patterson should know better!

No, women don't hate men. And if men are "unmanly," the trouble is with the definition. How many of us, for instance, would be "womanly" if womanliness meant perfection and godliness?

The point about most men which proves such a disappointment to women with a preconceived notion of manliness, is that in some ways they never grow up.

It is true that a "man's vanity is as necessary to him as oxygen." Just like the child who is terribly agitated about being the biggest, strongest, best.

It is true that men are far more susceptible to flattery than women. While only the most foolish women fall for it, it is the rare man who is above it. But all children love it.

It is true that men are selfish, colossally, unconsciously selfish. It has been said that the least selfish man puts the most selfish woman in the shade when it comes to selfishness! And I shouldn't be surprised! But there you have the child—colossally, unconsciously selfish. Ditto illogicalness.

Do we hate children for those qualities? Heavens, no! We would not be so selfish. Nor do we hate men. The more womanly we are the more those very qualities which disassociate a man from a god appeal to our material instinct!

"Adequate in all things," men most certainly are not. But that doesn't necessarily make them unmanly. If by manliness we mean being "brave and strong and loyal and kind," manly men there most certainly are in this world, and their name is legion!

Men who regard every woman as a goddess are bound to be disappointed. We cannot be goddesses, but we can be women and womanly. If we do not flatter and wrong men by expecting them to be gods, we shall be the better able to appreciate the manliness in them.

Plane Aviation Monument

Famous for establishing a number of the early records for stunt flying and for making an emergency landing in a city street of Berlin, Germany, the plane once piloted by Captain Carganico has been erected as a monument to the pioneer days of aviation. It has been mounted on a turret of the fence inclosing Potsdamer square in Berlin, and is illuminated at night.

MISSING THE MORNING

By DOUGLAS MALLOCH

WHEN you breakfast at six and you labor at seven,
Then you know about earth and you learn about heaven.
I have met ev'ry star, and the sun is my neighbor;
One has silvered my path, one has gilded my labor.
For what know you of air, if you never have taken
Just a breath of the dawn, when the grasses awaken?
Or what know you of skies, if you never have seen them
With their blues and their reds, and their purples between them?

Now we're staying up late, and we're getting up later,
And we're missing the morn, and a thousand things greater
Than your poor little toys and our cheap little pleasures,
And are cheating the soul of the most of its treasures.
I have walked to my work when the dew was a-glisten,
I have heard a bird sing, and have watched a world listen,
And whatever his wealth, and what titles adorning,
How I pity the man who is missing the morning!

(©, 1929, Douglas Malloch.)

Why We Do What We Do

by M. K. THOMSON, Ph. D.

WHY WE HAVE IMAGINATION

IMAGINATION is one of the greatest of all human traits. It serves the purpose of amusement and pastime. We love the weird, the fanciful, the ridiculous and absurd, the romantic; art, literature, magic, and the rest of the things which furnish amusement for the mind and relaxation for the body.

The trouble with most of us is that we do not have enough imagination. Imagination is not only a useful toy, but it also serves us in making discoveries and inventions, in looking ahead and planning the future, in building castles on the earth as well as in the air.

Imagination is like a moving picture machine. It projects one's hopes and desires and plans and purposes on the screen of the future. If we do not like the sight of ourself in the new situation we change the picture.

The greatest service of imagination is to help us to foresee the consequences of our acts. The criminal suffers from lack of imagination. He is not so wicked as he is nearsighted. He knows that a life of crime does not pay, but he has not vivid enough imagination to deter him.

We cannot imagine something we have never experienced. Try to picture creatures inhabiting Mars. We will find that no matter how absurd the creatures of our imagination they nevertheless possess parts that are familiar to us. For example, we can easily imagine a mermaid, half girl and half fish. No one has ever seen such a creation but the two parts that make up this fanciful creature are well known. All that the imagination does is to put old elements into new combinations and new forms.

The scientist needs his imagination to arrive at a new truth by means of piecing together all the known facts. The architect must have imagination enough to see the cathedral or skyscraper in the eye of his mind before he can give it expression in brick and steel. We all need imagination to shape our destiny through work and play.

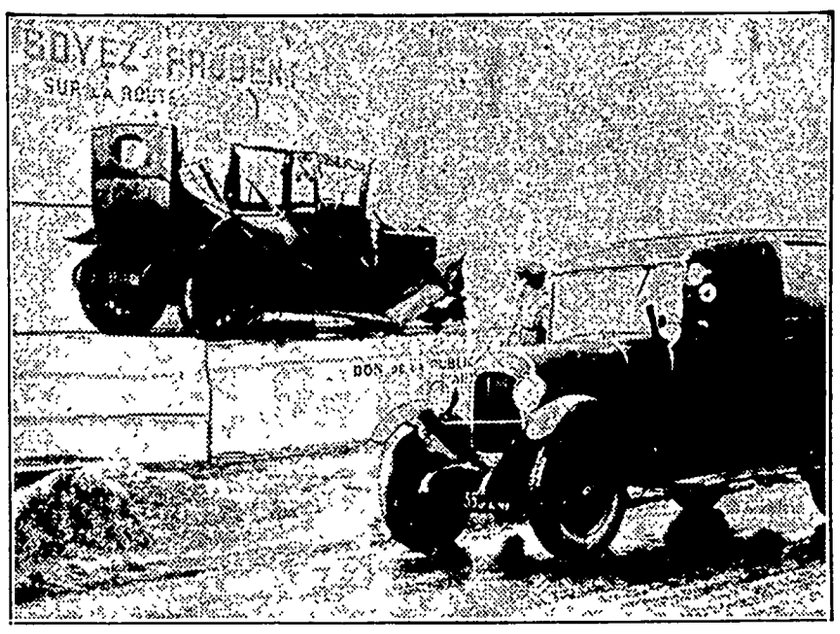
For Noisy Motors

The one disadvantage of a quiet motor is that you can hear all the instructions from the rear seat.—Cincinnati Enquirer.

UNIQUE WARNING FOR CARELESS DRIVERS



This badly smashed car, elevated on a base, is used as a warning to French drivers on the main highway leading west from Paris. The warning reads "Be Careful on the Highway."

SPEED LIMITS ARE BEING ABOLISHED

Five States Have Eliminated Maximum, Five Others Raised It.

Speed limits are slowly, if not surely, catching up to automobiles.

As to actually overtaking them, the possibility seems rather remote for engineering seems rather more speedy than legislation. But there are two things happening to speed laws that are making the lot of the motorist happy and a third that probably would make it happier than the other two.

The first satisfying thing is that speed limits are being liberalized in virtually all quarters of the country. The second is that, elsewhere, they are being removed altogether.

Slow Driver a Menace.

The third eventually, and it is no more than that at present, is that following the abolition of the arbitrary maximum there may come an arbitrary minimum speed. It is held to be a natural step and there are forward looking officials and motorists in both this country and England who are not so certain these days that the slow driver is not more of a menace than the fast one.

In recent weeks, five states have officially gone on record as favoring higher maximum speeds on their highways. Minnesota has gone from 30 to 35; Mississippi from 30 to 40; New Mexico, Ohio, and Oklahoma from 35 to 45. At the same time, Tennessee and Indiana have gone even further and abolished the maximum law altogether.

In this action, they have followed the course of Connecticut, Michigan and Montana. Anyway it is counted, that makes five states out of the 48 that have gone to higher speeds.

Fix Minimum Limit.

Just 43 states to go and then there will be no arbitrary maximum speed limit! Then, many insist, the next logical step is to establish a minimum limit below which the driver may be arrested as dangerous.

A minimum speed limit law is not a brand-new idea. Several years ago, John M. Mackall, then chairman of the Maryland state roads commission, sponsored a measure in the legislature for the establishment of a low speed limit of 20 miles an hour on state highways. The bill failed to pass but it died a gallant, fighting death, and its friends have by no means abandoned hope.

Attention to Automobile During Severe Weather

In cold weather the careful automobile driver will see that his storage battery has plenty of water, that it is fully charged, and that the charging rate of the generator is increased. A storage battery is less efficient in cold weather, more energy is used in starting the engine each time, the drives are shorter, and the lights are used more in winter than in summer.

The ignition should be timed exactly right, for the power of the engine is lessened by a late spark. If the consumption of gasoline is high, the engine runs hot, and the car is sluggish, the ignition may be the cause of the trouble. Headlights should be adjusted to protect the driver and to give him the most possible light.

Rotting Connection Is Caused by Warm Water

Motorists who have wondered why it is that the upper water hose connection needs replacing more often than the lower one only have to know their engine a little better in order to understand the reason.

Circulation of water is from the pump up through the water jackets to the top of the radiator or up through the water jackets in the same direction in the case of thermo-syphon cooling, in which a pump is not utilized.

This means that the hotter water always is rising and that the water is hottest when it is passing through the top water hose to the radiator. This heat has a disintegrating effect on the rubber hose connection. The connections at the pump receive cooler water from the radiator and generally last longer.

Japanese Tootle Their Horn and Shout "Hi, Hi"

"Rules of the Road and Hints to Motorists" in Tokyo, Japan, are printed in Time, the Newsmagazine, as follows:

"1. At the rise of the hand of policemen, stop rapidly. Do not pass or otherwise disrespect him.

"2. When passenger of the foot hove in sight, tootle the horn. Trumpet melodiously at first. Then tootle with vigor and express by word of mouth the warning, 'Hi! Hi!'

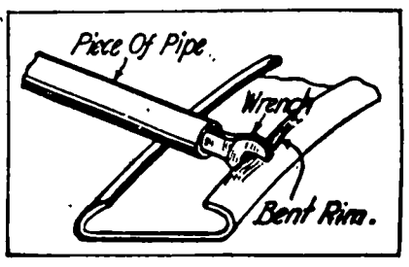
"3. Beware of the wandering horse that he shall not take fright. Go soothingly by.

"4. Give space to the festive dog that makes sport in the roadway. Avoid entanglement of the dog with your wheel spokes.

"5. Go soothingly on the grease-mud, as there lurks the skid demon. Press the brake of the foot as you roll round the corners to save the collapse and tie up."

Troublesome Automobile Clincher Rims Remedied

An automobile clincher rim becomes quite troublesome when the rim gets bent down in a few places so the tire bead will not slip under it properly, and if forced down enough to catch may suddenly slip out when the car is in rapid motion and cause an accident.



Straightening a Clincher Rim.

The sketch shows a simple method of remedying this trouble by the use of an ordinary open end wrench and a short piece of pipe to slip over it to get greater leverage.

Plan Overhead Roads in Paris for Automobiles

Plans have been placed before the French Ministries of Interior and Transportation of a project linking Paris by an overhead automobile road with Nice, Marseilles, Toulouse, Bordeaux, Brest, Lyons and Geneva. According to the scheme, the roads would be carried on reinforced concrete pillars at a height of about 25 feet, and would consist of two one-way tracks, each about 20 feet wide. A large proportion of the heavy initial expenditure, it was suggested, could be covered by the importation of materials from Germany under the reparation plan and the upkeep could be more than met if motorists paid a special tax of 100 francs a year.

AUTOMOBILE NOTES

There was nothing really similar to the rumble seat in the olden times, unless possibly it was climbing over a stile.

* * *

A traffic cop of Singapore, Straits Settlements, pulls strings to operate the stop and go signals attached to his shoulders.

* * *

Language is wonderful. We heard a fellow say: "The traffic officer came after me to give me a tag, but I gave him the slip."

* * *

Our recollection goes back to the old horse-and-buggy days, when there wasn't more than one Dead Man's curve per state.

* * *

Ninety cities in California, including San Francisco and Los Angeles, have adopted a standard code for traffic regulations.

* * *

According to George A. Parker, registrar of motor vehicle in Massachusetts, a motorist, rather than improving, begins to lose his ability to operate an automobile after ten years of driving.

* * *

Do not drive a new car too fast in the lower gears. This will ruin the engine. Be systematic when hunting trouble about the car. This is about the only way to determine quickly the difficulty.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

PHILLIPS Milk of Magnesia

The Pants She Panted For

The will has just been proved of a man living in a southwest suburb of London who died last November in which he left to his wife: "One pair of my trousers free of duty and carriage paid, as a symbol of what she wanted to wear in my lifetime, but did not."—English Paper.

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

HAD TO WORK TOO HARD

Lydia E. Pinkham's Vegetable Compound Gave Her Strength

Mt. Carmel, Pa.—"After my second baby was born I had to work too hard and be on my feet too soon because my husband was ill. After his death I was in such a weakened and run-down condition that nothing seemed to help me. I am starting the fourth bottle of Lydia E. Pinkham's Vegetable Compound and feel a great deal better. I am much stronger and don't get so tired out when I wash or work hard. I do housekeeping and dressmaking and I highly recommend the Vegetable Compound as a tonic. I am willing to answer any letters I receive asking about it."—Mrs. Gertrude Butts, 414 S. Market, Mt. Carmel, Pa.

Ugly Pimples

Nature's warning—help nature clear your complexion and paint red roses in your pale, sallow cheeks. Truly wonderful results follow thorough colon cleansing. Take NR—Nature's Remedy—to regulate and strengthen your eliminative organs. Then watch the transformation. Try NR instead of mere laxatives.

Mild, safe, purely vegetable—

RIPE REMARKS

To be loved, be lovable.

A dead secret—dyed hair.

The slogan of discretion is "No!"

Never look a gift automobile in the carburetor.

If one can entertain himself, he has a priceless gift.

Liberty consists in letting your wife go as you please.

An ache never scares a boy unless it is a stomach ache.

The harder a man works the less time he has to whine.

There is no fool like an old fool who acts like a young fool.

A woman is apt to envy a parrot if it can talk faster than she can.

One must remember that the swine haven't asked that any pearls be cast.

A gentle voice sometimes indicates merely that one is wanting in energy.

The man who knows what he wants often has sense enough not to try to get it.

One who is contemptuous of good clothes isn't living up to his opportunities.

Somebody has to be at home to entertain those who are always going on a visit

Sinners can't be reached because they don't know what you mean when you say "lost."

It is hard for some to comprehend why there is objection to a funny story because it's old.

Democracy encourages everybody to express his opinion, regardless; but worthwhile ones are still rare.

Tungsten's Great Value in Industrial World

A metal which until a few years ago was little known outside the chemical laboratory has become, in just a few years, Mr. Economy's favorite son. The annual savings brought about through the use of tungsten are almost beyond estimate

Employed in the manufacture of light bulbs, the metal requires less current in supplying more candlepower than the old carbon lamp, and a conservative estimate places the savings in this way alone at $240,000,000 a year. It is also a labor-saving factor in the steel industry.

Only about 6,000 tons of tungsten are used a year. The supply is obtained from China, which has a monopoly on the metal.

Old Mill Makes Parchment

The English town of Havant Church, six miles from Portsmouth, is the one of an industry which if local claims be true, has been carried on by the same methods and on the same site for 1,000 years.

The parchment made there was famous throughout Europe in days gone by and is still preserved in many libraries and museums in Europe, but it is the United States that keeps the mill going at present. There has been recently a great demand from America for English parchment to be used for diplomas and certificates in American universities, and though the demand has been great enough to cause a shortage and send up the price, this seems no deterrent.

Mystery

Making fun of the present-day models for women is a favorite indoor and outdoor sport, but it has remained for a clergyman to put out one of the prize bons mots of the season. Rev. W. E. Biederwolf declares:

"Nowadays, when you look at women from the back it is often hard to tell whether they are daughters of fourteen or Daughters of the Revolution."

Nor Measles

Teacher—Can you define heredity for us?

Jimmy—Er, yessum. It means if your grandfather didn't have any children, then your father prob'ly wouldn't have any and neither would you, prob'ly.

Not Found in United States

Strontium, which is used in refining beet sugar, in making fireworks, in glass making, and in medicines, is one of the few minerals for which United States must depend on foreign supplies.

She Understood

Prof. Finestein (ambling in at 4 a. m.)—Y'see, m'dear, it was like this: let x plus y equal th' square root of z divided by a square over sqmzyz—

Mrs E. (haughtily)—Oh, don't try to explain!

Naming the Menu

Rastus—Ef yo' says anything ter me Ah'll make yo' eat yo' words, man

Erastus—Chicken dumplings, hot biscuits and watermelon!

Barz's Addition to Klemme, Iowa

Alfred Merkel	Lots 1, 2, 3, 4 & 5 Block 1	.8
H. S. Schwartz	Lot 6 Block 1, Lot 1 Block 2, and vacated street between Blocks 1 and 2	.6
Lena Medaus	Lots 2, 3, and 4, block 2	.6
Mary S. Moberly	Lots 1, 2, 3 and 4, block 3	.8

You and each of you are hereby notified that on the 17th day of October, 1929, C. F. Merten, having been duly appointed to make a survey, profile, map and report in the matter of inclusion of certain lands in drainage district No. 18, Hancock County, Iowa, filed in the office of the county auditor of Hancock County, Iowa, a report and petition asking and recommending that certain lands be included in said drainage district No. 18, as here in set out, and that said engineer has, in connection with said report, changed the original maps, plats and profiles to conform to said report, said report recommends that the above described lands be established and included in a drainage district known and numbered as drainage districts No. 18, in which certain improvements have been heretofore constructed.

You are further notified that the board of supervisors of Hancock County, Iowa, have fixed the 2nd day of December, 1929, at the hour of ten o'clock A. M. in the Court House in Garner, Iowa, as the time and place for hearing thereon and that all claims for damages on account thereof except claims for right-of-way taken by said improvement, and all objections to the establishment of and inclusion in such district must be made in writing and filed in the office of the county auditor of Hancock County, Iowa, on or before the time fixed for such hearing. This publication is made by order of the board of supervisors.

Dated at Garner, Iowa, October 21, 1929.

CHRIS JACOBS,
County Auditor,
Hancock County, Iowa.

Thomas Edison Says:-

"DEVELOPMENT HAS ONLY WELL BEGUN"

Just fifty years have elapsed since Thomas Edison sent his incandescent lamp out into a world of candles and kerosene lamps. During this period the electric light and power industry has grown to mammoth proportions exceeding even the fondest hopes of the young inventor of Menlo Park

But according to Mr. Edison—"the electrical development of America has only well begun. So long as there remains a single task being done by men and women that electricity could do as well, so log will that development be incomplete."

The truth of this statement can be realized when it is considered that the average home in cities and towns takes **barely one fifth** of the amount of current which it can advantageously use and the average farm takes **only one twelfth** of the power which can profitably be put to work.

For fifty years the securities of electric companies have been classed as safe and conservative investments. The promise of the future for increased development assures the continuance of this high standing of utility stocks and bonds.

You can share in the future of these industries which now are celebrating "Lights Golden Jubliee", by becoming a stockholder in the company that serves you.

Our Division Manager, Division Representative, or any employee will appreciate the opportunity of telling you about our Company and the benefits you will derive from an investment in its Cumulative Preferred Stock.

Central States Electric Co.

Important to

BUYERS OF NEW CARS

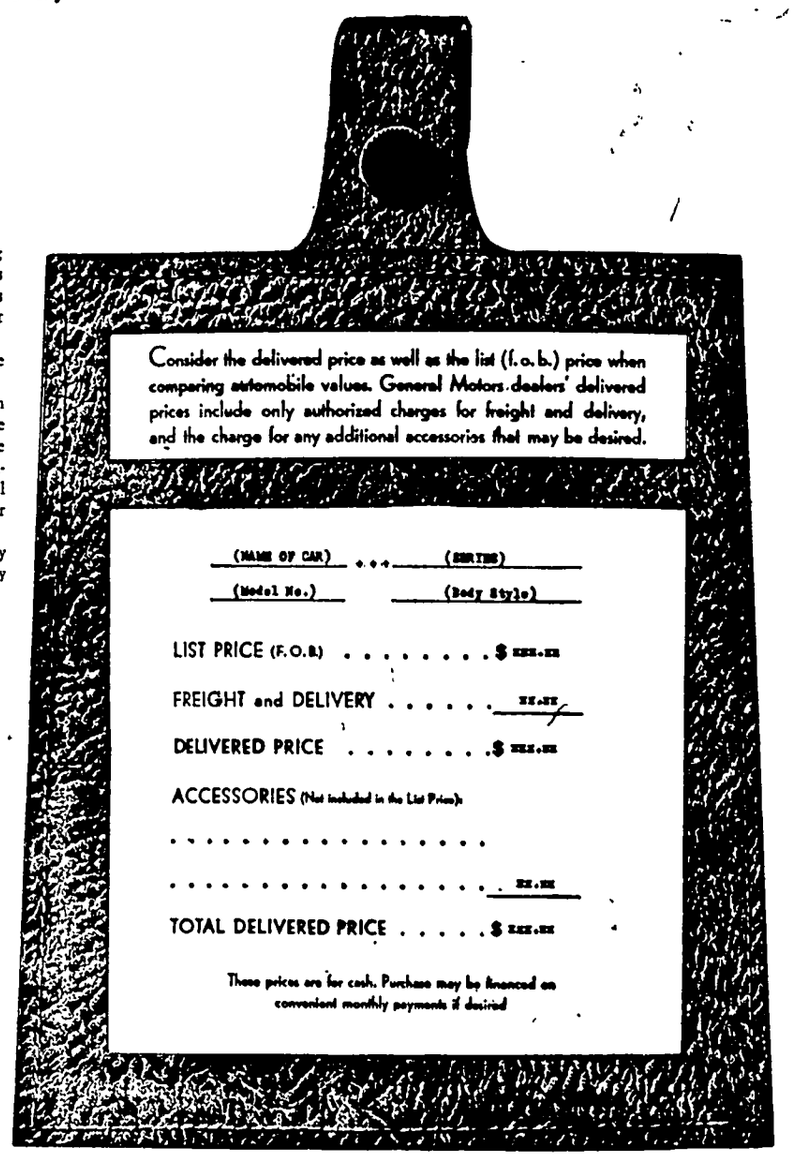
FROM time to time General Motors has devoted its messages in this paper to giving facts which help the car-buyer get full value for his automobile dollar. In keeping with that policy of frankness, this message gives facts about the prices of new cars which every one should know.

THIS is the standard price tag used by General Motors dealers to show what makes up the delivered prices of their new cars.

List Price. The f. o. b. price advertised by the factory.

Freight and Delivery. An authorized amount to cover the freight charges paid by the dealer and the cost of unloading, inspecting, supplying fuel and oil — preparing the car for delivery to you.

Accessories. A charge for any additional accessories that may be purchased.



Consider the delivered price as well as the list (f. o. b.) price when comparing automobile values. General Motors dealers' delivered prices include only authorized charges for freight and delivery, and the charge for any additional accessories that may be desired.
(NAME OF CAR)
(BODY TYPE)
(Model No.)
(Body Style)
LIST PRICE (F.O.B.) . . . . . $ xxx.xx
FREIGHT and DELIVERY . . . . . xx.xx
DELIVERED PRICE . . . . . $ xxx.xx
ACCESSORIES (Not included in the List Price)
. . . . . .
. . . . . xx.xx
TOTAL DELIVERED PRICE . . . . . $ xxx.xx
These prices are for cash. Purchase may be financed on convenient monthly payments if desired

WHEN you buy a new automobile, it is the *delivered price* that you actually pay.

The delivered price consists of the list price of the car—the f. o. b. price advertised by the manufacturers—plus certain other charges which the dealer makes.

You should know exactly what those charges are and what each one is for.

There is no mystery about the charges added by General Motors dealers. They have adopted this standard price tag, which tells you everything. Nothing is hidden. There is no extra charge to permit a *seemingly* better trade-in offer. No extra charge to cover advertising or any other item. You know exactly what makes up the difference between the list price and the delivered price. Each charge made by the dealer is fair and reasonable.

Use this tag for reference. Make it your guide in comparing automobile values. For the delivered price is the price you really pay.

Below is given the range of list prices for each General Motors car. They are just as low as General Motors' vast production, centralized purchasing and reasonable profit per car can make them. General Motors dealers maintain this value in their delivered prices of these cars and show you every item on the standard price tag. Look over the General Motors line. Then clip the coupon.

"A car for every purse and purpose"

CHEVROLET $525—$695. A six in the price range of the four. 7 models.

PONTIAC $745—$895. "Big six" luxury at low cost. 7 models.

OLDSMOBILE $875—$1035. The Fine Car at Low Price. 6 cylinders. 8 models.

MARQUETTE $965 — $1035. Buick's fine new companion car. 6 models.

OAKLAND $1145—$1375. The All American six. 9 models.

VIKING $1595. General Motors' new "eight" at medium price. 3 models.

BUICK $1225—$1995. The greatest Buick of them all. 14 models.

LASALLE $2295—$2875. Companion car to Cadillac. 14 models.

CADILLAC $3295—$7000. The Standard of the World. 26 models.

(Base prices—f. o. b. factories)

ALSO

FRIGIDAIRE Automatic Refrigerator. New silent models with cold-control device. Tu-tone cabinets. Price and model range to suit every family

DELCO-LIGHT Electric Plants — Water Systems. Provide all electrical conveniences and labor-saving devices for the farm.

You and each of you are hereby notified that on 18th day of July, 1929, Albert A. Schmidt Et Al filed in the Office of the County Auditor a petition and bond asking that the open drain of Drainage District No. 18 be changed to a closed drain, and that additional lands be included in the district and that the improvement be constructed to drain the same, and that Chas. F. Merten was appointed as a Preliminary Engineer to make survey, profile map and report upon the same and that the said engineer filed in said Auditor's Office on October 17th, 1929, a report, map, plat and profiled recommending that the above lands be included in the improvement which plan was tentatively approved by the Board of Supervisprs of Hancock County, Iowa, on October 17, 1929, but which plan may be amended before final action thereon.

You are further notified that the Board of Supervisors of Hancock County, Iowa, have fixed the 2nd day of December, 1929, at the hour of one o'clock p. m. as the time for hearing thereon and that all claims for damages on account thereof, except claims for right of way taken by said improvement, and all objections to the construction of such improvement must be made in writing and filed in the office of the County Auditor of Hancock County, Iowa, on or before the time fixed for such hearing.

Dated at Garner, Iowa, this 21st day of October, 1928, and published by order of the Board of Supervisors of Hancock County, Iowa.

CHRIS JACOBS,
County Auditor,
Hancock County, Iowa.

KLEMME LOCALS

Sunday guests at the Gimer home were Mrs. Cora Homan and children Hazel and Woodrow, accompanied by a friend, Frank Folkerts all from Abbott, Iowa, Mr. and Mrs. C. E. Johnson, Robert and Barabar Jean, and L. G. Gimer, of Klemme.

FOR SALE—Spotted Poland China fall and spring boars. C. Edwin Johnson, 3 miles south, 1 3-4 miles west of Kanawha. 19-2tc

Herman Stromer had the misfortune to get some ribs broken Wednesday in a runaway accident. Herman was injured when he was pitched from the wagon when his team became unruly on the way to the field.

Paul Grange has given his small pond at the Northern Lbr. Co. a natural touch by beautifying the spot with three mallard ducks. The ducks are tame and seem to enjoy the place. However, it would e just too bad if they should wonder away toward the river some day when a hunter was looking for good shooting!

At the P. T. A. Meeting held last Thursday evening in honor of the teachers at which time a reception was held and a lunch served, and during the business meeting Mr. A. Wellemeyer was re-elected president; Mrs. J. E. Stille, vice-president; Miss Coryle, secretary and C G. Waterman, treasurer. A large crowd was present and all had a fine time.

FOR SALE—Yellow Globe Denver Onions $2 per 100 lbs. delivered. Phone 515F36, Klemme. 2tp

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Mrs. J. J. Lemke visited at the Tim Waddingham home Sunday.

Mr. and Mrs. Oscar Carlson and son were dinner guests at the Ed. Schoenwetter home Sunday.

Mr. and Mrs. Emery Schaefer and son, Donald, were callers at the Beier home Sunday.

Mr. and Mrs. Emil Blumer and daughters were dinner guests at the Will Kraus home in Garner Sunday

Mr. and Mrs. Gus Kahler and Mr and Mrs. Emmet Kahler and baby from near Forest City visited at the Earl Kahler home Sunday.

Mr. and Mrs. Floyd Franklin celebrated their third wedding anniversary Saturday by driving to West Bend to see the Grotto.

Mr. and Mrs. Walter Schaper, son of Will Schaper of Charles City, visited at the Tanner home Thursday.

Mr. and Mrs. Clarence Cook and baby, and Mr. and Mrs. Wilbur Haefner visited at the Beier home Sunday.

Mr. and Mrs. Roscoe Baker and son, Junior, of Spencer, were visiting with Mrs. Baker's sister, Mrs. Will Lemke and family Saturday.

Mr. and Mrs. Wilson and Miss Minnie Blumer of Jewell were supper guests at the Emil Blumer home Sunday.

Emil Beier marketed a truck load of his spring pigs Tuesday, averaging 199 lbs. each. Sure not bad for this time of the year. Louie Knoke took them to Mason City.

Mrs. Whyte very ably took charge of the services Sunday in giving a paper on the History of the Bible. Rev. Whyte was there but unable to preach due to a severe cold.

Frank Ward helped Emil Beier move his fence last week and in getting the ground along the road ready for the excavator and graders that are working on the mile stretch by his farm.

The Klemme W. F. M. S. have kindly asked the Liberty W. F. M. S. to join them in their next meeting to be held next Thursday in the Parish House. The president would like as many members present as possible.

Mr. and Mrs. Frank Whitney of Ashland, Ky., and mother, Mrs. Wayne Whitney of Britt, visited at the Will Lemke home a few days last week. Mr. Whitney is a brother of Mrs. Lemke and has been visiting in Britt with relatives the past two weeks.

Thanks! Just phone that item of news to The Times. Phone 1-2.

THE CONSTELLATION

BY ELMO SCOTT WATSON

OCTOBER 27 is observed throughout the United States as Navy day, a time when the navy holds "open house," invites the public to visit the ships and stations and, through a general educational campaign, endeavors to inform the people as to its peace-time activities. This particular date was chosen for Navy day because it is the anniversary of the birth of Theodore Roosevelt, who, as assistant secretary of war, had much to do with the establishment of the modern American navy and who, throughout his lifetime, was devoted to establishing a sound naval policy for the United States. Navy day not only honors a great American and affords an opportunity for giving thought to our "first line of defense," but it also is an occasion for recalling some of the inspiring history of our navy. So—"let us now praise famous ships!"

We have had many of them, ships whose names were once on the lips of every American because of some brilliant feat of arms in defense of our country. In the case of some, their fame outlived their period of usefulness and all that we have to remember them by is the story of what they did. Fortunately, however, others have been preserved and today they ride the waters of our coasts as memorials of stirring events in our national history.

Greatest of all these "floating museums," perhaps, is the old frigate Constitution, affectionately known for more than a century as "Old Ironsides." Launched in 1797, as one of the first three naval vessels built by the United States, she sot out upon a remarkable career during which her sides were to be scarred by the wounds of 42 battles but never once was she to lower her flag in defeat. In 1798 the Constitution helped clear the West Indies and our coast line of French privateers. From 1803 to 1805 she was engaged in the war with the Barbary states. But the War of 1812 witnessed the Constitution's most brilliant victories and brought her the name of "Old Ironsides." Beginning with her remarkable escape from the British squadron off the coast of New Jersey in July, 1812, she swept on to a series of feats which thrilled the nation. Among them were the destruction of the Guerriere and the successive captures of the Java, the Cyane and the Levant.

Despite "Old Ironsides'" great achievements, however, the frigate was allowed to fall into disrepair and in 1830 a board of naval commissioners ordered her broken up and sold. Then Oliver Wendell Holmes wrote his protest in a poem which so stirred public sentiment that sufficient money was appropriated to practically rebuild her in 1833.

In 1905 it was recommended that the Constitution be used as a target to be sunk by gunfire of the modern battleships of the Atlantic fleet and once more a nation-wide protest against this sacrilege saved her. Congress appropriated a nominal sum to repair the ship and the upper works were reconditioned. By 1925 it was found that the ravages of time were again threatening the Constitution and in March of that year congress authorized the restoration of the vessel. Since that time the work of restoring "Old Ironsides" at the Boston navy yard has been going on and latest reports from there is that the work is 67 per cent completed. Since congress did not provide the necessary funds for the work it was found necessary to call upon patriotic Americans for contributions. The response was instantaneous and although more than $600,000 has been raised by this method approximately $200,000 is still needed, according to Rear Admiral Philip Andrews.

At the Newport (R. I.) naval training station there rides at anchor a ship which has the distinction of being the oldest vessel on the United States navy list. It is the frigate Constellation, launched September 7, 1797, a short time previous to the launching of the Constitution and second only to "Old Ironsides" in her fame as one of the great ships of the early American navy. Just as the name of Isaac Hull will always be associated with that of the Constitution so will the name of Thomas Truxtun be linked with the fame of the Constellation during our "war" with France in 1798-1800.

On February 9, 1799, the Constellation had a battle with the French frigate Insurgent which resulted in a victory for Truxtun's ship and the capture of the French vessel. Even more noteworthy was the Constellation's fight with the French ship Vengeance on February 2, 1800. Although the French ship was in every way superior to the American, Truxtun compelled the enemy to fight and after a bitter engagement the Frenchman was forced to strike his flag. However, the Constellation, having lost her mainmast, was so badly crippled that she was unable to pursue the Vengeance and the Frenchman slipped away in the night and escaped. Even though Truxtun was denied the honor of bringing the enemy ship into port as a prize of war, his courage and daring won for him the thanks of congress and a gold medal.

Visitors to Erie, Pa., can visit two historic vessels if they choose. One is the Wolverine, the first iron vessel built for the navy and the forerunner of the modern dreadnaughts. But more interesting still is another ship preserved there, the brig Niagara, sole survivor of Commodore Oliver Hazard Perry's victory over the British at the battle of Put-in-Bay during the War of 1812. The Niagara was one of the five ships built of green lumber by Perry, when he was ordered to construct a fleet which would try to regain mastery of Lake Erie from the British and save the Old Northwest for the United States. It was to the Niagara that Perry carried his battle flag, bearing the dying words of Capt. James Lawrence, "Don't give up the ship" when his flagship, the Lawrence, was riddled and most of her crew killed or wounded. On the decks of the Niagara he directed the engagement which ended in his astounding victory and, sitting on those decks, he penned his immortal "We have met the enemy and they are ours" message.

After the War of 1812 the Niagara, after being sold and resold a number of times, was sunk by the order of the government in Misery bay near Erie harbor. There she lay for nearly three-quarters of a century until the centennial anniversary of the Lake Erie victory in 1913 when the state of Pennsylvania appropriated money to have her raised and reconditioned. After the celebration the old brig was again the victim of neglect. For several years she was kept afloat with difficulty and finally sank in the bay with her pumps still working. Last spring the Erie County Historical society set about restoring the Niagara and that work is now being carried on.

If present plans are carried out still another old warship, a relic of Civil war days, is to be saved from the scrap heap. It is the Hartford, flagship of Commander David G. Farragut, first admiral of the United States navy. The Connecticut legislature some time ago adopted a resolution to petition the President to transfer the Hartford from the Charleston (S. C.) navy yard to the submarine base at New London, Conn. There she will be reconditioned and made as seaworthy as she was on January 19, 1862, when she was put into commission at Philadelphia and placed under command of Flag Officer Farragut. On her decks Farragut stood three months later as she rode safely through the storm of shot and shell, hurled at her by Confederate fortifications, Ft. Jackson and Ft. St. Philips and proceeded to the capture of New Orleans, the first step in the vitally important plan of opening up the Mississippi from St. Louis to the gulf. It was to the rigging of this same ship that Farragut lashed himself as he sailed into Mobile bay the following year and gave his historic orders "Damn the torpedoes, go ahead." There he remained under fire to the end of the battle and until the victory was won.

Out in Portland, Ore., there rides at anchor a battleship which in 1898 performed a feat which sent her fame ringing around the world. It is the battleship Oregon which, in 1898 under the command of Rear Admiral Charles Edgar Clark, made her dash from the Pacific coast around Cape Horn into the Atlantic and arrived in time to take part in the battle of Santiago bay on July 3. It had taken her just 67 days to cover 14,000 miles of water, the longest and quickest trip of any battleship then afloat and still a world's record. After the war the Oregon was relegated to the reserve fleet of the Pacific squadron but in memory of her famous trip she was given the distinction of being the first battleship to pass through the Panama canal when it was opened in 1915. She was visited by thousands at the Panama-Pacific exposition as she lay at anchor in San Francisco bay, was used for a time as a training ship and in 1918 came back again to San Francisco to be used in the Victory Liberty Loan campaign. Soon afterwards she was placed out of commission and presented to the state of Oregon to be kept in the harbor of its principal city as a permanent memorial.

If the expected action is taken by congress this winter still another famous battleship will be preserved as a "floating museum." For public sentiment is being rallied to save from the scrap heap the Olympia, Admiral Dewey's flag ship at the Battle of Manila Bay on May 1, 1898. The Olympia is still in commission at the Philadelphia navy yard but was recently condemned by a naval commission. Under the terms of a bill introduced into congress the Olympia is to be repaired and anchored near Washington where it would become a patriotic shrine.

ORCHARD GLEANINGS

PROTECTORS WILL SAVE MUCH FRUIT

Rabbits Damage Trees by Persistent Barking.

How many farmers let the rabbits rob them of fruit? One farmer told me he had planted three orchards and the rabbits had killed all of them inside two years after planted. I did not tell him what I thought of his management, says a writer in the Successful Farming. There is not the slightest use of letting the rabbits bark the trees. If you don't want to take the trouble to make protectors you can buy them already made. If you don't care to take them off and put them back again just leave them in place. The only reason why rabbits get the trees is that you don't object to it enough to protect them.

Galvanized window screen wire is an excellent protection, for it does not need to be so roomy to protect, and if cloths are forced in around the top and the lower end goes below the surface an inch or two, it protects from mice and borers as well as rabbits. A pocketful of lathing nails and the wire cut to strips make putting on easy. Pin the wire around the trees with the nails.

One-inch poultry wire is all right if it is made into cylinders large enough to prevent the rabbits reaching the tree through the holes. It has no value for mice or borers. This wire lasts longer but if the screen protectors are removed in midsummer after danger from the borer moths is past they will last long enough.

Cornstalks tied around the trees serve very well for protection but should be removed during the growing season. Some use building paper, but the labor and short life of this is against its use. Better do something, though, for the first snow that stays on a couple of days will make you wish you had.

Preparation Essential to Success of Orchard

Thorough preparation is essential to the success of an orchard. The roots of fruit trees require a much more favorable condition of the soil than do the roots of the forest trees, especially the coniferous forests which cover large parts of this province.

It is not advisable to plant on land immediately after clearing or breaking. After clearing plow to a depth of five to seven inches in the fall, and let stand in the rough during the winter.

This exposes more soil surface to the weather, which tends to ameliorate the condition of the heavier soils.

There is also less run-off of the winter precipitation, the land being in a better condition to absorb it.

In the spring work the land into a good seed bed with a disk or spring tooth, followed by some sort of smoothing harrow.

Strains of Delicious Apples Are About Alike

There is no great difference in the quality of the several strains of Delicious apple, and the striped variety is perhaps just as good for eating as the red variety, so if you are planting on a small scale for home use you can plant either variety with perfect confidence that you will raise apples of wonderful flavor and good keeping quality.

Golden Delicious is also a wonderful apple, fully as fine in quality and flavor as the red and striped strains, and also a good keeper. The trees are very vigorous, and make rapid growth in a few years. It is not at all uncommon for them to bear apples the third or fourth year after being set out, or even sooner if given good care and carefully pruned and sprayed.

Reduction in Acreage Will Improve Profits

One of the programs that will improve profits on many fruit farms is a reduction in acreage of fruit. New conditions are facing Illinois growers under which better care will be absolutely necessary for success, says the Illinois Farmer.

Those growers whose acreage is modest in most cases need more equipment. The businesses in other lines that are successful are those with ample and up-to-date equipment. It is no unusual matter for a business to junk a machine that is far from worn out simply because a new model will give greater economy of operation.

It is along these lines that fruit growers must go.

Pruning of Grapes

Grape pruning should be done late in the fall or early in the spring before the sap flows. The grapes are borne on new shoots each year. For the leaf lice, oil soap emulsion or a nicotine spray will be good materials to check them. The oil soap emulsion can be made at home. Dissolve one-half bar of laundry soap in two quarts of water and add to it while hot three quarts of kerosene, stirring until the kerosene and soap water are a creamy mass.

Denver Boy is a Win

Every mother izes how import is to teach ch good habits of duct but mar them fail to t the importance teaching their dren good bowe its until the poisons from de waste held too long in the s have begun to affect the health.

Watch your child and at the sign of constipation, give him a California Fig Syrup. Children its rich, fruity taste and it q drives away those distressing ments, such as headaches, bad b coated tongue, biliousness, fev ness, fretfulness, etc. It gives th hearty appetite, regulates their ach and bowels and gives tone strength to these organs so they tinue to act normally, of their accord. For over fifty years, ing physicians have prescribed half-sick, bilious, constipated dren. More than 4 million b used a year shows how mother pend on it.

Mrs. C. G. Wilcox, 3855½ St., Denver, Colorado, says: "My Jackie, is a prize winner for h now, but we had a lot of trouble him before we found his trouble constipation and began giving California Fig Syrup. It fixed up quick, gave him a good app made him sleep fine and he's gaining in weight right along the first few days, taking it."

To avoid inferior imitations California Fig Syrup, always loo the word "California" on the ca

JUST A ROBLEM IN THRIFT

(©by D. J. Walsh.)

IE CRAIG sat down upon the e of her bed when she heard doorbell ring below. Her ther went to let Joe Sherman here were the usual greetings en Mrs. Craig and her daughfriend. Then, "Are you 'most to come down, Jennie? I guess be here in a minute Joe. Go e parlor and wait."

e continued to sit rigid upon dge of her hard, narrow little She was having a terrible fight ch her head was trying to stand against her heart, with as yet erceptible possibility of winning. the battle was finished she go down and face Joe Sher-

had been going with Joe Sher- for a year. She loved him. She he loved her. But there were nces to their marrying. Joe be- to a family who lived from to mouth, accumulating nothing. getting into serious difficulties b debt. Jennie had inherited ire for thrift along with her red hair. She had saved a por- of her wages as religiously as she to church on Sunday. Every t of her being was unfriendly e's happy-go-luckiness. But Joe she adored with all the in- ty of a girl's first love.

rose at last, smoothed down prim little figured voile, and went stairs. Joe was walking impa- ly about the parlor, looking at the ly portraits on the wall, ugly por- s of ugly, honest folks who of ity would have had little in com- with this big, handsome, easy- g young fellow, at sight of whom e paused, her hand fluttering to throbbing throat.

t's raining hard. We can't go here tonight," Joe said, as they down upon the worn sofa. "Hear on the window! And the wind! boy! Turned my umbrella inside I'll have to get a new one to- row."

Why not have the old one mended?" There you go, Jennie! But you awful pretty tonight. Your hair ell, it's so much like sunshine that akes me forget the rain."

t's just red hair. Red hair is com- It stands for temper and giness and—and a lot of other gs you've no use for. We aren't ed to each other, Joe. I—I think all foolishness for us to go on."

oe looked at her sharply. "What's idea?" he demanded. "Are you ing to tell me you—you've had ough of me? Is that it, Jennie?" got up and stood before her, red- ed, excited. "If your folks are cut- g in on what's our business—" He de a belligerant gesture.

"Oh, they're not! They let me do I please. They trust me. It's my- lf. I'm to blame. I can't—I can't—"

"We'd be awfully happy," Joe mur ured, dazedly.

"Just for a little while. Then— what's the use? I don't dare. It 't as if I—I could make you over, e, or you me." Jennie was break- g down. If she began to cry Joe ould take her in his arms and that ould end it all—the wrong way. She n out of the room.

Joe looked after her, stunned. She s gone, for good. After a moment took his hat from the table. Un- neath the hat was the box of ex- nsive candy he had brought for nnie and forgotten until this mo- ent. He went out with a dreadful in tearing his heart.

Next day she wrote a letter to Joe. e was rather forceful with the pen. er letter was an explanation of all e things she felt she owed it to oe to say She laid all the blame on erself. She couldn't change her ake-up. She wanted to be happy. e wanted to be happy. They could ever be happy together.

Silence on Joe's part followed that tter. Jennie kept at work doggedly. ork was a blessing at a time like his. But she ate and slept so little hat it was no wonder her bright color egan to fade. Even her sunny hair ooked dim. One night she went to he movies with another girl and saw oe across the aisle with a girl named at who was not well, spoken of. hat took the heart out of her com- pletely. She wanted him back if nly to save him from Pat.

Three weeks passed. One night ennie, returning to the house from an errand in the neighborhood, found a huddled figure on the front steps.

"It's me, Jennie." Joe unfolded his long length. "I've got to have a talk with you."

Jennie's heart bounded. But she sat primly down beside him. She waited.

"If you want a man that's steady going and saving and—and honest and all that, I'm going to be that man," Joe said. "I don't even ask you to take me on trial, Jennie. When I come to you again you'll know I've made good. Good-by!" This time he left her.

"Joe!" Jennie sprang to her feet, too late. She heard him thumping down the sidewalk. What had he meant? Could it be she was going to be happy yet? The promise and hope in his words thrilled her. She sank back upon the steps, buried her red head on the arm of her old brown sweater and cried for joy.

After that when she met him he always gave her a grin and a wink. But he was usually in too big a hurry to stop to talk to her. He didn't come to the house. He seemed to be busy. Joe, who had had all of time and eternity to lounge through, as he had often said.

Soon she learned what Joe was up to. He had bought out a business which because it had apparently failed was to be had for a nominal sum. And now Jennie trembled for Joe's judgment. He knew nothing about job printing.

But Joe was out to succeed and win the girl he found he wanted more than anything else in the world. He worked eighteen hours a day getting the hang of his new job. He had brain and vigor, and there was need of another printery in the town.

One day Jennie picked up a handbill Joe had printed. Her eyes misted as she gazed at it, and tucked it away as if it were something sacred.

Next thing she knew Joe had a partner. Old Art Burrill, who knew more about printer's ink than almost anyone else in town but who had long ago retired, had watched Joe's method until he just felt he had to get back into the game with the boy.

When Jennie saw the name of the new firm on a plate glass window she nearly had heart failure. Joe had made good. But he wouldn't want her now—now when he could have Elsie Burrill, a girl with beauty and money. Elsie had been abroad. The boys thought her irresistible.

"Serves me right" Jennie thought sadly. "I shouldn't have been so particular. I'm not so much myself. We Craigs don't stand for anything but thrift and right living. Joe's going to the top. He won't stoop to pick me up now."

Jennie was alone the night the Craig house caught fire. She was startled by a crackling noise as she sat reading before going to bed. She opened the stair door. The chamber was ablaze.

She turned in an alarm. But there was no putting out the fire. In the midst of the furniture salvaged from the doomed building she stood wondering what dad and mom would say when they got home. Suddenly to her astonishment she saw Joe on the porch roof hacking away with an ax. The upper wall was about to cave in upon him, but he didn't see it. Neither did anybody else. It was Jennie who knew how flimsily the house was built.

Jennie leaped forward, arms outstretched.

"Joe! Jump!" she screamed.

He heard her voice above the roar of the flames; he saw her in the lurid light. Obeying, he jumped—and the wall almost grazed him as it crashed.

Later she stood alone with her smoke-begrimed hero.

"I know where I can get a house big enough for the four of us till your folks look around a bit," Joe said. He looked tenderly down into her quivering face. "How about it, Jennie? I'll have to speak for it right away—"

"Joe! Do you mean that you—and I—"

Joe's face was wonderful in spite of its smudge.

"If you say so we can get a license any time before four o'clock tomorrow," he said.

Remarkable Showing of Intelligence in Owls

The wisdom of owls is taken for granted, never tested by prying ornithologists, always assumed by bird lovers. Their intelligence is another matter; that is fair game for wielders of the yardstick. Spanish owls on the English estate of Sir George Courthope played havoc with scientific observations that were in progress there until the observers took cognizance of the intelligence of the birds. The observers had made two apparently contradictory discoveries; that the owls killed young birds; that the diet of the owls consisted of beetles and not of young birds.

In the Spectator the solution to the puzzle is given by W. Beach Thomas:

"One day in the course of the investigation of the mystery a Spanish owl was heard cackling and seen sitting on the top of a coop, proclaiming murder. It had just killed 16 small pheasant chicks. Now, the owls attack the coops not singly but in groups. On this occasion three birds were especially concerned, and between them they presently carried off all the 16 dead chicks and laid them at different spots on a low-lying stretch of land that is half covert alongside a stream. The observers discovered the whereabouts of most of the 16 bodies, and kept watch in their vicinity. The owls did not revisit their prey till the burying beetles began to attack the bodies. Thereafter they visited them at intervals, on each occasion devouring every discoverable beetle, often turning over the body to search them out. On no single occasion has any flesh been found in any of the several hundred owls killed on the estate; and almost every post-mortem investigation at certain dates has revealed a number of the upper wing cases of burying beetles."

This was no isolated accident. Observers watched this procedure for two seasons; a large number of owls shared in it. If this was not intelligent behavior then much of the premeditated action of man must be ascribed to some faculty other than intelligence.—New York Sun.

The Easiest

A motion picture actress says there are a hundred ways of making the human form look fat. Probably one of them is letting nature take its course. — Rochester Democrat and Chronicle.

LIVE STOCK NEWS

FALL PIGS GIVEN CAREFUL FEEDING

Forage Crop Suggested for Young Porkers.

The farmer who wants to make a success of his pigs must pay careful attention to proper feedings and handling, says the New York State College of Agriculture. Corn is a favorite high energy feed.

It is suggested that pigs be allowed to run on a forage crop after weaning to give them a better start toward the long winter months. During the growing and fattening periods, the concentrates fed should be of high energy value with some protein supplement, or a combination of protein supplements. Although corn is probably best, ground barley or ground rye may be substituted for corn. In using these feeds, farmers should remember that they are high in energy but low in protein, and that they must be balanced with high protein foods in order to get the best results. Skim milk or buttermilk, both of which are high in protein and mineral matter, are good to balance grains. About two and one-half to three pounds of milk should be fed with one pound of corn for fifty-pound pigs. As the animals grow the amount of milk may be correspondingly decreased.

Such feeds as tankage, fish meal, alfalfa meal, and oil meal, should be fed where skim milk or buttermilk is not available. In the Middle West a combination of 50 per cent fish meal, 25 per cent alfalfa meal, and 25 per cent oil meal has been used with corn or other feeds to start the pigs. About 15 to 20 per cent of the protein supplement should be fed in the beginning, and gradually decreased until at the finishing period only about 5 per cent is fed.

Nicotine or Sulphate Treatment for Worms

In treating sheep for stomach worms, either copper sulphate or nicotine sulphate should be used. The copper sulphate treatment: Dissolve one-fourth pound of the powdered sulphate (bluestone) in one pint of boiling water, using an enamelware dish, as the bluestone corrodes most metals. Then add enough cold water to make the solution up to three gallons, using wooden, earthenware or other nonmetallic receptacles. This will make approximately a 1 per cent solution and will be enough to dose 100 adult sheep, allowing 10 per cent waste. In the preparation of the dose use only clear, blue crystals of copper sulphate. Crush the crystals to a fine powder when ready to make up the solution.

Have the solution the right strength. An overdose may kill the sheep while less than the amount recommended may not kill the worms. Use only the pure blue crystals, not bluestone which has become white and powdery.

Bighead Is Incurable Derangement of Horse

In same parts of the United States a peculiar disease of horses, known as bighead, occurs. The bones become soft and spongy in the latter stage of the disease.

One of the first symptoms is a stiffness in gait or a decided lameness, usually in one or both hind legs. Close examination reveals a thickening or enlargement of the bones of the face, especially of the branches of the lower jaw.

There is danger that the horse will fracture the bones during muscular exertion. The disease is incurable. In the good old horse trading days a horse with bighead usually had many masters before he died.

Live Stock Hints

Alfalfa makes a good hog pasture though it will not produce the first season and it demands a sweet soil.

* * *

Fall pigs demand the best of attention to feeding and handling if they are to be profitable to the grower.

* * *

Profits in the stock business are generally made by good feeding. "Good feeding" is supplying the animal with its required food elements at a low cost, or with profit.

* * *

One eight to twelve months old boar should satisfactorily take care of the 18 gilts provided he is not allowed to run with the gilts and is not mated with more than an average of one sow per day.

* * *

Silage or roots furnish cheap feed and are especially useful in keeping ewes in good condition during the winter.

* * *

Up until the age of seven years mares are worth more than geldings; after the age of seven, geldings are worth more than mares.

* * *

Barley and whey, fed at the Wisconsin experiment station to fattening hogs, gave a daily gain of 2.2 pounds, while barley and tankage gave a daily gain of 1.6 pounds.

Self-Feeder Is Best for Swine

Unmannerly Greediness and Gluttony Done Away With by Device.

(Prepared by the United States Department of Agriculture.)

"Hoggishness" and "eating like a pig" are traditional phrases to describe unmannerly greediness and gluttony. Recent experiments in the feeding of pigs suggest that the phrases do not always apply. When pigs are fed by hand they do, in fact, rush in to make sure of their share of the feed. But, put hogs in a pasture and they graze leisurely and in contentment.

Help Themselves.

If, instead of feeding by hand, the owner installs a self-feeder from which the hogs and pigs may eat what they want, when they want it, and in whatever quantity they desire, they soon lose their gluttonous ways.

Commenting on a series of comparative feeding tests in which sows were self-fed and hand-fed, E. Z. Russell of the United States Department of Agriculture, said a noticeable fact about the sows in the self-fed lots was that "there never was any crowding at the feeders. Scarcely ever were there more than two or three sows eating at the same time, even when a dozen or more sows were being fed from the one feeder. Only a small quantity would be consumed at one time. It was taken slowly and apparently thoroughly masticated and digested."

Lose Gluttony Ways.

Probably this moderate eating and thorough digestion accounts for some of the good results of self-feeding. The natural presumption of most persons who have seen hogs eat would be that they would waste a great amount of grain and would overeat. The first thought would be to question whether the saving in labor would not be more than balanced by waste of feed. Instead of this, careful experimentation shows that the labor cost is only one saving from self-feeding. Self-fed hogs eat less grain than is usually fed by hand. They make better gains from the quantity consumed, and the quantity of grain consumed per pound of gain is lower than with hogs fed on a platform in a feed lot.

When left to their own devices, "eating like a pig" seems to mean eating with a nicely adjusted instinctive regulation of the diet for maximum growth and development.

Deficiency of Potash Harmful to Corn Crop

Premature dying of corn plants in black sandy soils may be due to deficiency of potash in the soil, says the United States Department of Agriculture. The corn plants may develop well during the seedling and early-growth periods and attain normal size, but before killing frosts they break over, the leaves die suddenly, and the ears remain incompletely developed, with soft cobs and chaffy grains. Such ears suffer further losses from weathering and ear rots. Experiments conducted in Indiana, where premature dying of corn is prevalent, showed that the continued removal of crop residues and the use of fertilizers containing only phosphates aggravate the trouble. Control measures, says the Department of Agriculture, include fertilization to supply the needed potash, changes in crop-residue disposal, and selection of locally adapted seed.

Improve Cow Beef

Experiments carried out by the food investigation board of Great Britain have recently shown that there is generally a progressive increase in the tenderness of all joints hung in a temperature of 41 degrees Fahrenheit, that this increase is less marked in the best quality meat, as in loin from prime animals; that coarse meat, such as aged cow beef, is greatly improved by hanging, and even after 17 days' hanging meat is still perfectly sweet and palatable.

Agricultural Notes

Every bull is potentially dangerous.

* * *

Clover should supplant, or at least supplement timothy meadows.

* * *

Six posts to the tree, at a dollar a post, after twenty years growth, yields a good return on the investment in a locust plantation.

* * *

Many orchardists are centering on fewer varieties of apples, and replacing old trees with a few standard kinds demanded by the markets.

* * *

It is advisable to give dry cows access to a simple mineral mixture, such as would be had from a mixture of equal parts of salt, bone meal, and finely pulverized high calcium limestone.

* * *

It is advisable to keep brood sows away from hog wallows for at least a month before they are due to farrow. Sows frequently become stiff and lame as a result of being in wallows.

* * *

It is a wise plan to pinch out the tips of young canes of blackberry and of black and purple raspberry in summer—but not the red raspberry. Shears or knife can be used to do the topping.

The Mark of *Genuine* Aspirin..

BAYER ASPIRIN is like an old friend, tried and true. There can never be a satisfactory substitute for either one. Bayer Aspirin is genuine. It is the accepted antidote for pain. Its relief may always be relied on, whether used for the occasional headache, to head-off a cold, or for the more serious aches and pains, from neuralgia, neuritis, rheumatism or other ailments. It's easy to identify Bayer Aspirin by the Bayer Cross on every tablet, by the name Bayer on the box and the word "genuine" always printed in red.

BAYER

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

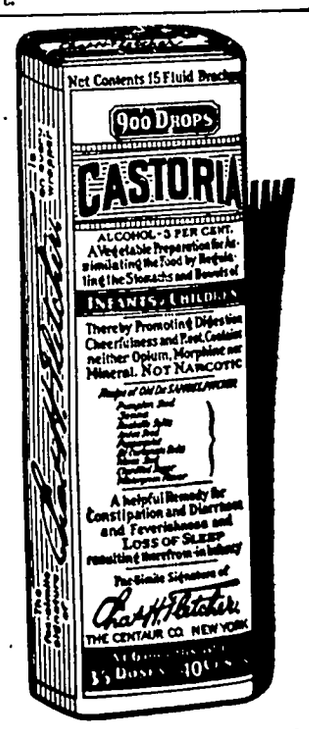
Few of those who live to a great age are willing to give robust ancestors the credit.

Excuses aren't worth while. Your friends don't care and your wife won't believe you.

Unless you bear with the faults of a friend, you betray your own.—Syrus.

If a man feels superior to the public, he either tries to instruct it or exploit it.

When BABIES are upset



Baby ills and ailments seem twice as serious at night. A sudden cry may mean colic. Or a sudden attack of diarrhea—a condition it is always important to check quickly. How would you meet this emergency—tonight? Have you a bottle of Castoria ready? There is nothing that can take the place of this harmless but effective remedy for children; nothing that acts quite the same, or has quite the same comforting effect on them.

For the protection of your wee one—for your own peace of mind—keep this old, reliable preparation always on hand. But don't keep it just for emergencies; let it be an everyday aid. Its gentle influence will ease and soothe the infant who cannot sleep. Its mild regulation will help an older child whose tongue is coated because of sluggish bowels. All druggists have Castoria; the genuine bears Chas. H. Fletcher's signature on the wrapper.

Quite a Feed

Time, the Newsmagazine, reports that at a recent advertising convention in Berlin "250 calves, 35,000 crabs, 4,000 bottles of wine were consumed by 2,500 diners."

Giant Warehouse

The largest warehouse in Europe is at Stettin harbor, on the Baltic. It has a capacity of 65,000 long tons and storage space of nearly 48,000 square yards.

When a White Collar Man "Goes Army"

Perhaps he doesn't learn a few things!

DON'T envy a man who "only has to work a typewriter."

So we were told by Mr. Solon S. Bloom of 3503 Woodbrook Avenue, Baltimore, Md., whose health began to give way because his work gave him no bodily exercise.

"I decided to get away to a military training camp," says Mr. Bloom, "thinking the rough and tumble with the army would do me good for a month. I asked the doctor what to do about my condition. 'I've seen men, I've known men,' he said. 'I know what they eat, drink, and how they live. I know cathartics, physics, and all the ways men try to keep themselves regular—and the only two that go together well are men and Nujol. Nujol soothes and heals the membranes and expels bodily poisons normally, naturally, easily, so that you are regular as clock-work.'"

That was what Mr. Bloom learned when he left his typewriter and went into the army. If you are like most other people, you too will find that Nujol will make all the difference in the world in the way you feel.

Remember Nujol is not a medicine, for it contains no drugs of any kind. It is simply bodily lubrication that everybody needs.

You can get a bottle of Nujol at any good drug store, in a sealed package, for the price of a couple of good cigars. If you will start today and try it for two weeks you will agree that Nujol is the easy normal way to keep well and make a success out of your life. You will be astonished at the results!

Sympathize with a boy in his troubles if you want to everlastingly win a human heart.

What is home without another?

Just So

"Disappointed in love, she says next time she will marry for money."

"Even that has been known to yield poor dividends."

Mothers find it magic for scuffs

One touch of the dauber and scuffs disappear. Smooth, uniform color comes back to faded shoes. More than 50 marvelous shines—50 cents. Colors for black, brown, tan and white shoes—a neutral polish for others.

GS AT SCHOOL THE PAST WEEK

T BALL GAMES ARE NOW NEARLY SCHEDULED

Will Have Carnival Friday Night At School Gym

good weather assured the expect a big house Friday of this week and none can afto remain at home if weather A very interesting program been prepared and many will to hear it. The business men responded generously towards pport of the Juniors in their aking for which the class are grateful. As we have previously aced the proceeds from the am are to be used to defray xpenses of the Junior-Senior et, an annual high school afin honor of the Senior Class.

Last Kitten Ball Game

high school boys lost their ame of kitten ball to our neigh from Goodell last Friday even- It was a close game and Klemd most of the time but too errors lost them the game. ush with the same boys in basall on Friday evening, Novem15.

re's Basket Ball Schedule

er basket ball games arranged the season thus far will be as n:

ember 27, Alexander there.
ember 6 Hayfield there.
ember 13 Crystal Lake here.
ember 20 Kanawha here.
uary 10, Swaledale there.
uary 17 Hayfield here.
uary 24 Crystal Lake there.
uary 31 Alexander there.
bruary 7 Goodell here.
bruary 14 Swaledale here.
bruary 21 Corwith there.

Two Regulars On Team

ith but two regular men of last now available, Mr. Breitske is fronted with a difficult task of ing a team to represent us this on. Some new men are devel- fast and may surprise us. The et ball mising for several days resurected by some of our grade a few days ago. They dug it of a dark corner of the school ing where few would have gone k fr it.

Old Magazines Can Be Used

s Trumbell has suggested that school can use to good advan- any discarded magazines that be lurking in cellars or garrets mes in or about Klemme. Some esting scrap books are being e by some of the classes and rded magazines provide good erial in the form of pictures, so foth.

Boys Are Making Book Cases

he boys of the manual arts dement are now making book cas- and are occasionally assigned to e work in mechanical drawing. rge class are enrolled for this k this year and all seem inter- d.

Otehr Items Of Interest

he coach, Mr. Breitske, spent week end at Emmetsburg and ew in Palo Alto County. He not volunteer to tell us just it is that attracts him there. Judging from the apple dumpsampled in the home economroom a few days ago we are led believe the girls of that depart- t are acquiring an art mighty thwhile. The new electric stoves a great improvement on the oil ners of a few years agó used by vious classes.

We enjoyed a fine dinner at the thodist parsonage Sunday and a l visit with Rev. and Mrs. H. E. yte.

Miss Ford and Miss Corle spent week end at Algona at the home Miss Corle, our primary teacher. We shall be glad when the corn husking season is over and there will be less work to be made up. But most parents have been very considerate.

At the reception for the new and old teachers a week or more ago many parents were present and our teachers, we believe, very much appreciate the courtesy shown them. In all sincerity, we believe they will go far before finding another town of as many fair-minded and helpful parents. Mr. Wellemeyer was re-elected President of the Parent-Teachers organization for the coming year.

Education Week Program

As one week in November will be celebrated all over America as Educational Week we hope a fine program can be provided by our P. T. A. in which many phases of education can be presented. Mr. Wellemeyer has perhaps notified those appointed to the various committees and they can be depended upon to carry on the good work which this association is qualified to do. We hope this may be a banner year for our local organization. The officers we believe will welcome sugestions from those interested looking toward improvement along any line. We feel that there are possibilities yet unrealized by our local organization and that we all need to take its purpose and work more seriously

Mrs B. C. Hopkins, our state president, exhorts parents in these words "Let us through study perfect ourselves as parents so that we may be competent to guide our children as they prepare themselves to live in the world of tomorrow." Another has said that "the world moves forward on the feet of little children." May it not also move backward due to the neglect of those whose work it is to guide those little feet?

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning worship in Klemme at 10:00 o'clock.
Sunday school, Klemme at 11:00.
Sunday school, Liberty, 10:15.
Morning worship, Liberty, 11:15.
Evening worship, Klemme, 8:00.
Epworth League, 7:15.

All services will be according to schedule Sunday at both Klemme and Liberty.

The growing interest in the Epworth League and evening church attendance is encouraging. We feel that we have not yet attaied a satisfactory goal. We therefore extend a cordial invitation to others to attend.

ANNUAL FARM BUREAU MEETING HELD LAST WEEK

Prof. Penrod Of The Klemme High School Gave Interesting Talk

The Annual Meeting of the Ell Township Farm Bureau was held at the Ell Center School house last Thursday evening, October 24.

A short program was given and a talk by Prof. Penrod was enjoyed by all.

Officers for the coming year were elected and are as follows: C. J. Wille, President; Ralph Elder, Director; Albert Barz, Secretary.

L. T. Nutty, county agent gave a short talk in which he explained the projects for the coming year.

Free refreshments were served at the close of the meeting.

Mr. and Mrs. W. F. Pavey, son Wayne and daughter Juanita will drive to Mt. Auburn, Iowa, Friday for a visit with his parents. They expect to return Sunday. F. H. Ridder will run the shop while Walalce is away.

BASKET SOCIAL REAL SUCCESS

The Stromer girls, who are both rural teachers, last week had their respective schools put on an entertainment and socia. The school had an entertainment Thursdoy and the other Friday evening, etting the sum of $44.01 and $44.15.

We belive that is almost a record for a rural school.

Is your subscription in arrears? Look at the date following your name, it will tell you when the paper is due.

KLEMME TROOP 56 LEADS IN CONTEST

TROOP 56, KLEMME AT HEAD OF LIST OF 61 TROOPS

Crystal Lake Crowding Troop 56 In A Close Race For First

Scouts and Scouters of Troop 56, Klemme, were happy when the report was isued from headquarters that they were leading the line in the Council-Wide Inter-Trrop Contest with 1,748 points.

Troop 31, Crystal Lake, was close on their heels with 1,643 points at the end of three weeks.

The other ten highet troops at the end of the three weeks period are as follows:

Troop 25, Thornton, 1265.
Troop 7, Mason City, 1218.
Troop 14, Mason City, 1133.
Troop 36, Hampton, 971.
Troop 45, Chapin, 968.
Troop 24, Sheffield, 965.
Troop 17, Clear Lake, 935.
Trop 3, Mason City, 915.
Troop 34, Clear Lake, 913.
Troop 18, Forest City, 913.

The contest is going to be close and is going to be hard to win. Every Scout and Scouter in Troop 56 MUST be at EVERY meeting, in uniform and must steadily advance in order to win this contest, or even be in the list near the top. The competition is keen and which ever trop wins this contest will certainly deserve the honor of having gone into it with al they have.

Klemme Scouts are determined to win if posible, and if they lose they are going to be good sports.

May the best troop in the Council win.

HENRY GRIFFEN SURPRISED ON HIS 49th BIRTHDAY

Some Fifty Neighbors And Friends Stage Party On Mr. Griffen

About fifty neighbors and friends sprang a surprise at the Henry Griffen home Friday evening, October 25, in honor of his 49th birthday. The affair was called "an old time" party and everyone came dressed in old style clothes. Prizes were awarded to the two persons dressed in the oldest style cotumes. Mrs. C. A. Arnold and Charley Fritzel won these prizes.

ce cream and cake were served and everybody enjoyed the party very much.

ELL TOWNSHIP CRAFTY CANNERS MET AT WILLE HOME

The Crafty Canners of Ell Township met at the home of Norma and Ruby Wille on Saturday, October 19th.

The members of the Club were not all present, but those who were present answered the rol call with their favorite bake dish.

Mrs. Griffen, leader, told the girls how to can meat and how to store vegetables.

A talk was to have been given by Reva Elder, but she was not present at the meeting.

A talk was given by Adaline Greiman on what a breakfast menu should contain.

Norma Wille gave a talk on what a club girl should eat and why.

DEATH CLAIMS LITTLE BERL FOUR YEAR OLD BEEK GIRL

DIED SUDDENLY SUNDAY EVE

Funeral Services Were Held Tuesday Afternoon At Reformed

Mary, the youngest child of Mr. and Mrs. Hamo Beek who reside a few miles south east of Klemme, died suddenly at her home Sunday evening.

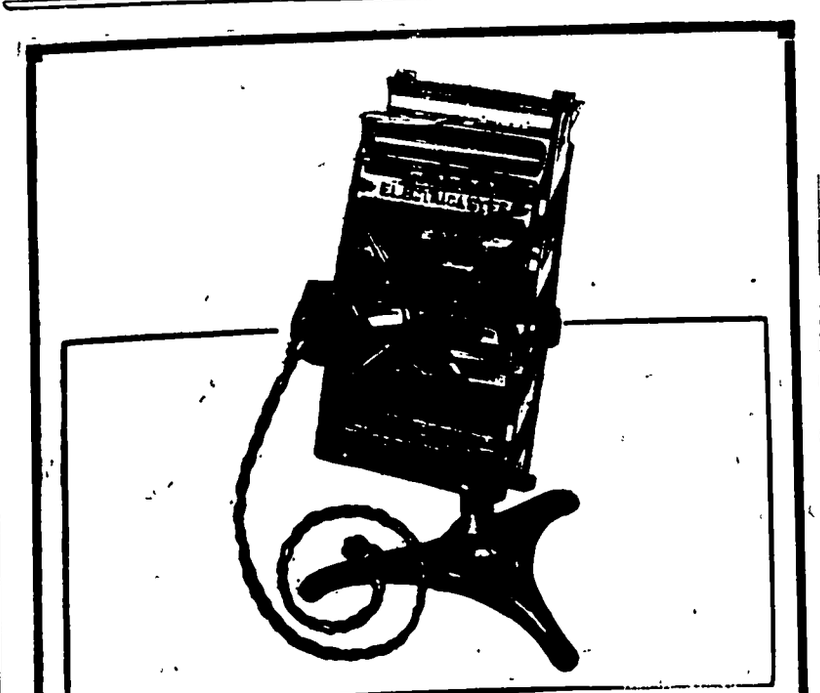
The child had shown signs of rather heavy breathing for a few days, but was not considered serious. However medical attention was given, but no unusual signs of serious illness developed until Sunday evening when she became suddenly ill and died soon after.

Little Mary was born August 22, 1925 and she was baptized on July 22, 1928 . Her age was 4 years, 2 months and 5 days.

Surviving her and mourning her death are her parents, Mr. and Mrs. Hamo Beek; five brothers, Henry, Benjamin, Herman, John and George and four sisters, Minnie, Frieda, Dena and Hattie.

Funeral services were held Tuesday afternoon at the Beek home, and at the Reformed Church with Rev. Calvin Grosshuesch in charge.

Burial was made in the Klemme Cemetery.



Announcing

ELECTRICASTER

Electricaster is an electrically heated stereotyping machine.

The addition of this piece of equipment to our shop facilities places us in a position to make fast quality printing plates from matrices.

It marks another forward step in our desire to make our plant right up to the minute in every particular. Especially will it be of benefit to our advertisers since we can now give them prompt service on their advertising plate work.

AGED MOTHER DIED LAST THURSDAY

MRS. CHARLOTTE SCHLEI DIED THURSDAY AT FENTON

Funral Services Were Held Sunday At Liberty Township Church

Funeral services were held Sunday for Mrs. Charlotte Schlei at the Edwin Josten home at 1:00 o'clock and at the Liberty Township Methodist Church at 2:00 o'clock, conducted by Rev. H. E. Whyte and assisted by Rev. Wessels, of Dows, a former pastor. Interment was made in the Klemme Cemetery.

Mrs. Charlotte Griffen Schlei was born in the province of Hanover, Falla, Germany, September 3, 1849, and passed away at the home of her daughter, Mrs. Weisbrod of Fenton on Thursday morning, October 24, 1929, at the age of 80 years, one month and twenty-one days. Her death came as a result of a gradual breaking down of her health due to her advanced years, which confined her to her bed, however, but for a few days.

Mrs. Schlei came to America from her native home in Germany as a young woman and settled in Clayton County, Iowa. In 1874 she was united in marriage to Fred Schlei of Giard, Iowa. After four years of married life the young couple moved to Liberty Township, Hancock County, Iowa, where she has made her home ever since that time. Her husband preceded her in death 30 years ago.

There were born to this union ten children, seven boys and three girls, for whom the main responsibility of providing a home was left to Mrs. Schlei. She faced this responsibility with fortitude, courage and faith. She has earned her reward.

Mrs. Schlei was confirmed in the Lutheran Church early in life, but after moving to Liberty Township both she and her husband became charter members of the Liberty Methodist Church.

Besides her eight living children, she leaves to mourn her loss, nine grand children, and many friends in this community.

Her children, who live in this vicinity and at Fenton are: Will, Ben, Henry, Edward, Elmer, Alfred, Ella (Mrs. Edwin Josten), and Dell (Mrs Weisbrod, of Fenton.)

A large number of relatives and friends attended the funeral to pay their last respects to this beloved lady.

Card Of Thanks

We wish to thank all our neighbors and friends for their kind assistance, and for the beautiful flowers and words of comfort in our recent bereavement of the loss of our mother.

The Chidren of
Mrs. Charotte Schlei.

OYSTER SUPPER TURNED INTO BIRTHDAY SURPRISE

Mr. and Mrs. Art Kudje, Mr. and Mrs. Frank Kluckhohn and Mr. and Mrs. Fred Kluckhohn entertained a number of friends at the Art Kudje home to a delicious oyster supper.

However, the affair was nicely turned into a birthday surprise party on Mrs. R. A. Jorgenson, who that day celebrated her birthday, and also Mrs. C. F. Keraus who had a birthday a few days previous.

Finally a large birthday cake was placed on the table as a center-piece and the honored guests were presented with beautiful and useful gifts. Following the dinner the evening was spent in playing bid whist and prizes for high scores were awarded to Mrs. C. G. Waterman and R. A. Jorgenson. Frank Kluckhohn and Mrs. C F Keraus tied for consolation honors.

All had a fine time and were only sorry that Mrs. Frd Kluckhohn, who was ill, was unable to be at this happy gathering.

36 JARS OF FOOD SET AS GOAL BY 4-H CLUB GIRLS

Reports Are Beginning To Come To Farm Bureau Office At Britt

The 4-H Club Girls of Hancock County are working hard to complete their goals in their club work. Some of the first girls accomplishing these goals and have reported to the Farm Bureau office are:

Marie Greiman, Liberty township.
Lucille Bonar, Madison.
Catherine Kellogg, Bingham.
Gertrude Tobin, Concord.
Wilma Perkins, Britt.
Fern Smith, Erin.
Sadie Everett, Boone.

The goals these girls accomplished was that each canned at least 36 jars of foods consisting of 6 varieties of fruits and 6 varieties of vegetables, improved 3 food habits and planned their food budget for one winter month.

Catherine Kellogg of Bingham township carried over the principals from her work in club last year the variety is always most interesting and has caned rhubarb, apples, currents, plums, raspberries, gooseberries, corn, tomatoes, swiss chard, kohlrabi, tring beans and beets. Catherine's leaders, Miss Margreete Tjaden and her mother, Mrs. E. W. Kellogg, have worked hard with the girls and they believe in the statement that good leadership means good fellowship because each girl in the club has the greatest respect for her leaders and this club was able to cooperate so that their club could have the largest attendance of girls and their mothers present at the Achievement Day held in Garner this fall.

Gertrude Tobin of Concord township believes in being the best kind of a 4-H club girl. When she sent her list of foods in she said that a girl cannot be a 100 per cent 4-H club girl if she s, fails to have at least two fruits and vegetables daily, one of these being raw; 2, clean her products thoroughly before canning; 3, drinks at least one pint of milk daily; 4, brushse her teeth three times daily; 5, drink at least 8 glasses of water daily; 6, bathe daily; 7, get at least 8 hours sleep each night; 8, wears comfortable low heeled shoes; 9, exercises daily; 10, drinks no tea or coffee. Gertrude believes as her leaders, Mr. W. L. Lawhorn and Mrs. Wolwood, do that we must have definite aims to work for and then strive to accomplish these aims of which the Concord Club has done the past year.

Marie Greiman is going to have well balanced meals which mean good health. She has planned to have whole potatoes at least once a day, whole wheat bread every day, beets once a week, cabbage twice a week, squash once a week, onion once a week, apples every day, peas twice a week, beans twice a week, a fruit every day.

Three food habits which Lucille Bonar has improved are that she eats a good wholesome breakfast each morning, eats a whole grain cereal every day and a raw vegetable every day. By making these habits a part of her daily health routine, she will be able to be well fitted for all her work and enjoy it for good health means happiness, and happiness means success. Mrs. Ferd Gelner and Mrs. Herman Gelner, her leaders, have been of the greatest help to this club during the past year and they have lived up to the above rules of success.

Wilma Perkins, Fern Smith, Sadie Everett, and all the girls in the various clubs who have completed their goals have been real loyal 4-H club girls and have helped inspire the rest of their club group to work for the best clubs and thus accomplish bigger things themselves.

HUNTERS HAVE GOOD LUCK ON OPENING DAY HERE

Hunters who ventured out into the cold and rain Wednesday morning were nearly all rewarded with a limit bag on pheasants.

This year hunters are allowed to shoot three birds a day, either male or female.

Friday and Saturday are also open days on the game bird.

JUST A PUFFBALL

MOST of us have learned that the plant we call a puffball derives its name from the fact that while it looks substantial enough, it collapses, at the slightest touch.

The plant is easily recognized. Not so, however, the human of the puffball species. Indeed their appearance is frequently deceptively substantial and they sometimes do great hurt before their true nature of an air inflated shell is discovered.

One of the puffball family is the friend who professes great affection, who is the jolliest company when you're having fun together, but who grows absent-minded when you speak of your aims, your aspirations, your troubles or your children.

Another of the puffball family is the woman who tells her friends' affairs, the most intimate details of their family and business matters, or not in the spirit of gossip, understand, but just because it makes an interesting story. These things are secrets, of course, and she wouldn't tell them to another soul, but they are a case in point of something you were discussing. Of course you'll never repeat. . . . That particular woman is not vicious, nor false, as far as intentions go. She is just—a puffball.

Prominent in the puffball family is the man or woman, since we're speaking particularly of women, who expects to get by on her charm, who even wants you not to expect too much of her. With her an appointment is something to be kept if convenient, a promise something to be fulfilled if possible without too much trouble, a loyalty to be clung to as long as the world doesn't make this too difficult for you. This type of woman would never get into a fight for a friend, will never get gray hair over other people's trouble or pain even her nearest and dearest, will never make bad friends by telling too much truth. She'll never get very angry at you—nothing could make her care enough. She's just a puffball.

We all have special favorites in the puffball family that we should like to see extinct. What's yours?

Mother's Cook Book

One of the hardest lessons we have to learn in this life, and one that many persons never learn, is to see the divine, the celestial, the pure, in the common, the near at hand—to see that heaven lies about us here in this world. —John Burroughs.

HOT PUDDINGS

PUT a dozen small home-canned pears into a stewpan with enough water added to their juice to make three cupfuls and a half; add one cupful of sugar, a piece of whole cinnamon and the rind of half a lemon; simmer until the pears are well heated. Remove the fruit, reduce the sirup, put the pears back into it and keep warm. Butter a border mold and fill with boiled rice. Cover and steam for fifteen minutes. Turn out the border on a hot dish, fill the center with the pears. Decorate with cherries and candied peel. Strain the sirup and pour it around the rice and serve.

Blueberry Pudding.

Sift together one cupful of flour, two teaspoonfuls of baking powder, a salt spoonful of salt and half a cupful of sugar; stir into it two well-beaten eggs and two cupfuls of milk. Mix a pint of drained blueberries which have been dredged with flour and pour into a well greased mold; cover and steam two hours. Decorate with whipped cream. Serve with vanilla sauce.

Orange Souffle.

Butter a pudding dish and tie a band of buttered paper around the outside to come up two inches above the top. This is to keep the pudding from rolling over the top while cooking. Scoop out the pulp from six oranges, melt two tablespoonfuls of butter in a saucepan, add two tablespoonfuls of flour and cook until thick; remove and cool. Beat three egg yolks and three tablespoonfuls of sugar, one at a time; add the beaten whites lightly folded in. Fill the pudding dish and sprinkle over the top a tablespoonful of grated orange rind. Cover with buttered paper and steam in a steamer for thirty-five minutes, or it may be placed in the oven in water and baked. Serve with the sugared orange and whipped cream.

Swiss Snow Pudding.

Put one quart of milk, one-half cupful of sugar, one bayleaf and the grated peel of half a lemon in a saucepan; when boiling stir in one-half cupful of tapioca and cook fifteen minutes. Remove the bayleaf and add the well-beaten yolks of two eggs. Pour into a buttered baking pan, set in hot water. Arrange three tablespoonfuls of preserved peaches over the top, cover with a meringue made from the egg whites and a tablespoonful of sugar and brown in the oven. Serve with fresh green peach leaves for a garnish if possible.

Gingerbread Pudding.

Heat one cupful of molasses, one cupful of brown sugar and three tablespoonfuls of butter; remove from the fire, add one teaspoonful of soda dissolved in a quarter cupful of boiling water, three cupfuls of flour, one-quarter of a nutmeg grated, one teaspoonful of ginger, one teaspoonful of cinnamon, two well-beaten eggs, one cupful of chopped prunes or raisins and four pieces of preserved ginger. Steam for three hours in a melon mold. Serve with whipped cream.

THE ROAD THAT'S HARD TO FIND

By DOUGLAS MALLOCH

THE road was rough, and hard to find,
And dark as dark could be,
And I have troubles on my mind,
A way is hard to see.
But I remember I kept on,
And I remember night brought dawn,
A little later, I recall,
I found the right road, after all.

I walked, I recollect, a wood,
A wood where trails were few.
I stumbled on the best I could—
That's all there was to do.
That's all there is to do right now,
Is just to stumble on somehow,
To do the best I can, and pray.
And wait the breaking of the day.

I'm walking some such road tonight,
A road as hard to grope,
But I keep watching for the light,
And won't let go of hope.
For I remember I kept on,
And I remember night brought dawn,
A little later, I recall,
I found the right road, after all.

Why We Do What We Do

by M. K. THOMSON, Ph. D.

WHY WE DON'T APPRECIATE WHAT WE HAVE

THE story is told of a little boy who used to admire the house with golden windows over a hillside several miles away. Each evening at sunset time he would get all excited about the house with the golden windows.

One day he was permitted to make the pilgrimage to the other hill in quest of the secret. It took a long time for his little legs to cover the few miles to the neighboring hill. Finally as he neared the place he could see nothing but an ordinary farmhouse and the windows were only glass, not overly clean.

He was the most disappointed boy in the world. His trip had been in vain. Tired and discouraged he sat down in front of the house to rest. The sinking sun was casting its rays in the direction of his own home. Lifting his eyes longingly toward home his heart leaped to his throat as he saw that his own home was the house with the golden windows.

We do not appreciate what we have because we lack the proper perspective to see its true worth. Like the boy in the story we need to get away from it to see the sun shining on it and turning it into gold. The things and persons that belong to us are too close. We need to get away from them for a while to appreciate their worth.

This is the genius of a vacation. Every man gets to the place where his work, his wife and children, his home with all its luxury begin to pall, to get on his nerve as we all say. A little distance, a little change and vacation performs wonders for him.

We do not appreciate what we have because it lacks romance. It is already ours and we do not exert ourselves in its behalf. We lose interest.

(© by McClure Newspaper Syndicate.)

Dear Editor:

TODAY we went through a town that wasn't very prosperous. You can imagine how poor they are—they only had three traffic lights.

Downtown was a billboard listing the contributors to a new cotton glove factory. Amounts from $3,000 down to $60 were listed. "Local boosters," the signboard read.

What in the world does a town want a cotton glove factory for?

Today we passed through the heart of the corn starch region. Thousands of standing ears are on their way to become chocolate pudding or boiled shirts.—Fred Barton.

Soy Bean Crop to Justify Combine

Advisable Only in Case Where Job Totals 100 Acres of Crop.

(Prepared by the United States Department of Agriculture.)

The purchase of a combine harvester for harvesting soy beans is advisable only in the case where the job of threshing per season is at least 100 acres of soy beans or 100 acres of soy beans and small grain, says the bureau of agricultural economics, United States Department of Agriculture. On such an acreage, says the bureau, the total per-acre charge, including interest and depreciation, will be less for a ten-foot combine than for an eight-foot binder and custom threshing.

Cutting Loss Average.

"The experiments have shown that in straight combining the cutting loss averages about 8 per cent and the threshing loss about 2 per cent, and that when the crop is harvested with a binder and threshed with a stationary separator the binder loss averages 20 per cent and the separator loss 3 per cent," says the bureau. "The relatively large harvesting loss for both binders and combines is due partly to shattering, but the greatest loss is due to low hanging pods being missed by the cutter bar, which cannot be adjusted to cut lower than four inches above the ground. Investigations in Indiana indicate that windrowing and picking-up with a combine is inadvisable except where ripening is not uniform.

"Analysis of combined soy beans has shown an average moisture content of 12½ per cent, and on beans threshed from the shock the moisture content ran about 15 per cent. Most combined beans are generally below the allowable moisture content of 15 and 16 per cent for United States soy bean grades Nos. 1 and 2, but beans which are bound and threshed usually run over these amounts. To offset this lower moisture content in combined beans it is necessary to delay combining from three to ten days after the time for cutting with a binder.

Harvesting Charges.

"Reports indicate that combine operators harvest about twelve acres in a six-hour day and binder operators ten acres in about seven hours. The charge for harvesting with a ten-foot combine is about $1.10 per acre and for an eight-foot binder, including threshing, about $3. This does not include interest and depreciation, which are large items on a combine."

Orchard Renovation Is Profitable Operation

Many growers are confronted from time to time with the problem of renovating an orchard. Unless the orchard is nearly dead, renovation will be a very profitable operation.

It is hard to choose a starting point in such an operation. Probably the best place to start is in the early fall and the first thing to do is to give the orchard a good pruning. Dead limbs should be taken out first. Then the light conditions of the whole tree should be improved by taken out good sized limbs here and there where they will do the most good. After this the other bearing wood should be thinned out slightly.

After pruning, a good dormant spray is next in line. This will clean up any scale which may be finding a poor living on the old or uncared for trees.

A fall application of nitrogen is very desirable applied at the time the orchard is pruned. This will get the nitrogen into the tree for use in the spring and will aid the pruning in bringing about a good set of fruit.

Farm Notes

Fall is the time for fixing lawns.

* * *

Study the home grounds now for changes you may want to make for next year.

* * *

Select seed corn for next year. Save only healthy, early-matured ears from vigorous and disease-free stalks.

* * *

Trash, litter, and dead grass and weeds that may form a harbor for the meadow mouse should be kept away from the tree trunks.

* * *

Since peach leaf curl is a disease spasmodic in appearence, it pays to play safe and spray, though no sign of the disease is apparent.

* * *

Damp weather and poor seed favor most of the losses from plant disease. The weather cannot be controlled, but disease-free seed is a help.

* * *

Trees that are given a moderate amount of pruning at regular intervals will usually produce more profitable crops than those that are pruned heavily and then neglected.

* * *

Sod orchards generally suffer worse from mouse injury than cultivated ones because more mice are likely to be present and better nesting places are generally found near the tree trunks.

* * *

Contrary to general belief, alfalfa hay is a good feed for horses, and has no bad effects if it is not fed in large quantities. About a pound a day for each 100 pounds live weight of the animal is not too much.

Are you prepared to render first aid and quick comfort the moment your youngster has an upset of any sort? Could you do the right thing—immediately—though the emergency came without warning—perhaps tonight? Castoria is a mother's standby at such times. There is nothing like it in emergencies, and nothing better for everyday use. For a sudden attack of colic, or the gentle relief of constipation; to allay a feverish condition, or to soothe a fretful baby that can't sleep. This pure vegetable preparation is always ready to ease an ailing youngster. It is just as harmless as the recipe on the wrapper reads. If you see Chas. H. Fletcher's signature, it is genuine Castoria. It is harmless to the smallest infant; doctors will tell you so.

You can tell from the recipe on the wrapper how mild it is, and how good for little systems. But continue with Castoria until the child is grown.

Heaven never helps the man who is a victim of that tired feeling.

Moral dyspepsia sometimes around disguised as piety.

Needless Suffering

The next time a headache makes you stay at home—

Or some other ache or pain prevents your keeping an engagement—

Remember Bayer Aspirin! For there is scarcely any pain it cannot relieve, and relieve promptly.

These tablets give real relief, or millions would not continue to take them. They are quite harmless, or the medical profession would not constantly prescribe them.

Don't be a martyr to unnecessary pain. To colds that might so easily be checked; to neuritis, neuralgia; to those pains peculiar to women; or any suffering for which Bayer Aspirin is such an effective antidote.

For your own protection, buy the genuine. Bayer is *safe*. It's always the same. It never depresses the heart, so use it as often as needed; but the cause of any pain can be treated only by a doctor.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

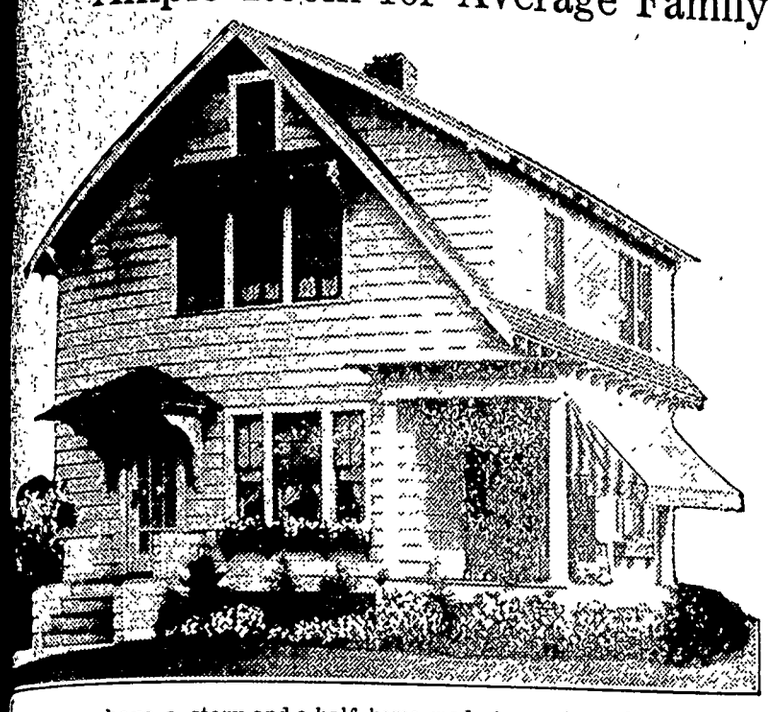
...tractive Home That Provides Ample Room for Average Family



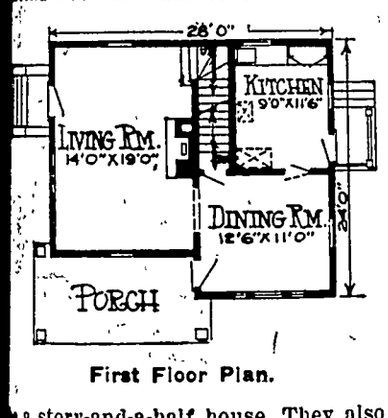
Here we have a story-and-a-half home made larger by a dormer projec... The porch and the living room will appeal to those who want comfort ...t and ventilation. The home is 24 feet wide and 28 feet deep and contains ... rooms.

By W. A. RADFORD

...r. William A. Radford will answer ...stions and give advice FREE OF ...T on all subjects pertaining to ...ctical home building, for the read... of this paper. On account of his ...e experience as editor, author and ...nufacturer, he is, without doubt, the ...hest authority on all these sub...cts. Address all inquiries to William ... Radford, No. 407 South Dearborn ...reet, Chicago, Ill., and only inclose ...o-cent stamp for reply.

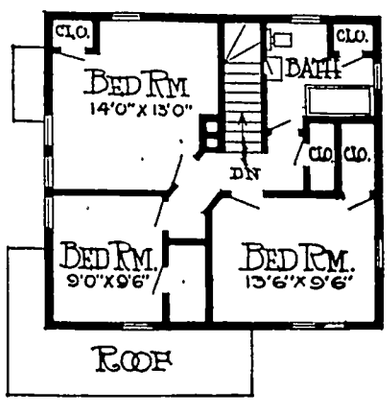
When the Dutch settled on Manhat... island and in the adjacent terri... more than three hundred years ..., they brought with them some un...al ideas in home building, and the ...t homes built in New York have ...t their impress on the architecture the whole United States. The Dutch ...onial home is very popular and ...oses following the original Dutch ...ign with many minor changes are ...ng built today everywhere.

The feature which identifies the ...ich colonial is a wide dormer set ...o a steep pitched roof. Such dorm... allow rooms of full height on the ...cond floor of what otherwise would ...e a story-and-a-half house. They also ...eak up the severe roof lines and ...end to make the exterior of the house ...ore attractive.



First Floor Plan.

An unusual use of the Dutch colonial dormer idea has been made in the home building design shown in the accompanying illustration. Here an open porch has been set onto one corner of the house. From the outside of the porch roof a steep pitch has been run into the ridge and in this roof is a dormer which provides space for two extra bedrooms on the second



First Floor Plan.

floor. The exposed roof rafters also help to break the severity of the lines of this house.

The building itself is 28 feet long by 24 feet deep. The entrance at one side of the front leads directly into a living room, 14 feet by 19 feet. A cased opening connects the living room with the dining room the walls of which extend out part way of the width of the open porch. At the rear on the corner is the kitchen.

Stairs run out of the dining room to the second floor where there are three bedrooms, each a corner room, and a bathroom.

For prospective home builders who want a rather unusual design for their homes, this plan will appeal. The house is not high in cost but is attractive and provides ample room for a medium-sized family. It is of frame construction and has a basement of the same dimension and lines as the foundation walls.

Group Harmony Gives Satisfactory Results

The value of harmony in design in groups of houses and other structures is becoming more appreciated, as is evidenced by several housing schemes followed in certain other developments.

The American, when he builds for himself, has a strong desire for individuality of expression. This is shown in most any suburb where you will see a neighborhood of houses in which many styles of architecture, materials, color schemes, etc., are represented. The lines and shapes have no relation to each other, so that as you look at the group there is a spirit of unrest and clashing in many respects. The whole group lacks repose and the homelike feeling is interfered with, even although each individual house might be good enough in itself.

Possibly this result is a reaction from the individuals having previously lived in city rows of a stereotyped plan. Having been previously suppressed, when the opportunity offers they go to an extreme of expression, or possibly it might in some cases be due to the architect's desire to have the individuality of the house stand out or the wealth of materials and knowledge of styles which we have at our disposal may also tend to this variety in treatment. In any case the result is not entirely satisfactory and could be improved.

Variety and individuality sufficient for any reasonable nature may be obtained even when the buildings are designed with relation to each other, and harmonize in line, shape, materials, color, etc.

When this principle can be applied to residence subdivision a much more artistic result will be produced.

Modernistic Furniture Painted By Purchaser

Modernistic furniture can now be purchased at most furniture stores unpainted, to be decorated by the purchaser as he sees fit or pleases. The cost of this unpainted furniture is considerable less than the finished product and has the added advantage of allowing the home maker to finish it off in any color that fits well into the general decoration scheme of his home. The new lacquers and the quick-drying enamels are easy to apply.

Large Variety of Wall Paper for Builder's Pick

There is no way to bring originality into your scheme of home decoration more easily than by using a delightful wall paper.

There are myriads of good wall paper designs, lovely in color and charming in pattern, that are both beautiful and original. Their use immediately sets your room apart from the rest, for the large space walls covered with a well-chosen paper dominate the scheme and strike a note of unusual interest that is not duplicated by a plain wall. There are so many wall paper patterns that there is no reason why any kind of effect cannot be achieved by their use.

Wall paper is made to simulate many other materials, marble, chintz, linen, velvet, ribbon, tile, wood and others, and the art of printing has reached such a state of proficiency that sometimes it is difficult after the paper is hung to tell the copy from the original.

These papers give many attractive opportunities to the home decorator to make her home different from the general run, and they are adequate expressions of her own good taste and sense of what makes charm.

Population Is Factor in the Price of Land

We are in the habit of judging values of real estate by the general activity of the real estate market, building operations, building permits issued, acreage bought and sold, general business conditions and similar indicia. But there are other important ways of gauging rising values.

The growth in population, transportation, utilities, industry, public improvements, etc., are some other factors which add to permanent real estate values because they indicate demand, accessibility, comfort, buying power, progress, desirability and the like, to the prospective buyer.

We have only to imagine the sales resistance in marketing a piece of urban real estate without improved streets, without utilities like gas, electricity, water, sewers and telephones; without factories or business nearby to create pay rolls; without rapid transportation to and from regular places of employment or business, and the importance of these factors in creating and increasing values in real estate becomes self-evident.

POULTRY

"OLD SETTIN' HEN" IN LOSING RACE

Incubators on Farm Hatch 24 Per Cent of Chicks.

(Prepared by the United States Department of Agriculture.)

The fluffy old mother hen continues to lose out in the race with the mechanical substitutes, but she is still on the job, according to the reports sent to the United States Department of Agriculture by the crop correspondents of the bureau of agricultural economics. About 43 per cent of all chickens raised are still hatched under hens, the reports indicate. Incubators on the farm hatch about 24 per cent of the chickens raised, and eggs supplied by farmers and hatched for a fee amount to about 10 per cent. Commerical hatcheries now hatch about 23 per cent of the annual baby chicks crop.

A distinct difference is evident when regional areas are compared. In the South Atlantic states from Virginia to Florida and in the South Central states, the hen holds her own and hatches about two-thirds of the chicks as compared with all others. Rhode Island with only 14 per cent of hen-hatched chicks is the lowest in this respect, and in no other states is the percentage lower than 20. The North Atlantic and the Western states buy the largest proportion of baby chicks, 45 per cent and 41 per cent, respectively. Farm hatching of chicks in incubators is most popular in the North Central states, more than 30 per cent being reported from this source. Missouri and Kansas each with 40 per cent of their chicks hatched in incubators on the farms are high in this group.

Moist Mashes Favored for Keeping Up Weight

Moist mash is a means of keeping up the body weight of the pullets and hens. Noon is the best time to feed the moist mash in the winter. In feeding the moist mash put it in troughs well spread out so that all of the hens can eat readily and don't feed more than they can clean up in from 15 to 25 minutes. Any moist mash remaining in the trough should be removed. In mixing the moist mash use liquid skim milk or buttermilk if available; if not, warm water may be used, or if fresh meat is cooked for the hens, the liquid should be saved and used in making the moist mash. In any case, do not feed a cold moist mash to the flock, as they do not eat it as readily and what they do eat will more or less chill the birds, and by so doing take considerable of their energy to warm them up again, so be sure to have the moist mash warm before feeding.

Low Temperature Very Essential in Storing

When an egg is first laid it contains no air cell. As the contents of the egg cools and evaporation starts, the air cell develops. This air cell continues to grow larger as the egg grows older, due to evaporation of moisture through the porous shell. An egg that is held in a warm room will show a larger air cell because the heat aids in bringing about more rapid evaporation. This makes the air cell a valuable aid in determining the quality of the egg. An egg which is a month old will not show much increase in the size of the air cell, if stored in a cool place; neither will its quality deteriorate greatly if properly stored. This is the reason why a low temperature is essential in storing eggs.

Buying Pullets

Buyers of pullets should know that age is not as important as weight and quality in buying pullets. In a flock of pullets of the same age and breeding, there will be three distinct grades of birds. In buying pullets at a flat rate it pays to weigh at least part of the birds and give them all a health inspection. In selling pullets it pays to know something about their cost of production. There are too many pullets sold for $1 each that cost approximately $1.20 each to produce.

No Best Breed

There is no best breed of chickens for laying or meat. There are a number of breeds that have been bred for egg production and any one of these will make a good record if they are fed and cared for properly. There are strains of Barred Rocks that have been bred for high production as well as Wyandottes, Rhode Island Reds and others. Be sure, in buying eggs of any of these breeds, that they come from high producing stock and from reliable dealers.

Fattening Ration

A useful fattening ration recommended by the Purdue station consists of 20 pounds of yellow cornmeal, 10 pounds of ground oats and 10 pounds of flour middlings, mixed with 80 pounds of buttermilk or skim milk. The mixture is allowed to stand 24 hours before using, the feed supply being prepared a day ahead of time throughout the fattening period. The poultry is confined in crates and given as much twice each day as the birds will clean up in about half an hour.

"Makes More Bread Than Any Flour I Ever Used"

Mrs. G. H. Blodgett
R. R. No. 1, Waverly, Minn.

"My neighbor who bakes 28 to 30 loaves of bread a week came over one day in tears. She said her bread turned out like lead and almost black. I told her it served her right because she did not use Gold Medal Flour that's 'Kitchen-tested'. She got a sack of Gold Medal and she said, 'Why, that flour is just like cake flour'. I told her there's never a failure with Gold Medal—besides it makes more bread than any kind of flour I ever used."

"Never a Failure With Gold Medal 'Kitchen-tested' Flour. The Only Flour For My Family" Says Mrs. Blodgett

It's Easy Now For Women To Have Baking Success

NO longer need they worry about perfect results. Now, they can be sure of success every time with pies and cakes, bread and biscuits. They use a new-type flour for all baking purposes—GOLD MEDAL *"Kitchen-tested"* Flour—that simplifies baking remarkably and banishes the cause of most baking failures.

Failures, experts found, were mostly due to the fact that 2 sacks of the same flour often *acted* differently, even with the same recipe . . . it was not *uniform* in oven action.

So now all GOLD MEDAL Flour is *"Kitchen-tested"* before it comes to you. As each batch comes through the mill it is tested by actual baking—bread, cakes, biscuits; pastries—in an oven just like yours. Only flour which acts the same perfect way every time is allowed to go out to you. Thus you know in advance exactly what *your* results will be.

Special "Kitchen-tested" Recipes In Every Sack
(Changed Every 3 Months)

Please accept, free of charge, simplified recipes for 12 of Betty Crocker's most delicious baking creations. Recipes for the daintiest cakes, the finest cookies, the most popular pastries known. Each one is "simplified" until it is remarkably easy, too.

All 12 of these simplified *"Kitchen-tested"* recipes are inside every sack of GOLD MEDAL *"Kitchen-tested"* Flour. You can get a full set today—simply ask your grocer for GOLD MEDAL *"Kitchen-tested"* Flour.

Engineering Feat

Moving a hill from the heart of a city, carrying it over streets without interfering with traffic, and dumping it from barges that turn turtle to empty themselves, is an interesting engineering task in progress at Seattle, Wash., says Popular Mechanics Magazine. The project involves the handling of approximately 4,500,000 cubic yards of earth, and transporting it more than a mile to the bottom of Elliott bay.

Modesty is innate. If it isn't, those who are devoid of it have an awful time.

Anyway, a pessimist never bores us with his funny stories.

Makes Life Sweeter

Too much to eat—too rich a diet—or too much smoking. Lots of things cause sour stomach, but one thing can correct it quickly. Phillips Milk of Magnesia will alkalinize the acid. Take a spoonful of this pleasant preparation, and the system is soon sweetened.

Phillips is always ready to relieve distress from over-eating; to check all acidity; or neutralize nicotine. Remember this for your own comfort; for the sake of those around you. Endorsed by physicians, but they always say *Phillips*. Don't buy something else and expect the same results!

Build Longest Bridge to Carry Phone Cables

Out in Arizona the telephone company has constructed what is believed to be the longest suspension bridge of its kind in the world, across the Gila river, says the New England Utility News. It was necessary to erect two towers 100 feet high on each side of the river from which were suspended two cables supporting cross-arms carrying the open telephone wires of the toll circuits. The span between the towers is 2,370 feet and approximately 800 feet longer than the span between the towers of Brooklyn bridge.

This type of construction was necessary because, while the Gila river during a large part of the year is a very shallow stream, there are times when sudden floods turn it into a raging torrent which would make it inadvisable to cross the river by means of a submarine cable, such a cable necessitating a length of more than 1,800 feet, which is considered the extreme length that can be used without loading pots. If loading pots were placed within the stream area, much difficulty might be experienced at flood times.

Says Senorita Too Modern

Senor Realito, a dancing master of Seville, Spain, has come out in a statement in which he despairs of the modern senorita. He says that she is not interested in the artistic past, but her mind is on only the present and future. When the gallant senor wants to teach her the sarahand and other equivalents of national dances, complete with castanets, the senorita asks for the Charleston.

Fortunate

Teacher—"How much home work do you do?" Billy—"We have a servant at our house."

Not Today

Hubby—"The garbage man is at the back door." Mrs. Newlywed—"Tell him we don't need any."

ATTENTION FARMERS!

Chemists' Trade Secrets Revealed!

Make your own remedies: Hog Cholera, Gall Remedy, Colic, Fertilizers, Milk Powder for Cows, Distemper, Condition Powders, Poultry Lice, Eradicators, Egg Maker, Insect Spray, Bug and Roach Exterminator. For Best Results in Home Dyeing

You can always give richer, deeper, more brilliant colors to faded or out-of-style dresses, hose, coats, draperies, etc., with Diamond Dyes. And the colors stay in through wear and washing!

Here's the reason. Diamond Dyes contain the highest quality anilines money can buy. And it's the anilines that count! They are the very life of dyes.

Plenty of pure anilines make Diamond Dyes easy to use. They go on evenly without spotting or streaking. Try them next time and see why authorities recommend them; why millions of women will use no other dyes.

You get Diamond Dyes for the same price as ordinary dyes; 15c, at any drug store.

AVERY TWIN LAKE NEWS ITEMS

(By Special Correspondent)

Grandma Schlawin has spent several days the past week at the Carl Wille home.

The funeral for Mrs. Charlotte Kehlei was held Sunday afternoon. A large crowd attended.

Mr. and Mrs. Henry Buseman and family were Sunday evening callers at the Hamo Beek home.

Ray Habercamp and daughter, Judy, were callers at the Emil Lau home one day last week.

Mr. and Mrs. Gilbert Schaefer and son, Bennie, spent Sunday at the Dick Swalve home.

Mr. and Mrs. Ben Swalve Sr. visited at the George Albers home Sunday afternoon.

Mrs. Carl Wille and daughter Arlene were Garner callers one day last week

Mr. and Mrs. Dick Swalve and daughter, Flo, were Mason City callers last week Friday.

A great number in this vicinity have finished corn picking, altho there are many of fields yet to be picked.

Mrs. David Schwichtenberg and children and Miss Berdice Schwichtenberg were Mason City callers last Saturday.

Bennie Beek, who works at the Edwin Josten home has spent several days the past week at the parental Beek home because of the illness and death of his sister, Mary. The funeral services were held on Tuesday afternoon.

Mr. A. J. Reemtsma of Aplnigton came Sunday to get his wife, Mrs. Reemtsma who had been visiting in this vicinity since Friday. He spent the day with relatives before returning Sunday evening. He has two children living here, Mrs. David Schwichtenberg and Ben Reemtsma, and is also a brother-in-law of Mrs. Dick Swalve.

THIRTY HIVES OF BEES PRODUCED TWO TONS HONEY

Albert Swanson is quite a bee man and certainly knows how to handle them to produce a profit.

Albert has thirty hives of bees at his farm north east of town. Last spring he shipped in a number of bees from Louisiana which arrived in small screen cages.

This fall Albert waged a war on the bees and after somewhat of a battle succeeded in removing two tons of honey from the thirty hives.

Besides what he took from the hives he left enough to provide the bees wit all they need until spring.

Thanks! Just phone that item of news to The Times. Phone 1-2.

NOTICE OF APPOINTMENT OF ADMINISTRATOR

STATE OF IOWA,
Hancock County, ss.

NOTCE IS HEREBY GIVEN that the undersigned has been duly appointed and qualified as Administrator of the estate of Amelei Josten deceased, late of Hancock County. All persons indebted to said estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned for allowance, and file in the office of the Clerk of the District Court.

FRED A. ARNOLD.

Dated October 23, 1929.

Chris J. Johansen, Clerk
District Court.

(Pub. Oct. 24-30, Nov. 7, 1929)

A. R. White will have a closing out sale next week Wednesday at which time he will sell over 200 head of livestock and a big line of good farm machinery. Mr. and Mrs. White will spend the winter in the west and expect to come to Iowa again in the spring and will live in Klemme. Allie is an ex-printer, we learn, so maybe we can convince him to help us out at the Times Shop.

TOOK SODA FOR STOMACH FOR 20 YEARS

"For 20 years I took soda for indigestion and stomach gas. Then I tried Adlerika. One bottle brought complete relief."—Jno. B. Hardy.

Adlerika relieves GAS and sour stomach in TEN minutes! Acts on BOTH upper and lower bowel, removing poisons you never knew were there. Don't fool with medicine which cleans only PART of the bowels, but let Adlerika give stomach and bowels a REAL cleaning and see how good you feel! Wilson Drug Store. F-1

A large crowd attended the pie social and bazar Thursday evening at Dist. No. 9. The club feature of the program was a play given by a few ladis of the District. About $45 was received from the sale of articles offered for sale.

H. S. Schwartz	Lot 6 Block 1, Lot 1 Block 2, and vacated street between Blocks 1 and 2	.6
Lena Medaus	Lots 2, 3, and 4, block 2	.6
Mary S. Moberly	Lots 1, 2, 3 and 4, block 3	.8

You and each of you are hereby notified that on the 17th day of October, 1929, C. F. Merten, having been duly appointed to make a survey, profile, map and report in the matter of inclusion of certain lands in drainage district No. 18, Hancock County, Iowa, filed in the office of the county auditor of Hancock County, Iowa, a report and petition asking and recommending that certain lands be included in said drainage district No. 18, as here in set out, and that said engineer has, in connection with said report, changed the original maps, plats and profiles to conform to said report, said report recommends that the above described lands be established and included in a drainage district known and numbered as drainage districts No. 18. in which certain improvements have been heretofore constructed.

You are further notified that the board of supervisors of Hancock County, Iowa, have fixed the 2nd day of December, 1929, at the hour of ten o'clock A. M. in the Court House in Garner, Iowa, as the time and place for hearing thereon and that all claims for damages on account thereof except claims for right-of-way taken by said improvement, and all objections to the establishment of and inclusion in such district must be made in writing and filed in the office of the county auditor of Hancock County, Iowa, on or before the time fixed for such hearing. This publication is made by order of the board of supervisors.

Dated at Garner, Iowa, October 21, 1929.

CHRIS JACOBS,
County Auditor,
Hancock County, Iowa.

Healthy Stock--Poultry

Lee's Remedies Are Best!

WHAT IS GRMAZONE?

Space does not permit a full description of Lee's Products and so we ask you to call and get your copy of the new 65 page LEE WAY BOOK—it's free to poultry and stock raisers.

GERMAZONE is the most widely used poultry remedy on the market today. It's use tends to prevent diseases and keeps your poultry in the best of condition.

LEE'S GERMAZONE

12-oz. Bottle 75c; 32-oz. $1.50; ½ gal. $2.50; 1 gal. $4.50

LEE'S HOG OIL WORMER

Has proven in thousands of tests that it will positively and unfailingly expel the worms from swine. Quick recovery, thrifty appetites, faster gaining, after using Lee's Wormer.

1 qt. bottle $3.50; ½ gal. $6.00; 1 gal. $10.00

LEE'S GIZZARD CAPSULE (For Poultry)

50 cap. pkg. $1.00; 100 cap. pkg. $1.75

LEE'S FLU-KOFF EMULSION

½ gal. bottle $3.50; 1 gal. bottle $6.50

LEE'S VAPO-SPRAY— ½ gal. can $1.25; 1 gal. can $2.00

LEE'S POUSE POWDER—1 lb. can 25c.

BULK DIP and DISINFECTANT—90c per gallon.

BLUE RBBON DRY DIP—25 lb. Pail $2.85.

If you have not used LEE'S PRODUCTS on your Poultry and all Livestock—be sure to get the Lee Book which contiains a lot of valuable information on poultry and stock raising—how to prevent diseases, how to cure various diseases—and many valuable hints that will mean more money to you.

CAR COMFORT FOR WINTER DRIVING
When You Heat Your Car With A

Tropic-Aire

The Original Fan-Equipped HOT WATER Car Heater

TROPIC-AIRE HEATERS have proved their superior features and reliability during two long, severe winters of service from coast to coast, on all makes of cars as well as thousands of de luxe busses and taxicabs. The welcome heat from the Tropic-Aire is circulated throughout the car by an electric motor-driven fan, controlled from the instrument board. The Heater is directly connected to and becomes a part of the water circulating system, distributing clean steady heat throughout the entire car ample for the most extreme cold weather—yet it cannot burn or scorch clothing or shoes. In summer, turning a simple valve faucet shuts off the hot water, allowing the fan to be used for ventilation, providing a cool circulation of air.

TROPIC-AIRE means—Hme Temperature in Coldest of Weather—Electric Fan Circulation—No Fumes, No Odors, No Carbon Monoxide Gas—Controlled by Handy Switch!

A Heater In Winter—A Ventliator In Summer!

AVERY LADIES HOLD LESSON ON NUTRITION STUDY

This Was The First Lesson On The Second Year Nutrition Course

The Ladies of Avery township held their first lesson in the second year nutrition at the home of Mrs. C. A. Arnold, October 25th. The subject studied was 'Diet for Expectant Mothers and Infant Feeding."

All of the Co-Operators were present but from two districts. Lets all be present at the next meeting.

One lady present spoke of how important milk was in the diet and especially for the teeth. Her little girl had drank a great deal of milk a day and how she was never without teeth and as soon as one came out another was there to take its place.

Everyone brought their own sandwiches and a creamed vegetable or fruit and it was served at noon.

In the afternoon Mrs. Arnold treated us all to cinnamon rolls.

At the close of the meeting photographs for the organization poster was taken.

One guest was present, Mrs. D. H. Stevenson from Savannah, Missouri, sister of Howard Barger.

Mr. Karl Kraus and Mr. and Mrs. Charles Kraus were at Fort Dodge Sunday looking over the beautiful scenery near there and the high railroad bridge.

C. F. Thompson is havin ghis pool hall repainted, the furnace fixed up and the tables re-cushioned. Mr. Thompson aims to have a first class place of amusement when he gets things fixed up the way he wants them.

You and each of you are hereby notified that on 18th day of July, 1929, Albert A. Schmidt Et Al filed in the Office of the County Auditor a petition and bond asking that the open drain of Drainage District No. 18 be changed to a closed drain, and that additional lands be included in the district and that the improvement be constructed to drain the same, and that Chas. F. Merten was appointed as a Preliminary Engineer to make survey, profile map and report upon the same and that the said engineer filed in said Auditor's Office on October 17th, 1929, a report, map, plat and profiled recommending that the above lands be included in the improvement which plan was tentatively approved by the Board of Supervisors of Hancock County, Iowa, on October 17, 1929, but which plan may be amended before final action thereon.

You are further notified that the Board of Supervisors of Hancock County, Iowa, have fixed the 2nd day of December, 1929, at the hour of one o'clock p. m. as the time for hearing thereon and that all claims for damages on account thereof, except claims for right of way taken by said improvement, and all objections to the construction of such improvement must be made in writing and filed in the office of the County Auditor of Hancock County, Iowa, on or before the time fixed for such hearing.

Dated at Garner, Iowa, this 21st day of October, 1928, and published by order of the Board of Supervisors of Hancock County, Iowa.

CHRIS JACOBS,
County Auditor,
Hancock County, Iowa.

The by-products of many manufacturing plants are the ones that show a profit, on the year's business, when the books are balanced.

In the dairy business there are three valuable by-products that must be taken into consideration when profits are figured up for the year.

Perhaps the most important of these by-products to the farmer, is the manure that may be utilized to keep up the fertility of the soil from year to year and enable him to raise bumper crops. Second in importance in the line of by-products are the calves that enable the farmer to build up and maintain a good, profitable herd. Third, is the skim milk that is so important in the raising of pigs and chickens.

Don't smply figure up your cream checks at the end of the year when you ask yourself if there is a profit in the dairybusinss, figure also the returns from the by products. And your profits will be greaterwhen you are a patron of the Klemme Co-Operatoive Creamery Company.

Klemme Co-op. Creamery Company

KLEMME LOCALS

Henry Josten is the owner of a new radio which he purchased of Karl Kraus.

"Dutch" Turgasen of Mason City spnt Sunday at home. Vernon, who is working at the Higley Plant is making good and we are glad to hear that he got a nice raise in salary the other day.

Miss Stella Bock and her uncle arrived in California at their destination near Los Angeles last Tuesday, a distance of 2,587 miles from Klemme. Stella reports that the weather is fine and that swimming is the order of the day.

Mr. and Mrs. Fred Arnold drove to Ames Saturdya morning where they met their sons, Fred from Wisconsin, and Asa of Iowa City, and all took in the football game together. Asa returned to Klemme with them for a short visit.

The Auxiliary ladies announce that they expect to continue the operation of ten cent movies every Saturday night, with the co-operation of the business men. The ten cent moyies are popular, according to the ladies and they hope to keep them going.

Mr. and Mrs. Ernest Palmby and son, Clarence, and daughter Gladys of Vernon Center, Minn., came last Saturday night to see Mrs. Harold Leitzinger, who has been seriously ill. They also visited with Mr. and Mrs. Henry Wille. They returned home again Sunday evening.

This Thursday evening Mr. and Mrs. A. D. Gimer will entertain for their daughter, Blanche, as it is her birthday. Those invited are the Camp Fire Girls, high school teachers, Glenna Gruetzmacher and Mabel Smith. Games and refreshments are the features of the evenings' program.

Rev. and Mrs. H. E. Whyte drove to Cushing, Iowa, last Thursday afternoon and spent the night with his folks. They then went to Storm Lake Friday and attended a Conference of ministers and laymen of the Northwest Iowa Conference at which general problems were discussed. They returned to Klemme Friday night.

New Accessory

The apparently respectable man was brought into a court for a petty theft. The judge interrogated him and it appeared he had been caught running off with a sign from a construction job.

"What did the sign say?" the judge asked.

"'No Help Wanted.'"

"Well, what in the world did you want with it?"

"You see, judge," was the meek answer, "I was going to hang it in the back of my car, where my wife could see it."

Ski-Cycles Replace Dogs

Motorcycles on skis are replacing Eskimo dogs in transporting mail, furs and supplies to isolated outposts in Alaska. The motorcycles make the trips in two days as compared with three weeks required by the huskies. The skis are wide enough to support the weight of the machine and to pack down the snow to a hard surface for the rear power wheel of the machine. The machine will also carry the sick from trading posts.

Davis Relic Preserved

A letter written in longhand by Jefferson Davis, President of the Confederacy, is one of the valued possessions of the little museum of Bethel college, near Russellville, Ky. The letter, dated May 15, 1872, expresses Davis' thanks to the Neotrophian society for an honorary membership conferred upon him.

Big Business

Passer-by (suspiciously)—Why are you begging with two hats?

Beggar—Trade is so brisk that I've had to enlarge my premises.—Royal Arcanum.

Natural Result

Townbird—I suppose you've made your garden bed?

Suburb—Yes; and now I have to lie about it.—London Answers.

Court Paid Attention

Sally—So you were arrested for speeding? What did the judge give you?

Irene—Only an invitation so far.

Fixing the Detour

"What? The main road to Binksville is open all the way?"

"Yes, we had to open it until we get the detour fixed."

NEWS REVIEW OF CURRENT EVENTS

Hoover's Extensive Program for Waterways—Golden Jubilee of Light.

By EDWARD W. PICKARD

PRESIDENT HOOVER has definitely taken his position as champion of the development of our inland waterways and set forth the policy of his administration in that connection. In an address at Louisville, made during his trip down the Ohio in the celebration of that river's canalization, the Chief Executive proposed a program that would call for the expenditure in the next ten years of approximately one billion dollars for the inland waterways projects. He would complete the canalization of the Mississippi system of 9,000 miles within five years at an annual outlay of $10,000,000 over the present appropriation, and would be ready to spend as much more on the St. Lawrence project.

The chief points of the President's program are thus summarized:

Establishment of a nine-foot depth in the trunk systems and six or seven feet in the tributaries of the 9,000 miles of navigable rivers of the country.

The federal government should not only retire from the operation of ocean shipping, but from the operation of barges and craft on these rivers after the period of pioneering.

Completion of the entire Mississippi basin system of waterway in five years.

The 746 miles of intercoastal canals should be lengthened by 1,000 miles during the next ten years.

The great lakes channels should be further improved and the lake levels stabilized.

This Mississippi flood control project to be expedited and finished in ten years.

Harbors and their littoral waterways to be maintained and deepened to accommodate the expanding foreign commerce.

When it came to the matter of providing the needed funds, Mr. Hoover adopted the idea of beating our swords into ploughshares. He expressed the hope that the great increase in expenditures involved would be balanced by reduction in the expenditures for the instruments of war as the result of the present international negotiations for naval limitation.

Mr. Hoover's first participation in the Ohio river celebration was at Cincinnati where, in Eden park he helped dedicate a monument to the men who started the canalization work 84 years ago and, as an engineer, gave high praise to the way in which the project had been carried out. He and his party then took a stormy ride to Louisville on the old lighthouse tender Green Brier, stopping briefly at Madison, Ind. Patrol boats, yachts and other passenger boats carrying members of the Ohio Valley Improvement association and officials from several states trailed in the wake of the Green Brier, making a flotilla of 16 vessels.

As the President's train was returning to Washington some persons discovered near Albany, Ind., an automobile placed across the rails. It was supposed an attempt had been made to wreck the train, and indeed that might have been the result; but two negroes who were arrested said they had put the car on the track in hope of collecting damages for its destruction.

LIGHT'S golden jubilee, the fiftieth anniversary of the creation of the incandescent electric lamp by Thomas A. Edison, was celebrated more or less all over the world but centered in the transplanted early American village, Greenfield, built near Detroit by Henry Ford. There were gathered President and Mrs. Hoover, Secretary of War Good and other government notables, Mme. Curie of France, co-discoverer of radium, and a host of other important people to do honor to the "Wizard" and his achievements. Bowed by his eighty-two years and almost overcome by emotion, Mr. Edison, in his rebuilt old original laboratory, repeated his final test of the first successful incandescent light, and then at a banquet heard what his fellow citizens and the world generally thinks of him and his inventions. Congratulatory messages from the prince of Wales, President Hindenburg of Germany and others were read; Owen D. Young as toastmaster was eloquent, and President Hoover revealed a delightful vein of humor as well as a deep appreciation of what Mr. Edison has done for humanity. Especially did he give the inventor credit for the way he has demonstrated the value of the modern method and system of invention by highly equipped, definitely organized laboratory research. Henry Ford and his son Edsel, the hosts of the occasion, declined to speak. Mr. Edison himself, in broken tones, thanked the American people for the tribute paid him and gave credit for a full measure of his successes to his fellow workers and the great thinkers of the past.

The celebration at Greenfield was supplemented by the dedication of the Edison Institute of Technology which Mr. Ford has created as his concrete tribute to his friend, the "Wizard of Menlo Park."

REPRESENTATIVES of twenty-nine co-operative live stock sales agencies, meeting in Chicago at the call of Chairman Legge of the farm board, made satisfactory progress with the organization of a central sales agency. It will have subsidiary corporations owned by its member agencies and financed to extend activities toward stabilization of the live stock industry.

Addressing the sixth conference of major industries in Chicago, Mr. Legge warmly advocated an economic parity between industry and agriculture as the only way to check the increase of radicalism in America.

"The public can rest assured," Mr. Legge said, "that the American farmer will never be reduced to peasantry, but unless he gets help, and gets it quickly, drastic results may be expected. You can't blame the farmers for backing radical blocs. Those blocs represent distress at home. If we remove the distress we remove the radicalism. If we don't we'll see radicalism in the future that is going to be worse than that we've had in the past."

DEMOCRATS and radical Republicans of the senate, striving at least ostensibly to make the tariff bill more favorable to the farmer, began their fight against the schedules of rates. Their success was variable, and the hottest parts of the battle are yet to come. The debates were so long drawn out that there were renewed fears that the measure would fail of enactment in the special session.

Herbert C. Lakin of New York, president of the Cuba company, was an interesting witness before the senate committee investigating lobbying. He said that American interests with Cuban sugar investments had thus far spent $75,000 in lobbying against an increased duty on sugar, and that propaganda headquarters have been maintained in Washington at a cost of $24,000 to date. Mr. Lakin insisted that he and those he represents do not desire to injure the domestic beet sugar industry and have tried to work out a scheme that would be equitable to all groups. Replying to Senator Caraway's questions, the sugar man said he believed his interests would have been unsafe if he hadn't employed persons to represent him in Washington.

ARISTIDE BRIAND, premier of France, and his cabinet stepped out of office last week because the chamber of deputies, by a vote of 288 to 277, refused its confidence in Briand's foreign policy. Briand, who has been premier 13 times and is in poor health, announced positively that he would not accept the task of forming another government. When parliament opened Briand demanded that debate on his foreign policy be postponed until after he had conferred with allied governments, until the conference at The Hague had been resumed for final action on the international bank, and until after final repartition of German reparations. This the chamber refused, deputies of all parties joining in the opposition vote. Dislike of the Young reparations plan and of the contingent evacuation of the Rhineland was strongly evinced by the right wing, which was surprised by the fall of the government. The left wing leaders said they really were strongly in favor of the Young plan and the evacuation program. Eduard Daladier, Radical Socialist, was picked to form a new cabinet.

BECAUSE a Slovene student was executed in Pola, Italy, there were violent anti-Italian riots in Belgrade and other cities of Yugo-Slavia, and the Italian representatives in that country were threatened and insulted. Consequently Mussolini, through Minister Carlo Galli, made indignant remonstrance, demanding immediate investigation and the cessation of the press campaign against the Mussolini policies.

CROWN PRINCE HUMBERT of Italy arrived in Brussels to ask officially for the hand of Princess Marie-Jose of Belgium, and when the king and queen gave their consent the engagement was formally announced. The consent of the king and queen of Italy was published at the same time. Prince Humbert next day went to place a wreath on the tomb of Belgium's Unknown Soldier and was there shot at by a young Italian student, Fernando di Rose. Humbert, who was unharmed, stood quietly until the tumult was stilled and then proceeded with the ceremony.

CIVIL war in Afghanistan apparently is ended for the present, for news comes that Bacha Sakao, the deposed king, and 1,000 of his followers have surrendered to Nadir Khan, the new ruler, stipulating only that their lives be spared. Amanullah, the former king, has sent his warm congratulations to Nadir.

DESTRUCTION, by explosion and fire, of the Hollywood laboratories of the Consolidated Film industries caused a loss of millions of dollars—nothing like an exact estimate being possible for some time. The place was used by about 75 per cent of the motion picture producers and included in the losses were a number of master films of new screen productions. Fifty persons were in the building at the time and all escaped unhurt except Albert Lund, who was taken out unconscious and died.

URBAN F. DITEMAN, JR., Montana cattleman and amateur aviator, started a surprise hop from Harbor Grace, Newfoundland, for London, and presumably was lost in the Atlantic, though there was a remote chance that he landed somewhere in Greenland.

Dox, the huge German Dornier seaplane, made a successful flight over Lake Constance carrying 169 persons; these included 150 passengers, nine stowaways and ten members of the crew. The big ship rose rapidly and for nearly an hour flew at an average speed of 106 miles an hour, though it is capable of 138 miles. Italy, Japan and Spain immediately put in orders for planes of the same type.

SEVEN of the Communist labor leaders who were tried in Charlotte, N. C., for the killing of Police Chief Aderholt of Gastonia during the strike troubles, were found guilty of second-degree murder and sentenced to prison for terms ranging from five to twenty years. Several of the convicted men were from New York; others were native products.

FIERCE raids by the bears brought on the wildest scenes the New York stock exchange has ever known, and prices of stocks crashed down to such low levels that billions of paper profits were wiped out. Trading was utterly demoralized as the brokers fought to execute their orders, and the ticker was nearly two hours behind with the quotations. The excitement was repeated only in lesser degree in the curb market and in Chicago and other exchanges. No explanation of the great crash was satisfactory, at least to the losers. The bulls struggled hard to keep their footing, with some success later.

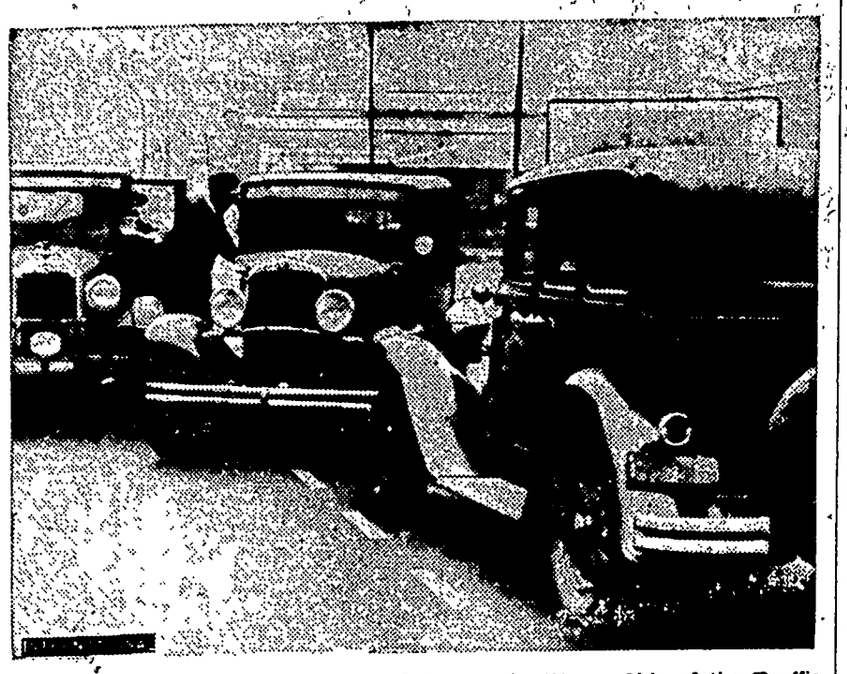
SIMPLER CODE URGED TO END TRAFFIC ILLS



Don't Cut Around the Car Ahead by Going on the Wrong Side of the Traffic Lane; It Is a Fruitful Source of Accident.

Psychology in automobile driving will make the world safer for motorists and pedestrians. That is the advice of Dr. Knight Dunlap, professor of psychology at Johns Hopkins university.

Standardization and simplicity, two names for driving psychology, is urged by Doctor Dunlap as a panacea for traffic problems and accident prevention.

For instance, the monotonous run of "dangerous curve" signs on gentle curves tends to make the driver of an automobile less cautious when approaching a really bad curve. Standardization of these signs would serve to keep the driver constantly on the alert for bad curves. He could relax when the signs told him things were comparatively serene ahead.

The simplifying of traffic signals would make driving of an auto a mechanical process, according to Doctor Dunlap.

Red, he says, can easily be misunderstood in traffic lights, for the reason that that color does not always indicate stop. Detour signs are red. Danger signals are red. Signals set up to indicate road repairs are red.

"Drivers will never be trained to the point of an automatic, unreflecting 'stop' on the red light so long as other uses of red in signals are retained," says Doctor Dunlap. "Fatal accidents have occurred from use of red lanterns on road obstructions.

WIDER HIGHWAYS ARE GREAT NEED

Four Traffic Lanes Would Soon Pay for Themselves.

(By E. E. Duffy)

Motoring toward a large metropolitan center on a sunny Saturday afternoon, when wheeled hordes are bound for the open country, reveals pertinent facts about highways.

The first thing that is forcibly impressed upon the motorist going against the heavy traffic flow is that two lane roads are decidedly not wide enough—usually by two lanes. Slow trucks, crawling old hulks of cars, hyper-cautious drivers hold back traffic until a jam of cars a quarter mile or so long results.

Human Element Enters.

Drivers driven to distraction by delays then suddenly dart out from their prescribed lanes of travel when oncoming traffic permits of a passing. Here, the well-known human element enters in, for if a driver misjudges the open spaces a collision may result. A four-hour ride against this wave of country-bound traffic brought several narrow escapes that cannot be recounted without a rise in blood pressure.

In addition to the dangers present in forging ahead on the two-lane road, there is the inability to get speed in keeping with the temper of modern cars, most of which travel some fifty miles an hour without excessive vibration. Fifty miles an hour is not a dangerous speed, yet it cannot be conscientiously attained on the narrow road when cars are thick.

Another criticism of the rural road, in remote regions as well as metropolitan areas, is that it usually passes through the center of every hamlet and town on the route. One little town in southern Wisconsin, with a single traffic light on the main highway running through on the chief business street, is frequently nothing short of choked with automobiles that have no business there.

Must Be Widened.

Narrow roads must be widened as fast as communities can make finances available, for without doubt congestion and accidents are costing as much or more than wider roads. Two-lane roads are suitable for traffic only where week-day travel is light and week-end travel moderate. A heavy volume of traffic demands roads at least four lanes in width. Accidents would be reduced considerably if by road builders' magic all congested routes were to be widened. That would mean a distinct lowering of car insurance rates.

AUTO HINTS

An average of 5,500 miles was traveled by each automobile in this country last year.

* * *

Motorists in England were taxed more than $127,605,000 for the operation of 1,758,000 motor vehicles in the past year.

* * *

"Remember away back when a flat tire drew a sympathetic look from passing motorists?"—Des Moines Register. No, we are not that old.

* * *

"A hotel for automobiles is the suggestion of a prominent New York contractor"—if you can imagine a bellboy rushing a quart of oil up to 703.

* * *

Are refugees losing their speed? A comparative table shows more people killed on New York streets in 1928 than at the first Battle of Bull Run.

MOTOR QUIZ

How Many Can You Answer?

Q. What causes preignition and how can it be remedied?

Ans. Usually the spark plug center electrode becomes red hot and fires the mixture early causing pinging and a sharp decrease in the engine's power. Changing to "cooler" spark plugs will correct the trouble.

Q. What causes the noise in shifting gears?

Ans. Usually the fault lies with the driver who is afraid of making a noisy shift and so hurries. The shift should be made calmly and deliberately without rushing or hesitating to avoid noises. Also improper adjustment of clutch lever causes clutch to drag.

Q. What should be done with a punctured spare tire?

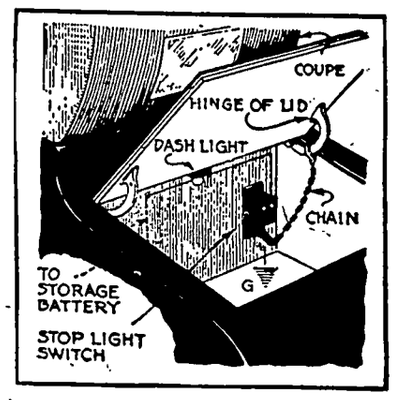
Ans. The spare should be repaired at once.

Q. What is considered a good rule to be governed by for testing oil level in the crankcase?

Ans. Test the oil level every time the tank is filled with gasoline.

Automatic Light Useful in Luggage Compartment

No need to fish around in the dark trying to find something in the luggage compartment. You can easily arrange an automatic light which will go on when the trapdoor is lifted, and go out when you close it. A socket of the bayonet type to hold a headlight bulb is attached underneath the front edge of the door opening, and a stop-light switch is attached at a



Automatic Light for Luggage Compartment Goes on When Lid Is Up.

point where it can be connected by means of a chain to the hinge or to a screw eye in the door.

The chain should be adjusted with enough slack so that when the door is in a fully opened position, the switch will be thrown on. Run a wire from the ungrounded battery terminal to one terminal of the socket, connect the other terminal of the socket to one terminal of the stop-light switch, and ground the other terminal of the switch to the nearest point on the metal frame of the car.—Popular Science Monthly.

Headlight Problem Due to Owner's Indifference

Many a headlight problem is due to the car owner's indifference. This is especially true, service men report, when the motorist is taking his annual tour.

On a trip of this character, which may involve night driving and the necessity for effective headlighting, the car owner is prone to forget that high speeds with their possible vibration and rough roads are likely to affect both the focus and the aiming of the headlights. Good illumination is closely related to keeping this point in mind.

FARM STOCK

KEEP LIVE STOCK MORE COMFORTABL

December Is Good Time t Eradicate Botflies.

(Prepared by the United States Departme of Agriculture.)

Holiday cheer for farm live stock one of the recommendations partic larly emphasized in the Decemb page of "A Calendar of Live Stock Pa usites," issued by the United States D partment of Agriculture. The autho Dr. Maurice C. Hall, says, "Strive keep live stock comfortable, there favoring more profitable production The text of the December advice is:

"Lice and mange (scab or scabie are commonly prevalent in Decembe If you didn't dip last fall use such pa liative measures as are possible at th season and be sure to dip next fa

"Now that the adult botfly h ceased to fly, except in parts of th South, call in your veterinarian an have him treat your horse for bo with carbon bisulphide. Treat th bot eggs with a 2 per cent coal-tar-cr osote solution or shave them off wi a safety razor. Bots interfere with horse's nutrition and in heavy infest tions may even cause death. One the bots, the nose botfly, is exceedingl troublesome as an adult fly, as horse are badly frightened by it and may ru away, sometimes with serious cons quences. Write for Farmers' Bulleti No. 1503-F.

"Ox warbles may be present in som parts of the South in December. E amining cattle for evidence of o warbles in the form of lumps on th skin, especially along the back. If yo find these, squeeze them out and d stroy them. Write to the United State Department of Agriculture for in formation and advice."

Cull Herds Closely If Feed Supply Is Low

Farmers who are facing shortage of hay or other feeds for the comin winter should cull their flocks an herds closely, says W. L. Cavert, e tension specialist in farm manag ment, University farm, St. Paul, Min This is an opportune time for suc culling, he says, as prices of all liv stock are high. Where feed is scarc farmers will find it better to carr over only as much live stock as ca be well handled, rather than to kee a larger number in a semi-starved con dition.

Mr. Calvert suggests that farmers wh anticipate short feed supplies shoul at once make careful calculations a to how much roughage will be re quired and check this against avai able supplies. Those who discove that they are short of feed are advise to locate supplies in their home local ties as early as possible and contrac for their needs.

Where poor quality roughage, suc as wild hay, straw or corn stalk must be used, plans should be made t feed more than the usual amount o linseed oilmeal or other high protei concentrates.

Sterility of Cattle Is Most Troublesom

A most troublesome breeding di ease of cattle is sterility. This i often a sequel of infectious abortio The exact causes are not alway known. Sometimes it is a result o infection of the uterus, the neck o cervix of the uterus, diseases of th ovaries, and very rarely it may b due to an impotent or diseased bul Sometimes a graduate veterinaria can make a diagnosis while the an mal is living and he may also do som thing to remove the cause of the ste ility. But it cannot be done in som animals. Unless the sterile cow o bull is highly bred and very valuab and a graduate veterinarian canno overcome the cause of the sterilit let the incurable animal go to slaug ter.

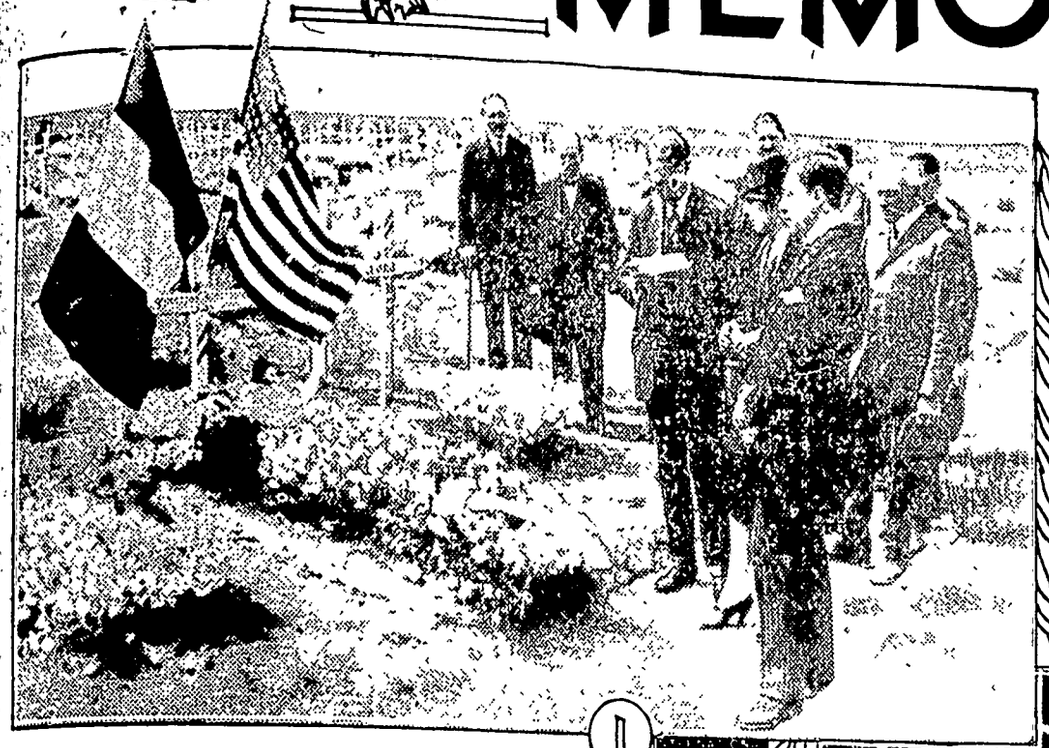
Satisfactory Results From Hog Self-Feede

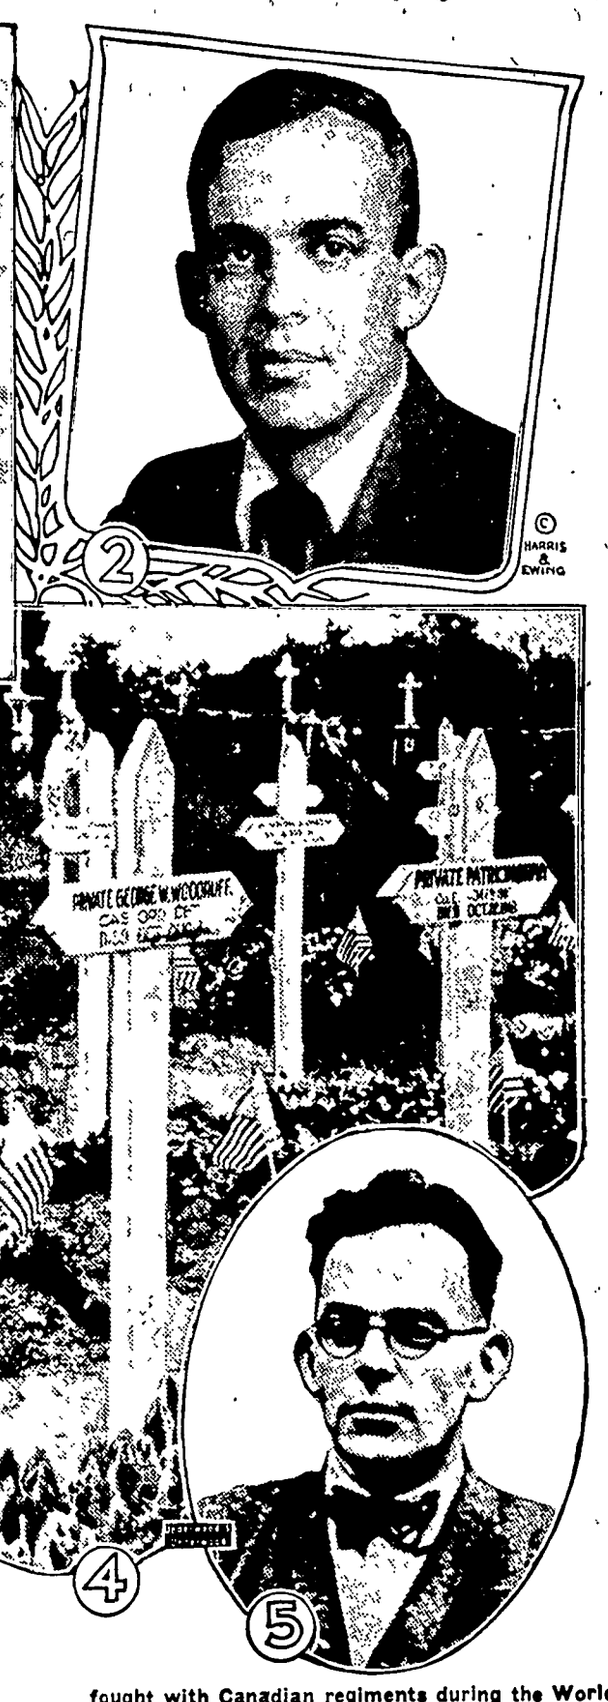
The Iowa experiment station re ports excellent results from the us of the self-feeder, not only for pr ducing market hogs, but also for rai ing breeding gilts and for feedin nursing sows with their litters. I regard to raising breeding gilts on self-feeder the suggestion is mad that, in order to keep them from ge ting too fat, such bulky feeds a ground alfalfa, ground clover, groun oats, bran, or similar feeds be mixe with the concentrated feeds such a ground corn, barley, wheat, rye, tank age, and so on. Ground alfalf seems to give the best results as apparently stimulated growth.

Scabby Sheep

Any condition which causes th sheep to bite and scratch should b investigated at once and the caus definitely learned. Scab on parts o the sheep's body may be overlooke It is usually found on the back o sides, but may start on any part o the body. Lambs are sometimes i fected around the head between th horns and ears, and as these par are frequently covered with dirt th lesions may not be noticed unle close examination is made.

ARMISTICE DAY MEMORIES





1—Fismes, France.—Rene Phelizot, the first American soldier killed during the war, lies in the French National cemetery near Fismes.

This photograph was taken during the special ceremonies in honor of the man who enlisted with the French infantry and when the Americans entered the war, transferred to them. He was given the honor of being standard bearer for his regiment, and was killed. The flag is his shroud now in this grave.

2—Harry Chapman Gilbert, Washington, D. C., first man drafted for service in the World war, died at Denver, Colo., on July 18, 1927, where he had gone seeking recovery from tuberculosis. His draft number, 258, was the first drawn by War Secretary Baker in Washington on June 21, 1917. Gilbert's father is a former White House policeman who has served under eight Presidents. He retired about two years ago and went West with his son.

3—Memorial erected at Arlington National cemetery by Canada, in tribute to the Americans who fought with Canadian regiments during the World war and died in action.

4—George W. Woodruff, a World war veteran who works in a butcher shop in Buffalo, N. Y., has the unique distinction of possessing a picture of his own grave in France, where the government gave him an official burial and erected a white cross with his name on it over his grave after he had been officially "killed in action" on October 23, 1918. Six months after Woodruff's return home with the A. E. F. his "widow" received a letter from the War department asking her if she wanted her husband's body brought back to America or left in Flanders Field. George took it upon himself to answer this missive, saying that if it was all the same to them he would just as soon let his body remain in France. The grave in France is shown as it looks today. An official death certificate signed by General Pershing was sent to Mrs. Woodruff. His strange experience became known recently when he applied for membership in the American Legion.

5—George W. Woodruff

By ELMO SCOTT WATSON

THROUGHOUT the United States November 11 is celebrated as Armistice day because it was on November 11, 1918, that hostilities in the World war ceased. But is it strictly accurate to say that that date marked the "end of the World war"? Under one interpretation of the phrase, it is not, for the war did not end for the United States until July 2, 1921—almost three years after President Wilson, commander-in-chief of the American army, declared the war at an end on November 11, 1918, after the army had been demobilized and the soldiers had returned to civilian life. Surprising as that statement may be, it has the authority of no less a person than the attorney general of the United States back of it. During the trying of a case in the court of claims in Washington recently, the attorney general argued that the war did not officially end until July 2, 1921, when the treaty of peace between the United States and Germany and Austria was signed. This set a woman lawyer, Nannie Lee King, who was concerned in the case, to studying the records, and her findings, as reported in the Washington Star are as follows:

Armistices were provided for in the laws and customs of war among nations adopted by The Hague treaty. It was provided that the armistice could state the terms of the contracting parties and what communications might be held in the theater of war.

The armistice of November 11, 1918, was signed in Marshal Foch's railway carriage, in the Forest of Compiegne, at 5 a. m., Paris time (midnight, Washington time), by Marshal Foch and Vice Admiral Sir Rosslyn Wemyss, first lord of the British admiralty, representing the allies and the United States, and by Mathias Erzborger, General von Winterfeld, Count von Obernoff and Captain von Salon, representing Germany.

Cessation of hostilities was the first provision of the armistice of November 11, 1918, but it contained 35 agreements, all of which have been fulfilled. It provided for evacuation of invaded countries, surrender of German war material, all submarines, mines and destructions to be taken from the waters; provided for reparations and return of all of our prisoners of war and all of the prisoners belonging to the allied countries.

The press all over the land carried the glad tidings that the war had come to an end.

Appropriation act of June 15, 1917, appropriating money for the war, provided that enlistments under the selective draft act were for "time of war" and that the war should be considered as having terminated when the President ascertained the fact and issued a proclamation to that effect.

Appropriation act of July 9, 1918, provided "that no plan for the construction or extension of any facilities shall be submitted to or approved by the secretary of war hereunder after the existing state of war between the United States and its enemies shall have terminated, and the fact of such termination shall be ascertained and proclaimed by the President."

November 11, 1918, President Wilson issued a proclamation to the public, proclaiming the armistice, and said that "everything for which America fought has been accomplished."

November 11, 1918, President Wilson also appeared before a joint session of congress to read the terms of the armistice to congress, and advised the congress that "this tragical war, whose consuming flames have swept from one nation to another until all the world was on fire, is at an end."

November 11, 1918, President Wilson, as commander-in-chief of the army, ordered all draft calls canceled and demobilization of the army which had been mobilized for time of war under the selective draft act, as congress had directed that the President should do when the war had come to an end.

November 16, 1918, General March, chief of staff of the army, advised the press that 200,000 men in military camps would be demobilized within two weeks and that demobilization would proceed thereafter at the rate of 30,000 a day.

February 5, 1918, the War department announced that up to January 31, 1918, 236,824 men had been returned from France, and the department estimated that 160,000 would be returned in February.

Because the armistice had ended the war on November 11, 1918, congress became busy with reconstruction legislation. March 2, 1919, the Dent act was passed for cancellation and settlement of contracts entered into during the war prior to November 12, 1918. The act of July 11, 1919, prohibited expenditure of funds for land for military camps that had not been taken and in use on November 11, 1918. March 3, 1921, congress repealed all "war-time" legislation—acts or parts of acts for the emergency or time of war—that remained in effect for a certain length of time after the war had ended.

July 2, 1921, a treaty was signed between the United States of America and Germany and Austria. Section 2 of this treaty referred to and made the armistice of November 11, 1918, a part of the treaty and reserved unto the United States and its Nationals all rights acquired by the armistice. June 3, 1920, congress passed a joint resolution authorizing and directing the President to issue a proclamation annually for the people to observe November 11, as November 11, 1918, ended the most destructive sanguinary and far-reaching war in the annals of human history and the resumption of peaceful relations."

November 2, 1926, and November 4, 1927, President Coolidge issued proclamations, proclaiming the armistice as having ended the war on November 11, 1918.

But the official date of the "end of the World war" is not the only subject connected with our participation in the war over which there is cause for dispute. Since Armistice day is a day for remembering the men who lost their lives, it is appropriate to inquire into the matter of who was the first American to make that sacrifice. The war department is authority for the statement that the first war casualty was Dr. Louis J. Genella of New Orleans, as witness the following Associated Press dispatch:

New Orleans, La.—Dr. Louis J. Genella, a quiet mild-mannered physician who twice has interrupted his work to go to war, has been notified by the War department that he was America's first casualty in the World war.

Although forty-two years old when America entered the conflict, Doctor Genella was among the first to offer his services. He was too old for active fighting duty, the recruiting officers told him, but was accepted for medical services.

On June 1, 1917, he was on active duty in France, 19 days after his enlistment. It was while serving with the British Second Northumbrian Field artillery, to which he had been assigned, that he received a fractured skull from a bursting shell. He was in the hospital for two months.

As a young man Doctor Genella left Tulane university to join the American forces in Cuba. His father was wounded with the Confederates at Shiloh and the family traces its soldier ancestry back to the ranks at Waterloo.

But in trying to decide who was the "first American killed in the World war" one finds that the claim for that honor is put forth in behalf of several men. The grave of one of them in a French cemetery is shown in one of the illustrations above. But when the American Legion met in Paris two years ago, it was stated that the Legion had decided the honor belonged to Edward Mandell Stone of Chicago, who volunteered in the French army in 1914 and was killed on February 15, 1915, and a delegation visited Stone's grave at Romilly-sur-Seine and placed a wreath on the wooden cross marker stating that he was the "First American Killed in the Great War."

Although it is generally stated that James Bethel Gresham of Evansville, Ind., was the first American soldier (i. e. member of the A. E. F.) killed in action, even that fact is disputed and the claim for that honor is put forth in behalf of a Massachusetts man. Gresham's right to the title is based upon the fact that on the night of November 3, 1917, under cover of a heavy barrage, a German raiding party entered the sector occupied by Company F of the Sixteenth infantry of the First division at Artois in Lorraine, about ten miles east of Luneville, and Corporal J. B. Gresham and Privates M. D. Hay and Thomas Enright of this company were killed during the raid. There the French erected a monument which bears this inscription "Here in Lorraine soil lie the three first American soldiers slain by the enemy—Corporal J. B. Gresham of Evansville, Soldier Thomas E. Enright of Pittsburg, Soldier Merle D. Hay of Glidden. Worthy sons of their great and noble nation, they fought for right, for liberty, for civilization, against German imperialism, plague of mankind. They died on the field of honor."

The Massachusetts man for whom the honor is claimed was Oscar C. Tugo and that claim is put forth by Carl E. Clifford, former commander of an American Legion post at Newton Upper Falls, Mass. An interview with him, published in the Boston Herald recently, states:

Mr. Clifford enlisted with the Harvard Medical unit (Base Hospital 5) and served overseas nearly two years with the organization, which was attached to the British Expeditionary Forces in northern France.

On September 4, 1917, Base Hospital 5 was bombed by German airplanes. One officer and three enlisted men were killed and several others wounded. This action constituted the first official American casualties in the World war.

There has been some controversy over this matter in the War department at Washington, but the matter was settled in 1921 when Mr. Clifford received a personal letter from President Harding, informing him of the correctness of this information.

This letter was publicly read at the dedication of Oscar C. Tugo circle (Pasteur and Longwood aves), near the Harvard Medical school, in October, 1921.

The dedication of this square in Boston in honor of the first enlisted man of the United States army to be killed in the World war, was attended by Surgeon General Ireland, Assistant Secretary of War Wainwright, Mayor Peters, General Edwards and Bishop William Lawrence.

The naming of the "square" and the dedication exercises were under the personal direction of Mr. Clifford, who, though living in Brookline, N. H., 50 miles from Boston, was persistent in his efforts to have the memory of his comrade-in-arms fittingly remembered by the citizens of his native city of Boston.

Said he: "To my mind it is important to establish the fact that it was a Massachusetts man who was the first United States soldier to be killed in the World war. History tells us that Massachusetts men spilled the first blood in the Revolutionary war and the Civil war and their memories are fittingly observed by memorials, but no one seems to care about the World war."

Horticultural News

COLLECT SCIONS IN EARLY WINTER

If Left Too Late Work Is Not Nearly So Effective.

Grafting is used for three distinct purposes—the renewing or patching up of injured stocks; the budding done on nursery seedlings; and the top working of unsatisfactory varieties with scions of more valuable kinds.

The scion, or part to be grafted on a tree, should be selected from a strong, healthy shoot of last year's growth. It is best to collect these shoots during the early part of the winter and then pack them away in sawdust to prevent their drying out. If left too late, or until the buds on the trees start to swell during warm spring weather, the work is not so effective.

Two or three inches of the base of the shoot is usually discarded because of poorly developed buds, while the tips are not used because the wood is soft and pithy.

One of the good grafting mixtures is made up of four parts resin, two parts of beeswax, and one part tallow. If the resin is lumpy, pulverize it over a slow fire, and melt it down completely. The mixture is well melted and then cooled. It may be put into a tub of cold water. Then grease the hands to prevent sticking and pull and work the mixture until it gets a smooth grain. If it is then rolled into small balls and put away in paraffin paper, it will keep indefinitely.

The old tree stock forms the root and the scion forms the new wood that is to be grown. Hence a close junction must be had, and air must be excluded.

Superior Orchard Soil Should Be Well Drained

A first-class orchard soil should be deep, mellow, well drained and free from alkali, to allow of a maximum root development at the minimum expenditure for improvements in these lines by artificial means.

Orchard trees will thrive for a period more or less short on some of the shallow soils, but, as a rule, they will begin to "go back" as they begin to bear heavy crops of fruit.

Practical experience has shown that these soils must be avoided if economical production of fruit is to be attained.

The limitation of bearing capacity is the certain result of planting on soils deficient in depth.

Straighten Up Leaning Trees for Best Growth

If proper care and attention is given to trees which have been blown over or which lean badly, they may usually be straightened up and anchored in such a way as to cause them to make a satisfactory growth and become reestablished in the soil. In bracing with wire or rope, splints consisting of small sticks or boards are often used against the tree trunks to prevent injury to the bark. Later care and attention during the spring and summer should be given braced or anchored trees. If this is not done, the first work may be of little or no value, and the trees will generally die or make a poor and unsatisfactory growth.

Horticultural Notes

Apples, like oranges, are becoming a "year-round" fruit.

* * *

The 1929 season has again shown the importance of vigor, bees and effective cross-pollination.

* * *

The growing of grapes is as old as man. Noah, as soon as the flood waters subsided, planted a vineyard.

* * *

General thinning-out of the fruit wood should be practiced each year to increase the size and quality of fruit.

* * *

Try planting grapes; it will be a great pleasure in the years to come to eat the fruit you yourself have planted.

* * *

Orchards can be successfully grown on deep blow sand if fertilized and a cover crop such as rye is planted to hold the soil.

* * *

The so-called tree strawberry is a novelty and is really a raspberry. It is sour and of indifferent flavor, of use only in making of preserves or jam.

* * *

It is as important to keep the tools in first class condition for work as it is to have a complete and satisfactory outfit.

* * *

The two most important pruning tools are the swivel pruning saw and the pruning shears.

* * *

Where cultivation cannot be practiced on account of soil washing or for other reasons, hoeing a strip a few feet wide around the tree trunks to clear the space of weeds, litter and mulch will help prevent injury.

Girl at the Top in Health Test

Millions of boys and girls all over the world, thousands of them right here in the West are being restored to health and strength by the purely vegetable tonic and laxative known as California Fig Syrup and endorsed by physicians for over 50 years.

Children need no urging to take it. They love its rich, fruity flavor. Nothing can compete with it as a gentle, but certain laxative, and it goes further than this. It gives tone and strength to the stomach and bowels so these organs continue to act normally, of their own accord. It stimulates the appetite, helps digestion.

A Kansas mother, Mrs. Dana Allgire, 610 Monroe St., Topeka, says: "Bonnie B. is absolutely the picture of health, now, with her ruddy cheeks, bright eyes and plump but graceful little body and she stands at the top in every health test.

Much of the credit for her perfect condition is due to California Fig Syrup. We have used it since babyhood to keep her bowels active during colds or any children's ailments and she has always had an easy time with them. She always responds to its gentle urging and is quickly back to normal."

Ask your druggist for California Fig Syrup and look for the word "California" on the carton so you'll always get the genuine.

Probable Explanation

Mr. Paragrapher—Why do they always place men scarecrows in the fields to scare the crows?

Mrs. T. W. H., Gainesville, Fla.—Maybe is is because they can't get enough clothes on a woman scarecrow to scare the birds.

Stop the Pain.
The hurt of a burn or a cut stops when Cole's Carbolisalve is applied. It heals quickly without scars. 30c and 60c by all druggists, or send 30c to The J. W. Cole Co., Rockford, Ill.—Advertisement.

People who know how to live, rather laugh at you when you lecture them on being efficient.

And seeing the inside of a cantaloupe can fool you about as badly as seeing only the outside.

YOU HAVE A DOCTOR'S WORD FOR THIS LAXATIVE

In 1875, an earnest young man began to practice medicine. As a family doctor, he saw the harm in harsh purgatives for constipation and began to search for something harmless to the sensitive bowels.

Out of his experience was born a famous prescription. He wrote it thousands of times. It proved an ideal laxative for old and young. As people saw how marvelously the most sluggish bowels are started and bad breath, headaches, feverishness, nausea, gas, poor appetite, and such disorders, are relieved by the prescription, it became necessary to put it up ready for use. Today, Dr. Caldwell's Syrup Pepsin, as it is called, is the world's most popular laxative. It never varies from Dr. Caldwell's original effective and harmless formula. All drugstores have it.

Headache — An NR—NATURE'S REMEDY Tablet—will promptly start the needed bowel action, clear waste and poison from your system, and bring welcome relief at once. The mild, safe, all-vegetable laxative. Try it—25c. NR TO-NIGHT TO-MORROW ALRIGHT.

INGS AT SCHOOL THE PAST WEEK

ITORS TAKE IN OVER $100 AT CARNIVAL AND PROGRAM

y Will Be Used To Entertain Seniors At Annual Banquet

The Carnival on last Friday night a decided success and everyone to enjoy the nonsense and hil-y. Thanks to Miss McGinnis the Juniors who planned it all program and other features en-d the public interest and a large wd was in attendance. The Class will well appreciate the generous tronage of our friends of the com-nity who came and spent their ey so freely. Over one hundred lars were taken in as admission for other things and we under-d the Juniors will now be left r expenses are all paid enough et on a very respectable banquet the Seniors later in the year.

Home Ec Girls To Serve Dinner

Miss McGinnis has agreed to give girls of the home economics de-tment some practical experience preparing and serving a meal for ather large group of men and on day evening they will serve the legates to a convention of Veter-arians invited here by Dr. Ander-n, local veterinarian.

Mr. Lewis Visits School

Mr. Donald Lewis, our last year's ysics instructor and orchestra di-ctor was a welcome guest in our ol last week end and attended r school carnival on Friday even-g in company with his friend, Miss lman.

First Game With Goodell

Mr. Brietske, our coach, has call-d our the boys interested in the gular indoor winter game, basket ll. They are all looking forward w to our first game with Goodell Friday night of next week, No-mber 15.

Supt. Larson, of Thornton, once ch at Britt, has been engaged as feree.

Will Attend Teachers' Meet

As this is the week of the State achers Meeting at Des Moines, the perintendent will be away, and in tendance there. Many of the hools of the state of Iowa whose achers wish to attnd will be closed Thursday and Friday of this ek. As none are going from here cept the superintendent, our hools will continue.

School Red Cross Drive

Mrs. Paul Grange and Mrs. Henry ltenberg were this week at the hool soliciting funds for the A-rican Red Cross. Last year our hool went over the top and we be-e they may be as patriotic this ar. Each room raised its quota d teachers enrolled as members.

New Seats Have Been Installed

The new seats long ago ordered some of our class rooms finally rived and have been installed by janitor. They are substantial comfortable and preferred by students to the older seats along e of them.

Have Perfect Attendance Record

Students of our grades who had en neither absent nor tardy the t nine weeks of school or until Friday evening are as follows:

FIRST GRADE

Allen Barz, Fritz Gobeli, Charles ck, Homer Blickenderfer, Elsie ke, Wanda Jean Cook, and Jac-line Kudje.

GRADE TWO

La Vonne Burgess, Elsie Ward, d La Verne Knoke.

GRADE THREE

Eugene Kluckhohn, Lester Knoke, ster Ward, Arlene Blickenderf-Ruth Heginger and Doris John-enderfer, and Thelma Gimer.

GRADE FIVE

Carmen Kluckhohn, Arle Kraus, Jean Lau, Norman Sampson, and Nora Wellemeyer.

GRADE SIX

Cecelia Heginger and Franklin Kluckhohn.

GRADE SEVEN

Bessie Larson, Mabel Schlichting and Ruth Wellemeyer.

GRADE EIGHT

Lu Vern Drake, Harold Jost, August Josten, Jas. Larson, Novella Bredbonner, Marie Stille, Asa Gibbs.

We are glad so many have been here every day and on time for so long and we hope these students may not be hindered from making a greater record. Both parents and children deserve commendation for regularity of attendance and punctuality. At a later date we shall announce the names of those in high school with similar records.

We believe our students are improving in their ability to apply themselves to thir school work. Not all find it easy to forget the many things bidding for their attention outside of school, but those who can are the ones who will succeed best in their subjects.

AVERY FARM BUREAU MET FRIDAY NIGHT

AVERY FARM BUREAU MEETS N NEW SCHOOL HOUSE

Fine Program Was Presented At Monthly Meeting Friday Eve

The regular monthly meeting of the Avery Township Farm Bureau was held Friday evening, Nov. 1 at the new schoolhouse in District No. 6.

The following program was presented:-

Community singing.

The Christmas Seal Sale, Mrs. C. A. Arnold.

The Meaning of Hallowe'en, Luella Lauen.

Folk Dances, school children of District No. 6.

Recitation, 'The Old Haymow," Howard Barger, Jr.

Recitation, "The Cradle Song," Emma Jane Barger.

A Chalk Talk, Donald Anderson.

Reading, "Little Orphan Annie," Miss L. Kroeger.

A Demonstration, "School Luncheses," Avis and Margery Anderson.

A Demonstration in Higher Mathematics (In costume) Andrew, Paul and Herman Lauen.

After the program the crowd was invited to the basement, which was appropriately decorated for Hallowe'en.

An old witch told fortunes, by slips of paper written in invisable ink and tied in peanut shells. Tubs of apples and apples hung on elastic provided fun for the children.

The Chamber of Horrors made a spooky entrance to Room 13, where a ghost stood guard. In this room a witch teld a ghost story, by the ghastly blue flame of the burning candles.

Refreshments were servd upstairs Doughnuts were passed on broom handls, and popcorn in big dishpans.

An airplane ride concluded the evening of Hallowe'en fun and jokes.

COUNCIL PROCEEDINGS

Klemme, Iowa,
September 9, 1929.

DON'T PUT AWAY THE ELECTRIC FAN

In many northern states the electric fan is put away in the moth balls for the winter months. The electric fan may not be as valuable in winter as in the summer but there are many days when the fan can be used in winter and this holds true of any part of the country.

With the coming of winter it is the general custom to put the electric fan on the shelf. This is a mistake, for the electric fan has many winter uses. It will, for example:

Dry wet shoes and stockings very quickly;

Cool fresh cakes and pies;

Dehydrate vegetables and fruit for preserving;

Remove dampness from clothes after washing;

Ventilate stuffy rooms;

Blow air into closets to prevent dampness and moths;

Hasten drying of new paint on furniture and floors;

Dry hair after washing;

Dry kodak films.

NOTICE OF APPOINTMENT OF ADMINISTRATOR

STATE OF IOWA,
Hancock County, ss.

NOTCE IS HEREBY GIVEN that the undersigned has been duly appointed and qualified as Administrator of the estate of Amelei Josten deceased, late of Hancock County. All persons indebted to said estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned for allowance, and file in the office of the Clerk of the District Court.

FRED A. ARNOLD.
Dated October 23, 1929.
Chris J. Johansen, Clerk
District Court.

GOODELL RESIDENT BURIED TODAY

FUNERAL SERVICES FOR HANS NIELSEN HELD TODAY

Had Lived In Hancock County For Many Years

Funeral services were held today at the Goodell U. B. Church, conducted by Rev. Bainbridge, for Mr. Hans Nielsen, 65 year old resident of Amsterdam, east of Goodell.

Mr. Nielsen died suddenly Tuesday. He had been ill for some time but his condition was not considered serious until shortly before his death which wa caused by heart trouble.

Mr. Nielsen was born at Falster, Denmark, on March 16, 1864. He was baptized in the Lutheran faith. When about nineteen years old he came to America and settled in this county.

On March 19, 1892 he was married to Miss Cena Anderson and two children were born to this union Harold Nielson resides at Belmond, and Mrs. Earl Ruka lives near the town of Goodell. These children, and his wife, mourn his death.

Funeral services were held today at the U. B. Church, in charge of Rev. Bainbridge and burial wac made in the Amsterdam Cemetery east of Goodell.

SCOUT HALLOWE'EN PARTY WAS A BIG AFFAIR

Strenuous Game Period Followed By Big Feed Here

The Boy Scout Hallowe'en Party givn by Troop 56 to the boys of this community and held at the school gym last Thursday evening went over big and beyond the expectations of the Troop.

Between forty and fifty boys of the comunity took advantage of the the fun afforded and had a big time at the school house.

Strenuous Scout games and contests were played for nearly three hours after which all present were treated to a real feed of hot dogs cocoa, doughnuts and rolls. The Pfaff Baking Co. of Mason City heard about the party and sent over five dozen rolls for the occasion for which the Scouts wish to thank the Company for their generosity.

The visiting boys were given a taste of Scouting as the party was opened with a Scout opening ceremony and also closed with a Scout ceremony and the Indian benediction. A number of scout camp songs were likewise a part of the program.

The party was considered a ibg success and will no doubt be made an annual aair. ff

RED CROSS DRIVE NOW ON IN KLEMME AND VICINITY

Drive Is Under Direction Of Mrs. Paul Grange, Local Chairman

The local annual Red Cross drive was begun in Klemme this week and the local chairman, Mrs. Grange expects to complete the drive by Armistice Day, Monday, November 11th.

The drive is progressing rapidly and for the first two days workers turned in $46.25. The ladies find it difficult to devote as much time to the drive as they would like, and so they ask that all who have not been called upon should leave their dollar for membership with Mrs. Martha Bredbenner at the J. N. Day Store, who will give you a receipt and a Red Cross button.

Mr. I. C. Hastings and Mrs. J. E. Wichman, of Garner, were in Klemme Wednesday on business and looking after Red Cross work. Mrs. Wichman is chairman for the east half of the county.

COUNTY AUXILIARY MEETING AT KANAWHA TODAY

The County Legion uxiliary is today meeting at Kanawha, and as usual the Klemme unit is well represented. The ladies from here who attened are Mrs. Paul Grange, Mrs. Benn Coobs, Miss Leona Lau, Mrs. J. C. Thomas, and perhaps others whose names we did not get.

The local Unit is a live wire and Klemme always has a large delegation at these meetings.

YOUNG LADIES ENTERTAIN AT SIX O'CLOCK DINNER

The Misses Mildred and Dorothy Hampel entertained a number of friends at a six o'clock dinner at the W. J. Hampel Sunday evening.

The guests were Hallie Greenman, Paul Stromer, Norma Lenz, Verne Stromer, Wayne Lemke, Richard Ax.

Following the two course dinner the guests were entertained at Hallowe'en games and contests.

JURORS ARE DRAWN FOR THE NOVEMBER TERM

Will Report For Duty November 25 At 9:00 A. M.

Following is the list of petit jurors drawn for the November term of the District Court at Garner:

Arthur Martin, Britt; Geo. Hagen, Corwith; Mary Haaland, Woden; Walt Mason, Goodell; Mrs. Meinecke, Ventura; Bernice Miller, Miller; L. G. Gimer, Klemme; Clara Hyde, Klemme; Esther Lemke, Garner; Jesse Hasty, Kanawha; H. Barger, Goodell; Albert Eteson, Goodell; H. J. Puegge, Garner; David Herdman, Kanawha; Peter Benson, Crystal Lake; J. W. Slater, Forest City; Walter Stinson, Hayfield; Harold Dudeking, Woden; Edd Moleney, Britt; R. L. Brass, Britt; Paul Knaup, Garner; Elmer Swanson, Britt; Emma Jenson, Forest City; Jno. Buzicky, Lu Clarence Cook, Kanawha; Mrs. Gillstrap, Crystal Lake; Edd Gunderson, Kanawha; Andrew Hegge Kanawha; Mabel Steil, Garner; Estella Frisbee, Garner.

The Grand Jury has been cal to report for duty November 19th 10 o'clock a. m.

NOTICE OF APPOINTMENT OF EXECUTOR

STATE OF IOWA,
Hancock County, ss.

NOTICE IS HEREBY GIVEN taht the undersigned has been duly appointed and qualified as Executor of the estate of William Becker deceased, late of Hancock County A persons indebted to said estate are requested to make immediate payment; and those having claims against the same wil present them duly authenticated, to the undersigned for allowance, and file in the office of the Clerk of the District Court.

F. A. ARNOLD.
Dated Nov. 4, 1929.
CHRIS J. JOHANSEN, Clerk
District Court.
(Pub. Nov. 7-13-21, 1929)

Mrs. J. C. Thomas and baby son are back from Sioux Falls, South Dakota where Mrs. Thomas went for treatment. We are glad to report that she is greatly improved in helath.

J. E. Stille and Mrs. Frank Kluckhohn took Mrs. Harvey Stille to the Mercy hospital Wednesday morning where she will receive treatment preparatory to an operation.

The M. E. Ladies Adi will meet next Friday afternoon, Nov. 15, at the Parish House with Mesdames Ralph Ludeke and Chris Gram as hostesses. Plans will be made for the annual bazaar.

EASY! QUICK! GLYCERIN MIX FOR CONSTIPATION

Simple glycerin, buckthorn bark, saline, etc., as mixed in Adlerika relieves constipation in TWO hours! Most medicines act on only lower bowel, but Adlerika acts on BOTH upper and lower bowel, removing poisons you never thought were in your system. Just ONE spoonful relieves GAS, sour stomach and sick headache. Let Adlerika give stomach and bowels a REAL cleaning and see how good you feel! Wilson's Drug Store. (F-2)

1—Alexander Pantages, theater magnate, entering jail at Los Angeles after his conviction of assaulting Eunice Pringle, young dancer. 2—Edouard Daladier, Radical Socialist leader, who tried to form a French government and failed. 3—Daniel Carter Beard, national scout commissioner, and scouts from New York, New Jersey and Connecticut, placing wreath on tomb of Theodore Roosevelt on his birthday.

NEWS REVIEW OF CURRENT EVENTS

Tremendous Fall in Prices of Stocks Checked by Buying by Bankers.

By EDWARD W. PICKARD

UTTER collapse of prices regardless of intrinsic values made the first three days of the week the wildest the stock exchanges of the country ever had experienced. Paper profits of many billions were wiped out and many thousands of amateur speculators who had been reveling in "easy money" for months were eliminated completely. The professional bears grimly hammered away and the hysterical public dumped their securities in such a flood that on Tuesday the total of shares sold on the New York Exchange was more than twenty-six million.

By Wednesday prices had reached so low a level that the big bankers, insurance companies and individual capitalists began buying heavily, and the immediate result was a recovery and steadying of the market. This buying was given the appearance of benevolence, to a certain extent, but the fact remains that the market did not receive such support until stocks had become a profitable investment.

President Hoover, and after him Julius B. Klein, assistant secretary of commerce, gave out statements insisting that the prosperity and the industries of the country were unaffected by the stock collapse and still absolutely sound. Business men generally did not bemoan the great readjustment in the stock markets. For a long time they have been suffering because so many citizens have been using their money in speculation instead of in the purchase of commodities.

The working staffs of the exchange and brokers' offices were so exhausted that a short session of the exchanges was held Thursday and they were closed up on Friday and Saturday to give the traders and clerks a chance to recuperate. The securities markets abroad adopted the same measure. It was generally felt that the crisis was over and that the confidence of the public was restored, and those who had any money left began picking out bargains in stocks.

WHEAT prices having fallen too low, according to Chairman Legge of the federal farm board, who said this was due to the fact that a large part of the year's supply was being marketed too rapidly; the board came to the rescue with a statement that $100,000,000 were immediately available to farmers to stabilize prices. The board set the minimum prices on which loans will be carried until the end of the marketing season. The money will be lent to wheat co-operatives qualified as borrowers under the Capper-Volstead act. Under the plan announced, the farmer can get more than 90 per cent of the value of his wheat without selling it. Much of the money available already has been loaned.

The Farmers' National Grain corporation, organized under the auspices of the farm board, came into legal existence with the filing of its papers of incorporation in Wilmington, Del. It started functioning at once, with headquarters in Chicago. The launching of this corporation, which is expected to solve the wheat problem of the Central states, is considered the most important step yet taken by the farm board in carrying out President Hoover's farm relief policies as set forth in the agricultural marketing act. The concern is expected to give the farmers control of their marketing and also to stabilize grain prices at a high level.

SOME of the old guard Republicans in the senate, led by Reed of Pennsylvania and Edge of New Jersey, have given up hope that a tariff bill acceptable to the Republican majority and the administration can be passed by the special session and want to bring about adjournment by the middle of November. Probably this group would like to have the bill entirely sidetracked in the regular session opening in December. However, President Hoover directly asked the senate to pass the bill "within the next two weeks," and though the leaders didn't think this possible, it seemed likely the special session would continue until the end of the month.

JOSEPH R. GRUNDY, head of the Pennsylvania manufacturers and veteran of many a political and tariff fight, was before the senate lobby investigating committee for three days, and proved to be the most entertaining witness the senators had yet heard. He undertook to justify in every way his efforts to keep the tariff high, was apparently frank and open in his statements, and quite unconcerned whether or not the committee classed him as a lobbyist. More than that, he delighted his unofficial hearers by his spirited attacks on what he classed as the "backward" states and their representatives in congress, asserting that they should "talk pretty darn small" on policies affecting the states that "form the tax reservoir of the country"—Pennsylvania, for instance.

Pressed to name the "backward" states, Grundy declared to Senator W. E. Borah that the latter's presence in the senate is proof enough for Grundy of Idaho's backwardness. Similarly, he bluntly told Senator T. H. Caraway that any state which, like Arkansas, showed such little interest in a senatorial election that only 30,000 votes were cast must be backward.

Grundy listed as "backward" states Arizona, South Dakota, Mississippi, Arkansas, Idaho, Montana and Georgia, and he didn't think much of Wisconsin and North Dakota. The senators from all of these states, he thought, shouldn't "put up any roars."

"How would you silence Senator Borah and myself?" asked Senator Walsh.

"I should think your intelligence would suggest silence on such matters," retorted Grundy to the delight of the hearing room crowd, which roared with laughter.

Senator Bingham of Connecticut, whose employment of C. L. Eyanson to aid him in tariff bill work was severely criticized by the lobby committee, started a bitter debate in the senate by declaring the committee was packed against the administration and that its members were playing politics.

SENATOR BLEASE of South Carolina, some ministers of Washington and various other persons have been loudly blaming President Hoover for the liquor and vice conditions prevalent in the national capital and demanding that he clean up that city. The Washington Times has been publishing articles exposing the liquor traffic there and its city editor, being called before the grand jury, gave a list of sixty speakeasies and bootleggers. Three Times reporters who were supposed to have purchased liquor at these places in the course of their investigations were summoned by the grand jury and refused to give that body the names and addresses of those from whom they had bought the drinks, declaring this would make them dry snoopers and cause them to lost their positions. Judge Peyton Gordon thereupon sentenced the reporters to jail for forty-five days for contempt of court.

IN ITS legislative elections the province of Ontario, Can., piled up a huge majority in favor of the Conservatives and of the policy of government controlled liquor sales for which they stood. Premier Howard Ferguson's government won 93 of the 112 seats in the legislature. Ferguson himself doubled his majority of the last election; W. E. N. Sinclair, Liberal and moderate dry, leader, barely escaped defeat by a government candidate, and John G. Lethbridge, bone dry Progressive leader, was beaten in the ordinarily dry riding of Middlesex West which he has represented for ten years.

EDOUARD DALADIER, the radical Socialist who was invited to form a new government for France, could not persuade the Socialists to participate, and therefore he was forced to give up the task. Then Etienne Clementel, president of the senate finance committee, tried and failed, and the difficult job was undertaken by Andre Tardieu.

CHINESE government forces were pushing rapidly forward in a wide area in Honan province and engaging in heavy fighting with the rebel troops which were said to be retreating. Gen. Chiang Kai-shek himself, president of the republic, went to the front to lead the attack. The civil war conditions in the Yangtse valley were considered so serious in Washington that six United States destroyers were ordered from Manila to Chinese waters to protect American lives and interests.

EIGHTY-SIX American officers and soldiers who were members of the expeditionary force at Archangel in 1918 and 1919 and perished there are on their way back to Michigan, their home state. The bodies, retrieved by the graves commission, were conveyed on board the Soviet steamer Lieutenant Schmidt to Havre, France, whence they were to be brought to the United States by an American battleship. Sixty-two of the dead have been identified. All were members of the Detroit Three Hundred and Thirty-ninth infantry.

ITALIAN Fascism celebrated its seventh anniversary with much eclat, and needless to say Premier Mussolini was the central figure of the affair. In an address to 60,000 Black Shirts in Rome the Duce reviewed the progress Italy had made under his rule and gave it his full approval. He told his followers the country was "armed in heart and hand" and ready for peace and for anything else; and he again warned the rest of the world to keep hands off.

TRAGEDIES on Lake Michigan cost a number of lives. The liner Wisconsin from Chicago foundered in a storm off Racine and fifteen persons, among them Capt. Douglas H. Morrison, drowned despite the heroic efforts of life guard crews. Sixty others were saved. Later in the week the steamship Senator and the ore boat Marquette collided north of Milwaukee, the former going down with a dozen persons, and the Marquette barely reaching port.

FOREMOST in the week's death list is the name of Theodore E. Burton, United States senator from Ohio, who passed away in Washington after a month's illness at the age of seventy-seven years. He had served a total of forty-four years in congress. After many terms in the house he was sent to the senate. Later he returned to the house, and finally went back to the senate. He was one of the leaders of the Republican party. Funeral services for Senator Burton were held in the senate chamber in the presence of President Hoover and other high officials and ten senators accompanied the body to Cleveland.

Other notables claimed by death were Rev. E. S. Shumaker, superintendent of the Indiana Anti-Saloon league; Sir Graham Balfour, British author and biographer of Stevenson; Prince Bernhard von Buelow, former chancellor of Germany; Rev. John Roach Straton, fundamentalist Baptist preacher of New York, and Edwin B. Parker, arbiter of international World war claims.

WHEN the jury in Washington found Albert B. Fall, former secretary of the interior, guilty of accepting a bribe from Edward Doheny for a naval reserve oil lease, it was announced that the oil magnate himself would be put on trial early in January. The verdict was a most painful surprise to Mr. Fall and his relatives and friends. It made him liable to a maximum sentence of three years in prison and a fine of $300,000, but the jury recommended mercy and it was not believed the aged and infirm man would be sent to prison.

Out in Los Angeles another jury brought in a verdict of guilty against Alexander Pantages, theater magnate, who was accused of assaulting Eunice Pringle, a young dancer. It recommended that he be sentenced to the penitentiary but asked that the court extend leniency.

Orchard Information

FERTILIZERS ARE HELP TO ORCHARDS

Devitalized Trees Respond Quickly to Chemicals.

Does it pay to apply chemical fertilizer to orchards? If so what kind should be used and when should it be applied? Experiments planned to answer these questions have given somewhat conflicting results. The application of fertilizer to trees at the experimental station, Summerland, B. C., has not materially influenced the yield of fruit produced. On the other hand, in experiments conducted by Mr. Ben Hoy in several Kelowna orchards, the use of chemicals has produced remarkably beneficial effects.

The explanation of this apparent contradiction lies in the fact that the nutritional conditions existing within a tree largely determine its response to fertilizer treatments, writes R. C. Palmer in the Farm and Home. The trees in the experimental station orchards were in a very vigorous condition, whereas those which showed the greatest benefit in Mr. Hoy's experiments were more or less run down when the fertilizer was applied. In orchards where the trees are making strong growth and clothing themselves in luxuriant foliage it is neither economical nor advisable to apply much fertilizer. Devitalized orchards, however, often respond wonderfully to the application of chemicals, especially when their use is accompanied by improved cultural methods and uniform distribution of irrigation water.

The nitrogen deficiency may be rectified by the use of legume cover crops, organic manures or chemicals such as ammonium sulphate, sodium nitrate and calcium nitrate. Legumes are undoubtedly the cheapest source of nitrogen. Barnyard manure never fails to give satisfaction where it can be secured at reasonable cost. Nitrates give the quickest results and, where the need is urgent, may well be applied at the rate of from five to twelve pounds around each tree according to its age and condition. The fertilizer should be spread thinly over the surface of the soil occupied by the tree roots.

Excessive Pruning Bad for Young Fruit Trees

While the greatest need with regard to orchard pruning is probably encouragement of the practice, at the same time there are those who are so enthusiastic about pruning in their orchards that some caution should be exercised by any such enthusiasts.

There should be a good reason for every cut made on the young trees. It is particularly important that the annual pruning of the young trees just coming into bearing be moderate and certainly no more wood should be removed than is absolutely essential to proper shape and form of the tree.

It has been shown that practically all varieties of apples and many varieties in particular, may be expected to fruit earlier when unpruned than when moderately or severely pruned. Also, it has been found that unpruned trees have made more growth. Yet some pruning during the first few years of the orchard's life must be done.

It is necessary to direct the growth of the framework of the tree, so that as the tree matures it will be sturdy and able to support large crops without breaking or splitting down. In obtaining the desired shape of the tree, prune moderately, rather than slashing right and left; otherwise, the man who carelessly does no pruning at all, may harvest fruit long before you do.

Control Leaf Curl by Spraying in Winter

Peach leaf curl starts in the early spring from spores carried over on the buds and twigs. These spores germinate, and the fungus begins to grow about the time the buds begin to swell. The fungous growth soon gains entrance to the buds and leaves, and after that time it is impossible to control the disease for the season by spraying.

In order that spraying may be effective, application must be made during the dormant season. Many growers wait until just before the buds begin to swell, as the material is believed to be most effective at this time. However, bad weather often prevents application at this time until it is too late for the spray to control the disease. For that reason, many growers are spraying for leaf curl in the fall or during mild spells in the winter. Bordeaux or lime-sulphur should be used.

Mounding in Fall

After cleaning away dead grass and mulch material from the base of the tree trunks in the fall before freezing starts, the soil may be mounded about them to a height of four to six inches. While mounding is not absolute proof against injury, it usually reduces the amount. This will be especially true during winters of light snow fall when the mounded soil extends above the snow. The mounded soil should always be leveled as early in the spring as possible.

Proper Care of Alfalfa Stand

Is Richest Hay When Cut Early and Produces More Gain in Stock.

(By L. E. WILLOUGHBY, Extension Crops Specialist, Kansas State Agricultural College.)

After a stand of alfalfa is obtained, the length of time it will live depends on how it is handled. Frequent early cuttings before the bloom stage will so weaken alfalfa that weeds and grass will come into the stand in one or two years.

At Manhattan on a two-year-old stand that was cut on an average of five times a year, with an average of 31 days between cuttings, weeds and grass came in after one year. This was cut in the bud stage. A stand that was cut in the tenth bloom stage kept the grass and weeds out for four years. When cut in the full bloom stage weeds and grass did not bother over a period of eight years. Where it is desired to maintain a strong stand of alfalfa, it seems advisable to cut alfalfa between the tenth and the full bloom stage. Where the highest quality of hay is desired, the earlier cuttings may be practiced at the expense of maintaining the stand.

Early cut alfalfa is the richest hay and produces more gain when fed to live stock than does late cut hay. An occasional early cutting probably will not injure the vigor of an alfalfa stand. If, for any reason, it is desirable to cut one crop early, the following crops should be allowed to approach full bloom.

Another common abuse to an alfalfa stand is to cut late in the fall. Sometimes after the third or fourth cutting a six or eight inch growth is formed. Such a growth appears to stand still as cold weather approaches. If short of hay, the grower may be tempted to cut this crop but if he does he is likely to weaken his next year's stand. There is experimental evidence to show that as winter approaches alfalfa plants attempt to build up reserve food in their roots for winter protection. Such an aftermath will offer considerable winter protection to the alfalfa plants.

Satisfactory Feed for Heifers During Winter

What feed should be given dairy heifers in order to winter them satisfactorily for fall calving?

a. When legume hay and corn silage are available—hay and silage at will and two pounds daily of corn, cane, or kaffir grain.

b. When legume hay but no silage is available—legume hay at will and two pounds of grain per day.

c. When corn silage but no legume hay is available—silage at will, some dry roughage as hay or fodder, and two or three pounds of a grain mixture consisting of one part of some high protein feed as cottonseed meal, linseed meal or gluten feed, and one part of corn, oats, or bran.

d. When neither corn silage nor legume hay are available—buy legume hay. Feed one-half legume hay, one-half non-legume roughage, and two pounds daily of a mixture of two parts corn and one part high protein feed.

Applying Limestone

Lime applied in the fall should be disked into the soil both immediately after applying and again the next spring. The extra time gives it an opportunity to become available for the young plants as soon as they germinate. If applied in the spring the applications should be larger because there is less time for the lime to dissolve in the soil. Winter applications are not as effective as fall because there is no opportunity to work the lime into the soil until spring.

Agricultural Notes

Shavings are better than straw for litter and for nest material to prevent soiled eggs.

* * *

Too much or too little fertilization of vegetables may increase their susceptibility to disease.

* * *

Plenty of water must be used in putting up stover silage, since the fodder itself is perfectly dry.

* * *

Ask your county agent about the new way of protecting poultry against chicken pox by vaccination.

* * *

Shredding cornstalks or putting corn in the silo have been found unusually effective means of corn borer control.

* * *

Build the out-take flues for your barn ventilation system from the mow floor to the eaves while the mows are empty.

* * *

Trouble with stringy milk may usually be overcome by thoroughly boiling and disinfecting all utensils, according to dairy experts.

* * *

Silo filling is expensive, but in spite of the expense there is no other method of utilizing corn that gives as large returns per acre as putting it in the silo.

* * *

Farms on which weeds are kept under control have less plant disease than farms where uncultivated areas grow up into luxuriant masses of weeds.

LIVE STOCK

CANINE PARASITES QUITE DANGER

Household Pets Are Att by Many Species

(Prepared by the United States De of Agriculture.)

Dogs and cats, favorite h pets as they are, are attacked species of parasites than m imals. In a recent article wri the Veterinary Alumni Quarte Emmett W. Price, of the Unite Department of Agriculture, su two animals have been repo hosts for about 475 species sites, some of which affect b some only one of the animals.

"Aside from the high mort dogs due to parasitic infestatio tor Price says, "there are othe which should not be minimized of the species which occur in d also infest man, either in the or larval stages, such infestati quently proving fatal."

Several varieties of fleas are to be carriers of bubonic plag tor Price says, and one of t worms of man passes one stag life cycle in dogs. Fleas are lieved to be carriers of infanti azar, a tropical protozoon The dog is also infested by fluke which may be identical species causing fatal illness in

The present-day practice of s dogs from one part of the cou another for shows or for com In field trials affords an excel portunity for the spread of can asites, Doctor Price points out

For some of the parasitic tions of dogs and cats, veterin ence has developed effective re For many, however, no rem known which will kill the without killing the host as wel

Hog Flu Attacks Take Heavy Toll Each

Attacks of hog flu on broo and fattening shoats take a he every year with the coming and stormy weather. Unlike investigations, studies of flue have not yet revealed the exac of the disease.

Live stock specialists find fr servation and experience that precautions in caring for the h greatly lessen the danger of s and death from flu. One of t mon troubles on many farms men find, is overcrowding in house. Hogs compelled to become too hot and the buildi likely be damp and steamy. W animals go out into the cold lowing morning they suffer their resistance to disease is l and they are more susceptible ganisms ever present in the tory system which investigat lieve spread hog flu.

March and August Pig Produces Most

By comparing spring and rowed pigs in the light of mental results it will be show the spring pigs required 322.3 of meal to produce 100 pou gain, and were finished in 212 an average weight of 189.7 pou head. The fall pigs consume pounds of meal for every 100 of pork produced and requir days to reach a finished average of 172.8 pounds per head. H 54 spring pigs show a profit per head, while 75 fall pigs s average profit of $4.90 per h spite of the more costly proc Indicating that owing to better the fall pigs more than hold th with the spring pigs. Further, experiments the March pigs a August pigs made the greates in their respective experiments ing that early litters, both spri fall, strike the best market.

Live Stock Item

Strong feet and legs and backs are more essential than the development of gilts for sows.

* * *

Live stock and dairy product been selling at good prices a stock keeper has been doing than he has at any time sin war.

* * *

Two and one-half to three of milk should be fed wit pound of corn for 50-pound pig the animals grow the proport milk may be decreased.

* * *

The more live stock fed on th the richer the land will become. live stock is the corner stone ter farming.

* * *

Use only a little bedding farrowing pen and keep it cle dry. Finely chopped wheat makes good bedding.

* * *

Don't worry over there bei over production. Beef is get high in price that many city f now eat chicken two and three week instead of beef.

JUST HUMANS

THE GOLD CAR.

Why We Do What We Do

by M. K. THOMSON, Ph. D.

WHY WE ARE SUBJECT TO SOCIAL PRESSURE

THERE is a lot of hard work and dirty work that is classed as drudgery. No one would do such work were it not for the force of necessity and social pressure. The same is true regarding certain parts of almost any job. There is some drudgery and hard work in connection with the most desirable positions.

We naturally shrink from what is difficult for us or is decidedly distasteful. It requires some special force to keep us at it. And this force is social pressure.

Social pressure is the force that society exerts over the individual to make him toe the mark, to make him a good social animal. For example, because society places a premium on education the boy is sent to school and kept there despite his desire to be out playing. Later on the same force urges him to his college course or working hard to make himself master some trade or profession to follow in the future.

None but the social outcasts, such as tramps and bums, escape social pressure and even these are not altogether free. They must obey the laws of the state. The man who violates the rules of polite society is ostracized. And if he violates the laws of the state he lands in jail. On every hand the social screw tightens on every one who would in the least degree the social code.

Social pressure functions through rewards and punishments. These may be in the form of material things such as money gold, medals, prizes or they may be honors, social, recognition, position of trust and responsibility, power over others, etc.

The remarkable thing about social pressure is that it operates against the great and good as well as against the criminal. Every one who undertakes to do things in his own way is likely to feel the force of social pressure. Society is suspicious of all innovations.

We are subject to social pressure because we cannot help ourselves. We are born in it. The individual is helpless against society. There is no way of avoiding the ever-present social pressure.

SUPERSTITIOUS SUE

A FRIEND TOLD HER THAT—

You must be careful not to step on the cracks in the sidewalk, because if you do—oh, oh, black, black woe—something terrible is liable to happen to you.

(© by McClure Newspaper Syndicate.)

Dear Editor:

TO ENTER Memphis from the north or west you cross the Mississippi on a high steel bridge. That's all right, but there's also a two-mile wood toll bridge that's more perilous than the Bridge of San Luis Rey.

However, Memphis is worth the trip. There's an atmosphere of politeness here. Men doff their hats even in office building elevators. The taxi driver thanks you for a dime tip. And eating breakfast in the hotel lunchroom is like dining with intimate friends.

It's interesting to me to see how people can make a living and still remain courteous. Perhaps northern people can learn something from southerners if they try.

—FRED BARTON.

Through a Woman's Eyes

by Jean Newton

NOT A WIFE, BUT A KITCHEN MAID

FROM Switzerland we have a new way of testing the character of a prospective wife. It is a savant in Geneva, the home of the League of Nations, who shares with the young men of today his secret for choosing the right kind of a wife. He reveals for them a test by which they can be certain of marrying the right girl, an infallible protection against those who would not make them good wives.

Ah, the test. Is it for the quality of their love, the strength of their backbone, the kindliness of their spirit, the possession of a brain, a sense of beauty or a sense of humor?

Nay, nay. The test is one in preparing potatoes!

If, says the Swiss savant, a girl peels the potato, cutting thick rinds, she is extravagant. If she leaves the eyes she is lazy. If she uses a great deal of fat while frying them she is greedy, and if she lets them burn she is negligent!

If, on the other hand a girl performs the test of peeling a potato without falling into any of these revealing traps, the man should marry her whether she is rich or poor, ugly or pretty, for she will prove a good friend and wife and bring him prosperity and happiness!

It reminds me of a certain old lady's test of housemaids who applied to her for a place. She always left a broom on the floor across their path as they entered the door. If they fell over the broom they were too stupid to even consider. If they stepped over it they were too lazy to be worth their salt. If they picked it up they were pretty sure to be good housemaids!

But, all joking aside, if we are to accept the standards of the Swiss savant who would judge the character of a woman and her value as a wife by the way in which she peels a potato, we may judge the character of a man and his eligibility as a husband by the way he blacks his boots! And that's all wrong. Most girls would prefer men who patronize a bootblack!

What you want, Mr. Swiss Savant, is not a wife but a good kitchen maid.

Amen!

Tourist—Why are you sailors so fond of being tattooed?

Old Seadog—Well, it's just like you wearin' them flash togs—ain't no particular reason except that other fools is doin' it!—Army and Navy Journal.

A TOAST

By DOUGLAS MALLOCH

FULL many a toast
Good men declare
To royal host,
To lady fair.
So here's a line
To some one, too;
But I'll drink mine
To me and you.

The ladies sweet
Get toasts enough,
So why repeat
A lot of stuff?
Their goose is cooked,
You'll all agree,
If no one looked,
Like you and me.

What makes a host,
With all he spends?
What does he boast
About? His friends!
Without a guest
What would he do?
So here's his best
To me and you!

(©, 1929, Douglas Malloch.)

Mother's Cook Book

I sit today at the loom of life
And weave, and weave, and weave;
The warp is laid by hands divine
But the weft is where I grieve;
For every moment in every day
The shuttle flies through and through
And patterns I scheme with the dreams I dream
And made up by the things I do.

—William J. Robinson.

CHEAP, GOOD EATING

A BIT of meat will season a dish of vegetables and make a dish which will serve five or six persons, which without the vegetables, would take more with much more expense.

Buy a cut from the neck or shoulder, cut into small-sized serving pieces and brown in a little hot fat. If the meat is mutton, add a half-dozen sliced or shredded carrots, an onion or two and some potatoes, then the meat, in an iron frying pan or shallow kettle. Add boiling water to give moisture, cover and cook slowly for an hour or two in the oven. A casserole may be used equally well. When nearly done add plenty of seasoning and serve very hot. A pound or less of meat will make sufficient flavor for the dish so that the lack of meat will not be noticed.

Lettuce With Peanuts.

Take fresh crisp peanuts, shell, remove the brown inner skin and roll like coarse crumbs. Serve, sprinkled over lettuce using a good french dressing. A bit of minced onion adds flavor, if one likes onion.

Hubbard Squash.

A well-developed squash is one of the most tasty of vegetables. Cut the squash into pieces and steam until tender. Scrape out the squash and season well. Trim the pieces into any fancy shape and refill with the seasoned squash. Cover with buttered crumbs and brown in a hot oven. Serve in the shells.

The following dressing is especially good with chicken or turkey:

Oyster Stuffing.

Soak two to three cupfuls of bread in warm water until soft, then squeeze dry. Chop one onion, a tablespoonful or two of ham, place in a frying pan with a little butter; when brown add the bread, one beaten egg, salt, pepper to season, a tablespoonful of chopped parsley and a pinch of spice. Parboil two dozen oysters, chop the hard muscle, then stir all into the dressing and fill the turkey.

Mashed Sweet Potatoes.

Wash and boil the potatoes with the skins on. Peel and mash, add seasoning of salt, pepper and paprika with butter or cream to moisten. Place in a deep baking dish, cover with brown sugar, place in the oven to brown. Remove from the oven and press marshmallows in design over the top. Brown in a hot oven.

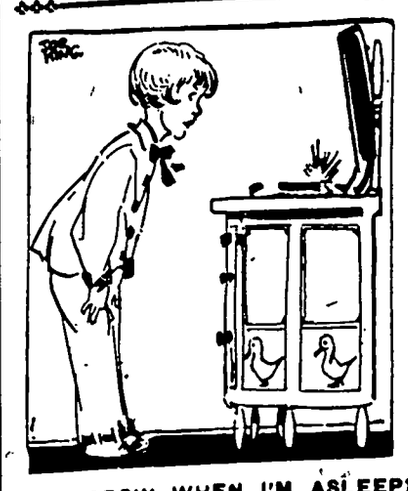
What Does Your Child Want to Know?

Answered by BARBARA BOURJAILY



DO I GROW WHEN I'M ASLEEP?

You grow the most when you're asleep
And settled safe at rest,
Your body uses up its food
And grows its very best.

(Copyright.)

WINTER CAR CARE ROUTINE OUTLINED

Autos in Storage and in Service Need Attention.

To assure automobile owners of maximum automobile comfort and efficiency during the coming cold months service experts have prepared a list of suggestions which cover the essential points of pre-winter car preparation.

Where a motor car is not to be used during the winter, the experts advise storing it in a dry, evenly heated and not too light place. The car should be washed and dried, all oil and water drained off, wheels jacked up to lift weight from tires, the tires partly deflated, and unpainted metal parts coated with heavy oil or vaseline to prevent rust or corrosion.

Oil Should be Added.

To prevent rusting of rings and cylinder walls the spark plugs should be removed and one gill of engine oil poured into each cylinder. Then distribute the oil by turning the engine over a number of times and replace the plugs.

Where it is intended to keep the car in commission changes in operating conditions call for attention to certain important details. It is important that cars be in good operating condition to overcome the rigors imposed by cold weather. Whenever possible owners are urged to use the facilities of service stations. For those who prefer to condition their own cars these suggestions should be followed:

Remove all accumulated sludge from the oil pan and refill with oil of good quality. Frequent oil changes during the winter, with proper adjustment of the crankcase ventilator, will safeguard oil circulation. Lubricate the chassis completely. Change oil in the transmission and differential. Inspect and clean the generator and replace any worn parts. Check the battery and recharge the electrical system if necessary.

Clean Starting Motor.

Remove and clean the starting motor and replace worn parts. Clean connecting cable terminals of electrical system and grease those at the battery, generator, starting motor and starting switch. Clean and adjust distributor and spark plug points. Inspect cables and replace if necessary. Reset timing.

Clean gasoline and vacuum tanks, gas lines and carburetor. Adjust carburetor to proper winter mixture. Tighten water hose connections or replace worn hose if necessary. Pour in anti-freeze mixture. If alcohol is used check specific gravity weekly to prevent freezing of the mixture.

Align wheels to prevent tire wear. Tighten body bolts and spring clips. Adjust clutch, brake pedals and brakes for cold weather driving.

AUTO FACTS

More than 97 per cent of the farmers in Garfield county, Okla., own passenger automobiles.

* * *

Many Paris policemen are linguists, but the American traffic cop can say enough in one language.

* * *

"Here," said the Vain Optimist, "is a traffic regulation scheme that will not pain a great many people."

* * *

You can beat some of the trains to all of the crossings; all of the trains to some of the crossings, but you can't beat all of the trains to all of the crossings.

* * *

Pennsylvania has approximately 27,000 gasoline retailers. Each dealer is required by law to file a bond, in amounts upward of $500, to insure collection of the four-cent gasoline tax.

MOTOR QUIZ

How Many Can You Answer?

Q. Why should a driver allow a reasonable space between his car and the one ahead?

Ans. To avoid an accident caused by a sudden stop, also delay on account of being unable to get around the car ahead in case it becomes stalled.

Q. How can the strain caused by rough spots in the street, uneven car tracks and other obstructions, be avoided?

Ans. By releasing the clutch and allowing the car to coast over these places.

Q. How often should the ignition cable be replaced and why?

Ans. About once a year. Cables become leaky and cause loss of electrical current.

Q. What is the average life of a spark plug?

Ans. Ten thousand miles.

Eyesight of Motorists Found to Be Defective

Dr. Edwin H. Silver, prominent Washington optometrist and chairman of the motor vision commission of the Optometrist society, has declared that 30 per cent of all automobile accidents in the United States are due to

Dr. Edwin H. Silver.

defective eyesight of motorists. Recently returned from an inspection trip in Europe, Doctor Silver says France and Germany are far ahead of the United States in safeguarding the rights of pedestrians and regulating the issuance of motor permits. During 1928 the motor vision committee has succeeded in securing legislation in nine states and the District of Columbia requiring eyesight tests for motorists.

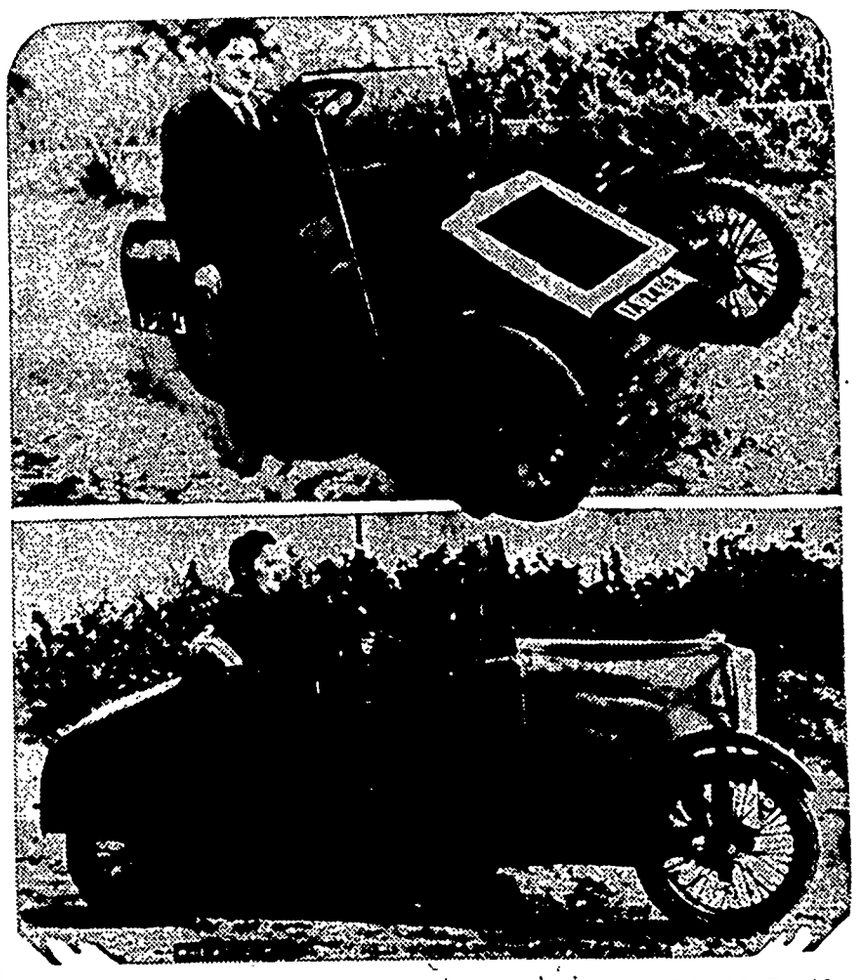
Annual Automobile Cost Is Estimated at $418

An average of $293 was spent by each motorist in the United States during 1928 in the operation and maintenance of his car, according to figures compiled by the American Motorists association. Of this sum $101, or 34 per cent, was expended for fuel and lubricants, this being the largest item in the motorist's annual operation and maintenance bill.

The $293 figure does not take into account depreciation. The average life of a passenger automobile, according to computation of the federal government, is approximately seven years. During 1928 the average retail price of passenger cars in the United States was $875, which, based on a seven-year life expectancy, would mean an average depreciation of $125 per year.

From this figure, plus the average maintenance of $293, it will be seen that the general average cost of operation, plus depreciation, was $418 per year, or approximately $1.14 per day. The comparable figure for 1927 shows that the average cost of operation, plus depreciation, was $365 for that year, or $1 per day.

FOLDING AUTOMOBILE IS NOT EXPENSIVE



Two views of the new folding automobile, invented by Heinrich Zaschka, of Berlin, which costs about $350 and is in reach of all classes.

Neal's Mother Has Right Idea

Within a few months there will be no more feverish, bilious, headachy, constipated, pale and puny children. That prophecy would surely come true if every mother could see for herself how quickly, easily, and harmlessly the bowels of babies and children are cleansed, regulated, given tone and strength by a product which has proved its merit and reliability to do what is claimed for it to millions of mothers in over fifty years of steadily increasing use.

As mothers find out from using it how children respond to the gentle influence of California Fig Syrup by growing stronger, sturdier and more active daily they simply have to tell other mothers about it. That's one of the reasons for its overwhelming sales of over four million bottles a year.

A Western mother, Mrs. Neal M. Todd, 1701 West 27th St., Oklahoma City, Okla., says: "When my son, Neal, was three years old he began having constipation. I decided to give him California Fig Syrup and in a few days he was all right and looked fine again. This pleased me so much that I have used Fig Syrup ever since for all his colds or little upset spells. It always stops his trouble quick, strengthens him, makes him eat."

Always ask for California Fig Syrup by the full name and see that the carton bears the word "California." Then you'll get the genuine.

HANFORD'S
Balsam of Myrrh
A Healing Antiseptic
All dealers are authorized to refund your money for the first bottle if not suited.

The Lord loveth a cheerful giver—and so does the taker.

ONLY A DOCTOR KNOWS WHAT A LAXATIVE SHOULD BE

Danger lies in careless selection of laxatives! By taking the first thing that comes to mind when bad breath, headaches, dizziness, nausea, biliousness, gas on stomach and bowels, lack of appetite or energy warns of constipation, you risk forming the laxative habit.

Depend on a doctor's judgment in choosing your laxative. Here's one made from the prescription of a specialist in bowel and stomach disorders. Its originator tried it in thousands of cases; found it safe for women, children and old folks; thoroughly effective for the most robust man. Today, Dr. Caldwell's Syrup Pepsin, as it is called, is the world's most popular laxative. It is composed of fresh herbs and other pure ingredients. You can get it, in generous bottles and ready for use, at any drugstore.

FIND "FRIEND IN NEED"

Mother and Daughter Praise Vegetable Compound

Johnson City, N. Y. —"My daughter was only 20 years old, but for two years she worked in misery. She was all run-down, nervous, had aches and pains and no appetite. I was taking Lydia E. Pinkham's Vegetable Compound with good results so she decided to try it. Before she had taken two bottles her appetite was better, she was more cheerful and was able to work. I cannot praise your medicine too highly. It is wonderful for mothers and for daughters. It's surely 'a friend in need'."—Mrs. L. E. Hall, 223 Floral Avenue, Johnson City, N. Y.

Garfield Tea

Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

NOTICE OF ASSESSMENT FOR SURFACED ROADS
Secondary Road District No. 14

Ta all persons named in the following schedule as owners, to all occupants of real estate herein described and to all lien-holders and all persons having any interest in said real estate:

You and each of you are hereby notified that there has been filed in the office of the County Auditor of Hancock County a report of the Board of apportionment showing the special assessments proposed to be levied on all lots, parts and parcels of real estate included within secondary road district No. 14 the schedule of proposed said assessments being as follows, to-wit:

KLEMME LOCALS

A number of friends and neighbors staged a party on Allie White and family Wednesday evening at the White home. The evening was spent in visiting and a general good time was enjoyed. Refreshments were served.

Mrs. Mary Waterman left Saturday for Iowa City where she visited friends until Tuesday and then went to Chicago where she will be with her daughter this winter. Mrs. Waterman will reside but a few blocks from Grandma Schroeder, so we predict they will be frequent visitors with each other.

Miss Stella Bock wrote an interesting letter to The Times from Pomona, Cal. in which she states that the weather is warm, nights cool. She visited a Mon farm where they had 164 lions which they feed on old orses, requiring two a day. She has seen the ocean, orange trees in blossom and many sights. She says Los Angeles is a very busy place.

Martin Jensen and family, Ed. C. Buentenbach and family, Mr. and Mrs. Erwin Rosendahl and Mr. and Mrs. Aug. Baack and son, all gathered at the Frank Kluckhohn home Sunday evening to surprise his birthday. An oyster sup served and the evening s visiting. Frank received a of fine presents, which sort ened the shock of the surpr

Mr. and Mrs. C. G. Wa and Marian, Mrs. Mary Wa and Mr. and Mrs. Fred Mu Clarion all drove to Cedar Saturday, from which place Mrs. Musfelt and Mrs. Mary man took the train for Iow for a visit. The C. G. Wa family then drove to Traer visit until Sunday evening C. Keraus and family.

Tuesday evening a num friends staged a surprise b party and waffle supper on Kluckhohn. After the supp evening was spent in visiti playing cards. Those present Mr. and Mrs. C. F. Keraus, Kudje and family; Fred Klu and family; C. G. Waterma family and R. A. Jorgens family. Frank was presente a gift in remembrance of casion.

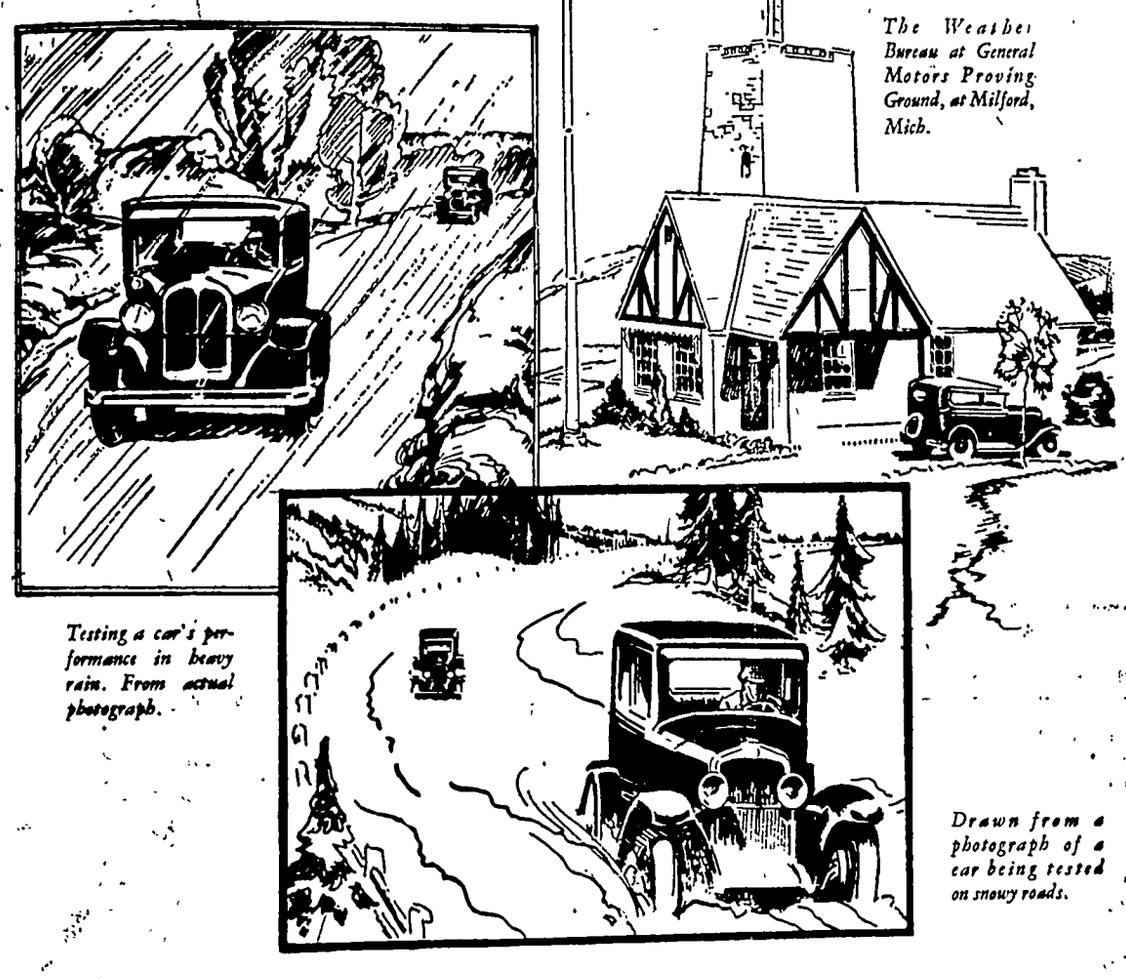
"THE FARM SERVICE STORE"

"What! A weather bureau?"



The Weather Bureau at General Motors Proving Ground, at Milford, Mich.

Testing a car's performance in heavy rain. From actual photograph.

Drawn from a photograph of a car being tested on snowy roads.

VISITORS to General Motors' 1268-acre Proving Ground marvel at the sight of a complete weather bureau and ask what it is for.

The answer is that in the testing of cars every possible factor that might affect a car's performance is considered by General Motors' engineers.

So precise are some of the tests that even the difference between a sunny day and a partly cloudy day—or between a north breeze and a south breeze—is considered.

With each day's record of the mechanical tests applied to a car on the roads and hills of the Proving Ground is included a report of the exact weather conditions prevailing. The engineers then can know how weather affects performance, and can have a comparable record so that every car tested is given an equal opportunity to prove itself under exactly the same conditions.

Advance models of all the cars listed below were proved at the Proving Ground before they were introduced to the public. Read about them; then clip and send the coupon.

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$695. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful Fisher Bodies. Also sedan delivery. Light delivery chassis. 1½ tonchassis and 1½ ton chassis with cab, both with four speeds forward.

PONTIAC. 7 models. $745—$895. Now offers "Big six" motoring luxury at low cost. Larger L-head engine; larger Bodies by Fisher. New attractive colors and stylish lines.

OLDSMOBILE. 8 models. $875—$1035. The Fine Car at Low Price. Now offers further refinements, mechanically and in the Fisher Bodies. Also eight optional equipment combinations in Special and De Luxe line.

MARQUETTE. 6 models. $965—$1035. Buick's new companion car, designed and built by Buick. Six cylinders. Fisher Bodies. Its price puts Buick quality and craftsmanship within reach of more families.

OAKLAND. 9 models. $1145—$1375. Oakland All American Six. Distinctively original appearance. Splendid performance. Luxurious appointments. Attractive colors. Bodies by Fisher.

VIKING. 3 models. $1595. General Motors' new "eight" at medium price. 90-degree V-type engine. Striking Bodies by Fisher. Unusual appointments, also optional equipment combinations.

BUICK. 14 models. $1225—$1995. Three new wheelbases, 118-124-132 inches. The greatest Buick of them all. Many new mechanical features. Fisher Bodies with new lines.

LASALLE. 14 models. $2295—$2875. Companion car to Cadillac. Continental lines. Distinctive appearance. 90-degree V-type 8-cylinder engine. Striking color combinations in beautiful Bodies by Fisher.

CADILLAC. 26 models. $3295—$7000. The Standard of the World. Famous efficient 8-cylinder 90-degree V-type engine. Luxurious Bodies by Fisher and Fleetwood. Extensive range of color and upholstery combinations.

(All Prices f. o. b. Factories)

There's a lot of things you never learn at school,
There's a lot of things that's never taught by rule;
There's an awful lot of knowledge
That you never get at college;
There's a lot of things you never learn at school.
—Old Song, Author Unknown.

By ELMO SCOTT WATSON

IN THE grade schools the children are taking nature study. In high school, they learn zoology and botany. In college they broaden their knowledge of all living things by studying biology. But there is one branch of science which the textbook writers and the teachers have neglected. It is the somewhat-less-than-exact science of unnatural history—the best exemplification of the sentiment expressed in the old song quoted above.

For unnatural history is one of the things "you never learn at school." To become acquainted with its fascinating facts you must go—not to books but to the source of all true knowledge, to people. And there is one class of men who are better fitted than any other to give these facts. They are the simple men who lived close to the soil and whose brief snatches of leisure between long hours of hard work were usually given over to spinning yarns for the amusement of themselves and their fellows. In telling their tall tales they invented mythical characters of heroic proportions who performed prodigious feats and whose every activity was carried out on a vast scale.

Such were the old-time lumberjack and the old-time cowboy, who have given to us Paul Bunyan, the super-lumberjack, and Pecos Bill, the super-cowboy, whom the students of folklore characterize as the best and almost only examples of native American myth heroes. More than that, in telling of the deeds of these legendary heroes, these saga-singers peopled their world with strange creatures, bizarre in appearance and fantastic in habits.

Not only did they invent their yarns for their own pleasure but they often repeated and embroidered them for the express purpose of "stuffing the tenderfoot" or "hazing the pilgrim." So if you would learn the most interesting "facts" in unnatural history, go to a lumberjack or a cowboy and by your unsophisticated manner and naive questions, give him a chance to tell you about some of the strange creatures which he has seen in the course of his career.

If it's a lumberjack you're talking to, the chances are that one of the first animals he will tell you about is the hodag. Although the hodag is now extinct, the one specimen having been captured near Rhinelander, Wis., years ago, all lumberjacks know about the hodag and how it came into being. Once upon a time there was an ox which had led an unusually hard life at the hands of his various drivers up in the north woods of Wisconsin. Among lumberjacks it is believed that the hide of an ox is invulnerable to everything but the profanity of its drivers. When the animal dies, its customary burial ceremony is cremation, and it requires seven years of continuous fire to reduce to ashes all the profanity which has accumulated in its body during its lifetime.

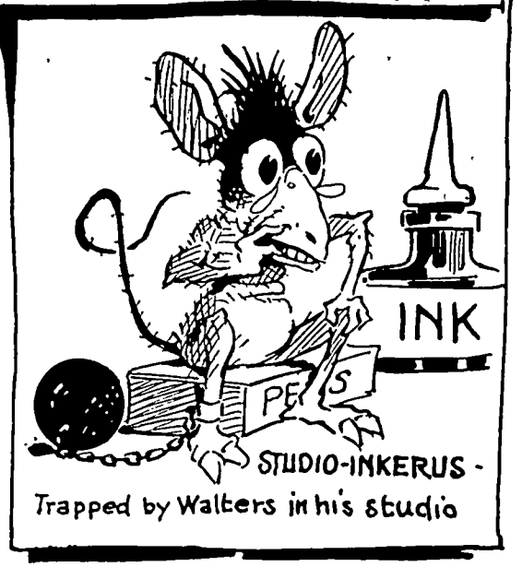
So when this particular ox died, a brush fire was built around its body and kept going for seven years to obliterate all the curses which had been heaped upon it in English, French, Irish, Scandinavian and German while it had toiled in the lumber camps. At the end of the seventh year the fire was allowed to die down but instead of there being left no trace of the ox, out of the heap of ashes, there rose, phoenix-like, a fearsome creature, such as is pictured above, which exhaled an obnoxious odor and the swish of whose tail made the earth tremble.

For some time this monster preyed upon the lumber camps, its favorite food being beef on the hoof. Then, according to "Lake Shore" Kearney of Wausau, Wis., an old-time lumberjack who has written a book on the hodag, E. S. Shepard of Rhinelander, Wis., another old-timer in the north woods, succeeded in capturing it by digging a hidden pit in a trail which the hodag was known to frequent and luring the hodag to it by having a young man of marathon fame and a noted ski jumper lead an ox along this trail with the hodag in hot pursuit. After its capture the hodag was put to death, skinned and mounted. For years it was exhibited in an old barn near Rhinelander and thousands of people journeyed there to view it until the barn burned down and all traces of this creature vanished from the earth. But if you go to Rhinelander today they will sell you picture post cards of the hodag as proof of the fact that it did once exist.

But even though the hodag is extinct, there are other equally interesting creatures still in the north woods, your lumberjack friend will tell you, some of whom make it exceedingly dangerous for a tenderfoot to stray far from the lumber camp by himself. Of course, you may not see them, but that doesn't prove that they are not there. If you find in the woods a set of tracks that puzzle you, they were probably left there by the tote road shagamaw. Its hind legs have the hoofs of a moose and its forelegs the paws of a bear. When it is tired of traveling on one set of legs, it continues on its way on the other, which accounts for the peculiar trail which is so baffling to hunters.

The tote road shagamaw is shy and harmless but look out for the agropelter and the gumberoo! The agropelter has a long body and arms like a spider monkey. It has a perpetual grudge against mankind and it hides in hollow trees, out of which it springs, tears off a huge branch of a tree and cracks the skull of the luckless tenderfoot as he passes by. The gumberoo lives in burned-over forests and is therefore easily avoided. It is larger than a bear and has a round leathery body which nothing can pierce. If a hunter fires at it the bullet rebounds from its tough hide, strikes the marksman and usually kills him. The only thing that can kill it is fire and often during forest fires the lumberjacks hear loud explosions which are gumberoos blowing up in the flames.

All of the foregoing animals are known to lumberjacks of the north woods from Maine to Minnesota. When the lumber industry expanded west, the lumbermen discovered many other interesting creatures which are known both to them and to the cowboys, the scene of whose activities bordered on theirs. For instance there is the roperite which is as large as a small pony and has a long rope-like beak with a slip-noose on the end. With this natural lariat the roperite catches even the swiftest jackrabbit and sometimes ropes a tenderfoot. Then there is the tripodero with two telescopic legs. Its beak is like the muzzle of a gun with a sight on the end. Going through the brush it raises and lowers itself to look for game and, upon seeing some, tilts itself to the right angle, sights along its beak and then lets fly with a pellet of clay, a quantity of these quids being always carried in the left cheek. The tripodero has never been known to miss a shot and as a result the mortality among tenderfeet in some parts of the West is said to be appalling.



Although lumberjacks and cowboys have been the principal contributors to the origins of unnatural history, too much credit cannot be given to editors, and especially editors of country papers, for their part in preserving it for future generations of Americans who are unlikely to "learn it at school." It is to a number of them that the author of this article is indebted for information about two creatures, without a description of which no unnatural history notebook would be complete. One is the gilly-loo or philly-loo bird and from descriptions furnished by R. F. Fuller of the Rhame (N. D.) Review, Larry Flint of the Sharon (Pa.) Herald, "Uncle Jimmy" of the Harlowtown (Mont.) Times, Ben E. Manning of the Riddle (Ore.) South Umpqua News, W. M. Huff of the Claflin (Kan.) Clarion and L. O. Johnson of Livingston, Mont., a fairly accurate idea of the appearance and habits of the philly-loo can be written as follows:

The philly-loo is a comic supplement of the ancient rarustarus, is related to the wild coldshuts and fuzzy-billed sidewinders and in some respects resembles the galliwampus. It has a beak like a stork, one arm to guide itself, and a long lizard tail, which it usually carries in the shape of a Q and which leaves a track like a modern non-skid tire. It is covered with horse feathers and from it is obtained not only horse feathers but colt slaw. Its most distinguishing characteristic is that it flies upside down and if it were not for this fact more would be known about it. For when the hunter shoots the philly-loo it falls up instead of down and therefore but few specimens have been collected. The reason for its flying upside down is that it can thus absorb more violet rays from the blue sky and stave off rheumatism.

The other interesting animal is the gyascutus. Editha L. Watson of the Colorado Graphic, Denver, the daughter of an old-time country newspaper man, has written the following description of this creature:

The gyascutus is about the size of a white-tail deer, has ears like a rabbit, and teeth like a mountain lion. Its coat is brindle, and its eyes are red. It has a long and prehensile tail, which it wraps around rocks when it turns around, for a little extra leverage.

It has telescopic legs, which arrangement enables it to graze around the sides of mountains, the two right or left legs, as the case may be, telescoping to about half the length of the other two. For this reason it can eat either to the right or the left, but has some difficulty in turning around, as it appears that the two hind legs or the two front ones will not telescope at the same time, only one side at a time having this power. Hence the long tail, which it wraps around the rocks, often pulling them out of the ground with the labor of its exertions in turning around.

The gyascutus eats the tan and green lichens which adhere closely to rocks on hills, and in the process, wears little trails around the mountainsides, which many people have noticed.

When disturbed, this animal digs a hole in the ground very rapidly, disappearing almost immediately, so that sight of one is very rare. The holes are often mistaken for prospect holes, but the seeker for ore would be amazed to find a gyascutus upon farther digging.

The gyascutus is seen only after a snake-bite—and the subsequent treatment—by the observer. This causes one to wonder if this animal and the snake are not in some way affiliated. This is a subject which will bear investigation.

Gyascuti, while rare, are not extinct, but have been run into the ground so often that they are almost unknown.

Editors not only have done a good work in the interests of unnatural history by preserving the accumulated data on many of these interesting animals, but they have also contributed to the science of their observations on some of the fauna which are found only around print shops. Go to any print shop and, if you will ask, the editor will be glad to show you some type lice. Then there is the type lout, which is an apprentice type louse, whose job it is around the print shop to eat all punctuation marks which are incorrectly placed and to correct typographical errors. A lout being an awkward fellow, the type lout sometimes makes mistakes himself and that is why you sometimes find your name misspelled in the newspaper. Another interesting animal is the studio-inkerus. It was just by chance that one of these appeared while Artist Walters was making the sketches for this article and he was able to draw the picture of this interesting little fellow—the first time in history that its portrait has ever been made. The studio-inkerus is the reason why the ink bottles and ink wells on the desks of cartoonists and editors are always dry. The studio-inkerus eats nothing and drinks only ink.

Backache Bother You?

A Persistent Backache Often Warns of Sluggish Kidneys.

DOES every day find you lame and achy—suffering nagging backache, headache and dizzy spells?

Are kidney excretions too frequent, scanty or burning in passage? These are often signs of sluggish kidneys and should not be neglected.

To promote normal kidney action and assist your kidneys in cleansing your blood of poisonous wastes, use *Doan's Pills*. Endorsed the world over. Sold by good dealers everywhere.

50,000 Users Endorse Doan's:

Mrs. L. Dietz, 2015 S Street, Sacramento, Calif., says: "I surely feel grateful to Doan's Pills. Dizzy spells bothered me and I felt tired and nervous. At times I had such a lameness across the back that it was very hard to get around. My kidneys were not acting normally. I started to use Doan's Pills and I am glad I did. Now I enjoy good health."

Doan's Pills

A Stimulant Diuretic to the Kidneys

A Sour Stomach

In the same time it takes a dose of soda to bring a little temporary relief of gas and sour stomach, Phillips Milk of Magnesia has acidity completely checked, and the digestive organs all tranquilized. Once you have tried this form of relief you will cease to worry about your diet and experience a new freedom in eating.

This pleasant preparation is just as good for children, too. Use it whenever coated tongue or fetid breath signals need of a sweetener. Physicians will tell you that every spoonful of Phillips Milk of Magnesia neutralizes many times its volume in acid. Get the genuine, the name Phillips is important. Imitations do not act the same!

PHILLIPS Milk of Magnesia

Those who have been used as stepping stones by the great are generally proud of it.

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee. Insist upon K-R-O, the original Squill exterminator. All druggists, 75c. Largesize (four times as much) $2.00. Direct if dealer cannot supply you. K-R-O Co., Springfield, O.

K-R-O KILLS-RATS-ONLY

Is life a journey to some, a treadmill to others?

Cold in Head, Chest or Throat?

RUB Musterole well into your chest and throat — almost instantly you feel easier. Repeat the Musterole-rub ***once an hour for five hours . . .*** what a glorious relief!

Those good old-fashioned cold remedies—oil of mustard, menthol, camphor—are mixed with other valuable ingredients in Musterole.

It penetrates and stimulates blood circulation and helps to draw out infection and pain. Used by millions for 20 years. Recommended by many doctors and nurses. Keep Musterole handy—jars, tubes. All druggists.

To Mothers—Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

MUSTEROLE BETTER THAN A MUSTARD PLASTER

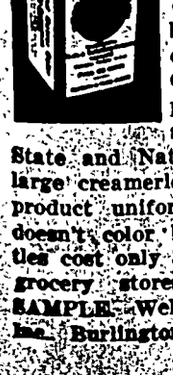
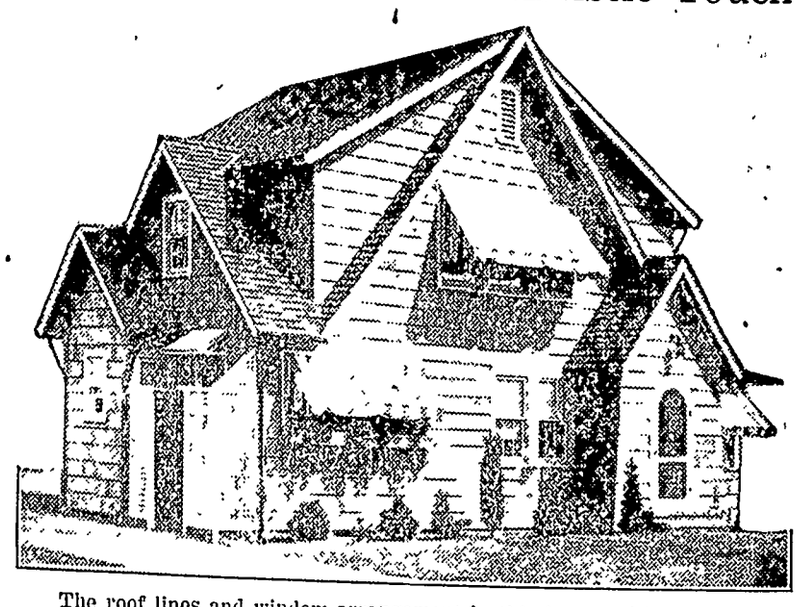
A Few Cents Invested in "Dandelion Butter Color" Will Put Dollars in Your Pocket.



Top prices for your butter are possible the year 'round with the help of "Dandelion Butter Color." Put in just a half-teaspoonful for each gallon of cream before churning and out comes butter of that Golden June Shade. It's purely vegetable, wholesome and meets all State and National Food Laws. All large creameries use it to keep their product uniform. It's tasteless and doesn't color buttermilk. Large bottles cost only 35 cents at all drug or grocery stores. Write for FREE SAMPLE. Wells and Richardson Co., Inc. Burlington, Vermont.

Unusual Roof Lines and Window Arrangement Give Artistic Touch



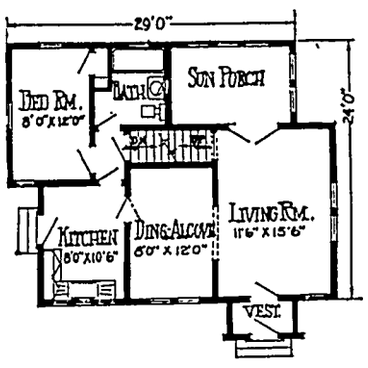
The roof lines and window arrangement in this house with the numerous gables give it a very unusual and attractive exterior appearance. The dimensions are 24 feet by 29 feet. There are six rooms and a good-sized sun porch. One bedroom on the ground floor is a convenience.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply

There is a fascination about a shingled home. Shingles used on outside walls of a modern house are a silvered gray, which is an imitation of the stained shingles of New England seacoast towns. The silver effect comes from the action of the salt sea air on the unpainted wood and gives it a most pleasing and artistic effect.

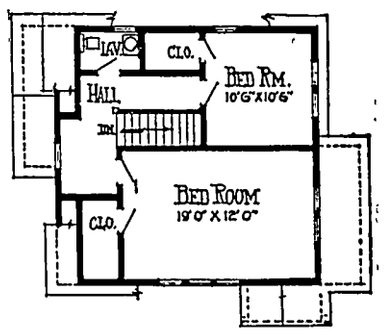
The beauty of New England homes now can be had anywhere in the country through the use of these treated shingles for exterior walls. A fine example of a home of this type is shown in the accompanying design. Here is a house 24 feet deep by 29 feet wide, containing six good-sized rooms and an unusual large sun parlor at the back of the house connected with a large living room. The unusual roof lines and window arrangement in this home building design



First Floor Plan.

with the numerous gables give it a very unusual and attractive exterior appearance. The house is, in reality, a story-and-a-half but the steep pitched roof lines and the many gables give it the appearance of a full two-story building.

The room arrangement of this home and the sizes of each room are shown on the floor plans accompanying the exterior view. It will be noted that the arrangement on the first floor is unusual as the living room, dining room and kitchen are arranged along the front of the house, while at the back is a bedroom, bath and a large sun porch. The gabled roof entrance vestibule leads directly into the living room which occupies that end of the



Second Floor Plan.

house. This room is 11 feet 6 inches by 15 feet 6 inches long and is connected with the sun porch at the back by double french doors. At the left and at the front of the building is the dining room or dining alcove, as the architect has designated it. This room is connected with the living room by doubled case opening. This room is 8 feet by 12 feet, which is not a large dining room but of sufficient size to accommodate a family that can live comfortable in this house.

Stairs to the second floor run out of the end of the living room and lead to a large hall on the second floor. Here are two bedrooms. The one at the front of the house is unusually large being 12 feet by 19 feet and is made possible by the pitch of the roof. It has at the front a series of three windows and at the side two more windows, which make it a very attractive room. The other bedroom is at the rear corner and is rather small being only 10 feet 6 inches square.

This building design will appeal to prospective home builders who want a home suitable for a corner site. It will be seen by the illustration that this home fits nicely into a surrounding of lawn, shrubs and trees.

Woman Converts Old House Into Modern Home

How an old house can be modernized through the laying of oak floors, remodeling of the roof and other improvements, was strikingly demonstrated by Mrs. Charles Treas, of Aberdeen, Miss.

Mr. Treas was obliged to take the house, built 80 years ago, in payment of a debt. He did not think much of the place, but his wife saw possibilities in it. He turned it over to her.

"She ripped off the roof and replaced it with a new one," said Mr. Treas. "She tore away the old porch and built on a new one. She bathed the entire place with fresh paint. She placed a fence around it. She added to and rejuvenated the outbuildings. She used much concrete and finished off the outside appearance with much shrubbery.

"Then she went inside. There she laid new oak floors throughout, redecorated the walls and added touches of enamel work where needed. She built a new stairway, added an extra bathroom, a sleeping porch and a sun room. New windows relegated the old to the junk heap and new wiring and fixtures graced the spots where the old had died a natural death from old age."

When the house was completed Mr. and Mrs. Treas gave up their apartment and moved into it. It is one of the most attractive homes in Aberdeen.

Painting Shelves Makes Them Clean and Lasting

In order to last, shelves should be protected with paint or varnish on the bottom as well as on the top and sides. Decay is no respector of surfaces, and will attack and wear away one side as well as another. Therefore it is best to paint or varnish the entire shelf as soon as it is put up.

Concerning Walls

Of the many types of walls, each has advantages as to cost, durability, decoration, insulation, application, etc. Which will give you the best average for the job you have in mind?

Most of Walnut Used Today Is Grown in U. S.

Following close upon the heels of tobacco and corn, one of the first exports from colonial America was of considerable quantities of American walnut.

The English cabinet makers of the Seventeenth century, ever alert for new materials, soon learned from visitors to America of the beauties of American walnut as distinguished from European species. So, at their request, a returning visitor first imported into England some American walnut in the year 1629.

Since that time exports of American walnut continually expanded until 1913, when about 90 per cent of the American walnut produced was shipped abroad. During the World war the use of American walnut was regulated by the government, which required many millions of board feet for the manufacture of gunstocks and airplane propellers. Since the war a tremendous demand for American walnut was developed in the United States and in Canada. At the same time exports have increased until in 1928 nearly 15,000,000 feet of semimanufactured walnut lumber was shipped abroad. Of this a large percentage still goes to England, though since the war Germany has been an increasingly large user. The wood is used by many of Europe's most noted cabinet makers.

Water Drains of Lead Made Thing of Beauty

In houses of the English Tudor style, leader heads of elegant patterns are often cast in lead. Sometimes architects specify pressed copper, washed with lead. These practical water drains, frankly exposed, are made things of great beauty.

Light Woodwork Takes Antique Finish Well

An antique finish on woodwork may be used over any color which is not too dark. While raw umber is the most popular for the glaze, any one of a great variety of colors may be used for this purpose. A darker shade of the base color is always a good choice.

POULTRY

WINTER QUARTERS NEED RIGHT CARE

Great Drawback Is Keeping Fowls Free of Vermin.

More interest among poultry raisers and "small flock" owners centers around the fall and winter season than at any other time of the year. Many flocks of chickens are ruined by lack of knowledge in caring for their winter quarters, picking out the right fowls and keeping them in shape for the long winter season to follow.

One of the greatest drawbacks of the small raiser is keeping their birds free from vermin, lice and different parasites which infest the chicken quarters. The owner is besieged with different kinds of literature on this subject, some too expensive to try and others not practical for their use. In order to raise chickens profitably one must have "building" material that will not use up all the income received. In the feeding line your feed man can, in most cases, sell you feed of the right kind at the right price. In the disinfectant line everybody has a different method and generally too expensive for the average small raiser. In this line perhaps the best is none too high, but several have been tried and proved successful.

Take a full handful of tobacco stems and soak in luke warm water for one hour, drain and use the water—adding one-half pint of kerosene and one gallon of water. Spray just before chickens go to roost. If tobacco stems are not obtainable, use smoking tobacco, a small package the same way. If too bothersome to soak tobacco get nicotine at the drug store or nursery and use two teaspoonfuls to the same proportions as tobacco.

To be sure you are getting results, place a sheet of paper on the dropping board after spraying and if the chickens have vermin you will see them drop off onto the paper.

Hens Are Tempted by Eggs Broken in Nest

One of the most common vices is egg eating, of which most poultry keepers have had some experience.

Although the habit may be formed at any period of the year there is no doubt that a large number of the outbreaks are recorded during the summer.

This is partly due to the fact that large numbers of eggs are produced, and many of them are deposited in nests devoid of litter, thus creating a tendency for the eggs to become damaged.

The habit is often the result of a broken one being left in the nest or on the manure board, to be devoured by some bird later.

Very few, if any, hens can resist the temptation, and the habit quickly spreads from one to another, developing into an epidemic which frequently proves costly for the owners. Unless the nests are kept well covered with soft material the shells are certain to get damaged. Later on other hens frequent the nests, and broken eggs follow.

Poultry Hints

Cleanliness is the best preventive of poultry diseases.

* * *

Old hens are the most common spreaders of poultry tuberculosis.

* * *

Canker is a sore throat similar to diphtheria. Remove a sick hen at once.

* * *

Generally speaking, the hens with white shanks, big red combs, and old, dirty, and ragged plumage are the ones to keep, according to the specialist.

* * *

If eggs are found in stolen nests, in the litter or otherwise, so that their condition is not absolutely known, candle such eggs before taking them to market.

* * *

A hen that is laying will have a big, red, waxy comb, but as soon as she quits, the comb will begin to shrivel.

* * *

New corn can be fed in the ear if the birds are started on it gradually, with the amount increased from day to day.

* * *

Muslin curtains, if used in ventilating poultry houses, should be clean and in good condition. The old muslin area which is clogged with dust is not an effective medium for the diffusion of the air.

* * *

In addition to mash and scratch grain hens should have free access to grit, oyster shell and water. Green feed such as cabbage or mangles is also helpful.

* * *

For winter feeding yellow corn is superior to white. The yellow types are rich in vitamine A, which is necessary to keep the birds in good health and particularly to prevent eye trouble. This vitamine is also found in green feeds, but little of it in white corn, wheat, oats, buckwheat, barley and other common feeds.

Bayer-Tablets of Aspirin BAYER Genuine

To Identify *Genuine* Aspirin

THE increasing use of Bayer Aspirin every year is proof that it has no ill effects. It is the accepted antidote for pain. It always helps; it never harms. Quick relief when you've a headache, or cold; or are suffering from neuralgia or neuritis. Rheumatic pains yield, too, if you'll only give these tablets a chance. But you want genuine Aspirin, so look for the Bayer Cross on every tablet. The box always bears the name Bayer and the word "genuine" printed in red. Proven directions inside.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

BAYER

Where Politics Count

A notary public who had served in such capacity in his home town for the last 32 consecutive years recently filed with the judge of the circuit court an application for reappointment.

Turning to the court deputy, the judge asked if she knew whether Mr. A's character was such that the application should be granted, to which the deputy seriously replied: "I don't know; I'm not sure I know his politics."

Cause and Effect

"I'm certain there's something wrong with this loudspeaker. I've had bad reception all the week."

"Have you, dear? That reminds me. I saw baby toddling round filling that trumpet thing with pieces of coal, the darling!"—Passing Show.

Cole's Carbolisalve Quickly Relieves and heals burning, itching and torturing skin diseases. It instantly stops the pain of burns. Heals without scars. 30c and 60c. Ask your druggist, or send 30c to The J. W. Cole Co., Rockford, Ill., for a package.—Advertisement.

Where Convicts Read

Eight hundred convicts in the Minnesota reformatory at St. Cloud withdrew 110,000 books from the prison library last year.

Vanity is the only intellectual enjoyment of some women.

UGLY PIMPLES?

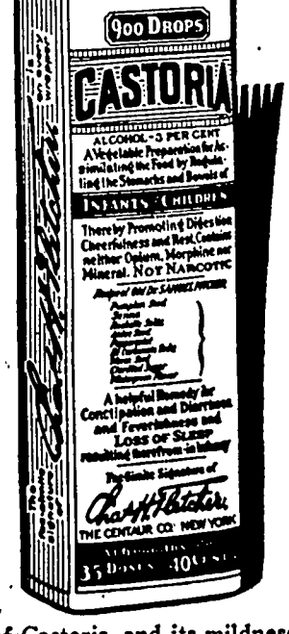
***If Baby has* COLIC**



A cry in the night may be the first warning that Baby has colic. No cause for alarm if Castoria is handy! This pure vegetable preparation brings quick comfort, and can never do the slightest harm. Always keep a bottle in the house. It is the safe and sensible thing when children are ailing. Whether it's the stomach, or the little bowels; colic or constipation; or diarrhea. When tiny tongues are coated, or the breath is bad. Whenever there's need of gentle regulation. Children love the taste of Castoria, and its mildness makes it suitable for the tiniest infant, and for frequent use.

And a more liberal dose of Castoria is always better for growing children than some needlessly strong medicine meant only for adult use. Genuine Castoria always has Chas. H. Fletcher's signature on the wrapper. Prescribed by doctors!

Goes to Hospital to Learn Beauty Aid

Doctor laughed when asked "What cleared my skin?"

"THE first time I heard of it," writes Mrs. E. Whitney of 35 Parker Street, Bangor, Maine, "was when I was at the Hospital. I was very nervous and run down and after my baby daughter was born the doctor began giving me something. In about ten days I felt like a new person. Before then, I was miserable. My skin was in very bad condition and I could not understand what made it clear up so quickly.

"Before I left I asked the House Doctor what kind of medicine it was that cleared up my skin and made me feel so much better. He said 'My dear girl, didn't you ever hear of Nujol? Hospitals aren't the only place where you can get it! You can buy it most everywhere!'

"I have been using Nujol ever since, and I think it is wonderful."

That's the great thing about Nujol. Not a medicine, contains no drugs, can't possibly hurt you, forms no habit—and if you are like most other people its simple natural way of bodily lubrication will do wonders for you, too.

You see, all of us have an excess of body poisons that make our skins sallow, only able to work at half or quarter our real ability. When Nujol absorbs these poisons and carries them off easily, normally, naturally, we just feel like a million dollars.

Try Nujol for two weeks, and see what happens. It costs only as much as a ticket to a good movie, and it will mean so much to you. In sealed packages at any drug store. Start feeling fine, this very day!

ATWATER KENT

RADIO

SCREEN-GRID

We are happy to announce today a reduction of $27 in the price of Atwater Kent Screen-Grid Radio.

This is Atwater Kent's way of joining with the leaders of other great industries to stabilize the public's dollar for the prosperity of the country.

Hundrds of thousands of people want Atwater Kent Screen-Grid Radio right now. By these price reductions we are putting the finest radio set within the reach of everyone—just when most purchasers of radio are ready to do their buying.

This company owns outright its business and its manufacturing plant. It has done business on its own capital for for twenty-seven increasing profitable years and has never borrowed a dollar. Today it is in the strongest position it has ever had.

For the past seven months we have been making the Screen-Grid Radio in the largest and most efficient radio factory in the world.

Concentrating on one job—the production of the finest radio that can be built—enables the Atwater Kent Co. again to share with the public the savings of our large scale operation.

These price reductions mean the greatest value ever offered in Atwater Kent Radio. A. Atwater Kent.

DINGS AT SCHOOL THE PAST WEEK

REE ONE ACT PLAYS TO BE GIVEN TUESDAY NIGHT

yers From Clear Lake, Belmond And Klemme In Casts

Clear Lake, Belmond And Klemme High Schools are cooperating in program of one-act plays and on esday evening of next week the ree schools will each stage their e-act play in our own gymnasium. later dates our players will stage eir one-act play at each Clear ke and Belmond. Each school ill receive all of the door receipts its town. Very naturally we de- re that Klemme shall have a re- rd breaking crowd and that we ay the first night set a mark for e other towns to emulate from e standpoint of attendance. We ould be proud to excell, if possible ch of the other two towns and be- ere we may do it judging from the upport hitherto received on such ccasions.

Admission here has been placed t 25 and 35 cents with a charge of 0 cents for reserved seats. These ill go on sale at Mr. Wilson's drug tore on Saturday afternoon of this eek at 1:00 o'clock. Our girls lee club will sing between acts at he program here. Our school will resent "Memory Rose," Clear Lake The Trysting Place," and Belmond, "Tea Leaves."

First Game Thanksgiving Eve

Goodell sent us word that owing to the vacation there for corn husking their basket ball players were not yet in condition for the game here on Friday night. Consequently our first game will be played at Alexander just before Thanksgiving, Wednesday evening, Nov. 27.

Faculty Dines At Barz Home

Our faculty were invited to the Albert Barz home on Wednesday evening of this week. A fine six o'clock dinner was prepared for them and all ate with a relish. We appreciate this expression of good will shown our instructors by these splendid parents.

This Is Educational Week

As this is educational week quite a few guests were observed at our school becoming better acquainted with the work done here. We are not able to report all of them but remember especially, Mrs. John Tanner and Mrs. Bridges who visited several classes in high school on Wednesday forenoon. It i not only during educational week that parents and friends of our school are welcome but they may come any time they choose. We are anxious to have them visit their own children's classes when ever they wish.

Teachers Meet Well Attended

A very fine program was prepared for the teachers of the state at Des Moines last week end. Among many invited to address us there were Pres. Glenn Frank of Wisconsin University; Dr. Sadler, M. D. of Chicago and Commissioner of Education for the U. S. Government; Mr. Cooper. The attendance was the largest of any such meeting ever held. One of the oustanding events was the concert given on Friday evening by approximately 300 high school boys and girls of Iowa directed by Jacob A. Evanson of Flint, Michigan, who is considered one of the best directors in America today. This was followed by a concert by two celebrated artists from New York City, Arthur Hacket a famous tenor of the Metropolitan Opera Co., and Nine Morgana, a coloratura soprano of the same opera. For those who appreciate good singing it was all a rare treat. Sectional meetings were held for all classes of teachers from kindergarten to college and university. We belive all who came for a serious purpose found there something worth while and returned home better equipped for his or her job.

P. T. A. Program November 26

Mr. Wellemeyer, president of our local P. T. A., has appointed his committees and we understand our next P. T. A. program will be given on Tuesday evening, November 26. The program may be observed in these columns next week.

We again invite everyone to the splendid program of one-act plays to be given next Tuesday evening.

WELLEMEYER NAMES P. T. A. COMMITTEES FOR YEAR

They Will Appoint Other Committees For Each P. T. A. Meeting

Arthur Wellemeyer, president of the local Parent-Teacher Association has named the following committees to act for the coming school year:

Program: Mrs. J. E. Stille, Wilma Trumbell, Albert Barz.
Membership: Mrs. Clara Schaeffer, Mrs. Martha Bredbenner.
Refreshments: Mrs. R. A. Jorgenson, Mrs. Emil Krause, Mrs. Geo. Stokesbary.
Games: Mr Wm. Brietske, Miss Ford and Mrs. Ralph Ludeke.

Refreshment Committees

The Refreshments Committee met and have named their committees for the following months:

NOVEMBER

Mrs. A. G. Koerner, Chm., Mrs. M. O. Barr, Mrs Hans Hanson, Miss L. McGinnis.

DECEMBER

Mrs. A. Wellemeyer, Chm., Mrs. Tanner, Mrs. Bredbenner, Miss Wilma Trumbell.

JANUARY

Mrs. A. D. Gimer, Chm., Mrs. C. J. Wille, Mrs. J E Stille, Miss Ford.

FEBRUARY

Mrs. P. M. Wilson, Chm., Mrs. Ralph Elder, Mrs. George Buseman and Miss Siemsen.

MARCH

Mrs. Frank Kluckhohn, Chm., Mrs. Gilbert Schaeffer, Mrs. Henry Jost, Miss Bremer.

APRIL

Mrs. C. G. Waterman, Chm., Mrs. Clarence Johnson, Mrs. H. E Whyte, Miss Coryle.

MAY

Mrs. Will Kirkwood, Chm., Mrs. Karl Krause, Mrs. Art Kudje, Mrs. Otto Pringnitz.

RESERVE LIST

Mrs. Herman Gast, Mrs. W. Johnson, Mrs. Calvin Grosshuesch, Mrs. Fred Kluckhohn, Mrs. Herman Baack, Mrs. George Johnson, Mrs. George Stokesbary, Mrs. Emil Krause.

The Chairman and her committee are responsible for the meeting as listed. In case a member of the committee named cannot serve the Chairman, Mrs. Jorgenson should be called and a lady from the Reserve List will be substituted.

Each Chairman should also keep a list of the members solicited so that the list can be checked for future use.

The folowing ladies served at the October meeting, which was also a reception for the teachers: Mrs. L. Schroeder, Mrs. Henry Barz, Mrs. Albert Barz, Mrs. John Bock, Mrs. Fred Kothenbeutal, Ms. P. W. Johnson, Mrs. Otto Lemke, Mrs. R. A. Jorgenson.

Please clip this list for future reference.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English service.
11:00 a. m. Sunday school.
8:00 p. m. Tuesday, the Young Peoples Bible Class meets.
8:00 p. m. Saturday, the Junior Choir meets.

HARRY BUSS TO HAVE SALE NEXT WEDNESDAY

Harry Buss this week announces in the Times with a half page adv his farm sale which he will hold next Wednesday, November 20th.

Harry has a lot of mighty good stuff to offer. He lists eight head of horses, and they are good, young stock; fifteen head of cattle which includes six fresh milk cows. He offers a complete line of machinery. This machinery is much better than ordinarily found on a sale. Harry has only been farming four years, and he purchased the machinery new and has taken good care of it.

A free hot lunch will be served at 11:30 o'clock and Auctioneer B. A. Reemtsma will start the selling at noon, promptly.

Turn to another page and look over the sale bill.

BASKET AND PIE SOCIAL

—on Friday, November 22 at District No. 2, Twin Lake Township.

Ladies please bring baskets or pies.

Bernice Tanner, Teacher.
Director, Herman Nuehring. 1tc

VETERINARIANS MET HERE FRIDAY NIGHT

DR. AND MRS. ANDERSON ENTERTAIN 40 AT SESSION

Bi-Monthly Sessions Upper Iowa Veterinary Association Meets

Dr. and Mrs. D. P. Anderson were hosts Friday evening, Nov. 8 to the members of the Upper Iowa Veterinary Association and their wives.

At 6:30 o clock a three course dinner was served in the school auditorium by the Domestic Science teacher, Miss McGinnis and her class of girls.

The tables were prettily decorated, the color scheme being yellow and green. The Association commended Miss McGinnis and her girls for the excellent meal served and the manner in which her class served it.

The guests were then entertained by a one-act play and musical numbers furnished by the high school students, which were greatly enjoyed.

Ladies Entertained At Home

Mrs. Anderson opened her home to the ladies where a short business meeting was held, followed by bridge and viiting.

The men remained at the school auditorium, and aside from the general discussions, Dr. S. H. McNutt of Ames presented an article on the differential diagnosis of certain diseases of poultry with special reference to Infectious Bronchitis.

A report on the special conference on Bangs disease and Undulent Fever was also delivered by Dr. McNutt. A finding of this conference was that Undulent Fever cases in humans when traced to their source wree in practically all cases caused by infections from swine and rarely from milk of cows as has been commonly believed.

Several county agents from adjacent counties were present and offered some very constructive suggestions. All voiced their appreciation for the invitation extended to them.

Meetings like these are held bimonthly thru-out the district, but a number of veterinarians present remarked that the meeting here was the outstanding meeting thus far held.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning worship in Klemme at 10:00 o'clock.
Sunday school, Klemme at 11:00.
Sunday school, Liberty, 10:15.
Morning worship, Liberty, 11:15.
Evening worship, Klemme, 8:00.
Epworth League, 7:15.

All services next Sunday will be according to the regular schedule, except that we will have a special service Sunday evening when six of our young people will speak at the regular preaching hour on topics bearing on the observance of Better Education Week. Do not fail to come to this service.

REEMTSMT HAS MANY FARM SALES LISTED

B. A. Reemtsma, local auctioneer has a large number of farm sales booked for the season. The sales listed for the coming two weeks are as follows:

November 18—H. E. Early, 5½ miles south and 1 mile east of Ventura.
November 20—Harry Buss, 1 mile south and 3½ miles east of Klemme.
November 21—M. D. Dodd, 3 miles north of Swaledale.
November 26—John Jendriche, ¼ mile east of Swaledale.

Julius Priebe Buys Home In Town

Ing. Lauritsen of Sheboygan, Wis. was in Klemme last week and closed a deal with Julius Priebe who purchased the Lauritsen residence in south-east Klemme, which for the past few years has been occupied by the E. F. Jacobs family.

AVERY AMBITIOUS ARISTOCRAT 4-H CLUB HAS MEETING

The Avery Ambitious Aristocrats, 4-H Club, met at the home of Barbara Gealow, Saturday, November 9th, near Goodell. The program follows:

Song, "How Do You Do" all of Club.
Roll Call, with vegetables I have stored.
Minutes of previous meeting.
The duties of a reporter.
Vote on reporter.
Number of jars canned by each girl to be displayed at next meeting and award presented.
Song, "I Know a Little Pussy," by all the girls.
Kind of shoes we should wear, by Jane Dutheridge.
Exercises to stengthen the feet, by Gertie Trampel.
Song, "John Brown's Baby", all girls.
Refreshments served.

Everyone reported that they had a nice time. The club girls had a handkerchief shower on the leader and she received many beautiful handkerchiefs.

Eva Stokesbary composed and recited the following:

"LEADER DEAR"
(Parody, "Barefoot Boy.")

Blessings on the leader dear
Always here and full of cheer.
With thy thots where baby croons
And thy merry 4-H tunes.
With thy red lips, redder grown
Kissed by kiddies in your home;
With the sunshine on thy face
When thou art here to fill thy place.
From my heart I give thee joy
Some day we may claim a boy.
Queen thou art, the township o'er
We can never hope for more.
Let the million dollared ride!
We girls trudging at thy side
We have more than we can buy
In the reach of ear and eye.
Outward sunshine, inward cheer
Blessings on thee, Leader dear.

GARNER AUTO COMPANY IS NOW "KLEMME AUTO CO"

W. S. Pritchard, Jr., better known as "Bud", announces that he has changed the name of his garage in Klemme to "The Klemme Auto Co." It was formerly called The Garner Auto Co. and was a branch of their garage at Garner.

The old name was more or less confusing, and also Bud says it did not sound right. Bud is a good booster for Klemme and is running a fine garage here now. He expects to make further changes to better the service where possible.

FIRST SNOW FELL HERE TUESDAY

We got our first real taste of winter weather Tuesday when a cold, drizzling rain turned into wet snow. Snow fell steadily all day and most of the night. Clearing skys, rising temperature and some sunshine on Wednesday removed most traces of the snow, leaving the roads slippery and soft.

NOTICE OF APPOINTMENT OF EXECUTOR

STATE OF IOWA,
Hancock County, ss.

NOTICE IS HEREBY GIVEN, taht the undersigned nas been duly appointed and qualified as Executor of the estate of William Becker decoased, late of Hancock County. All persons indebted to said estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned for allowance, and file in the office of the Clerk of the District Court.

F. A. ARNOLD.
Dated Nov. 4, 1929.
CHRIS J. JOHANSEN, Clerk District Court.
(Pub. Nov. 7-13-21, 1929)

BASKET AND PIE SOCIAL

come to the pie and basket social at the Garfield Center No. 5 school house Friday eve, Nov. 22. A program will be given by the school children and a Community Play, entitled "All a Mistake.,' Also good music. Everyone is invited. Ladies please bring pie or baskets. Meta Lemke, teacher; John Rayhons, director. 2tc

LEGION MEN HAD ARMISTICE "STAG"

PAST WAR VETERANS WERE SPECIAL GUESTS

Men Review Celebration Of First Armistice Day 11 Years Ago

The members of the American Legion here held a special Armistice meeting Monday night which they called a "stag" party and as special guests entertained past war veterans: Lew Lewis, Civil War Veteran and Geo. Carson and Henry Jost, Veterans of tne Spanish American War.

The evening was spent in playing cards, visiting and reviewing the big day eleven years ago when Armistice was declared. In reviewing this important date in world history the members present told about where they were on that date. This was an intresting feature of the meeting and the result follows:

Frank Ward, France, near Verdun eating his dinner.
Alzo Blank, Camp Dodge.
Ed. Jacobs, Ft. Bliss, Texas, taking a much needed nap.
"Happy" Johnson, Mitchell Field, Long Island.
George Lawhorn, France.
George Carson, Ft. Dodge.
David Schwichtenberg, France.
Henry Schuldt, France, on a train enroute for Metz.
Ben Merkel, in a hospital at Vichy, France.
Ben Coobs, iu a hospital at Vichy, France.
Geo. Alden, Houston, Texas.
Albert Kraus, Camp Dodge.
Jeff Bell, Bremerton, Wash.
J. C. Thomas, Leredo, Texas.
H. F. Jost, Lidderdale, Iowa.
Lew Lewis, Klemme, Iowa.
Rev. H. E. Whyte, enroute to Camp Dodge.
Paul Grange, Camp Jackson, S. C.
John Lemke, with Henry Schuldt on train enroute to Metz.
Dr. D. P. Anderson, Chattenooga, Tennessee.
D. H. Osborne, Ames, Iowa.

The men all enjoyed an oyster supper which was prepared and served by Rev Whyte, Paul Grange and Dr. Anderson.

Smokes were also passed out following the supper.

It was an evening greatly enjoyed and one long to be remembered.

ROYAL NEIGHBORS HONOR MRS. ALLIE WHITE

The Royal Neighbors Lodge held a farewell party in honor of Mrs. A. R. White, who with her husband and son, left today for Colorado to visit with relatives and to spend the winter. The long table was beautifully decorated with streamers in the R. N. A. colors with two large centerpieces of crepe paper flowers. A delicious two course lunch was served. Favors were placed at each place. Mrs. White was presented with a Nashua blanket by the lodge members. The party was nicely carried out and was an occasion long to be remembered by all.

Miss Gladys Wilson, who attends Drake University at Des Moines, came home Thurday evening and remained until Sunday visiting with her parents, Mr. and Mrs. P. M. Wilson.

A baby boy was born to Mr. and Mrs. Worthy Usher at Rowan Sunday, November 10th. The young man tips the scale at 7½ lbs., has black hair and looks like his dad. Mrs. Usher was formerly Miss Minnie Blank of this city.

Mrs. Harvey Stille, who is a patient at Mercy Hospital, Mason City, enjoyed a visit last Thursday from Mrs. Frank Kluckhohn, Mrs. Clarence Kluckhohn and mother, and Mrs. Marvin Barr.

Mr. and Mrs. Adolph Lauritsen drove to Des Moines last Thursday where Mr. Lauritsen atended the State Teachers Meeting. He is the coach for the Orange Township Consolidated school near Waterloo and was here on his vacation.

Last week Paul Grange received a large piece of Moose meat from his brother, Ed of Ruthven, who had been on a hunting trip in Canada. The Benn Coobs family also enjoyed a Moose steak dinner. The flavor was reported as excellent.

The new long type stationery at The Times Print Shop at 30 cents and up per box. tc

HANCOCK COUNTY REAL ESTATE TRANSFERS

List Of Property Changes For The Week Ending November 9th

Alice C. Mead and husband to H. J. Deitz. Wty Deed date 11-1-29, $2,000.00 on lot 16 block 5 Anderson's Add. Britt.

George H. Breen and wife to Falkert Van Hoorn. Wty Deed date 11-1-29, $4,500.00 on lot 6, block 10, Original Woden.

L. A. Andrew, Receiver for State Savings Bank, Ventura, Iowa, to Carl H. Schneider. Receiver's Deed date 3-1-29, $1,800.00 on lot 3 f block 45 Original Garner.

J. N. Sprole, Adm. Estate of M. E. Peck, deceased, to Carl H. Schneider, Administrator's Deed date 9-28-29, $2,000.00 on lot 6 and 7, block 33 Original Garner.

Joseph H. Cassill to Christian Houdek, Wty deed date 11-1-29, $1,350.00, on lot 4, block 11 West Side Add. Garner.

E. H. Wahlert, Sheriff of Hancock County, to J. E. Gifford. Sheriff's Deed, date 11-6-29, $2,739.17 on NW¼ 9-94-25.

Agnes M. Korn; F. J. Korn and wife to Mary C. Williams and Lucile Matilda Williams. Q. C. D. 10-1-29, $1.00, all of lot 4, Auditor's Plot Inc. Town of Britt.

United States of America to James H. Bush. Land Grant date 8-7-1866 on W fr ½ SW¼ sec. 19-94-23.

Joseph H. Cassill to M. L. McCormick, Wty deed date 9-3-29, $1.00 on N 5-8 of lot 4 and all of lot 10 block 34 Original Garner, made in fulfillment of contract dated March 30, 1926.

Frank F. Konrad and wife to S. A. Corey. Wty Deed date 11-7-29, $1.00 and exchange of property on NW¼ 28-95-25.

Britt Loan Co., Britt. Owner M L. Armstrong. Trade Name 11-7-29, concerning trade name.

E. H. Wahlert, Sheriff to Aetna Life Insurance Co., Sheriff's Deed date 11-6-29, $44,585.41 on W½ 29 and S½ SW¼ and S½ rods of SE ¼ 20, all in 95-25.

What might have resulted more seriously hapened at the J. N. Day home Monday shortly after noon when a fire was discovered in the basement. Mrs. Day had taken ashes out of the furnace, and as they appeared to be cool, placed them in a wooden basket and then went about her work preparing dinner. After diner she was ging to the basement when she discovered smoke. She called her husband from the store who had some difficulty in entering the heavy smoke filled cellar to locate the fire, which he easily extinguished.

Mr. and Mrs. C. A. Larsen, accompanied by Mr. and Mrs. Alvin Stokesbary took little Ardith Stokesbary to the Mercy hospital this morning where the little Miss will undergo a tonsil operation and any other surgical attention needed to restore her health. Little Ardith sems to have had more than her share of illness this fall and her many friends hope for her speedy recovery.

Mrs. Paul Grange and Mrs. P. W. Johnson drove to Britt yesterday to attend a meeting of the presidents and secretaries of the various Auxiliary units of the county, to discuss and lay plans for the coming year. At this meeting Mrs. Garnge was at this meeting elected a page for the district conference at Jefferson. She has been County Secretary for two years.

Mr. and Mrs. Allie White and son, Albert, who left this morning for Colorado, have been royally entertained by neighbors and friends the past week. Monday evening a dinner was given them at the Emery Schaeffer home; Tuesday evening a dinner at the Hio Harberts home and Wednesday evening a dinner at the Lippo Blank home. Allie said their many good friends just about killed them off with good eats before they got started for the west.

Mr. Penrod's Sunday School class held a party at the Parish House on Tuesday evening which began with a banquet at 7:00 o'clock and followed by games, singing and other entertainment. Officers for the ensuing year were elected. It was decided to have a dinner about every two months.

HER IRISH LUCK

(© by D. J. Walsh.)

ENTERING one of the smartest of the avenue shops, Nancy Keenan was bitterly conscious of just two things—that her shoes were shabby to the point of showing her neatly darned stockings through the cracks at the sides, while in her purse reposed an heirloom she must sell, and sell promptly.

For the Keenan finances were in a distressing state, and since exhaustive as well as exhausting research had convinced Nancy that no pawnshop would advance a loan with even the choicest of Duchesse lace scarfs as security, nothing seemed left save to sell the beautiful scarf outright for what cash she could get.

Mechanically as Nancy entered the mauve and silver salon of Jules, Ltd., a sleek, satin-gowned saleslady rose and advanced to meet her. Mustering a smile, Nancy asked for Monsieur Jules.

"Abroad madame—in Europe till September," answered the saleslady. "Perhaps some one else would do?"

"I'm afraid not," sighed Nancy. "You see—I want—that is, I must—sell some very lovely Duchesse lace—a scarf. I thought Monsieur Jules might buy for the trousseau of one of his customers."

A second saleslady, even sleeker than the first, but whose sharp eyes had noted the cracks at the sides and the runover heels of Nancy's shoes, and who had not troubled to rise, now inquired languidly, "You have the lace with you?" The fact that Miss May did not add the "madame" required by the house of Jules when addressing clients indicated Miss May's opinion of Nancy's shoes.

"Oh, yes," answered Nancy, a touch of hope in her voice.

"Could I see it?" Miss May's tone was that of an arrogant duchess addressing a street sweeper.

Quickly Nancy opened her purse and, withdrawing a slim, tissue wrapped bundle, smoothed back the folds of paper to disclose a handful of cobweb-fine lace.

An involuntary exclamation of amazement from the condescending Miss May was followed by "Ohs!" and "Ahs!" and admiring gasps from the other saleswomen who clustered about to admire the exquisite scarf, which cascaded from Nancy's slim, almost caressing fingers into Miss May's supermanicured hands.

"For the love of Mike, what makes you sell a piece of lace like that?" bluntly asked Miss May, who had been startled out of her veneer of refined manners.

"A husband out of a job and two little children who've got to eat," as bluntly answered Nancy.

"How much do you want for it?" asked Miss May.

"All I can get."

"Know what it's worth?"

Nancy shook her head as she answered "No; I didn't buy it; you see, it's been in the family quite a while; it's always been used as a wedding veil."

"Well, I'm telling you it's worth $500 easy—to some selfmade party who needs heirloom lace for his daughter's wedding duds. Only the trouble is you've got to find the right party," said the shrewd Miss May.

Suddenly Nancy swayed and laughed hysterically. "Five hundred dollars!" she exclaimed. "And I've exactly 15 cents in my purse—just enough to buy a quart of milk for the children's tomorrow breakfast. Five hundred dollars—oh, that's simply too lovely."

The shop door swung open. Instantly the satin-clad ladies of the sales staff were galvanized into decorative automatons as a stunt, elaborately dressed woman entered.

"Good morning, Mrs. Avelon," cooed Miss May, abruptly releasing her hold on Nancy's lace and gliding forward to meet the stout figure. "The little frocks monsieur chose for you arrived only last evening." Deftly Miss May escorted her customer toward a silver-doored fitting room.

The other satin-clad figures melted into the mauve and silver-gray background. Nancy found herself standing forlornly in the midst of the velvet carpet, futilely clutching her crumpled wedding veil.

This time Nancy was painfully conscious of two more facts. In addition to her shoes being broken and her veil very valuable, the chances of her being able to realize any cash on the veil were slim and she must in all probability go still hungrier before she could hope to buy as much as a cheering cup of coffee.

Mechanically she folded and rewrapped the fragile scarf, slipped it back into her purse and started wearily toward the street door. As she reached for the heavy polished clasp some one touched her arm and in a low voice said, "Here's a dollar—I know it's not much, but it'll help out on car fare and the kids' milk. I'd loan you more, but I'm still paying on a doctor's bill myself."

As Nancy gasped a tremulous protest the voice added: "That's all right, dearie, you just take it along. I know how you're fixed. I've been broke myself and you've gotta have car fare."

"Oh, no—no; thank you," protested Nancy brokenly as she opened her purse, and beside the dime and five pennies disclosed a ticket. "See, I have a trip-ticket that will get me home. You're awfully kind, but I can walk to the station."

"Then take it for the kids' milk. It'll help a little, and I know what it's like to be broke, though I never had kids on my hands besides. Pay me when you can—Miss Murray, Katie Murray is the name." Thrusting the bill into Nancy's purse the black-clad figure turned and melted into the background.

Silently Nancy made her way out onto the avenue, her eyes so brimful of tears that she entirely failed to recognize the middle aged woman who suddenly greeted her with an exclamation of surprise. "Why, Nancy Keenan, whatever are you doing so far from Boston?"

"Glenn had what he thought was a good offer to come west," answered Nancy.

The tears in Nancy's eyes, the pathetic droop to her usually smiling mouth, the cracked shoes told the rest of the story.

"I'm just on my way back from California," said the older woman. "You must come and tell me all the news over a cup of tea."

Half an hour later over a tea table on which was far more than a cup of tea, Nancy's friend was to be heard saying: "I'll rent the scarf for Flora's wedding—she's marrying Don next month. That will be much better than your selling the scarf, and since you won't let me loan you anything it will at least solve the problem for a little while."

Ten days later Miss Katie Murray of the sales staff of the house of Jules, Ltd., opened a letter postmarked Boston and discovered neatly folded in a wisp of a point-lace edged handkerchief the same crumpled dollar bill she had thrust into the purse of the shabby-shoed stranger who had wanted to sell Monsieur Jules the Duchesse wedding veil.

Enviously Miss May eyed the lovely little old square of yellowed lace and linen as she exclaimed: "Glory, Katie, Jules will give you $25 for that thing any day. You certainly do strike things soft. Talk about Irish luck—isn't it the truth that the Irish get all the good breaks in the world?"

Neanderthal Bone Has Place in Field Museum

The only authenticated piece of original bone from the remains of a Neanderthaler ever brought to America is in the possession of Field Museum of Natural History, Chicago, which acquired it among collections made by an expedition to Europe sponsored by Marshall Field, Jr. The Neanderthalers are the earliest race of human beings of whom complete skeletal remains have been found by archeologists, and only a relatively few skeletons and bone fragments have been obtained anywhere. All of them with the exception of the Field museum piece are in the repositories of various European countries. The Neanderthal race flourished in western Europe about 50,000 years ago, according to estimates of scientists.

The bone obtained by the museum is part of a child's skull, apparently from an infant who died or was killed befort he was two years old. This deduction is made from the condition of the lines of suture.

The bone was obtained in Germany by Henry Field, assistant curator of physical anthropology and leader of the European expedition which made a vast collection of flint implements and other objects representing the cultures of prehistoric man. The skull fragment was traced as coming from a prehistoric rock shelter at Le Moustier, France. A European collector brought it to Germany. It had passed through the hands of several people who did not realize what it was, before it came into the possession of the Chicago scientist. Consultation with leading anthropologists of England and France confirmed Mr. Field's recognition of it as a priceless relic.

Variation in Flag Coloring

The bureau of navigation says that the shades of colors in the United States flag have never been defined by law. The fact that flags used earlier in our history are represented with lighter blue than those in use now may be explained by the fact that the current dyes and bunting are of a better quality than formerly. Formerly the flag was manufactured for the government by a number of commercial firms. Since 1912 the United States army has been making its own flags, and the navy has been making its own flags for an even longer period, so that the dark blue used by the government has now standardized the shade of the blue.

Evading the Law

It is always difficult to make a law which cannot either be crept through or got around. A candidate for election tells me, writes Lookcr-on in the London Daily Chronicle, of a curious attempt to do so. It is illegal to use hired cars to take voters to polling stations on election day. This candidate has had a letter from a motor firm offering to sell him as many cars as he likes to buy at £60 each and to take them back at £40. If this is not exactly breaking the law, it seems to me to make a good big crack in it.

High Temperatures

A meteorological correspondent states that the occasional shade temperature of 130 degrees endured by Brisbane is not the best (or worst) on record. On September 22, 1922, a shade reading of 136.4 degrees was officially registered at Azizia, North Africa, 25 miles south of Tripoli, and this is the highest ever recorded. For the highest mean temperature, India must give place to Berbera, Somaliland, where the average shade temperature is 85.5 degrees.

AUTOMOBILE SAFETY DEVICE BEING TESTED

AUTO FIXED FOR WINTER DRIVING

Good Advice on How to Prepare for Cold Weather.

The motorist can take advantage of the pleasant fall weather to check over his car or have his service station do so in order that it will be in proper condition to withstand the rigors of winter driving.

The following recommendations on putting the car in shape for winter are gleaned from an engineering bulletin:

Clean Chassis First.

The first step in the procedure is to clean the chassis, engine and body, as dirt can hide many defects.

Tighten all bolts and nuts.

Check front wheels for proper alignment; remove caps and re-grease; adjust wheel bearings and replace hub caps.

Check steering gear for proper adjustment.

Drain the old oil from the transmission and differential and pour into both about a quart of kerosene. At the same time put in the radiator a few handfuls of sal soda and then drive the car two or three miles. The kerosene should then be drained from the transmission and differential and water drained from the radiator. A winter grade lubricant recommended by the car manufacturer should then be put in the transmission and differential.

Inspect the rubber hose connections, replacing if necessary, after which the radiator should be filled with clean water; and at the first appearance of cold weather an anti-freeze solution should be added.

Next, drain oil from the engine; flush crankcase and put in a winter grade oil.

If the oil filter has been in use for 10,000 miles install a new cartridge.

Examine Wiring.

Inspect wiring and clean contacts; oil generator and starting motor and clean the armatures and brushes; set generator charging rate ahead for winter driving; check breaker points for proper spacing; replace spark plugs if used more than 10,000 miles; if used less than this, clean them; adjust gaps; clean battery with ammonia water solution; tighten terminals and grease with vaseline; inspect water level and if gravity reading is low, recharge.

Oil and grease all parts that require it.

Adjust brakes and reline if necessary.

The motorist should also examine the top of his car and will do much to preserve it if he will spend a few minutes in going over the top with a good grade of top dressing.

Many car manufacturers are now equipping cars with a summer and winter driving adjustment on the carburetors and the proper adjustment to the carburetor should be made at this time. The fuel and carburetor strainers should also be taken out and cleaned.

With these simple but highly essential adjustments, a winter of carefree driving should be enjoyed.

AUTO NOTES

Strong interest in horseshoe pitching proves that the horse is still influential. The auto tire pitching contest may arise later.

* * *

The same folks who wonder why the moth is such a darn fool as to fly into a flame, will try to beat a railroad train over a crossing.

* * *

Americanism: "An Eastern woman makes a fad of collecting the tags given in various countries for traffic violations."

* * *

To speed funeral processions, the municipal council of Paris, France, has voted to supplant horse-drawn hearses by automobiles.

* * *

In the early days of the motor car, too, there were marvelous non-stop performances by beginners who didn't know how to shut off the power.

MOTOR QUIZ

How Many Can You Answer?

Q. Does an oil filter remove crankcase dilution?

Ans. No. Its function is to remove dirt and foreign matter from the oil, which it does efficiently for 10,000 miles, after which the filtering unit must be renewed. This makes the filter as good as new again.

Q. Does all the oil pass through the filter?

Ans. Yes, in some filters the oil is completely filtered from four to eight times an hour.

Q. What causes discoloration of the oil even though the car is equipped with an oil filter and is it harmful?

Ans. Extremely small particles of carbon in the oil. No, it is not harmful.

Q. Is an oil filter bag likely to rupture?

Ans. No. Engineering tests have proved that it is able to withstand a pressure of 150 pounds to the square inch which is much higher than the pressure attained in the engine.

Temporary Repairs Made on Broken Tire Chains

If a driver should be so unfortunate as to break so many cross pieces of the tire chains that they will not remain in place around the wheel, the chains should be removed and wrapped around the tires as one would wrap a rope. This, of course, applies only when the car is stuck in the snow or in deep mud, for after getting under way, the cumbersome "lump" should be removed. Owners should get into the habit of repairing tire chains, the work requiring little effort. The garage makes a charge of 10 cents, even for one new link, which the owner can install in less than one minute with a chain tool which most supply stores offer, or which can be had from the chain manufacturer.

Traffic Jams and Joy Riders in Olden Days

There were traffic troubles and tolls and joy riders 100 years ago, when the automobile and bicycle belonged to the far future and the "iron horse" and train were gazed upon in curiosity.

Newspapers of a century ago were filled with stories of traffic mishaps and careless drivers of stages.

"Back in the days when great-great-grandfathers rode, the authorities took serious counsel of such things as speedsters, road hogs, joy riders, drunken drivers—and of how 'females' were enticed from their homes by the lure of the stage coach, and how pedestrians on the sidewalks were too frequently injured by recklessly driven wheelbarrows," declares a recent issue of the American Motorist.

Clamp Very Serviceable in Removing Car Dents

An ordinary iron C-clamp proves serviceable in many cases in removing dents from automobile fenders. To prevent damage to the finish, a wooden block of suitable size is placed under the mud guard and another on top of it at the point where the dent is located. These blocks should be of smooth, hard wood. The clamp is screwed tight as possible with the fingers. Then the clamp is rocked back and forth. The pressure and the motion slightly flattens the dent and the screw of the clamp can again be tightened. The operation is repeated until the dent is completely flattened out.—Popular Science Monthly.

Horn Is Neglected by Many Automobile Owners

Approximately 95 per cent of the owners of automobiles never oil their horns. Because the horn gives little trouble, little attention has been paid to it. The horn usually outlasts the car if conscientiously oiled. It is not necessary to oil it as frequently as the other mechanism of the car—twice a year being sufficient.

It takes little effort on the part of the motorist to be sure that his horn is always in operating condition.

ATWATER KENT RADIO

SCREEN-GRID · · · ELECTRO-DYNAMIC

Battery or House-Current

"SERVICE . . . WHAT FOR? look again . . . It's an Atwater Kent"

ASK any Atwater Kent owner if he ever does anything more than tune in, sit back . . . listen.

Service? He's bought the kind of radio that almost never needs it, the kind that you will find in most farm homes today

It's as mechanically perfect as a well-made watch. Please look inside and see. Every part is precise—accurate to a hair's breadth. That's why you can expect uninterrupted performance month after month, year after year.

This holds true for the millions of Atwater Kent Radios sold in past years. It holds true for the greatest radio Atwater Kent has ever built—the new Screen-Grid Set—Electro-Dynamic, of course.

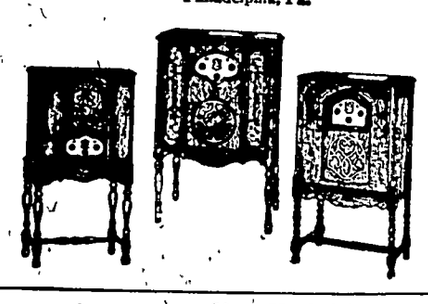
You can have this new set operated either by batteries or from house-current, in a compact table model or a wide variety of fine cabinets. Either type assures you a radio that lets you listen every time you turn the switch.

ON THE AIR—Atwater Kent Radio Hour, Sunday Evenings, 9:15 (Eastern Time), WEAF network of N. B. C. Atwater Kent Mid-Week Program, Thursday Evenings, 10:00 (Eastern Time), WJZ network of N. B. C.

ATWATER KENT MANUFACTURING COMPANY
A. Atwater Kent, President
4764 Wissahickon Avenue Philadelphia, Pa.

IN CABINETS—The best American cabinet makers—famous for sound design and sincere workmanship—are cooperating to meet the demand for Atwater Kent Screen-Grid Radio in fine cabinets like these.

Also IN COMPACT TABLE MODELS—*For batteries, $77. For house-current operation,* from $88 to $100. Electro-Dynamic table model speaker, $34.



Camouflage for Mice

Camouflage, which helped to win the World war, is being employed in Europe to catch mice. On the theory that rodents of today know their traps, inventors have produced, for use in office desks, a mouse-catcher shaped like a harmless paper clip. Another, for general use, resembles an old tin can whose top closes suddenly. Still another resets itself automatically to catch mice all night and dump them into a vat of water.

Flapper of 60

"Long skirts are coming back."

"Grandma says she's too old for changes."

A good talker knows when to start, what to say, and when to stop.

New York Dirt

There is an old expression, "dirt cheap," that does not apply in New York city. There is a sign in a New York store window which reads: "Dirt—10 cents a quart." The fact is that in New York city there is no dirt available for flower pots unless it is bought at a dirt store. This seems incredible to the rest of the country but it is true.—Princeton Clarion-News.

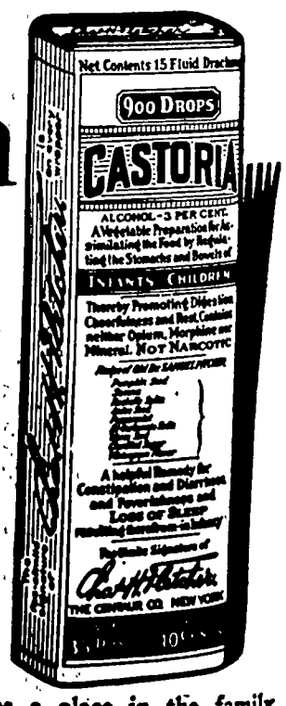
Greek and Baseball

Teacher—Who was Homer?

Stude—He was the fellow who made "Babe" Ruth famous.

The man who is always waiting for something to turn up is usually asleep when it finally comes along.

Children Cry for it



Children hate to take medicine as a rule, but every child loves the taste of Castoria. And this pure vegetable preparation is just as good as it tastes; just as bland and harmless as the recipe reads. (The wrapper tells you just what Castoria contains.)

When Baby's cry warns of colic, a few drops of Castoria has him soothed, asleep again in a jiffy. Nothing is more valuable in diarrhea. When coated tongue or bad breath tell of constipation, invoke its gentle aid to cleanse and regulate a child's bowels. In colds or children's diseases, use it to keep the system from clogging. Your doctor will tell you Castoria deserves a place in the family medicine cabinet *until your child is grown.* He knows it is safe for the tiniest baby; effective for a boy in his teens. With this special children's remedy handy, you need never risk giving a boy or girl medicine meant for grown-ups.

Castoria is sold in every drug store; the genuine always bears Chas. H. Fletcher's signature.

Removes Dandruff—Stops Hair Falling
Restores Color and Beauty to Gray and Faded Hair
60c. and $1.20 at Druggists.
Hiscox Chem. Wks. Patchogue, N. Y.

FLORESTON SHAMPOO—Ideal for use in connection with Parker's Hair Balsam. Makes the hair soft and fluffy. 50 cents by mail or at druggists. Hiscox Chemical Works, Patchogue, N. Y.

Makes Life Sweeter

Next time a coated tongue, fetid breath, or acrid skin gives evidence of sour stomach—try Phillips Milk of Magnesia!

Get acquainted with this perfect anti-acid that helps the system keep sound and sweet. That every stomach needs at times. Take it whenever a hearty meal brings any discomfort.

Phillips Milk of Magnesia has won medical endorsement. And convinced millions of men and women they didn't have "indigestion." Don't diet, and don't suffer; just remember Phillips. Pleasant to take, and always effective.

The name Phillips is important; it identifies the genuine product. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

Confucius said that the way to reform society is to call things by their proper names.

Bigamy is merely an overissue of matrimonial bonds.

NERVOUSNESS
Helpfully treated with This Famous Aid

KOENIG'S NERVINE

Weak After Operation

"About five months ago, following an operation for appendicitis I did not gain strength enough to be up and about. My mother and sister advised me to take Lydia E. Pinkham's Vegetable Compound. I have taken five bottles and it has helped me to get strong so I can do my own housework now. I have recommended it to several friends who have been weak and run-down."—*Mrs. Oscar Ottum, Box 474, Thief River Falls, Minn.*

Lydia E. Pinkham's Vegetable Compound

A GREATER CATASTROPHE THAN THE WORLD WAR

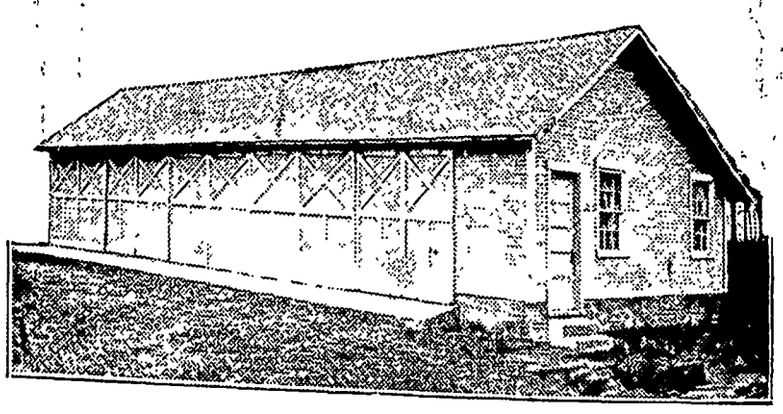
More people than were slain in the World War are being killed every year through carelessness and neglect. Rather than make their condition known to their family or friends, they prefer to suffer in silence. The inevitable result of this lack of attention is premature old age and a shortened life.

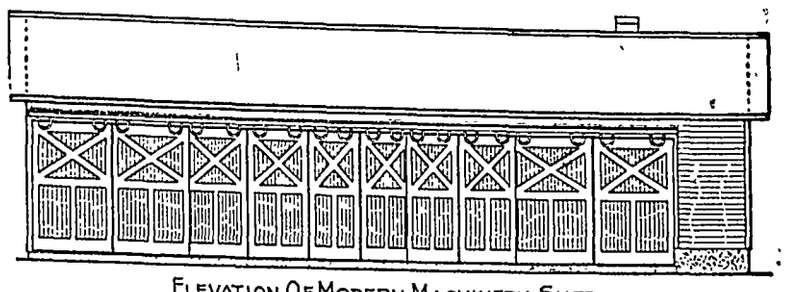
RHEUMATISM, NEURITIS, ANAEMIA, Rash, Blotchy Skin, Catarrhal Troubles and other Bad Blood afflictions are danger signals warning you of a much more serious *internal condition.*

Sufferers have been relieved and restored to health through RESTORIA. It is especially effective in long-standing, deep-seated chronic Bad Blood conditions that have defied other treatment.

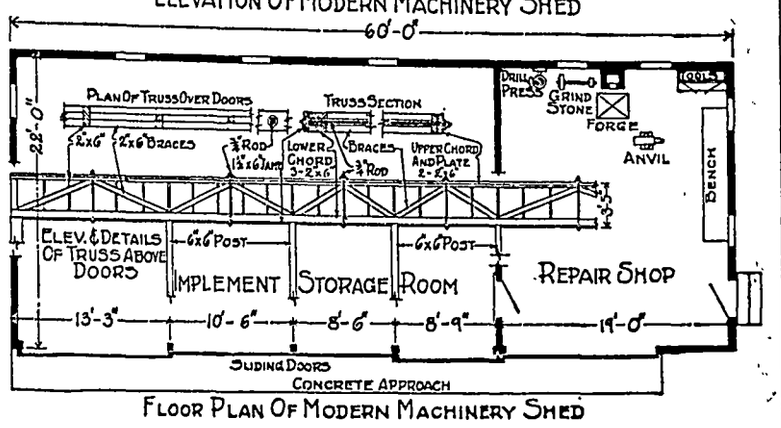
A TWO MONTHS' TREATMENT for $5.00. RESTORIA IS THE MOST EFFECTIVE FORMULA YET DEVISED FOR THE CORRECTION OF CONDITIONS RESULTING FROM BLOOD DISORDERS. Order it today—Dept. P. S. RESTORIA, 425 Van Buren St., Milwaukee, Wis., or write for FREE literature.

Modern Farm Machinery House and Repair Shop Good Investment





ELEVATION OF MODERN MACHINERY SHED



FLOOR PLAN OF MODERN MACHINERY SHED

By W. A. RADFORD

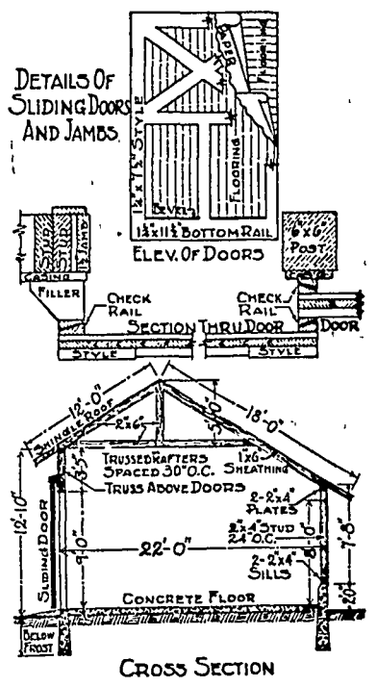
Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

It often has been said that more farm machinery rusts out than wears out. In this day of power farming it is economy for every farmer to have a good weather-tight house for his machinery and the equipment that goes with it, and also a room where the more simple repairs can be made.

Shown in the illustration is an excellent design for a modern machinery shed and repair shop. This building is of good construction, but is not expensive. It is a simple two-gabled one-story farm building, stands on a concrete foundation and should have a concrete floor. However, many farmers do not go to the expense of laying concrete in the storage space, but a concrete floor is pretty much a necessity in the repair shop. The continuous sliding doors at the front of the building permit the storage of the larger of the modern farm machines without trouble. At the same time these doors close tightly, which keeps out weather and the birds which are a nuisance around machinery.

The building is 60 feet long and 22 feet wide. In connection with the floor plans are elevations and cross-sections together with a number of details which will enable farmers themselves or a local contractor to erect this building. The cross-section gives dimensions of the materials used, the thickness of the floor and the depth of the footings to get below the frost line.

The average investment in machinery on the modern farm runs into the thousands of dollars. It will readily be seen that if the depreciation on this machinery can be cut in half, the saving will soon pay for a building such as this. Then there is the added advantage of always having the machinery in condition for the work it is supposed to do. The time factor is becoming more and more recognized on farms. When the machinery is in "tip-top" condition ready for work, advantage can be taken at various seasons of favorable weather, whereas the delay of a day or so might make a tremendous difference in the farm income.



CROSS SECTION

Millwork for Home Is Factor in Its Beauty

In the construction of beautiful, substantially-built homes, much has been said about the good work of the plumber, the concrete maker, the roofer and the insulator, but little has been told concerning the millworker's important contribution, according to recent remarks made by general contractors.

It is said that public opinion seems to have taken for granted that frames, sashes, doors, interior trim, cabinet work, etc., can be easily manufactured by anyone regardless of skill. Builders state, however, if there were no skilled millworkers, the ugliness of most of the woodwork would cause a domestic drawback if not a severe backset.

Paper Does Not Take Place of Insulation

Good building paper should not be confused with insulation. While it has insulating value per inch it is more a resistant to air leakage than to heat flow. If one wants a warm house one can be sure that building paper will play its valuable part in its construction, but it does not take the place of insulation—it is rather an important addition.

Shellac Useful for Interior Trim Finish

Shellac, a spirit varnish, is useful for most interior trim finishing. Its proper uses are not generally understood as is evidenced by its frequent application where it actually causes damage. Again on surfaces where it should be employed, an unfair advantage is taken of certain of its virtues.

Loose Floor Boards

If floor boards are loose, evidently due to insufficient nailing, they may be face nailed. If it is done carefully, it will do very well.

Dining Alcove in Small Home Is Popular Now

Following the modern trend in construction, except in unusually large homes, the dining room, once called the most essential room in the house, is becoming more and more a non-essential.

Especially in the small house, the apartment and the bungalow of few rooms, the dining room is being replaced by the dining alcove, or breakfast room as it used to be called. The space once devoted to the dining room might easily be devoted to a library or sewing room combined.

The kitchen, that necessity in every home of whatever size, should be so placed that the smoke and odors from the cooking foods are carried away from the rest of the house. Thus it would in many cases be at the northern end of the place, where the prevailing winds in our climate at least would blow the aromas away from the other rooms.

The kitchen may very happily be designed toward the front of the house, especially if the house faces north, and there can be no possible objection to such a design. The service entrance may be at the side of the building, the drying room and the service yard being inclosed within a lattice wall, a stone wall or a high hedge.

Rough Stipple Finish Good for Plain Room

A rough stipple is an unusual wood treatment which would be suitable in a plain room and with furniture of a somewhat heavy or massive type. To obtain this finish a little plaster of paris is mixed with the final coat of paint which is applied in the usual way and stippled.

The roughness of the mixture causes little projections of the paint to remain in the finish. A glaze coating (which is usually wiped over) is sometimes spread over the rough coating

Drives 23 Miles To Buy Gold Medal Flour

"Gold Medal 'Kitchen-tested' Flour Never Fails —Makes More Bread Per Sack" Says Miss Pearson

Miss Edna Pearson, Swea City, Iowa

"I prove my preference for Gold Medal 'Kitchen-tested' Flour by driving 23 miles to buy it," says Miss Pearson. "Gold Medal Flour never fails. Makes more bread per sack than any other flour, and the pie crusts I make with it are the flakiest I've ever seen."

This New-Type Flour Banishes Baking Failures

WOMEN all over the country declare they have taken the "guess work" out of baking . . . Now they get perfect results every time with bread, cakes, pies and biscuits.

They use a new-type flour for all baking purposes—GOLD MEDAL "*Kitchen-tested*" Flour—that simplifies baking remarkably and banishes the cause of most baking failures.

Failures, experts found, were mostly due to the fact that 2 sacks of the same flour often *acted* differently, even with the same recipe . . . it was not *uniform* in oven action.

So now all GOLD MEDAL Flour is "*Kitchen-tested*" before it comes to you. As each batch comes through the mill it is tested by actual baking—bread, cakes, biscuits, pastries—in an oven just like yours. Only flour which acts the same perfect way every time is allowed to go out to you. Thus you know in advance exactly what *your* results will be.

Special "Kitchen-tested" Recipes In Every Sack

(Changed Every 3 Months)

Please accept, free of charge, simplified recipes for 12 of Betty Crocker's most delicious baking creations. Recipes for the daintiest cakes, the finest cookies, the most popular pastries known. Each one is "simplified" until it is remarkably easy, too.

All 12 of these simplified "*Kitchen-tested*" recipes are inside every sack of GOLD MEDAL "*Kitchen-tested*" Flour. You can get a full set today—simply ask your grocer for GOLD MEDAL "*Kitchen-tested*" Flour.

WASHBURN CROSBY COMPANY

"Listen in to Betty Crocker, 9:45 to 10:00 A. M. Wednesday and Friday, Central Standard Time, Station: WHO."

GOLD MEDAL FLOUR

"Kitchen-tested"

Always sold in trade-marked sack—never in bulk

Cannibal Fish Trapped

G. L. Erkenbrack of Republic, Kan., went fishing, caught a two-pounder and staked it to the river bank during the night. Next morning, so he says, he found an eight-pounder had swallowed the smaller fish and was caught by the stick through the gills of the two-pounder.

This Little Girl Got Well Quick

"Just after her third birthday, my little daughter, Connie, had a serious attack of intestinal flu," says Mrs. H. W. Turnage, 217 Cadwalder St., San Antonio, Texas. "It left her very weak and pale. Her bowels wouldn't act right, she had no appetite and nothing agreed with her.

"Our physician told us to give her some California Fig Syrup. It made her pick up right away, and now she is as robust and happy as any child in our neighborhood. I give California Fig Syrup full credit for her wonderful condition. It is a great thing for children."

Children like the rich, fruity taste of California Fig Syrup, and you can give it to them as often as they need it, because it is purely vegetable. For over 50 years leading physicians have recommended it, and its overwhelming sales record of over four million bottles a year shows it gives satisfaction. Nothing compares with it as a gentle but certain laxative, and it goes further than this. It regulates the stomach and bowels and gives tone and strength to these organs so they continue to act normally, of their own accord.

There are many imitations of California Fig Syrup, so look for the name "California" on the carton to be sure you get the genuine.

His Fiancee

Jack—Is there anything in this affair of yours with the heiress?

Tom—Millions, I hope.

Children who have measles are bound to be rash.

The sea of matrimony swamps many a courtship.

Another Bird Refuge

A new bird refuge has been established on a group of islands off the tip of Florida by executive order of President Hoover. The group consists of Snake key, North key and Dead Man or Bird key. It will be known as the Cedar keys bird refuge and will be administered by the biological survey of the United States Department of Agriculture.

Live and Learn

He (hopefully)—I've never seen such dreamy eyes.

She (fed up)—That's because you've never stayed so late before.

Medical science is restrained in its self-congratulation by its experience with cancer.

Night Life Gets You if You Don't Watch Out!

War Vet almost takes count, but pals help.

HOW would you like it if every two weeks you had to give up your good night's sleep, and work all night instead? This is what happened to W. H. Huggins of 90 Savannah Street, Rochester, New York. When he came back from the War, he took a night "shift" job.

"It certainly shot me all to pieces," said Mr. Huggins. "I was licked before I started. My pals noticed that the night shift got me, so during a 'lunch' period in the middle of one night one of them said to me, 'Hug, I bet I know what's the matter with you. This irregular life gets us all unless we watch out. Why don't you try Nujol? Most of the boys are onto this little health trick. Try it!'

"Well, that very night on the way home I got a bottle and within a week I felt like a different person. I wouldn't know myself. You can lick any job, even a night one, if you get the poisons out of your system regularly. Nujol sure did it for me!"

That's the great thing about Nujol. It absorbs the poisons in your system (we all have them) and cleans them out regularly. It cannot hurt you no matter how long you take it, and it forms no habit.

This kind of man wins no matter where you put him

Nujol contains no medicines or drugs. It is simply the world's most famous method of bodily lubrication.

You can get a bottle at any good drug store, in a sealed package, for less than the cost of a couple of good cigars. Begin today to prove to yourself how Nujol can help you to lick the toughest job and feel bully!

The Soap That's Known and Sold the World Around

Cuticura Soap
MEDICINAL & TOILET

NEWS REVIEW OF CURRENT EVENTS

Elections in Virginia and Elsewhere Cause Democrats to Rejoice.

By EDWARD W. PICKARD

DEMOCRATS were jubilant over the results of elections held in various states, seeing in them evidence that the split in the solid South made last fall by the Republicans was not permanent; that the people do not like the Republican tariff measure now pending; that the Democrats have a good chance to cut down the Republican majority in both houses of congress next year and pave the way for a real fight in the next Presidential campaign; and, as Chairman Jouett Shouse of the Democratic national executive committee put it, "the country, for the time being at least, is Democratic-minded."

Most interesting was the election in Virginia where the regular Democratic ticket, led by Dr. John Garland Pollard for governor, was easily victorious over the coalition of Republicans and anti-Smith Democrats which was directed by Bishop Cannon, C. Bascom Slemp and Henry W. Anderson and which had William M. Brown for its gubernatorial candidate. The political power of Bishop Cannon in the Old Dominion was completely upset and the use of religious strife for partisan purposes was discredited, and observers generally admitted that Virginia was restored to the list of safely Democratic states.

Kentucky also gave the Democrats cause for rejoicing, for they retained a two-thirds majority of the lower house of the state assembly and a majority of the senate. Last year Kentucky was carried by Hoover and the Republicans elected nine out of eleven congressmen.

Mayor Jimmie Walker of New York city retained his office by virtue of a genuine landslide, his plurality over Fiorello H. La Guardia, Republican-Fusion candidate, being almost 500,000. George U. Harvey, borough president of Queens, was the only Republican to win in the metropolis. In a dozen other New York cities the Democrats elected mayors.

Indiana voters apparently turned flatly against the Ku Klux klan, for throughout the state the candidates who had klan affiliations generally were defeated by Democrats. The wets also saw in the results evidence that the people were tired of the domination of the Anti-Saloon league. Reginald Sullivan, Democrat, won the Indianapolis mayoralty by a two to one vote, and in many other state centers, most of them former Republican strongholds, the Democrats were victorious.

Detroit staged an exciting mayoralty contest between former Mayor John W. Smith, liberal, wet, and Catholic, and Charles Bowles, former judge and a Catholic. The klan, prohibition and religion all figured in the fight and the race was so close that the result was in doubt to the very last. Then it appeared Bowles had won by about 6,000 majority.

SENATOR BINGHAM of Connecticut has received his punishment for charging that the subcommittee on lobbying was packed against the administration, though ostensibly his offense was the employment of a lobbyist to post him on tariff matters, by virtue of which employment said lobbyist gained admission to executive meetings of the finance committee when it was working on the tariff bill. Bingham refused to apologize and so Senator Norris, chairman of the judiciary committee, who had named the subcommittee on lobbying, introduced his resolution censuring Bingham for action that "is contrary to good morals and senatorial ethics and tends to bring the senate into dishonor and disrepute." Twenty-two Republicans voted against the resolution, but a like number lined up with thirty-two Democrats and the measure was adopted, 54 to 22.

THAT remarkably voluble Senator Brookhart of Iowa, after giving fair warning, arose in the senate and told his story of the "Wall Street dinner" given in Washington three years ago by Walter J. Fahy of New York and attended by a number of senators and financiers. It was a fairly amusing old tale but far from exciting. Brookhart said that before entering the dining room each guest was offered a silver flask of liquor, and that he and Senators Smoot and Gooding declined. But he failed to name those senators who accepted the flasks, saying that the "boys" could answer for themselves. Beside Brookhart at the feast sat E. E. Loomis, a railroad official and connected with Morgan & Co., and on his other side was Otto Kahn. "During the course of the dinner, Mr. Loomis took his hip flask out of his pocket and he poured out some of that alcoholic stuff," said Senator Brookhart. "I have had enough experience in the chemical laboratory to know that it had a heavy content of alcohol. He poured that in the glass, and then he poured in some water—it was too strong to take raw—and he drank that. A lot of similar operations went along down the table."

The Iowa senator was called before the grand jury in Washington last week and presumably told that body the same story of the Fahy dinner, though he may have given more vital details. In the course of his speech in the senate he berated the administration for the failure to enforce the dry law along the Canadian border and in the best clubs and hotels. He especially attacked Secretary of the Treasury Mellon and said President Hoover should dismiss him from the cabinet.

MORE than the expected success is attending the efforts of the Democratic-radical coalition in the senate in changing the tariff rate schedules. After having their way with a number of chemicals, the coalitionists showed their strength effectively when the first major industrial schedule was reached, that fixing the duty on pig iron. By a wide majority they were successful in fixing this rate at 75 cents a ton, just half that proposed by the administration group and 37½ cents less than the present duty. The vote was 48 to 30. Reed of Pennsylvania said this vote could only serve to confirm his contention that the tariff bill was dead and that the house could never agree to the changes which the coalition was making.

CHIEF witness last week before the senate lobby committee was A. J. Arnold, Washington representative for the Southern Tariff association and the American Taxpayers' league. The inquiry revealed some of the methods employed to get tariff protection for products of Southern states and to promote abolishment of the federal inheritance tax. A long list of names of more or less prominent men and corporations from whom Arnold obtained contributions was made public, and Arnold sought to justify his collections from them and all his other efforts. He gathered in about $225,000 in the past year but was a trifle hazy as to how this amount was expended.

CHARLES GATES DAWES, our ambassador to Great Britain, on the eve of his return to his post in London spent a day or two in Washington conferring with President Hoover and Secretary Stimson. He was given a detailed account of the conversations between the President and Prime Minister MacDonald and discussed various phases of the naval reduction situation. Ambassadors Dawes and Guggenheim were the guests of Mr. and Mrs. Hoover at a dinner, as were the members of the senate foreign relations committee, and there was something of a sensation when it was learned that Senator Hiram Johnson of California, a member of that committee, was not invited. The newspapers made a lot of the incident, but Mr. Hoover promptly wrote the senator explaining that his omission from the list of guests was wholly accidental and had caused the President great distress.

PRIME MINISTER MACDONALD reported to the house of commons on his visit to the United States and thanked the American officials and people for their cordial welcome and the honor paid him. He gave little information on the agreements reached in Washington but in the course of his speech admitted the matter of Great Britain's fortified bases off the American coast had been discussed. Mr. Mac Donald's government does not face any considerable opposition in the matter of the naval agreement, but in domestic affairs, especially the plans for settlement of labor troubles, its course is not to be so smooth. The question of granting dominion status to India, or rather how soon this should be done, also has given rise to bitter debate. One of the first acts of parliament was to approve the resumption of relations with Soviet Russia.

ANDRE TARDIEU formed a new cabinet for France, a "concentration" government with Briand still in as foreign minister, but there were fears that it would be short lived. The Communists, Socialists and Radical Socialists decided to vote against it solidly, and they would need only fifty right wing votes to overthrow it. Such a result would seriously endanger the success of the Young plan and the Rhineland evacuation.

German Nationalists and Fascists mustered enough votes to call for a plebiscite on the Young reparations plan the result of which shall be binding on the reichstag. The present government has a majority in the reichstag and that body will reject the proposal for a plebiscite, whereupon it will be submitted to the national electorate. To override the reichstag's veto will require 20,000,000 supporters, or half the total eligible electorate, and so the scheme is evidently doomed to defeat.

CONFLICTING reports and claims made uncertain the situation in the civil war in China, but there evidently had been some bloody fighting between the rebel "people's" forces and the Nationalist government troops. There were no important developments on the Manchurian front. The American Red Cross sent over $20,000 for the relief of the white Russians who survived the massacres perpetrated by the Soviet forces in that region.

UP IN Minneapolis the Co-operative Farmers Northwest Grain corporation was organized with capital of $0,000,000, to be owned by the Farmer Elevator and Grain Pool associations of Minnesota, the Dakotas, and Montana and to act in co-operation with and as the agency for the Farmers National Grain corporation in the four states.

FOLLOWING a brief spurt of recovery, stock prices on the exchanges went tumbling again until most of them reached the low figures of the previous week, and each day many more billions of paper values were wiped out. If the New York bankers' pool was doing anything to support the market, it wasn't visible, and none of the bankers would say a word. The bears were just permitted to have things their own way, and the terrified amateur speculators who had survived the earlier debacle submitted their wool to the shearers almost unresistingly. Later came some spasmodic recoveries.

ROSCOE C. McCULLOCH of Canton was appointed by Governor Cooper of Ohio as United States senator to fill the vacancy caused by the death of Senator Theodore E. Burton. He has served three terms in congress and held other public offices. McCulloch's appointment is for a period of one year. He must seek election in November, 1930, for the unexpired two years of the six-year term of the late Senator Frank B. Willis.

RECENT deaths include those of William G. Lee, former head of the Brotherhood of Railway Trainmen; Marquis Inouye of Japan and Maurice Herbette of France, diplomats; Prince Max of Baden, last imperial chancellor of Germany, and George Hannauer, president of the Boston and Maine railroad.

POULTRY

SMALL EGGS ARE DIFFICULT SALE

Best Plan to Cull Hens Laying Undersized Product.

(Prepared by the United States Department of Agriculture.)

Poultry growers usually believe that any hen laying 250 eggs a year is a good one, and a record of 300 eggs in a year is unusual except in a relatively small number of highly bred flocks which are fed and cared for by skillful poultry specialists.

At the Beltsville experiment farm of the United States Department of Agriculture last year one hen made a record of 306 eggs laid in 365 days. But she went to the butcher. The poultry experts of the bureau of animal industry made no apology for what would seem a sacrifice to many. This hen laid eggs that were undersized, poorly shaped, and below standard weight. They would have culled her before the year ended but for the fact that her record was needed for comparison with her sisters in a study of inheritance.

Her eggs were numerous, but her 25½ dozen eggs did not weigh more, or have more food value, than 18 to 20 dozen standard eggs. She did in fact lay a greater weight of eggs than the average of many high-producing flocks. But even so she was not considered a desirable breeder. The department's studies of inheritance show it is much more difficult to breed into a flock of chickens the factors responsible for size and quality of eggs than it is to breed merely for numerical production. In the interest of the industry, which should endeavor to meet the demand for quality products, the department has set a minimum standard for the hens it will use in breeding experiments. They must produce eggs weighing not less than two ounces each, or a pound and a half to the dozen. They recommend this standard to poultry growers.

Free Open Water for Poultry Pays Profit

Free open water, neither too warm nor too cold, certainly not in the form of ice or frozen milk, should be supplied. If plenty of skim milk or buttermilk is available, they may often be used as the sole liquid, particularly in summer; they carry some 90 to 93 per cent of water.

The other nutrients accompanying the water in these milk by-products are of very high class from the feeding standpoint.

As the common drinking vessel is apt to be a good medium for disease transference and flock contamination, all drinking vessels should be kept sanitary.

Number of Females to Male Quite Variable

The number of females to be mated with one male varies with the class of stock.

For the Asiatics it should be eight to ten.

For the American and English classes it should be ten to fifteen, and the Mediterraneans may be fifteen to twenty.

The hens to be mated should be kept away from other males for at least three weeks prior to the saving of the first eggs for hatching, and should have associated with the males it is desired to breed from, for at least ten days, while two weeks is better.

Selling Stock Source of Big Poultry Profit

While it has been proven that a poor-laying mongrel flock containing several types and colors may be made over into a high-producing flock of uniform color that is just as desirable from the market standpoint as pure-breds, within the space of three years, the fact should not be overlooked that a considerable source of profit may come from selling breeding stock.

This can only be done satisfactorily where one keeps pure-bred stock.

It costs no more to house and feed a pure-bred flock than it does a bunch of mongrels or grades.

Shell Materials

The average hen eats three cents worth of oyster shell a year, and when it is available she will lay about 30 more eggs a year than though it is not provided. The hen needs calcium carbonate for the egg shells. It is difficult for her to secure an ample supply of this from water and feeds alone. Poultrymen long ago learned that oyster shell was about 99 per cent pure calcium carbonate and when crushed was readily available for the hens.

Save Manure

Poultry manure ferments very quickly, losing, if left exposed, a large proportion of its nitrogen as ammonia. This fact emphasizes the desirability of systematically and frequently cleaning off the boards beneath the roosts—a plan that also conduces to the general good health and thrift of the fowl. In summer the manure previously mixed with loam to destroy stickiness and facilitate distribution, may be applied directly to the land.

Everything Fixed for Speed in Elopement

The modern Romeo was making arrangements for eloping with his Juliet.

"Now, darling," he said, "we'll run over our schedule for the last time. The car will be at the door just before midnight. You understand that?"

"Yes, precious."

"I'll creep round to your window and throw a handful of stones up against it to let you know I'm there. Do you follow me, sweetheart?"

"Absolutely, my own."

"You will then creep downstairs with your suitcase. You'll be quite ready with it when I arrive, won't you?"

She nodded.

"Quite, dearest," she replied. "Mother is packing it for me now!"

Auto Travels on Water

Using a pair of seaplane pontoons, a Winnipeg man makes trips by water in his automobile, and completed 120-mile voyage without mishap. The propeller shaft of the car is disconnected at the universal joint, and a marine propeller shaft, rigged on the framework between the two floats, is connected. Thus equipped, the car cruises at a speed of about 15 miles an hour.—Popular Mechanics Magazine.

Trains to Close Gates

Application of the apparatus which recently stopped two speeding French railway trains within 20 feet of each other may be applied to crossings. The trains automatically will, when a mile from a crossing, cause lamps on the gates to light up, then closing the gates and start a loud bell ringing. The apparatus may be applied to steam or electric trains.

Needless Pain!

The man who wouldn't drive his motorcar half a mile when it's out of order, will often drive his brain all day with a head that's throbbing.

Such punishment isn't very good for one's nerves! It's unwise, and it's unnecessary. A tablet or two of Bayer Aspirin will relieve a headache every time. So, remember this accepted antidote for pain, and spare yourself a lot of needless suffering. Read the proven directions and you'll discover many valuable uses for these tablets. For headaches; to check colds. To ease a sore throat and reduce the infection. For relieving neuralgic, neuritic, rheumatic pain.

People used to wonder if Bayer Aspirin was harmful. The doctors answered that question years ago. It is *not*. Some folks still wonder if it really does relieve pain. That's settled! For millions of men and women have found it *does*. To cure the cause of any pain you must consult your doctor; but you may always turn to Bayer Aspirin for immediate *relief*.

THE FIRST THANKSGIVING,
Painting by J. L. G. Ferris
Underwood & Underwood Photo

By ELMO SCOTT WATSON

EVERY American knows that we owe our annual holiday of Thanksgiving to the Pilgrims, that little band of 102 self-exiled Englishmen who, after two months of weary journey across seemingly endless seas, came at last to the "stern and rock-bound coast" of their future home. Even after they had reached their goal safely, their situation was not one which would ordinarily be considered a cause for gratitude. Their supply of food was alarmingly low; winter lay heavy upon the land before them and gave little hope of replenishing their larders; and they were confronted with unknown dangers in this wilderness.

Yet no sooner had they made their historic landing on Plymouth Rock on December 21, 1620, than they celebrated the "first Thanksgiving" ever observed in this country. That celebration is described in the words of William Bradford, their first governor, as follows:

Being thus arrived in good harbor and brought safe to land, they fell upon their knees and blessed ye God of Heaven, Who had brought them over ye vast & furious ocean, and delivered them from all ye periles & miseries thereof, again to set their feete on ye firme and stable earth, their proper elements. . . . They had now no friends to welcome them, nor inns to entertaine or refresh their weatherbeaten bodys, no houses or much less townes to repaire too, too seek for succoure. It is recorded in scripture as a mercie to ye apostle & his shipraked company, that the barbarians shewed them no smale kindness in refreshing them, but these savage barbarians, when they mette with them were readier to fill their side full of arrows than otherwise. . . . Neither could they, as it were, goe up to ye top of Pisgah to vew from this wildernes a more goodly cuntrie to fed their hopes; for which way soever they turned their eye (save vpward to ye heavens) they could have little solace or content in respecte of any outward objects. . . .

They had much more cause for thanksgiving a year later and the result was another celebration of a kind which has survived in something of its original form for more than 300 years and promises to continue for all time as one of the most distinctively American of all our holidays. That first winter had been a terrible one for the Pilgrims. Huddled aboard the Mayflower until late in March, sickness laid a heavy hand upon them and at one time all but six were suffering from some ill or other. By April they had established rude homes on shore, the Mayflower had left and they started planting crops.

The Indians, instead of being ready "to fill their side full of arrows," proved friendly and helpful in planting and caring for their crops of corn, barley and peas. All through the summer they watched those crops with anxious care and when October came there was a bountiful harvest. Says Governor Bradford:

They began now to gather in ye small harvest they had, and to fit up their houses and dwellings against Winter, being all well recovered in health and strength, and had all things in good plentie; for as some were employed in affairs abroad, others were exercised in fishing, about codd & bass & other fish, of which they tooke good store, of which every family had their portion.

All ye somer ther was no wante. And now begane to come in a store of foule, as Winter approached, of which this place did abounde, when they came first (but afterwards decreased by degrees). And of these they tooke many, besides venison. Besides they had aboute a peck of meale a weake to a person, or now since harvest, Indian corn to right proportion. Which made many afterwards write so largely of their plentie hear to their friends in England, which were not fained, but were true reports.

Now indeed did the Pilgrims—there were only 55 of them now; hardship and undernourishment had taken their toll during the winter and spring and 47 of the original company were buried on the hill overlooking their landing place—have cause for gratitude. Accordingly, Governor Bradford proclaimed a three-day celebration of thanksgiving. Furthermore, in appreciation of the Indians' friendly aid, it was decided to invite Chief Massasoit and his tribesmen. Edward Winslow, one of the participants, tells of the celebration as follows:

Our harvest being gotten in, our Governour sent foure men on fowling, that so we might after a more speciall manner rejoyce together, after we had gathered the fruit of our labours; they foure in one day killed as much fowle, as with a little help beside, served the company almost a week, at which time amongst other recreations, we exercised our Armes, many of the Indians coming amongst us, and amongst the rest their greatest King Massasoyt, with some ninety men, whom for three days we entertained and feasted, and they went out and killed five Deere, which they brought to the Plantation and bestowed on our Governour, and upon the Captain (Standish) and others.

It is from that historic feast 308 years ago that our annual observance of a Thanksgiving day may be traced and, although some of its original significance may have been lost by Americans of the present day, it is one of our heritages from the Pilgrims. But an annual feast day and another holiday from our every-day tasks is in reality the least of the reasons why we should hold the Pilgrims in grateful remembrance.

Before they left England, to seek a home first in Holland and later in America, these Pilgrims had been known as Separatists, that is, people who believed that the church and state should be separated. So they brought to the New world the germ of the idea of religious freedom and their idea of the separation of church and state became one of the cardinal principles of the new nation when it was founded 150 years later.

But as a distinguished Englishman, Sir Arthur E. Shipley, vice chancellor of Cambridge university, writing of these people during the Pilgrim Tercentenary celebration in 1920, has observed: "Too much stress must not be laid—as the clergy are apt to lay it—on the purely religious principles which impelled our Pilgrims to make their great break with their life in the Old world. Still, the fact that they came not entirely for gain, played a large part in their success as colonizers. Not only had they the high spirit of enterprise, but they had the sober, constant quality of enduring industry. To be a successful colonist one must not only have the light-hearted adventurous spirit of Hawkins, Drake, and Raleigh, but a deep and abiding seriousness of purpose. This the Pilgrims had, and in spite of persecution and affliction their stern qualities enabled them to endure to the end, and if they were intolerant, they were less so than their successors, the Puritans. They supplied that element in New England which is expressed by the Englishman who has described the New Englander as the 'east wind made flesh.'"

In order to be able to come to a land where they could have the religious freedom which they desired, they entered into a financial agreement with the Merchant Adventurers of London, wherein the merchants furnished the capital and the Pilgrims furnished the service. Under the terms of the agreement which was to last seven years no lands or goods should be divided, in order that the investors might receive a profit. Thus they mortgaged their future for seven years.

But scarcely had they reached their new homes than the typically English respect for law and order manifested itself and the political motive was added to the religious-commercial. On November 11, 1620, they drew up the now famous "Mayflower Compact" which was signed by the 41 men of the colony. "It was thought good that there should be an association and agreement," writes Governor Bradford, "That we should combine together in one body, and to submit to such government and governors as we should by common consent agree to make and choose; and set our hands to this that follows, word for word." Brief as is this historic document, it contained the root out of which sprang the Constitution of the United States.

FARM STOCK

PRODUCTION OF AVERAGE SHEEP

Wise Culling and Attention Bring Returns to Owner.

(Prepared by the United States Department of Agriculture.)

How culling and wise attention to breeding of farm animals may be expected to produce returns for farmers is reflected in statistics gathered by the bureau of animal industry and published in the current Yearbook of the United States Department of Agriculture.

"In 1840," says E. W. Sheets, in charge of animal husbandry investigations, "the average weight of fleece sheared from American sheep was less than two pounds. By 1900 it had increased to nearly five and one-half pounds. Today it is approaching eight pounds. In other words, an average sheep today grows wool enough each year to make approximately one suit of clothes. In 1840 it took the wool of four sheep to make a suit of equal weight and quality."

Better breeding and more rigid culling of breeding flocks promise to raise this average still further. Wool production is similar to such qualities as heavy milk production in dairy cattle and heavy egg production of hens. The offspring of heavy producers are likely to be heavy producers and to transmit to their offspring the capacity for heavy production.

In the case of sheep, Mr. Sheets says: "There is still room for improvement. By 'weeding out' the poor producers and breeding from the heavily fleeced sheep, flock owners can raise the average."

Self-Feeders Produce Most Profitable Pork

The importance of self-feeders in producing profitable pork is rapidly increasing. The successful use of a self-feeder in making pork is well proven and every hog farm is now using them for feeding the growing shoats. This popularity of the self-feeder for producing pork has, as many other good things, its drawbacks. One of these is the ease with which rain and snow seeps in and dampens or wets the feed. Were it not for the delicate digestive system of the pig, this condition would pass unnoticed. However, the stomach of the growing pig is like that of a small child and eating wet or damp feed which has started to mold has about the same effect on it as green apples have on the child. The care and guidance of the mother removes the apples from the youngster, and it soon recovers. As in the case of the child, the thinking must be done by the man caring for the animals.

Minerals Necessary for Growing Animals

Producing animals, pregnant animals, and growing animals need large amounts of minerals, says J. C. Nisbet of the Kansas extension service. A cow puts 14 pounds of mineral in every ton of milk, 56 pounds in a normal production year. A large amount of minerals is needed for repair within the body. A growing calf needs 40 to 60 grams of mineral matter per day.

Alfalfa hay contains the two minerals needed the most in animal nutrition, calcium lime and phosphorus. These minerals are available and in such abundance in alfalfa hay that there can be no deficiency when fed at the rate of one pound of hay for every 100 pounds live weight in a properly balanced ration. One pound of alfalfa hay contains more calcium than 100 pounds of corn. One ton of alfalfa contains 163 pounds of minerals.

Produce Ton Litters Without Feeding Corn

You can produce ton litters without corn. County Agent Svoboda, of Eddy county, North Dakota, tells of ten pigs, owned by Smith brothers and weighing 2,336 pounds at the age of six months. They were sired by a purebred Duroc boar and farrowed by a Chester White sow. After weaning, the pigs were on alfalfa pasture and were self-fed on ground barley at all times.

During the first four months these pigs were given a slop made of red dog and middlings, mixed with skim milk and water. The last two months the slop was made of ground hull-less oats. The owners believe the weight would have been increased had corn been available, but the experience shows that you can produce good pigs without corn.

Good Rams Needed

Those who have ewe flocks already established should by all means get good rams with which to mate them. Only by so doing can a product of good quality be secured. In some sheep raising countries the practice is to buy rams for the production of commercial lambs at a cost equal to from five to ten times the value of the average ewe. When good rams are secured this is not an exhorbitant price and might serve as a fair guide as to how much to pay.

Tobacco Plants Found Poisonous

Not Generally Known These Weeds May Cause Death of Stock.

(Prepared by the United States Department of Agriculture.)

Most amateur smokers well know that our ordinary cultivated tobacco is poisonous, says Dr. C. Dwight Marsh, of the United States Department of Agriculture, specialist in the poisoning of live stock by plants and weeds. While nicotine, the poisonous substance in tobacco, is also present in some of the tobaccos that grow wild as weeds, it is not generally known that these plants may cause sickness and death in live stock.

Resembles Cultivated Tobacco.

The weed known to botanists as nicotiana trigonophylla grows in many localities in the relatively dry range areas of the Southwest—Texas, Arizona, New Mexico and southern California, and Utah. It resembles cultivated tobacco, although the leaves are narrower. After several deaths in a herd in Arizona, the owner and Doctor Crump of the bureau of animal industry, suspected the weed as the cause. They drove a herd of cattle away from a patch and marked it carefully. Next day the cattle had returned and eaten the wild tobacco and two vere very sick as a result. These animals seemed to have acquired an appetite for the weed.

Another wild tobacco, N. attenuata, which is almost equally poisonous, is found not only in the Southwest but extending as far north a Washington. Nicotiana glauca, commonly known as tree tobacco, because of its shrub-like growth, is also known to be poisonous to live stock.

Easy to Kill Plants.

Ordinarily, Doctor Marsh believes cattle and other live stock will avoid the wild tobacco if good feed is available. As the plants grow on limited areas it is not difficult to destroy them, and on the range, where live stock are herded, it should be easy to keep them away from patches of wild tobacco if the herders take pains to learn the appearance of the plants.

Guard Against Termites in Erecting Buildings

While building new buildings they should be termite proofed. Two per cent of the original cost will make the building safe from the inroads of the insect that causes thousands of dollars damage each year, according to Thomas E. Snyder of the United States Department of Agriculture.

The surest way to make the building less liable to be attacked is to use no wood in the foundation or basements. The chief thing to keep in mind is to prevent any wood coming in contact with the ground.

Termite control and other methods of prevention are thoroughly described in a leaflet just released from the United States Department of Agriculture, Washington, D. C.

Keep Yards Clean

Care exercised in keeping poultry yards clean and in sanitary condition has a double function in keeping the flock clear of parasites that undermine the health and sap the vigor of the birds. The injury by mites, lice, fleas, and other parasitic organisms is sometimes obvious, but it also happens that some insects and other small creatures are carriers or intermediate hosts of some of the internal parasites of poultry. Once the pests are out it is easy to discourage them.

Agricultural Notes

The earlier the plowing for wheat, the better the crop.

* * *

Live stock abortion diseases cause losses amounting to more than $50,000,000 annually in the United States.

* * *

Dogs and cats are attacked by no fewer than 475 species of insect parasites, more than afflict any other animals.

* * *

With the beginning of the new year, a resolution that will pay well, is the decision to keep cost accounts on the major farm operations.

* * *

Owners of white pine trees should learn to identify white pine blister rust and to realize that it spreads through currant and gooseberry bushes.

* * *

A good farm machinery shed will soon pay for itself by prolonging the life of the tools it protects. This happens, however, only when the shed is used for its intended purpose.

* * *

If a sash or other plant house is to be built, or the old one needs repairs, the job will be easier now than later. It is also well to get the hotbeds and the cold frames ready for use.

* * *

Green feed added to the ration will aid in keeping the hens in production. Be sure that there are no mites in the poultry house, and make it as comfortable as possible in every way.

* * *

In the case of soil that can be handled under a system involving fall plowing, fall plowing certainly has much to recommend it. At least, a portion of the garden should be fall plowed, for this will mean an early spring garden.

The A. R. White family were entertained at a six o'clock diner at the home of Mrs. Henry Church on Friday evening.

Mr. and Mrs. Harry Carson came Monday from La Crose, Wis., for a visit with his brother, Geo. Carson and family.

Miss Lydia Bock, William Bock, and their guest, Miss Schlichting, of Mason City, visited at the Rev. Calvin Grosshuesch Friday evening.

A baby girl was born to Mr. and Mrs. Herman Nuehring Tuesday night. They now have a fine family of three boys and two girls.

The Bible Class of the Reformed Church had a social gathering last Thursday evening at the Parish House. A fine time was reported.

Asa Arnold, who is a student at Iowa University, spent Saturday and Sunday with his parents, Mr. and Mrs. F. A. Arnold.

Mr. and Mrs. Fred Kluckhohn drove to Mason City this morning where Mrs. Kluckhohn entered the Mercy hospital for treatment.

Mrs. Hod Lawhorn of Garner, Mrs. Cliff Swartz of Ventura and a lady from Kansas City visited at the Henry Freie home Saturday.

Ralph Elder was looking down on the world with one eye since last Friday when he got a weed seed in an optic, causing some pain and distress.

Quite a number of Klemme men attended the Masonic Lodge at Garner Friday evening when work in the third degree was put on for two candidates.

Mr. and Mrs. Tom Blank and Miss Marie drove to Rowan Sunday to see the new baby at the Usher home. Grandpa Tom says the youngster is a fine specimen.

Walter Lau, who works at Albert Lea spent Sunday with his family and relative here. Mrs. Lau visited with him at Albert Lea last week Saturday and Sunday.

Mr. and Mrs. Paul Mueller and baby drove to Winthrop, Minn. Sunday to visit Paul's parents. Other brothers from South Dakota and Garner were also home.

Help a good cause! Help the Ladies Aid! Help swell the church building fund! Help and be helped by having that new church. Attend the Ladies Aid Bazaar! 1tc

Buy your Xmas Gifts at the Ladies Aid Bazaar; lovely hand made articles that will please all. Fancy work in different lines; aprons, fancy and kitchen style—without any doubt you will find your size there. Where? At the L. A. Bazaar, come and see! 1tc

Mr. and Mrs. Paul Kemp, Mr. and Mrs. Gilbert Kropp, Mr. and Mrs. Wm. Schlichting, Alvin Schlichting and Miss Martha Kemp, were all entertained to dinner Sunday at the Theodore Kemp home at Goodell.

Mr. and Mrs. John Lemke, accompanied by Mr. and Mrs. Tim Waddingham, drove to Mason City this morning when Mr. Waddingham went for examination at the hospital.

Mr. and Mrs. Elmer Arnold and children, Mrs. C. A. Arnold and Miss Minnie Lenz all drove over to Mason City Sunday and enjoyed dinner ad a visit at the Dr. C. B. Tice home.

Mr. and Mrs Allie White and son Albert left this morning for Bennett, Colorado, to spend the winter. Albert drove his car and had a lot of necessities packed in it and his parents followed in their car, also packed to the roof. They will visit with Mrs. White's relatives during the winter and will return next spring or summer.

Married Woman Fears Gas —Eats Only Baby Food

"For 3 years I ate only baby food, everything else formed gas. Now, thanks to Adlerika, I eat anything and enjoy life."—Mrs. M. Gunn.

Just ONE spoonful Adlerika relieves all GAS so you can eat and sleep better. Acts on BOTH upper and lower bowel removing poisons you never knew were there, and which caused your stomach trouble. No matter what you have tried for stomach and bowels, Adlerika will surprise you! Wilson's Drug Store.3

DOINGS AT SCHOOL THE PAST WEEK

SCHOOL PROGRAM WAS WELL ATTENDED TUESDAY EVE

Goodell Exepected Here Friday Eve For Basket Ball Game

The program of plays staged by Belmond, Clear Lake and Klemme on Tuesday night of this week was well attended and we believe all enjoyed them. The same plays will be staged again on Saturday night at Clear Lake and on Monday night at Belmond. Miss Trumbell has coached another cast for Klemme's part of the program at Clear Lake on Saturday night. Allan Klotzbach, Clarence Lemke, Ethel Baack and Frances Tanner will take the parts there. It is to be decided later as to which students from Klemme will play the parts at Belmond on next Monday night.

Basket Ball Game Friday Eve

We are hopeful of a basket ball game with Goodell on our own floor on Friday night, f this week. In as much as our expenses last year exceeded our receipts in basket ball our Board decides to place the price of admission at 35 cents for adults this year instead of 25 cents. This seems to be the prevailing price at other chools, at present and may convert a deficit into a small balance at the end of the school year. We already have a few bills unpaid and need the where-with-all to take care of them. Our team plays Alexander at Alexander on next Wednesday night.

P. T. A. Next Tuesday Night

The necessary committees have been appointed by Mr. Wellemeyer, our P. T. A. president, and a program of short addresses is in process of preparation by the students of our public peaking coure at high school under the dircetion of Miss Trumbell, their instructor. Our small but progressive high school orchestra will make their first appearance on this program on Tuesday night of next week. Our membership roll is perhaps the largest it has yet been and we hope for a large attendance. We are looking again for a tasty lunch on this occasion.

Profs Wil Meet Again

The superintendent will meet the other school dads of our county at the home of Supt. Baker of Corwith u Saturday afternoon of this week. A short business meeting will be held after lunch.

Another Six Weeks Period Ends

This is the end of another six weeks period and we are learning how thorough has been our instruction and how much effect has been made on the part of our pupils. We hope the results may prove gratifying to both teachers and students. There should be some improvement over the preceding period as more time has been provided to get thoroughly started on the year's work. But we are constantly reminded that only a small fraction of the human intellect or mental capacity is being exercised. Few students have Edison's spirit of stick-to-itiveness. But it is sa'd that "genius i capacity of hard work," and we have no reason to expect every child to be a genius. If all were, the rewards that come to those who work hard would not be assured.

Close For Thanksgiving

On Thursday and Friday of next week our schools will be closed for the usual annual Thanksgiving vacation. Both students and instructors will enjoy the rest from their studies and release from their confinement. We understand Garner is to play Clear Lake as usual on Thanksgiving Day and this time at Garner. It should be a good game of football and a good place to go, it's near.

Will Anance Basket Ball Dates

Watch for our own basket ball anouncements. Posters will be in plain view to keep our fans informed as to dates and places.

Wil Apear On P. T. A. Program

The following high school students of the public speaking class will give talks as follows at the P. T. A. Program Tuesday evening:

Carence Lemke, "World Progress Since the War."

Valeria Koerner, "Health."

Wayne Pavey "Home and School"

Lela Bachman, "Know Your School."

Allen Klotzbach, 'Life's Work"

Raymond Barz, "Use of Leisure Time."

Ethel Lemke, "Education for Good Character."

Miss Wilma Trumbell, instructor in public speaking will give a talk on "How Parents May Help Secure More Thorough School Work."

In addition to the abve program the high school orchestra, under the direction of Miss Ford, will make its first public appearance of the school year.

A committee has been appointed to look after the lunch which will be served after the program.

ALBERT TANNER WAS VICTIM OF BIRTHDAY SURPRISE

Albert Tanner was agreeably surprised last Sunday, when about noon a number of cars were seen driving up the lane.

He had forgotten that it was his birthday, but not so his wife, who in honor of the event staged this little gathering to help him celebrate.

Large, well-filled baskets and boxes found their way into the house and shortly after the sumptuous dinner was served cafeteria style to some sixty folks.

The folowing friends and relatives that were present were:

Mrs. Rose Taner, Luther, Francis and Florence.

Mrs. Emma Schwichtenberg, Ernest and Berdice.

Mr. Charlie Kraus; Mr. and Mrs. Wm. Neuhring and family, of Rockwell; Mr. and Mrs. David Schwichtenberg and family; Mr. and Mrs. Wm. Kraus, Retha Ball and Dorothy Duesenberg of Garner.

Mr. and Mrs. Karl Kraus; Mr. and Mrs. Emil Kraus and Arlene; Mr. and Mrs. Mat Bachman and family; Mr. and Mrs. John Newberger, Ruth, Fay, Wm. and Merlin; Mr. and Mrs. J. M. Newberger; Mr. and Mrs. Henry Griffen, Marvin, Kenneth and Dorothy; Mrs Leonard Sampson and Irma.

Mr. Tanner received some fine, useful gifts and also a generous handful of silver and greenbacks.

The beautiful and tasty birthday cake was brought by Mrs. Rose Tanner.

ATTENDED LEAGUE CONFERENCE AT ALGONA LAST NIGHT

Rev. H. E. Whyte and Carl Carlson each took an auto load of young people to Algona Wednesday evening t atend a super and a meeting of the Epworth League of the Algona District.

Following the supper a business meeting was held. Men from the Central Office of Chicago were on the program and gave out much information of real value to Epworth Leaguers.

BUYS HOGS FOR DECKER'S IN THIS COMMUNITY

E. C. Buentenbach, wh buys hogs in this community for the Decker Packing Plant at Mason City last week shipped three car loads to the Plant from Clear Lake.

CHRISTMAS SEAL-ED

NUTRITION STUDY FOR F. B. LADIES

FARM BUREAU WOMEN HAVE SPECIAL COURSE ON FOOD

Program In Hancock County Will Extend Over Three Weeks

"Food and the Pre-School Child" and considering the rest of the family is a lesson which is being given in Hancock County during the ext three weeks for the Farm Bureau ladies in the Home Project Work.

The "toddlers" age is described as the most neglected age of childhood The foundation for health and life is built during these growing years of the child's life. Food and food habits that will guard this health are studnied in a lesson on "Food for the Preschool Child." We will study the essentials of good diet, easy ways of making proper food selections and a simple guide for meal planning is printed on a card which will help the ladies in giving follow up meetings. Every true homemaker is interested in turning out a family that will score high in health because without health we cannot be appy and without hpapiness we cannot be successful. We eat food to give us health so it is of great benefit for us to know how to select food to cook so every need of the body will be met. Nutrition is not learning hw to cook but what to cook. Ruth Cessna of the Nutritin Department of the Iowa State College says Nutrition is a study of the food needs and the selection of foods to meet these needs. A similar term or one which might be substituted for nutrition is "balanced ration." This term is used by all good animal feeders. Is the health and food of animals and the chickens more important than human health which is also dependent on food to a great extent? Good food alone is not sufficient for health in either animals or human bodies, but it is considered by many authorities as one of the most important factors. With food we need sunshine, exercise, fresh air and sleep.

Every school district in Hancock County has a cooperator who attends the training schools that are given in the township. This cooperator will be glad to tell you the lesson on which she received or you can be on the outlook for the follow up meetings.

Mr. and Mrs. C. J. Wille and Mrs. John Johnson and girls were visitors at the home of Lydia and William Bock Friday evening.

MORE SNOW AND ZERO WEATHER IN NORTH IOWA

Tuesday morning the ground was again covered with a couple of inches of snow and Wednesday the thermometer began a downward slide and hovered around 22 degrees most of the day, with another sudden drop as night approached, when it hit 10 degrees about dark. This morning the mercury had slid down to the zero mark, and some thermometers registered 2 degrees below.

The sun is again shining and it bids for fair weather ahead.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German service.
Celebration of the Lord's Supper.

11:00 a. m. Sunday School.
All children who wish to take part in our Christmas program should be in Sunday School this Sunday.

Also good music. Everyone is invited. Ladies please bring pie or baskets. Meta Lemke, teacher; John Rayhons, director. 2tc

COURT OF HONOR AT GARNER MON.

DISTRICT FOUR SCOUTS TO BE AWARDED FOR WORK

Scouts Of Klemme Troop 56 Will ccive Advancement Awards

A Boy Scout Court of Honor for District No. Four will be held at Garner, Iowa, Monday evening, November 25th at 8:00 P. M. The Court of Honor is a meeting at which Boy Scouts are awarded badges or honors for achievement that they have made in the Scouting Program.

The meeting next Monday night will be presided over by Rev. C. H. VanMetre of Garner, with Hugh H. Shepard of Mason City present, representing the Area Court of Honor Committee. Because the Court of Honor cmes as the climax to a large Area-Wide Contest which has been running for the past eight weeks, a very large atendance of Scout candidates for awards is expected.

It is vital to the lives of these boys that their parents be present to share with them in the thrill of their successes.

These meetings are open to the public. Everyone interested is urged to attend. It is an opportunity to learn more about what the boys of North Iowa are doing.

The Troop or Community Cmmittee in the varius Area towns will hold Board of Review meetings this week so that all Court of Honor papers can be in the Area Office by Saturday night, November 23rd.

BUSTER JORGENSON NINE YEARS OLD SUNDAY

Sunday was Buster Jorgenson's birthday and so his mothre prepared a big chicken dinner unbeknown to him and invited Dorance Day, Byrnes Missman, Marian Waterman, Mr. and Mrs. C. G. Waterman, and Grandpa and Grandma Jorgesonson, of Garner, to help him celebrate.

Buster was quite surprised when he came home from Sunday school and saw the long table, in the center of which was a birthday cake with nine candles on it. He received many fine gifts as a rembrance of the occasion.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning worship in Klemme at 10:00 o'clock.

Sunday school, Klemme at 11:00.

Sunday school, Liberty, 10:15.

Morning worship, Liberty, 11:15.

Evening worship, Klemme, 8:00.

Epworth League, 7:15.

At the morning worship service next Sunday both the Klemme and Liberty Churches the sacrament of the Lord's Supper will be administered. This is one of the most sacred and significant of observances in the church and should inspire new faith and devotion in the hearts of all beleivers.

The male quartet will sing at the evening worship, at which time there will also be the regular service of preaching.

BASKET SOCIAL

There will be a program and basket social, 6 miles east, and 2 miles north of Klemme on Wednesday, Nov. 27, beginning at 8:00 p. m. Everybody invited. Ladies please bring baskets. Martha Dorenkamp, teacher. 1tc

Little Ardith Stokesbary came home last Friday from the Mercy hospital where she underwent a tonsil operation. She is now getting along fine.

A Hand Colored (In Oil) 8x10 Photo FREE with every $10.00 order of pictures at the Kirk Studio, 11½ East State St., Mason City, Iowa. tfc-12-

KLEMME LOCALS

Mr. and Mrs. C. A. Bachman and children visited at the Wm. Bachman home Sunday.

Mr. and Mr. Tom Blank and Miss Marie, and Melvern Lau drove to Rowan last Thursday evening for a visit at the Worthy Usher home.

Mr. and Mrs. Elmer Schlei, and son Dale, Mrs. Fred Haupt and Miss Edith visited with relatives Sunday at Rowan.

Mr. and Mrs. Lew Lewis are enjoying a visit from Mr. and Mrs Geo. Holm, who came Saturday from Minneapolis.

Herman Bridges and family, Mr. and Mrs. Oscar Carlson, and Paul Stille and family visited relatives and friends at Dows Sunday.

Mr. and Mrs. Geo. Stokesbary and children, and Reuben Lemke drove to Des Moines Sunday morning for a visit with Mr. and Mrs. Stokesbary's daughter and husband.

Mr. and Mrs. Harold Leitzinger were at Mason City Saturday when Mrs. Leitzinger had a medical examination. She is now improving in health rapidly since her recent illness.

XMAS CARDS—In boxes at 50c and $1.00. Others priced at 25 for 75c and up. Printed names at a small extra charge. Order now, as we have already placed many orders. Times Print Shop. 1tc.

Henry Linne and family who the past summer worked on the Lew Griffen farm, moved Tuesday to the Will Messelheiser place south east of Klemme. Henry will work for Mr. Messelheiser the coming year.

Miss Leona Buseman had a minor operation on her nose at Mason City last Friday. She was accompanied by Mr. and Mrs. Henry Buseman, her parents. They returned home Saturday.

Students entering Hamilton College, Mason City, Iowa, at the beginning of the second semester, December 2, will be offered the same schedule that was open to those who began the course in September. Send for special bulletin. 1tc

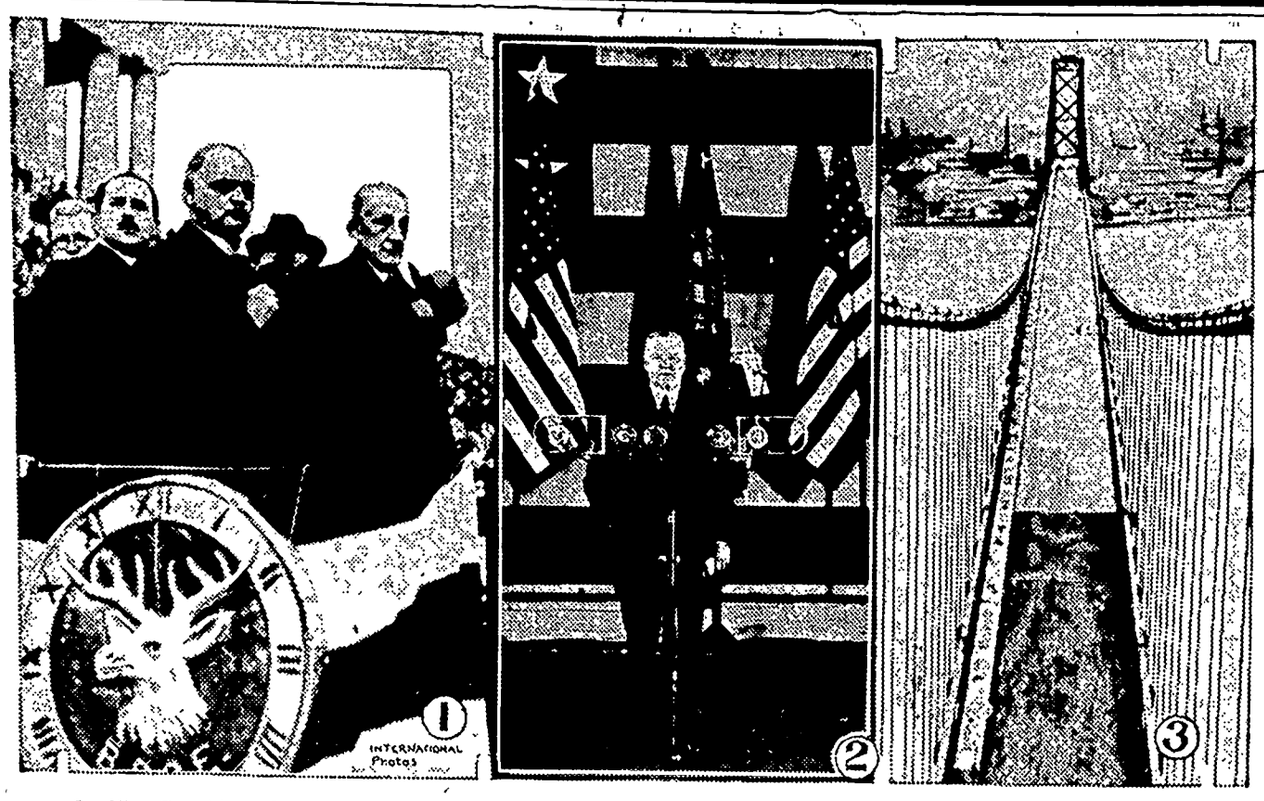
A young man from Waterloo flew into Klemme Saturday evening and in landing his plane in Koerner's pasture struck a fence. But little damage was done and he and his companion suffered no injury. They returned to Waterloo again Sunday afternoon.

Mrs. Walter Aderson had a birthday and Sunday evening a lot of her friends and relatives came in and gave her a pleasant surprise. Games and visiting furnished the evening's entertainment. Later delightful refreshmets were served. All report a fine time.

Miss Adella Kuhlman, who has been with her mother, who is ill, at Meno, South Dakota, will return to Iowa soon and resume her work at the Forest City telephone office. Her mother has again fully recovered.

Sunday guests at the A. D. Gimer home were the following: Mr. and Mrs. R. J. Gimer and daughter, Gladys of Wellsburg, Iowa; Mrs. Cora Homan and children, Hazel, and Woodrow, of Abbott, Iowa; Mr. and Mrs. C. E. Johnson, Robert and Barbara, and Miss Clarice Wellemeyer, of Klemme.

B. L. Prouty and Walt Kurtz, of Garner, were in Klemme Monday morning trying to locate and remedy local radio interference. They said that if every electric user endeavors to keep small motors and appliances clean and in good order, most of the interference would be done away with. We would advise that every radio owner should look for interference in their own home. Tune in your radio, then turn on various appliances, motors, etc. and note whether or not they cause any loud noises on your radio. Then fix them up or call the electric company at once.



1—Vice President Curtis and Governor Emmerson of Illinois at the Armistice day exercises on Soldier field, Chicago. 2—President Hoover delivering his notable Armistice day address at Arlington National cemetery. 3—View down the long span of the Ambassador bridge across the Detroit river which was dedicated with great ceremonies.

NEWS REVIEW OF CURRENT EVENTS

Reduction of Income Tax by One Per Cent Proposed by the Administration.

By EDWARD W. PICKARD

IF CONGRESS is agreeable, and it almost certainly will be, our income taxes for this year will be reduced by about $160,000,000. This is the plan of the administration, the announcement of which was made in advance of the President's budget message to congress in the hope that it would serve to ameliorate the stock market situation.

Secretary of the Treasury Mellon, Undersecretary Ogden Mills and Roy Young, governor of the federal reserve board, conferred with Mr. Hoover, and Mr. Mellon then issued a statement which said in part:

"While the final detailed estimates of revenues and expenditures for the fiscal year 1930 and 1931 have not been completed, the secretary of the treasury considers the estimates have reached the point where tax reduction should be recommended to the congress at the coming sessions.

"The indications are that business profits, dividends, interest, and wage payments in 1929 will considerably exceed those of the year 1928. Our estimates indicate that the government should close both the fiscal years 1930 and 1931 with a surplus. Taking all factors into consideration, the secretary of the treasury, with the approval of the President, will recommend tax reduction to the congress.

"The form of relief to the taxpayers which the treasury's recommendations will probably take will be a 1 per cent reduction of the normal tax on the incomes of individuals and corporations applicable to 1929 incomes and payable in the calendar year 1930.

"The total reduction of taxes to be collected during the calendar year 1930 will amount, it is estimated, to approximately $160,000,000.

"The reduction, it is hoped, will take the form of a joint resolution of congress, thus permitting prompt action by both houses by avoiding a general revision of the revenue law.

"The proposal has been discussed with the Republican and Democratic leaders of both houses of congress, who have tentatively approved the proposed recommendation."

It was believed in Washington that enactment of the necessary legislation will come early in the regular session of congress, which opens on December 2.

COMMENT on the stock market situation seems superfluous, for every one in the country has been reading the financial columns with avidity if not with dismay. Day after day prices continued their downward way and it seemed as if the market had no bottom. Even the bears were surprised, and one of their leaders, Jesse Livermore, was quoted as saying that prices of many of the good stocks had fallen too low. But the amateur speculators were panic-stricken and refused to listen to reason. Many of the highest-priced industrials fell to new low records for the year, and lots of bargain hunters of the previous week were caught in the jam. The New York Stock Exchange on Wednesday took steps to ferret out the undercover selling that had foiled all efforts to stabilize the market. Every member was called on to give at once the following information:

A list of stocks borrowed and from whom and for whose account; a list of stocks loaned and to whom; intra-office borrowings and for whose accounts; a list of all stocks, which they have failed to deliver, and for whose account.

This action, together with the tax reduction news, brought on a flood of buying orders, and prices began to move upward.

PRESIDENT HOOVER'S Armistice day address at Arlington National cemetery was hailed in America and Europe as one of the most important statements ever made by him, and it was given general approval. Briefly, he challenged the other powers to a radical reduction of naval armaments, declaring that the United States would reduce its naval strength in proportion to any other, that it remained for the others to say how low they would go and that "it cannot be too low for us." He suggested the exemption of merchant ships, carrying food exclusively, from seizure by belligerents as the first step in solving the problem of the freedom of the seas. He proposed amplification of the Kellogg anti-war pact by provision of automatic machinery for investigation of disputes involved in violation of the pact, subjecting the aggressor to the "searchlight of public opinion." And he suggested the need of additional arbitration treaties and of an authoritative system of international law.

Throughout his address Mr. Hoover revealed himself as an ardent advocate of world peace and the reduction of preparations for war, but asserted the latter must be by agreement only. "I have no faith in the reduction of armaments by example alone," said the President. "Until such time as the nations can build the agencies of pacific settlement on stronger foundations; until fear, the most dangerous of all national emotions, has been proved groundless by long proof of international honesty, until the power of world public opinion as a restraint of aggression has had many years of test, there will not have been established that confidence which warrants the abandonment of preparedness for defense among nations. To do so may invite war.

"I am for adequate preparedness as a guaranty that no foreign soldier shall ever step upon the soil of our country."

It should be noted that Mr. Hoover said his suggestion concerning food ships in war times would not be discussed at the London naval reduction conference.

ONE of the many interesting events on Armistice day was the dedication of the Ambassador bridge, the first to be built across the Detroit river to Canada. It is the longest bridge of its type in the world and cost $20,000,000. Its free span is 1,850 feet long and its total length is one and eight-tenths miles. The ceremonies included military parades in both Detroit and Canada and addresses lauding the structure as an aid in perpetuating the 114 years of peace between the United States and the Dominion.

SIR RONALD LINDSAY, British under secretary of state for foreign affairs, has been selected as ambassador to Washington to succeed Sir Esme Howard, who retires from the diplomatic service early next year. Sir Ronald is well known in this country and his wife is an American, a daughter of the late Colgate Hoyt of New York.

Nelson Johnson, assistant secretary of state in charge of far eastern affairs, was appointed by President Hoover to be minister to China to succeed John Van A. MacMurray, resigned. He is a "career" diplomat who has served in China and is remarkably well posted on the entire far eastern situation. William Phillips has resigned the post of American minister to Canada, to the deep regret of President Hoover and the State department. He was offered another diplomatic post, but wished to return to the United States on account of his children.

SENATOR BINGHAM'S theory that the senate lobby committee was packed against the Republican tariff bill received a measure of substantiation when its chairman, Senator Caraway, asserted that its labors would soon be concluded. For all the lobbies operating in Washington, little or no attention has been paid by the committee to any others than those whose concern is the tariff. Joseph R. Grundy, veteran lobbyist for Pennsylvania interests, was recalled by the committee last week and Mr. Caraway demanded that he name the senators from "backward" states who, he contended, have too much voice in fixing the policies of the nation. Mr. Grundy said that on reflection he had decided this would be improper and unbecoming, and Mr. Caraway called him a welsher and yellow. But a moment later the senator retracted this, shook Mr. Grundy's hand and said that, after all, he liked him. In a report to the senate, Chairman Caraway dealt with the testimony given by William Burgess of New Jersey, representative of pottery and other interests. The senator flatly accused Burgess of perjury and slander and said he was a paid lobbist who had "no regard whatever for his reputation."

DELEGATES to the conference to establish the new Bank of International Relations signed the statutes, charter and trust agreements of the institution and departed from Baden Baden. The statutes, as published immediately, fix Basel, Switzerland, as the seat of the bank and describe its purposes as:

"To promote co-operation of the central banks, provide additional facilities for international financial operations and to act as trustee or agent in regard to the international financial settlements entrusted to it."

So long as the Young reparations plan is operative the bank will not only "observe provisions of the plan in administration of operations of the bank," but also will "conduct its affairs with a view to facilitating execution of the plan."

During the Young plan's operation the bank is vested with the functions of receiving and distributing the German reparations and supervising and assisting in commercialization and mobilization of certain parts of the German annuities.

NADIR SHAH, the new king of Afghanistan, has issued a proclamation saying that strict prohibition is to be enforced in that country. The rights of the people are to be equal, with no distinctions as to nationality, caste or birth excepting those prescribed by the Shariat—sacred law. A recognized national army has been established and equipped with the latest implements of war. A military school is to be founded at Kabul, the capital, where officers will be trained in modern scientific warfare. King Nadir also says he hopes to conclude a trade treaty with the United States.

REDUCED to poverty and without desire to live longer, the former Princess Victoria, eldest sister of the ex-kaiser of Germany, died in a hospital in Bonn at the age of sixty-three years. Wilhelm was estranged from her when she married Alexander Soubkoff, a Russian refugee, and gave her no assistance when she was forced to sacrifice all her possessions to pay her husband's debts. She had applied for divorce from the dissolute Soubkoff, who was expelled from Germany and has been working as a waiter in Luxemburg.

Other deaths were those of James A. Robb, finance minister of Canada; Dr. E. A. Allen, chief of the experiment stations of the Department of Agriculture; Dr. Frederick Monsen of California, eminent anthropologist, and James J. Riordan, New York banker and close friend of Al Smith, who committed suicide.

WHAT is believed to be the largest embezzlement in the nation's history was revealed by a statement of the officers of the Union Industrial bank of Flint, Mich. It shows that within the last few months ten or more of the bank's employees have stolen from it money and securities to the amount of $3,592,000. Charles S. Mott, president of the institution, has deposited cash enough from his private fortune to guarantee the depositors against loss.

SOCIETY along the Atlantic seaboard was provided with a sensation when it was learned that William W. Willock, Jr., of New York had married Adelaide Ingebert, a recent immigrant from Norway who had been his mother's chambermaid. The young groom is the son of W. W. Willock of the social register and former vice president of the Jones & Laughlin Steel company, and his mother was the daughter of the late B. F. Jones. The family fortune is reputed to be more than one hundred million dollars, but how much the son will get is questionable. He and his bride were found in a $5 a week room in Oyster Bay.

CHRISTMAS SEAL SALE IS NOW ON

Using Christmas Seals Saves Human Lives.

Thirty-two million penny Christmas seals distributed by the Iowa Tuberculosis Association will be offered for sale by local committees in every city, town and school district throughout Iowa during the twenty-second annual seal campaign which extends from Thanksgiving to Christmas.

This quota for Iowa, if the seals were placed side by side, would make a design of the double barred cross reaching from Rock Rapids to Keokuk with arms extending from Onawa to Algona and from Council Bluffs to Mason City, and would leave enough to pave a one-inch strip in the middle of the Jefferson Highway entirely across the state.

Translated into human lives it is estimated that the work accomplished by Christmas seal funds in the field of tuberculosis prevention alone represents a saving in this state of 950 lives annually. Translated into dollars statisticians estimate that the preventive health work done by the State Tuberculosis Association, its affiliated county and local health organizations and cooperating agencies represents a money saving of $744,000 a year in Iowa.

The proceeds of the seal sale are used by the local associations in various forms of child health work, nursing, weighing and measuring, health education, fresh air camps, tuberculosis and heart clinics, dental inspection, school health supplies such as scales, first aid kits, thermometers, posters, books, etc., and a portion by the State Association in the prevention of tuberculosis both in humans and animals, in the discovery and prevention of heart disease, and in general health work.

The design of the seal is that of a bell ringer dressed in mediaeval costume. The color scheme is red, gold and blue. On the background are the words "Health Greetings 1929," in the lower right hand corner is the red double barred Lorraine cross, the international emblem of the world wide movement for the prevention of tuberculosis.

SANTA CLAUS GIVES OUT AN INTERVIEW

Santa Claus having just completed a pre-Christmas inspection trip gave out today the following interview to the representatives of the Press.

"The journey I have just finished," said Santa Claus "was in the nature of a survey, which is a word we hear used a great deal today. I wanted to find out what was the most useful Christmas present.

"I first landed in a school yard at recess time. A small boy had cut his finger. The teacher immediately got some disinfectant and bandage material from a small first aid kit.

"'Where did you get the first aid kit?' I said. 'It was bought with Christmas Seal money', replied the teacher. 'The county superintendent had one put in every rural school.'

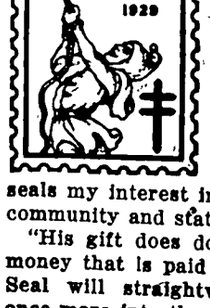
"To make my story short I visited many schools, big and small, many homes, churches, libraries and playgrounds. Here are just a few of the things I saw, all made possible by the Christmas seal:

"A school room thermometer; children being weighed and measured at the same time; undernourished school children eating hot lunches and drinking milk; a nurse inspecting teeth and eyes and throats; kindergarten walls decorated with health chore pictures; children making health posters; little essays on tuberculosis; a teacher in a library getting ideas from the book 'Health Training in Schools'; new playground equipment; health blotters; sanitary book covers; individual drinking cups; a film on bovine tuberculosis shown at a farm bureau meeting; a doctor with a stethoscope listening for 'engine trouble' at a tuberculosis and heart clinic; patients at a sanatorium cheerfully making book ends and hand bags; a dozen silver cups at the State Fair won by Iowa Schools for national leadership in health education work; a volume of Iowa statutes containing the physical education laws and many other fine health laws recently enacted; a fresh air camp on a wooded hill; a speaker on health at a teachers' institute; children recording the observance of daily health rules on what looked like baseball score cards and forming good health habits for life.

"The most charming memory that I carried away with me was that of a group of school children singing a health song to the tune of 'America the Beautiful.'

"These are only a few of the experiences that led me to decide what is the most useful Christmas present.

"It is the Christmas Seal.



seal is a messenger of health and good will. In pasting it on a Christmas package the sender says 'Here is my wish for your good health.' He also says 'This is the stamp that symbolizes and seals my interest in the health of my community and state and nation.'

"His gift does double duty for the money that is paid for the Christmas Seal will straightway be converted once more into the sort of things that I saw on my trip."

CAP AND BELLS

A MATTER OF AGE

In the course of the trial the judge turned to the negro woman on the stand and asked:

"How old are you?"

"I's seventy-three, jedge."

"Are you sure?"

"Yass, suh."

"Mandy, you don't look seventy-three."

"I'se sure, jedge."

After a few moments the trial was interrupted by Mandy.

"Jedge, I's mistaken about my age being seventy-three, that's my bust measure, suh."

PLACING HIM

"You know Flubdub, don't you Golf with him frequently?"

"Yes."

"Can one trust him?"

"In golf or business?"

Inclusive

Women's faults are many;
Men have only two.
Everything they say
And everything they do.

Had a Right to Be Peeved

"She was furious about the way her marriage was reported," said Polly to her friend.

"Why, did it allude to her age?"

"Indirectly. It stated that Miss Younger and Mr. Morris were married, the latter being a well known collector of antiques.

Poor Fellow

Critic (to neighbor at concert)—That woman has wonderful control over her voice.

Neighbor (sadly)—Yes, she's my wife. She can do anything with her voice—except stop it.—Tit-Bits.

Take Your Choice

Mr. Gottjack—I'd like to have you make a painting of me, but $200 is too much.

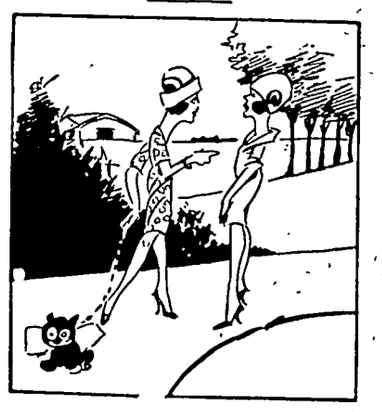
Portrait Painter—Well, if you only want to pay $100 I will have to make the painting look more like you.

Exactly

Father—Well, I should have thought that a night club was the very last place a daughter of mine would go to.

Daughter—It always is, dad.

APPROPRIATE GIFT



"Jessie has graduated as a lawyer. I want to give her a little present."

"Give her a bar pin."

No Comeback

My radio! At me you fling
A voice, with homage heard.
Whatever you may say or sing,
You have the final word!

No Sale

The Salesman—A nice birthday gift for your husband, eh? How would this safety bill-fold suit? Impossible to open it without the key.

Mrs. Justwed—Why, I think that would be perfectly horrid.

The Eye-Witness

Judge—You say the man struck you? Have you any witness thereto?

Complainant (points to his swollen eye)—I have an eye-witness here, your honor.

Sounds Like a Good Excuse

Customer—Why isn't your bread wrapped like that in other grocery stores?

Grocer—The paper gets so dirty from handling that people won't buy it.—Pathfinder Magazine.

The Noise Is Terrible

Foreman—What's the big idea of quitting?

Riveter—Oh, I don't mind hammering rivets all day long, but the man who works with me hums incessantly.

Take Care of Your Kidneys

One should not neglect kidney and bladder irregularities.

Too many people sacrifice health by failing to heed the early danger signals of kidney disorders. Even minor irregularities should be dealt with promptly.

A drowsy, listless feeling; lameness and stiffness; constant backache and bladder irregularities are often timely warnings. Don't neglect them.

To promote normal kidney action and assist your kidneys in cleansing your blood of poisonous wastes, use *Doan's Pills*. Recommended the world over.

50,000 Users Endorse Doan's

Benjamin Faucher, 262 Silver St., Manchester, N. H., says: "For a time I couldn't do any work, for when I bent over my back would ache. My kidneys acted very irregularly and I felt all out of sorts. After using Doan's Pills, I felt fine again."

DOAN'S PILLS
A Stimulant Diuretic to the Kidneys

Population Increase

Doctor Kueznski of the Hall Foundation institute, estimates that at present the population of the world is increasing at the rate of five-eighths of 1 per cent annually.

A man may be self-possessed and still have no taxes to pay.

Acidity

The common cause of digestive difficulties is excess acid. Soda can alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

PHILLIPS Milk of Magnesia

ALWAYS KEEPS IT ON HAND

Lydia E. Pinkham's Vegetable Compound Helps Her So Much

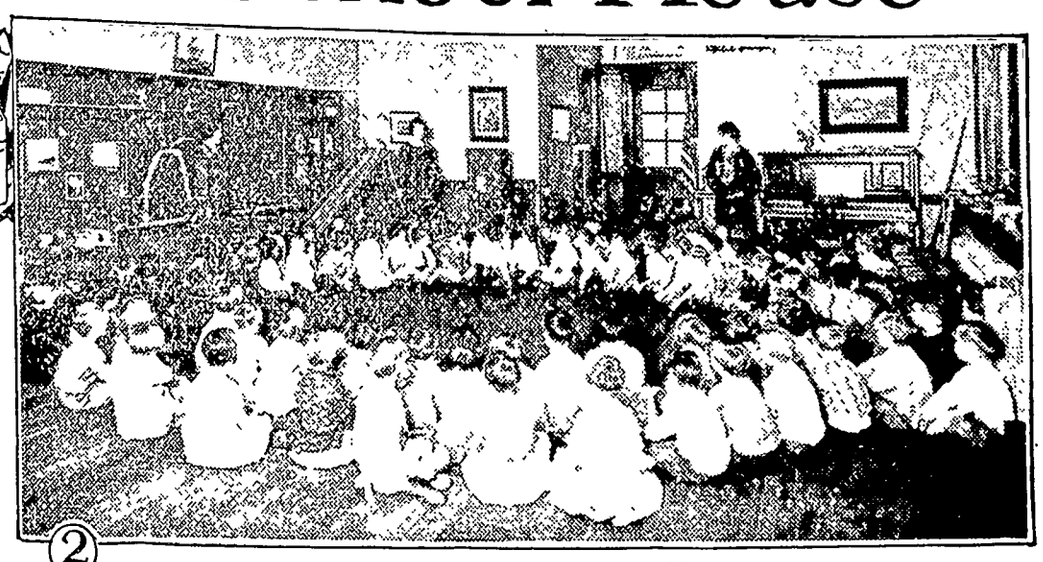
Pittsburgh, Pa.—"I was just completely run-down. I had tired, heavy sluggish feeling and I could not eat. I was losing weight. I read much about Lydia E. Pinkham's Vegetable Compound and what a good medicine it is, that I started taking it. I have taken eight bottles of Lydia E. Pinkham's Vegetable Compound and about the same in tablet form. This is one medicine a woman should have in the house all the time. I am improving every day and I sure am able to eat. I am willing to answer any letter I get asking about the Vegetable Compound."—Mrs. Ella Richards, 2 Chautauqua St. N. S., Pittsburgh, Pa.

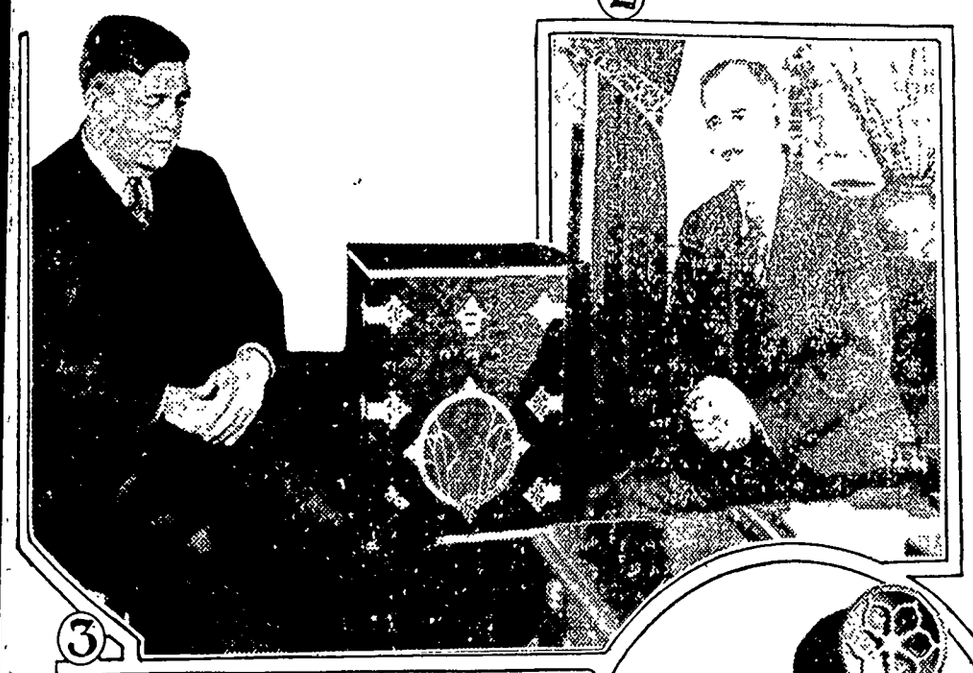
Garfield Tea

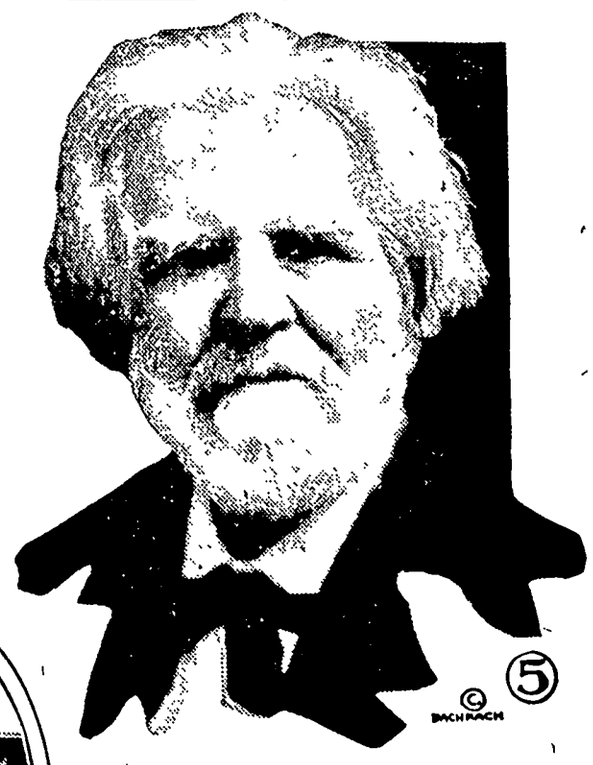
Was Your Grandmother's Remedy

For every stomach and intestinal ill. This good old-fashioned herb home remedy for constipation, stomach ills and other derangements of the system so prevalent these days is in even greater favor as a family medicine than in your grandmother's day.

"Ohio School of Air" Brings World to Little Red School House







By JAMES M. CHALFANT

THIRTY years ago B. H. Darrow, then attending a little red schoolhouse in Champain county, Ohio—actually a little red schoolhouse—began his first official connection with school administration. His position then, at the age of ten, was rather humble. During the fall and winter months he built the fire, being required on especially cold days to be at the schoolhouse at seven o'clock in the morning in order to have the place warm by the time the other youngsters arrived. As compensation for caring for the fire he received five cents a day.

For sweeping out the room (when the roads were muddy it was usually necessary to use first the hoe, then the broom, and then the mop) he received another nickel daily. With these hard-earned nickels young Darrow made the first payment on a Webster's unabridged dictionary, he recalls.

Today, after a varied experience including teaching in the country schools, the centralized school, and the high school, Darrow, known to thousands of school children in more than a score of states as "Uncle Ben, the Radio Schoolmaster," heads the most interesting and most successful effort in education by radio, the "Ohio School of the Air," a division of the state department of education of Ohio at Columbus.

His official title now is director of educational broadcasting, state of Ohio. Two years ago he was just a free-lance "visionary," a man with a big idea: that the radio might be enlisted to vitalize public school education. There were still in the United States well over 150,000 of those isolated little one-room schools such as he had attended in his youth.

So long as that was the case, he felt, the slogan "Equality of Opportunity in Education" must remain rather empty and meaningless. Surely there must be some way to tap the great streams of knowledge, of culture, of current events, and carry new life and vigor to the country schoolhouse as well as to the city school system. The radio might well lift the little red schoolhouse out of its long isolation and place it on a par with the million-dollar city school, for a part of the school day, at least. Master teachers, through the magic of radio, could become visiting teachers and expert assistants for the teachers in charge of those 150,000 one-room schools still in operation.

"Well, the story of the origin of the Ohio School of the Air is a bit complicated," Darrow said when the question was put to him. "And my connection with it is, I suppose, the result of my interests over a good many years.

"In the first place, I've been something of a pioneer right along, always preferring the uncertain with great possibilities to the rather tame certainty. With the exception of my high school teaching, since I left college I have filled no other man's shoes—I've always made a job for myself and then filled it.

"After varied and interesting experiences in country life institute work, and with the agricultural extension of Maryland State college, I found myself in 1924 in charge of children's programs at station WLS, Chicago. I became intensely interested in educational broadcasting then, but left WLS to promote a patent that I thought was going to prove profitable. It did, fairly so, but not for me! After a year or two, I abandoned my manufacturing project. The first thing I thought of then was to get back into the field of radio education.

"More and more there grew upon me the idea of a National School of the Air. I was convinced that the radio might become a tremendous agency for public school education. The idea presupposed three big "ifs." IF educators could be induced officially to sponsor the project. IF a radio station might be persuaded to broadcast educational programs free of charge, and IF financial support could be secured to pay the cost of administration, a school of the air could be established.

"From one end of the country to the other I traveled, seeking to enlist the aid of organizations and individuals to help me put my idea across. Finally, late in 1927, the Payne Study and Experiment Fund of New York became sufficiently interested to put me on its staff to investigate and develop the possibilities of broadcasting for schools ou a national scale, under the guidance of organized educational authorities.

"The results of that preliminary survey were laid before the National Educational association in Boston, February, 1928. They were greatly interested, but beyond the passing of a strong resolution suggesting a committee to look into the matter, did nothing. Then I interested the leaders of the Roosevelt Memorial association—James R. Garfield, Theodore Roosevelt, Jr., Gifford Pinchot, Arthur W. Page, and others. It looked as though the association were going to sponsor the project, but it was discovered that some technicality as to the terms of gift made that utterly impossible.

"In June, 1928, I thought I had the Radio Manufacturers' association in convention in Chicago, ready to put the idea across. But once more red tape 'gummed the works.' In July I came to Columbus and broached my plan to Dr. J. L. Clifton, state director of education. He was interested, but frankly dubious of his department's ability to undertake the work.

"I kept hammering away at Clifton for some time. In October the Payne fund came to my rescue, with an offer to pay my salary for the rest of the year and loan me to Ohio. And then station WLW of Cincinnati came through with an offer of free broadcasting. I went back to Clifton and told him the situation. 'Pull up your chair,' he said, 'You are Ohio's first director of educational broadcasting.' It's too long a story to tell how a program was evolved—how educators were awakened to the great possibilities of educational broadcasting, how great teachers and other national figures were secured to donate their time and services to the School of the Air. From thirty to sixty people each week were cooperating with the school without compensation. The 'Ohio School of the Air' was established in January, 1929. In April, 1929, the state legislature appropriated funds to carry it on for two years."

The "Ohio School of the Air" has attracted so much favorable interest on the part of educators generally that it is to be, during the fall months of the present year, the subject of a special investigation by a federal commission. This commission, composed of prominent educators, was appointed by Secretary of Interior Ray Lyman Wilbur, with instructions to report to him not later than January 1, 1930, on the feasibility of educational broadcasting on a national scale.

1.—B. H. Darrow, "Uncle Ben, the Radio Schoolmaster," director of educational broadcasting in the "Ohio School of the Air."

2.—Class listening in on the "Smile Lady's" broadcast of story plays and rhythmics in a Cincinnati school.

3.—Gov. Myers Y. Cooper of Ohio (right) and John L. Clifton, director of education, listening to the "Ohio School of the Air."

4.—A school principal listening in on the "School of the Air" program.

5.—Edwin Markham, distinguished poet and author of the famous "The Man With the Hoe," who is a member of the committee on poetry of the "Ohio School of the Air."

The Ohio project is not the first, but it is the pioneer in the field of constant, regular public school radio education. And Darrow is the first director of educational broadcasting ever appointed by a state. The Ohio effort differs from a number of earlier experiments by being more varied, and in having legislative support.

Each school day over WLW and WEAO from two to three o'clock the "School of the Air" brings to thousands of schoolrooms and thousands of homes a carefully correlated and graded course of instruction for all twelve grades of public school. Current events, story games and rhythmics, health talks, history dramalogs, nature study, appreciation of art, geographical world tours, French lessons, chemistry and physics lectures, music lessons, drama—these suggest the breadth of the curriculum.

Small wonder that schools are hastening to equip to receive broadcasts. In some cities, notably Cincinnati, school boards require that all new school buildings shall be completely wired for radio.

The "School of the Air," as the state department of education very emphatically says, is in no way intended to supplant classroom teaching. It is meant to augment and supplement the face-to-face teaching of the classroom teacher. Its programs are carefully planned with the close cooperation of school people all over the state. It attempts to do only those things which may be done better by radio than by any other instrumentality. For example, the school children may read of some great current event such as the inauguration of a president or the ratifying of a peace pact, or the teacher may tell them about it. How much more compelling, vivid, memorable, it is, however, for them to hear history in the making via the loudspeaker. They may feel the pulse of the nation—the vital, throbbing present and so get a new conception of the stuff that history is made of.

The attitude of the Ohio department of education toward the "School of the Air" experiment is clearly reflected in a recent communication from J. L. Clifton, director, to co-operating teachers:

"It may be said that at no time has the world of science been so able and willing to serve education as at the present. The radio, having passed through a joyous, carefree childhood, and the storm and stress of the adolescent period, is now approaching mature, creative manhood. As it comes knocking at the schoolroom door, it says, 'Can you, will you use me?' Great broadcasting stations are at our service. A wealth of talent is available, but unless there is close co-operation between the radio teacher and the classroom teacher, the pupils will profit but little.

"One marvels at the tremendous possibilities of the radio. But in the classroom use of the radio many problems remain to be solved. Extensive experimentation in the psychology of hearing should be made. New principles of teaching must be evolved. New methods must be developed, for educational broadcasting is still in the experimental stage. But a big idea is on foot, and we teachers, as a body who have always performed our duty towards public education, must co-operate in order that the radio may be made to work in constantly new ways.

"Even in an age of marvels, there is something awe-inspiring about the radio. Through the radio the throbbing present may be brought home to us and the dead past made to live again. Certainly not the least of the splendid achievements in radio has been the development of radio education—the enriching and vitalizing of classroom instruction.

"Very gratifying results have already been noted. However, with the conception that this newest aid to education seeks to complement but not to substitute for the living presence of the classroom teacher, who shall set the bounds to what we may confidently expect to accomplish in advancing the ends and aims of true education in the days which lie immediately before us?"

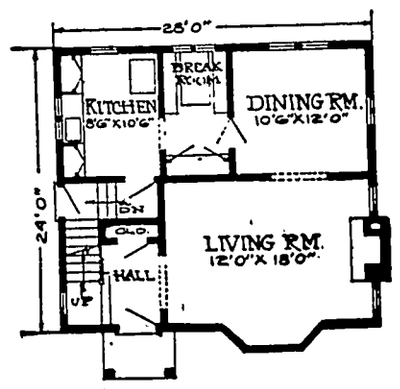
Simplicity the Keynote of This Attractive Colonial Type Home

A simplicity that is reminiscent of the early Colonial homes is the appealing characteristic of this house and its trim appearance will make it fit harmoniously in any group or setting of which it may be made a part.

By W. A. RADFORD

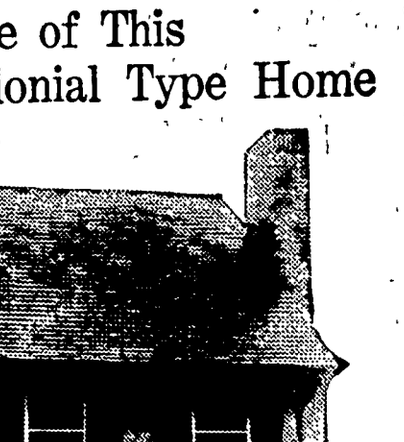
Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

A simplicity that is reminiscent of the early Colonial homes is the appealing characteristic of this house and its trim appearance will make it fit harmoniously in with any group or setting of which it may be made a part. It is an economical house to build because of the straight lines of its foundation walls of the house itself. It is of a design which gives the home builder the greatest amount of space at the least possible construction cost.



First Floor Plan.

This house contains six rooms, three on the first floor and three on the second, all of which are of good size. The entrance door is placed near one end and leads into a hall to the right of which is the living room, 12 feet by 18 feet, to the rear of which is the dining room, 10 feet 6 inches by 12 feet, connected with the living room by a cased opening. The kitchen is at the rear left corner and between it and the dining room is a breakfast nook and there is space for wall cases.



Second Floor Plan.

There are three bedrooms on the second floor, two at the front and one at the back with the fourth corner occupied by a large bath room. It will be noted by the floor plans, which are reproduced here, that there is an unusual amount of closet space in this home, a feature that will appeal to the women members of the family.

This is the type of home which will appeal to those who have not a large amount of money to invest in a house and to them who want to build a home which would be readily salable should the occasion or necessity arise. Such a home as this would appeal to the greatest number of prospects. It is rather plain but attractive. At the same time it provides a comfortable roomy house for a good-sized family.

Here's Correct Way to Build Up a Foundation

Upon completion of suitable concrete footing the contractor should proceed with the construction of foundation walls.

Assuming that a twelve-inch concrete wall is to be poured over the footing, allow a six-inch projection on either side of the foundation for equal weight distribution. In some cases, where a building is being constructed over sand or soft earth, the width of the footing on each side will vary to allow for a still greater distribution of downward pressure, although the thickness of the foundation wall above would not be affected.

The contractor will proceed in either one of two ways with the erection of the wood forms for the walls. The proper method is to excavate at least 18 inches beyond the exterior side of the wall in order that an outside form may be built. Upon the completion of this outside form, the contractor should proceed with the construction of the inside form; these should be properly braced.

Suitable wire, used in tension, and wood blocks not smaller than two by two inches, used in compression, should be used between the forms to insure proper separation. These blocks are removed as concrete is poured. It is better to have all walls poured at once.

The mix for concrete for poured foundations is usually one part portland cement, two and a half parts clean sand and five parts screened aggregate (gravel not less than three-quarter inch up to broken stone not larger than two inches). This type of wall can best be waterproofed by use of a powder or liquid compound, made for the purpose, mixed into the concrete, or coating exterior surfaces with asphalt after forms are removed.

Good Floor Finish

Two coats of oil and wax, with no filler or varnish, is an excellent method of finishing oak flooring. It has an appearance distinctly different from the standard filler and varnish job. A choice between the two is practically a matter of taste.

Closet Window

If a window is put in a closet there is no musty, dusty smell; clothes are easily distinguished and the contents of the closet are much more easily cared for.

White or Weathered Tone Very Attractive

Discussing color, Charles S. Schneider, fellow of the American Institute of Architects, says in the Cleveland News that for the frame house good taste limits us to two choices for the color of exterior walls. He writes:

"The house with siding walls should invariably be white or near white. The house with shingle walls depending upon its design may either be white or some weathered tone approaching as nearly as possible the color of wood long exposed to the weather. Let us have no more walls of shingles stained in bilious greens and yellows, sad browns and mustards. This is most decidedly bad taste.

"White is always satisfactory. It affords an excellent surface for the play of shades and shadows cast by details on the house itself by foliage or by passing clouds and it forms a dominant note of contrast whether set against the cool green of summer foliage, the glowing colors of autumn or the dark gray tracery of winter trees. If one wants to be relieved of the cost of keeping a white house white, then good taste demands the use of tones which wood naturally takes on when exposed to weather.

"There are stains on the market which approximate these weather tones. Weathered tones are good because they are natural and although full of variety they are never loud nor flashy."

Common Brick Old as King Tut's Tomb

Common brick was found in King Tut's tomb; in the ancient city of Ur in the Indus valley, and Rome was built of common brick. Among the outstanding buildings of history that mark the stability of common brick are Nero's Gold house, Coliseum at Rome, Carpenter hall, Thomas Jefferson's Monticello home, Independence hall, Babylon, French quarters in New Orleans, Wheat row in Washington, University of Vermont. Sewers and aqueducts built in Caesar's time of common brick are still in use today. The Appian way was built entirely of brick. Italy is rich in artistic brick work.

Brick for Renovating

Face brick is a popular medium for modernizing old homes. Often an attractive home is salvaged out of the old house at a fraction of the cost that a new dwelling of similar appearance would entail.

ATWATER KENT SCREEN-GRID RADIO

ASK FOR TERMS!

More Power!
Clearer Tone!
Super Selectivity!

HOW people are coming in for the newest, greatest Atwater Kent—the Atwater Kent Screen-Grid Set! How they are captivated by its richer, truer tone—by its tremendous power under complete control, its prodigious reach for distant stations—its needle-point selectivity—its steadfastness!

What makes it so good? The way Atwater Kent precision engineering uses the new Screen-Grid tubes! It is *so much better* it takes your breath away!

Other manufacturers are coming to Screen-Grid. But Atwater Kent is way ahead with performance, with choice of cabinets, with value and with *dependability*. Try it—listen to it—here—today!

"Screen-Grid" means

that a fourth element or "screen" has been added to an amplifying tube. This "screen" prevents feed-back, and allows the set to handle greatly increased power.

In this special circuit that Atwater Kent has worked out, each Screen-Grid tube is 100 times as powerful as an old-style tube. Such tremendous power makes possible more distance, more volume if you want it, sharper selectivity and richer, truer tone, without distortion or hum.

At this time of the year our attention is again turned to Thanksgiving and the many fine things for which the day stands for. We are thankful for the loyal support and patronage gven us the past year by our many fine farmer friends and dairymen whose co-operation has helped to make this an outstanding year in the history of the Creamery. As this is a Co-Operative Concern it means that it belongs to the people and farmers of this Community and all are striving to make it the very best in Northern Iowa. We are thankful for the fine spirit of Co-operation displayed the past year, and we ask for your further co-operation for the future.

Klemme Co-op. Creamery Company

The Christmas Seal

What do you think of the Christmas Seal?
"What do you think?" said I.
"It maketh the Christmas spirit real:
'Tis greater than gifts you buy.
For it proveth better than jewels can
That your heart hath room for your fellow-man.

"Who giveth a gift to his friend is done
No more than a gracious deed.
But the seal proclaimeth the man as one
Who giveth to those in need.
For God, who marketh the sparrow's fall,
Giveth not to His friends, but to one and all.

"So I look at the Christmas Seal and say:
This friend who remembereth me,
Hath also thought of the sick today,
Wherever they chance to be.
And he giveth not only to cheer his own,
But to all who hath need is his mercy shown."

An intimate closeup of Mr. Turkey Gobbler, the "National Bird" of America, who will lose his official head, with many other members of his family, to grace the tables of America on Thanksgiving day.

Wild Turkey Ranked King of the Woods

When Charles the Ninth of France sat down at his wedding banquet in the year 1570, he was probably entirely unaware that something was about to happen to him which had never happened to any other king of France. Perhaps his mother, Catherine of Medici, had knowledge of what was coming, for Catherine was a managing sort of woman and kept a watchful eye on everything that was done or planned in the royal palace. But chefs are an independent tribe, intolerant of interference with their affairs, and possibly only the palace chef and his underlings knew that a rare distinction was about to be conferred upon their exalted master.

History is silent as to these details. The important fact—vouched for by Charles Lucian Bonaparte, the French naturalist—is that Charles the Ninth at his wedding banquet consumed, doubtless with great gusto, liberal portions of a strange new fowl never before eaten in France—a large and extraordinary and very delicious bird known as a "Cock of the Indies."

Thereby Charles the Ninth of France established a precedent. That "Cock of the Indies" was, as a matter of fact, a turkey. No other French king, probably no other European king, had ever dined on turkey, and certainly no African or Asiatic potentate had enjoyed that experience. Hence Charles the Ninth's wedding banquet may be set down as one of the turning points of history. Then and there the turkey, noblest of his royal race, came into his own as the king of all table birds, fit provender for monarchs and for presidents.

Second to None on Earth.

He is not only the king of table birds. He is also, in his wild state, the king of game birds, certainly the noblest game bird of the Western hemisphere and probably unexcelled anywhere on this planet. "It has been given to but a few hunters," says Dr. William T. Hornaday, director of the New York Zoological park, a great sportsman as well as a naturalist, "to seek this bird in its native forests, witness its splendid flight, and afterward shoulder a splendid gobbler weighing from 25 to 30 pounds for a ten-mile carry. He who has done this, however, will thereafter rank the bird as second to none on earth." To the naturalist and nature lover, also, the turkey is the feathered monarch of the woods, just as the eagle is the winged lord of the air. He is one of the wildest and in many ways one of the wisest of all woods creatures, and a glimpse of him in his wilderness haunts is an event never to be forgotten. I have seen him many times in the woods, for I am fortunate enough to live in a region where the wild turkey still exists in considerable numbers; but I have never yet seen him without experiencing that thrill of delight which only the wildest of wild things can impart. And so it will be until my woods-roaming days are over.

Wild Gobbler Beautiful Bird.

The man who knows only the domestic turkey, and who has seen that pompous and rather foolish swaggerer often in the barnyard, may find it a little difficult to understand why the sight of a turkey in the woods always and invariably makes a red-letter day. Let him go hunting wild turkeys—either with or without a gun—and he will understand why. As a matter of fact, the tame turkey of our barnyard and the wild turkey of our woods are two entirely different birds, differing not only in plumage (though in this respect the difference is slight) but also in form, in bearing, in mentality and in personality.

In the wild gobbler, for all his size and weight, there is something of a gamecock's slimness. His form is powerful and stalwart, yet beautifully molded. His bearing is proud and confident; yet one sees in him always a hair-trigger alertness which accentuates his wildness; and somehow that wildness is apparent in every line and curve of his body, in the poise of his head, in the glance of his eye, in the springiness of his stride. His rich coppery-bronze plumage glows and glints in the sun and in certain lights gleams like burnished gold; and when he is on guard (and it is no easy matter to catch a wild gobbler napping), he holds himself splendidly erect so that his tall form seems amazingly tall and that clean thoroughbred slimness which distinguishes him delights the eye of the beholder. There have been times when, fresh from a meeting in the woods with some superb bronze monarch of the sunlit glades, I have almost been ready to agree with old Ben Franklin that the turkey and not the bald eagle should have been chosen as our national symbol.

Not Match for Fierce Eagle.

Almost, but not quite; for the wild turkey, with all his stalwart grace and stateliness and pride of bearing, cannot compete with the eagle in those supreme attributes which render the "Bird of Jove" the most impressive of all the denizens of the air. The turkey's name is against him, too. It lacks both majesty and beauty, and to many people it implies, naturally enough, a Moslem origin. Moreover, familiarity too often breeds contempt, and though the wild turkey is as far superior to the domestic turkey as a gamecock is to a dominicker rooster, it is the barnyard bird that generally comes to mind when the turkey is mentioned. The turkey, whether wild or domestic, belongs not with the martial birds but with the game birds, a much less dashing and aggressive group than the eagles and falcons; and though he is fairly strong and swift on the wing for short distances, his power of flight is as nothing compared with that of the great eagle family. As for physical prowess, the largest turkey gobbler, though far outweighing the largest eagle, would have no chance in a combat with the latter bird. Not many miles from where this is being written such a combat once took place, though the eagle in this instance was not the bald eagle, our national bird, but a golden eagle. The turkey was already dead and the eagle was feasting on its body when a gunner shot the victor.

Belongs to New World.

Nevertheless, though it is probably just as well that Franklin did not have his way, the wild turkey might be regarded as, in some respects at any rate, a logical second choice for the symbol of the United States; and lumping the wild and the domestic forms together for the moment, the popularity of the turkey as a table delicacy in America and the prominence which it assumes at Thanksgiving and Christmas might well entitle it to be called "Our Other National Bird." Hence the history and natural history of the turkey constitute a subject of particular interest, especially in view of the fact that most Americans know very little about this bird which plays a gala part in our gastronomic lives, while a good deal of what they do know about it is not true.

Perhaps the most widespread error concerning the bird is the vague idea shared by thousands of people that the turkey came originally from Turkey. This is an utterly false notion. The turkeys are a distinctively New world family and were entirely unknown until the first explorers crossed the Atlantic. Possibly the turkey owes its misleading name to the habit once prevalent in England of calling every strange and foreign object Turk, Indian, and so forth; or possibly the English of those times saw in the headgear of this bird a resemblance to the headgear worn by the Turks. No one really knows how the name originated and most of the suggestions which have been offered are guesswork.

Another common error is the notion that the tame turkey is the descendant of the wild turkey of our woods. It is quite natural to assume that some person or persons in the early days caught some wild turkeys and tamed them and that from these our domestic turkeys are derived. Like a great many other plausible and widespread assumptions, however, this idea is incorrect.—Herbert Ravenel Sass, in American Legion Monthly.

Covers for Bee Hives Big Need

Effort of Insects to Keep Warm Is Cause of Weak Colonies.

The effect of bees to keep warm in a cold hive during the winter is largely responsible for weak colonies in the spring when there is work to be done, says B. A. Slocum of the New York State College of Agriculture.

Bees Form a Cluster.

When the hive temperature falls below 57 degrees the bees form a cluster in the shape of a hollow ball and the bees on the inside vibrate their wings to generate heat. This continual motion wears the bees out and they become old prematurely; if the hive is too cold they may die of overwork before spring.

Since bees do not hibernate, and since their body temperature is the same as the air surrounding them, their owners must help the bees to keep warm without working themselves into old age, or even to death, needlessly.

Wood or tar paper packing cases with four inches of insulation for the bottom, six inches for the sides and eight inches for the top will hold the heat in the hive. Clover chaff, planer shavings, sawdust, powdered cork, or dry forest leaves may be used for insulation. A slot, one-half inch wide and five inches long, should be left for entrance and ventilation.

Windbreak Is Helpful.

But after the bees are packed in cases a windbreak will save much loss in temperature. The south side of a hill is best, not so much for the sunlight as for freedom from cold north winds.

Save Valuable Manure With a Shallow Basin

In manure fermentation all of the urine nitrogen is changed to ammonia and at the same time much carbonic and organic acids are formed which unite with the ammonia and form salts. In this form, as long as the manure is kept well packed and moist none of this nitrogen is lost, but remains in solution in the manure. Of course, if the heap is subject to leaching there will be losses from this source. A very good plan followed by some is to build the manure heap on a concrete base so shaped to prevent any loss of liquid. A sort of a shallow basin shaped affair has proved very satisfactory.

When this fermented manure is hauled to the field during the warm, breezy days of spring there is a very rapid loss of its nitrogen as ammonia. In a couple of days, with conditions just right, it is possible to lose over half of the nitrogen from the liquid manure, and if allowed to dry out for a week or ten days, practically all of it may be lost, leaving only the insoluble nitrogen that was in the dung and which will give practically no returns on the immediate crop.

Building Soil Fertility Year by Year Is Best

There is a vast difference between building up a soil in fertility to grow all kinds of crops for many years, and applying a small amount of fertilizer each year for a special crop. In the first case the land can be brought up to a higher and higher productive capacity year by year as the system is continued; while in the other case the fertility applied is practically exhausted each year, and after one crop is grown the land is no better than before the fertilizer was applied. With proper management the cost is about the same in each case, but one may show a large profit and the other may not.

Agricultural Hints

Onions require cool, dry storage.

* * *

Many dairymen grow potatoes as a cash crop.

* * *

The main purpose of cultivation of growing crops is weed destruction.

* * *

Dairymen are always looking for something that pays well for the doing.

* * *

The hotbed and coldframe sash should be repaired and the frames put in condition for use.

* * *

Though ground from solid rock, cement is actually finer than the flour you buy from the grocer.

* * *

According to agricultural college figures, farm buildings should be repainted every three and one-half years.

* * *

Potatoes should be handled as gently as possible during digging and storing to avoid bruising and tearing the skins.

* * *

In sections where the winters are even moderately severe the straw loft-house has been found very satisfactory and is proving popular among the poultry producers wherever tried.

* * *

Are your garden tools in good condition? This is the time of the year to repair and sharpen them. Are you using the best labor-saving hand tools? There is a large assortment from which to choose.

Unfair Triumph

Senator Smoot at a Washington reception said of a new Bolshevik triumph in Russia:

"This triumph reminds me of burly Mr. Strawbridge. He bragged:

"'The man insulted me, he cursed me, and, fierce as he was, I knocked him down.'

"'What? With your fist?' They asked.

"'No,' said burly Mr. Strawbridge, 'with my car.'"

It is no pleasure for a man to do as he pleases until after he gets married—then he can't.

The better a man thinks he is the more foolish he acts.

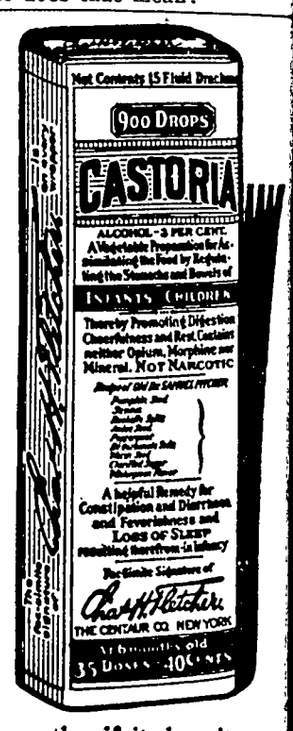
FEEL GOOD?
Most ailments start from poor elimination (constipation or semi-constipation). Intestinal poisons sap vitality, undermine your health and make life miserable. Tonight try NR—NATURE'S REMEDY—all-vegetable corrective—not an ordinary laxative. See how NR will aid in restoring your appetite and rid you of that heavy, logy, hopeless feeling.
Mild, safe, purely vegetable—at druggists, only 25¢
FEEL LIKE A MILLION. TAKE
NR TO-NIGHT
TOMORROW ALRIGHT

Ambiguous

"This fellow says he never knew what happiness meant until he married."

"What does that mean?"

For any BABY



We can never be sure just what makes an infant restless, but the remedy can always be the same. Good old Castoria! There's comfort in every drop of this pure vegetable preparation, and not the slightest harm in its frequent use. As often as Baby has a fretful spell, is feverish, or cries and can't sleep, let Castoria soothe and quiet him. Sometimes it's a touch of colic. Sometimes constipation. Or diarrhea—a condition that should always be checked without delay. Just keep Castoria handy, and give it promptly. Relief will follow very promptly; if it doesn't, you should call a physician.

All through babyhood, Castoria should be a mother's standby; and a wise mother does not change to stronger medicines as the child grows older. Castoria is readily obtained at any drugstore, and the genuine easily identified by the Chas. H. Fletcher signature that appears on every wrapper.

Time to Leave

He—Are you fond of indoor sports?

She—Yes—providing they go home early.

Never agree with a woman when she is abusing her husband.

Not the Place

The country roads were pleas As they stopped at an intersec the young man remarked: "Here fork."

"No place for a spoon," decl the girl.

The Mark of Genuine Aspirin..

BAYER ASPIRIN is like an old friend, tried and true. There can never be a satisfactory substitute for either one. Bayer Aspirin is genuine. It is the accepted antidote for pain. Its relief may always be relied on, whether used for the occasional headache, to head-off a cold, or for the more serious aches and pains from neuralgia, neuritis, rheumatism or other ailments. It's easy to identify Bayer Aspirin by the Bayer Cross on every tablet, by the name Bayer on the box and the word "genuine" always printed in red.

BAYER

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Orchid Days End

Friend—How's business?

Florist—Not so good. All my old customers are married now.

Industry attracts good things.

Reason Enough

Sap—Why did they bury the tain at sea?

Head—Because he was dead.

Silence is the father of truth.

Girl Fights Big Handicap

MANY a girl would give up in despair when she found herself snubbed in school and unpopular in college, but not so Mrs. Norma Kussel Jones of 1567 Cramer Street, Milwaukee, Wisconsin.

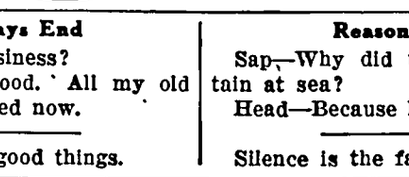
"When I was seventeen I went away to college," says Mrs. Jones. "Freda, my room-mate, was a very popular girl. Soon she asked to have her room changed. It seems I kept her awake at night, I slept so restlessly. No one knows how I suffered.

"One day one of my teachers found me sobbing. 'Why', she said, 'sometimes sluggish circulation causes restless sleep. Why don't you try Nujol?'

"In two weeks Nujol had begun clearing out the poisons in my body, my skin had a clear healthy appearance, and everything looked brighter. 'What have you been doing to yourself?' asked my room-mate. 'You are a different girl.' The days and years that followed were filled with every activity and not long ago Freda was maid of honor at my wedding. That's what Nujol did for me!

Such a simple way to health and happiness! Your doctor will tell you that Nujol contains no medicines or drugs—it is simply bodily lubrication—harmless, normal, and it works easily so you will be regular as clock work. You can get a bottle in a sealed package at any drug store for what you would pay for two or three sodas.

Get a bottle today and try it. If you are like most other people Nujol will make you brighter, happier, more able to succeed. Don't put off good health! Start being well the easy way, the very day.



Brave American Girls like this one never say die!

KILLS-RATS-ONLY

Close Golf

Walter Hagen told a golf story at dinner in Hollywood.

"The Scotch," he said, "take their golf very seriously. Two Scotchmen, Jones and Saunders, were playing a close round of golf one day, and at the seventeenth hole they tied, and the excitement was great.

"The excitement was so very great, in fact, that on the last hole Angus had a paralytic stroke, and Saunders let him count it and won out.

Don't Be Disfigured.

Keep Cole's Carbolisalve in the house. Stops pain from burn or cut quickly and heals without scars. At all good druggists, 30c and 60c, or J. W. Cole Co., Rockford, Ill.—Advertisement.

Flake ice, made by freezing thin sheets of ice over metal plates, is replacing crushed ice because of its greater cheapness.

If your harvest is a failure remember you selected the seed.

Don't neglect a COLD

DISTRESSING cold in chest or throat—that so often leads to something serious—generally responds to good old Musterole with the first application. Should be more effective if used *once every hour for five hours.*

Working like the trained hands of a masseur, this famous blend of oil of mustard, camphor, menthol and other helpful ingredients brings relief naturally. It penetrates and stimulates blood circulation, helps to draw out infection and pain. Used by millions for 20 years. Recommended by doctors and nurses.

Keep Musterole handy—jars and tubes.

To Mothers—Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

MUSTEROLE
BETTER THAN A MUSTARD PLASTER

MORE LIVES LOST THAN IN LUSITANIA DISASTER

More lives are being lost each day in needless pain and suffering than were lost in the terrible Lusitania Disaster when thousands of helpless victims went down to a watery grave in the chilly waters of the Atlantic.

Each day thousands of people are sinking in depths of pain and misery because they fear to acknowledge their own condition. RHEUMATISM, NEURITIS, ANAEMIA, Rash, Blotchy Skin, Catarrhal Troubles and other Bad Blood afflictions are danger signals warning you of a much more serious *internal condition.*

Sufferers have been relieved and restored to health through RESTORIA. It is especially effective in long-standing, deep-seated chronic Bad Blood conditions that have defied other treatment.

A TWO MONTHS' TREATMENT for $5.00. RESTORIA IS THE MOST EFFECTIVE FORMULA YET DEVISED FOR THE CORRECTION OF CONDITIONS RESULTING FROM BLOOD DISORDERS. Order it today—Dept. P. 6. RESTORIA, 426 Van Buren St., Milwaukee, Wis., or write for FREE literature.

SHOES TO MATCH LATEST VANITY; RETURN TO NORMAL WAISTLINE

AN ADDED vanity has been brought into the program of dress for the school girl—colorful kid shoes. In issuing this call for footwear to match, fashion encourages youth to observe that same nicety of color values, which is so generally observed in the adult style world.

So, when the school-faring miss adopts her favorite color, according to the rules of the fashion game, she must do so from head to foot, which is just what she did when she chose the winsome frock in the picture above. This girlish model is a one-piece which looks like a two-piece. It is of blue flannel, the upper plaid part being in three shades of blue on a cream ground. The Peter Pan collar is furnished at the throat with a blue silk tie matching one of the shades in the plaid. The shoes are navy kid in a one-strap model, with carefully styled leather heels.

This costume carried out in tones of green would be equally as effective and rich. for beautiful greens are exceedingly smart this season. There would be no difficulty in getting shoes in a handsome green to match, or a wine shade, for that matter, should the dress be developed in the deep toned reds.

For dressier occasions this plaid with plain frock could be carried out most charmingly in velvet, for plaid velvets are easily available and they make up effectively with velvet in a solid color. By supplementing a frock of this type with a matching velvet jacket, the result would be an ensemble of super attractiveness. The costume might be topped with either a matching tam, combining the two velvets, or one of the new chenille crocheted berets would prove a crowning glory.

Very often the contrast in the material which goes to make up the frock is in the weave rather than the color. A happy combination widely featured this season is jersey with satin. As applied to the model pictured, jersey in some one of the popular wines, green, browns or blues would be used for the skirt portion, the blouse top being of satin in an accurately matched shade, jersey bands trimming the same.

The young woman who decides upon taffeta for her party frock shows that she is properly fabric-conscious. If she decides on red for the color, then again does the youthful sophisticate follow a fashion-wise course. Not only for evening wear is red an outstanding color, but it is en mode for day time as well. There's nothing in the way of a street outfit for youth quite so swanky as an ensemble developed in red-toned tweed, with knitted slip-on blouse to match, the cloth generously furred in black or gray.

As an evening color red is the rage. Perfectly charming and immensely flattering are dresses of red net, coarse tulle, allover lace or taffeta, velvet or satin as the case may be. Paris creates many arresting gowns in this color, such as, for instance, a Chanel model which uses finely all-over-patterned red lace, most intricately manipulated in way of spiral tiers and a labyrinth of drapes which flutter gracefully about the shoulders.

The model in the picture below leaves no doubt as to the revived favor for waistlines. Of course it takes a slender girlish figure to carry with honors a highwaisted and full-skirted silhouette as is this. But that is how youth is proclaiming itself this season—by victoriously wearing the quaint models which are the envy of and the impossible for "fat, fair and forty." From the atelier of Lanvin comes this very lovely frock illustrated. It is developed of bright lusterful red bemberg taffeta. Tiny twin peplums at the waistline with a multiplicity of godets worked into the skirt, give to this model a picturesque bouffancy.

As said before red is as fashionable a color for daytime wear as it is for evening. Such interesting combinations as black broadcloth and red satin occur in the afternoon mode in this wise—the coat is of the black cloth collared and furred with black caracul, the gown and the coat lining being of the red satin.

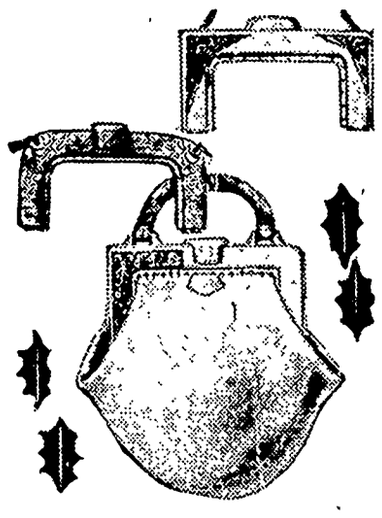
USEFUL CHRISTMAS PRESENTS TO MAKE OR TO PURCHASE

Carved Wood Mountings



Handbag or pocketbook frames of carved wood! Aye, there's an idea for bewildered minds who are seeking out-of-the ordinary Christmas suggestions. Too chic for words are these little mountings made of hard-as-ivory hand-polished and hand-carved wood. Their lovely natural brown tones tune in with the fashionable costume browns for this season. The bag which may be made of felt or velvet or any chosen fabric is sewed to the frame in the usual way, a row of perforations being made in the wood for the stitches.

Italian Leathercraft

In beautiful Italy where art ever survives, hosts of skilled craftsmen are busy creating intriguing handbags of finely wrought leather. Almost unprecedented enthusiasm marks the present vogue for bags of the type illustrated, the leather of which they are made being hand illuminated and tooled in the inimitable Italian way. Some have zipper fastenings and leather-laced edges. Others are mounted on rare frames with handles. No Christmas gift suggestion one may make will outrival that of one of these choice bags. One of the many attractions of these bags is that they are obtainable in all the fashionable costume colors.

For the Little Folks

Here is where work is made play for the children. The cunning "dolled up" coat-hangers and hat stands which are so numerous in holiday displays, are enough to train any wee boy or girl to be orderly. Which is a hint to doting parents and relations as to "what to give" the little folks for Christmas.

Artful Glass Toiletries

If you're asking what's "smart" to give for Christmas, decorated glass toiletries is the answer. A bottle for every lotion or medicine, cold cream jars, powder boxes, soap dishes. Oh! there's no end to the intriguing articles to be had, each prettily painted, many in dainty flowers, others adopting unique designs like the little fish set in the picture.

GOLD MEDAL "Kitchen-tested" FLOUR

This Won't Do

Gog—Office buildings are now going up with no inside window sills, I see.

Magog—And where, I'd like to know, do they set the mucilage bottle?—St. Louis Globe-Democrat.

Just Slow

Toto—Mr. Smith you are not dumb, are you?

Mr. Smith—Of course not! Why do you ask?

Toto—Big sister said that she had been expecting you to speak all winter.

John's Mother Praises Doctor

There isn't a mother living who won't agree that no half-sick child should be the subject for an experiment with medicines of uncertain merit. When your child is bilious, headachy, half-sick, feverish, restless, with coated tongue, bad breath, no appetite or energy, you know that nine times out of ten it's a sign his little stomach and bowels need purging. And when you know that for over fifty years leading physicians have endorsed one preparation for this condition, there doesn't seem to be any reason for "trying" things.

Rich, fruity California Fig Syrup clears the little stomach and bowels gently, harmlessly and in a hurry. It regulates the bowels, gives tone and strength to them and to the stomach; and helps to give your child new strength, energy and vitality. Thousands of Western mothers praise it. Mrs. Joseph W. Hill, 4306 Bedford Ave., Omaha, Nebraska, says: "I'll never forget the doctor who got me to give my baby boy, John, California Fig Syrup. Nothing else seemed to help his weak bowels. That was when he was just a baby. He suffered a good deal before I gave him Fig Syrup, but it stopped his trouble quick. I have used it with him for colds and little upset spells ever since. I consider him a Fig Syrup boy."

Insist on the genuine article. See that the carton bears the word "California." Over four million bottles used a year.

Those who inherit health should take care of it. It is worth more than a fortune.

If abuse makes a man whine instead of rage, there's something wrong.

Record Gain in Butter Profits

Dairymen Who Use "Dandelion Butter Color" Say It's the Best Investment of All.

The biggest creameries in the country, who are most careful to cater to the whims of the public, are earning record profits by keeping their butter that appetizing June color everyone likes. Ninety per cent of them are doing it with "Dandelion Butter Color." It's the most economical and satisfactory butter color made. Half a teaspoonful colors a gallon of cream! It doesn't color the buttermilk. It's purely vegetable and tasteless. Approved by all State and National Food Laws. Large bottles, only 35¢ at all drug and grocery stores or write Wells and Richardson Co., Inc., Burlington, Vt., for a FREE SAMPLE BOTTLE.

Basket Ball Game Played At Alexander Wednesday Night

ast week terminated the second weeks period and this week par- are sent a report of children's done according to the best ent of their instructors. The ers' judgments are not infall- but we believe our teachers can relied upon to deal justly and as fairly as they can. We be- as a rule they take more pleas- in awarding good grades than ones and are more inclined to grades than purposely lower below what they should be. teacher exercises her own ment as to the ranking of her nts and in no case is she urged us to raise or lower grades. She erely told to award to the very in each class an A, to those no- bly above average a B and to ranking well up among the rage a C plus, and to those only little below C minus, while to noticeably below average a D to those doing unsatisfactory k an E. No doubt many children awarded D's when their work is y unsatisfactory.

P. T. A. Meeting Held

Our P. T. A. program on Tuesday of this week was well attended. young high school speakers vinced their audience that they acquiring the ability to speak ll in public, an art well worth ltivating. Our young high school chestra under Miss Ford's direc- gave promise of much usefull- in the future and were no bt a pleasant surprise to those o came to see them in their first pearance.

Coach Brietske, who directed the y program, proved equal to the asion and all had a good time.

Our next P. T. A. program will obably be given on Thursday ev- ing, December 17.

Basket Ball Game At Alexander

Mr. Brietske and Bernard Smid ove to Alexander on Wednesday ning of this week for the open- basket ball game. The following s will in all probability start in s initia game: Raymond Barz, yne Pavey, Merion Carson, Allan lotzbach and Clarence Lemke. A- ong reserves are Raymodn Drake, ery Smid, Raymond Schultz, Paul mpson and Clarence Kluckhohn. rence Lemke is captain of the m.

Thanksgiving Vacation

Most of our faculty will be out town during the Thanksgiving cation, some going home and oth- s elsewhere to get the much need- relaxation and recreation. School ork will be resumed Monday for least another three weeks before e Christmas Holidays.

R. AND MRS. EMERY SCHAEF- ER ENTERTAIN AT DINNER

Last Sunday Mr. and Mrs. Emery haefer entertained the following ests to a Sunday dinner in honor Miss Doris Schaefer, of Marble ck, a sister of Mr. Schaefer, who s spending the week end at their me:

Miss Hilda Schaefer, of Marble ck; and the following from this nity: Mr. and Mrs. Ed. Schaefer daughter, Miss Mabel; Mrs. J. tzmacher, Mrs. P. M. Greise- r; U. G. Smid and family; Mr. Mrs. Emil Beier and Billie; and Herald Ridder.

The occasion was the birthday of Doris Schaefer, and Mr. and Emery Schaefer succeeded in ing it a complete surprise until dinner was served. At the last Miss Doris was given the of lighting the candles on the day cake and cutting it.

All had a very enjoyable time.

METHODIST WILL VOTE ON NEW CHURCH THURSDAY EVE

Special Meeting Of Congregation Will Decide On Building

Rev. H. E. Whyte has called a special meeting of the Methodist congregation of Klemme to meet on Thanksgiving night (Thursday) at which time Rev. Lease, Dist. Supt. will be in Klemme.

At a recent meeting of the official board that body recommended that a new Methodist church be built in Klemme at a cost not to exceed $25,000.00. This propo ition will be submitted to the congregation for their vote of approval.

Should the proposition carry favorably, the new church will be built next summer. At this time a large portion of the funds necessary for the proposed building, are subscribed.

Without any doubt the members will vote for a new church as the list of subscribers for the project are growing rapidly.

NEW CASES FILED IN DISTRICT COURT FOR NOVEMBER

SAND AND GRAVEL BEING HAULED FOR NEW CHURCH

Several trucks and drivers were hired by the Reformed Church to haul gravel and sand for the new church building, which will be erected next spring.

Some of the truck men had hauled gravel for roads during the summer and this job came along just right to suit them.

Three hundred yards will be used in building the new church. The sand is being piled along the east side of the church and makes quite a huge pile.

STATE OF IOWA
Executive Department

A Proclamation

In a government of free and independent people, prosperous by reason of their devotion to their daily toil, blessed beyond measure by the outpouring of the gifts of God, it is most appropriate that a day of general thanksgiving be observed.

This is an annual custom and I feel that no day of the year should be more conscientiously and sincerely observed. Thanksgiving is as old as courtesy, as mutural as happiness, and as necessary as kindness. Everyone should render to Almighty God his sincere thanks and deep appreciation to Him for His manifold blessings.

In setting apart a day for this purpose, I deem it expedient to mention some of the things for which our people should have reason to be grateful.

We should voice our common gratitude for the security, happiness and service which the reward of industry and the blessings of health have made possible; for the home love we share, for the affections we treasure, and the future we guard; for our part in paying allegiance to truth and in pursuing it unremittingly and honestly in schools, public service, ad daily duties; for the human spirit that is charitable in need, tolerant of everything but injustice, and creative in good will.

We should pause to recognize the family as the unit of civilization. We reveal the spiritual strength of our State by our gratitude to God and by our further desire for human adjustments. Our freedom is found only in fidelity and righteousness.

Therefore, I, JOHN HAMMILL, Governor of Iowa, in conformity with the President of the United States, do hereby appoint and set apart

Thursday, November 28 1929

as a day of Thanksgiving Prayer and Praise.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the Great Seal of the State of Iowa.

Done at Des Moines, this 16th day of November, A.D. 1929.

JOHN HAMMILL, Governor — E. M. SMITH, Secretary of State

(The Great Seal of the State of Iowa.)

LOCAL MEM WIN AT D.M. RABBIT SHOW

S. & D. RABBITRY OF KLEMME SHOWS AT DES MOINES

Local Men Enter Six Rablts And Capture Three Ribbons

Sumner Trumbell and Dr. D. P. Anderson, proprietors of the S. & R. Rabbitry of Klemme drove to Des Moines last Thursday to enter some of their rabbits in the Annual Des Moines Rabbit Show. The local rabitt fanciers exhibited six animals and captured three places, 2 first places and 1 fifth place.

The show which was held Friday, Saturday and Sunday, was one of the largest held in Des Moines and rabbits from a great number of states were shown. More than five hundred rabbits were entered in this show.

The local men won 1st in the Junior Doe Class with a White Beavern; 1st in the Junior Doe Class with a Silver Martin; and 5th place in the Junior Doe with a Chinchilla.

Trumbell and Anderson have been in the rabbit business less than a year and htey can be congratulated on the showing they made at the Des Moines show. They have made a thorough study of this interesting business and were careful to start with only high class animals. They now have about one hundred and fifty rabbits.

Tame rabbits have a real commercial value both for their fur and for their excellent meat. The meat is just like chicken. The fur is strong and durable.

LADIES AID BAZAAR TO BE HELD DECEMBER 3, 1929

Come to the Parish House, December 3, 1929. Bring your purse plus your good will. There will be fancy goods, candy and the fish pond, and last but not least, the big Family Dinner in the evening.

FULL OBSERVANCE OF THANKSGIVING DAY IN KLEMME

Many Big Dinners Will Be On The Program Of Family Gatherings

Thanksgiving Day, 1929, more than three hundred years after the first Thanksgiving day observed by the Pilgrim fathers, will be observed in Klemme in much the same manner as in former years, with big turkey, goose or duck dinners, garnished with all the trimmings down to cranberry sauce, and pumpkin pie—the most popular feature.

All business places will be closed so that business men may enjoy a big dinner with relative or friends.

The Klemme schools close Wednesday afternoon, not to re-open until Monday morning, December 2nd, which gives students and teachers a short vacation. Klemme teachers will undoubtedly go to their respective homes to enjoy a big feast with their folks and friends.

Many will spend the afternoon in listening to college and university football games over the radio, and a large number of Klemme people will go to Garner to see the annual high school football game between Clear Lake and Garner.

Klemme Churches will hold special services for Thanksgiving.

The Reformed Church will hold a Thanksgiving service in the morning at 10:00 o'clock. The Methodist Church will have a special service for Thanksgiving at 7:30 in the evening.

LIBERTY CO-OPERATORS WILL MEET DECEMBER 6

All Day Meeting Will Be Held At The Home Of Mrs. H. A. Greiman

The Co-Operators of the Liberty Township Farm Bureau will meet at the home of Mrs. H. A. Greiman, Friday, December 6th, from 10:00 a. m. until 4:00 p. m.

Miss Myrtle Johnston will be present and give the second lesson in the nutrition course which will be "Diet for the Pre-School Child."

At this meeting the ladies will prepare a cereal luncheon under the instruction of Miss Johnston.

COURT OF HONOR HELD AT GARNER

KLEMME BOYS SCOUTS AWARDED FOR WORK DONE

Next District Court Of Honor Will Be Held In Klemme

A number of Klemme Troop 56 Scouts and Scouters went to Garner Monday evening to attend the first fall district Court of Honor and to receive advancement rewards.

Their were Scouts and Scouters present from Forest City, Garner, Britt, Crystal Lake and Klemme.

Assembly was called by Bugler Donald Roe of Troop 19, Garner, and the parade of candidates and opening ceremony was in charge of Paul Manor, A. S. M. of Garner Tr. 19 and was as follows: Parade of Colors, while bugler sounded "To the Colors," pledge of allegiance, and posting of Colors.

Rev. Van Metre led the audience in singing America, and Rev. I. C. McNulty, of Crystal Lake gave the benediction.

Mr. W. S. Pritchard, chairman of the Garner Committee gave a short address of welcome and introduced the Court of Honor members.

Rev. Van Metre, Garner, chairman of District Four court of honor explained the purpose of the meeting, why a Scout should appear and told why parents and friends should attend these meetings.

All candidates up for awards were recommitted to the Scout Oath, led by Soutmaster aE. J. Lewis of troop 61, Britt.

Scoutmaster P. J. Kirkpatrick of Troop 31, Crystal Lake presented a large number of boys with their Second and First Class Badges.

C. G. Waterman, Troop Committeeman of Troop 56, Klemme called the roll of all Scouts and Scouters present from the various troops of the district.

Second Class Merit Badges were awarded to a number of scouts by J. N. Day, Troop Committee of Tr. 56, Klemme.

A large group came up for the First Class Merit Badges and these were presented by Rev. McNulty of Troop 31, Crystal Lake.

Star and Life Scout Certificates were awarded to nine Scouts and Scouters by R. A. Jorgenson, S. M. of Troop 56, Klemme.

An Eagle Palm Certificate was presented to Eagle Scout Harvey Steiff, of Troop 31, Garner, by H. H. Shepard, of Mason Clyt, member of the Area Court of Honor and Troop Committeeman of Troop 16, Mason City.

The closin ceremony in charge of Troop 19, Garner consisted of Retreat of Colors, Benediction, and Taps.

Next Court Of Honor At Klemme

After the Court of Honor the men of District Four met to set Court of Honor dates. It was decided to hold the next District Court of Honor at Klemme, Monday evening, January 6th, at 8:00 o'clock. The meeting will be held at the high school auditorium.

Other Court of Honor dates are as follows: Mar. 3, at Forest City; April 4, at Britt; May 26, Area-wide Court of Honor, Mason City.

SNOW FENCED ERRECTED

The county have had their men out the past few weeks putting up snow fences to protect the roads against snow drifts in the winter.

The work is now well completed and most of the fence has been put up. In the vicinity of Klemme the snow fences were put up last week.

The road leading west from town has been given this protection.

BASKET AND PIE SOCIAL

There will be a basket and pie social at District No. 6, 4 miles east and 2 miles north of Klemme on Friday evening, December 6. A program by the pupils of the school will begin at 8:00 o'clock. Bring your friends. Everyone is cordially invited. Marie Carson, Teacher; Fred Barz, Director. 1tc

C. F. KERAUS SURPRISED BY FRIENDS ON BIRTHDAY

Big Duck Dinner Served At The Keraus Home Friday Evening

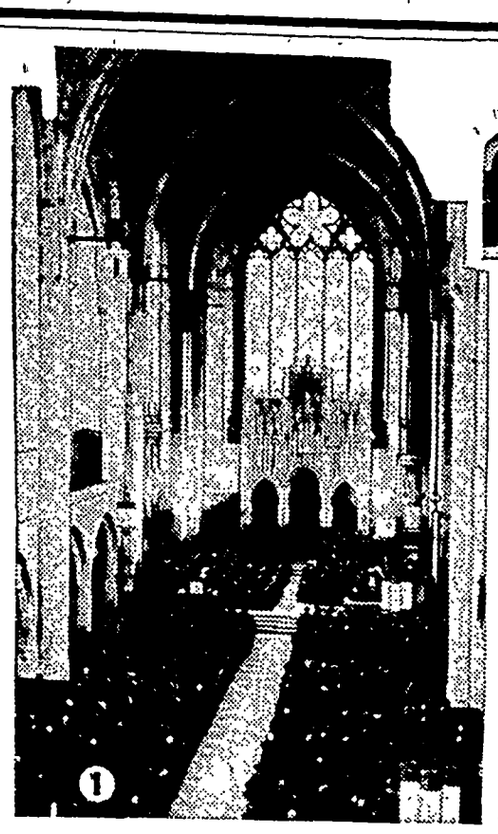
C. F. (Dad) Keraus had a birthday last Friday, but as he had celebrated the event quite a number of times before he did not give it much thought and paid no attention to the vast activities during the day in the home kitchen. However, along about 6:00 p. m. he began to suspicion something unusual was in the air when folks began to arrive and the dinning table stretched to full length and savory odors of roast duck and dumplings floated from the kitchen. "Dad" was then surprised and realized a party was being staged on his birthday.

A fine duck dinner was served, including dumplings and a lot of other trimmings, and a big birthday cake decorated the center of the long table. Everyone enjoyed the delicious meal.

Following the dinner the evening was spent in playing pinochle until a late hour. Mr. and Mrs. Art Kudje won low score; C. G. Waterman and Mrs. R. A Jorgenson, high honors, and all were awarded accordingly.

Those present were C. G. Waterman and family; Mr. and Mrs. F. W. Kluckhohn, Fred Kluckhohn and daughter, Thelma; R. A. Jorgenson and family; and A. J. Kudje and family.

Mr. Keraus was presented with gifts in remembrance of the occasion.



1—View in chapel of University of Chicago at installation of Robert Maynard Hutchins as president of the institution. 2—Omaha's new $500,000 Coliseum, built for conventions, stock shows and prize fights. 3—Thousands of persons gathered at the grave of Rev. Patrick J. Power in Malden, Mass., where many miraculous cures are reported.

NEWS REVIEW OF CURRENT EVENTS

Industry and Finance Give Assurance That Nation's Business Is Sound.

By EDWARD W. PICKARD

UNLESS President Hoover and the leaders of finance, industry and labor are all wrong, the country's business structure is on a firm basis and there is no reason why prosperity should decrease, despite the stock market collapse which in six weeks reduced stock prices by about 37 per cent.

What the leaders mentioned think about the situation was brought out in the conferences called in Washington by the President. First to gather were the presidents of a number of railways, together with William Butterworth, president of the Chamber of Commerce of the United States; Julius Barnes, chairman of the chamber's board; Secretaries Mellon and Lamont and Ernest L. Lewis, chairman of the Interstate Commerce commission. President Hoover thus told of the results of this meeting:

"The railway presidents were unanimous in their determination to cooperate in the maintenance of employment and business progress. It was stated that the railways which they represented would proceed with full programs of construction and betterments without any reference to recent stock exchange fluctuations; that they would canvass the possibilities of further expansion, and that amongst these particular railways it appeared that the total volume of such construction work already indicated an increase during the next six months over the similar period of last year."

Later in the week, at the annual meeting of the Railway Business association in Chicago, the rail officials of the country gave out more definite information of their plans for expansion and betterment which will call for the expenditure of a billion dollars.

The second group to assemble in the White House included the twelve members of the advisory council of the federal reserve system and the members of the federal reserve board, together with government officials. They gave assurance of the soundness of the business structure and the probability of cheaper money. Each member of the council reported that business and banking throughout his district were in a sound condition.

On Thursday morning the nation's industrial leaders assembled, with Julius Rosenwald, Henry Ford and Owen D. Young of the General Electric company at their head. Included in the conferees were the chiefs of nearly all the great corporations—an impressive gathering indeed. The President asked these men to cooperate in maintaining their business activities on the same plane as in past months and to make expansions wherever possible. What the President particularly desires to avoid is a curtailment of industrial activity in anticipation of a possible business slump due to the stock market collapse. He received the assurance that the constructive activities of the various industries would be continued, and even expanded to take up the slack in employment.

That afternoon William Green, president of the American Federation of Labor, and other prominent labor leaders, together with Secretary of Labor Davis, conferred with Mr. Hoover. And it was announced that on Monday there would be meetings of the leading public utility magnates and of farm leaders.

Thursday evening Mr. Hoover announced that a truce between capital and labor had been made; that the big industries of the country would not reduce wages and that organized labor would make no demands for increased pay. Both groups, he said, had pledged themselves to assist the President in his endeavor to maintain business stability and progress.

Soon after this Henry Ford announced that a general wage advance was to take effect immediately in all his automobile plants, benefiting about 135,000 men. He gave his views on the industrial situation, maintaining that prices of commodities are too high and must come down, while wages are too low and must be raised.

As a result of the series of conferences it is planned to set up some sort of an organization to act as a clearing house for the activities of the different groups. Mr. Barnes and Mr. Butterworth, in co-operation with Secretaries Mellon and Lamont, will figure prominently in this work.

JAMES W. GOOD, secretary of war, died in a Washington hospital following an operation for acute appendicitis. The news of his demise was heard with deep regret throughout the country for Mr. Good was regarded as a most efficient servant of the nation and was popular with a host of friends. President Hoover was especially grieved by the death of a man who had been his close associate for years and who held his high regard. The war secretary was given all military honors at the funeral services which were held in the east room of the White House and were attended by the President and Mrs. Hoover, the members of the cabinet and as many others high in the government as could be accommodated. Then the body, on an artillery caisson drawn by six bay horses, was escorted to the railway station and taken on a special train to Cedar Rapids, Iowa, Mr. Good's boyhood home, for burial. It was accompanied by committees representing the administration and the senate and house and by Acting Secretary of War Hurley and General Summerall, army chief of staff.

PRESIDENT HOOVER has completed the delegation to the naval conference in London by naming as additional members Secretary of the Navy Charles Francis Adams and Ambassadors Charles G. Dawes, Dwight W. Morrow and Hugh S. Gibson. The others, previously selected, are Secretary of State Henry L. Stimson, Senator David A. Reed of Pennsylvania and Senator Joseph T. Robinson of Arkansas. Admiral William V. Pratt, commander of the United States fleet, and Rear Admiral Hilary P. Jones, retired, will accompany the delegation as naval advisers.

The addition of Secretary Adams and the three ambassadors to the delegation was a measure taken to pacify Admiral Jones, who had threatened to refuse to go along because he thought the administration was not giving proper consideration to the navy and the naval authorities who have been opposing what they considered too great concessions to Great Britain. It was said the admiral is now satisfied.

FINDING it was impossible to complete its version of the tariff bill this month, the senate voted, 49 to 33, to adjourn the special session of congress sine die on Friday night, and the house concurred. This gives the lawmakers an intermission of ten days before the regular session convenes on December 2. The adjournment was proposed by the Democrats and the old guard Republicans voted for it because they are disgusted with the tariff measure as it now stands. The new grouping of younger Republicans, headed by Senator Allen of Kansas and called "Young Turks" by Senator Pat Harrison, tried to keep the session alive, believing much more progress with the schedules could be made. The tariff bill retains its place on the senate calendar as unfinished business, and though the Vare case comes up for disposal during the first week of the regular session, the senate leaders hope the tariff measure can be passed before the Christmas recess.

Doings of lobbyists in behalf of high and low tariff on sugar were investigated by the senate committee on lobbying during the week, and the information elicited was interesting though not especially incriminating. Most important of the witnesses was President Rentschler of the National City bank of New York, which institution is deeply interested in Cuban sugar plantations and refineries.

SENATOR George H. Moses remains chairman of the Republican senatorial campaign committee, despite the animosity he aroused among the western radical senators recently. The committee met last week and apparently all was harmonious. Consequently the New Hampshire senator will be in charge of the arrangements for the re-election of those solons whom he stigmatized during the tariff debates as "sons of the wild ass."

HARRY F. SINCLAIR, oil magnate, completed his term of imprisonment for contempt of the senate and the District of Columbia Supreme court and was given his freedom after 198 days of confinement. He seemed happy and healthy and posed obligingly for news photographers, declared he was guilty of no moral turpitude and asserted his imprisonment was "in violation of common sense and common decency" to make him the scapegoat for corrupt politicians.

CONGRESSMAN Edward E. Denison Marion, Ill., a bone dry, is added to the victims of the prohibition laws. He and John Layne, his former secretary, were indicted by a grand jury in Washington on a charge of illegal possession of liquor. The indictment is based on the fact that, eleven months ago, a trunk and suit case containing liquor were delivered to Mr. Denison in the house office building, being addressed to Layne in Denison's care. Federal agents opened the trunk in his presence. The congressman says he explained at the time that the baggage was not his and had been checked to him by mistake in New York after his return from a trip to Panama. The agents, he asserts, expressed themselves as satisfied and said there would be nothing more to it. In Washington it was said Denison's receipt for the trunk was laid before the grand jury. Layne, who is now connected with the internal revenue bureau, has flatly denied any connection with the liquor.

TWO of our new ambassadors presented their credentials last week at the courts to which they are accredited. John W. Garrett was received with all due ceremony by King Victor Emmanuel of Italy after being conveyed with his staff to the Quirinal palace in three gala coaches. In the royal palace in The Hague Ambassador Gerrit J. Diekema was received by Queen Wilhelmina of The Netherlands.

MOST of New York, New England and the maritime provinces of Canada were startled by a series of violent earthquake shocks early in the week. At first it was believed no material damage had resulted, but in a few hours the cable companies found that nine of their twenty-four Atlantic cables had been broken. The center of the disturbance was at sea between Nova Scotia and New York, and several liners that were in that region were brought up standing as if they had run against a reef.

Toward the end of the week came the belated news that the quake had caused an immense tidal wave which hit the Burin peninsula on the south coast of Newfoundland. Several villages were swamped by the water and at least thirty-six persons were killed.

GEN. PASCUAL ORTIZ RUBIO was elected president of Mexico, defeating Jose Vasconcelos by a large majority. Rubio may be relied on to carry on the policies of President Gil. He is of an old Mexican Indian family, tracing his ancestry to the last of the Tarascan kings of Michoacan. He has had an adventurous life, taking part in all the revolutionary activities since his youth.

SOVIET RUSSIAN forces, invading Manchuria, captured Dalai Nor, the key position of the Chinese front line defenses in the "Three Rivers" district, after nineteen hours of bloody fighting. The Russians thus cut off the Chinese position in Manchouli and opened the way for a drive on Hailar, besides gaining possession of valuable coal mines.

T. P. O'CONNOR, called the father of the British house of commons and familiarly known to the world as "Tay Pay," died in London at the age of eighty-one years of septic poisoning. Famous as an Irish Nationalist and as a journalist, he had served as a member of parliament for forty-nine consecutive years.

YOUNG DEWBERRY PROMISING CROP

Becoming Important Sort in East and Western Areas.

(Prepared by the United States Department of Agriculture.)

The Young dewberry, named for B. M. Young, of Louisiana, who originated it more than 20 years ago, is now becoming an important sort in both the eastern and western parts of southern United States, according to George M. Darrow, of the United States Department of Agriculture, whose trials with this dewberry a few years ago showed it to be promising for the South.

The largest centers of production at present, he says, are in southern Alabama and southern California, though there are extensive plantings near Wilmington, N. C., and Houston, Texas. Evidence at hand indicates that it is hardy from Norfolk, Va., south and west to include eastern North Carolina, South Carolina, Georgia, and the states west of Texas, including Arkansas and parts of Tennessee and Oklahoma. In California, Oregon, and Washington it is apparently adapted to a somewhat greater range of conditions than is the loganberry.

The Young dewberry is favored because of its resistance to anthracnose and leaf-spot diseases, the vigor and productiveness of the plants, and the high dessert quality of its fruit. Recent tests indicate that the fruit is well adapted to freezing for sale in the winter season, and its usefulness after freezing for preserves, pies, and the table suggests this outlet as one of the most important for this berry.

No planting stock is available from the department, Mr. Darrow says, but prospective growers will find the Young dewberry listed for sale by a number of southern nursery establishments.

Pruning Brambles Best Done During Winter

When a blackberry cane has borne fruit it dies. Therefore in trimming blackberries the first thing to do is to cut out all dead canes. Also any that appear to be diseased or infested with insects. The same is true with raspberries, except that the raspberry cane does not die after fruiting.

After cleaning up the briar patch by removing dead, diseased and insect-infested canes, thin out the healthy canes which are left, removing all but four or five of the best canes per bush. It is not advisable to head back the canes now unless they have extremely long growth.

Heading-back should be done in the summer after the new shoots, which have come up from the crown, are about 20 inches high. At that time pinch off two or three inches of the tops of the new shoots. This will induce branching and the consequent formation of more fruiting wood for next year.

All trimming, except the pinching-back, should be done at this time of the year, or before growth begins in the spring. All trimmings should be burned immediately and the trimming followed by spraying the bushes with a solution of 5½ gallons of commercial liquid lime-sulphur or 20 pounds dry lime-sulphur to 50 gallons of water.

Horticultural Hints

Forest litter makes good fertilizer for farm crops as well as for trees.

* * *

Apple trees need an abundance of nitrogen early in the spring when the leaves are expanding.

* * *

The weather has not been nearly as favorable to the development of brown rot as it was last year.

* * *

Grapes are a sure crop, and by acquiring a little technical knowledge and taking a little interest, one can raise grapes.

* * *

There should be a good reason for every cut made on the young trees. It is particularly important that the annual pruning of the young trees just coming into bearing be moderate.

* * *

It has been shown that practically all varieties of apples and many varieties in particular, may be expected to fruit earlier when unpruned than when moderately or severely pruned.

* * *

The grower must constantly strive to keep his trees growing vigorously but not excessively. Changes in his type of pruning to meet this need must be made only after careful observation of the individual orchard.

* * *

The last week of January is the latest date to which the ordering of trees for an orchard, or seeds for a garden should be postponed. Grades, varieties, and amounts wanted are more easily obtained by those who order early.

* * *

Oil sprays are best applied to peach and apple trees during the dormant period. Peaches should not be treated with spraying oils after the buds have started to break, but apple trees may be sprayed as late as when the buds are showing green.

Turkey Raising on Clean Ground

One of Most Important Preventives of Dread Disease of Blackhead.

(Prepared by the United States Department of Agriculture.)

Success in turkey raising is largely a question of proper management, says the United States Department of Agriculture. The fundamental factors essential to success are described by Dr. M. A. Jull and A. R. Lee of the bureau of animal industry in Farmers' Bulletin 1409-F, just published by the department.

First Aim of Raiser.

Avoidance of parasites and prevention of disease should be the first aim of every turkey raiser, these specialists say. Of the infectious diseases common to turkeys, blackhead is the most destructive, but it can be controlled by proper sanitation. Blackhead occasionally affects adult turkeys, but it occurs principally among young turkeys between the ages of 6 weeks and 4 months. Keeping the quarters strictly sanitary and burning all dead birds will help prevent spread of the disease.

It is of more importance, however, to adopt measures that will prevent the introduction of blackhead into the flock. One of the most important preventive measures is the keeping of the poults on clean ground not occupied by chickens because chickens often carry the host of the blackhead organism. Pigeons, sparrows and others birds or animals should also be kept from the turkey houses or yards for the same reason.

Suitable Turkey Breeds.

In this new publication the poultry specialists describe the various breeds or varieties of turkeys suitable for the different sections of the United States. Also they discuss the approved management practices and the preparation of the birds for market.

Copies of the bulletin may be obtained free as long as the supply lasts by writing to the United States Department of Agriculture, Washington.

Many Flocks Are Kept in Very Small Houses

Many Kansas flocks are kept in houses too small to make possible the best results from the hens. For light breeds the house should afford 3½ square feet of floor area for each bird. The heavy breeds should not have less than 4 square feet. Only sufficient height to furnish head room for the attendant is needed in the poultry house. Many poultry houses have been built unnecessarily high, at extra cost and resulting in a less comfortable shelter.

For economical construction that will meet the essential requirements for profitable poultry and egg production, the straw loft type of poultry house is recommended to meet Kansas climatic conditions.—Walter G. Ward, Extension Architect, Kansas State Agricultural College.

Spreading Fertilizer on Snow Good Practice

Manure is too valuable to waste in any way. A manure spreader is one of the most profitable pieces of equipment that a farmer can have, and with it manure can be spread rapidly and uniformly so that the greatest good is gotten from it. Haul and spread manure whenever possible during the winter. Keep the spreader close to the barn so that when the stalks are clean the manure can be thrown directly into it. Spreading the fertilizer on the soil before snow or in between storms is good practice. The rainfall going through the manure will leach out much of its value and carry it right into the soil. Strawy manure spread in the winter time has a chance to rot before it is turned under the soil in the spring.

Agricultural Hints

A well balanced and complete ration is a necessity in growing chickens.

* * *

A small potato in a good hill is just as good for seed as the large ones.

* * *

Cabbage plants started in February will be less likely to produce seed stalks than those started in January.

* * *

Self-feeding gives larger gains than hand feeding under most conditions. This applies to all the feed as well as tankage.

* * *

One of the essentials of a good silo is an impervious wall, one which will exclude air and retain the moisture in the silage.

* * *

There are Hessian fly adults laying eggs on the volunteer wheat. If you have any volunteer wheat on your farm it should be destroyed.

* * *

Efficient feeding, proper care, and culling of unprofitable cows as practiced in cow testing associations is raising the averages of butter fat production.

* * *

Lime should be applied to the garden soil, since few vegetables produce good crops on acid soil. Application may be made just after the garden has been plowed.

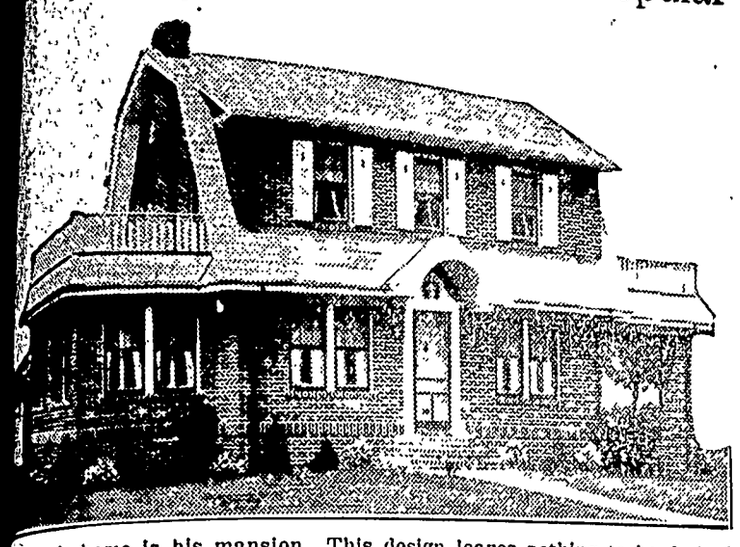
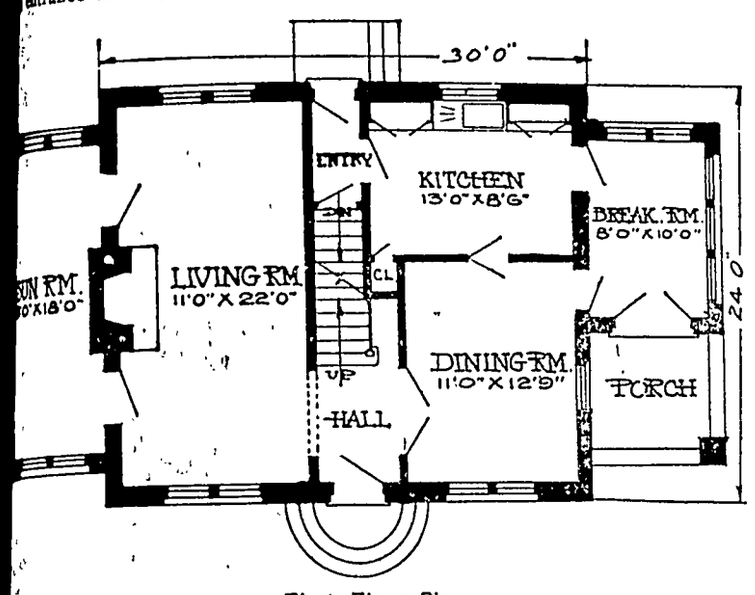
Home of Dutch Colonial Design Attractive and Popular



A man's home is his mansion. This design leaves nothing to be desired. It is complete, beautiful and practical. The floor arrangement is ideal. The entrance is of pure colonial design.



First Floor Plan.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the greatest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn street, Chicago, Ill., and only inclose a two-cent stamp for reply.

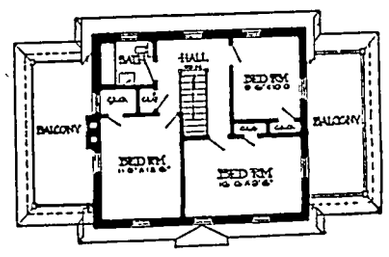
Brick is becoming a very popular building material. In cities where there are restrictions on materials because of fire hazards, brick is the material most used for the reason that it is available in practically all sections of the country and can be laid up in many attractive designs.

The house shown in the accompanying illustration is of the Dutch colonial type and is constructed wholly of brick. However, for those who want a less costly method of construction, the house can be constructed of frame and the outside walls of brick veneer with some type of insulating board in between. This is a very popular type of construction in cities now and the result is that the owner has a very attractive substantial house at a cost less than that of a house of solid brick walls.

The illustration gives the idea that this is an unusually large home. However, it is only 24 feet deep and 30 feet wide. It contains six good size rooms besides the sun parlor adjoining the living room on the first floor and the bathroom on the second floor.

As in all colonial homes, the entrance is in the center of the house and leads into a hall out of which run the stairs to the second floor. In this design the living room is at the left and the dining room and kitchen at the right. The living room is 11 feet by 22 feet. In the center is an open fireplace on either side of which are french doors leading to the sunroom, which is 8 feet by 18 feet. This arrangement adds considerably to the size and attractiveness of the living room. Owners who have homes with a sunroom adjoining the living room say that the sunroom is the most attractive feature of the house and it is used more than the living room when the family is alone.

The dining room is at the front and is 11 feet by 12 feet 9 inches. The kitchen is large being 8 feet 6 inches by 13 feet. Off it at the rear is a breakfast room, 8 feet by 10 feet, which can also be reached through the dining room.



Second Floor Plan.

Upstairs there are three bedrooms, each a corner room, and the bathroom. The sizes of these rooms and their location in relation to the upstairs hall are shown in the floor plans.

This is an unusually good design for a colonial type house. Its appearance is attractive and the brick makes it a substantial home. The balcony over the porch and breakfast room at one end and over the sunroom at the other are good features.

Need for Fire-Stopping Ended by Mineral Wood

Necessity for installing fire-stopping between a brick veneer exterior and the sheathing of a wood frame house can be eliminated through the use of an incombustible mineral sheathing. Such a sheathing provides its own firestop on the inside of the structure. Nor can a blaze travel far up the air space between the brick and the sheathing because of the facing of incombustible materials on both sides.

In laying up brick veneer over mineral sheathing the brick are tied in with metal ties, which are nailed into the sheathing with no more difficulty than the same ties are nailed into wood. This is made possible by the gypsum composition of the incombustible sheathing.

Mineral sheathing comes in large panels, which are tongue-and-grooved and which, in consequence, make possible a wall that is sealed against the infiltration of wind and which cuts down the escape of furnace heat.

Sees Higher Plane of Living in New Homes

Improved living conditions are clearly shown in the construction of new homes in practically all parts of the United States and the installation of additional conveniences, reports James A. Taylor, acting chief of the division of building and housing of the United States Department of Commerce. His report is based on a survey regarding modern trends in home building just made by the housing division in 38 American cities.

The built-in garage has descended from the very expensive house and is now found in the medium price field. On streets where there is a considerable amount of automobile traffic families are living more and more in the back of their houses. A sun parlor at the rear of the house is fairly common and the real living room is no longer a curiosity.

Artist Paints Breakfast Nook in Blue and Yellow

A color scheme for a breakfast room may be suggested by our own exalted Whistler. His painting of a breakfast room surpasses anything in color combination yet seen, unless it be his own Peacock room.

He painted that small and cozy room in blue and yellow. Think of it, think of the beauty of the combination, the sense of selection!

Blue always makes a room look larger even though it be ever so small, and yellow brings the effect of the sun's rays to so much more prominence.

The ceiling he painted light blue, like the very sky itself. The cabinet work and the furniture were of the light radiating color—yellow; the curtains white, but worked in yellow. And you can well imagine the beauty of it all when in the morning the table was set for breakfast with dainty blue china—so simple, and yet so joyous!

Standard Slate Roof Not Heavily Framed

Pitched roofs are very easily covered with slates. This type of material is particularly well suited to a wet climate, as the weight of the roof covering prevents it from being easily torn off in stormy weather.

It has sometimes been stated that this heavier roof covering requires heavy roof construction. This is not true when slate of the commercial standard thickness is used.

After the Rain

If after a heavy rain, plaster is damp at the side of the fireplace, have a roofer inspect the roof to see that all flashings are tight. Inspect also the points where the wall joins the chimney stack. Make sure that there is not a leak at the top of the stack itself through a defective coping.

LIVE STOCK

STEERS GAIN FAST WHILE ON PASTURE

Has Many Advantages Over Dry-Lot Feeding.

Pasture for steers which are being fattened, adds to the profit obtained from them, as against dry-lot feeding, it is indicated in experiments carried on at the Ohio agricultural experiment station in 1928.

Summarizing the results of the test, Paul Gerlaugh of the animal husbandry department of the experiment station, reports that "steers fattened while on bluegrass pasture made more rapid gains, much more efficient gains, shrank more enroute to market, sold for less money on the market, dressed 1 per cent less, but returned more profit than steers fattened in a dry lot.

"In June, nine Hereford steers were turned into bluegrass pasture and fed ground shelled corn and linseed meal. Similar steers were fed in a shed and given a ration containing ground shelled corn, linseed meal, corn silage, and mixed hay. Both lots had been fed from December to June on a ration of corn silage, linseed meal, and alfalfa hay. Their average daily gain during this period was one and one-half pounds.

"From the start the pasture-fed cattle made more rapid gains although their condition did not show it. Evidently they were growing more than the dry-lot cattle. The cattle on pasture were much slower in taking hold of the grain ration. However, at the end of six weeks both lots were taking the same amount of ground shelled corn and thereafter the cattle on pasture consumed more corn than the dry-lot cattle.

"The results of the test indicate strongly the advisability of full-feeding corn to cattle on pasture and feeding long enough to obtain sufficient condition on the cattle to remove them entirely from grass cattle competition. A short feeding period on pasture will not do this."

Herd Success Depends on Vigorous Animals

No structure is secure without a strong foundation. Likewise your success in establishing a herd of cattle depends on the strength of the foundation. Pedigree is not the main thing, although it is important.

Constitutional vigor and strong individual character are most important of all. Without these there is no dependable foundation upon which to build. These qualities are characterized by the following outstanding points: Deep heart girth, well sprung ribs and hips, well shaped and finely chiseled head, horns well set on and symmetrical, strong facial expression with large, full expressive eyes set wide apart in an ample forehead, bone enough throughout the frame, but not too much.

Cattle Sterility Due to Some Organic Ill

Barrenness, or failure to settle, is a condition which renders the animal incapable of becoming pregnant. It may be a congential condition due to permanent abnormal structure of the reproductive organs. When so diagnosed by a veterinarian, it is best to sell such animal for beef.

Failure to settle may also be caused by a bull that is diseased or otherwise sterile. However, it is nearly always due to germ infection of some part of the female reproductive tract. It often follows cases of retained placenta (afterbirth). The germs attack the tissues of the reproductive organs and so impair them as to make pregnancy impossible. The infection kills the male or female reproductive cells or causes expulsion of these cells because of improper nourishment.

Sanitation Necessary for Healthy Swine

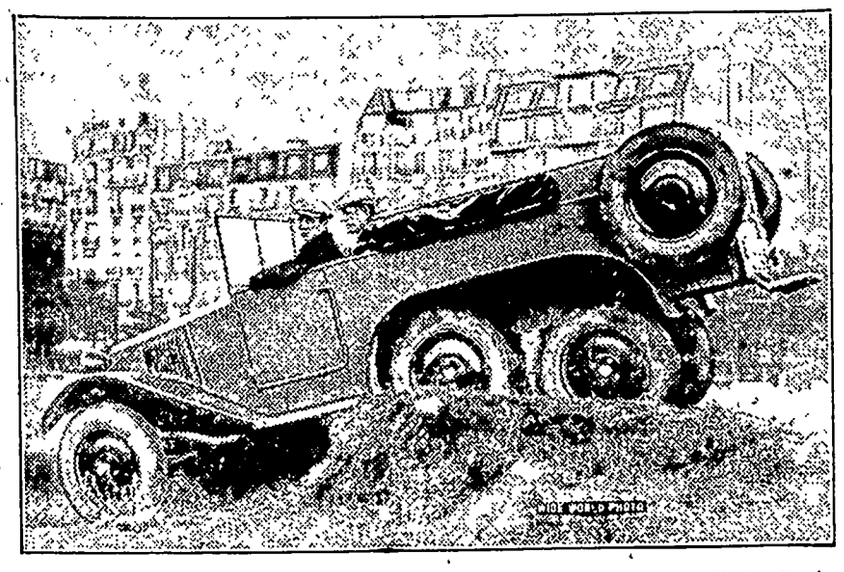
Every experienced breeder and all authorities agree that hog sanitation has become absolutely necessary, not only for reserved brood sows and pigs, but also for the entire herd of stockers.

Maintaining the health and steady growth of the herd by preventing losses from diseases and worms, means more pigs raised per sow, quicker maturity of the herd, and greater profits. There will be no profits if these disease losses are not stopped. Rapid increase of the various ailments common to hogs and little pigs simply means that you must protect your herd and your investment against these losses or quit the hog business.

Shipping Cattle

When a small number of valuable animals is to be shipped it has been found to be good policy to tie the animals, and also to build partitions between the animals. Shipping show cattle brings out this type of car, and there are innumerable ways of building up the cars. Almost invariably the cattle stand crosswise of the car, and it seems that the cattle are better able to brace themselves for the shock of the sudden stop and start of the train when they stand crosswise.

IDEAL AUTO FOR BUMPY COUNTRY ROADS



A new motor car recently exhibited at the Salon de l'Automobile in Paris, possessing six independent wheels and which can run over obstacles as here depicted. It is powered with a four-cylinder air-cooled motor and can attain a speed of 60 kilometers an hour.

PERFORMANCE OF ANY SPARK PLUG

Best Condition Means Maximum of Efficiency.

With the general trend toward higher compression engines, the importance of keeping the spark plug in the best condition cannot be over-emphasized if the motorist would enjoy the maximum of efficient car operation, according to an engineering bulletin, which says:

"A surprisingly large percentage of poor performance may be traced and often eliminated by an examination of the spark plugs, which are often responsible for engine trouble coming under the following classifications:

Trouble Classifications.

1. Engine hard to start—misses at low idling speeds, sluggish.
2. Engine loses power on long runs, at high speed, on hills or hard pulls.

"Conditions described above may be due to fouled, worn out or wrong type spark plugs, or to improper adjustment of spark plug gaps.

"If the plugs are fouled, obviously they should be cleaned, and if worn out they should be replaced. If the gap is too wide it should be adjusted to .025 inch for average engines and .020 inch for high compression engines. The distributor contact points should also be cleaned or renewed and the gap set at no less than .016 inch or more than .020 inch in most cases.

Cleaning Easily Done.

"In the case of fouled spark plugs that are comparatively new, cleaning is easily done:

"Fill the lower part of the plug with alcohol, metal polish or equal parts ammonia and water, and let it stand for a few seconds.

"Rub carbon from insulator with stiff wire or small wooden peg covered with one thickness of cloth. Then wipe the plug dry. Clean the sparking points with emery cloth. Adjust the gaps. Car manufacturers recommend that spark plugs be renewed every 10,000 miles because worn out plugs cannot be restored by cleaning."

Highway Grade Crossing Accidents on Increase

Of the 5,036 highway grade crossing accidents in which motor vehicles were involved during the past year in the United States, 1,275 resulted from motorists crashing into the sides of trains, which were either standing still or in motion. This was an increase of 113, or 9.7 per cent, compared with the number of such accidents in 1927. Highway grade crossing accidents resulting from motor vehicles being struck by trains totaled 3,761 in 1928, an increase of 74 compared with the preceding year, or an increase of 2 per cent.

AUTOMOBILE HINTS

Modern man drives 2,000 miles in a week and calls it taking a vacation.

* * *

Statistics show there is one automobile for every 70 of the world's population. Some drivers seem to have an idea it is up to them to kill off the other 69.

* * *

"And how do you know I spent my vacation driving a motor car?" asked the amazed client. "That," said Sherlock, "is elementary. Only the back of your left hand was sunburned."

* * *

The town of Montelimar, France, averages 200 arrests of speeders a day. One reason for this is that the legal speed is seven miles an hour, and, secondly, the law is enforced.

* * *

The movement is gaining ground to have the name of every community painted on some conspicuous roof. This will be a great help to the motorist struck by a fast freight at the crossing.

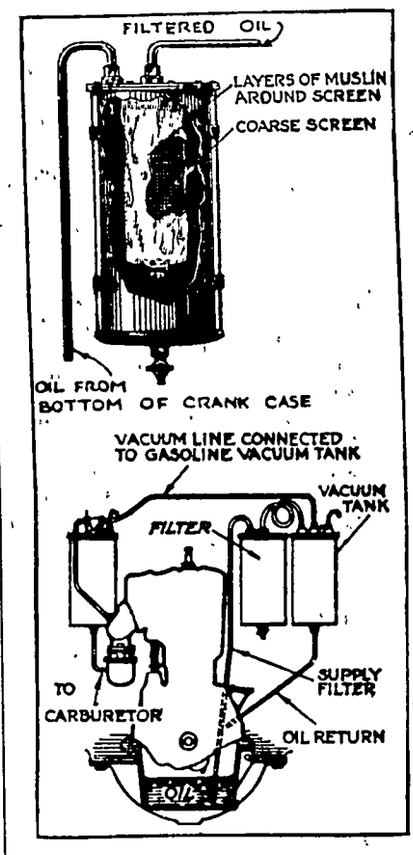
* * *

"Perhaps the proposed 200-pound automobile would give the pedestrian less to contend with." We don't know: A Brooklyn girl was taken to the hospital recently after being run over by a baby buggy.

Homemade Oil Filtering System Fits Any Motor

The illustration shows a homemade oil filtering system that can be applied to any automobile to make it modern and up-to-date.

You need one vacuum tank in good working order. A serviceable one can be obtained at a low price from any auto wrecking yard. In addition, you need the outer shell of another vacuum tank to serve as a filter compartment. Of course, this tank could be soldered up from sheet metal in any shape desired. Copper piping is used to connect the tanks as shown in the illustration. If your car is fitted with a vacuum tank to supply gasoline to the carburetor, fit a tee instead of an elbow on the intake manifold pipe. If your car has no vacuum tank, run the air pipe from the vacuum tank which is to pump oil through the filter directly to a coupling fitted into a hole



This Oil Filtering Device Can Be Applied to the Lubrication System of Any Auto Motor.

drilled in the intake manifold. As long as the motor is running, oil will automatically be pumped up through the filter and allowed to run back into the crank case. This system will work perfectly on any type of gasoline engine no matter what type of lubricating system is used.—Popular Science Magazine.

Junked Cars Cluttering Highways Called Menace

There are scores of thousands of automobiles on the highways today which were actually disposed of by their owners as junk, but which were salvaged, put in running condition and sold by junk dealers, according to the safety division of the American Automobile association.

The American Automobile association points out that it is a common practice throughout the country to buy junk cars for a few dollars, put them in some degree of running shape and sell them back to the public.

"These mechanically ungood cars," says the American Automobile association, "produce three very bad results. First, they create a serious hazard and intensify the safety problem. Second, they clutter the highway and increase congestion by reason of their inability to maintain anything like an average rate of speed. And, third, since these salvaged cars are almost invariably the first venture of their buyers in car owning, they get badly stung and oftentimes get soured on automobiles in general."

Find Another Effective Anti-Freeze Combination

The United States bureau of standards has found another anti-freeze that is said to be even more effective than glycerin, in that not as much is needed proportionately. That is ethylene glycol, a petroleum product which has the advantages of both alcohol and glycerin. It costs more than glycerin.

Glycerin mixes easily with water and is kept in circulation by the pump or the thermo-syphon system of cars without pumps. It doesn't settle either down or up, so as to permit any part of the cooling system to freeze while the engine isn't running.

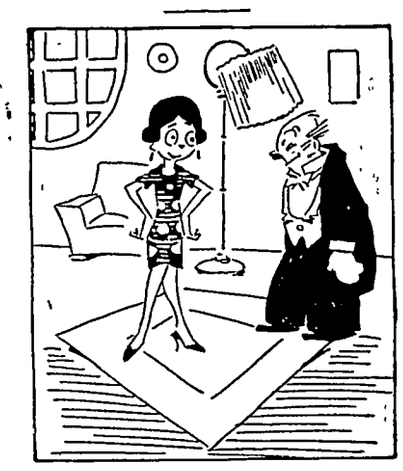
A Few Little Smiles

QUITE HOPELESS

A young student provoked his teacher very much by the excessive use of "have went" instead of have gone.

One day the lad was in school after dismissal and was told to write "I have gone" 100 times. When the task was finished, the teacher being out of the room, he wrote a note as follows: "I have finished my work and I have went home."—Wall Street Journal.

WENT TO PIECES



"You know that terribly fat girl John went with? He dropped her."

"You don't say. What happened?"

"She went all to pieces, of course."

Especially on Sundays

Unless the careless nuts can learn
To drive more carefully,
It doth behoove the rest of us
To do ours prayerfully!

Saving Time

"Are you still taking a cold dip every morning?"

"No; I stopped doing that to save time."

"Why, a cold plunge doesn't take more than a minute or two."

"I know; but I used to spend three-quarters of an hour beforehand in bed hesitating."

A Hopeful Sign

"Dear," said Mrs. Brown, "I believe mother is offended about something. She hasn't been to see us for several days."

"Be sure," said Mr. Brown, "to find out what it is when she comes and we'll try it on her again."

Sport Writing on Society Events

Ed—I see Myers, our baseball expert, got in bad when he wrote up that society wedding.

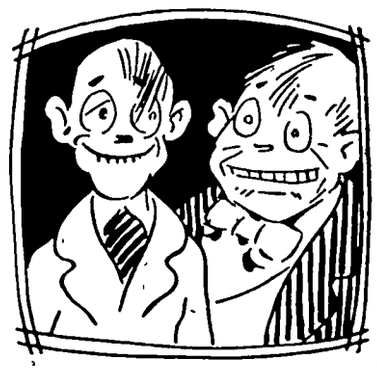
Bill—Yes, he continually referred to the bridegroom as "the main guy of the show."

It's Spade Work

Question—What is the difference between realism and modernism in literature?

Answer—Realism calls a spade a spade a spade. Modernism tells you what is on the spade.

HAD TO GIVE UP ONE



"Why did you sell your car, Ed?"

"Well, you see, I couldn't afford to buy gas for both my car and my cigar lighter."

No Use Kicking

The Philistines brave Samson slew.
An ass' jawbone carried through.
The ass declares, and stands aloof,
"The head is mightier than the hoof."

And Now He Is in Prison

Howell—Poor Rowell was always trying to raise money.

Powell—Yes, and it turns out that he raised it the wrong way.

Howell—How so?

Powell—He raised checks.

Well Escorted

Lady (engaging maid)—As for your evenings out, I am prepared to meet you half way.

Maid—No need to do that, ma'am. My young man'll see me to the gate.

Explained

Louise—You mean to tell me that the escaped convict lived for six days in a cave without food?

John—Oh, no, he lived on milk.

Louise—Where did he get it?

John—He had the sheriff's goat.

Not Very Well Acquainted

"Do you know that fellow Snyder?"

"I should say I do. I loaned him $10 this morning."

"No sireel Then you don't know him at all."

WOOD SWALLOWED UP BY PRINTING PRESS

Any large daily and Sunday newspaper with its many sections and supplements is one of the chief consumers of the forest resources of the nation, according to a survey of reforestation needs by Farm and Fireside.

One week's publication uses enough paper to represent the pulp from 400 acres of trees, or 20,000 acres of forest in a year. At least 10 square miles of forest go to the pulp mills every day in the year to keep the presses of the country running.

The United States uses more wood per capita than any nation in the world. More than two-thirds of the 822,000,000 acres contained in the country's original forests have been pulled, cut over or destroyed by fire. About 26,000,000,000 cubic feet of material are taken out of the forests every year for all purposes, while only about 6,000,000,000 feet are growing new in them. All kinds of trees are being consumed faster than they are being grown.

Since 1909 the United States has used more wood pulp than it has produced. Two-thirds of the present supply is being imported from Canada.

"ADVERTISE OR BUST," IS DEWAR'S SLOGAN

Lord Dewar made a number of characteristic remarks on advertising recently, when he opened the seventh annual exhibition of the London and North-Eastern railway's posters at the New Burlington galleries. "Samson," he declared, "got some wonderful advertising results when he took two columns and certainly brought down the house." "If you do not advertise you fossilize. A man upon his trade relies. He must either bust or advertise." "The prophet without honor is one who does not know how to advertise." "Some people are always looking for a new kind of mistake to make." "Success is merely a matter of buying your experience cheap and selling it at a profit." "We are gradually and surely moving along to better times. If we will say 'hats off to the past and coats off to the future,' and act up to it all will come right."

Devotion and Recreation

Members of the baseball team in Roanoke, Mo., go to Sunday school in the morning and to the baseball diamond in the afternoon. Responsibility for dividing the Sabbath day between the church and baseball is due to Eddie Lockridge, pitcher and star. He is active in church work and while not believing it is wrong to play ball on Sunday, has contended too much time is given over to the sport that day. In placing his position before his teammates Lockridge compromised with the understanding the team would go to Sunday school in the forenoon and play ball in the afternoon.—Indianapolis News.

Army of Hunters

Pity the poor, wild game of this country! Based on last year's figures, an army almost three times the size of the A. E. F. in the World war is about to move on the rabbits and deer, ducks, partridges and other game fowls and animals. Hunting licenses for the 1928 season were issued to 6,450,000 people, who paid in excess of $9,000,000 for the privileges of hunting. New York state led with 675,780 licenses and Pennsylvania was second with 517,729.

White Rhino Becoming Rare

The white rhinoceros, the third largest of living animals, is rapidly decreasing in numbers. They haunt a small area on the Nile in Uganda, where there are wide expanses of papyrus swamps and intense heat. These huge mammals, noted for their shyness and their remarkably keen sense of smell, are not really white, but a pale, dust brown. The herd is thought to number only about 45 animals and is under government protection.

Coal From Ice Fields

Every once in a while some scientist undertakes to figure out the amount of coal available, but it seems to be generally agreed among polar explorers that the world's greatest untouched coal fields lie in the Antarctic. There have been several reports of the presence of coal in the Antarctic regions and it is expected that they will be confirmed by Byrd.

Another Surgical Triumph

Something new in the line of surgical activities was disclosed at Great Falls, Mont., when a surgeon at a dog and cat hospital operated upon a dog for removal of a silver dollar from its stomach. The operation was a success, the dollar was recovered and the dog regained its health.

Completing the Job

Mrs. Jello—Doctor, is there no hope for my husband?

Doctor Killum—No, I don't think your husband will recover, but to make sure I'll call in another physician.

Getting a Husband

"What a girl needs in life is some good right arm to protect here."

"And if she doesn't happen to land a good right arm, a southpaw will do."

Place, Not Time

"Where do you bathe?"

"In the Spring."

"I didn't say when; I said where."—Stray Stories.

IN LIGHTER VEIN

The Pessimist

"I've got half a mind to get married."

"Well, that's all you need."

Latest Model

Friend—Your wife is a picture!

Newlywed—You said it! The talking kind.

Extreme of Boldness

"She certainly is a bold thing."

"Terribly. She even high-hats her milliner."

At Least That

"Yes, Albert has drawn an awful picture."

"Only one?"—Madrid Buen Humor.

The Style

"Is the furniture in their home modern?"

"Sure! It's all antique."

No Use

"Pa says there will be a coal shortage by 1940." "What's the use of looking for trouble that far ahead?"

None at All

Salesman—"This machine will cut your work in half." Customer—"Let me have two."—Montreal Star.

C'est Ca?

Peggy—Going abroad?

Polly—Yes, I think I need a new French phrase.

Something Else

"Do you honestly believe cigar ashes are good for the rugs?" "Yes, but I can't get my wife to believe it."

Uh?

"Women no longer wear elaborate hats."

"Well, who looks at hats?"

TRUTH TABLETS

Gossips know how to make even the little things tell.

Eve had the best husband in the world—at that time.

No man approves of flirting—unless he is in on the deal.

If you are trying to seem young, be careful of your recollections.

Dame Fortune is a fickle jade that all men woo and try to win.

There will come a thrashing time for those who sow wild oats.

Heaven never helps the man who is a victim of that tired feeling.

Democracy gives every man a right to be his own oppressor.—Lowell.

A self-made man is too much inclined to be astonished at himself.

Our young men still burn the midnight oil, but most of it is cylinder oil.

Many a good golf shot has been ruined by a passing thought of business.

Don't waste words when talking to a woman; cut your story short and let her do the talking.

A man who is icily keeping his temper can be fully as disagreeable as one who swears.

Solitude is as needful to the imagination as society is wholesome for the character.—Dryden.

It is a noble and a great thing to cover the blemishes and excuse the failings of a friend.—South.

Lion's Dentist Gets Nerve.

Surgical treatment of two trained circus animals gave the residents of the Latin quarter of Paris a thrill recently. Doctor Stroumga, of the Paris Faculty of Medicine, operated on the "patients." He entered a lion's cage and removed the nerve of a tooth which had been troubling the king of beasts, after the animal had been tied to a board. Doctor Stroumga then treated an elephant which was afflicted with bunions on one foot.

Seek Sunken Treasure

Dynamite and powerful magnets are the implements being used to salvage a sunken ocean liner whose treasure room contains gold and silver valued at more than $5,000,000, says Popular Mechanics Magazine.

The ship is the Egypt, which sank in 360 feet of water in the Bay of Biscay in 1922 with a loss of 87 lives. In its hold is the bullion, which was consigned to the Egyptian treasury.

Recovered His Horse

Anthony Wasko of Towanda, Pa., knows his horse and his horse knows him. It had been missing for a week. Anthony discovered a cave-in of an abandoned coal mine shaft where the horse had been grazing. He called down the shaft. The horse answered him and Anthony went for block and tackle. The horse was pulled out unharmed.

Followed Suit

"What did you say when you proposed to Muriel?"

"I told her the truth. I said: 'I am nothing, I have nothing, and I can do nothing.'"

"What did she do?"

"She did nothing."

Still Untold

"I heard a new story the other day. I wonder if I've told it to you?"

"Is it funny?"

"Yes."

"Then you haven't."

To Finish the Job

His Wife's Mother—I nearly died laughing at that story you told.

Mr. Pester—That so? Listen; I'm goin' to tell you a few more.

LIVING "RUG" GAVE ZEST TO FESTIVITY

An exciting and novel idea for a party was originated by the Marchesa Casati, Lord Hasting's beautiful mother-in-law at Venice. The marchesa received her guests seated on a golden sphere with a real tiger lying at her feet. The animal had been brought from a local zoo, and its keeper, disguised as a guest, was in close attendance. So enchanted, however, was the keeper by the splendor of the scene—all the most beautiful women of Venice were there, and it was a costume affair—that at the moment when his services were urgently required he was off his guard. The tiger was asleep, and one of the women guests, mistaking it for a rug, gave it a slight dig with her foot. Immediately the "rug" gave vent to a roar which froze the marrow of all present and trotted toward the door. Many of the women fled screaming from the room. Fortunately the keeper was able to recapture the beast without trouble.—London Mail.

High Praise Conveyed in Three Short Words

Dr. William A. Muhlenberg, who founded the Church of the Holy Communion in New York, is claimed by a correspondent of The Churchman to be the author of the world's shortest sermon.

The occasion was the burial service for one of his trustees. He gave out his text, Micah 6:8, which reads "He hath shewed thee, Oh, man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" His sermon was, "He did this."

Recently The Churchman expressed the belief that a sermon by a Catholic priest in Toronto during the hot weather this summer was the record holder for brevity. That sermon, however, ran to 100 words.

See End of Tsetse Fly

As the result of experiments being conducted in the tsetse belt of Natal, the South African government is hopeful that an effective means of combating the ravages of the deadly tsetse fly has been at last discovered. A special poison in powdered form has been sprayed over donkeys. The tsetse fly, when it alights on the animal, absorbs the poison through its feet and dies. Reports so far received show that the experiments have been successful, giving hope that one of the worst plagues with which the farmer of South Africa has to contend is doomed.

Gold Stream Reduced

It has been a long time since the "forty-niners" made their rush for the gold fields of California, but still the mines continue to pour out a stream of precious metal, though the stream is lessening somewhat, judging from the 1928 figures.

The production of gold, silver, copper and lead for the year reached a total value of $15,381,783, a decline of about 9 per cent from the preceding year. This does not take into consideration the stream of gold pouring into Hollywood.

May Save Paper Parasols

Chinese paper parasols, once popular in this country until Americans turned against their odor and their propensity to wilt in the rain, may be saved by Americans. Chinese students of American universities are trying to find a deodorant for the oil used on the parasols, and treated American kraft paper is hoped to make them more durable. Four years ago half a million Chinese parasols were carried in the United States; now there is practically none.

Paris Rubbish Profitable

Nearly 800,000 tons of rubbish are being collected and incinerated every day in Paris. The waste gases given off in burning it are being used to produce electricity, and a big revenue has been derived from turning the clinkers into bricks.

Had Reasons

Dauber—My picture was turned down by the exhibition hanging committee. I don't believe they even looked at it.

Friend—Nonsense. They must have seen it or they wouldn't have done such a thing.—Pathfinder Magazine.

Natural Fountain

Seepage water from irrigation enters a large pear tree at Brass Valley, Calif., and issues under pressure four feet up the trunk. The trunk forks at that height and a crack in the fork forms the vent for a tree fountain that is attracting much notice.

And Ears

Patron—That barber down the street has cut his prices down to 40 cents for a haircut.

Barber (after withering silence)—Yeah? Well, a good barber cuts hair and a poor one cuts prices.—Cincinnati Enquirer.

Would Try to Remedy That

"Theory and practice are very different things," said the professor.

"Yes, indeed," assented the medical student. "I pay for theory and intend to be paid for practice."—Stray Stories.

Have Confidence in America

Dr. Julius Klein, assistant secretary of commerce, says that citizens of other countries hold more than $7,000,000,000 worth of investments in the United States.

STAGE SNOW MADE BY CORN FLAKES

There is still hope for the salvation of the great American corn raiser.

Corn has gone into the movies in a business-like way. Heretofore the slapstick comedies may have used a few roasting-ears, with sound effects, but now corn is going into Hollywood in a determined manner and mingling with the great and near great in its most commonplace form—hominy.

"The film experts," says Farm and Fireside, "have discovered that there is nothing quite so good as corn flakes for faking a real, old fashioned blizzard. The corn flakes are specially made from hominy and are thin, white and airy. A bushel of corn flakes and an electric fan will make a snowstorm anywhere, even in California."

Newest Dress Fabrics Composition of Metal

Flexible fabrics containing layers of metallic foil have been perfected by German manufacturers, and women soon may go to dances and the opera in stunning evening gowns of metal, while their escorts will be clad in a modern adaptation of the suits of armor worn by knights of old, says the San Francisco Chronicle.

The new "cloth" is made of thin sheets of aluminum, resembling tin foil or gold foil, and coated on both sides with protective material not unlike the plastic substances used in manufacturing rayon. This fabric is said to be almost as light as silk, tough as leather, waterproof as leather and bright and heat-reflecting as aluminum. Of this material raincoats, umbrellas, and even dresses and business suits may be made. Not only striking frocks for women, but also beautiful effects in household decorations will be obtainable in the new fabrics, according to the makers.

Great Geyser Exhibit

The most comprehensive geyser exhibit in the world has been placed in the new Yellowstone Park museum building at Old Faithful, under the supervision of Dorr C. Yeager, park naturalist. It consists of specimens of the various types of geyser and hot springs deposits and of diagrammatic paintings showing how a geyser works, and of the evolution of a geyser through the geological ages. The museum has been located at Old Faithful because that is the geyser capital of the earth More active geysers of the first order are to be found within a ten mile radius of this spot than in all the rest of the world put together.

Variations in Sugar

Eight sugars, all alike in having their atoms arranged in rings, are described to the American Philosophical society by Dr. Claude S. Hudson of the United States public health service. But some of their effects "are as different as can be," he says, due to slight alterations in arrangement. They are glucose, galactose and mannose, found in nature, and allose altrose, gluose, idose and talose, thus far made only in laboratories.

Hunter's Luck

The prize story of the California deer season was recounted by William Thompson, of Santa Rosa. He fired at a buck which was standing on a steep bank and the animal fell mortally wounded. In rolling down the bank the deer locked horns with another buck, which had been under cover. The subsequent tangle enabled Thompson to shoot the second deer, his season's limit.

State Botanical Garden

A large tract of land known as the Rancho Santa Ana in southern California has been set aside and developed into a great botanic garden in which all species of plant life to be found in the state will be cultivated. More than 45,000 plants already have been propagated, and work is under way for the complete collection of native flora.

Birds, Alligators, Her Pets

Miss Beatrice Harrison, whose cello playing induced nightingales to sing for the radio in England, is gathering a unique collection of pets at her beautiful home at Oxted. A number of alligators live in a tank in the dining room, basking on a tree trunk during the day. The room also contains a number of birds, including a singing parrot, and seventeen dogs.

First County Agent

J. L. Stallings, deceased, of Smith county, Texas, was the first county farm demonstration agent in America, appointed in 1906. The work he started is now being carried on by more than 2,400 county agents.—Farm and Fireside.

Start at Home

"I'm taking reducing exercises, Robert," said Mrs. Winkley.

"I wish you could induce the household expenses to join you," responded her harassed husband.—Montreal Star.

Lures

Mrs. Bones—How do you propose to get your husband away from the city?

Mrs. Jones—Oh, I've sent for some seed catalogues and a booklet on fox-farming.

No Place to Go

She—Darling do you think there can be people in the moon?

He—How could there be? Where would they go when there is no moon?—Kikeriki, Vienna.

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Glen Lange picked corn for Lew Griffen a few days last week.

Wayne Lemke visited at the home of his folks over Sunday.

Mr. and Mrs. J. J. Lemke were Jewell visitors Monday.

Mr. and Mrs. John Lemke were Sunday guests at the Otto Lemke home.

Mr. and Mrs. Geo. Schoenwetter and children visited at the Ralph Ludeke home Sunday.

The W. F. M. S. will meet at the home of Mrs. Floyd Franklin on Dec. 4 instead of at the church.

Mr. and Mrs. John Lemke were visiting at the Tim Waddingham home Tuesday.

Mr. Albert Reimer of Garner, assisted Emil Beier with making a fence Monday.

Miss Ethel Schoenwetter is unable to attend school this week due to having a siege of mumps.

Kenneth Gast visitd at the Albert Borchers home near Garner last week.

Mr. and Mrs. Ralph Carolus and sons were visiting at the Albert Carolus Sr. home Sunday.

Mr. and Mrs. Henry Ludeke and son were Sunday visitors at the Otto Lemke home.

The Lau Brothers installed a new Crosley Radio at the J. J. Stille home Thursday.

A baby girl was welcomed at the home of Mr. and Mrs. Quinten Stille Monday evening, Nov. 25th.

Mr. and Mrs. Lew Griffen and daughters were entertained at the Otto Lemke home near Garner Sunday.

Walter Blumer was a Jewell visitor Wednesday, taking Tim Waddingham down for medical examination.

Mr. and Mrs. Otto Schlawin and children visited at the home of their daughter and family, Mr. and Mrs. Otto Lemke Sunday.

An oyster supper was held Church last Thursday Rev. showed some slides and a good time was had. About were present.

Miss Bernice Tanner held ket and pie social at her sch Friday evening. Due to the greeable weather a rather crowd was in attendance. A program was given by the and also a play was given by Klemme high school student bout $25 was realized from th of articles auctioneered.

KLEMME HIGHWAY SIGN P ON WILSON SATURDA

Travelers Will No Longer Past Road Leading To Kle

Saturday the large highwa directing the way to Klemm erected in the "Y" at the highway just west of Klemm big marker fills a long felt ne in the past many people bou Klemme drove past the road town, as there was no good n The big sign at the interstect not very easily missed.

The new sign which the tow erected is built of lumber and best looking highway town sig tween the Twin Cities and K City. The sign is twelve feet and the background is paint nice yellow. The sign is three wide and the black letters "K ME" are eighteen inches high average about sixteen inches The letters are raised, being cu of one inch lumber. The raise fect makes them more easily and easily kept painted. Belo word "Klemme" the direction Mile" with an arrow indicatin direction.

The signs, there are two of t are elevated on heavy posts, an bottom of the sign is 5½ feet the ground, the top 8½, which es the sign easily read from a

It is a fine improvement at highway leading into Klemme. suggest that the town dads no a little further and have ele lights run out to the highway have the sign well lighted and lights at intervals along the s road to town. What say? Let's is the job!

GOODELL AND VICINITY ITEMS OF INTEREST

(By Special Correspondent)

Mr. and Mrs. Ernest Helsp spent Sunday at the Tom Roths home.

Mr. and Mrs. Jule Cook and Dolores were Belmond callers Saturday.

Mr. and Mrs. A. C. Carpenter were Ventura callers at the Newberger home Tuesday.

Mr. and Mrs. W. N. Allaben spent last Wednesday at the home of their daughter, Mrs. Jay Buchanan.

Geo. Buseman was helping Tom Roths with shredding at the Jay Grigs farm Friday.

Father Malloy of Belmond was a visitor at the Justin Lowenberg home Thursday.

Donald Newberger of Klemme was a caller at the Ed Hemenway home.

Vogel Christenson and Florence Mason attended the show in Belmond Friday night.

Misses Nadia Wesenberg and Florence Mason were Belmon dshoppers Friday morning.

Miss Evelyn Hetland spent Thursday with her teacher, Miss Letha Van Nostrand.

Mrs. Carl Robbins, teacher of the Quigley school, had a basket social Tuesday night.

Mr. and Mrs. Alf. Carpenter spent Sunday afternoon at the Leon Sherwood home.

Fred Gealow had the misfortune to injure his eye while cutting wood. A splinter struck his eye and he had to have it dressed by Dr. Snearly.

Mr. and Mrs. Jay Griggs, Nellie and Kenneth spent Sunday at the home of her parents, Mr. and Mrs. Henry Grosz of Meservey.

Mr. and Mrs. Glenn Avery spent Thursday evening visiting with his parents, Mr. and Mrs. Geo. Avery at Belmond.

Mr. and Mrs. Justin Lowenberg are the parents of a baby daughter Mrs. Lowenberg who has been critically ill is somewhat better.

Mrs. Geo. Snearly returned from the Hampton hospital Friday where she had submitted to an operation. Her many friends are glad to know she is making a speedy recovery.

Mrs. Rose Houghton, Mr. and Mrs Denny Conlan and Mrs. L. E. Avery Harvey Hubbard and Miss Edith Halfpop attended the social in District No. 5.

A basket social was held at Avery Center school last Thursday night. A good program was rendered and a fair size crowd attended. The proceeds amounted to $14.10.

While repairing some batteries in the garage Mr. Anderson accidently burned one of his eyes with acid, which caused him to suffer great pain.

C. H. Thomas of Kanawha was arrested by Game Warden Moses for having 25 muskrats in his possession which were thought to have been trapped illegally. His case was tried at Kanawha before a jury who pronounced the furs were legally trapped, thus clearing the defendant.

Mrs. Ed. Hemenway's father and mother, brothers and sisters and families, surprised her Sunday and brought well filled baskets and all enjoyed a Thanksgiving dinner together. Mr. and Mrs. Martin Rasmussen and family of Crystal Lake were also present. Mrs. Rasmussen will be remembered as Miss Winifred Tisor.

School Notes

The "Fun House" presented by the whole school Friday night was well attended. Ten booths were on display, a good program and two good side shows. The Home Ec. Girls made and sold candy, sandwiches, coffee and etc. They netted a nice some of money

This week ends aonther six weeks period.

Miss Boller visited school last Wednesday afternoon.

Mr. and Mrs. Geo. Albers ,accompanied by Mrs. Dick Swalve drove to Mason City Monday to bring Mr. Swalve home from the hospital.

Mr. and Mrs. Dave Schwichtenberg and family visited at the Herman Neuhring home last Sunday evening.

KLEMME LOCALS

XMAS CARDS—In boxes at 50c and $1.00. Others priced at 25 for 75c and up. Printed names at a small extra charge. Order now, as we have already placed many orders. Times Print Shop. 1tc.

Wallace Pavey suffered a smashed finger on his left hand Saturday when he was cutting a shaft at the Farmers Elevator. The shaft had a heavy cog-wheel on one end and it dropped catching his finger between a cog of the wheel and the wall.

Salmer Sieverson of Blue Earth, Minnesota, and Tommy Larson, of Scarville, Iowa, visited at the J. W. Johnson home last week. They were on their way home from a trip through southern Iowa.

Rev. and Mrs. H. E. Whyte and Mrs. R. A. Jorgenson were at Mason City Monday afternoon and visited with Mrs Fred Kluckhohn at the Mercy hoepital. She is getting along fine and they report that she looks good and is feeling better.

Arthur Wellemeyer and family will drive to Charles City Thanksgiving Day to have dinner with his mother. Miss Ethel came today from Cedar Falls to spend the short vacation at home.

Mr. and Mrs. Tom Blank and daughter, Miss Marie, and Milvern Lau, drove to Rowan Sunday for a visit with Mr. and Mrs. Worthy Usher and to see how the new baby was getting along.

Mrs. Grange, chairman of the local Red Cross Drive wishes to thank all the people who contributed to the fund, and to those who helped put the drive across. Klemme did very well as the people here subscribed $63.50.

Mr. and Mrs. C. F. Keraus, Mr. and Mrs. Clarence Waterman and daughter, Marian, Mr. and Mrs. R. A. Jorgenson and son, Buster, all of Klemme, and Mrs. Sawyer of Clear Lake, were entertained to a delicious duck dinner at the home of Mr. and Mrs. Tom Mitchell at Swea City, Sunday.

Here's an item we misplaced last week: Emery Schaefer and family spent Sunday at the C. C. Schaefer home at Marble Rock. Miss Hilda Schaefer came to Klemme with them for a short visit. Teusday Mr. C. C. Schaefer and daughter Doris drove to Klemme nnd Doris remained here for a visit at the Emery Schaefer home.

Miss Wilma Trumbell took her cast of high school playres to Clear Lake Saturday evening, where they gain their play, "Memory Rose." The Belmond school gave "Tea Leaves," and Clear Lake presented, "The Tysting Place." These were the same plays given in Klemme on Tuesday evening of last week. Monday night the three plays were given at Belmond.

The P. T. A. meeting Tuesday evening was well attended and several new members are now enrolled. Everyone interested in school should attend these meetings. The committee in charge of refreshments certainly put out a fine lunch. Next month the committee in charge of the lunch is, Mrs. A. Wellemeyer, Chairman, Mrs. Tanner, Mrs. Bredbenner and Miss Trumbell. Those who are solicited for food should bear in mind that if they cannot donate they should notify the chairman so that there will be enough lunch to go around. A list of those who donate is kept on file, so that those who respond will not be again called upon until their turn.

"THE FARM SERVICE STORE"

What Is The Cost To You A Year?

From Decay, Fungus Growth (Rot), Rats, Mice, Lice, Mites and Disease To Stock---

DECAY and FUNGUS GROWTH (ROT) take a big toll from the farm owner every year.

POST—stock fence, small buildings, wood floors, sills and so forth which are exposed to the weather unless treated do not have the lasting qualities of material 20 years ago. This is a proven fact which you have learned by having had to make expensive replacements. This job of replacing can be extended for at least eight or ten years by a very simple treatment of CREOSOTE OIL.

RATS and MICE—are a costly pest to have on the place. Statistics again and again have proven this to you. Twenty dollars per year would be a very small loss to the average farmer a year. A sure way of disgusting rats and mice is by giving your bins and corn cribs a good coating or sprayng with CREOSOTE OIL. It is a small job compared to the damage the pests can do.

LICE and MITES—are easily controlled. First of all KEEP THE HOUSES CLEAN. Then spray twice during the summer with CREOSOTE OIL.

CREOSOTE OIL—kills all disease germs, not only with those it comes in contact with but the fumes are strong enough to kill many of them also. Use this in the hog house, around the hog lot, give the calf pen a good spraying with this oil and free the calves from warts or fungus growths.

WE ARE GOING TO OFFER YOU A PROPOSITION PROVIDED WE CAN get Buyers Enough So We Can Get In A CARLOAD LOT. We will either be out to see you, or send you a card. Fill out this card and rturn it to us. If you want a barrel, you will get the best buy and the steel drum will be yours. There will be a big saving to you. We formerly sold this CREOSOTE at 75 cents per gallon. A big item in the cost of this material is freight, drayage, and the cost of handling in small lots. Let's get in a CARLOAD and cut this price nearly in two!

Northern Lumber Co.

Service

We are here to give car owners the best of SERVICE in all departments of our garage.

NOW—REAL TIRE SERVICE

We have just added to our equipment the latest type of Electric Tube Vulcanizer. We are now equipped to give you a high class service on tube repairing. Let us vulcanize your punctured tubes and make them as good as nw again.

FIRESTONE TIRES

Have your car equipped now with a set of new Firestones—be prepared for the winter driving season and take no chances on those old tires. You will be surprised how cheap you can have your car re-tired with Firestone Gum Dipped Casings.

MRS. COOLIDGE AND "REBECCA"

By ELMO SCOTT WATSON

THE next time you see fit to urge upon your small son that he make the most of his opportunities because he "may be President some day," you might include among the incentives for that ambition the fact that the White House is, among other things, a place "where it is Christmas every day in the year." For that statement is almost literally true and few are the days, indeed, on which there does not arrive in Washington some new gift for the Chief Executive. These gifts are of every conceivable kind and some of them would seem absurd if it were not for the kindly thought back of the giving.

Most interesting of all, perhaps, are the live gifts which come to the White House. It began as far back as Washington's administration when the king of Spain sent our first President a jackass! Since then the custom of sending, unsolicited, all sorts of presents has grown enormously. In 1802 Thomas Jefferson received from the people of a little town in western Massachusetts one of the most remarkable of all gifts—a cheese weighing 1,532 pounds. The story back of that gift is this:

In 1801 the town of Cheshire was noted for three things—its dairying interests, its loyalty to the Democratic party, in a section of the country that was mainly Federalists, and an able, eccentric and witty Baptist divine named Elder John Leland. One Sunday morning in 1801 Elder Leland announced from his pulpit the plan of presenting to the President, whom they all admired so much, the greatest gift that was in their power to bestow—a mammoth product of their community. July 20, 1801, was the date set for making the cheese and the plan was to have all the owners of cows in the town, with the exception of a few Federalists, make the curd. There was no cheese press large enough for the purpose so Elisha Brown's cider press was called into service. The hoop in which the cheese was pressed was four feet in diameter and eighteen inches deep and was secured with strong bands of iron. Into this the curd was placed and the ponderous wooden screws of the old cider mill were turned down.

At the conclusion of the ceremony, a hymn, lined off by Elder Leland, was sung by the assembled multitude and the cheese was put away to cure. In December Elder Leland and Darius Brown loaded it on a sled on which it was taken to Hudson, New York, and then shipped by water to Washington. The presentation ceremony took place in the White House in the presence of the cabinet, foreign diplomats and other notables and when the formalities were over, the steward of the White House cut the cheese, bread was brought in and all present enjoyed the historic Cheshire cheese.

There is a tradition that Andrew Jackson once turned down a very valuable gift because it did not conform to his democratic ideals. An American naval officer, cruising in foreign waters, came into possession of a sarcophagus of a Roman emperor and wrote to Jackson asking permission to send it to him with the suggestion that he be buried in it when his time came to die. Jackson declined the gift, not because of the gloomy insinuation that his end was near but because he did not think it fitting for a man of the common people, even though he had been elevated to leadership of those people, to be buried in such monarchial splendor.

Another gift, however, which did meet with his approval was a narrow-brimmed beaver hat, sent to him in 1837 by W. H. Peck, a New York hatter.

This gift, taken to Jackson by a friend, brought from him the following letter of acknowledgement:

Washington, March 4, 1837.

Dear Sir: Your letter, and the present which you have so kindly offered me through Mr. Butler, are received with the pleasure which such a tribute is so well calculated to inspire.

Let me assure you that I feel more pride in the gift which you consider an humble one than I should in the costliest present from the hand of ostentation. The hat you have so carefully and skillfully wrought with your own hands I shall wear with prouder feelings than I would a crown.

The power of exalted station is nothing in comparison with the pleasure conveyed in the acknowledgment that I have invested my faculties to sustain the rights of the industrious and producing classes—to opref(ss) and degrade which is, for the most part, the businef(ss) of rulers.

Wishing you great prosperity—a long and useful life—a happy immortality, is the wish of your fellow-citizen,

(Signed) ANDREW JACKSON.

Mr. W. H. Peck.

In some cases gifts to the Presidents have caused them some embarrassment. The imam of Muscat once sent an almost priceless string of pearls to Martin Van Buren. Under the circumstances of their sending to have refused them would have been highly insulting to the foreign monarch. Van Buren overcame the difficulty, however, by accepting them and immediately presenting them to the National museum where they are still preserved. During the administration of President Franklin Pierce, Massachusetts again came into the limelight by presenting to the President a splendid carriage made at Pittsfield and given to him by Boston admirers. Incidentally, Andrew Jackson once received a similar gift, a phaeton, made from the timbers of the frigate Constitution, the famous "Old Ironsides."

Although Abraham Lincoln, the man who said that "the Lord must have loved the common people because He made so many of them," received many gifts from that class of society, the best known of them, perhaps, was a giant white ox and it was named "President Grant" and exhibited on Pennsylvania avenue when Grant was inaugurated President. In the Washington zoo still lives a faded old Somaliland ostrich, presented to President Roosevelt by King Menelik of Abyssinia. A world traveler gave President Benjamin Harrison a parrot which was the favorite pet of the Chief Executive during his administration. It is interesting to note that "Polly," now seventy years old, is still living in Omaha, Neb., the property of a family to whom she was given when the Harrisons left the White House.

The custom of sending a turkey to the White House for Thanksgiving goes back, nobody knows how far, but this annual gift of the national bird is only one of the many samples of frequent additions to the "White House menagerie." During the administration of President Roosevelt he unwittingly started the "Teddy Bear" craze and bears of all descriptions, some of them alive, arrived frequently at the White House. The fact that Roosevelt was a "Rough Rider" and that he had some lively sons whose tastes were similar to those of their father resulted in any number of gifts of ponies. A western politician once presented to President Taft a live goose which was much photographed and got more newspaper notice than perhaps any goose in history, and still another admirer sent him a cow. During President Wilson's administration, a flock of sheep, sent to the war President, was a familiar sight on the White House lawn.

When President Harding occupied the White House the tradition of a "first dog of the land" became established and since that time dogs have been the favorite live stock gifts. The story of the faithful airedale, "Laddie Boy," which died of a broken heart after the death of its master in 1923, promises to become one of the favorite traditions of our Presidents and their pets, even though the interest in the dogs which the Coolidges brought to the White House somewhat eclipsed his fame. There have been a number of them but of them all, "Rob Roy," the white collie, was President Coolidge's special pet, and "Tiny Tim," the red chow, who was seen so often with Mrs. Coolidge, were the best known. "Rob Roy" was the successor to "Prudence Prim," who died during the Coolidge administration, and he also died while holding the position of "first dog of the land." "Paul Pry," an airedale, enjoyed a brief career in the White House but was much too lively for his station in life and was sent back to the marines, whence he came, as an efficient mascot for those red-blooded he-men. Another Coolidge dog whose stay was short was the wirehair, "Peter Pan," who "just couldn't get on with the other dogs." Then there was "Boston Beans," the bull terrier; "Black Berry," the furry, black chow; "Ruby Rough," a collie; "King Kole," a Belgian Gruenendael, and "Calamity Jane," another collie.

Aside from the dogs, the Coolidges had one of the most extensive "zoos" of any of the occupants of the White House. Most famous of the others, of course, is "Rebecca" the racoon, but included in it are the following: two lions, two bears, three wildcats, one hippopotamus and six birds. Four of them are rare canaries. President Coolidge could have added to that collection considerably during his summer vacation in the Black Hills if he had chosen to. He was offered a baby coyote, two baby burros, mountain goats, lambs, deer, red squirrels and chickens, not to mention "Kit," the beautiful bay mare, presented to him by the Boy Scouts.

But the animals in the Coolidge zoo, most of them, incidentally, were presented to the National Zoological park in Washington, were only minor items in the flood of gifts which poured in upon this popular President. The extent of this flood is indicated by the following news dispatch which appeared a short time before he left office:

A list of the gifts received in one week by President Coolidge give a glimpse of the difficulties that will confront him when he leaves the White House. Among them were a knitted flag, in which there were 115,000 stitches; a twist of Tennessee tobacco, an enormous cake of Vermont maple sugar, an ounce of vanilla extract, a baseball bat, a ukelele, three boxes of fish bait, a squash with his name on it, a bundle of sheet music, a bound collection of Swedish stamps, a pair of knitted woolen sleeping socks, a patchwork bedquilt, a gilded bust of the prince of Wales, a bottle containing a wood carving; also his own picture on a piece of tin, a barrel of apples, a bushel of popcorn, a box of honey, six jars of home-made preserves, a roast of venison, a bushel of cranberries, a kit of mackerel, a layer cake, a ham, a crate of oranges, a brace of wild ducks, a basket of peaches, a crate of cantaloupes, a jar of peach pickle, sixteen walking sticks, twelve knives, for post-Presidential whittling; three carved pipes, a knitted pair of house slippers, a pumpkin, an ear of corn and a string of red pepper.

Canes are frequent gifts: there are five or six hundred of them stored away, a few handsomely carved and some gold mounted. The favorite gifts of elderly women to the President are knitted woolen socks and knitted house slippers. Men give him canes and pipes. His living gifts would almost stock a museum, the most common being eagles, dogs and cats. At the beginning of each administration there is keen competition among breeders to supply a dog.

When Herbert Hoover came into the White House dogs continued to be the favorite White House pet, for the Hoovers brought with them three—"Cragwood Padriac," the Irish wolfhound; "Bellhaven Behoover," a collie, and "King Tut," a police dog. Later additions were "Englehurst Gillette," a Gordon setter; "Whoopee," a Schnauzer; "High Boy," another dog of Irish extraction, and "Buckeye," another police dog. Within recent weeks three more dogs have joined the Hoover kennels—"Southboro Markham" and "Southboro Sunny," English setters, and a little Eskimo puppy, as yet unnamed. And the successor to "Rebecca," the Coolidge racoon, is "Billy Possum," an opposum which strayed upon the White House grounds and, being captured by a guard, was immediately adopted into the exclusive society of "Presidential Pets."

Needless Pain!

People are often too patient with pain. Suffering when there is no need to suffer. Shopping with a head that throbs. Working though they ache all over.

And Bayer Aspirin would bring immediate relief!

The best time to take Bayer Aspirin is the moment you first feel the pain. Why postpone relief until the pain has reached its height? Why hesitate to take anything so harmless?

Read the proven directions for checking colds, easing a sore throat; relieving headaches and the pains of neuralgia, neuritis, rheumatism, etc.

You can always count on its quick comfort. But if pain is of frequent recurrence see a doctor as to its cause.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Children CRY for it

A Vegetable Preparation for Assimilating the Food by Regulating the Stomachs and Bowels of
INFANTS CHILDREN
Thereby Promoting Digestion Cheerfulness and Rest. Contains neither Opium, Morphine nor Mineral. NOT NARCOTIC
A helpful Remedy for Constipation and Diarrhoea and Feverishness and LOSS OF SLEEP resulting therefrom in Infancy
Chas. H. Fletcher
THE CENTAUR CO. NEW YORK
35 DOSES 40 CENTS

It may be the little stomach; it may be the bowels are sluggish. No matter what coats a child's tongue, its a safe and sensible precaution to give a few drops of Castoria. This gentle regulation of the little system soon sets things to rights. A pure vegetable preparation that can't harm a wee infant, but brings quick comfort—even when it is colic, diarrhea, or similar disturbance.

And don't forsake Castoria as the child grows older. If you want to raise boys and girls with strong systems that will ward off constipation, stick to good old Castoria; and give nothing stronger when there's any irregularity except on the advice of a doctor. Castoria is sold in every drugstore, and the genuine always bears Chas. H. Fletcher's signature on the wrapper.

Wins Wife as First Prize!

IF you don't think your whole life can be changed by chance, read this. It is the story of a young man who was pretty well down and out, but he figured he might win a prize if he took some advice.

"As far back as I can remember I had been a weakling," says Mr. Calvin L. Floyd of Orlando, Florida. "A headache, it seemed, was to be my life companion. I was always dizzy in the mornings. Nothing I ate seemed good for me. Then I attended a health lecture in a sanatorium and the physician talked on 'faulty elimination.' That was certainly my trouble. One of the patients asked him about Nujol. He recommended it highly. I decided to try one bottle to see if there was anything in what he said about natural lubrication for the human body.

"Long before I had finished the first bottle my 'companion-headache' was gone. No more tired out feeling. I get a real kick out of life now. By the way, I almost forgot to tell you I found a new life companion, too!"

Many a life changed by a message like this one.

Perfectly simple, wasn't it? Mr. Floyd just learned the normal natural way to get rid of bodily poisons (we all have them) and nature did the rest. Why shouldn't you be well?

Nujol is not a medicine. It contains no drugs. It is effective, so you will be "regular as clock-work." You can buy it at all good drug stores in sealed packages for less than the price of a couple of good cigars.

Begin today. Millions have found that Nujol makes all the difference in the world. Nujol will make you feel fine and you can prove it.

Does your mirror reflect rough, pimply skin?

THEN USE

Cuticura

And have a clear skin!

ANOINT the affected parts with Cuticura Ointment. Wash off in a few minutes with Cuticura Soap and hot water and continue bathing. Pimples, rashes and all forms of skin troubles quickly yield to this treatment.

Ointment 25c., 50c. Soap 25c. Talcum 25c. Sample each free. Address: "Cuticura," Dept. B7, Malden, Massachusetts.

Matilda's Christmas

By Robert Stead

MATILDA CUMMINGS looked soberly out of her kitchen window across the fields of snow which lay to the westward. The afternoon sun was dancing on the white crystals, but it was not the dazzle of light which brought the puzzled look into her eyes, or knitted her brows in a slight frown of perplexity.

Half a mile across those white fields lay the homestead of Arthur Birch. A tiny spiral of blue smoke spun upwards from snow-covered roofs, suggesting comfort and domestic activities. Susie Birch, that would be, Matilda reflected, busy with her Christmas preparations. Susie was fourteen now, and almost as useful about the house as a woman.

Matilda thought of the year and a half that had passed since that unhappy day, and her heart warmed again with woman's sympathy for Arthur Birch. She was in a position to sympathize, for her own widowhood dated back eight years. Carl, her boy, had been seven then; now he was taller than she, and as good as a man.

Through all these years Arthur, in his gentle, inarticulate way, had made his friendship plain to her, and she had accepted it as from a good neighbor and the husband of her particular friend, Jessie Birch. Now, with Jessie gone, it was not so easy to accept. There were gossiping tongues, and Matilda had caught some echoes of the morsels they were tossing about.

That was why a puzzled frown darkened her eyes as she looked across the white fields toward the homestead of Arthur Birch. She wondered if anything had reached his ears.

She was recalled from her reverie by the sound of sleighbells at the door, and Carl's cheery voice calling, "All right, mother! All aboard!"

The boy rushed in, but as her eyes turned to his he sobered. "Something wrong, mother?" he asked.

Matilda smiled bravely at her big man. Should she tell him?

She tapped his arm with an affectionate hand. "Ready in a minute, son. I was day-dreaming."

But he knew. "You are troubled, mother." His words were an invitation to confidence.

She made a quick decision. "All right, Carl. I'll tell you. You know that every year since your father left us Mr. Birch has sent a Christmas remembrance."

The boy smiled broadly. "Yep. A pig. A dressed pig. Always left on the porch sometime Christmas eve."

She answered his smile. "An unusual kind of gift, Carl, but a very practical one. And now—perhaps you don't understand, Carl, but now that Mrs. Birch is gone it is a little different, don't you see?"

Carl's shoulders came back and his jaw stiffened. "Have people been talking? Just let me hear them!"

His eagerness to spring to her defense pleased her, but this was not a

Life Was Still Very Much Worth Living, She Reflected.

matter in which physical force could be employed. "No, that would not do any good," she answered, kindly. "And people will talk, you know. I hope Arthur won't send one this year."

"Why don't you tell him?"

"That is not easy to do. If he has heard the talk he won't send it. If he hasn't—but I must hurry!"

Tucked in the snug cutter beside her son, Matilda's misgivings soon evaporated. Life was still very much worth living, she reflected, even though there was one great vacant spot in it.

On the road they met George Janson, and his neighbor, Sam Reaney. George touched his cap with his whip hand in answer to her smile.

"A fine woman, that," said Sam, with implications in his voice. George was a bachelor. "Now, if I was a single man—"

George sniffed, but the suggestion came nearer his heart than even Sam suspected.

"I guess nobody but Arthur Birch has much chance in that direction," he said, hoping to be contradicted.

"Arthur Birch? Pahaw! Nothing's ever done until it's done, George, and Arthur hasn't married her yet. But he will, I'm thinking, if you let her slip out of your hands. Didn't you see the way she smiled at you?"

George had seen, all right, but he thought that was just Mrs. Cummings' courtesy.

"But what's a fellow to do?" he asked, hoping for guidance.

"Do? Do something! Do what Arthur does. You know he sends her a dressed pig every Christmas. Now there's no farmer around Wheat Center got a better line of hogs than you have, George, and you could spare her a carcass as easy as a colt can spare a whinny."

George ruminated for some minutes, while his sprightly horses hoofed little clouds of snow in his face. "I have as fine a carcass of pork as you ever set tooth to hanging in my shed right now," he confessed, "and I have a good notion—"

Darkness had fallen long before Matilda and Carl returned. Their shopping had taken more time than they expected, as the stores were choked with Christmas buyers. Carl swung the cutter up to the door, but even before Matilda left her seat she

"You Have Heard the Talk?" Matilda Asked.

could define a large dark object lying stiff on the porch floor.

"It's here," she said, with a little sinking feeling inside.

Carl had seen it, too. "Yep," he agreed.

For some moments Matilda contemplated the situation. Then she made her decision. "I think you had better take it back to him, Carl. Just take it in the cutter and leave it quietly on his porch. He'll understand."

Carl hurried away on his errand, but Christmas eve was spoiled for Matilda. In fancy she saw the mild surprise on Arthur's face when he found his gift—his customary gift for eight years, now—returned to him. It would hurt him. She was sorry for that, but what else was she to do? If the gossip of the countryside had not yet reached Arthur it would before long, and then he would understand.

"I think, Carl," Matilda said, after they had breakfasted and the morning chores were done, "it would be nice if we drove over to Mr. Birch's, just to wish Arthur and Susie a—the compliments of the season. It can't be a very merry time for them—"

But Carl was looking out of the window. "We're late," he exclaimed. "Here's Mr. Birch driving down the road!"

To Matilda's annoyance she felt the blood rush from her cheeks, then back again in a flood. She had just time to whip an apron off and run a comb through her pretty brown hair, with its occasional tell-tale thread of silvery, when Arthur's knock sounded on the door.

"Come to the door, Matilda," he called. "Santa Claus!"

In spite of the cheery ring in his voice Matilda's quick ear detected the strained effect. Trembling a little, she stood beside him. In his sleigh, there it was!

"Left at my house, by mistake," he said. "This card was pinned inside."

With eyes that swam a little she read: "To Mrs. Birch, with many good wishes from George Janson."

"But I thought it was from you!" she cried. "I sent Carl back with it last night, because—because—Oh, won't you come in and sit down?"

Carl took the team, and in the cozy sitting room they faced each other. "You have heard the talk?" Matilda asked, too honest for evasion.

He nodded. "That is why I didn't send one this year," he answered. "I didn't wish to embarrass you. But I have thought of a way out."

"Yes?" Her voice was eager.

He raised her hand in his, and before she realized what he was doing a gem flashed from her finger.

"Oh, Arthur!" she murmured.

"Will you keep it, dear?" He was drawing her to him.

"Certainly not! I can't keep George's pig—when I'm going to marry you."

POULTRY

EASY TO DETECT POULTRY DISEASE

Expert Tells of Tests to Show Carriers of Ills.

"Fifteen years' experience has taught the Massachusetts poultry men that the so-called agglutination test is an efficient means of detecting carriers of bacillary white diarrhea infection," said W. R. Hinshaw, of the Massachusetts Agricultural college experiment station. In this test, made under a microscope, specimens of the suspected bacteria are mixed with a sample of diluted blood serum from the infected bird. "The laboratory test alone will not eradicate the disease; it is only one step in the progress."

Under the Massachusetts law, the control of the disease is voluntary with the poultryman, who pays for the service at the experiment station control laboratory at the rate of 10 cents a bird plus 1 cent for the leg band. The cost of 11 cents for each bird includes expenses of the blood collector as well as the actual laboratory work.

Mr. Hinshaw attributes the failure of certain poultrymen to eradicate the disease to a number of reasons. The poultryman may fail to test all his birds, or fail to retest at intervals within the season if the flock is found to be infected, or he may keep chicks which have been hatched before the test had been completed. Other reasons are the failure to remove reactors from the flock as soon as they are reported; the failure to burn offal from birds which react to the test killed for home use; and the failure to clean and disinfect the houses following the removal of reactors.

Sometimes the poultryman makes the mistake of holding reactors for egg-laying purposes, and feeding eggs from unknown sources to baby chicks. Again he may hatch eggs for poultrymen who have not tested their flocks, or buy stock such as eggs, chicks, and adults, from diseased flocks. When he returns birds to the flocks from poultry shows and egg-laying contests without first quarantining them, he runs danger. Lack of attention to details in the field at the time of collection of blood samples may result in failure to eradicate the disease.

Convenience Important in Poultry Buildings

Though convenience concerns the manager directly, it indirectly affects the poultry. The more convenient it is to do the work the easier it is, and the surer that it will be done; the poultry plant should be "get-at-able" for the manager or feeder.

Put the poultry house where it can be got to readily, and also make it possible to feed the poultry without having to run to the granary or stable for grain.

In the gate, the door, the driveway, and everything connected with the poultry, convenience should be studied.

Often this one item determines the difference between pleasure and drudgery, and the one is as easy to have as the other. Not only should the house be accessible, but the internal arrangements ought to be such that the necessary work may be done with the least amount of labor.

If the man can do the work in the hen house with the ease with which it is done in the horse stable, there will be fewer filthy poultry houses and much better returns.

Buckwheat Favored for Feeding During Winter

Buckwheat has some qualities to be recommended. It is oily and, therefore, supplies heat to the birds and is particularly adapted to winter feeding. It is fattening. Because it has so much woody fiber, however, it is only worth about one-half as much pound for pound as wheat for poultry feed. Ground and mixed with skim milk and buttermilk it makes a very good fattening mash. In scratch feeds for laying flocks it is generally used in no greater quantities than 10 per cent for the above reason: too much fiber.

Light Important

Light is very important in the poultry house in winter, because the days are short at best. If the hens do not have sufficient light to take full advantage of their opportunities to eat, they will not be able to lay many eggs. Artificial lights are considered profitable in increasing winter production, and it certainly is worth while to provide for the maximum benefits from natural daylight. Nothing contributes more to contentment and well-being of the flock than clean litter.

Save for Chicks

It is not too early to plan on saving some of the winter egg money to buy early chicks for the replenishment of the farm flock. Money is frequently saved by placing the order early, and the farmer is sure of obtaining the chicks at the right time. Installment buying helps many a man to obtain useful things. A hundred dollars for chicks may be hard to scrape up next spring. But if $20 can be placed in the chick fund every month it is a great help.

"I Won A $25 Prize For A Loaf of Bread At Our County Farmer's Institute"

Says Her Success Was Due To "Kitchen-Tested" Flour

Miss Viola Nelson, Dixon, Ill.

"At our County Farmer's Institute I won $25 for a loaf of bread baked with Gold Medal 'Kitchen-tested' Flour. With this prize money went a scholarship to attend the Springfield Domestic Science School. My mother always uses your flour, too, and has won numerous prizes."

—Viola Nelson

Women Now Find It Easy To Bake Prize Bread and Pastry

WOMEN all over the country are now saying: "No longer is there need for worry about baking results. Now you can be sure of success with pies and cakes, bread and biscuits."

They use a new-type flour for all baking purposes—GOLD MEDAL *"Kitchen-tested"* Flour that simplifies baking remarkably and banishes the cause of most baking failures.

Failures, experts found, were mostly due to the fact that 2 sacks of the same flour often *acted* differently, even with the same recipe . . . it was not *uniform* in oven action.

So now all GOLD MEDAL Flour is *"Kitchen-tested"* before it comes to you. As each batch comes through the mill it is tested by actual baking—bread, cakes, biscuits, pastries—in an oven just like yours. Only flour which acts the same perfect way every time is allowed to go out to you. Thus you know in advance exactly what *your* results will be.

Special "Kitchen-tested" Recipes In Every Sack

(Changed Every 3 Months)

Please accept, free of charge, simplified recipes for 12 of Betty Crocker's most delicious baking creations. Recipes for the daintiest cakes, the finest cookies, the most popular pastries known. Each one is "simplified" until it is remarkably easy, too.

All 12 of these simplified *"Kitchen-tested"* recipes are inside every sack of GOLD MEDAL *"Kitchen-tested"* Flour. You can get a full set today—simply ask your grocer for GOLD MEDAL *"Kitchen-tested"* Flour.

WASHBURN CROSBY COMPANY

Bible Research Center for Mount of Olives

Thanks to a devoted Christian woman of wealth, a site for a Bible study center for the use of Bible students and church workers of all denominations and nationalities, has been secured on the Mount of Olives facing Jerusalem. The land has been given to the Travel Institute of Bible Research. It is near the traditional site of Christ's weeping over Jerusalem, above the Garden of Gethsemane and only a few minutes' walk eastward from the Brook Kidron. The buildings will be erected and study begun as soon as the funds are raised for the purpose. As the land and the Book and the Man are so intimately related, it ought to be the most helpful Bible school in the world, if its regulations are dominated by the spirit of the late conference upon the Mount of Olives. —Sunday School Times.

Hard Going

Fowler Wright, the novelist, is a great reformer, and a publisher said of him the other day:

"Young Wright would reform everything. He'd abolish birth control and newspapers and booze and goodness knows what. He told me one night at the Savoy a story about a girl he knew who had just got married. Of course he doesn't think much of marriage.

"Questioning her about her husband, for she didn't look very happy, Wright said:

"'Maybe your husband would be better tempered if he were more athletic. Does he ever take hard exercise?'

"'Well,' said the young bride, 'last month he was out 30 nights running.'"

European Woolen Industry

The French woolen industry, which comprises the combing of the wool, spinning, weaving and preparation, employs at the present time 200,000 workers and operators 60,000 looms and 3,000,000 spindles. France holds third place in the woolen industry, Germany and Great Britain being slightly ahead in rank. Italy, Belgium and Spain are far behind.

Covering the Ground

Son (home from agricultural college)—I've brought some books on farming for you to dig into, Dad.

Farmer—And I've bought another 80 acres for you to dig into.—Montreal Star.

The Modern Girl

"Where are you going my pretty maid?" "There are numerous theories, sir," she said.

A necklace of bear claws, believed to have been worn by Chief Sitting Bull, has been received by the San Diego museum.

More than 1,000 communities already have spent $300,000,000 for airports and another $200,000,000 will be spent within a year.

Experience

Seedy Giant—Will you engage me as a wrestler?

Showman—Have you wrestled before?

"Yes, always."

"With whom?"

"Adversity."

Has to Have It

Lawyer—"Why do you wish a divorce?" Client—"Why, I'm thinking of marrying again!"—Life.

Those who have no dignity are perpetually making fun of dignity. Dignity is a fine thing.

CONSTIPATED?

Take NR—NATURE'S REMEDY—tonight. Your eliminative organs will be functioning properly by morning and your constipation will end with a bowel action as free and easy as nature at her best—positively no pain, no griping. Try it.

Mild, safe, purely vegetable—at druggists—only 25c

NGS AT SCHOOL THE PAST WEEK

ME WINS FIRST GAME OF SEASON AT ALEXANDER

Play The Hayfield Cagers This Friday Evening There

r basket ball team won their l game of the season on last nesday evening by a substantial in, 31 to 12. Supt. Morrison ows officiated and did a good of it. The lexander team offerkiff opposition and displayed good floor work in passing and ling but were poor marksmen shooting. But with a pair of guards opposing them many wise good prospects of making were interfered with. Klemoffensive seemed to be working and both Klotzbach and Lemke the hoop from all angles.

Will Play Hayfied Friday

ur team will tear into Hayfield Friday night on Hayfield's own and try to show them how the is played. We always have to extend ourselves to take field's measure and may be deed this year as last, but we think prospects are fair for a victory, Hayfield boasts they can hardly beaten on their own court.

Thirty Working On Declam.

Miss Trumbell is perhaps the iest one of our faculty these s as there are around thirty rking on declamatory selections looking to her for what time can spare for coaching them. plans on an elimination contest ore the Christmas vacation. Alst half of our Freshmen class are ing out and quite a number of high school boys.

The Schoolmaster's Club of the nty voted to group the schools last year which brings us to come against Gopdell, Hayfield and rner in the first round of the nty contests. If Goodell can be rsuaded to stage the contest it ll be held there. The final will again at Garner.

New Equipment Installed

The new duplicating machine nt us last week for a trial has en put to use and will no doubt very popular among all of our achers. The P. T. A. voted to ast in paying for it and in doing so e membership is rendering the hool a distinct service.

ETHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning worship in Klemme at 0:00 o'clock.

Sunday school, Klemme at 11:00.

Sunday school, Liberty, 10:15.

Morning worship, Liberty, 11:15.

Evening worship, Klemme, 8:00.

6:30 p. m. Intermediate League.

Epworth League, 7:15.

Fourteen of the local Epworth eaguers attended the second of our b-District Rallies held at Thornon last Monday evening. It was a old night but there were over a ndred young poeple present, and e program was one of the best e have had. The next one will be eld at Britt on January 13th.

AMILY GATHERING HELD AT THE JOHN LARSON HOME

Art Brouwer broke a wheel on s car Sunday when it skidded and t the curb at Ed. Jacob's store.

Mr. and Mrs. John Larson entered to dinner Thanksgiving day, r. Larson's sister and hueband Mr. nd Mrs. Frank Koller and daughter Frances of Goshen, Ind., who came uesday and visited until Saturday, r. and Mrs. Walter Lauden and y of Forest City, Mr. and Mrs. Larson and son of Albert Lea, r. and Mrs. Soren Larson and ughter of Ceylon, Minn., Mr. and Mrs. Chris Toiesburg of Fairmont, Minn., Mrs. Hattie Larson and children of Jewell, and Mr. and Mrs Peter Koller and son Ralph of Williams. This was a regular family gathering as all of the Larson sisters and brothers were preent, except one brother who was unable to be present.

V. A. COOK'S HERD LEADS IN THE GARNER-KLEMME C. T. A.

Howard Horne, Tester Gives Report For November Tests

V. A. Cook s thirteen head of grade and purebred Holsteins lead the Association for the month of November with an average production of 1033.8 pounds milk and 36.6 pounds of butterfat.

M. T. Love's eleven grade and purebred Guernseys were second high herd with a production of 598.6 pounds mil kand 34 pounds of butterfat.

Cook Has High Cow Also

V. A. Cook, Goodell, also had the high cow in the Association. This cow, a six year old grade Holstein, produced 1380 pounds milk testing 4.9 per cent for a total of 67.6 lbs. of butterfat.

Howard Horne, tester, had 249 cows that were milking and 75 that were dry, making a totol of 325 in the Association. The average production of all cows was 480.8 lbs. milk and 20.1 pounds butterfat.

During the month six cows were sold for beef.

Howard Horne, Tester.

KLEMME FOLKS IN AUTO WRECKS THANKSGIVING DAY

Dr. George Zinn when driving to Fort Dodge early Thanksgiving morning did not see a turn sign on the highway about six or seven miles west of Goldfield and his car went into the ditch and struck a fence, overturning and wrecking the car beyond repair. Doc also "wrecked" a couple of ribs and was cut some about the head and on his hands. He was taken to Fort Dodge where he recuperated at the home of his nephew, Dr Edgar Zinn. He returned to Klemme yesterday, driving another car. Doc is practically O. K. again.

The same day R. A. Joregnson and family and Dorance Day were driving to Lincoln, Nebr. Everything went fine until they reached Logan at about 11:00 o'clock. At this point is a steep, paved hill on the northeast edge of town. The Editor got partly up the hill and then his car slid down, and while in this position another car came over the hill and started sliding down and crashed into the Jorgenson car at the bottom of the hill. No one was injured but the Editor's car suffered a smashed rear fender, running board and apron and the door caved in. The other car, a Dodge four touring, driven by Mr. Walter Williams of Council Bluffs received only a broken rear bumper and a bent rear fender. Mr. Williams agreed to stand the damage. The Editor's car was straightened out by an auto body company at Lincoln and looks as good as new.

The State Highway Department has often been criticised by the residents of Logan and tourists for allowing traffic on that particular hill as it can be afforded. It has caused many accidents when wet or covered wit hsnow.

ENTERTAINED RELATIVES AT A THANKSGIVING DINNER

Large Gathering At Home Of Mr. And Mrs. Clarence Newberger

Mr. and Mrs. Clarence Newberger entertained for Thanksgiving Dinner, Mrs. Newberger's brothers and sisters and their families. Those who were present were:

Mr. and Mrs. Tom Holmes and four children; Mr. and Mrs. Clarence Holmes and two children; Mrs. Edward Fessenden and son; Mrs. Ferry Baker and two children; Mr. Harry Holmes; Mr. and Mrs. Chas. Nettleton and two daughters; Mr. and Mrs. George Rose and son; Mr. and Mrs. Earl Trimble and son; Mrs. Lewis Holmes and two children. These people are from Clear Lake and Mason City.

All enjoyed the fine dinner and had a good time visiting.

METHODISTS TO BUILD NEW CHURCH

WORK ON NEW CHURCH WILL BEGIN NEXT SPRING

Church Will Be Build On Site Facing Klemme Park

Last Thursday evening, Thanksgiving night, special services were held at the Methodist Church when Rev. Lease, Dist. Supt. was here to give a sermon, and a general assembly of the congregation was called to discuss building matters.

At this meeting it was almost unanimously voted to build a new Methodist Church iu Klemme this coming spring, at a cost not to exceed $25,000 complete.

At this same meeting the congregation settled the question as to where the new church should be built.

There were about three good locations favored by some and these were voted upon. It was an almost unanimous vote that the new building should be erected on the site now occupied by the Parish House and the rsidence wherein Fred Bell and family reside. The votes for the present location of the Methodist church found favor with but a few, while a few scattered votes hda other locations in mind, on property not now owned by the church.

Acording to plans as decided by the vote of the congregation, the residence now occupied by the Bell family will be disposed of or moved to another location and the Parish House will be torn down or sold. The old church can thus be used as a meeting place until the new building is ready. The old church will then be torn down and the lumber sold.

A large portion of the money needed has already been raised, and the cost of the new building will be regulated according to the amount that can be raised.

A building committee has been appointed: E. J. Arnold and Thos. Nelson, Jr., representing the rural community; and C. A. Larsen and Frank Gruetzmacher, representing the town, with Rev. Whyte as the fifth member of the board.

The building board has already gone to work and Wednesday of this week, acompanied by several other members of the church, made a trip ot see churches north of us, expecting to visit Crystal Lake, Hollandale, Minn., Plymouth and other churches if time permitted.

An architect from Waterloo has been secured at a low figure to plan the building and supervise the construction.

Two New Churches In Klemme

Klemme is going to be a busy place next year as there will be two new churches constructed at about the same time. The Reformed congregation have their plans all made and are ready to proceed as soon as weather permits in the spring.

The Methodists are going rapidly ahead and should have their plans definitely formed in a short time.

Both congregations needed new buildings, and it is certainly a fine thing for a community to be able to have two fine, modern churches as the new structures will be when completed. Good churches and good schools are the backbone of a community.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English Service.

11:00 a. m. Sunday school.

1:00 p. m. Practice for Christmas Program. All children taking a part in the program should be at the church not later than 1:30 o'clock.

8:00 p. m. Tuesday, Bible Class.

8:00 p. m. Saturday, Senior choir.

The Confirmation Class meets every Tuesday and Saturday.

Emery Schaefer assisted with work at the D. Swalve home Tuesday of this week.

AVERY LADIES STUDY SECOND LESSON IN NUTRITION

Interesting Meeting Held At The Home Of Mrs. Cook

The second lesson in the Nutrition Course was held at the home of Mrs. J. J. Cook, November 30th. Diet for the Pre-School Child was the subjec tstudied.

Review on Infant Feeding was first discussed at the meeting.

Dinner was prepared for the Pre-School Child using a prepared menu. Childrens teeth bulletin, height and weight chart for infants and pre-school children and score card for diets of pre-school and school child diets was given to each member present and discussed by Miss Johnston, the leader.

Early Age Is Important

The ages of one and a half to six years are critical years when right habits of living must be well established. Food which consists of thick soups, fruit, many vegetables, cereals, milk and little meat build strong and healthy bodies and good teeth for the pre-school child.

Mrs. J. J. Cook discussed making Posters for Achievement Day.

Those present were Mrs. L. W. Sherwood; Mrs. Howard Barger; Mrs. Harry Ostendorf; Mrs. C. A. Arnold; Miss Blank; Mrs. Gealow; Mrs. Virgil A. Cook and Mrs Will Johnson. Mr. and Mrs. A. C. Carpenter and Miss Iris Sherwood were guests at the meeting.

CREAMERY HIGH CHECK LIST FOR NOVEMBER 1-15, 1929

A Large Number Of Patrons Again Found On The High List

Peter Josten, Secretary of the Klemme Co-operative Creamery has been busy the past few days getting out cream checks to the farmers of this community. Here is the list of high checks for the first two weeks period in November:

Checks For 50 And Over

V. A. Cook	$107.27
James Kurtz	90.81
C. J. Janssen	90.26
Fred Kotheubeutal	73.48
John Rust	61.56
Oscar Carlson	57.96
C. J. Wille	56.15
H. B. Lauen	55.26
Art Schoenwetter	54.76
J. Koenan	54.22
J. J. Stille	53.28
J. J. Hrubes	51.75
G. Lauster	50.30
Henry Kahler	50.22

$40 to $50 Checks Listed

Kennedy & Shoemaker	$47.06
Art Knoke	46.79
Chris Sheppelman	46.38
Wm. Baack	46.34
C. J. Bode	4545
W. H. Greiman	44.82
A. Faaborg	44.50
John Kaduce	44.24
Virdie Anderson	42.07
Kort Delger	41.71
Henry Nananga	40.22
W. H. Lemke	40.09
Tom Burgess	40.03

PROCEEDINGS OF THE TOWN COUNCIL

Klemme, Iowa,
October 14, 1929.

Regular meeting of the Town Council held at the Town Hall.

Four members of the Council present.

Upon motion the following bills were ordered paid:

W. F. Pavey, welding Light Pole, etc.	$ 18.25
Geo. M. Bechetl Co. Bonds and Interest	605.00
A. H. Ridder, Tapping Tank	.75
Lloyd Lau, Drayage	1.00
Garner Auto Co., Repairs and Labor	2.05
H. H. Stoltenberg, Sept. Salary and Truckage	87.50
Dorance D a y, Cleaning Water Tank	2.50
Central States Electric Co. Sept. Power	15.15
Central States Electric Co. Sept. Street, Alley and P. H. Lights	29.78
Klemme Times, Publishing Council Proceedings	1.92
C. D. Smock, Police Duty	1.60

Meeting adjourned.

A. J. KUDJE,
Clerk.

AID BAZAAR WAS VERY SUCCESSFUL

SOCIETY NOW HAS $1,300 FOR NEW CHURCH FUND

$188.72 Was Taken In By Bazaar And Dinner Tuesday Eve

The Methodist Ladies Aid Bazaar and chicken dinner went over big, and total receipts for the annual affair, held Tuesday, amounted to $188.72.

The above amount was taken in from the Bazaar selling, fish pond, candy booth, chicken dinner, auction sale and food sold.

The Bazaar selling which began at 4:00 p. m. was well attended and a large portion of the goods on display were sold.

121 persons, not counting the Aid members, enjoyed chicken dinner, which was served from 5:00 p. m. until all had been served. There were 94 adults and 27 children who were served.

Following the chicken dinner the auction sale was started with Rev. Whyte as the auctioneer. All articles which were not sold during the afternoon were disposed of, as well as a quantity of food, such as buns, pickles, pies, cream, and a few chickens.

Ladies Are Nearing Goal Set

When the Ladies Aid were asked for a pledge for the proposed new church they set their goal at $1,500. With their previous earnings and with what they cleared at te bazaar they have $1,300 on time deposit in the First National Bank toward the building of a new church. They expect to raise the balance of their pledge during the year.

The ladies wish to use the Times to express their thanks and appreciation of the fine support given them in their bazaar and dinner. They wish to thank all who donated food and bazaar articles, and who assisted them in various ways. They want to thank all who came to the bazaar and dinner. Several who could not send articles, sent checks instead, and the ladies wish to thank these people.

There are about eighteen ladies in the Aid Society, and for such a small group they are certainly to be complimented on the way they put over their project. It has meant a lot of work and time, but the ladies feel that it has been well spent for a good cause.

NORTHERN LUMBER COMPANY BUILDING WORK SHOP

Will Build Brooder Houses And All Kinds Of Small Buildings

The Northern Lumber Company is again expanding its business and at this time has nearly finished the building of a 20x30 foot building which will be used as a workshop in which their carpenters will construct hog and poultry brooder houses, and other small buildings useful to the farmer.

The new building is located at the year of their large lumber storage building.

The Northern Lumber Company have built and sold a number of brooder houses the past year which have proved popular with the farmers. These buildings can be purchased at a price so low that the busy farmer cannot afford to build them himself.

The Northern Lumber Company are also improving their implement sheds by building an addition to the north side of the main building. The new section houses tractors and threshing outfits.

START HAULING SAND FOR NEW METHODIST CHURCH

Work began this morning on the hauling of sand for the new Methodist Church. The sand is being unloaded near the Parish House, the site of the new building.

ARLENE KRAUS HAD BIRTHDAY PARTY LAST WEDNESDAY

Last Wednesday was Miss Arlene Kraus' tenth birthday, and in honor of the event her mother, Mrs. Emil Kraus, planned a party for her and invited about twenty-five little friends to an after school party.

After the children had enjoyed an hour of games a delightful lunch was served at 5:30 o'clock. A birthday cake with ten lighted candles was a feature.

Arlene received many fine gifts, and all wished that she might again have another such party as all had a fine time.

YOUNG BAND IS GETTING ALONG SPLENDIDLY HERE

There Is Still Room For More New Beginners In Kid Band

We visited the young band during rehearsal Wednesday evening. The abnd, composed of a group of boys under the dirction or Mr. Storer, is getting along fine.

The band is open to any boy in the community, and there is room for several more beginners. More boys are wanted to play alto and the bass horn, as these positions are still vacant. We would urge boys to join the band at once and get in on the fun, as well as good experience and pastime.

AVERY TOWNSHIP FARM BUREAU MET FRIDAY EVE

Monthly Meeting Was Held At The Home Of E. J. Arnold

Last Friday evening the Avery Township Farm Bureau held their monthly meeting at the home of Mr and Mrs. E. J. Arnold.

In spite of a biting cold north wind, about a hundred persons attended.

The school children of District 3, with Miss Esther Harberts, their teacher, rendered a fine program of songs, recitations and dialogs.

The grown-ups of the neighborhood gave a play depicting the unhealthful condition of agriculture, and pointing out the remedy: Co-operation.

After a jolly social hour together the company was served with refreshments consisting of hot weiner sandwiches, pumpkin pie and coffee.

Those who attended from town as guests were, Mr. M. F .Penrod, Rev. H. E. Whyte, Mr. and Mrs. John Day, and Miss Mabel Smith.

At about 11:00 o'clock the loud sputter and roar of some thirty cold and unwilling motor cars out in the yard was the signal for "wraps" and all departed.

REAL ESTATE TRANSFERS

Anna Quintus and husband to Henry T. Lemon. Wty Deed date 8-12-29, $50.00 on Lots 13 and 14, block 12, Pard Add to Garner.

Jennie Rezabek, widow and Exec of Est. of Anton Rezabek, to George Rezabek. Executrix Deed date 10-29-29, $12,000.00, on NW¼ 11-96-25.

Harm Rust and Maggie, his wife, to Albert Rust. Wty Deed date 11-20-29, $1.00 on NE¼ 25-94-24.

Harm Rust and wife to Anna Brunes. Wty Deed date 11-20-29, $1.00 on NW¼ 13-94-24.

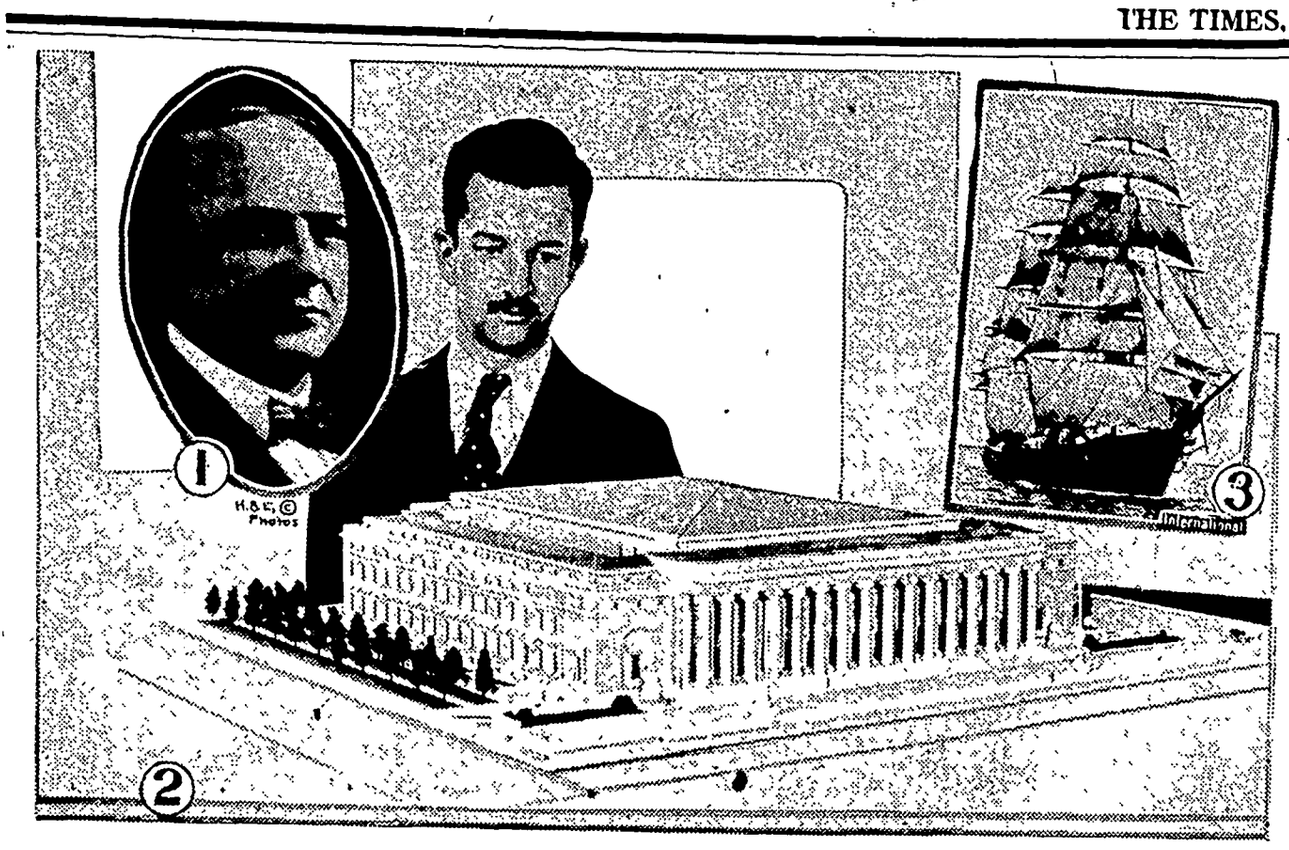
Dick Swalve came home from the hospital at Mason City Monday, November 25th and feeling quite well but on Friday became worse and again entered the hospital on Saturday. Mrs. Swalve makes daily trips to see him.



1—Nelson T. Johnson, assistant secretary of state in charge of Far Eastern affairs, who was appointed minister to China to succeed John Van A. MacMurray. 2—Walter F. Frederick of Chevy Chase, Md., with his model for the George Washington Memorial building to be erected in the National Capital. 3—Two-thousand-ton clipper ship, Benjamin F. Packard, that was sold at auction in New York as an item in the art collection of Max Williams—the largest antique ever so sold.

NEWS REVIEW OF CURRENT EVENTS

Hoover's Prosperity Program Goes Well—China Asks Russia Be Checked.

By EDWARD W. PICKARD

BUSINESS as usual—and then some. This appears to be assured by the responses made to President Hoover's call and by the programs disclosed in the series of conferences held in Washington at his summons. The last of these conferences with different groups was that with the representatives of public utilities on Wednesday. They were the spokesmen for the electric power and light interests, the gas companies and the street railways, and after having held separate meetings in New York to canvass the situation in their respective fields, they went to the National Capital prepared to assure the President that they, like the other groups, were ready and willing to assist in his program for stabilizing business conditions and assuring the continuance of the country's prosperity. They told him their organizations would spend about $1,500,000 in improvement and expansion during 1930.

Mr. Hoover sent a message to the governors of all the states asking that they co-operate by canvassing the state, municipal and county programs and speeding up, so far as possible, public works so as to further employment. The responses were most gratifying, giving assurance of the expenditure with the next year of hundreds of millions for road building and other public improvements. Pennsylvania headed the list of states making definite pledges, announcing that $155,000,000 would be available in 1930 for roads and public buildings and that it would be distributed throughout the state with a view to taking up any employment slack that occurs.

Leaders of farm organizations met with the President Monday, Secretary of Agriculture Hyde and Chairman Legge of the farm board being present. Mr. Hyde announced that they were in hearty accord with the Hoover program and promised to aid it in every possible way, and he added: "The general opinion expressed was that confidence has been gaining in agriculture and that the morale of agriculture is now better than it has been for years past. Except in short crop areas there has been genuine improvement in agriculture and an increased income, and therefore an increased buying power this year."

RAILROAD executives having announced extensive plans for expansion and improvement; leading industrialists having promised there shall be no reduction in wages, and heads of organized labor having pledged their word that there shall be no demands for increases in pay next year; and numerous associations of manufacturers and merchandisers reporting good conditions in their fields, it would seem that the prospects for continued prosperity are indeed bright. The nation is determined to show that the speculation crash has not done vital damage. Edward N. Hurley, one of Chicago's level headed business men and a former president of the Illinois Manufacturers' association, put the matter so well that he is worth quoting.

"There is nothing wrong with American business and the outlook for 1930 is most encouraging," Mr. Hurley declared. "We have everything today that we had on September 1 in the way of brains, wealth and earned income. Nothing is gone except some delusions as to the amount of profits which American industries might earn in years to come.

"The deflation of so-called stock values from about $90,000,000,000 on September 1 to some $71,000,000,000 now does not represent the disappearance of one ounce of material wealth. Ultimately this 'loss' represents a positive gain, because it will insure more and cheaper capital and the industries will be relieved of the pressure to earn extravagant profits which is exercised by a speculative securities market."

As a culmination of the President's conferences, some two hundred of the country's leading business men were invited by the Chamber of Commerce of the United States to gather in Washington on December 5. It was announced that Mr. Hoover would open this conference, the result of which was expected to be the formation of a business council for continuing study of business conditions and the co-ordination of activities.

A summary of business conditions, published by the federal reserve board, reveals a higher industrial activity during the month of October last than in the same period of 1928, although there was a decline in both industrial production and factory employment as compared with the preceding month.

CHINA'S Nationalist government and the governments of the three eastern provinces of China have appealed to President Hoover, the League of Nations and the powers signatories of the Kellogg pact for action to halt Russia's invasion of Manchuria and to punish the Soviets for the seizure of Chinese cities and the massacres of Chinese citizens. Russia's aggression is termed a deliberate violation of the Kellogg treaty, which both Russia and China signed. The message from the Manchurian provinces was dispatched directly to President Hoover. It cited many definite instances of Russian invasions, raids and massacres, naming places more than 100 miles within the border lines, and added: that if the world tolerates this Russian policy it means "the triumph of Bolshevism and the end of humanity; also the end of the anti-war pact, which certainly is not the intention of the United States and other signatory powers" The appeals from Nanking were equally specific and urgent.

It was said in Washington that there was no indication that the State department would take any immediate action in response to the call from Manchuria. And the officials there were rather at a loss to know what could be done about it, since the Kellogg pact contains no sanctions and depends wholly on public opinion for its effectiveness.

Within the last two weeks the Soviet invaders have made decided advances in both eastern and western Manchuria. Hailar was captured, as were Muling and other important points, and it looked as if the Russians were getting ready to close in on Harbin from both sides. Chinese troops everywhere were reported to be retreating almost without offering resistance, and thousands of them were made prisoners and disarmed. Those still in the field were described as lacking sufficient food, ammunition and winter clothing.

Japan was excited by the push into Manchuria, for she has many nationals resident there. The Japanese ambassador to Moscow, Tokichi Tonaka, told the Soviet government that Japan demanded that full protection be given its citizens in Manchuria, and Russia promised to exercise every care. The military group is very strong in Japan and there is some reason to believe it has been preparing to have the country eventually enter the conflict on the side of China.

ONE more of the great figures of the World war—perhaps the greatest—passed with the death of Georges Clemenceau, who, as premier, guided the destinies of France during the most critical years of the mighty conflict and by his tremendous courage and ability kept his countrymen nerved to their task until victory was achieved. The old giant—he had passed his eighty-eighth year—died in Paris of uremia after many hours of suffering, and the next day the "Father of Victories," as France called him when he was its idol, was laid to rest in a little village of the Vendee with only a dozen to witness the interment. In accordance with his injunctions there was no state funeral, nor were there any religious rites, for Clemenceau was an avowed atheist. Premier Tardieu, however, ordered all flags at half staff and the firing of a salute of 101 guns such as was fired on November 11 1918, in honor of the armistice And the Sunday following the funeral the World war veterans marched past the tomb of the Unknown Soldier in honor of the Tiger

DEATH last week also claimed Francis Emory Warren, United States senator from Wyoming, who had the distinction of serving longer in the senate than any other man. He was a member of that body for thirty-seven consecutive years. A state funeral for Mr. Warren was held in the senate chamber, with President Hoover and his cabinet, Chief Justice Taft and his associates of the Supreme court, members of the senate and house and the entire diplomatic corps in attendance. The body was then taken to Cheyenne.

Senator Warren's death removes one of the last three survivors of the Civil war who held high office in Washington. Warren served in the Union forces with Justice Oliver Wendell Holmes of the Supreme court. Representative Charles M. Stedman of North Carolina served the Confederacy.

Another well known American who passed away was Raymond Hitchcock, actor and musical comedy star, who died suddenly in Los Angeles from a heart attack. He had been in poor health since last May.

Lieut. George T. Cuddihy, one of the best pilots in the navy, was instantly killed when an airplane which he was testing at Washington crashed. Cuddihy, who was thirty-three years old, graduated from the Naval academy in 1917, served in the World war and later entered the aviation branch. He distinguished himself in the Schneider cup and other races, and in 1927 flew over the Andes.

TOKYO correspondents sent over what purported to be the Japanese program for the London naval conference, and it contained the demand for a 10-10-7 ratio in cruiser strength and other auxiliary ships, as well as a reduction in the size of capital ships. It seemed certain the United States would oppose the increase of Japan's ratio in cruisers, but later dispatches from Japan said its delegates had received private instructions to accept considerable less than 70 per cent of the British and American auxiliary navies.

France and Italy were still trying in vain to reach a preliminary agreement on policy in the conference. The principle obstacle is that the Italians insist on complete parity with France in all categories of warships. The French oppose this on the ground that Italy has only Mediterranean interests, while France also requires sea power in the Atlantic and in the English channel. The French also oppose giving Italy parity because of France's widely distributed colonial empire, whereas Italy's possessions are chiefly Tripoli and the area facing the Red sea.

THE text of the trust agreement for the Bank of International Settlements has been made public by a Paris correspondent. The principal provisions relative to the issuance and marketing of bonds are contained in article 12, which provides that the international bank, as trustee, will be guided in matters relative to mobilization of annuities "by the provisions of the (Young) plan which govern mobilization." The bank also will inform the creditor governments when it seems "practically possible" to proceed with the issuance of bonds.

CREATION of five new cardinals was announced at the Vatican, bringing the membership of the sacred college to 62, of whom 33 are non-Italians. The new list included the Most Rev. Joseph MacRory, archbishop of Armagh; Msgr. Cerejeira, patriarch of Lisbon; Archbishop Verdier of Paris, Archbishop Lavitrano of Palermo and Archbishop Minoretti of Genoa.

GEN. C. P. SUMMERALL, chief of staff, in his annual report recommends the enactment of a selective service law to operate in war time as the one method of procuring new units for the "far from complete" infantry division of the army. In other respects the report reflects a generally satisfactory condition throughout the army, says the decentralization system is justified, and that increased ration allowances have greatly improved the morale of the troops.

Orchard Information

NEW STRAWBERRY BEING PRODUCED

Blakemore Is Easy to Pick or Hull and Has Fine Flavor.

(Prepared by the United States Department of Agriculture.)

A new strawberry variety, the Blakemore, will be introduced this winter in the coastal plain section of North Carolina by the United States Department of Agriculture in co-operation with the North Carolina coastal plain test farm at Willard, N. C. The new variety is a cross of the Missionary and Howard 17, and shows a number of the good characters of each parent.

The Blakemore is a fart berry of the Missionary type with foliage more resistant to disease than either parent plant. It has a firmer berry than either parent but inherits its firmness from the Missionary. In hot, moist weather it does not puff and become soft as do the Howard 17 and most other varieties.

Berries of the new variety are a light, bright-red color, which is derived from the Howard 17, and unlike most varieties do not turn dark on holding, which makes this variety well adapted to preserving and market purposes. Like the Missionary it grows well during the short days of winter and spring in the South, conditions under which the Howard 17 makes little or no growth.

After a thorough test in which a number of varieties were tried, the Blakemore has been selected by the National Preservers' association as the most satisfactory variety for preserving. Reasons for the selection of this variety include its easy picking and hulling qualities, its bright, light red color, tough skin and firm flesh, solid center, acidity, high pectin content, and excellent flavor.

This variety is recommended for growing in the eastern North Carolina section northward to New Jersey, and is suggested for thorough trial in all regions where either the Klondike or Missionary varieties are grown and in the southern part of the regions where the Howard 17 is grown.

Practical Tools to Use for Thorough Pruning

The best tools to use for thorough pruning are a pruning saw of the swivel, replaceable blade type and a pair of hand shears. Extreme care should be taken in making all cuts close and smooth. Stubs should not be left, as they delay healing and cause decay. All wounds more than one inch in diameter should be covered with paint or other noninjurious —substance that will protect the tree against decay. White lead and raw linseed oil combined make one of the best paints.

There are exceptions to all pruning rules, but in general all dead or badly diseased branches, no longer fruitful, should be removed. Branches which crowd or rub other more desirable branches should be taken out. Severe heading back should not be practiced except with very young trees or in the case of old peach trees which may respond to "topping back" or "dehorning," as it is sometimes called.

Peach Moth Parasite Will Survive Winter

Reports from the Geneva experiment station carries the cheerful information that the larvae of the oriental peach moth parasite has been identified on peach twigs in the locality in Newd York state, where it was liberated a year ago. This proves that the parasite can stand our severe winters. In New Jersey, the parasite has reduced the moth from 75 to 90 per cent to 10 per cent. This is in the older areas of infestation. This peach moth was discovered in Michigan last year. The parasite is the only practical method of control yet found.

Useful Big Four

The production of a profitable crop of grapes calls for the operation of the big four—cultivation, pruning, spraying and fertilizing. Falling down on one of these jobs may result in a poor yield. Listen to a man tell of his failure to grow a crop of grapes and you will probably learn that he let his grapes grow in weeds, or failed to spray timely or neglected pruning.

A vineyard should be cultivated and free of weeds during the entire spring and summer months.

Effective Supports

A new method of supporting trees has been devised which has the old system of wiring with screw eyes and then wires run to a central washer beaten in every way. A circle of wire is run around the tree and the main limbs are reached with this circle. The limbs on one side of the tree support those on the other. It gives a very well supported tree. For fastening the wire to the limbs, yokes are used. Naturally the wire could not be used directly on the limbs.

Red-Oat Section Making Change

Sowing of Spring Variety Shows Increase in Western States.

(Prepared by the United States Department of Agriculture.)

How to make oat growing more generally profitable, particularly spring-sown red oats, is discussed by T. R. Stanton, an agronomist of the United States Department of Agriculture in Farmers' Bulletin 1583-F, "Spring-Sown Red Oats," just issued by the department.

Red Oat Areas.

Spring-sown oats are grown mainly in the region comprising the southern parts of Ohio, Indiana, and Illinois, southeastern Nebraska, and Kentucky, Tennessee, Missouri, Arkansas, Kansas, Oklahoma, and northern Texas.

According to the 1919 census, about 8,000,000 acres of oats were grown in the principal red-oat producing states, about 5,000,000 of which were spring-sown and the rest fall-sown red oats. Since then the proportion of spring-sown oats has increased markedly, and it is estimated that about 7,000,000 acres were sown to red oats in the spring of 1927.

This decided increase in acreage, Mr. Stanton says, is due largely to the development and distribution of the Fulghum oat for spring seeding. Red oats, he says, are often referred to as "warm-climate oats" and have the ability to withstand hot, dry weather, especially at heading and filling time. Fulghum and its various strains are at present one of the most important varietal groups in this country, their extreme earliness enabling them to escape injury by hot weather and drought to some extent.

Varieties Discussed.

There is detailed discussion of the several important varieties in the bulletin. Copies may be obtained from the office of information, Department of Agriculture, Washington, D. C., upon request.

Increased Need and Use for Home Ground Feed

Increased use and need for ground feed among dairymen and poultrymen have led to many developments in feed grinding equipment. An increase in the amount of available power on farms in the form of tractors, electric motors and gasoline engines has made farm grinding an easier and simpler matter while improvements in the construction of the grinders themselves have made them more efficient and cheaper to operate.

Observations indicate that both home grinding and custom grinding is on the increase. Under average conditions, custom grinding is generally considered cheaper for the farmer who needs less than 200 bushels of ground feed per year. On farms using more than 400 bushels of ground feed in the course of a year, grinding can be done at home with individual equipment at a considerable saving. If as much as 700 bushels of grain are to be ground annually, an individual grinder on the farm will do the job at about half the cost of the custom grinder.

Roasting Corn Borer in Very Practical Way

The European corn borer has been "roasted" continually for years by those who have had their fields devastated as well as by those who fear its invasion. Now it is found that it can be roasted in a practical way, says the Wisconsin Agriculturist.

There is a danger of spreading this pest by way of seed corn. Some one might bring a single ear of seed corn into a clean district and from that might spread the scourge. It is found, however, that the borrer in the cob or grains can be killed by heat.

The United States Department of Agriculture reports that a temperature of 136.4 degrees, maintained for 24 hours, will kill it. The same result will come from 140 degrees for eight hours; 145.4 degrees for five hours; 150.8 degrees for three hours, or 154.4 degrees for two and a half hours. This would be a very low oven temperature. This is a good thing to know and may help in preventing the spread of this dangerous pest.

Farm Notes

Erosion is active on 75 per cent of all the land in the United States.

* * *

Agriculture, like industry, will do well to make war on waste in all forms.

* * *

Sweet clover is considered to be a good fertilizer and it will do much to keep land in good condition.

* * *

Posts may be treated with creosote from two to four hours in the hot creosote and then allowed to cool while submerged.

* * *

Only pure-bred rams of the right type and quality can be relied upon for the production of uniform, early maturing lambs of superior quality.

* * *

Oat smut took a heavy toll from Kansas farmers last year. This means that most of our seed oats this year carry a considerably heavier "spore load" than usual. The germ or spore that produces the oat smut fungus lives over on the seed.

RUTH SINGS FOR HER HOME PEOPLE

(© by D. J. Walsh.)

THE small concert hall was decorated elaborately. Ruth Meade was coming to sing for her home people. As Mrs. Cook ...ed: "It wasn't every day in the ...that a widely known singer hon... a small town by her presence, ...when in a way she belongs to us, ...up to us to show her how we ap...ciate her coming."

...very one was enthusiastic. "Wel...", in big letters was placed over ...entrance door.

... Mrs. Reed, whose bank account ...decidedly larger than that of any ...else present, demurred: "I call it ...ulous to fuss so much. Every one ...s she was an ordinary little ...l girl here."

...eral women began to speak at ... "One does not remember that ... dear Mrs. Reed—one only real... our good fortune in getting Miss ...de to come." Another said: "My ..., you have heard her sing, as I ..., and you know how perfectly ...rfous her voice is. We shall be the ... of the whole county; this place ...l be packed."

...Mrs. Reed sniffed: "For my part, I ...der at her coming, knowing how ...d she will be remembered."

...Mrs. Cook swung around, with little ...arkling glints in her eyes. "Ruth ...ade is honoring us by coming, and ... said she was glad to come. Moth... had the kindest letter from her. ... she says her fiance is motoring ... down. He is a highly respected ...ng man."

There was a triumphant note in Mrs. ...k's voice as she murmured to a ...end: "That will give her some...ing to think about!"

She was right. Mrs. Reed went ...me in a temper. She had many ...es heard Ruth Meade sing and ... son had fallen in love with the girl ... who had never in his life been ...used anything, had been refused ... Ruth. Knowing how the young ...ger had been taken up by the best ...ple, Mrs. Reed had so far humbled ... pride as to call and plead for her ...e.

At first she praised and flattered. ...t finding she made no headway, ...e said: "I called because I thought ...u were so much honored by my ...n's offer, you dared not accept him ...remembering that your mother once ...rked in my home. I was not sur...rised."

The only answer she received was: ...I cannot marry your son because I ... not love him."

And now it was explained! The ...ttle minx had aimed for some one ...ell known and wealthy. But it was ...nwise for her—most unwise—to ...ring her fiance here! There was ...mething very unpleasant about Mrs. ...eed's expression at that moment.

In the early evening a big car slow... wound its way along the town ...treets. "Oh, Roger, it seems ages ...nce I saw my little home town. Let ... drive slowly. Oh, here is our ...ome!"

A small house peeped out from be...reen fruit trees, the fence covered by ...oses. Big bushes of lilacs were close ... the door.

The girl's blue eyes were suddenly ...uffused with tears. "Mother planted ...hose bushes. She loved flowers—"

A strong hand grasped hers sympa...hetically.

By the time they reached the con...ert hall she was laughing again. "Oh, ...Roger, this is the first place I sang ... How happy I am to come again."

Then she saw the big "Welcome" ...ver the door.

They led her into the small dress...ng room to remove her wrap, and ...ome of them who remembered her ...when she was a little girl, long before ... rich woman took her away to have ...er voice trained, came to greet her.

When she stood before them on the ...iny platform they mentally rubbed ...their eyes at the beauty and sim...plicity of her.

She felt she must give them her ...very best, these dear country people. ...She must not once let herself wish to ...see her mother's little, upright figure ...seated before her. If she did she ...would break down.

The hall was indeed "packed" and ...every breath was still as her voice ...rose. She sang the songs they knew ...and loved, but never, never, had they ...heard her sing like this. A wild bird ...seemed to be imprisoned in her ...throat and the notes swelled and ...poured forth and held them spell...bound.

Mrs. Cook glimpsed the expression ...in the eyes of the man Ruth was go...ing to marry, and was satisfied. Mrs. ...Reed saw the same look. "He won't ...be so proud of her presently," she ...thought.

But the others could not see any...thing properly, for she was singing ..."Home, Sweet Home," and they knew ...the words came from her heart.

At the end they crowded around her, ...and it was then she saw Mrs. Reed ...and caught her meaning glance at ...Roger Burton. She felt sick at heart. ...Roger was not a snob but, after all, ...she was only a poor, country girl. ...She had not before realized what it ...meant. Her face flamed. Did that ...woman think she was ashamed of her ...own mother?

Impulsively she stepped up to the ...platform again and held out her hands ...to them appealingly. "Just one min...ute more, please," she cried. "Before ...I go I must thank you for your kind...ness to me—for my mother's sake and for my own. You must realize what it would have meant to me to have had her with me tonight." Her trembling lips would not let the words come for a moment, then she continued bravely. "She must come before your eyes at this minute as she comes before mine—so brave, so clean and always so busy. Tired but ever cheerful. Working at menial tasks but always wearing a smile. And you know how very poor was my home life."

There were many wet eyes when she finished. Her eyes turned to Mrs. Reed, whose face turned crimson, then Ruth gathered up a great bunch of roses that had been handed her at the end of the recital and left the stage.

The whole hall arose and cheered and Mrs. Cook invited Ruth and her fiance to her home.

Roger Burton spoke up immediately: "We should love to; you people have a beautiful spirit—something fine to see."

And the very first minute Ruth and Roger were by themselves. Roger said: "Dear one, I loved you before, but I adore you now that you have been so brave. And"—his voice grew very soft—"you must let me take a few of your roses as my offering of thanks to your little mother—for yourself."

No Immediate Danger of Women Losing Toes

Speaking in London, Dr. Norman Lake told the English Society of Chiropodists that women are gradually losing their toes. High-heeled shoes, he said, distribute the weight of the body in such manner that certain parts of the foot tend to atrophy; thus in the future women's feet will become "a large mass of bones with a few little appendages as toes." And if this should come to pass it would be far from an unmixed calamity. Women without toes would certainly get more wear out of silk stockings, as they would have no toenails to make holes in the toes, and right there would be a saving for the average family of about $0 a week. But whether it will come to pass it extremely doubtful Doctor Lake is probably an excellent chiropodist, but only an indifferent biologist.

The laws of biology being what they are, no matter how many women wear high-heeled shoes or in other ways mistreat their feet, their children will be born with ten perfect toes, each liking to be tickled, each forming a separate bead in My Mother's Rosary. To suppose otherwise is to run squarely against the facts of acquired characteristics, which are that no case has ever been discovered where the offspring inherited characteristics acquired by the parent. No matter how many legs a soldier has shot off in the war his little boy always has two. This is the rock on which the evolutionary hypothesis has so far pounded itself to pieces; for while it is quite easy to see how an ape could lose his tail in the course of an active simian life, it is very hard to see how he could transmit the loss of that tail to his son, and thus father a man. So things look very bad for the race of toeless women, and the price of silk will probably remain high for a long time to come.

It is interesting, though, to learn that the English foot doctors have remained chiropodists, instead of becoming pediatrists, as have their American colleagues.—New York World.

Made Mark as Inventor

Among the vast numbers of ingenious inventors whose mark is the heritage of today, a prominent place must be conceded to Thomas Newcomen, who invented the atmospheric steam engine.

Newcomen died in London on August 5, 1729. His first engine was erected in 1712, the outcome of the application of the physical discoveries of the Seventeenth century. Newcomen learned the trade of an ironmonger at Exeter and afterward had a business of his own.—Nature Magazine.

Great Empire's Downfall

The decline of the Roman empire is considered to have begun about the year A. D. 180 and it continued for about three centuries. In the year 476 the empire ended when the Coths, the Visigoths, the Vandals and the Huns took possession of its territories and dethroned the emperor. There were other causes of this downfall besides the inroads of the barbarian hordes, such as civil wars and internal disorders, weak rulers, degeneracy of the people through luxury, etc.

Water Not Drawn by Sun

The sun does not pull water vapor up. Water is just evaporated by heat (this heat comes directly or indirectly from the sun), and thus made a portion of the air. It then is mixed with the atmosphere by diffusion, convection and the stirring caused by the winds. The rays of light which are perceptible are merely rays from the sun to the earth, made visible because the sun is shining between clouds, showing up the dust and particles floating in the air.

Have We One?

Daughter—The preacher just 'phoned and said he was coming to call this afternoon.

Mother—Gracious, we must make an impression; give baby the hymn book to play with.—Congregationalist.

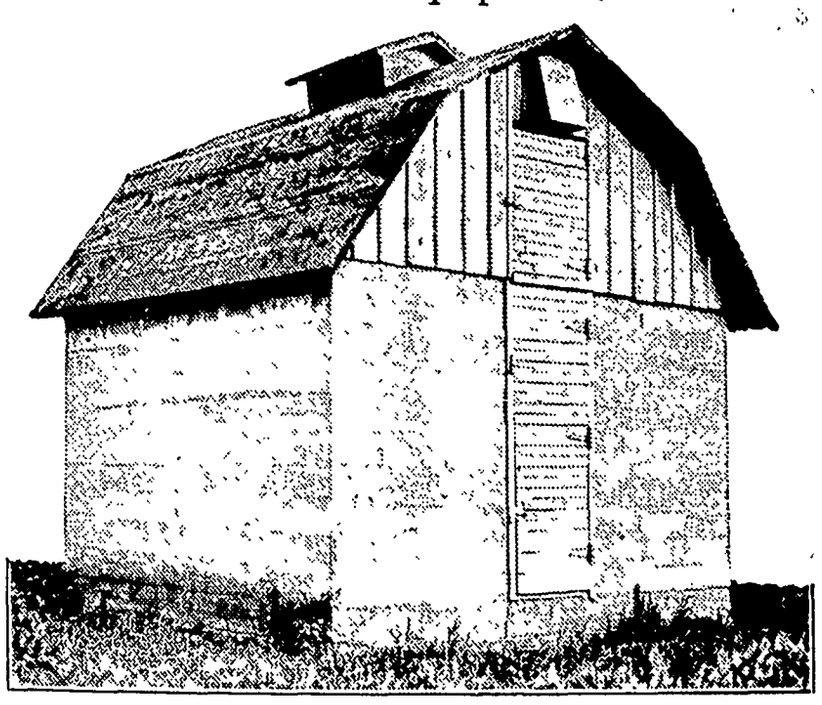
A Larger Order

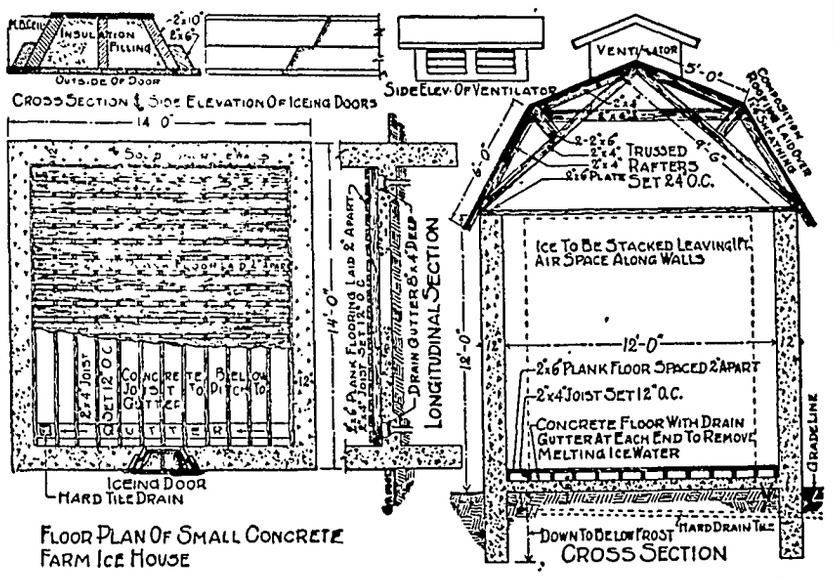
Jim—Where will we eat today, John?"

John—Let's eat up the street.

Jim—No, I don't like asphalt.

Concrete Ice House Is Valuable Addition to Equipment on Farm





FLOOR PLAN OF SMALL CONCRETE FARM ICE HOUSE

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

While automatic refrigeration is rapidly substituting ice in cities where electricity is available, there is a constant demand for ice in the smaller towns and on the farm. Ice is especially valuable on the farm where there is a herd of dairy cows, as it is essential that milk be kept in the most sanitary manner.

The cheapest means of refrigeration is ice that is kept and stored by the individual. This is a profitable winter time occupation on the farm as the ice crop is harvested when there is not much else that can be done.

The construction of the icehouse is a rather simple matter. When it is of frame construction the outside and inside walls should be separated by the thickness of the studding so that insulation—either sawdust or straw—can be packed between them to preserve the ice when warmer weather comes. Another type of icehouse which is easy to build and which will last indefinitely is poured concrete just as is shown in the accompanying illustration.

The building shown is 14 feet square and the poured concrete walls are six inches thick. The cross section shown together with the floor plans and some of the detail give a good idea of how this building is erected. The walls extend a foot and a half below the surface line and are constructed by building forms and pouring concrete. Care should be taken in pouring concrete when the weather is freezing and in concrete that is poured when the temperature is below 32 care should be taken.

The inside measurements of this building are 13 feet by 13 feet. The height of the interior is 12 feet.

The floor of the building also is of concrete and is covered with a raised open plank floor. This floor is made of 2 by 6 planks laid two inches apart and set on 2 by 4's which act as the floor joists. Thus this structure will hold 2,028 cubic feet of ice.

By using the poured concrete method of construction the owner will have a building which will be available for ice storage for many years to come.

Winter Building Gains Headway Every Year

Each year shows an increase in the amount of winter building. Even materials which need special care can be handled by the exercise of a little forethought by the builder. Included in this are the need of heating sand and gravel, the care in the pouring of concrete and protecting it from the frost and the use of salamanders to prevent materials freezing and to keep men comfortable.

While the foregoing costs a little more, winter building includes certain definite economies which offset these few added expenses. Builders can choose the most efficient workmen because of slack times, better deliveries are often obtained and often again lower prices in materials are secured.

Lumber is a material that can be used with no additional precaution or extra expense in winter building. While naturally it requires protection from rain and dampness in winter as it does in summer it should be protected also against snow by storage inside the building or by covering stock piles. It does not, however, need any special treatment before using or protection from cold after being put in place.

Overcoating Old Home Eliminates Drafts

The process of overcoating, if properly done, with proper flashing of windows and doors, should help considerably in freeing the house of drafts.

Overcoating a house is not so difficult a process as might be supposed. Shingles may be nailed directly to the old siding; a new siding may be nailed over the old. Metal lath furred onto the old walls will hold a permanent stucco coat. A brick wall may be built up over any old wall, started on a new concrete footing and tied to the old wall with wall-tiles or 30-d nails.

There is never any need to remove the old siding unless it is hopelessly rotted. If it is in such a condition, it would be well to examine the whole structure to see if it is sound enough so that modernization would be wise. Loose clapboards should be nailed down tight, but otherwise the wall need not be touched.

Grain of Wood Starting Place for Decoration

The interesting grain and mellow sheen of a fine wood fiber may serve as the decorative starting point for the whole room. In a bedroom, for instance, the maple floor may be dyed a delicate orchid with one of the new transparent color stains.

Around this unusual note the treatment of the sunny room revolves in a harmony of sunset hues and soft dove grays. The newer developments in acid and water stains have made possible the most enchanting colored surfaces. Pastel green, silver gray, royal blue and other lovely shades blend into the "ensemble" of bedroom or studio.

Beech has much the same appearance as maple but more grain and takes a deeper color tone when varnished or waxed. Birch with its smooth white sapwood and pinkish heart, absorbs a beautiful, even stain.

Paint is the finish par excellence for the softwoods—pine and spruce. The glare of a sun-bathed chamber can be softened if the floor is painted one of the absorbing shades—the cool blues, greens and grays.—Elizabeth Hallam Bohn in McCall's.

Cold Floors and Drafty Rooms Most Disagreeable

The windows may be loose, warped or shrunken. Loose windows allow the ready entrance of cold air and the house on the windward side will generally be cold and drafty if the entrance of air through the windows is permitted.

The remedy may be weather stripping, fitting storm windows or replacing the furring.

Poor floors often allow cold air to creep in, thus disturbing the heating arrangements and causing the fuel bills to mount to an unreasonable figure.

Poor floors should be replaced by well seasoned hard wood. Properly installed by an experienced builder using good material, your floors should be practically airtight and cold resisting.

Book Shelves

When you are figuring out how many books to put in your shelves, allow ten books to the running foot.

GASOLINE LEVY IS DEDUCTIBLE

Tax in Various States Yields Total of $375,000,000.

The gasoline tax is deductible in filing income tax returns where the language of the state law specifically lists it as a tax on the consumer, according to a bulletin issued by the legal department of the Chicago Motor club.

The bulletin pointed out that it is clear that the consumer always pays the tax, regardless of the wording of the law; therefore, the consumer should be allowed a deduction in all instances.

Interpretation of Law.

"However," continued the bulletin, "the bureau has put a strict interpretation of the state gasoline tax laws in the rulings already made. Consequently, in states where the bureau rules that the gasoline tax applies to the dealer, the only remedy remaining for those states is to amend and clarify the state gasoline tax laws so that the language of the act specifically levies the gas tax on the consumer.

"The gasoline tax in force in the various states this year will yield a total of approximately $375,000,000, which, if construed as a tax on the consumer in the various states, would amount to a considerable saving to the motoring public.

Tax Deductible.

J. H. Braun, general counsel for the club, declared that the bureau of internal revenue has already ruled that the gas tax is deductible under an interpretation of the laws of Delaware, Kentucky, Michigan, Missouri, New York, North Carolina and Virginia. On the other hand, if the tax is added to or made a part of the business expense of the owner of such motor vehicles, it cannot be deducted separately as a tax.

The motor club attorney asserted that decisions have also been rendered by the bureau with respect to the states of Colorado, Connecticut, Maryland and Ohio, holding that under its interpretation of the gasoline tax laws of these states, the tax is levied against the dealer, and therefore is not deductible by the consumer in filing his income tax returns.

Proper Care Will Make Tires Last Much Longer

Tires, among the most neglected of all motor-car essentials, can be made to render remarkably greater efficiency with improved economy, by systematic and intelligent care. This point, often emphasized by tire engineers, has been conclusively proved in a year's test, results of which have been computed.

On a metropolitan bus fleet selected for the test, a saving of 448 bus tires with a total of 7,213,706 tire-miles, at an average of 26,947 miles to the tire, was affected, according to the data available.

Under the care of an expert tire man the tire mileage of this entire fleet is declared to have been increased 67 per cent in one year and records for the first three months of this year show an increase of 96 per cent over 1926. The tire expert took charge of tire inspection and tire care at the beginning of 1927, it was explained.

AUTOMOBILE FACTS

A front-wheel drive is being put on the market by an Indiana car manufacturer. Combining this with the back-seat drive will give it nice balance.

* * *

It is estimated if all the automobiles in the world were placed end to end, some hot dog stands wouldn't do any business in their present locations.

* * *

A tourist back from abroad says you have to speak very distinctly to traffic officers on the Continent. Many of them do not understand broken English.

Few Simple Traffic Rules Will Make Travel Safer

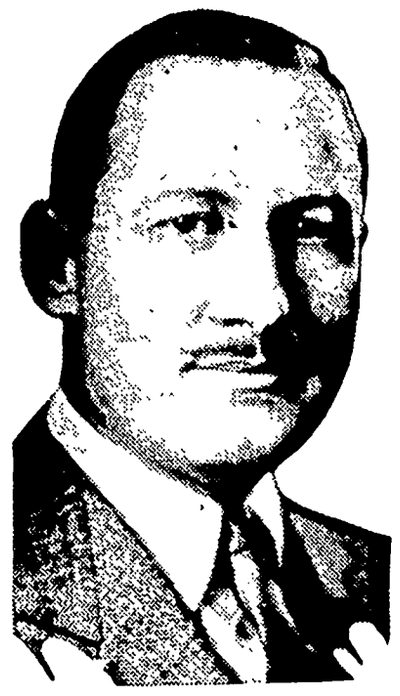
Believing that the careful observation of a few simple traffic rules will materially help in making travel safer on the highways the United States National Chamber of Commerce has prepared the following recommendations for drivers of automobiles:

1. Always remember you are an engineer, fully responsible.
2. Always test your brakes when starting and have them inspected frequently.
3. Never pass a street car when it is stopping, or if the law permits, proceed very slowly past it at the legal distance.
4. Exercise especial care in crossing in front of a street car or in passing it, as you cannot tell what may be coming on the other side.
5. Always signal with hand when slowing down, turning or stopping, even though you have an automatic or mechanical warning device.
6. Look before you back and sound the horn three times.
7. Try to drive with using the horn as little as possible. A sudden noise may stop pedestrians in their tracks rather than warning them.
8. Don't count too much on the common sense of the other fellow. No one is 100 per cent alert all the time.
9. Drive slowly in streets where children are playing. Remember your own childhood.
10. Cross crossings cautiously. Warning bells may be out of order, watchmen or gate operators may be off duty. Trains cannot stop as quickly as you can. Shift into second to avoid stalling on tracks.

Youngest Executive in Automotive Industry

Harlow H. Curtice, who has just been appointed president and general manager of the AC Spark Plug company of Flint, Mich., is one of the youngest, if not the youngest, major chief executives in the automobile industry.

Mr. Curtice is thirty-six years old. Starting in the accounting department 16 years ago, he successively occupied the positions of comptroller, assistant manager, and vice president and assistant general manager.



Harlow H. Curtice.

He is head of one of the largest automobile accessory companies in the world with branch factories in France and England and employing 5,000 persons. The products made by these plants are estimated to be in use on 20,000,000 automobiles today. Mr. Curtice succeeds Basil W. de Guichard, one of the pioneers in the industry, who resigned because of ill health.

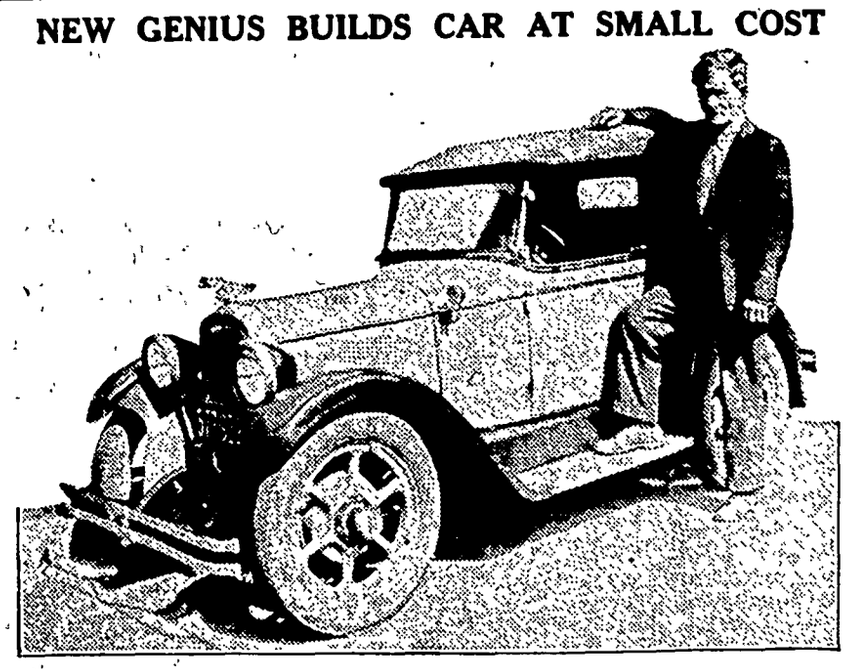
Shock for Men

Here's a shock for men drivers!

A recent survey conducted in 30 states showed that only 5 per cent of all accidents were due to women driving cars.

It was also found that on an average more women drivers bring in their cars at regular intervals for mechanical checkup which includes brake inspection. This, it is held, practically eliminated mishaps to the failure of a vital part of their cars. Brakes are often overlooked.

NEW GENIUS BUILDS CAR AT SMALL COST



George S. Brauks, pioneer automotive mechanic of St. Louis, who for the last thirty-one years has built 12 types of cars, has now perfected a model "four" which cost him but $185 to make. The car is of the midget type with an 86-inch wheelbase and a tread of 46 inches. It has a reputed speed of 60 miles an hour and will do 35 miles on a gallon of gas. Brauks claims that the auto can be profitably manufactured and distributed for $375. Photograph shows George S. Brauks with his midget car.

Porcupine Shown to Be Much Maligned Animal

One of the most unconcerned denizens of the woods and one about which has been woven many a fantastic tale is the porcupine.

It is the marksman of the forest, the story goes—the bowman that shoots barbed arrows at those it sees fit to attack. One in imagination can almost see a cloud of quills winging their way toward some enemy, ready to pierce any unprotected skin and race beneath the skin, presenting the problem of the fish-hook imbedded in a luckless angler's finger. It has the reputation of belligerency of the two-gun man, swaggering around, scowling at any luckless person who chances to get in the way.

If ever a more unfair picture of the character of an animal has been painted, a grave injustice has been done. The porcupine, as a matter of fact, is mostly intent on minding its own business and hopes that other animals will do the same. It is not particularly afraid of any others, knowing, as the skunk does, that it will not be attacked by any but the very young, and the very young soon learn that a good defense is a wonderful offense, reversing the usual strategy.

Printers Absolved of Charge of Irreverence

An average layman, fairly familiar with his Bible, hastily opened the Good Book to verify the statement of the Literary Digest's lexicographer that in the Scriptures the personal pronoun representing our Lord did not begin with a capital letter. To his surprise, the learned doctor was right. And if the reader turned back to the Old Testament, he discovered also that the pronouns referring to God were in the same style. The reason for this, the lexicographer explains, is that early-day printshops had inadequate upper cases (capitals) and that the rule was invoked, not because of a lack of reverence, but of necessity. So far as we know, Bible publishers are the only printers who have remained true to this tradition. Certainly there are few, if any, newspapers that do not use the upper case first letter in a pronoun referring to Christ or God.—St. Louis Post-Dispatch.

This Frank Decade

Mary Elizabeth has just started to dancing school and on the occasion of her second or third lesson her mother, sitting by as an interested spectator, was glad to see that she and her boy partner seemed to be holding a conversation. "What were you and Jimmie talking about?" she asked when the little girl joined her after the dance. "Oh, just talking," evaded the youngster. "Well, what did Jimmie say," persisted the mother. "He said, 'Gee, you're a rotten dancer,'" revealed Mary Elizabeth. "Oh!" cried the stricken parent, thinking her daughter would be offended. "What did you say to that, honey?" "I said," replied the child, calmly, "'Say, you're not so good yourself.'"

Catfish Peculiar

Catfishes are called catfishes because they have feelers on the head, like cats' "smellers." They have no scales, their bodies being naked and smooth, or mailed with long plates. The different species vary in size from dwarfs two inches long to six feet giants. The stone-cats and the madtoms, seldom more than three inches long, sting painfully, but not dangerously. Only a few fossil catfishes have been found. The present scaleless members of the group evidently come from scaly ancestors. The peculiarities that distinguish them are caused by specilization of some parts and by degeneration of other parts.

Swedes Made History

Sweden's international relations were kept alive by the contact between the home country and Swedish emigrants and settlers abroad. Thus in the year 375 Swedes penetrated as far south as the Black sea and founded an Austro-Gothian dominion. Others settled on the British islands and in Normandy. Headed by the great statesman and warrior, Rurik, one group went east across the Baltic and founded the empire of Russia, named after the coast district of Roslagen, near Stockholm, whence came its founders.

Old American College

Dartmouth college at Hanover, N. H., is an outgrowth of a school founded at Lebanon, Conn., by Eleazar Wheelock for the Christian education of Indian youth. Funds raised in England and contributed largely by Lord Dartmouth enabled Wheelock to move 150 miles to the Hanover plain, five miles north of the junction of the Connecticut and White rivers, and so allowed him to enlarge the scope of his work. The province of New Hampshire gave a charter to the new Dartmouth college in 1769.

History of the Diamond

India was the original home of the diamond as a jewel. For centuries India remained the sole source of Europe's diamond supply. About 1730 diamonds were discovered in Brazil. In 1867 diamonds were discovered in South Africa. South African diamonds constitute more than 90 per cent of the world's supply. From their discovery to the present time they have yielded 90,000,000 carats. The diamonds of the world probably represent a value of $5,000,000,000

Ring in Health With Christmas Seals

In the olden days anyone could be a bell ringer. Sometimes a citizen had to pay for the privilege; if he abused the honor he had to pay a fine. In All Saints' Church, at Hastings, England, these words may still be seen:

"This is a belfry that is free
For all those that civil be,
And if you please to chime or ring
It is a very pleasant thing."

The 1929 Christmas Seal

All through history since the 16th century, which was the golden age of bells, chimes have called out to people their cheerful messages, usually telling a story. For example, with the passing of the old year the bells were tolled in sadness, then, when midnight had struck, the merry peals clanged forth their welcome to the new year. Before the invention of the newspaper the town crier focused the attention of the people by lustily clanging a bell before he shouted the important news it was his duty to spread throughout the city. Since bells have so often served to proclaim victory it is not surprising to find that the design of the modern cup presented as a token of victory in sport is in reality an inverted bell.

It is equally fitting that on the gay little Christmas seal for 1929 a bell ringer should be portrayed tugging at a heavy bell, announcing once again to the nation that further victorious advances have been made against the enemy tuberculosis. Each year the seal brings its message of health at the Christmas season to remind people that sickness can be prevented.

The First Christmas Seal

Although the stamps are now well known, they originated in a modest manner only twenty-five years ago as the invention of a Danish postal clerk, who devised them to raise money for a tuberculosis hospital for the children of Copenhagen. Miss Emily P. Bissell of Wilmington, Delaware, was the godmother of the Christmas seal in this country. She also was seeking for a method to raise money for a tuberculosis institution in her state and in 1907 found the solution to her problem in a magazine article describing the Danish seal and its successful mission. Through her efforts a fund of $3,000 was raised and the project begun. The following year the first nation-wide sale of tuberculosis Christmas seals was undertaken, and women's clubs, religious bodies and business groups gave their support to this cheerful method of raising money. In 1910 the then young National Tuberculosis Association took over the sale of the seals and has directed it ever since. The seals therefore should be called tuberculosis Christmas seals.

The First American Christmas Seal

Thanks to the tiny seal, state after state has been organized to attack tuberculosis with a scientific program. Together, led by the national body, they have brought into existence much of the present-day community machinery that combats tuberculosis. Through the intensive educational work made possible by the Christmas seal, health laws have been passed and are being enforced; tuberculosis specialists and nurses reach the most remote country districts; printed matter on disease prevention is circulated in schools, homes and factories, and there is an active public interest in tuberculosis control among civic, political, commercial, social and religious groups.

This year again the seal carries its message of health throughout the country, giving everyone a chance to be a bell ringer as in olden days—a proclaimer of the important tidings that health is the best insurance for happiness and that tuberculosis may be cured if discovered in time. And as millions of letters and packages decorated with Christmas seals travel from one end of the country to the other during December they will spread the message, "Ring in a year of health with Christmas seals."

A Steady Income--

How much better to have a steady income that the weather can't stop nor poor crops control than to rely on grain farming and be at the mercy of the elements and market conditions.

With a Dairy Herd, in case of crop failure, even the partially matured crops and the grasses in the fence corners are turned into a Golden Harvest by the aid of the cow.

Just the assurance and self confidence that the Dairy Cow inspires in the heart of the average farmer, more than offsets for the trouble and time spnt in her care.

The Semi-Monthly Cream Check is oftims a life line to the farmer, on the sea of financial difficulties.

YOUR OWN CREAMERY

—is an important factor in developing the dairy business in this community. Protect your OWN nterests by protecting your local market——by selling your cream at the Klemme Co-Operative Creamery you ar taking out insurance on the cream market of the future. You insure your livestock, buildings and life and pay real money for what you get——by selling your cream at this creamery you are getting excellent insurance and bing paid to tak it.

And we want to thank you for your part in helping to make this one of the Best Creameris in Iowa.

Klemme Co-op. Creamery Company

You Save The Difference

Filling up with Alcohol time after time during the cold months is a costly way of keeping your radiator from freezing. One filling of—

EVEREADY PRESTONE

at a very little more cost than the same amount of Alcohol, will last all winter. You save the difference.

EverReady Prestone is the Perfct Anti-Freeze. Does Not Boil Off and Does Not Freeze. Let us fill your radiator today—You are then safe.

To Preserve Indian Sign Language

GEN. SCOTT TALKING TO CAPT. SUMKIN OF THE UMATILLAS ©Harris & Ewing

H. L. SCOTT, CAPTAIN, SEVENTH CAVALRY, U. S. A.

"SIGN OF THE BIG HORN"

GEN. SCOTT AND OLD TIME INDIAN WARRIORS Photo by International

© Henry Miller

I-SEE-O OF THE KIOWAS

By ELMO SCOTT WATSON

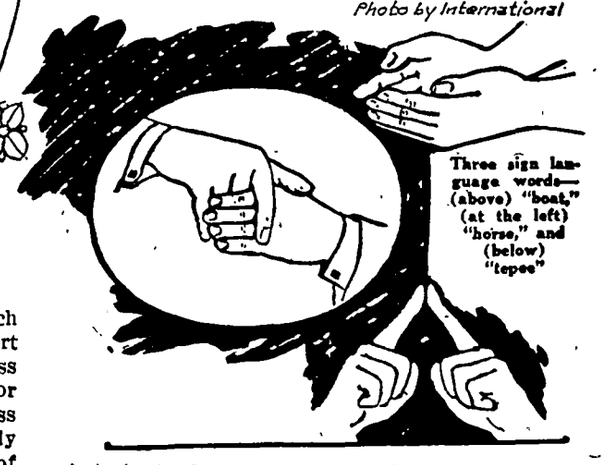
THE Indian sign language, which is rapidly becoming a lost art as the old-time Indians pass away, is to be preserved for future generations if congress passes a bill introduced recently by Representative Leavitt of Montana, chairman of the Indian affairs committee in the house. The bill asks for an appropriation to make a permanent record of this language and Representative Leavitt has suggested that Maj. Gen. Hugh L. Scott, retired, who has been a student of the Indian sign language since his graduation from West Point in 1876 and who is one of the few white men who ever mastered its intricacies, is the one man living today who is best fitted to handle this work.

The Indian sign language is unique among methods of communication between human beings. The white man has invented a deaf-and-dumb alphabet of more or less arbitrary sort which is practicable for the communication of ideas but which must be learned by intellectual application and by a recollection of certain shapes of the fingers which mean letters and thus spell out words. But that was not the red man's way. He thought in pictographs just as he wrote in pictographs and each of his signs was a whole word or a distinct sentence or a complete thought.

It was old Jim Baker, the famous trapper, fur trader and guide, who once said: "An Injun will tell a long story in four grunts and the rest with his fingers." And that expresses it about as well as the statement by the bureau of American Ethnology experts that "A Sioux or a Blackfoot from the Upper Missouri has no difficulty in communicating with a visiting Kiowa or Comanche from the Texas border on any subject from the negotiating of a treaty to the recital of a mythic story or the telling of a hunting incident."

An interesting example of the efficiency of the sign language is related by General Scott in his book "Some Memories of a Soldier," published recently by the Century company. When Chief Joseph of the Nez Perces was being carried down the Missouri to Bismarck, N. D., as a prisoner of war after his surrender in the Bear Paws mountains in Montana in 1877, a crowd of more than 1,500 Indians gathered to see such a famous chief. Joseph addressed them in the sign language and, recounting the whole story of his people's wrongs, he made his meaning clear to all these people, who spoke eight different languages—Nez Perces, Sioux, Cheyenne, Crow, Arikara, Mandan, Gros Ventre and English. Even more interesting was the incident which took place in 1925 in which General Scott himself figured. At the Old Fort Union celebration in Montana in that year there was a big gathering of Indians which General Scott addressed, using the sign language. Thirteen different tribes were represented in his audience and every member of every tribe understood everything he said!

General Scott's name among the Indians is "Mole-Te-Qu-Op" (The Man Who Talks With His Hands or Sign Talker). It was given to him by Big Wolf, a Cheyenne chief, in 1890 when Scott was sent among the Cheyennes in Montana to quiet the ghost dance excitement there. But his proficiency in the sign language dates back further than that. Soon after his graduation from West Point he was assigned to the Ninth cavalry but obtained a transfer to the Seventh, which had been all but wiped out in the Battle of the Little Big Horn at about the time of his graduation. With the Seventh he served in the remainder of the Sioux campaign in 1876-77 and then in the Nez Perces war in 1877.



Three sign language words—(above) "boat," (at the left) "horse," and (below) "tepee"

Early in his career on the plains Scott recognized that one way to solve the Indian problem was to try to get the Indian point of view and in order to do that he had to learn to speak their language. Obviously it would be a lifetime job to learn the tongues of all the tribes. But the intertribal language, the sign language, offered a short cut and he set himself to learn that. He was fortunate in gaining the friendship of a remarkable Indian, I-See-O of the Kiowas, who became the "guide, philosopher and friend" of the young cavalry lieutenant and also his instructor in the intricacies of the sign language. Both I-See-O and Scott were fighting men but they were also both peacemakers and they worked together in bringing about a better understanding between the two races. In fact, General Scott is better known for his diplomatic victories which settled many troubles with the Indians, than he is as the greatest white exponent of the sign language. But it was his knowledge of the sign language which helped him in winning those victories.

An example of that is shown in his interview with Red Cloud, the great chief of the Oglala Sioux. General Scott tells about it as follows:

Going up to Red Cloud's village on White Clay Creek, I noticed ugly signs. Red Cloud was said to have five thousand young men, many recently from the hostile village, and I could see that they were in a very ugly mood. . . . I could feel trouble in the air.

There was no interpreter with the command, when one was needed most, nor any Indian scouts. When the head of the column stopped at Red Cloud's lodge, they sent back in the column for me.

Red Cloud was in a most surly mood. There he stood in the presence of eleven troops of cavalry and boldly asked: "What do you come looking for here? My young men don't want you here. If you come here looking for a fight my young men will fight you. If you don't want to fight, you go home."

It was a good deal of responsibility to throw on a young man. I not only had to act as interpreter, and extricate the commanding officer from the tense situation, but must still preserve his dignity. Fortunately I succeeded.

We went a day's march away to camp, and I was sent back to live in Red Cloud's lodge for a few days to keep tab on what he was doing. Indians are always hospitality itself, and he made me welcome in his lodge. I stayed there three nights, watching.

Red Cloud was an excellent sign talker, but he made his gestures differently from anyone I had ever seen before or since. While each was perfectly distinct, they were all made within the compass of a circle a foot in diameter, whereas they are usually made in the compass of a circle two and a half feet in diameter. We talked about everything under the sun, but he would not give me any clew to what made him so ill-humored, and to what was actuating his young men.

The remarkable thing about this is that the young officer knew that Red Cloud was holding back something because his sign talk swung only in a diameter of a foot instead of in the large, open gestures within a circle two and one-half feet in diameter. Knowing that, he was able to get at the heart of the matter, "smooth down" the irate chief and perhaps saved many lives, both white and red, through his intimate knowledge of the sign language.

Of the origin and development of the sign language General Scott says:

Whenever persons of alien speech encounter others with whom they cannot communicate they first endeavor to make themselves understood by raising the voice. When this proves inadequate, they stage a little drama or pantomime by gestures that will serve to put their idea into the minds of others by the imitation of acts or qualities. If this pantomime proves apt and easily understood in the two alien groups it would be used again on meeting other groups, the signs acting and reacting on each other for ages; the fittest only surviving until the language had spread and become stabilized over all the plains, the habitat of the buffalo, long before the arrival of Europeans on this continent.

The sign language obeys all the general laws of linguistic science, save those of sound. It appeals to the same human brain through the eye rather than through the ear. It is therefore akin to all human tongues and has its own place in the hierarchy of all the languages of the human race.

The Indian seizes the most salient qualities to give an object a name and you will be surprised at the aptness and skill with which they pick out these qualities. The law of the sign language is to give a name that belongs to something and to nothing else.

Of some of the commoner symbols in the sign language, James Mooney of the bureau of American ethnology, writing in the "Handbook of American Indians," says:

The signs in every case are founded on some tangible or symbolic characteristic, although by abbreviation or "wearing down," as in a spoken language, the resemblance has frequently been obscured and conventionalized. Thus the sign for man is made by throwing out the hand, back outward, with index finger extended upward, apparently having reference to an old root word in many Indian languages which defines man as an erect animal. Woman is indicated by a sweeping downward movement of the hand at the side of the head, with fingers extended toward the hair to denote long flowing hair or the combing of flowing locks. A white man is distinguished as the hat wearer, either by drawing the index finger across the forehead or by clasping the forehead with outstretched thumb and index finger. For Indian the speaker rubs the back of his left hand or perhaps his cheek with the palm of the right to indicate a person whose skin is of the same color. The sign having obtained this conventional meaning may be used equally by a white man to convey the same idea.

A tepee is shown by bringing both index fingers together like an inverted V to indicate the conical shape and the crossing of the poles. An ordinary house would be distinguished by adding the sign for white man. The buffalo, and in later days a cow, is indicated by crooking the index fingers at the side of the head to resemble a horn. A dog is indicated by drawing the hand, with first and second fingers spread apart, across in front of the body, typifying the old-time travois dragged by the animal when used as a beast of burden.

Eating and drinking are indicated by signs easily intelligible. Sleeping is indicated by inclining the head to one side, with the open palm held just below, typifying the recumbent attitude of repose. As days, or rather nights, are counted by "sleeps," the same sign may mean a day when used in connection with enumeration, indicated by the motion of counting upon the fingers. In the same way cold is indicated by a shivering movement of the clenched hands in front of the body and as Indians count years by winters or "cold" seasons, it signifies also a year in another context. The hand upright and turned upon the wrist with fingers apart and extended indicates the question sign and a somewhat similar but slower gesture means vacillation, i. e. "may be."

Reduced to action the question "How old are you?" becomes (1) point finger at subject: you; (2) cold sign: winter or year; (3) counting sign: number; (4) question sign: how many? An expert can go through the whole movement in about the time required to put the spoken question, with the advantage that he can be understood by an Indian of any language from Canada to Texas.

Some signs are beautifully symbolic. Thus, fatigue is shown by a downward and outward sweep of the two hands in front of the body, index fingers extended, giving a gesture picture of utter collapse. Bad is indicated by a motion throwing away; truth by signs for straight talk and falsehood by the talk sign with another for different directions, i. e. "talking two ways."

On the Funny Side

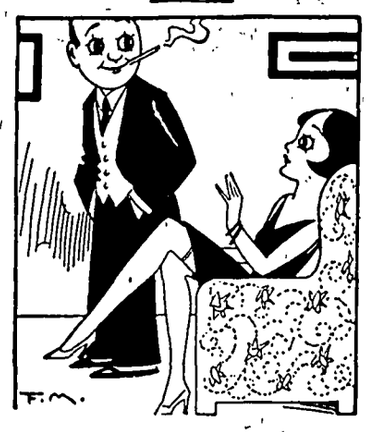
ACCURACY

The local politician stormed up to the editor's home at a late hour and pounded on the door. When the editor appeared at the window above he shouted:

"I've read your slander on me and I've come to throw the charge back in your teeth!"

"Well, be a good fellow," said the editor, yawning, "and throw it in the bathroom window. I've left my teeth in there."—Boston Transcript.

WHY THEY'RE SO CALLED



Wife—Why do they call the street-cleaners white wings?

Hubby—Because they're like angels. Haven't you noticed that their visits to our street are few and far between?

The Greatest of Fish Stories

The best of fish yarns have been made
Apart from active glory.
Perhaps old Jonah, in the shade,
Thought up his splendid story.

"Unspeakable" Ones Best

Mrs. Withers had been to the talking pictures for the first time.

"'Ow did yer like it, Nell?" asked her friend.

"All right enough, but to tell yer the truth, I'd rather 'ave been to one of the old unspeakable ones."—London Passing Show.

An Ancestral Joke

Visitor (to butler, who is showing him through the picture gallery of the old mansion)—That's a fine portrait. Is it an old master?

Butler—Oh, no, sir; that's the old missis!

Important

Old Lady—My poor man, I suppose you have had many trials in your life?

Tramp—Yes, ma'am, but only one conviction.

Call the Wagon

"I can't express myself," said the Thoughtful One.

"Of course not," retorted the Nut, "live stock has to go by freight and in cattle cars."

A GOOD GOLFER

"Is he a good golfer?"

"Oh, yes—always goes to church before he plays his Sunday game."

Just So

Some think dancing on the wane
They are rather lax.
Everywhere you go you see
Dancing on the wax.

Cinching It

Miss Plainsmith—Are you going to have your fiance present at your announcement luncheon?

Miss Mainchance—Sure thing? He hasn't yet acknowledged it before witnesses.

More Noise

"Why can't you please that customer in a tie?"

"He wants a gray tie."

"We have plenty of gray ties."

"He wants a loud gray."

Squirrel's Cage

"When are Joan and Ed to be married?"

"Never, I'm afraid."

"Why, how's that?"

"Well, she won't marry him until he pays his debts, and he can't pay his debts until she marries him."

As You Were

He—Don't go. You are leaving me entirely without reason.

She—I always leave things as I find them.—London Tit-Bits.

Mothers . . . Watch Children's COLDS

COMMON head colds often "settle" in throat and chest where they may become dangerous. *Don't take a chance*—at the first sniffle rub on Children's Musterole *once every hour for five hours.*

Children's Musterole is just good old Musterole, you have known so long, in milder form.

Working like the trained masseur, this famous blend of oil of mustard, camphor, menthol and other ingredients brings relief naturally. It penetrates and stimulates blood circulation, helps to draw out infection and pain.

Keep full strength Musterole on hand, for adults and the milder—Children's Musterole for little tots. All druggists.

CHILDREN'S MUSTEROLE
BETTER THAN A MUSTARD PLASTER
MILD

FOR INFLAMED JOINTS

Absorbine will reduce inflamed, swollen joints, sprains, bruises, soft bunches. Quickly heals boils, poll evil, quittor, fistula and infected sores. Will not blister or remove hair. You can work horse while using. $2.50 at druggists, or postpaid. Send for book 7-S free.

From our files: "Fistula ready to burst. Never saw anything yield to treatment so quickly. Will not be without Absorbine."

Effect of Salt Water on the Human System

Some of our common credulities, writes Prof. J. Arthur Thompson in John o' London's Weekly, refer to the supposed susceptibility of our body to certain influences; and a good example is the widespread belief that drinking salt water brings on madness. For subtle physiological reasons, concerned in part with the density of the living matter and the difference of fluid material from cell to cell, the health of the body depends on a delicate balance between the inorganic salts in the blood. If there should be a lack of salts in the food, things may go badly wrong; and similarly if, through lack of fresh water or its equivalent there should be an accumulation of salts in the blood, everything goes wrong in the working of the body, and delirium is likely to set in.

Grizzlies Passing

Forest rangers in the Far West who have been making a census of grizzly bears report that this interesting animal is almost extinct. It is estimated that there is only about a score of grizzly bears in the entire Pacific coast region. In times gone by these animals were common in the mountain forests and hunters and trappers had many adventures with them. But they are going the way of the buffalo, the passenger pigeon and the great auk.

Haul

"How was the fishing where you were this summer?" "The man who wrote the booklet had an excellent catch."

The Unusual Christmas Gift

by

Frances McKusick

IT WAS cold. About six inches of snow had fallen within the last few days. The stores were gay with their glistening decorations and pretty holiday gifts. The pine and spruce trees on the lawns were shining with many colored electric lights. It would be Christmas in a few days.

John Clair and Gordon Lawson were sitting before the open fire in the New Haven University club. They were young, good looking and frankly men of leisure.

"I think I shall go to Miami soon," said John Clair, as he filled his pipe. "It's getting cold here now."

"Why don't you stay a while?" asked Gordon, "the season's just started, and there are some very pretty debs this year."

"Women, all you think of is women," said Clair disdainfully.

The two men were silent for a few minutes. Then John said: "Oh, by the way, Lawson, what are you giving the ladies for Christmas?"

"Why?"

"Oh—just a matter of my feeble but still functioning curiosity."

"For Carmine—a gorgeous dresser set (she's vain); for Lelah—a rope of pearls (she has an unusually beautiful throat) for Marise—"

"Stop!" interposed Clair. "Why don't you give her something original—a beautiful shoe tree set, for instance?"

"What are you going to give the darlings for Christmas?" demanded Lawson.

"My dear Lawson," he answered condescendingly, "I am going to present a girl with her brother as a gift."

"A brother? Why not a husband?"

"That will come later. Shall I tell you the story?"

"Yes, go ahead—if it gets too tiresome I'll let you know."

"Do you remember when I graduated from Yale?" began Clair; "that was about three years ago, I believe, and a notable year, because it was the last time I ever did any work."

Lawson sighed. "Ah—the detailed history of John Clair," he murmured.

"My father died the year after, you will recall," continued Clair. "Well, the last year I was at school the family went to Europe and closed the town house. So I rented a flat.

"You were always clever," said Lawson with mock appraisal.

"Strange as it may seem to you, Lawson, I have a hidden talent. I can write. When I was in school I even had aspirations to be a newspaper man."

"I see. This is only about yourself. There are no women in this narrative."

"Wait a moment. There will be presently. The whole story hangs on the fact that about Christmas time that year I wrote an unusually good

They Were Young, Good Looking, and Frankly Men of Leisure.

English theme. It was about a Russian Christmas."

"Good Lord," ejaculated Lawson, "you've never been to Russia, man."

"I know, but I took the idea from a book, or magazine or something, and rewrote it. Well, the good-hearted prof. handed it in to one of the papers, and they published it. How realistic that story was you will understand in a few minutes."

"I hope so."

"Christmas eve I was coming home rather late from a party, in fact a series of parties, so it was almost dawn when I let myself in the apartment. And what should I see curled up asleep on the chesterfield but a girl. She was poorly dressed, and she had a lot of dark hair that had fallen across her face, so I couldn't tell whether or not she was pretty, but I took the chance, and awakened her. She sat up straight and looked at me and smiled. She was beautiful, fine features and that sort of thing. And a figure that would make most of these debs turn green with envy. Well, anyhow she started talking to me in an ungodly tongue and all I could do was look amazed.

"'Aren't you Russian?' she asked.

"'Heaven forbid,' I replied; 'I am a God-fearing American citizen, about to graduate from Yale, and—'

"'I beg your pardon,' she said coldly, and moved toward the door.

"'I am sorry if I have offended you in any way,' I apologized. 'Won't you at least stay and have breakfast with me?'

"She shook her head, but when she saw how it was snowing outside she reconsidered, and turned around.

"'I suppose you deserve an explanation,' she said.

"'You don't have to tell me a thing if you don't care to,' I replied.

"'You funny boy; don't you think it is at all strange to find a girl whom you'd never seen before, asleep in your apartment?'

"'I don't know—I was just wondering why I ever stopped believing in Santa Claus,' I answered.

"The girl laughed, and after that we got along beautifully. While we were eating breakfast she told me all about it. It seems that she was a member of the aristocracy in Russia, not a princess, perhaps, but still of very high rank. Well, she and her brother managed to get along for a

She Was Beautiful, Fine Features and That Sort of Thing.

time, then one day he left her to go to another town on business, and he never came back. She heard from him once or twice, and he said he was escaping to America, and asked her to follow him. So she did. And she told her story to the New York and Boston newspapers, but she was never able to find any trace of him. Almost penniless, she came to New Haven. She read my story, thought perhaps I was a Russian writing under a pen name, went to the newspaper office, obtained my address, and with a few faint hopes, she came to my apartment.

"'Of course the men in the office knew who you were,' she said indignantly, 'but I suppose they thought it would be a good story for you to find me here.'

"'God bless the newspaper men,' I said fervently. 'And I'll help you find your brother—what is your name, by the way?'

"'Dounia Petromonoff, but I couldn't think of letting you try to find him,' she protested.

"'Think nothing of it. I am training to be a detective, and that will be good practice.'

"'I don't believe it,' she laughed, 'but you are a dear American, so I think I shall let you.'"

"How nice of her," interrupted Lawson. "And I suppose you found the brother?"

"Yes, I found him just a few days ago, playing in a cafe in Hartford. It was a sort of Russian resort. So I gave him her address and a little cash. As you have probably concluded, I fell in love with the girl, but I decided I wouldn't ask her to marry me until I had found her brother."

"I understand. You wanted to make her feel indebted to you."

"She is wonderful," he mused, "wonderful."

The two men smoked in silence for a few minutes. Then a boy brought in the afternoon mail. Clair looked through his until he found a small envelope addressed in large, unusual handwriting.

"An invitation to spend Christmas with Dounia and her brother," he exclaimed, as he tore open the letter.

"May I come, too?" teased Lawson.

Clair read:

"Dear Johnnie:

I want to thank you many, many times for finding Leo. It has made me very happy, and you were so kind to look for him. But I want to ask your forgiveness for deceiving you, for it wasn't my brother whom you were looking for. It was my husband.

"He sends his best regards. We both want you to spend Christmas with us. You will come, won't you, Johnnie? Affectionately,

"DOUNIA."

(c, 1928, Western Newspaper Union.)

VARYING WAYS ICE CREAM CAN BE SERVED

Nicely Arranged Plates of Ice Cream, Cake and Cookies.

(Prepared by the United States Department of Agriculture.)

Ice cream can come on the table as just ice cream—dipped from a box or a freezer, or cut in slices from a brick—or it may be served in a charming and interesting way that will give a delightful touch to the entire meal. An attractive setting, of course plays its part—pretty dishes of glass or china, a nicely arranged plate of cake or cookies, a beautiful bowl of flowers. The illustration, taken by the bureau of home economics of the United States Department of Agriculture suggests some of these accessories.

In this case the ice cream was in reality a mousse, made in a ring mold which was filled, when turned out, with canned peaches. Each portion included some of the peach, placed on a plate neatly and attractively with cake to accompany it. Sometimes this combination is reversed. The ice cream is put into halves of large canned peaches. "Peach Melba" is the popular name for this dessert. Half canteloupes and honeydew melons are often used as containers for ice cream, adding greatly to both flavor and charm of appearance. Vanilla cream with canteloupe and lemon or orange ice with honeydew melons, are liked.

A "parfait" might be called a sundae built on a vertical plan. A tall narrow glass is used. In the bottom is put a little of the ice cream; then a spoonful of fruit or chocolate sauce, according to the flavor wanted, then more ice cream, and a generous serving of whipped cream, topped by a candied or maraschino cherry for color.

Ice cream sandwich, which is ice cream placed between layers of sponge cake; pie a la mode, or pie with a helping of ice cream on top; ice cream with berries or cut up peaches, bananas or other fruits; ice cream in sherbet cups with chocolate sauce or maple sirup, are other familiar ways of presenting this wholesome and always welcome dessert to your family.

PROTECT FRUITS AGAINST INSECTS

Plan to Keep Out Various Pests During Drying.

(Prepared by the United States Department of Agriculture.)

It is hardly necessary to point out that all dried fruits, whether bought commercially or prepared at home, should be stored in tight containers to protect them from insect attack. Adult insects of various species choose dried peaches, apricots, raisins, figs, and other fruits as suitable places for laying their eggs. These will soon hatch out into larvae or worms and make the product unfit for food.

The bureau of entomology of the United States Department of Agriculture receives many requests, however, for information on how to protect peaches and other farm orchard fruits from insect pests during the process of drying. All fruit should be covered with a light cheesecloth while drying, to keep out dust as well as insects. An additional precaution suggested by entomologists studying the insects that attack stored and dried products is to sterilize the peaches or other fruits by heating them for a short time in a hot oven. This should kill any eggs that have been laid on the fruit, also any living weevils.

Another method is to fumigate each batch of dried fruit with carbon disulphide and then store it immediately in tight containers. The fumigation is accomplished by placing the fruit in a tight container and exposing it overnight to the fumes of the chemical. One or two ounces of carbon disulphide is sufficient to fumigate a space of ten cubic feet. The chemical should be poured out in a shallow pan and placed on top of the fruit. The fumes of carbon disulphide are inflammable and fire in any form should be kept from the room in which it is being used.

Tuna Fish, Spaghetti, and Tomatoes Favored

The flavor of tuna fish is enhanced by serving it with tomato. Here is an "all-in-one" lunch dish which takes advantage of this excellent combination of flavors, and which introduces our old friend spaghetti in a new way. It is from the bureau of home economics of the United States Department of Agriculture.

¼ pound spaghetti, or 1 pint broken
2 tbs. chopped celery
5-ounce can tuna fish
1 quart canned tomatoes
1 tsp. salt
⅛ tsp. pepper

Cook the spaghetti in boiling salted water until tender, then drain. Remove the fish from the can, drain, and cut the fish into small pieces. Cook the celery in the oil from the fish, and add one or two tablespoonfuls of olive oil or other fat if desired. Add the tomatoes and cook until fairly thick. Stir in the spaghetti and the fish and season with salt and pepper. Simmer until well blended, then serve.

If Mayonnaise Curdles

If your mayonnaise curdles or separates, the trouble can be remedied by using a mixture of cornstarch and water. To one tablespoonful of cornstarch add two tablespoonfuls of water. Stir together and add this to the separated mayonnaise. If one treatment is not enough, repeat. You will find that the treatment seldom fails to make the dressing smooth and firm.

Split Pea Souffle Will Make Hearty Lunch Dish

The combination of several eggs with the puree obtained from cooked split peas makes this a hearty enough dish for lunch or supper. Serve it with a crisp raw vegetable salad. The recipe is from the bureau of home economics.

4 eggs
½ cup green split peas
1½ cups water
1 cup milk
2 tbs. flour
3 tbs. butter
4 tbs. finely cut celery
2 tbs. finely cut onion
3 tbs. finely cut parsley
1¼ tsp. salt
⅛ tsp. pepper
Several dashes of tabasco sauce

Wash the split peas. Soak them in one cupful of water overnight. In the morning, add the remaining water to the soaked peas and cook until very soft. Press through a fine sieve. Cook the celery and the onion in the butter for a few minutes. Stir in the flour until thoroughly mixed, then add the milk, and cook until thick. Pour the hot mixture into the well-beaten egg yolks. Add the pea puree and the other seasonings. Fold in the stiffly beaten egg whites. Bake in a buttered dish in a very moderate oven (300 degrees Fahrenheit) for about one hour, or until set in the middle. Serve at once.

Plan for Making Apple Butter Without Cider

Good apple butter is often made from tart apples without the use of cider. Enough water is added to the sliced apples to make a thin apple sauce, which is then cooked very slowly over a low fire for three or four hours. A pound to the gallon of brown rather than white sugar is added when the cooking is about two-thirds done. The amount of spice and vanilla to be used is determined by taste. Stir often.

Several variations of flavor are possible by using other fruit juices. For instance, a pint of grape juice may be added to each gallon of peeled and sliced apples, cook into sauce and strained. Add also one cupful of brown sugar and one-quarter teaspoonful of salt. Cook slowly and stir often for two hours.

To make apple butter with lemons, slice four lemons, cover with water, and let stand overnight. Next morning put them in a preserving kettle with eight pounds of apples, pared, cored, and sliced. Cook for one hour, add three pounds of sugar, and cook slowly with frequent stirring one and a half hours longer, or until of the proper thickness.

Cereals in Baked Apples

Use any left-over cereal you have. Wash and core the apples and fill the centers with the left-over cereal. Put the apples in a baking dish. Place a dot of butter and one teaspoonful of sugar on each apple. A few drops of lemon juice may be sprinkled over all. Bake in a moderate oven until the apples are soft. Serve hot with cream for breakfast or as the dessert at dinner or supper.

Baked Indian Pudding

Scald one quart of milk and add half a cupful of molasses and one tablespoonful of butter. Mix three-fourths cupful of corn meal with half a tablespoonful of ginger and half a teaspoonful of salt, then pour the liquid over the dry ingredients. Beat in one egg and pour the mixture into a buttered baking dish. Bake for two hours in a moderate oven.

To What Purpose

Hubby—It's queer, but the biggest idiots seem to marry the prettiest women!

Wifey—Now, you're trying to flatter me.—Boston Transcript.

Many a man who thinks he is a martyr is only a chump.

Calloused Individual

"They say Mr. Destyle is financially embarrassed."

"Well, he's horribly in debt, but it would take more than that to embarrass him."—Tit-Bits, London.

Famous Last Words: "So this is a cannibal island?"

Old shoes made *new* for less than a penny a pair

Scuffs disappear. Clean, uniform color returns. More than 50 shines for 50 cents. Black, brown, tan, white and neutral.

BARTON'S DYANSHINE SHOE POLISH

His Choice

"What is your son taking in summer school?"

"The golf course."

Keep up with the procession. Don't, at least, be a Rip Van Winkle while you are awake.

If It's the Right Man

He—What do you say to a kiss?

She—I usually ask if it came alone.—Exchange.

A man must either make way for himself or get out of the way of others.

For COLDS

We all catch colds and they can make us miserable; but yours needn't last long if you will do this: Take two or three tablets of Bayer Aspirin just as soon as possible after a cold starts. Stay in the house if you can—keep warm. Repeat with another tablet or two of Bayer Aspirin every three or four hours, if those symptoms of cold persist. Take a good laxative when you retire, and keep bowels open. If throat is sore, dissolve three tablets in a quarter-glassful of water and gargle. This soothes inflammation and reduces infection. There is nothing like Bayer Aspirin for a cold, or sore throat. And it relieves aches and pains almost instantly. The genuine tablets, marked Bayer, are absolutely harmless to the heart.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

A NEW FORM OF INVESTMENT

Our Company has recently created and is now issuing a new series of preferred stock to be known as Cumulative Convertible 6 Per Cent Preferred Stock.

This stock is designated as "convertible" because the holder of each share enjoys the right and privilege of converting or exchanging the same into one share of Class A Common Stock of the Company at any time prior to the stock of this series being called for redemption.

This right of conversion gives the holder of this stock the advantage of receiving a fixed return on the investment until such time as it may be an advantage to convert such stock into Class A Common Stock.

In addition to this right of conversion this series of stock will njoy all the other rights and privileges of preferred stock of the Company.

The par value of this new stock is $25.00 per share and it pays dividends at the rate of 6 per cent, payable quarterly.

Fill out and mail to Central States Electric Co., 515 Merchants Nat'l. Bank Bldg, Cedar Rapids, Iowa.
Send me circular in regard ot your new stock

ME CAGERS DEFEAT OLD RVALS IN FAST GAME

tal Lake Team Will Play The Greens Here Friday Night

Our basket ball team went to rfield last week and in a fast and ious fray convinced all there they ld play a good brand of ball for won 23 to 13. Victory was ished for last year they lost over re. Our Pep Club put on plenty pep in our team.

Fishermen Next Foes Here

On Friday evening of this week lemme will meet the angling hoop- rs from Crystal Lake and both r first and seconds will play. The st game beginning about 7:30 o'- ock. Supt. Larson of Thornton, rmerly a coach of Britt, will of- iate. This is the first game of e season on our own floor and it ould be a very close one as both ams have defeated Hayfild and ill try to keep their record clean winning. We refer to the game tween the first string men. We lieve our seconds can be depended on to furnish plenty of opposition r Crystal Lake Seconds, but we ake n predictions as to the out- ome of this game. We hope to win oth battles.

Perfect Attendance 12 Weeks

In consulting the attendance re- isters our teachers have found the following pupils have to their credit perfect attendance for the first 12 weeks of this school year, that is, have been neither absent nor tardy.

First Grade: Allen Barz, Fritz Gobelel, Homer Blickenderfer, Elsie Drake, Wanda Cook and Chas. Bock.

Second Grade: Lu Verne Knoke, and Elsie Ward.

Third Grade: Eugene Kluckhohn, Lester Knoke, Chester Ward, Arlene Blickenderfer, Ruth Heginger, and Doris Johnson.

Fourth Grade: Buster Jorgenson, Ruth Blickenderfer and Thelma Gilmer.

Fifth Grade: Doris Ludeke, Arlene Kraus, Nora Wellemeyer, Raymond Keeper, Norman Sampson and Jean Lau.

Sixth Grade: Cecelia Heginger, Mabel Griffen, Milvern Barz, Walter Klotzbach.

Seventh Grade: Bessie Larson, Mabel Schlichting, Ruth Wellemeyer.

Eighth Grade: Lu Verne Drake, Asa Gibbs, Harold Jost, Jas. Larson Novella Bredbenner and Marie Stille

High School: Dorance Day, Raymond Drake, Henry Smid, Louise Rosendahl, La Vohn Larsen, Wilbur Arnold, Kenneth Kluckhohn, Marion Carson, Gladys Bridges, Gracka Quandt, Mildred Stille, Irene Bridges, Ruby Miller, Karma Peterson.

We find fifty such in the whole school and feel this is a pretty good record, especially since so many are from out of town.

High Grade List Given Out

Some may be interested more in good scholarship records and we have investigated the records for the past six weeks, or rather the second six weeks period and are listing names of those pupils and students who have been awarded in the major subjects and spelling at least two "B's" which indicate work above average.

Grade 1: Allen Barz, Raymond Bachman, Della Kaduce, Elsie Drake Jacqueline Kudje and Caroline Schwartz.

Grade 2. Cecil Leitzinger, Dorance Grange, Pearl Wade.

Grade 3. Those with 2 B's: Ronald Gibbs, Eugene Kluckhohn, Donald Lemke, Chester Ward, Edith Bachman; with more: Marvin Lemke, 3 B's; Reuben Grosshuesch, 3 B's; Velma Kaduce, 1 A and 2 B's; Doris Johnson, 3 A's and 4 B's; and Ruth Heginger with 1 A and 5 B's.

Grade 4. Buster Jorgenson, 2 A's and 4 B's; Paul Schuldt, 1 A and 4 B's; Thelma Gilmer, 1 A and 3 B's; Ruth Blickenderfer, 2 B's; and Avis Barz, 3 B's.

Grade 5. Christina Schwartz, 1 A and 1 B; Jean Lau, 1 A and 2 B's; Carmen Kluckhohn, 1 A and 3 B's; Doris Ludeke, 1 A and 4 B's; Norman Sampson and Nora Wellemeyer each with 1 A and 5 B's.

Grade 6. Franklin Kluckhohn 5 B's; Milvern Barz, 1 A and 4 B's;

Grade 7. Geo. Stokesbary, 1 A; Thomas Gilmer, 2 B's; Bessie Larson, 2 B's and 4 A's; Ruth Wellemeyer, 2 B's and 4 A's; Elise Lau, 1 A and 4 B's; Mabel Schlichting, 1 A and 2 B's; Harriet Gibbs, 1 A.

Grade 8. Alvin Keeper, 1 A and 1 B; Irma Sampson, 1 A; Hilda Keeper, 1 A and 1 B; Marie Stille, 1 A and 3 B's; Novella Bredbenner, 4 A's and 1 B.

Honor Roll In High School

Freshmen with at least two B's or better: Raymond Drake, 3 A's; Margaret Gates, 1 A and 2 B's; Louise Rosendahl and Norma Wille each with 2 B's.

Sophomores: Emma Goll and Nova Koerner each with 2 B's; Blanch Gracka Quandt, 1 A and 2 B's;.

Seniors: Raymond Barz, 4 B's; Clarice Wellemeyer, 1 A and 4 B's;

One student in high school deserves favorable mention, for she is voluntarily carrying five major subjects and has made better than average marks in all and a superior grade in one. We refer to Clarice Wellemeyer. Clarice is also in our high school orchestra and Gril's Glee Club. She is aso active in Sunday Schoo work and church, and has a promising future.

We commend all our students who are trying hard to do their work well, altho their marks are but average or even at times less. Much of the world's work is done by folks of just average ability who are industrious and dependable. Let none be discouraged because their names do not appear in the above list for if they have been making an honest effort as many have, they are improving and may even pass some whose marks in school have been superior.

SLIPPERY PAVEMENT CAUSES BACHMAN CAR WRECK

Mart Bachman's Buick Badly Damaged At Clear Lake Friday

As Mr. and Mrs. Mart Bachman were driving their Buick touring car to Clear Lake Friday, their car suddenly skidded on the intersection near the park, causing the car to swerve into a telephone pole.

The impact threw their small daughter thru the windshield, but luckily she was not injured. The car suffered a broken wheel, bent front axle and damaged body, the total damage amounting to about $100. None of the Bachman family were injured.

STOCK SHIPMENTS BEGIN TO MOVE HERE AGAIN

Stock shipments are beginning to assume the proportion again worthy of publicity.

Saturday there were three car loads shipped out which included two car loads of cattle, and one of hogs. The cattle were shipped to the Chicago market, while the hogs went to Iowa Falls. C. A. Larsen shipped the one car of cattle, and the Shipping Association had the balance.

Wednesday C. A. Larsen shipped two car loads of hogs to Iowa Falls.

Tuesday and Wednesday, Ed. C. Buentenbach, another local buyer, shipped four car loads of hogs to the Decker Plant at Mason City. These were shipped out of Clear Lake over the electric line.

The week before there were ten car loads of stock shipped out of Klemme.

FINISHED HAULING SAND FOR NEW CHURCH MONDAY

About Three Hundred Yards Are Required For Structure

The work of hauling and piling up the sand for the new Methodist Church was finished Monday. The work of loading, hauling, unloading and piling up was all contributed by members and friends of the church. This represented a big saving.

P. T. A. PROGRAM TUESDAY EVENING

REV. BAINBRIDGE OF GOODELL WILL GIVE ADDRESS

Games Will Be Part Of Program, Followed By A Lunch

Arthur Wellemeyer, president of the Klemme Parents-Teachers Association announces that the meeting for December will be held on next Tuesday evening at 8:00 o'clock at the high school gym, December 17th.

The usual program will be given which will include an address by Rev. Wm. Bainbridge, pastor of the U. B. Church of Goodell. Rev. Bainbridge will also sing two numbers.

Rev. Bainbridge has spent many years as an evangelist and singer. He has a wonderfud voice and it will be a real treat to have him in Klemme at the December meeting of the P T. A.

The Committee on eats for this meeting is busy and the Commtitee for games has also some special plans for the evening.

Everyone interested in our public schools is invited to this special December program of the P. T. A.

Remember the time, 8:00 o'clock at the school gym, December 17th.

W. M. & H. L. SUCKOW CLOSING OUT SALE TUESDAY

In this issue of the Times you will find a full bill announcing the closing out public sale of W. M. & H. L. Suckow, on the farm 2¼ miwest of Kemme.

This is one of the largest sales to be held in this vicinity this year. The machinery is in very good condition as it has always been well taken care of. There wil be 134 head of live stock sold, including horses, cattle, hogs and sheep.

It will pay you to attend this big farm sale if you need good stock or machinery.

MRS. HENRY C. GREIMAN WAS GIVEN BIRTHDAY SURPRISE

A surprise party on Mrs. Henry C. Greimann was held at the W. F. Greimann, Sr. home Sunday, December 8th, that day being Mrs. H. C. Greimann's 46th birthday anniversary.

The following were present, who enjoyed the bounteous birthday dinner which was served in cafeteria style: Mr. and Mrs. W. F. Greimann, Sr.; Mrs. W. F Greimann, Jr and son, Robert and Elmyra; Mr and Mrs. Ben Greimann and family; Mr. and Mrs. Rhine Schlawin and family; Mr. and Mrs. Carl Swanson and family; Mr. and Mrs. Fred Etchen; Mrs. Henry Lemke and family; Mr. and Mrs. Aaron Greimann and Betty; Mr. and Mrs. Albert Etchen and family. Mr. W. F. Greimann was not present as he was on a trip to Minnesota.

There were only five absent, Mr. and Mrs. Herbert Greimann and baby; Mr. and Mrs. Henry Klinge.

This represents the whole Greimann "clan" in this community.

All had a fine time and Mrs. Greimann received many fie and useful gifts.

Misses Trumbell, McGinnis, Mr. Brietske and Byrnes Miesman were entertained at the J. N. Day home Sunday evening, and enjoyed the radio program.

DONALD NEUBERGER AND MISS BENA BLANK MARRIED

Ceremony Was Performed Wednesday At Methodist Parsonage

Mr. Donald Neuberger, son of Mr. and Mr. Louis Neuberger, who eside a few miles northeast of Klemme, and Miss Bena Blank, daughter of Mrs. George Blank, of Osakis, Minnesota, were united in marriage by Rev. H. E. Whyte at the Methodist Parsonage, on Tuesday afternoon, December 10th at 2:00 o'clock.

They were attended by Miss Pearl and Mr. Melvin Neuberger, sister and brother of the Bride.

The Bride wore a gown of midnight blue flat crepe, with a hat to match, while the Bridesmaid was attired in Navy blue flat crepe.

Following the wedding a six o'clock dinner was served at the home of Mr. and Mrs. Louis Neuberger, and besides the immediate family and the wedding party, those present were: Mrs. George Blank, mother of the Bride; Mr. and Mrs. Paul Lemke; Mr. Lloyd Wistie; and Miss Millie Hallvorsen, of Mason City.

Mr. Neuberger is an industrious and upright young man from one of the highly respected families of this community. He has already demonstrated his ability as a farmer, the ocupation he has chosen to follow, and we predict he will make good in that line.

The Bride formerly lived at Garner, and is a neice of Mr. and Mrs Tom Blank, and Mr. and Mrs. Leppo Blank, of this community. For a time she wa semployed at the Garner Bakery; more recently she has been employed in the Ed. Hemenway home near Goodell. She is an attractive young lady with a pleasing personality, and possesses those qualities which make toward a good home maker.

For a few days the young couple are remaining at the Neuberger home and from there they will go to Minneapolis for six weeks on a honeymoon trip.

In the spring Mr. and Mrs. Neuberger will mve to the Henry Josten farm, two miles north and one mile east of Klemme, which they have rented.

SLEET MAKES GOING BAD HERE THIS WEEK

Rain which turned to ice as quick as it fell left an icy coating on sidewalks, and highways, and made traveling either on foot or by auto a difficult task here the past few days, and has been the cause of many auto acidents in the state, due to skidding.

Electric and telephone lines also suffered some damage. As we go to press the weather is becoming a little warmer and ice is beginning to melt from the side walks again.

LIBERTY FARM BUREAU LADIES MET LAST THURSDAY

The Liberty Township Farm Bureau Ladies met last Thursday, Dec. 6th at the home of Mrs. Henry Greimann. The lesson on "Pre-School Children's Diet" was studied.

Those present were the Mesdames John Goll, Geo. Snyder; Ralph Upmeyer; Emil Blumer; Roy Schaefer; Paul Stille; Lester Stille; Wes Lenz; Miss Freida Schuldt and Miss Myrtle Johnson, the leader.

The ladies enjoyed a fine dinner as each had brought some article of food.

The next meeting will be held on February 13 at the home of Mrs. John Goll at which time Food for the School Child will be studied.

The Confirmation Class will be examined before the Consistory Saturday morning at 9:00 a. m.

YOUNG FARMER DIED SUNDAY

TIM WADDINGHAM DIED AT A WEBSTER CITY HOSPITOL

Funeral Services Were Conducted In Klemme Wednesday

Mr. Tim Waddingham who lived seven miles, northeast of Klemme, died at the Webster City hospital late Sunday evening, following a mastoid operation.

Mr. Waddingham had not been in good health for the past year or more and had suffered more or less physical trouble which weakened and poisoned his sytem. Sometime ago he suffered an attack of flu and this caused mastoid trouble A few weeks ago he went to the hospita but it was thought he might recover without an operation. Late he went to Jewell and was under the doctor's care there. His condition did not improve and an operation was resorted to Saturday, but his weakened ondition could no rally from the ordeal and death came to end his suffering.

The remains were brought to Klemme to the home of Mrs. Lena Medaus, Monday.

At one time Mr. Waddingham was numbered among the business men of Klemme, when he was the proprietor of a dray line. Disposing of this business he took up farming a his occupation, which he was successful at. In recent years the Waddingham family have resided on th farm northeast of Klemme.

Funeral services were held from the Medaus home at 1:30 o'clock Wednesday afternoon and from the Methodist Church at 2:00 o'clock. Rev. H. E. Whyte was in charge and was assisted by Rev. Grosshuesch of the Klemme Reformed church Interment wa made in the Klemme Cemetery.

This was one of the largest funerals ever held and the church was over-crowded. About one hundred persons who attended to pay their respects had to remain out of doors as there was no room inside.

The large crowd was an indication of the high esteem in which the community held Mr. Waddingham.

Obituary

The following obituary was read at the funeral services by Rev. H E. Whyte.

George Timothy Waddingham was born at Alexander, Iowa, May 10, 1889, and passed away Sunday evening, December 8th at the Webster City Hospital where he had undergone an operation for mastoid a few days previous. His age was 40 years, 7 months and 28 days at the time of his death. Mr. Waddingham had been in poor health most of the summer, and had been rapidly failing the last few weeks. For a day or two after the operation it was believed that he was on the way of recovery, but in his weakened physical condition due the prolonged illness, the ordeal proved more than he could with-stand, though he made a heroic fight for life.

On July 12th, 1911, Mr. Waddingham was married to Miss Anna Blumer of this place, and practically all of their wedded life has been spent in this vicinity.

There were born to this union four children: Curtis, Arnet, Ardell and one who is deceased.

Mr. Waddingham was not only a good husband and father, he was also a good neighbor, honored and respected by all who knew him. He was always ready to support any worthwhile enterprise in the community, and help a brother in need.

He leaves to mourn his loss his wife, his three children, his father and mother, Mr. and Mrs. George Waddingham of Milton, Oregon; four brothers and five sisters: J. W. Waddingham of Klemme, Mrs. Mary Smith, Panesville, Minnesota, Mrs. Rebecca Le Fever, Portland, Oregon, Mrs. Emma Yahnke, Didsbery, Alberta, Canada, Mrs. Dora Boyes, Lewiston, Idaho, Charles Waddingham, Meservey, Iowa, Mr. Ralph Waddingham, Lattimer, Iowa and Mrs. Myrtle Osborn, Panesville, Minnesota. Likewise, many other distant relatives and a host of friends.

ELL TOWNSHIP CO-OPERATORS MET AT SCHLAWIN HONE

Lesson On Diet Taken Up At Final Meeting, November 26th

The Co-operators of Ell Township met at the home of Mrs. William Schlawin, November 26th. The subject of the lesson was "The Diet of the Pre-School Child." There were eleven co-operators present.

The topics studied included:
"Causes of Under Nutrition."
"Measures to Prevent Malnutrition"
"Childrens' Teeth"
"Diet."

The ladies enjoyed preparing and serving the hot dinner from the menu recommended for a child of pre-school age.

Menu

Baked Potato Crisp Bacon
or Creamy Eggs
Creamed Spinach, or
Stewed Tomatoes on Toast Suqares
Whole Wheat Bread Sandwiches
Prune Pulp or Baked Fruit
Graham Crackers Milk

The next meeting will be February 10th, and each one attending is asked to bring a schoo llunch.

Miss Johnston was pleased that so many co-operators reported their chools serving the hot lunch at noon and urges all schools to serve it. A method that has proved very satisfactory is the "pint lunch" This will be discussed at the next training school.

Free Pamplets Available Now

Anyone wanting the pamplets on the Care of Infants or Diet for the pre-school child may obtain them from their local leader or Township Chairman.

FAREWELL PARTY GIVEN FARM BUREAU LADIES FRIDAY

Mrs. L. Weaver Entertains In Honor Of Mesdames Griffen and Morrisay

Mrs. L. Weaver entertained the group of ladies, who were ocal leaders when she was Township Chairman, and their husbands at her home Friday evening.

This meeting was in honor of Mrs. Chas. Griffen who with her family will leave for their new home near Morris, Minnesota, early in January, and Mrs. J. Morrisay who will live in Illinois.

The evening was spent by the ladies talking about the different meetings and the many things they made, especially for the booth at the County Fair at Britt, and the men enjoyed visiting and possibly commented on how the ladies got to these meetings and what nice dinners they prepared for themselves on those days.

The ladies served delicious hot oyster stew, sandwiche, cake and coffee and how "the men" did eat

We are sorry to have Mrs. Griffen, who has been our efficient 4-H leader and Mrs. Morrisay leave our Township. We will miss them from our Farm Bureau meetings, but we hope they will enjoy the same work in their new localities.

Those present were Mr. and Mrs. C. J. Wille; Mr. and Mrs. William Schlawin; Mr. and Mrs. Addis Greimann; Mr. and Mrs. Jennings Anderson; Mr. ad Mrs. Fred Greiman, Mr. and Mrs. Chas. Griffen; Mr. and Mrs. J Morrisay; Mr. and Mrs. W. Hampel and Mr. and Mrs. Ralph Elder.

Now the ladies are wondering if the husbands can entertain them as well We think they will have to take the course in nutrition first!

—Contributed.

Card Of Thanks

We wish to thank all our neighbors and friends, and especially the R. N. A. for their kindness and help and for the sympathy extended to us in our sorrow. Wo thank lal who contributed flowers, and who assisted in lightening our burden in various ways.

Mrs. Anna Waddingham
And Children.

Fraser, for the medal authorized by congress to commemorate the achievements of Col. Charles A. Lindbergh.

NEWS REVIEW OF CURRENT EVENTS

Congress Hears President's Message and Gets Busy on Tax Reduction.

By EDWARD W. PICKARD

CONGRESS is doing business again at the old stand, the first regular session having opened Monday with perfunctory meetings of both houses. Next day President Hoover's annual message was read in senate and house, being listened to with intense interest and praised by administration supporters and criticized by the opposition.

The document was long and comprehensive, consisting of a matter of fact statement of what the administration has done and of what it hopes to do in the near future, followed by many recommendations to the legislative body. Concerning international matters the President expressed "high hopes" for the success of the naval conference in London, and made the significant statement that if the movement for reduction of armament fails, the United States may find it necessary to spend upward of $1,200,000,000 in naval construction in the next six years. He gave praise to the Kellogg-Briand pact, and said he would submit to the senate later the amended world court reservations. He urged ratification of the French debt settlement. In view of the uncertainty with respect to future revenue, the President recommended that the proposed 1 per cent cut in individual and corporation income taxes be limited to the present year. He urged early action on the tariff bill, again asking that the measure be devised to aid agriculture and industries that have not been prosperous, and once more he advised that the flexible tariff provision be retained.

Mr. Hoover's liking for commissions was evidenced in several recommendations. These included suggestions for a commission to study the problem of branch, group and chain banking, a commission to dispose of the Muscle Shoals controversy and a commission to study conditions in Haiti. The message advocated an increase in appropriations for rivers and harbors improvement from $50,000,000 to $55,000,000 annually, at least half of which should be available for the Mississippi inland waterways system. It also asked bigger appropriation for construction of public buildings and for ocean mail contracts. Concerning the reorganization of government departments, the President said he had come to the conclusion that the only way to avoid endless controversy was to delegate authority to the executive.

When he reached the subject of prohibition and law enforcement the President used decidedly vigorous language. In dealing with the former he said that "it is not to be expected that any criminal law will ever be fully enforced so long as criminals exist," and of law enforcement and observance generally he said it is "the most serious issue before our people." He scored the citizen who insists on selecting the particular laws which he will obey, branding him as the enemy of society. He made a number of recommendations for legislation to aid in enforcement of the prohibition law.

ON WEDNESDAY the President sent to congress the budget for the fiscal year 1931 calling for the expenditure of $3,830,000,000 Of this sum about $719,000,000 are for national defense activities, including the laying down of the three 10,000 ton cruisers on which suspension of work was ordered by President Hoover last summer. An outlay of $33,000,000 for the army and navy air services is contemplated, and $30,000,000 is to be expended on public buildings.

SPEEDY action on the administration's $160,000,000 tax reduction program was obtained in the house, the joint resolution for the legislation going through practically without opposition. It was assumed that the senate also would adopt the resolution after some debate, and that the legislation would be enacted before the Christmas holidays. While the reduction applies to only one year, there were indications that the President hopes it can be made permanent.

THE senate, according to program, took up the three year old controversy over the right of William S. Vare of Pennsylvania to a seat in that body. Efforts to delay the debate were defeated, and on Wednesday Mr. Vare himself, crippled by partial palalysis and watched over by his physician, appeared in the senate chamber and read a detailed denial of the charges of fraud and corruption in his campaign for nomination and election in 1920. Every one knew that Vare's appeal was hopeless, for a majority of the senators were hostile to his cause. The privileges and elections committee had decided in his favor the contest brought by W. B. Wilson, the defeated Democratic candidate, but a minority of that committee reported that alleged ballot box frauds and corruption made Vare's election illegal. Radical Republican senators could vote for this report because it would accomplish the exclusion of Vare without seating a Democrat.

WHEN President Hoover and Secretary Stimson, backed by Great Britain, took cognizance of China's appeal and sent a note to Russia and China asking them to remember their obligations under the Kellogg pact and stop their warlike activities in Manchuria, they ran against an ugly snag. Maxim Litvinoff, acting Russian commissar of foreign affairs, replied with a brusque note virtually telling the United States to mind its own business. He attempted to justify Moscow's course in the Manchurian embroglio, and then emphasized that the United States government had appealed to Russia at a time when direct negotiations were being carried on with Manchuria. By strength of this circumstance, the American note to Russia was termed an unjustified attempt to influence the Chinese-Russian negotiations and consequently could not be considered as a friendly act.

The commissar followed this with a public statement in the course of which he advised the United States and Great Britain to turn their minds toward activities in South America, warships in Chinese waters, and armies in colonial countries rather than attempt to obstruct the Russo-Chinese negotiations.

Secretary Stimson in a statement to the press made a sharp rejoinder upholding the right of any nation to mobilize world public opinion against a threatened outbreak of war.

The Nationalist government of China announced it would do all possible to effect a peaceable settlement with Russia of the controversy over the Chinese Eastern railway.

NEARLY four hundred of the country's leaders in business, finance and industry gathered in Washington Thursday, at the invitation of the Chamber of Commerce of the United States to take steps for the advancing of President Hoover's campaign of business progress. Mr. Hoover himself told them first of the progress made through the series of conferences held previously, and Assistant Secretary Klein of the Commerce department addressed them on "the elements of strength and weakness in the present business situation."

A general discussion followed, culminating in the organization of a permanent committee, which is to maintain an alert scrutiny over national production, distribution and consumption, for the purpose of noting depressions in particular fields as they develop and of evolving a means of ending them before they become serious.

In his survey Mr. Klein, although saying that "admittedly in some industries the situation is not as satisfactory as it might be," and nothing is to be "gained by gilding these less solid wheels in our business mechanism," went on to declare that agriculture, in a broad sense, is sound, transportation active and efficient, mining and most major manufacturing activities "predominantly healthy, with a sound fiscal and banking system and available credit at reasonable rates. Prices are steady with a somewhat downward trend, and inventories are low and without indication of any serious congestion."

KING VICTOR EMMANUEL and Queen Helena of Italy made history Thursday, when they paid their formal visit to Pope Pius. They were the first sovereigns of united Italy ever to enter the Vatican. Minister of Foreign Affairs Dino Grandi, Count de Vecchi, Italian ambassador to the holy see and a great throng of courtiers accompanied the rulers to the Vatican City, all being in closed automobiles and escorted by cyclist police. Hundreds of thousands of persons gathered in the streets to witness the procession, and on buildings along the way the Italian and papal colors were displayed. High officials of the Vatican City met the king and queen at the Arch of Charlemagne, the papal gendarmes presented arms and their band played the royal march. After a lot more stately ceremonial the visitors entered the throne room alone, the pope met them and raised them up as they bent to kiss his hand; then the door closed and the three conversed alone for a time. The royal pair as they left carried precious religious gifts bestowed by the pontiff. After calling on Cardinal Gasparri, papal secretary of state, and receiving holy water from Cardinal Merry del Val, they worshiped in St. Peter's and returned to their palace.

ALL of our biggest oil magnates and Sir Henri Deterding of Holland, managing director of the Royal Dutch Shell companies, were in Chicago last week attending the annual meeting of the American Petroleum institute. The fact that Harry F. Sinclair is still popular among oil men was demonstrated by his re-election as a director of the institute. Edward L. Doheny was retired at his own request. Deterding addressed to the convention a plea for conservation of oil.

"A great many today," he said "think the oil supplies inexhaustible. We pay too little attention to wasteful exploitation (apart from producing too much), forgetting that new fields in the States may still be discovered, but that they can never be created. Nature put them in limited number and it is almost childish to state that the more that are discovered the fewer are left to the fate of discovery."

E. B. Reeser, president of the institute, asserted that the American petroleum industry had succeeded in balancing demand and supply of crude oil supplies but that there was still an overproduction of gasoline.

POSTMASTER GENERAL BROWN'S annual report revealed that the deficit in his department for the year ending June 30 was $85,461,176, or more than twice as big as the previous year. Among the factors responsible for this fact were the granting of $7,470,000 additional pay to postal workers and the payment of $7,390,000 on ocean mail contracts; also the downward revision of postal rates during the last year reduced revenues about $21,528,000 below what they would have been. Mr. Brown's report said that the department handled free of charge special privileged mail that otherwise would have paid in nearly ten millions of dollars.

REPRESENTATIVE TINKHAM of Massachusetts has prodded the senate committee on lobbying so severely that it may inquire into the activities and sources of revenue of a lot of lobbyists other than those whose concern is with the tariff. These may include the Anti-saloon league and other bodies that are supposed to influence the votes of congressmen in matters relating to prohibition. Chairman Caraway of the committee told Mr. Tinkham the investigators would give him a public hearing. The Massachusetts representative has introduced a measure to require, under the threat of heavy penalties for violators, the registration of persons attempting to influence legislation.

COBLENZ, GERMANY, was ablaze with bonfires and torches and gay with banners during a twenty-four celebration of the liberation of the second zone of occupation of the Rhineland. As the allied troops marched out, the German authorities marched in, the bands played and the people rejoiced hysterically. It has been announced that the last of the British occupational troops will leave the Rhineland on December 12.

Bungalow Is Comfortable and Convenient Type of Residence

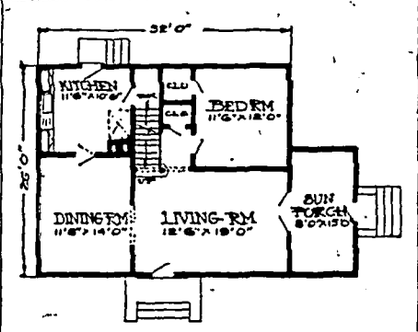
Many people will prefer this type of home because of the convenient arrangement. It has a bedroom on the ground floor. When treated as this house has been treated a charming exterior appearance is also achieved with a suggestion of coziness.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

A bungalow is a cozy type of home. Also it is a convenient one for the housekeeper. For the small family which has a good-size lot on which to erect a home, a bungalow has many good points.

The bungalow shown here is of frame construction and it is different

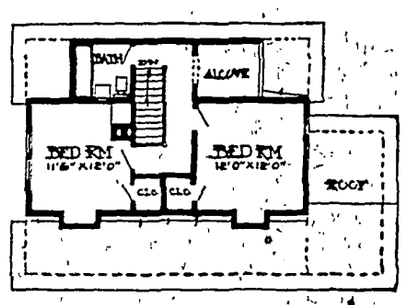


First Floor Plan.

from the ordinary bungalow in that there is a half floor above which provides space for two extra bedrooms, one in each gable. The fan-shape windows set into the roof aid in giving light and ventilation to these second floor bedrooms.

This house is 26 feet deep and 32 feet wide exclusive of the sun porch which is built into the house rather than a one-story addition as is usually the case. The living room is 12 feet 6 inches wide and 19 feet long. The sun porch is 8 feet by 15 feet and is connected with the living room by double french doors which makes a good arrangement because it adds spaciousness to the living room and provides a sunny place in winter and an airy one in summer.

The dining room is at the front to the left of the living room and is connected with it by a double cased open-



Second Floor Plan.

ing. Thus the whole length of the house, including the sun porch, is practically one room. Back of the living room is a bedroom on the first floor while the kitchen is at the back of the dining room.

Stairs run out of the living room to a hall on the second floor of which are two bedrooms and a bathroom.

While this house is of frame construction with clapboard siding, shingles can be used for the outer walls to excellent advantage. It has a basement of the same dimensions as the house proper.

White Is Color Used Sparingly for Interior

There is something nice about a white house with green shutters set down on a green lawn among green trees. But this whiteness represents a small area within the landscape. And likewise when it is carried into the house it must be used with restraint. For it is every bit as striking as cerise and must be as carefully blended with other colors.

With the exception of snow, which was obviously meant to drive us indoors, Mother Nature, who has been subtly influencing our tastes for ages, uses white very sparingly. Similarly we are most successful when we use it only as an edging for accent, like the crest on the waves, or as sheer veiling like the clouds; or the white should be faintly tinted, as in the white rose.

A colonial bedroom in the white house with green shutters will not be complete without wall paper with a white background, white bed draperies and white curtains. But the wall paper is enlivened with bright nosegays. And the draperies should be transparent. The logical reason for sheer hangings is that they permit other colors to show through. And thus the white is adulterated and blended with the other tones in the room.

The woodwork should be painted a warm ivory rather than a dead white, and if the ceiling is not going to be papered in a design, the paper should at least be cream. As a guide in the use of white in other rooms it must be remembered that in the successful colonial room, for all of its abundance, white does not really predominate. The furniture is dark and heavy. The hooked rugs are bright and striking and the chintzes of decided character.

Good Roof One Factor in Warm Home Building

Nothing is more vital to the warmth of a building than a good roof. The most urgent step in modern improvement is made when a roof of superior quality is demanded.

Unless the roofer's work is perfect, the installation of insulation and the placing of weatherstrips and storm doors, are useless. A loss of at least 28 per cent in radiation is experienced in buildings that are roofed with scanty materials.

Good raw materials and excellent equipment means but little if it is not backed up by thorough craftsmen and rigid inspectors. In effecting roofing economies, the company says best supplies are the cheapest for the building owners, since the best brands are weather-resisting and will last indefinitely without a sign of warping or rotting.

Clean Flues

When the autumn days come and you need open fires, don't forget to have some one examine the chimney flues. Be sure they are clean and free from soot. Fires have started because house owners have neglected this precaution.

Woodwork in the Home Should Have Wall Shade

Two schemes are in general use for the finishing of woodwork, either as a part of the wall or as a part of the furniture. The former is, in most cases, preferable. As a part of the wall it should be a shade or two darker of the same color as the wall. This insures harmony and good taste, and gives that restful effect of space so much to be desired.

In the second method the woodwork takes the color of the furniture, or, perhaps, only the doors and permanent furniture are given the furniture color, while baseboards, cornices and "standing trim" have the wall color. This method may be successfully used in large rooms, or in rooms that have a relatively small amount of woodwork, so that it does not distract the attention from the sum total of the room.

Finish for interior woodwork may be gloss, semi-gloss or dull. The high gloss is most easily kept clean, but does not usually please the eye as well as a dull finish. The flat finishes are much more artistic, and when properly done are quite as serviceable. There is now on the market an oil which produces distinctive effects in eggshell and satin finishes without laborious rubbing or even stipling and which is washable and very durable.

Woodwork which contains knots or sap-filled streaks necessitates very special treatment in its finish, and the extra cost involved here more than offsets any saving made by buying woodwork of second quality. Never allow your interior doors, trim or built-in furniture to become neglected or run down in appearance for need of new paint.

Trend Toward Larger, Airy Living Quarters

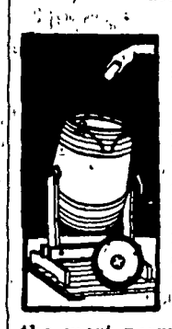
Modern features that contribute to saving time and labor in housekeeping, and that make for health and comfort, have come to be demanded in most new houses, and absorb a considerable part of the cost of the house. This has created a pressure to cut down on the cubical contents, and has meant somewhat smaller room sizes, lower ceiling heights and greater attention to economical arrangement of space. The process has its limits, and there are some evidences of a reaction. People themselves are no smaller; in fact, their average dimensions are increasing. Where more space can be afforded without too much extra labor for housekeeping home builders are glad to have it.

Clean Chimney Will Mean Efficient Heating Plant

A clean chimney, one entirely devoid of soot, will mean more efficiency in the home-heating plant. In the first place, it will mean an easier job starting a fire some of these cold mornings when heat becomes necessary, and, strangely, a proper draft will mean more complete combustion, with the result the fuel is used more efficiently.

Butter Brings Higher Pri

Biggest Creameries Say Cents Worth of "Dande Butter Color" Is Bes Investment.



Dairymen every are making bigge its from their h nowadays. T keeping their pr that Golden June which brings top the year 'round, t ing "Dandelion B Color." It takes half a teaspoonf the gallon of crean the most permeating butter colo therefore the most economical. Ginkgo Tree Only One That Has No Enemies

Only one species of plant life now growing in the United States is without an enemy trying to take its life, Dr. William A. Taylor, chief of the bureau of plant industry, reported to the house appropriations committee during hearings in Washington.

"This unmolested tree is the Japanese ginkgo tree," Doctor Taylor stated. "So far as we know this tree has no insect or fungus enemy at the present time."

On a driveway leading to the United States Department of Agriculture buildings the street is lined on both sides with the ginkgo trees. In the fall they present a striking appearance; for as the yellow leaves fall they heap up on the sidewalks like piles of gold.

The ginkgo tree has a fruit, but one which the white man scorns. The nut inside is rather tasty, but as Doctor Taylor said, "it is surrounded by a most abominable smelling and tasting pulp. It smells more like salt-rising bread in the process of fermentation than any other thing. Chinese laundrymen pick up the fruits, take them home, clean them and eat the kernels."—Kansas City Star's Science Service.

Last British Invasion French Practical Joke?

The last invasion of England by an armed enemy force was on February 22, 1797, when a French army of 1,400 men, under General Tate, landed at Fishguard with an idea apparently of conquering Wales. The whole affair proved farcical. Lord Cawdor hastily gathered together the local militia, and hundreds of women, dressed in the national costume, red mantles and beaver hats, accompanied their men folk, whereupon the invaders, concluding that large reinforcements had reached Fishguard, hastened to make unconditional surrender. Tate was an American, many of his officers were Irish, and more than half his men were convicts released to help to equip the expedition. There were not wanting cynics, who declared that the French government had planned the whole affair with the sole idea of getting 1,400 incorrigible ruffians boarded and lodged at the expense of the British.

Great Forests on Pacific

Nowhere in the world are there such magnificent forests as those found along the immediate coast north of San Francisco, says the American Tree association. West of the Cascade and coast ranges the mild climate, heavy rainfall and generally humid atmospheric conditions have resulted in the production of a forest that is more wonderful in the density of its growth and the majesty of its development than is to be found anywhere else. The sequoias of California are the giants of the vegetable kingdom. The Douglas firs, Sitka spruces and the giant arbor vitae (western red cedars) of Oregon and Washington are second in size only to the sequoias.

Fish-Oil Ice Cream

Ice cream made from fish oil, snow and sugar recently was an unexpected winter dish of Eskimos of Alaska. The odor was strong but the dish is said to have tasted better than it smelt. Eskimos caught great numbers of eulachon, a species of smelt which is sometimes called the candlefish because it contains so much oil. These they placed in holes lined with heated rocks, and after the fish were cooked they were placed in covered baskets on which the women trod with bare feet to extract the oil. During cold weather the oil has much the consistency of butter. To make the ice cream the oil was melted and sugar and snow were added, then stirred in.

Why Borah Couldn't Come

The Golden Book recounts the story of how Mrs. William Borah, wife of the senator, arrived alone at a diplomatic breakfast in Washington during the late days of the Coolidge administration when the Kellogg anti-war treaty was still in process of negotiation. Asked by Secretary of State Kellogg what had become of her husband, the gentle and literal Mrs. Borah replied:

"He said that if you asked for him, Mr. Kellogg, I was to say that he is at home working on your d—d treaty."

One Thing Certain

Some questions will forever remain unsolved. A back East physician once told a colored woman who had called to consult him in regard to an all-goneness, that her vitality was much run down. "Suppose," said he, brightly, using one of Doctor Holmes' questions for the purpose, 'you were packed in a barrel of snow. How much of it could you melt?" The lady shivered. "Ah dunno," she replied fervently, "an' what's mo', Ah ain't never goin' to find out."—Portland Oregonian.

Hernandez Found Dahlia

It was in 1570 that Philip II of Spain sent Francisco Hernandez to Mexico to compile an official report of the tree and plant life of New Spain. He sent seeds to the director of the Royal Botanic gardens in Madrid, who, says Nature Magazine, disseminated the dahlia throughout Europe. Hernandez found the dahlia, not as a wild flower, but in the cultivated gardens of the Aztecs.

You Save The Difference

Filling up with Alcohol time after time during the cold months is a costly way of keeping your radiator from freezing. One filling of—

EVEREADY PRESTONE

at a very little more cost than the same amount of Alcohol, will last all winter. You save the difference.

EverReady Prestone is the Perfct Anti-Freeze. Does Not Boil Off and Does Not Freeze. Let us fill your radiator today—You are then safe.

Klemme Auto Company
Phone 77 *Klemme, Iowa*

RIPE REMARKS

To be loved, be lovable.

A dead secret—dyed hair.

The slogan of discretion is "No!"

Never look a gift automobile in the carburetor.

If one can entertain himself, he has a priceless gift.

Liberty consists in letting your wife do as you please.

An ache never scares a boy unless it is a stomach ache.

The harder a man works the less time he has to whine.

There is no fool like an old fool who acts like a young fool.

A woman is apt to envy a parrot if it can talk faster than she can.

One must remember that the swine haven't asked that any pearls be cast.

A gentle voice sometimes indicates merely that one is wanting in energy.

The man who knows what he wants often has sense enough not to try to get it.

One who is contemptuous of good clothes isn't living up to his opportunities.

Somebody has to be at home to entertain those who are always going on a visit.

Sinners can't be reached because they don't know what you mean when you say "lost."

It is hard for some to comprehend why there is objection to a funny story because it's old.

Democracy encourages everybody to express his opinion, regardless; but worthwhile ones are still rare.

Tungsten's Great Value in Industrial World

A metal which until a few years ago was little known outside the chemical laboratory has become, in just a few years, Mr. Economy's favorite son. The annual savings brought about through the use of tungsten are almost beyond estimate.

Employed in the manufacture of light bulbs, the metal requires less current in supplying more candlepower than the old carbon lamp, and a conservative estimate places the savings in this way alone at $240,000,000 a year. It is also a labor-saving factor in the steel industry.

Only about 6,000 tons of tungsten are used a year. The supply is obtained from China, which has a monopoly on the metal.

Old Mill Makes Parchment

The English town of Havant Church, six miles from Portsmouth, is the scene of an industry which if local claims be true, has been carried on by the same methods and on the same site for 1,000 years.

The parchment made there was famous throughout Europe in days gone by and is still preserved in many libraries and museums in Europe, but it is the United States that keeps the mill going at present. There has been recently a great demand from America for English parchment to be used for diplomas and certificates in American universities, and though the demand has been great enough to cause a shortage and send up the price, this seems no deterrent.

Mystery

Making fun of the present-day modes for women is a favorite indoor and outdoor sport, but it has remained for a clergyman to put out one of the prize bons mots of the season. Rev. W. E. Biederwolf declares:

"Nowadays, when you look at women from the back it is often hard to tell whether they are daughters of fourteen or Daughters of the Revolution."

Nor Measles

Teacher—Can you define heredity for us?

Jimmy—Er, yessum. It means if your grandfather didnt' have any children, then your father prob'ly wouldn't have any and neither would you, prob'ly.

Not Found in United States

Strontium, which is used in refining beet sugar, in making fireworks, in glass making, and in medicines, is one of the few minerals for which United States must depend on foreign supplies.

She Understood

Prof. Einstein (ambling in at 4 a. m.)—Y'see, m'dear, it was like this: let x plus y equal th' square root of z divided by a square over sqmzyz—

Mrs. E. (haughtily)—Oh, don't try to explain!

Naming the Menu

Rastus—Ef yo' says anything ter me Ah'll make yo' eat yo' words, man.

Exodus—Chicken dumplings, hot biscuits and watermelon!

Located

"What has become of the end seat hog?"

"He drives in the middle of the road."

Hope That Beams Will Divulge Historic Dates

With saws and drills and microscopes, the specialists engaged in the beam studies are digging from the heart of ancient logs and beams a more accurate calendar of happenings in the southwestern United States than that which we possess for the civilizations of the Egyptians or the Mayas.

The work is built on the fact that every growing tree leaves in its trunk a ring for each year; and on the further fact that each one of these rings has an individuality of its own—a different width, definiteness, or character resulting from different climatic or seasonal differences.

Furthermore, all trees in a given region show the same ring sequence; and some of the rings, deposited in an especially characteristic season of drought or moisture, stand out so plainly that it is almost as if Nature had rubber-stamped the ring: "This is the year 1398 A. D."

The work was undertaken after expeditions of the National Geographic society had uncovered the ruins of Pueblo Bonito in New Mexico, one of America's earliest "apartment houses." Many interesting things were learned about the customs and culture of the 2,500 people who once occupied the great structure; but the date at which they flourished remained a secret.

Some of the old beams used in supporting the roof were well preserved, and when sawed showed characteristic rings. The idea was conceived of tracing a tree-ring calendar back from the present to the days when Pueblo Bonito's beams were growing.

Wisest Men Have Ever Been Slow of Speech

People are likely to get too much store by "conversation." A very large proportion of it isn't worth 2 cents. It must be conceded that there is a kind of exhilaration in talking. One can even get headache by it; showing that it has a direct offset on the tempo of the heart and on the nervous system. The popular notion that one must talk "for the sake of relief" is probably bogus; because silence, once it is learned and practiced, gives a greater relief.

Keeping still is an interesting game, to the point of being, at times, delightful; especially when employed to keep out of a fruitless row under full headway. It is a difficult game, therefore the more inviting to play. One may suffer from the invidious implication that it is timidity instead of good sense that keeps him from participation, but let him remember that many of the wisest men within human knowledge were taciturn—"minded their own business," and we don't know but that the slow to speech get along about as well as the wordy and impassionate; some think, better.—St. Louis Globe-Democrat.

Washington's Cherry Trees

Mrs. Taft shortly after going into the White House ordered 80 Japanese cherry trees to be sent to Washington and planted. She had seen and admired these trees while traveling in the East. A Japanese resident of New York made her a gift of 2,000 of these trees. When they reached America they contained an insect that was injurious to American plants. For that reason they were thrown overboard. The city of Tokio then gave the United States 3,000 of these trees. The water side around the Speedway and the Tidal basin in Washington have these trees in blossom during the early spring.

Honoring the Dead

Annual Decoration day is most enthusiastically observed by the Lower Yukon River Indians. Late last autumn fifteen families of Indians from Nulato and other villages met together to fulfill the custom of erecting houses over the graves of those who died during the year. The shelters of the old graves were given a fresh coat of brilliant paint.

Many of the unique mausoleums have windows and floors and contain rugs and other articles that were used by the departed ones.

Every western Alaska Indian tribe has a different method of protecting the spirit of departed ones.

Cumbersome Old Vessels

Galleon was a name formerly given to a large kind of vessel with three masts and three or four decks, such as those used by the Spaniards in their commerce with South America to transport precious metals. They were large, clumsy, square-sterned vessels, having bulwarks three or four feet thick, all of which were so encumbered with tophamper and so overweighted in proportion to their draft of water that they could bear little canvas, even with smooth seas and light winds.

More Howlers

"A schoolboy's essay on Henry VIII included in the sentence: 'At this time King Henry walked with great difficulty, having an abbess on his knee.'"

A business man says that a shortage in any commodity automatically raises its value.—This is doubtless the reason for the high price of evening gowns.

No Standing Still

Progress is essential in this life. But whether it shall be forward or backward is for you to decide. You cannot stand still. This is impossible. The world is only a stairway on which men go either up or down.—Gait.

NEW ESSEX WENT INTO DITCH MONDAY NIGHT

Young Belmond Men Have Narrow Escape In Foggy Weather

Three young men from Belmond, driving a new Essex sedan narrowly escaped serious injury Monday evening when their car went off the highway just west of Klemme.

There was a thick fog Monday night and as the young men were leaving Klemme driving west they were perhaps driving a bit fast for that kind of weather. At any rate they failed to see the "Slow" sign and did not see the turn but headed the car straight across the road, across the Wilson highway, jumped the ditch, plowed through a fence and landed in Henry Ludeke's hog pasture. All were shaken up but none of the boys were injured beyond a few scratches. The car was badly damaged and it was estimated it would cost between $300 and $400 to make it look like new again. The car was insured.

EASY! QUICK! GLYCERIN MIX FOR CONSTIPATION

Simple glycerin, buckthorn bark, saline, etc., as mixed in Adlerika relieves constipation in TWO hours! LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

LIBERTY LADIES STUDY LESSON ON DIET OF CHILDREN

Nutrition Course Meeting Held At Home Of Mrs. Henry Greiman

The Second Lesson on Nutrition given by the county leader, Miss Johnston, was held at the Henry Grieman home Friday. Nine ladies were present, leaders of the different districts.

The subject of Pre-School Child's Diet was discussed freely and a lunch prepared to know how it should be done. Also the School children's lunch was taken up but not prepared, as that will be the next lesson.

The next meeting will be held at the John Goll home in January.

Herold Ridder was confined to his bed part of the past week.

Mrs. Roy Schaefer was a Garner visitor Wednesday.

Earl Kahler became owner of a Ford truck the past week.

Will Velau attended the Ford sale east of Garner Thursday.

Billie Velau bought a bunch of brood sows from Emil Beier Friday.

Walter Bredlow hauled a load of sheep to Garner Saturday.

Miss Dorothy Carolus was taken quite sick in school Monday, and is still unable to return.

Harry Larson and Buzz Carlson were in Mason City Monday to attend a tractor demonstration.

Mr. and Mrs. Ben Ridder, Mabel Schaefer and Fern Stille were Mason City shoppers Saturday.

R. R. and Will Lemke were in Garner Thursday evening attending the Masonic Lodge.

Mrs. Emil Beier was a visitor at the Will Lemke home Thursday afternoon.

Laurice Pollock visited at the Franklin home Wednesday and Thursday.

Ethel Schoenwetter is staying at the Hanson home and attending the high school.

Dorothy Carolus is staying at the home of Grandmother Haefner and attending high school.

Mr. and Mrs. Ben Neiman and daughters were Mason City shoppers Saturday.

The Schoenwetter brothers delivered a bunch of cattle in Klemme Saturday.

Mrs. John Tanner and daughters were callers at the Lew Abele home Sunday.

Mr. and Mrs. Albert Lange and Mary visited at the Gast home Sunday.

Mr. and Mrs. Emil Blumer drove to Webster City Saturday to be with his sister, Mrs. Waddingham, as Mr. Waddingham underwent another operation Saturday evening. They returned home Sunday afternoon.

Ancients Excelled in Art of Glass Staining

The medieval artists in stained glass toiled like jewelers setting diamonds and rubies. Their ideal was not a pretty picture made transparent, but a window made beautiful. Years of experimenting with various combinations of glass taught them secrets of design which resulted in windows that have never been surpassed.

Glass staining and glass painting are two quite different things. One method is to build up a mosaic of pieces of glass, colored not only on its surface but its very substance. The other is to paint the design upon white or colored glass.

It was in glass making that the ancients excelled. The blue of one school was so vibrant that the workers ground down sapphires to obtain their magic color. The fancy, although popular, is probably fallacious. Nevertheless, the colors of the ancients were so expertly compounded that they blended into a uniform whole in a completed window and never appeared flat or "raw."

The greens, for example, were not a straight mixture of blue and yellow, but a combination of blue and red and yellow in such proportions that they did not fuse into adjoining blues at a distance as do modern blue-and-yellow greens. The reds likewise were distinctive, as they contained alternating layers of red, and green-white gave a mellow softness to light before it reached the eye of the beholder.

Mendelssohn Hailed as Master of Philosophy

As a Jewish philosopher acting the part of a pioneer, Mendelssohn brought about the understanding of the beauty and humanism of the Bible, says a writer in the Boston Herald. He prepared a basis for the development of science and Judaism. His translation of the Pentatech had inaugurated a new era in the education of the German Jews.

He gave to his brethren the German Bible, by which means he introduced them to the intellectual life of Germany, and thus through it once more into the civilization of the world at large. Mendelssohn has united Jewish and Hellenic life. He was the first to advocate the emancipation of the Jews. By his writings he contributed to a great degree to the removal of the brutal prejudices against the German Jews.

Mendelssohn died on January 4, 1786, and was deeply mourned, not only by his coreligionists, but also by all the learned world. His memory was celebrated as that of a "Sage like Socrates." The greatest philosophers of the day exclaimed: "There was but one Mendelssohn."

May-Day Customs

As far back as the Medieval period in England, Chaucer says, it was customary to go out early on the morning of the first of May, "to fetch the flowers fresh." Hawthorne branches were carried home about sunset amid much merry-making. The name, The May, was given to the hawthorne, and the ceremony was called "the bringing home the May." A relic of the Roman custom when on May day the goddess Flora was especially honored is seen in the selection of a beautiful village maid to be crowned as queen of the May.

Theoretical Dollar

The term "compensated" or "stabilized dollar" was coined by Prof. Irving Fisher of Yale in his book, "Stabilizing the Dollar." It is a theoretical dollar having a constant purchasing power. The theory of the compensated dollar is to convert the present gold standard into a true commodity standard—that is, to standardize the dollar as a unit of purchasing power. Thus, there would be a gold dollar of constant purchasing power with varying weight instead of a gold dollar of standard weight and varying purchasing power.

What Is Poverty?

Franz Schubert died and left great riches to the world—the riches of beauty translated through the glorious medium of music. Those who came to look into the attic of Schubert declared that he had died in poverty. He was the poor figure of financial tragedy. Lately a bit of his manuscript sold for $5,000. But that does not establish his wealth. The great riches he left are for those who can appreciate them. Men may die without money, but they need not die in poverty in the larger sense.—Grove Patterson in the Mobile Register.

Slay Stone-Eating Germs

Chemical warfare is being waged on germs that are literally eating up big buildings. Scores of organisms that eat stone and other substances have been discovered. Chemicals are sought that will slay the germs without destroying the materials. The germs open the pores in the surface, exposing the material to the destructive influence of the weather. Some bacteria cause erosion in the hardest marble in three weeks.

An Eye for Color

A little girl recently skinned her knee and her mother promptly applied a bright-colored antiseptic.

Several days later the mother served cold meats and catsup. The little girl, seeing her father generously helping himself to catsup, demanded: "Mother, I want some meat with mercurochrome on it."

STAGE SNOW MADE BY CORN FLAKES

There is still hope for the salvation of the great American corn raiser.

Corn has gone into the movies in a business-like way. Heretofore the slapstick comedies may have used a few roasting-ears, with sound effects, but now corn is going into Hollywood in a determined manner and mingling with the great and near great in its most commonplace form—hominy.

"The film experts," says Farm and Fireside, "have discovered that there is nothing quite so good as corn flakes for faking a real, old fashioned blizzard. The corn flakes are specially made from hominy and are thin, white and airy. A bushel of corn flakes and an electric fan will make a snowstorm anywhere, even in California."

Newest Dress Fabrics Composition of Metal

Flexible fabrics containing layers of metallic foil have been perfected by German manufacturers, and women soon may go to dances and the opera in stunning evening gowns of metal, while their escorts will be clad in a modern adaptation of the suits of armor worn by knights of old, says the San Francisco Chronicle.

The new "cloth" is made of thin sheets of aluminum, resembling tin foil or gold foil, and coated on both sides with protective material not unlike the plastic substances used in manufacturing rayon. This fabric is said to be almost as light as silk, tough as leather, waterproof as leather and bright and heat-reflecting as aluminum. Of this material raincoats, umbrellas, and even dresses and business suits may be made. Not only striking frocks for women, but also beautiful effects in household decorations will be obtainable in the new fabrics, according to the makers.

Great Geyser Exhibit

The most comprehensive geyser exhibit in the world has been placed in the new Yellowstone Park museum building at Old Faithful, under the supervision of Dorr C. Yeager, park naturalist. It consists of specimens of the various types of geyser and hot springs deposits and of diagrammatic paintings showing how a geyser works, and of the evolution of a geyser through the geological ages. The museum has been located at Old Faithful because that is the geyser capital of the earth. More active geysers of the first order are to be found within a ten mile radius of this spot than in all the rest of the world put together.

Variations in Sugar

Eight sugars, all alike in having their atoms arranged in rings, are described to the American Philosophical society by Dr. Claude S. Hudson of the United States public health service. But some of their effects "are as different as can be," he says, due to slight alterations in arrangement. They are glucose, galactose and mannose, found in nature, and allose altrose, gluose, idose and talose, thus far made only in laboratories.

Hunter's Luck

The prize story of the California deer season was recounted by William Thompson, of Santa Rosa. He fired at a buck which was standing on a steep bank and the animal fell mortally wounded. In rolling down the bank the deer locked horns with another buck, which had been under cover. The subsequent tangle enabled Thompson to shoot the second deer, his season's limit.

State Botanical Garden

A large tract of land known as the Rancho Santa Ana in southern California has been set aside and developed into a great botanic garden in which all species of plant life to be found in the state will be cultivated. More than 45,000 plants already have been propagated, and work is under way for the complete collection of native flora.

Birds, Alligators, Her Pets

Miss Beatrice Harrison, whose cello playing induced nightingales to sing for the radio in England, is gathering a unique collection of pets at her beautiful home at Oxted. A number of alligators live in a tank in the dining room, basking on a tree trunk during the day. The room also contains a number of birds, including a singing parrot, and seventeen dogs.

First County Agent

J. L. Stallings, deceased, of Smith county, Texas, was the first county farm demonstration agent in America, appointed in 1906. The work he started is now being carried on by more than 2,400 county agents.—Farm and Fireside.

Start at Home

"I'm taking reducing exercises, Robert," said Mrs. Winkley.

"I wish you could induce the household expenses to join you," responded her harassed husband.—Montreal Star.

Lures

Mrs. Bones—How do you propose to get your husband away from the city?

Mrs. Jones—Oh, I've sent for some seed catalogues and a booklet on fox-farming.

No Place to Go

She—Darling do you think there can be people in the moon?

He—How could there be? Where would they go when there is no moon?—Illinois Wiggas.

Trade Board Big Factor in Chicago's Progress

The jobs of 30,000 men and women are directly dependent on the existence of the Chicago Board of Trade; 100,000 are employed indirectly because of the "world's largest" commodity exchange. These figures indicate the important part the board has taken in building Chicago into the fifth city of the world and the financial and marketing center of the Middle West.

Early in 1848 a small group of influential leaders, engaged in pulling Chicago out of the mud that was old Fort Dearborn, organized the board of trade. Memberships in those days could be bought for a comparatively few dollars. Today the total value of memberships, at a conservative estimate, is $50,000,000.

In the old days, toiling wagonloads of wheat and corn arrived from across the prairies in Chicago and were promptly sold at the exchange. Long before the end of the board's eighty-first year, Chicago was the railroad center of the world and farm products moved to market in modern style. It is estimated that one-seventh of all the revenue of midwestern railroads now is derived from the transport of farm crops to market. A great part of their shipments go to Chicago for sale on the exchange.

Thinks He Has Special Reason for Complaint

The driver of a small car, parked in a crowded downtown section, stopped short and stared at the apparent nakedness of the machine. The spare tire was missing.

With a nonchalant shrug, he muttered something about "thieves will be thieves" and began to climb into the machine. But he stopped short again and stooped to pick up a wrench from the running board. His face grew crimson, and the things he said were terms not generally employed by frequenters of social teas.

"What's the trouble?" asked the Stroller.

"A lot!" he snapped. "I don't mind these crooks stealing my tire, but when they open my car and take my tools to do it with, that's too much!" —Philadelphia Public Ledger.

Protect Guano Birds

Shipmasters carelessly blowing their foghorns, disturbing the guano birds nesting on the islands off the coast of Peru, are punished with a fine; and if it is discovered that their vessels approached within two miles of the islands, their boats are confiscated!

This new law was passed by the Peruvian government in a drastic campaign to protect the birds, which, as described in Popular Science Monthly, produce large quantities of guano, an excellent fertilizer. While guano is found in various places, the most valuable variety—containing from 13 to 14 per cent nitrogen and a like proportion of phosphoric acid—is exported from the Chincha and other islands near the Peruvian coast. These islands produce $1,000,000 worth of the fertilizer a year.

Gems His Playthings

Many, varied, and strange are the belongings kept in safe deposits. During the recent visit to England of the ruler of a semi-independent Indian state a score or more of gorgeously apparelled retainers visited the premises of one company every day to collect three heavy chests filled with cut and uncut precious stones. These were taken away for the dusky potentate to play with, and returned to the vaults when he tired of his daily amusement. The jewels were said to be worth over £10,000,000 and were probably the most valuable collection ever stored at one time.

Cable Insulation

One can hardly see any connection between hoop skirts and the electrical industry, but one may be traced, strangely enough, which took place in the early days of the electrical development. The first cables were not insulated satisfactorily till Walter T. Glover, an Englishman who braided steel hoops with cotton, had an inspiration. Crinolines were going out, so was his business. So he used his machinery for insulating copper wire with cotton braid, and he soon had no cause to regret the passing of the crinoline.

Turkeys Bred by Aztecs

Although the earliest authentic record of the turkey refers to its introduction into Spain in 1524, a French writer says turkeys were first brought to France in 1518. When the Spaniards conquered Mexico they found semi-domesticated turkeys in the zoological parks of the Aztecs, he writes. Among the Pueblo Indians of the Southwest turkeys were raised before the coming of the Spaniards and these fowls had reached about the same degree of domestication that pigeons have today.—Pathfinder Magazine.

Help!

Young Thing (at the library)—I want a copy of Liver.

Librarian—My dear, this isn't the butcher shop.

Young Thing—Maybe not, but I was told to get a copy of some kind of meat here.

Librarian—Maybe you mean Bacon.

Young Thing—You guessed right first time, so let me have Bacon for my little boy friend.—Cincinnati Enquirer.

Oddest Radio Station in Virginia Graveyard

There are many strange radio stations in the world, but one of the strangest, perhaps, is the station that is located in a graveyard. The redeeming feature of the whole thing is the fact that it is not a human but a ship graveyard.

Anchored in the James river near Fort Eustis, Va., are some 200 ships of the Emergency Fleet corporation. Built for use in the time of the war and now of no use to the government, they are tied up awaiting sale, or death by decay. Tied up in 10 units of 20 ships each, they spread out over this historic river for some five miles.

When the high winds blow down the river the boats occasionally break away from their units and go drifting down the river, a menace to navigation. Also, when the high winds blow, the little land phone line that runs to Yorktown is carried away. It is in times like this that the radio station, which is located on the flagship of the fleet, comes into operation. A call is sent to the navy yard at Newport News and tugs are dispatched to return the refractory boat to the fold.

Even in calm weather the transmitter gets an occasional workout by transmitting messages received by phone from the Yorktown mine depot to the navy yard. Fort Eustis, near which this peculiar little station is located, is also the home base of the only railway artillery unit in the United States army.

Washington Put Office Above Personal Regard

When a friend made a personal appeal to George Washington to appoint a man whom Washington did not believe to be competent, the first President said to him:

"My personal feelings have nothing to do with the case. I am not George Washington, but President of the United States. As George Washington I would do this man any favor in my power. As President of the United States I can do nothing."

Lincoln said to a visitor who came to the White House in the course of the Civil war and commiserated with him on his trials and his burdens: "It isn't the war that is burdening me and killing me; it is your plagued Pepperton post office." I have found this remark quoted in a score of books on politics and government. Jackson and Lincoln, from all accounts, were more besought by office seekers than any other men who have been President of the United States.—Edward G. Lowry in the Saturday Evening Post.

From Earth to Sun

The distance between the earth and sun varies from something more than 91,000,000 miles to something more than 94,000,000. The mean distance is calculated to be about 92,800,000. The earth is nearest the sun in early January and farthest away in early July. That the distance has nothing to do with the seasons may be seen from the fact that while it is winter in the northern hemisphere, it is summer in the southern. The real reason for the seasonal changes is the fact that the earth's axis is at an angle (23½ degrees) with relation to its path around the sun. At that season of the year when our northern hemisphere is tipped toward the sun, its rays fall more directly upon us, and we have summer.

Rejuvenation

An old man went to a gland specialist and asked how much it would cost to rejuvenate him.

"To make you feel like thirty again, it will cost you $1,000," said the surgeon. "But to make you like twenty-five again will cost $2,000, and anything below that age, $5,000."

"I don't care about the cost; just make me eighteen again," said the oldster. The operation was a success. But when the surgeon sent his bill the rejuvenated one sent it back with this notation:

"You can't collect from a minor."

Won Astronomical Honors

All the planets except Uranus and Neptune have been known since early times. Uranus was the first planet to be discovered. William Herschel discovered Uranus, and was soon afterward made royal astronomer by George III of England and knighted. The eccentricity of the behavior of the new planet led to mathematical calculations deducing the presence of another planet. Several astronomers exchanged data regarding its calculated position, and Galle of the Berlin observatory was the first to see the planet known to the world as Neptune.

Poser

Tommy was always eager for knowledge, and one day, while walking in the park with his father, he asked the name of a tree.

"That's an elm tree," his father told him.

"Why do they call it an elm?"

"Oh, why do they call you 'Tommy'?" asked his father, impatiently.

Tommy thought for a while. Then he said: "I don't know—why do they call me 'Tommy,' father?"

Selling

The smart salesman is the man who creates in his prospect a desire for a certain piece of goods. He lets a bit of sun on the budding desire, waters it, and tends it properly, but he doesn't crush it by too much talk.—Grove Patterson, in the Mobile Register.

Reached the Limit in "Panning" of Boy Friend

The other day two Brooklyn girls were overheard discussing a youth of their acquaintance. In this case, however, they were not at loggerheads; in fact, each tried to outdo the other in panning him. It seemed that the thing about him that they disliked the most was his idea of a sense of humor.

"Doesn't he make you sick with those stale wisecracks he's always pulling?" demanded one.

"Yeah; and he always laughs the hardest."

"He gives me a pain.",

"Me, too."

"Why, that guy thinks he's the he of every he-and-she joke ever written."

That diagnosis was so devastating that the other couldn't stage a comeback, so the subject was changed.—New York Sun.

KOENIG'S NERVINE

Not a Modern Mother

Bud, age nine, was describing an accident in which Mary, a little girl in the neighborhood, had been injured. "And her mother ran right out the door when she heard her scream and, without even stopping to powder her nose, she took Mary right to the doctor."

Woman Suffrage

Fifteen states had adopted woman suffrage before the nineteenth amendment became a national law. The earliest of these was Wyoming, which had woman suffrage in 1869, when it was still a territory.

Most ingratiating person is the easy, pleasant talker who doesn't appear to be ingratiating at all.

All false praise wounds an honest mind.—Boileau.

PISO'S for COUGHS

PISO'S gives quick, effective relief. Pleasant soothing and healing. Excellent for children—contains no opiates. Successfully used for 65 years. 35c and 60c sizes.

CONVENIENCES IN MODERN FARM KITCHEN

Well Arranged Kitchen on a New Jersey Farm.

(Prepared by the United States Department of Agriculture.)

The conveniences in this farm kitchen are unusual. Running hot and cold water is available in the very modern tap in the white porcelain sink, which, it may be noticed, is placed sufficiently high for a medium sized woman. There is a left-hand drain board, provided with a drain basket; a sanitary garbage pail, a white metal wastebasket, and a ladder stool. Among the utensils on top of the electric range is a coffee percolator.

In the daytime good light from the window reaches the sink, while at night an overhead electric light furnishes the necessary illumination. The washtubs in the recess have the benefit of the window for light and air, and are near enough to the sink to serve as a table for dishes or other articles when not in use. The wall behind the electric range is tiled for safety and cleanliness. Another light fixture is well placed over the range. The enamel topped table will not be hurt when hot dishes are set on it, and like the linoleum-covered floor it is easy to keep clean. The kitchen cabinet, which is the food preparation center, is well situated near the sink where vegetables and fruits are washed and peeled, utensils filled with water and washed after using.

This illustration was taken in New Jersey by the United States Department of Agriculture. The kitchen was improved by the owner to demonstrate suggestions for home improvement included in the county home demonstration program. It affords a good example of what can be done with careful planning of arrangement and wise selection of equipment.

WASHABLE WOOLEN SUIT FOR YOUTHS

Flannels Are Suitable for Winter if Cared For

(Prepared by the United States Department of Agriculture.)

In some climates it seems best to put the children into wool garments during the coldest months. Suits for the small boy from three to six years old, however, must be washable, and there must be several of them so that approximately the same weight is worn every day. Flannels and other woolens may be used if guaranteed washable, and if care is used in laundering them. It is particularly necessary to select patterns or models for wool suits that result in very simple, easily constructed and easily pressed garments, without unnecessary thicknesses of bulky material.

The bureau of home economics of the United States Department of Agriculture has made a study of the clothing of the small boy, and shows

Several Good Points.

in the accompanying illustration several good points that can be applied to both wool and cotton clothing. The fastenings at the belt line are so very simple a child can manage them without help. Instead of having the front overlap the back, there are separate buttons for the front and the back drops. A one-piece trouser pattern has been used to eliminate side seams, and the side openings are bound to avoid heavy lapping plackets, which would add bulk in the wool material and make pressing more difficult. These openings end in an embroidered tailor's arrowhead, a strong, simple, and easily-made finish used on tailored clothing.

Hold Lingerie Straps

If your lingerie straps cause you embarrassment by frequently dropping off your shoulder while wearing short-sleeved dresses, try the following: Sew a short piece of tape to the shoulder seam of your dress. On the free end of the tape sew one section of a dome fastener and sew the other half to the shoulder seam. In this way all the lingerie straps can be securely held in place by the tape. Twill tape will be found to be satisfactory and white or black can be used, according to the color and the sheerness of the dress.

APPLE BUTTER IS EASY TO PREPARE

Either Fresh Cider or Commercial Sterilized Used.

(Prepared by the United States Department of Agriculture.)

Apple butter has not lost its old-time popularity, but it does not seem to be made in such generous quantities or in so many homes as formerly. It is an excellent spread for school or supper sandwiches, as well as a good preserve to use at any time. You can make apple butter out of the sound portions of windfall, wormy, and bruised apples, saving the perfect fruit for other uses.

While almost any apples will make good apple butter, those which have a distinctly rich, tart flavor and good cooking quality are most satisfactory. Such old standard varieties as Northern Spy, Rhode Island Greening, Tompkins King, and Smokehouse, as well as Jonathan, Grimes Golden, Stayman Winesap, and other standard sorts are excellent for the purpose, says the United States Department of Agriculture. Overripe apples are not desirable but if they must be used a little vinegar, determined by taste, may be added to give some snap to the butter.

Apple Butter With Cider.

Either fresh cider or commercial sterilized cider may be used. The usual proportions of peeled and sliced apples to cider is gallon for gallon, but from one-half to three-quarters of a gallon of cider to a gallon of sliced apples will also give a rich product if the apples are good cookers. This mixture is cooked until the cider and apples do not separate and the butter when cold is as thick as good apple sauce. Strict attention must be given to stirring throughout the cooking, lest the butter scorch. Determine the thickness at frequent intervals by cooking small portions.

Sugar may be used or not, depending upon the individual taste. If sugar is used, add it after the cooking of cider and apples is about two-thirds done. A pound of either white or brown sugar per gallon of apple butter is the usual proportion. Apple butter is spiced according to taste. When the cooking is finished, about half a teaspoonful each of ground cinnamon, cloves, and allspice per gallon are stirred into the butter. From two to four teaspoonfuls of vanilla extract improves the flavor.

Food for Child

Daily food requirements of a school child are listed as follows:

One quart of milk in cooked food or as a beverage. The vegetables besides potatoes, including, if possible, a leafy vegetable. One or two fruits, with a raw fruit or vegetable included. Whole grain cereals and breads as frequently as white breads and refined cereals. Two servings of protein foods, such as meat, chicken, fish, eggs, cheese, dried beans and peas. Butter used freely. A quart and a half of liquid. Enough cereals, sweets and fats to provide energy.

Apples With Sausage

Baked apples with sausage fillings are prepared by coring and peeling large apples and filling the cavity from which the core has been taken with sausage meat. Place in a baking pan and pour in one cupful of water mixed with two tablespoonfuls of sugar and a few drops of lemon juice. Cover the pan and bake until the apples are tender. Baste two or three times while cooking and uncover for the last 10 minutes to brown.

Current Wit and Humor

COSTLY APPROVAL

He had gone into the library to put the thing up to her father and she was anxiously waiting on the front porch.

"Well," said the suitor when he returned, "he asked me how I was fixed and I told him I had $3,000 in the bank."

"And what did he say to that?"

"He borrowed it."

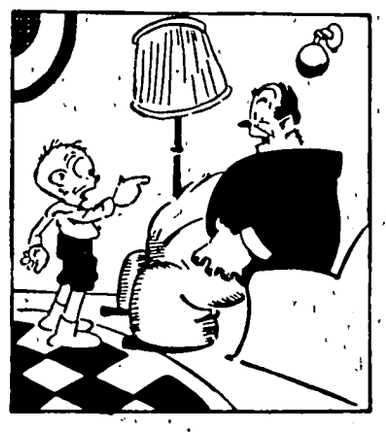
Cleaning Up

A young woman attorney was about to argue her first case. On that morning she washed her hands five or six times. Her mother said:

"Don't be nervous, Marie."

"I'm not nervous, mother, but these judges have so much to say about coming into court with clean hands."

HARD TO FIND



Willie—Daddy, will you buy me an X-ray machine?

Father—What in the world do you want with an X-ray machine?

Willie—To find "X" in my algebra!

Non-Efficiency

"We'll start a brand-new government!"
'Tis the plan that lurks
In every time of discontent—
And yet it never works.

From the Back Seat

"I wish you would quit driving from the back seat," exclaimed Mr. Chuggins.

"All right," sighed the patient wife. "But after that remark, don't expect me to smile sweetly and give sympathy when a traffic cop gets you."—Washington Star.

Some Escaped

Mr. Jabbs (in a graveyard)—All these people buried here had their troubles in life, Jane.

Mrs. Jabbs—Oh, not all of them—all of them weren't married, John.

WHAT SHE LOOKED FOR

Williams—"She boasts that she's not the kind of woman who's always looking for the latest wrinkle in clothes." Thompson—"True enough—she spends all her time looking for the latest wrinkle in her face."

Overwhelming Greatness

True greatness bids the smaller fry
Be satisfied to win
A corner where they can "stand by"
And humbly "listen in."

Daddy's Tour

Willie—My mother goes to Europe every summer.

Mary—Where does your daddy go?

Willie—To the post office and the bank!

No Chance to Relax

Mr. Bowser—I'm sorry, but it's impossible for me to give you three weeks' vacation at the present time.

Bookkeeper—Then, perhaps, you could give me a little advance pay so that I can send my wife away. I must have some rest.

Sturdy

"I recommend a vegetable diet for a few weeks."

"But, doc, I like meat. Nothing strong about vegetables."

"Try garlic."

Face and Reverse

Mrs. Plainmug—Is my gown cut too low in the back? I can just feel that those men behind us are just staring at me.

Her Husband—Aw, turn around and show 'em your face and they'll quit staring.

Reception Day

"Mr. President, I am honored in meeting you."

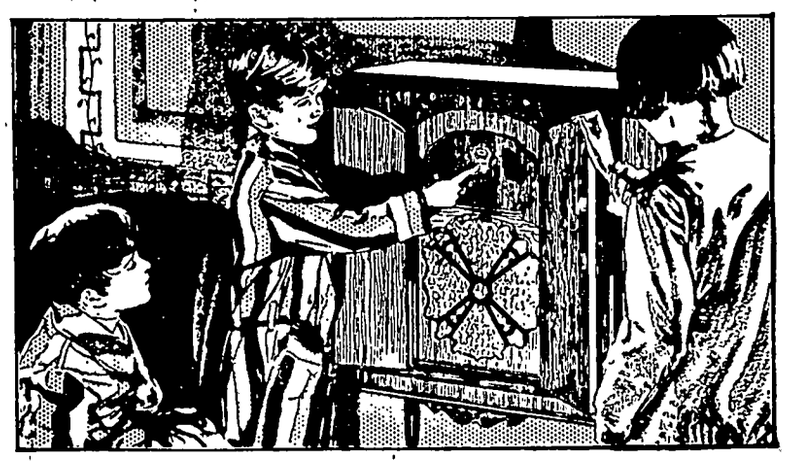
"Thank you, sir."

"I have no advice to offer you."

"Won't you stay for lunch?"

ATWATER KENT RADIO

SCREEN-GRID (BATTERY... OR HOUSE CURRENT) ELECTRO-DYNAMIC

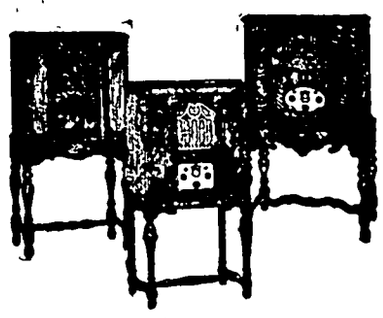


A radio—*fine!* but an Atwater Kent—that's great!

EVEN YOUNG FOLKS know the difference. Just watch their eyes glow when they discover their new radio is an Atwater Kent!

Why is it that this one name in a radio means so much, particularly to those who live on farms? Perhaps it's because Atwater Kent Radio asks for no time out for trouble. Perhaps it's because Atwater Kent never offers any improvement in radio until it has first been thoroughly tried and tested.

You'll enjoy a real sense of satisfaction in owning the greatest radio Atwater Kent has ever built—the new Screen-Grid, Electro-Dynamic, operated either by batteries or from the high line. The two types contain the same proved improvements, giant power, needle-point selectivity, purer tone, and a choice of cabinets or table model. Why not, this Christmas, join your home to the largest radio family in the world,* who get the great programs of the air with Atwater Kent Radio?



IN CABINETS—The best American cabinet makers—famous for sound design and sincere workmanship—are cooperating to meet the demand for Atwater Kent Screen-Grid Radio in fine cabinets like these.

Also in compact table models—*For batteries, $63. For house-current operation, from $68 to $80.* Electro-Dynamic table speaker, $27. *Prices slightly higher west of the Rockies, and in Canada.*

On the Air—Atwater Kent Radio Hour, Sunday Evenings, 9:15 (Eastern Time), WEAF network of N. B. C. Atwater Kent Mid-Week Program, Thursday Evenings, 10:00 (Eastern Time), WJZ network of N. B. C.

*Nearly 3,000,000 Atwater Kent Sets sold to date.

From small fires oft comes no small mishap.—Herbert.

The cowardly dog barks more violently than it bites.—Curtius.

A good deal of worrying over other people's morals is unnecessary.

Don't hunt for mistakes in others; you'll stumble onto enough.

SCHOOLGIRLS NEED HEALTH

Daughter of Mrs. Catherine Lamuth
Box 72, Mohawk, Michigan

"After my daughter grew into womanhood she began to feel rundown and weak and a friend asked me to get her your medicine. She took Lydia E. Pinkham's Vegetable Compound and Lydia E. Pinkham's Herb Medicine. Her nerves are better, her appetite is good, she is in good spirits and able to work every day. We recommend the Vegetable Compound to other girls and to their mothers."—*Mrs. Catherine Lamuth.*

Daughter of Mrs. Eva Wood Howe
1006 South H. Street, Danville, Ill.

"I praise Lydia E. Pinkham's Vegetable Compound for what it has done for my fourteen-year-old daughter as well as for me. It has helped her growth and her nerves and she has a good appetite now and sleeps well. She has gone to school every day since beginning the medicine. I will continue to give it to her at regular intervals and will recommend it to other mothers who have daughters with similar troubles."—*Mrs. Eva Wood Howe.*

The Message of the Christmas Seal

Ho, Little Seal, with your message of hope,
Flung to a world as a life-saver's rope,
Seek you the palace and seek you the shed—
Soft little pillow for Suffering's head!

Ho, Little Seal, with your message of cheer,
Building up courage and casting out fear,
Shed you God's sunlight in castle and cave—
Bright little beacon of lives that you save!

Ho, Little Seal, with your message to men,
Lifting them back to life's highroad again,
Bring you the air of God's heaven above
Flowing in gently to heal them with love!

—Walter Greenough

INGS AT SCHOOL THE PAST WEEK

UBLE HEADER BASKET BALL GAME FRIDAY NIGHT HERE

awha Grades And High School Will Invade Shamrock Camp

n Friday night of this week our mmar room boys and high school s will welcome boys of these de-tments from Kanawha public ool. The object in their coming to defeat us, if they can, in two ket ball games. It will be the t game our rgade boys have ever yed with boys from other schools they are enthused and eager to lay their prowess. Mr. Breitski given thim two workouts this k and they are eager students of popular winter indoor sport.

To oblige some of our friends we varying the order of the games the high school game will be yed first, starting promptly at 0. The grade game will follow. mission will be as last week, 20 d 35 cents.

The games last week end with ystal Lake were both won by emme. Our first team won their me by a score of 19 to 13, and r seconds, 15 to 8.

P. T. A. Program Well Attended

Our P. T. A. program on Tuesday ening of this week was well at-nded, considering the severity of e weather. Rev. Bainbridge and r. Tompkins were on hand as they greed to be and we liked their lks and Rev. Bainbridge's singing. rs. P. W. Johnson, representing r local Legion Auxiliary, briefly plained the program of her or-anization and illustrated it in part presenting to each of our grade ooms a book. We have reason to e proud of the wrk bth the Legion nd its Auxiliary are doing in behalf our schools. Their influence along his line is being felt in both State nd Nation. Our children and tea-hers wil make good use of these ooks and very much apreciate hem.

Declamatory Elimination Today

On this Thursday afternoon our igh school classes will be dismis-ed for the local elimination contest in declamation. Twenty five of our local high school students will com-pete for a chance to speak at a local declamatory contest to be held the latter part of January. Four of the best in each class will be selected from these twenty-five, making 12 in all. These twelve will receive as much time as can be spared them by Miss Trumbell on her return af-ter the Holiday vacation.

As last year, those winning first and second places in each class in this January contest will represent our high school in the county and state contests at a later date. Our firsts represent us in the state and our seconds in the sub-county con-test.

Miss Trumbell is to be congratu-lated on the interest she has awak-ened in this most worthwhile phase of school work. It has been a lot of effort to meet personally each of these twenty-five boys and girls who will speak on thursday after-noon or evening. We desire to con-gratulate the boys and girls who have volunteered to go into this contest for it has meant extra time and effort on their part when many are already very busy. But among such will be found our leaders of tomorrow. We beleive they have each made an honest effort to win a place in this first contest but some must fail. Only four will be left in each class and those ranked below the four will be disappointed but not disgruntled. Some of the more determined ones will try again next year and may then win. Parets who have encouraged their children to engage in this work deserve our commendation. Some children often heed the urge of their parents to venture on an untried sea. We are glad this urge in some cases has been given.

Board Declarses Vacation

Our Board met on Tuesday even-ing of this week in their regular monthly meeting, allowed bills due, and voted to dismiss school from Friday evening of this week until January 6th, 1930. Most all of the faculty will go either Eas oft South on Friday evening or Saturday morning, homeward bound, happy to be again with their parents. Four of the nine months have gone by hurriedly and but two more weeks yet remain of this semester. We hope those who are doomed to have the mumps may have them these next two weeks in light form and be ready for school work on January 6th.

We wish everyone a Merry Christ-mas and a wonderfully prosperous and happy New Year!

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

Saturday, Dec. 21st.—
1:00 p. m. Rehearsal of Sunday School Program.

The Brothers and Sisters.

We Wish All A Merry Xmas

CO. AGENT EXPLAINS 4-H CLUB WORK

WHAT THE FARM BUREAU IS TRYING TO DO WITH RE-SPECT TO 4-H CLUBS

Club work reveals a great field of good accomplishments which cannot be measured in money alone. Every boy or girl enrolled in Club Work is making one more step to-ward that goal, Success, in the ag-riculture industry. Each boy or girl living on the farm should be entered in one or another phase of Club Work. Give them an interest in the farm and success is assured.

Baby Beef Club Shows Gain

In the Baby Beef Club there are already fifty calves entered which shows a decided increase over last year when thirty-two calves were entered. Through this club the boys and girls are taught the prop-er methods of feeding and manag-ing beef production. We cannot help but recall that Elliot Brown, the Rose Hill, Iowa, boy who was crowned champion steer raiser of the United States and Canada with his grade Angus steer, which later sold for $8.25 per pound, was a former 4-H Club boy. His age pro-hibited him from membership this year. This is an example of what the club work leads to. We all can-not win but we all can learn the better methods of feeding and man-agement.

Other Clubs Will Be Increased

We are going to increase the en-rollment, also, in th other clubs, namely, Dairy Heifer, Sow and Litt-er, Fat Pig, Ewe and Lamb and the Colt Clubs. We are coming more and more to producing dairy pro-ducts and due to this fact we must increase the dairy heifer club putt-ing more stress on pruebreds as only two out of twenty-eight mem-bers last year had purebreds.

Other Popular Clubs

The Sow and Litter club was or-ganized last year and affords a won-derful opportunity for the parents to start their boy or girl toward a real herd of hogs. The Fat Pig club affords the same opportunities with hogs as the beef club does with beef. The Ewe and Lamb club was also organized last year and also affords wonderful opportunities as there is a place on every Iowa farm for at least five sheep. The Colt club will be carried on again and from all reports will show a decided increase in enrollment. It should as every farmer enjoys driving a good team of horses.

Our slogan is "Every Farm Boy and Girl a 4-H Club Member."

Let us be thankful for the fools. But for them, the rest of us could not succeed.—Mark Twain.

KLEMME LEGION-AUXILIARY NOTES

(By Mrs. P. W. Johnson.)

As this is rehabititation, I know of no other way to make the first step than for each member who has forgotten her dues to send them to Miss Marie Blank, and each of us to try and get a new member.

Quotation from paper:-

"Mrs. Myrton Skelley, a gold star mother and our department secre-tary says 'To be a member of the American Legion Auxiliary means that I am continuing the work start-ed by a loved one who lost his life in courageously defending his coun-try and me; it means working shoul-der to shoulder with those dear ones and their comrades who were priv-ileged to return; it means wroking with them for the best we can pro-vide for those other comrades who are sick and cripled in body or in mind or both; it means making this world a healthy, safe and happy place for their children, for all chil-dren born into this world; and fin-ally, it means pooling, my efforts with the leaders of the home town, county, district and state in mutual helpfullness for the best interests of clean living and right and sane thinking.'

"Isn't this sufficient reason for renewing our membership fo r1930. Isn't it cause for putting all of our best energies into an intensive mem-bership drive that will clear the field for the balance of the big work of the year."

The regular meeting was held in Mrs. Pavey's home Thursday night.

As in other years the Auxiliary voted to contribute to the Christmas Fund for Disabled Veterans. This money is used to fill boxes, one for each of the men in the hospitals in the state of Iowa. This brings a cheery Christmas to all those who would otherwise have to count their Christmas as part of the War's sac-rifice. Three dollars and ninety cents was sent from the local Unit.

A price of $7.00 for an afternoon or evening meetig; $10.00 for an all day meeting was the price set for the use of the Opera House.

The January meeting will be held jointly with the Legion in the home of Leppo Blank. The invitation was extended by Miss Grace Blank, an Auxiliary member. All members of both organizations are urged to at-tend.

PAY YOUR DUES!

REFLECTOR LIGHT WARNS MO-TORIST OF HI-WAY CORNER

The Town has placed a red refec-tor light on the "Klemme" hi-way sign west of town, warning motor-ists of the corner leading onto the Wilson Highway.

At night the rays from the car's headlights throws a beam into the reflector which gives a red light of warning.

The State Highway Commission sometime ago installed a "Slow" sign. Wit hthe double warning there is no reason why a motorist should drive past the corner.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The Christmas that will be car-ried out in the worship services on Sunday morning, both in sermon and song. This will be an oppor-tunity for all to put more of Christ and the spirit of worship into our Christmas.

A group of the Epworth Leaguers will assist in the inging of some of the Christmas carols at the evening service, after which Mr. McDonald of Ames will preach. Let us give him a good hearing.

The Leaguers plan to go to the homes of shut-ins in town after the church service to sing Christmas Carols.

Morning worship in Klemme at 10:00 o'clock.
Sunday school, Klemme at 11:00
Sunday school, Liberty, 10:15.
Morning worship, Liberty, 11:15.
Evening worship, Klemme, 8:00.
6:30 p. m. Intermediate League.
Epworth League, 7:15.

CAMP FIRE GIRLS GET CHEER-ING NEWS FROM ARTIC

Santa Claus Writes That He Will Reach Klemme Monday

The Klemme Camp Fire Girls re-ceived a letter from Santa Claus the other day. He told the girls that he would be in Klemme Mon-day night to see all the little kiddies and that he would have a package for each one. He asked the girls to escort him to the homes of the chil-dren. f you hear any singing Mon day night you'll know its the Camp Girls and Santa Santa is coming Monday night to see if the children have been good and he will be back again Christmas eve and bring pres-ents to the good little children.

Plays Are Postponed

The Camp Fire Girls had planned to give their one-act plays this month but as they were all so busy with school work they have post-poned the plays until a later date. If it is possible they will be given during the first part of January The proceeds from the plays will be divided equally and given to the new churches.

A meeting was held Monday ev-ening, Dec. 16, at the home of the Guardian, Marie Blank. The girls drew names for Christmas Gifts.

The following officers for the coming year were elected:

President, Blanche Elmer; Vice-President, Nova Koerner; Secretary, Valeria Koerner; Treasurer, Gracka Quandt; Chaplain, Thelma Kluck-hohn; Editor, Clarice Wellemeyer; Sergeant-at-Arms, Hilda Keeper

KLEMME FOOD MARKET IS NOW A RITE-WAY STORE

Large Buying Power Enables R Stores To Offer Low Prices

The Klemme Food Market, C. A. Larsen, proprietor, has joined the Rite Way System of Grocery Stores in Iowa, which number now by the hundreds. This change, however, does not affect the ownership or former policy of the store. It does, however, give the lcal store the ad-vantage of large buying power, and therefore, lower selling on many of the standard items.

In this issue of the Times you will find the first Rite-Way adv. in which are quoted many real bar-gains. Look it over now.

ELEVEN DAYS OF CLOUDINESS WAS BROKEN WEDNESDAm

Old Sol Comes Out Of Hiding, But Below Zero Weather Follows

Our eleven days of cloudiness was broken Wednesday, when Old Sol peeked out from a heavy mist, sleet and rain for the first time in a long period of dullness. However, with the coming again of clear days the thermometer dropped from just freezing temperatures, sliding down the scale, first to around zero and then to twelve below th zero mark this morning.

The weather man promises con-tinued fair weather, with somewhat rising tmperatures.

V. A. COOK INJURED WHEN KICKED BY COW

V. A. Cook has his nose tightly taped to hold some broken bones in place as the result of an injury when a cow kicked him in the face over a week ago.

The impact of the animals hoof flattened Mr. Cook's nose consider-able, but the doctor did a good job of straightening it out and V. A.'s nose is about back to normal again.

Births

A baby boy was born to Mr. and Mrs. Irwin Rosendahl Tuesday.

A baby boy was born to Mr. and Mrs. George Christie this morning.

A Peach of a Skirt

Peaches: "I'd like to try on that rose dress in the window."

Salesman: "Sorry, miss. That's a lamp shade."

By ELMO SCOTT WATSON

ACROSS the stage of Time have stalked great men of all degrees. Princes and potentates kings and emperors, conquerors and rulers, great captains in war and great statesmen in peace, orators and learned men in the arts and sciences—all have enjoyed their hour of fame and for some of them history has preserved at best but one eventful moment in their careers. But there is one event in history which stands out above all others, for all their pomp and circumstance and all the panoply and pageantry that attends the scenes which men call great events. It took place in humble surroundings—a stable in a little town in Palestine. It was the birth of a child who was destined to give to the world a new religion and to humanity a new hope.

And this event which we celebrate on December 25 has been the inspiration for the greatest painters of all time who, instead of recording the deeds and triumphs of captains and kings, have chosen to delineate this greatest of all events, The Nativity, and those figures of greatest appeal to all mankind, the Madonna and Child. Poets, too, have found in the birth of Christ a theme for their genius. Long ago "rare Ben Jonson" sang this:

HYMN ON THE NATIVITY OF MY SAVIOUR

I sing the birth was born to-night,
The author both of life and light;
  The angels so did sound it.
And like the ravish'd shepherds said,
Who saw the light and were afraid,
Yet searched, and true they found it.

The Son of God, the Eternal King,
That did us all salvation bring,
  And freed the soul from danger;
He whom the whole world could not take,
The World, which heaven and earth did make,
  Was now laid in a manger.

The Father's wisdom will'd it so,
The Son's obedience knew no No,
  Both wills were in one stature;
And as that wisdom had decreed,
The Word was now made Flesh indeed,
  And took on Him our nature.

What comfort by Him do we win
Who made Himself the price of sin
  To make us heirs of glory!
To see this Babe, all innocence,
A martyr born in our defense—
  Can man forget the story?

And another master of verse, his eyes blinded but his soul seeing the wonder and glory of that scene in Bethlehem, also wrote of it. He was John Milton and the following are some of the verses from his:

TME HYMN OF CHRIST'S NATIVITY

I

It was the winter wild,
While the heaven-born Child
  All meanly wrapt in the rude manger lies;
Nature, in awe to Him,
Had doff'd her gaudy trim,
  With her great Master so to sympathise:
It was no season then for her
To wanton with the sun, her lusty paramour.

V

But peaceful was the night
Wherein the Prince of Light
  His reign of peace upon the earth began:
The winds with wonder whist,
Smoothly the waters kist,
  Whispering new joys to the mild ocean,
Who now hath quite forgot to rave.
While birds of calm sit brooding on the charmed
  wave.

XIII

Ring out, ye crystal spheres,
Once bless our human ears,
  If ye have power to touch our senses so;
And let your silver chime
Move in melodius time;
  And let the bass of heaven's deep organ blow;
And, with your ninefold harmony,
Make up full consort to the angelic symphony.

XXVII

But see, the Virgin blest
Hath laid her Babe to rest:
  Time is, our tedious song should here have ending:
Heaven's youngest-teemed star
Hath fix'd her polish'd car,
  Her sleeping Lord with handmaid lamp attending;
And all about the courtly stable
Bright-harness'd angels sit in order serviceable.

This ancient theme which is ever new has inspired modern poets, too. Louise Imogene Guiney sings of:

TRYSTE NOEL

The Ox he openeth wide the doore
And from the snowe he calls her inne,
And he hath seen her Smile therefore,
Our Lady without sinne.
Now soone from sleepe
A starre shall leap,
And soon arrive both King and Hinde;
Amen, Amen:
But O, the place co'd I but find!

The ox hath husht his voyce and bent
Trewe eyes of Pitty ore the Mow,
And on his lovelie Neck, forspent,
The Blessed lays her Browe.
Around her feet
Full warme and Sweete
His bowerie Breath doth meeklie dwell;
Amen, Amen:
But sore am I with Vaine Travel!

The Ox is Host in Juda's stall,
And Host of more than onelie one,
For close she gathereth withal
Our Lorde, her little Sonne;
Glad Hinde and King
Their Gyfte may bring,
But wo'd tonight my Teares were there;
Amen, Amen:
Between her Bosom and His hayre!

And Dorothy Belle Flanagan has written this charming

LULLABY FROM A STABLE

Sleep, little baby,
Sleep, little son . . .

Over the earth a cold wind blows,
Over the hills is spread the night,
Within the inn a hearth-fire glows—
  Here a star is gleaming white.
There are cribs of gold for baby Kings,
  With incense from East and gems from the West,
Pillowed with down of swallows' wings—
  You are cradled against my breast.

Other babes guerdoned safely lie
  Swaddled in linens soft and fine.
Angels will watch from out the sky
  Over you, poor wee babe of mine.

Sleep, little baby,
Sleep, little one

These are but a few of the many poetic expressions of the "wondrous story." There have been others in other forms of writing but of them all none can compare with the matchless prose of one of the earliest accounts of The Nativity. It is told in the Gospel of St. Luke thus:

1. And it came to pass in those days, that there went out a decree from Caesar Augustus, that all the world should be taxed.
2. (And this taxing was first made when Cyrenius was Governor of Syria).
3. And all went to be taxed, every one into his own city.
4. And Joseph also went up from Galilee, out of the city of Nazareth, into Judea, unto the city of David, which is called Bethlehem, (because he was of the house and lineage of David,)
5. To be taxed with Mary his espoused wife, being great with child.
6. And so it was, that, while they were there, the days were accomplished that she should be delivered.
7. And she brought forth her first-born son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn.
8. And there were in the same country shepherds abiding in the field, keeping watch over their flock by night.
9. And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them; and they were sore afraid.
10. And the angel said unto them, Fear not; for, behold, I bring you good tidings of great joy, which shall be to all people.
11. For unto you is born this day, in the city of David, a Saviour, which is Christ the Lord.
12. And this shall be a sign unto you: Ye shall find the babe wrapped in swaddling clothes, lying in a manger.
13. And suddenly there was with the angel a multitude of the heavenly host praising God, and saying,
14. Glory to God in the highest, and on earth peace, good will toward men.
15. And it came to pass, as the angels were gone away from them into heaven, the shepherds said one to another, Let us now go even unto Bethlehem, and see this thing which is come to pass, which the Lord hath made known unto us.
16. And they came with haste, and found Mary and Joseph, and the babe lying in a manger.
17. And when they had seen it, they made known abroad the saying which was told them concerning this child.
18. And all they that heard it wondered at those things which were told them by the shepherds.
19. But Mary kept all these things, and pondered them in her heart.
20. And the shepherds returned, glorifying and praising God for all the things that they had heard and seen, as it was told unto them.

CAREFULLY AVOID CARBON MONOXIDE

Autoist Should Take Every Precaution in Winter.

Chicago.—Motorists should take the utmost precautions to protect themselves from the danger of carbon monoxide during the winter months and the simplest is to never remain in a closed garage with the car running, according to a statement issued by the Chicago Motor club.

Assumes National Proportions.

It was said that the danger from carbon monoxide has assumed national proportions and an automobile running in an ordinary small garage with doors and windows closed will produce enough of the gas in a few minutes to cause death.

"The only safeguard is never to run the engine unless the garage door is open or at least two windows," the motor club asserted.

While there are no definite figures available on the annual toll of deaths from carbon monoxide, the census bureau says there were 2,378 deaths in 1923, while the number of automobiles has since nearly doubled.

Get Into Open Air.

The club pointed out that a car owner working in a garage with the engine running should go at once into the open upon feeling the slightest headache.

Effective treatment of acute carbon monoxide poisoning was outlined as follows:

1. The victim should be removed to fresh air as soon as possible.
2. If breathing has stopped, or is weak and intermittent, or present in but occasional gasps, artificial respiration by the Schaefer method should be given persistently until normal breathing is resumed, or until after the heart has stopped.
3. Pure oxygen, or a mixture of 5 per cent of carbon dioxide in oxygen, should be administered for 20 minutes or more, beginning as soon as possible.

Quick Acceleration Is Due to Reserve Power

The quick acceleration of an automobile is due in a large degree to the amount of power reserve of the engine. Especially is this noticeable in the higher driving speeds.

As an illustration of this, one horse may be able to move a load at a slow pace, whereas the same load can be moved much faster with the addition of a second horse.

In designing certain cars factory engineers give them an unusual margin of reserve power. The 6-80 is equipped with a 72 h. p. motor; the 8-90 with a hundred h. p. straight eight motor, and the 120 with a 125 h. p. straight eight motor.

Reserve power likewise plays an important part in the life of a motor. The engine which is compelled to deliver its full power to attain a certain speed is under a strain to maintain that speed. Gas and oil consumption are increased and the various parts begin to weaken.

Pay Strict Attention to Rear Tire Pressure

In these days when safety is the paramount issue at all times, it is natural to pay strict attention to front tire pressure to avoid underinflation and possibly of a blowout, but there is a tendency to neglect the rear tires.

A rear tire blowout will cause a skid if the car is going over slippery roads or if in process of stopping at the time. That covers the safety point.

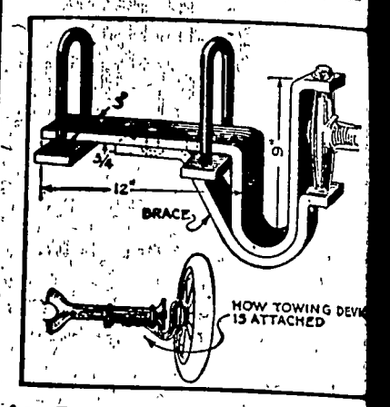
From the mechanical standpoint the risk lies in carrying the rear tires at different pressures, caused by allowing one of them to become underinflated. Just as with carrying tires of different sizes on the rear wheels the differential is then made to act continuously.

Since the differential is supposed to operate only on turns and when one wheel is forced to go over a bump, the excess action is certain to cause premature wear on the unit.

EMERGENCY TOWING AXLE FROM SCR

Few Pieces of Strap I and Two Bolts Needed

Two U-bolts, some pieces of s iron, and a front axle can be fitte gether to form the emergency to axle shown in the illustration. If



An Emergency Towing Axle, M From Two U-Bolts, Some Strap I and a Front Axle.

car axle has broken off at the wh this auxiliary axle can be bolted to axle housing, making it possible tow the car to a service station wh the broken axle can be replaced.—P ular Science Monthly.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q. How much less does it cost farmer to pay for his automobile truck today than in 1913?

Ans. Thirty-eight to sixty-three p cent less. In 1913 it would take 1,5 bushels of wheat to buy an avera car, whereas this same car can bought today for 930 bushels of whe

Q. What percentage of all t automobiles are registered in tow of under 10,000 population?

Ans. Fifty-five per cent.

Q. What is the percentage of clos cars manufactured in 1928?

Ans. Eighty-eight and five tent per cent. Ten years ago the percen age was only about 10 per cent, t other 90 per cent being open cars that time.

Q. What are among the commone causes of making it necessary to h towed?

Ans. Running out of gas and ign tion trouble. Ignition system shoul be inspected in the spring and fall a least.

Clean Battery Terminals to Prevent Corrosion

Care should be taken that the bat tery terminals do not become corroded with acid, which not only interfere with the proper current from batter into cable, but also destroys the ca bles. Have the cables removed and the terminals and cable ends thor oughly cleaned, and then after they are put back, smear them heavily with cup grease. Ordinary stiff trowel roofing cement pressed under and over the terminals and cable ends is also an excellent material not only in keeping them clean but in preventing the battery acid from working out. A graphite grease is also an excellent material.

AUTOMOBILE FACTS

When a fender is dented, it pays to have it repaired and repainted at once.

* * *

An occasional drop of oil on the spare tire lock may save time and trouble in the next change.

* * *

Streets in Berlin have been made skidproof, but it's a safe bet that the average American driver could make his car cut up on 'em.

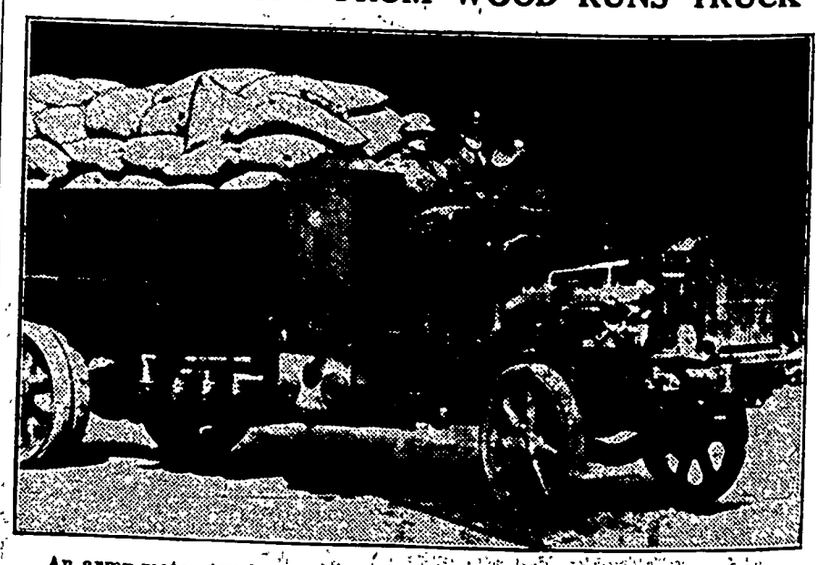
* * *

"A bee will travel on an average 40,000 miles to make a pound of honey." The motorist will then travel a similar distance to find it at a wayside stand.

* * *

While it is possible to start a car in second gear, or even in high, low gear should be used except when you are starting downhill. The use of one of the higher gears puts a strain on the engine that will show in time.

GAS GENERATED FROM WOOD RUNS TRUCK



An army motor truck, using for power the gases generated from a sackful of broken tent poles, pulled a load of more than thirty-eight tons. An army driver dumped a sack of broken tent poles into the top of the invention and a torch was then touched to the bottom of the machine. The driver turned a small crank at the side of the machine for three minutes, until the gases generated from the burning wood were forced into a series of condensers beneath the truck. Then the driver cranked the engine as if it were a gasoline motor and the engine roared its response. The present cost of one of the machines is $400. The truck is shown loaded with sacks of oats, while the gas generator can be seen under the truck.

A Merry Christmas To All

We wish to take this opportunity of extending to our Patrons and Friends a very Merry Christmas, hoping that Santa Claus brings you much happiness and joy at this glad season of the year.

The loyalty and patronage of the farmers and the people of this community has made this a happy Christmas for the Klemme Co-Opeative Creamery Company. We appreciate this friendly spirit which adds to the success of your Creamery. The past year has been one of the greatest in the history of the Creamery. This succss which has come to the Creamery is passed along to the farmers who ar patrons of the Creamery and has no doubt made theirs a more Merry Christmas also.

We will all find more happiness and prosperity in friendly, loyal co-operation. Let us strive to make the coming year an even greater one in the prosperity and happiness of our Community.

We thank all for their good will and support of this growing home enterprise.

Large and prominent cemetery has opening for high-grade man of executive ability. Permanent and very attractive proposition.—Adv in Chicago Tribune.

2 GLASSES WATER, NOT TOO COLD, HELP CONSTIPATION

One glass water is not enough—take 2 glasses a half hour before breakfast. You get quicker and better results by adding a little simple glycerin, saline, etc. (known as Adlerika) to one glass.

Unlike other remedies, Adlerika acts on BOTH upper and lower bowel and removes old poisons you never thought were in your system. Adlerika stops GAS and sour stomach in 10 minutes! Relieves constipation in 2 hours. Wilson Drug Store. 1c

Speaking of Service and Service

"Will you please see that your engineer on the 11:50 does not blow the engine's whistle when passing Rose Avenue on Sundays?" said the complainant.

"That's impossible," protested the railroad official. "Why shoudn't he?"

"Because our minister always preaches until the 11:50 passes. Last Sunday it was 25 minutes late."

There may be splinters in the ladder of success, but you don't notice them unless you are liding down.

A Skin Game

"Say, Sambo, dat certainl some tear yo' give yo' pants yo' slid into second base."

"Yo' is right, boy. Came m nigh to calling dis game ou 'c darkness!"

To Start Out With

The drunk halted in front o enormous stuffed tarpon in a case. He stared at it a minut two in ilence. Then he said:

"The fella who caught—h that fish is a—hic—liar!"

GOLD IN A TURKEY'S CROP

(© by D. J. Walsh.)

COME—here to this—wild country—for turkeys, but are—not a turkey hunter," mused the girl slowly, with ething odd in her voice. "And worked in a city market. Do you pose to know what a turkey crop

Sam stared and his voice was fully odd as hers as he replied: "Y-es, y?"

She studied him for some moments, n nodded her head.

Yes, I'll trust you," she decided. u don't look like a thief. As I've rd my father say, suppose we 'lay cards on the table.'"

She leaned her rifle against a tree, a small box from her pocket and ed and extended it for Sam's inction.

My name is Margaret Mossis," she

The box was nearly full of various d grains of pure gold.

Sam reached into his pocket and led out a buckskin bag, lossened strings and passed it to her.

Looks as if they came from the e turkey," he remarked, "and my e is Sam Holden. And I worked the poultry section of the Chicago rket."

The girl peered into the bag. "My! at a lot!" she exclaimed.

"Just four crops," Sam grinned.

"And you found them in the mar- and came straight here to seek d by hunting turkeys?"

"No, just turkeys here, to get cap- l to seek gold at a place called rcupine Hollow and along Sheep nge mountain. I've heard it's ere."

"Strange how things come round," e said. "Father and I hunted turys at those places, Porcupine and eep Range, nearly three years ago. t turkeys were scarce and we finaldrifted up here."

"Didn't see any signs of gold?" gerly.

"No, and don't believe any gold is ere. You see, we lost our home hrough—through debt. Then mother ent to live with an uncle and father nd I took to the woods. Father asn't a bit well and I refused to ave him. He had to be out of doors nd we drifted into turkey hunting y accident, because we found there as money in it.

"We had wonderful success here. I uppose we shipped those birds you ound the gold in."

"You mean the gold came from ere?" incredulously.

The girl nodded.

"But gold comes from rocky places, r in river sand washed down from uch places."

"Maybe there are ledges under the urface of this flat scrub, or perhaps he gold washed here from elsewhere. Anyhow, it's here."

"You know where? If you do it's ll yours, of course."

"I don't know any more than you—nly suspect. You see, turkeys were too valuable for us to eat. We wanted to accumulate enough to buy back our home if we could. I had a few snares to catch rabbits and quail to supply our meat, and shipped all our turkeys away alive. It was only a month or so ago that I killed our first turkey. Father was sick and I wanted something extra good. I found the gold in that one's crop. Soon after we had to go away for a while, so we couldn't scratch for the gold. I got back only this morning."

"That's why I haven't seen either of you," commented Sam. "Well, I shall try to see your father tomorrow."

The girl picked up her rifle abruptly.

"I must be going now," she said in a low voice. "It's getting late. Goodnight." Sam did not see her again until he was at the train the next day shipping twenty-four turkeys he had caught that morning. She slipped from the scrub as a lot of empties were being thrown from the train.

"Here you are," Sam called as he saw her, "about a dozen traps and more crates. You take 'em all. And I'm shipping off a dozen birds apiece. Been too busy to hunt gold. But I'll do that the rest of the day and keep it up."

"I've been hunting since daylight," said the girl wearily. "Not a vestige of color. And yet I know there is gold here, for that bird was caught with its crop full. But the scrub contains miles and miles of land alike."

"One of us will find it yet, all right," asserted Sam confidently, "even if we have to learn turkey language, and ask 'em."

The girl shook her head. "I shall stay here only two more days, for a last chance," she declared. "I shot the hateful turkey about two miles northwest from here, and have been all over that ground this morning. Turkeys travel a long way, though, and that one may have filled his crop miles away. I shall go back to the city."

"Then your father must be better. I'm glad of that. But I do hate the thought of your giving up the gold just when the scent seems getting warmer."

"It might be a year, or ten, before it's found. And I've been here ever since now. I couldn't stand any more. The eleven traps are all I can manage. You keep all yours." She picked up her rifle with her left hand and started the scrub. Sam sprang forward.

"Let me carry them," he entreated.

"Nonsense. They weigh only a few pounds apiece, you know. I can handle them easily."

He did not see her until late the second day. Most of the intervening time he had spent in gold-seeking, and was now over five miles from the railroad. At length, discouraged, he threw himself on the ground with a grunt of disgust.

"Feel as bad as that?" a girl's voice queried.

He peered round some shrubs. Margaret was sitting on the ground not ten feet away.

"Worse," he answered, as he rose and joined her. "I'm suppressing most of it. And I'm beginning to believe those birds must have made flying visits off to Sheep Range for the gold."

"No, it's here somewhere," she insisted. "Though I'm through. Look yonder!"

A rabbit, sitting a dozen feet away, regarded them wisely. Sam dropped a hand to the ground, and began to finger round for a small stone.

But as his hand rose, she clutched it frantically. "Oh, look! look!" she cried.

"At what, the rabbit?" that was scurrying away at sound of her voice.

"No, your hand."

He looked, and gasped. The stone was a piece of gold as large as a walnut.

"G-o-s-h!" he exclaimed. "I've heard the god Fate is blind. I believe it now."

They were both on their feet by this time, their eyes searching the ground swiftly. Sam saw another nugget, smaller, glistening in the sun. Then the girl found three. In an hour they had a dozen or more each, some hardly large enough to be seen.

"Notice the long depression we're in," said the girl, as she straightened up and studied the surroundings thoughtfully. "I wouldn't wonder if it was some ancient river-bed. There are a lot of small sink-hole springs through the scrub. One near here. Perhaps it's a drinking place for turkeys, after which they peck about. The bits of gold attract their attention. Well, it's getting too dark to see, so I'll go on to camp."

"Not leaving in the morning, I suppose?" asked Sam, jocularly.

"Not for a few days," smiled the girl. "I shall be here at daylight."

"Find me right on the spot."

During the next ten days they saw a good deal of each oher, and at the end of it they met at the track, to flag the train when it should come. Each had a comfortable little buckskin bag filled with something, which each held carefully concealed so it should not be conspicuous on the train.

Soon Sam began to look uneasy.

"Why doesn't your father come?" he asked at length. "Pretty near train time. He wouldn't want to be left. Shall I go and—"

"No, father is dead," the voice striving to keep from breaking. "He died a few days after I shot the turkey, and when I went away it was to take his body home. We—we had been expecting it for over a year, though it was none the less hard when it came. I returned to look after his papers and the crates consigned to my care, and of course with some little hope of finding gold."

A shrill whistle was heard in the distance. Sam stepped to the middle of the track.

"What are you expecting to do, Margaret?" he asked—"if you don't mind telling."

"Go straight to the city and enter a four-years' college course," promptly. "I'm pretty old for it, eighteen, but my education has been neglected roaming round with father, and I want to make it up. I shall rent a suite of rooms nearby for mother."

"And buy back your home?"

"Of course, but will let the present people live in it till I get through college. What are your plans, Sam?"

"Haven't any, much. I shall send a big sum to astonish my folks, first, then—but say," as a new thought seemed to flash to his mind, "I never thought much about real schooling, because there never seemed any possible chance for it. I've taught myself some, hit and miss. But now—do you know of any nice college for overgrown boys who shave?"

"There's said to be a splendid one five miles from my town."

"Fine! I'm going straight there and enter for a four-years' course."

He stepped off the track as the train rattled up and then helped the girl on board.

Call Down

"I regret that I did not postpone my tour until the grippe epidemic was over," said the brilliant novelist, Thornton Wilder, after a Chicago lecture.

"The interruptions from grippe victims," he continued, "are most upsetting to a speaker. I can sympathize with the preacher who, driven desperate by his congregation's constant throat clearing, coughing and sneezing, interrupted his eloquent sermon to remark:

"'I wish to say that there is no prize given in this church for the best cough.'"

Many Relatives

Mr. and Mrs. Adrien Alix, of Greenville, are said to hold the New Hampshire championship for numerous nieces and nephews. Mr. Alix was one of a family of nine children, and so also was his wife, who was Angeline Thibeault. Mr. Alix is uncle to 43 children, and his wife is aunt to 33. The couple themselves are the parents of five children.—Indianapolis News.

LIVE STOCK

CATTLE ABORTION CANNOT BE CURED

Through Good Sanitation Eradication Is Possible.

Cattle abortion cannot be cured, but it may be eradicated, according to Dr. H. J. Metzger of the New York state college of agriculture. Doctor Metzger recommends as a means of stamping out the disease the blood test and the isolation of infected animals. "The complete eradication of abortion disease from the cattle herds is possible, and it would mean stopping a serious source of loss to the dairy men of the state," he says.

No cure for abortion is known, according to Doctor Metzger, and the purchase of any drug or stock tonic as a cure is a waste of money. The blood test will detect the presence of the Bang abortion disease, and then the owner can take the measures which, through sanitation and prevention, will clear his herd of the disease.

Doctor Metzger recommends complete isolation of the diseased animal, complete cleanliness, and the rearing of all animals on the farm to keep from reinfecting a clean herd. A more complete discussion is given in a new bulletin, just written by Doctor Metzger and published by the college, which will be sent free of charge to anyone who will write to the college of agriculture at Ithaca and ask for bulletin E 182.

Control Hog Cholera by Preventive Means

Hog cholera has no cure and must be controlled by prevention. The disease is caused by an organism which can live a year or two outside of the animal's body. These organisms are found in almost all tissues of, and in all discharges from, the body of the diseased hog. Cholera may be spread in many ways. The germ may be carried on one's shoes or by animals, in infected straw or litter, or streams of water. All dead hogs should be burned or buried deeply. Do not go near a neighbor's sick hogs; they may have cholera.

Vaccination prevents the disease. When vaccination is properly performed the animal passes through a mild attack or form of cholera which immunizes it against the disease for life. A small amount of virus, injected into the pig causes the disease. At the same time, enough hog cholera serum is injected to protect the animal against the disease.

Hundred-Pound Shote Needs Plenty of Feed

A few years ago the Kansas station started some weanling pigs on alfalfa pasture with a view to determining the amount of corn and tankage required to bring them up to 100 pounds weight.

The heavier pigs, weighing about 52 pounds at the beginning, required 90 days to reach 105 pounds weight; the lighter pigs weighing 43 pounds required 120 days to reach 102 pounds.

Averaging all the groups it required 153 pounds corn and 14.4 pounds tankage per pig to reach the weights stated. The average daily gain was 0.54 pound per pig.

Buying Ewes Requires Practical Knowledge

Buying ewes requires an understanding of the factors which make a ewe profitable. In general, the best ewes from the practical standpoint are the ones that will produce a good percentage of lambs, nurse them well and shear good fleeces. Constitution and health therefore are first essentials in the ewe. Very good mutton form is much less important in the ewe than in the sire. While the form of the ewe is important, it is of less significance as a rule than constitution and thrift, and milking and shearing qualities.

Provide Exercise to Keep Boar in Shape

You cannot raise a strong active boar without exercise. Neither can you keep him in shape for service without exercise. As a rule, if on pasture, a boar will take plenty of exercise; but, if he does not, make him. Drive him around the pasture several times a day, if necessary. A good plan is to have the shelter at one end and the feed troughs at the other end of the pasture. Exercise tends to prevent the laying on of excessive fat and assists in developing stamina and vigor which are necessary, if your boar is to sire large litters of strong, vigorous pigs.

Mineral Is Needed

A ration is no better than the weakest element in it. Fortunately, most of our common combinations of feeds have sufficient mineral to supply the animal's need. As a rule, feeds rich in proteins are high in phosphorus and when the feeding standards are complied with there is little need of supplementing minerals. However, when the ration is composed chiefly of corn, as is usually the case in fattening hogs, a good mineral should be supplied to the animals.

POULTRY

TURKEY RAISING SHOULD DEVELOP

Survey Reveals Industry One of Most Profitable.

That "turkey production in the West should become one of the major farm enterprises if economic conditions remain as good as they have been during the past three years" is the belief of F. B. Headley, chief of the department of farm development of the University of Nevada agricultural experiment station.

Basis for his conclusion, Headley says, is a cost of production study carried on by his department during the last three years on five farms in Churchill county. Other profitable enterprises on the farms surveyed, according to the experiment station man, were alfalfa production, dairying and the raising of chickens, but turkeys brought in greater return for capital and labor expended.

Cost of producing the average turkey, which weighed 13 pounds dressed, on the basis of more than 5,000 birds covered by the study, was $3.52, or approximately 27 cents a pound.

"The bulk of the cost in producing turkeys is for feed," Headley says. "On most farms pasture constitutes an essential part of the ration and it is probable that the low cost of production is due in large part to the excellent alfalfa and grain stubble pasture that has been available."

Other conclusions concerning turkey production drawn by Headley from the survey are that the interest on investment is low, that "large flocks require less time per bird than the smaller flocks, and that over 75 per cent of all costs is for labor and feed."

Popularity of Frozen Eggs Fast Increasing

While at one time practically all eggs kept in Pennsylvania cold storage warehouses were "in shell," several million pounds of eggs "out of shell" have been reported in storage each year during the past few years, according to the Pennsylvania Department of Agriculture. On June 30, 1928, the cold storage report for the state showed 4,657,000 pounds of eggs out of shell in storage, just ten times more than were in storage on the corresponding date in 1914.

The increasing popularity of the frozen eggs is explained by the bureau of markets as follows: "In the spring when eggs are plentiful, surplus eggs are purchased by breaking establishments which break and place the eggs in containers to be frozen as whole eggs, egg yolks, or egg whites for the use of the baking industry. After being frozen solid, the eggs are kept at a temperature ranging from zero to five degrees below. These are then made available to bakers at any time during the year. Many bakers report that these eggs give the most satisfactory results when kept in a frozen condition for about three months."

Well-Ventilated House Needful During Winter

A warm poultry house that will help to keep egg production high during the winter months must be well ventilated, says Prof. E. R. Gross, agricultural engineer at the New Jersey experiment station, New Brunswick.

To maintain a warm, well-ventilated henhouse three things are needed, advises Professor Gross: Tight walls, doors, and windows; ventilating flues, which may be constructed of wood at a low cost, and limited overhead space. To make the building tight, close all the cracks, cover the outside walls with roll roofing, or ceil the inside walls. Reduce the air space by ceiling overhead or by constructing a straw loft.

Ventilation and warmth go together. If the house is tightly built and has all doors and windows closed, the birds will give off heat enough to raise the inside temperature considerably above that on the outside. But when the house is tightly closed, moisture will begin to accumulate and the air become stale. Ventilation is needed, therefore, to carry away the moisture and to bring in fresh air.

Disappointment Sure

Compounding the ration of the laying hen, particular attention should be paid to the inclusion of the necessary vitamins. Yellow corn and green feeds provide much of vitamin A. Vitamin B is carried in wheat, corn, green feeds, alfalfa meal, alfalfa leaf flour and others. Vitamin D, or its equivalent, is supplied by making use of direct sunshine or by resorting to cod liver oil, the latter being an outstanding source of this most essential substance.

Keep Ground Clean

Clean and fresh ground may be made available by moving the house or houses to new ground each year, or by having a regular rotation of sown crops.

Sanitary ground is particularly necessary in the handling of all chicks and growing stock.

All poultry runs should be disced and planted with oats, rye, wheat or similar crops. Discing or plowing once a year is not sufficient for best results.

Horticultural News

TO PRUNE FRUIT TREES PROPERLY

Best Practice to Do Work Later in Winter Season.

The kind of pruning and the amount of pruning are both of far greater importance than the time of doing the work. Pruning can be done at most any time without detrimental effects on the tree but all things considered it is usually best practice to do this work in late winter or very early spring. Pruning wounds heal best when made in May and June, during the period of very active growth of the tree. The advantage of pruning when trees are in leaf is that weak and shaded wood can be most easily recognized then and removed. The disadvantage of pruning in late summer is that mature trees usually have fruits maturing at that time to interfere with pruning, and with young trees a second growth, that may not mature properly, can be induced from such pruning. So generally speaking pruning should not be advised in late summer.

Both raspberry and strawberry plants are best set in very early spring as soon as the soil can be properly prepared for planting. Strawberry plants set on a north hillside fruit later in the season than when planted on other slopes. It would be a disadvantage if early berries are wanted. North slopes are often less subject to drought and for main crop berries where earliness is not a factor such a slope might be favorably considered. —F. H. Beach, Ohio Experiment Station.

Mulching Strawberries Holds Plants in Check

Mulching the strawberries is very important. It prevents severe freezing of the plants, avoids alternate freezing and thawing of the soil in early spring, holds the plants back till the proper season in the spring, keeps the fruit clean through hard rains, furnishes a clean surface for the pickers to kneel in gathering the fruit, conserves the moisture, and holds back the weeds.

There is really little use of setting out a new strawberry bed every year or two unless, of course, grubs or some fungus disease become established among the plants. It will be noted, that by following the instructions offered, a "new" bed is established every year, and yet, without really setting out a single plant. This saves a lot of hard work, as well as the expense of the plants for setting out.

Drain Peach Orchards to Save Choice Trees

Draining peach orchards is now generally practiced in the nearly level orchards. Three years ago this was not true.

Such a general change in orchard practice was brought about by two very wet winters. Many orchards which were not well drained suffered high percentage losses of trees. The trees which were left were seriously injured.

Now, growers are not neglecting this. Many growers merely plow a furrow down each middle. Others take a road grader and do an artistic job of draining. No doubt this is also somewhat better than merely plowing the furrow.

Apples stand bad conditions much better, but this is no reason for not giving attention to drainage in the apple blocks. It will pay big to do so.

Horticultural Hints

As soon as the ground is frozen hard, strawberry beds should be mulched.

* * *

The greater part of crown and root injury of apple trees is started by low temperatures.

* * *

A close relation exists between the growth of an apple tree and the amount and quality of the fruit borne.

* * *

Experiments at the Cornell experiment station indicate that poor pollination is the cause of many crop failures in apple orchards.

* * *

If raspberries are so located that they cannot be cultivated then the best plan would be to set a new patch early next spring.

* * *

Strawberry plants from an old bed may be used for starting a new patch next spring. In digging the plants discard any very weak ones or ones with dark-colored roots.

* * *

Bridge grafts, set in the spring, should be inspected sometime during June or July and any growths which have started from their buds should be cut or rubbed off.

* * *

Neglect in giving orchard spray machines and accessories proper care in the fall is always costly. Recommendations call for draining the water in the gasoline engine on the power sprayer and from the pump. It is best to loosen the packing and give it an application of oil. Painting the tank is important.

Berries Without Thorns Promised

Blackberries and Dewberries Being Tested by Many Scientists.

(Prepared by the United States Department of Agriculture.)

Blackberries and dewberries without thorns has been a subject of interest to plant breeders for a number of years. Doubtless those who have picked either of these fruits are in sympathy with the efforts of the scientists to eliminate the thorns, and it now looks as if it were to be done, according to George M. Darrow of the United States Department of Agriculture.

Two thornless varieties—the Cory blackberry and the Austin thornless dewberry—placed on the market in recent years have met wiath fairly good success. These thornless types are adapted to certain southern localities only.

Recent Developments.

One of the most recent developments in the production of thornless fruits is the work of E. L. Pollard, a fruit grower of California. In the summer of 1928 he observed thornless sports of the Young dewberry on his place. He tested six of these this year, and all but one proved to be worthless. The one exception proved to be apparently as good in every way as the original Young, and all propagations of this sort were thornless.

"The success of this grower in finding a productive thornless sport of the Young dewberry," says Mr. Darrow, "calls attention to the desirability of finding similar sports of the standard blackberries of each section. All thornless sports should be propagated and tested for their productiveness.

Many Advantages.

"Thornlessness in the dewberry is advantageous not only in lowering the cost of training, but what is more important, also in reducing thorn injury to the canes themselves. Even greater advantages might be obtained with thornless Oregon Evergreen and Himalaya blackberries."

Investigations looking to the development of thornless blackberries and dewberries are now being conducted by the department and by a number of workers at state experiment stations.

Tonnage of Hay Stack Is Easily Estimated

To estimate the volume or number of cubic feet of hay in a stack, find the length and width of the stack and measure the distance over the stack from the ground on one side to the ground on the other side. This last measurement is found by throwing a rope over the stack. These three measurements are multiplied together, and from one-quarter to one-third of this product will give the number of cubic feet in the stack. If the stack slants toward the top from close to the bottom of the stack, one-fourth of the product is taken; if the stack goes up straight for about half its height and then slopes toward the top, one-third of the product is taken.

The most difficult problem is to estimate the number of cubic feet of hay required to equal one ton. One rule states that when hay has stood less than one month it requires 590 cubic feet of hay to make a ton, when it has stood one month 512 cubic feet, five or six months, 422 cubic feet, and when it has stood one year, 343 cubic feet.

Gatherers of Nitrogen Are in Legume Family

Nitrogen gatherers belong to the legume or clover family, most of which take their nitrogen from the air and do not reduce the content of soil nitrogen. These crops, when plowed down as green manures, add directly to the crop producing power of the soil. In order that the plant may obtain its nitrogen from the air the soil must originally contain or must be inoculated with a special type of bacteria, the presence of which is noted by the growth of nodules upon the roots through which the nitrogen is obtained.

Agricultural Notes

Most fungous or bacterial parasites thrive best where moisture is plentiful.

* * *

Calves fed at shorter intervals are also less subject to digestive disorders.

* * *

Not all plants need a "sweet" soil; some do better at a fairly high degree of acidity. It pays to know your plants.

* * *

When they get to using rustless iron and steel in agricultural implements, the sky-roofed machine shed will not take its toll so rapidly.

* * *

Weed patches in grain fields should not be treated with sodium chlorate until after harvest when they need not be disturbed further with farm machinery.

* * *

The first and most important step in gathering the materials for use in manure-heated hotbeds is the manure. The best is fresh horse manure. Pile in rows four feet wide, not over six feet high and as long as is needed for the beds to be filled.

"That's what I call a Gift!"

For the whole family!

Harold Gruetzmacher and family of Tekamah, Nebr. expect to spend part of the holiday vacation with Frank Gruetzmacher and family.

which to finish the basement of the new church there. Rev. Ortmeyer was here sometime ago to help Rev. Whyte raise funds for a new church in Klemme.

Mr. and Mrs. J. N. Day and son Dorance, Mr. and Mrs. Wm. Smith and daughter, Mabel, were entertained to a goose dinner Tuesday evening at the home of Mr. and Mrs. Werner Schlawin.

"Jack" Wellemeyer, of Kansas City expects to come home about Sunday to spend his Christmas vacation with Klemme folks Ethel, who is a student at Cedar Falls will be home Friday.

Mrs. Louis Cheadle will leave Monday for her home in Indiana, so that she can be with her husband and daughter over Christmas. She is a sister of Mrs. Fred Kluckhohn and has been here on a visit.

R. W. Elder drove to Britt Monday to attend a Farm Bureau Directors meeting. Out of the sixteen townships there were fourteen men present. Mr. Elder represented Ell township. He reports a very profitable meeting.

The Farm Bureau Ladies of south Ell met last Wednesday at the home of Mrs. Oscar Swanson and studied the lesson on Nutrition in a most practical way, as they prepared dinner, using the recipes recommended in the course. They enjoyed a good time as well as a profitable day of study.

The building committee of the Methodist Church composed of C. A. Larsen, Rev. H. E. Whyte, Frank Gruetzmacher, E. J. Arnold and T. C. Nelson, were entertained to an oyster stew at the T. C. Nelson home Monday evening, and to talk over building plans for the new church.

Other Klemme young folks who are attending college and who will be home for the holidays are: Harvey Nelson and Oral Gibbs of Morningside, Sioux City; Maurice Greman, Claire West and Ray Lange of Iowa State College, Ames; Lucille Kraus and Mabel Schuldt, State Teachers Colege, Cedar Falls; and Elmer Larson, Chicago.

The following members of the Klemme Methodist Church drove to Titonka and Lakota last Thursday to look at some new churches there, Tom Nelson, Rev. H. E. Whyte, E. J. Arnold, Henry Busse, Mrs. Emil Patet, Mrs. E. J. Arnold, Frank Gruetzmacher and August Ridder. All said the church at Lakota was one of the best they have visited so far.

The P. T. A. Meeting Tuesday evening was well attended, despite a rather stormy night. The talks by Rev. Bainbridge of Goodell, and Mr. Chas. Tompkins of Garner were very much enjoyed. Mrs. P. W. Johnson gave a short talk after which she the grades with some books, as a gift from the Legion Auxiliary Miss Ford and Miss Siemsen were in charge of the game period following lunch, and some lively games were enjoyed by old and young.

This year—why not give gifts that the whole family can enjoy the whole year? We suggest needed articles for your home:—

A Nw Kitchen Range	Parlor Furnace
Coleman Lamps and Lanterns	Pyrexware
Aladdin Lamps	Silverware
(Table, Floor or Bracket)	Carving Sets
Waterless Cookers	Pressure Cookers
Conservo Cookers	Clothes Racks
Meadows Washer	Ridjid Ironing Board
(Electric or Gas Motor)	Cake Covers
Electric Toasters	Electric Waffle Irons
Electric Corn Poppers	Electric Irons
Corn Poppers	Clothes Hampers
Casseroles	Baking Dishes
Pyrex Pie Dish with frame	Gas Iron
Colored Enamel Ware	Aluminum Ware
Kitchen Utensils	Kitchen Knives
Burns Bread Knife	Bread & Cake Cabinet

SCOUTS DECORATED KLEMME STREET

TROOP 56 SCOUTS DID A GOOD TURN HERE MONDAY

Do Another Good Turn Tuesday By Giving Basket Of Food

Scouts of Troop 56 Klemme worked diligently Monday when they did a community "good turn" by decorating the Main Street of Klemme.

The Scouts went to the E. J. Arfarm where Mr. Arnold and his sons helped them cut branches from his evergreens and donated the Scouts this material for their project.

The Scouts placed evergreens around every electrolier on the street and put colored tissue paper inside the globes on top of the electroliers, and when lighted up looks very fine.

Do Another Good Turn

The Scouts were bubbling over with the Christmas spirit and set about to se what more they could do. Tuesday they again got together and solicited canned fruit, vegetables and other delicious food with which they packed a heaping big box and took it to Ernest Henzie, and old man who lives near the railroad tracks. Mr. Henzie does not understand English very well so the boys enlisted Mr. G. Gobeli to act as interpreter for them, which he did. Mr. Henzie was very much pleased with his gifts from Troop 56.

Those who gave the boys canned fruit, etc. can later have their jars as Mr. Henzie will leave them at the Wellemeyer store when they are empty.

ROYAL NEIGHBORS ELECT NEW OFFICERS FOR 1930

Election Of Offices Held At Their Meeting Friday Afternoon

At their regular meeting at the hall Friday afternoon the Royal Neighbors Lodge of Klemme elected the following officers for the coming year:

Lillie Koerner, O.; Bessie Gram, V. O.; Viola Freie, Recorder; Bessie Waterman, Treasurer; Eunice Braund, Marshall; Mina Ludeke, Assistant Marshall; Fannie Trumbell, Chancellor; Mrs. Chas. Keraus, Past O.; Hazel Barr; Inner Sentinel; Naomi Kluckhohn, O. S.; The Five Graces chosen by the Oracle are Faith, Marie Blank; Unselfishness, Henel Stille; Courage, Myrtle Jacobs; Modesty, Helen Kirkwood; Endurance, Maude Stille.

The first meeting in January will also be installation for the new officers.

MASONS AND STARS ELECT 1930 OFFICERS FOR LODGE

Following are the officers for the coming year for the Masonic Lodge at Garner:

W. M., P. S. Tompkins of Garner; S. W., Mr. Taylor of Hayfield; J. W. Sumner Trumbell, of Klemme; Secretary, H. V. Reed; and Treasurer, Isaac Sweigrad, Garner.

The other officers will be appointed by the W. M. before the next meeting.

Eastern Star Officers

W. M., Mrs. Chas. Schissel, Garner; W. P., Mr. Victor Waldek, of Hayfield; A. M., Mrs. P. S. Tompkins, Garner; A. P., Edwin Bock, of Klemme; C., Mrs. Roy Strate, Garner; A. C., Mrs. R. A. Jorgenson of Klemme; Sec., Mrs Marve ZeZiZger, Garner; and Treas., Mrs. Wetterling, Garnr.

The Star Points and other officers will be appointed by the W. M.

The two lodges will have a joint installation service in January.

NOTICE

The Methodist Porish House and the old parsonage will be sold at public auction sometime in January. Look this property over and have your bids ready. 1tc

ROY SWANSON HAD EXCITING EXPERIENCE WITH CAR

Torn Down Fence Marks Path Of His Unruly Phord Took To Town

Roy Swanson Sunday evening wound up his "Phord" Runabout and after but little coaxing got it headed for town. Roy put some alcohol in his Phord's radiator and it may have been that the runabout was feeling young again, for when he got to a point a mile east of Klemme the Phord first straddled a low bridge. t's next caper was then cut along the ditch where the wheels cut figure 8's. Roy tried to steer it in a more westerly course which Mr. Phord didn't like and he next took for the fence, wound a few strands of woven wire about the wheels and then straddled the fence for several rods, breaking off Hy Barz's fence posts and winding several spools of wire about itself the unruly Phord finally heaved a heavy sigh and leaned up against a telephone pole and called it a day!

Roy was shaken up some, but the Phord presented a more or less forsaken look, with bent front axle, running board turned up and the windshield tilted backward at a pertinent angle, and the radiator cap ot as good as it used to be.

However, Roy i ot the worse for his flying trip an the Phord looks normal again.

AVERY F. H. GAVE XMAS PROGRAM

INTERESTING MEETING HELD AT CENTER SCHOOL

Christmas Program Was Feature Of Avery Township Meeting

The regular monthly meeting of the Avery Township Farm Bureau was held at the Center School, Friday evening, December 20th.

The committee in charge of this meeting, Mr. and Mrs. J. J. Cook, presented a Christmas program before a full house.

The program opened with a dramatization of the Christmas story.

Told Story Of First Christmas

Mrs. Ed. Hemenway took the part of the angel. With violin music by J. J. Cook off stage, she told the story of the birth of the infant Jesus.

Instrumental music, "Oh Hasten, Oh Hasten to Worship the King," by Mrs. J. J. Cook, preceded the entrance of the shepherds and the wise men, all in costume.

The "Wise Men," J. J. Cook, and E. J. Nelson sang, "Gft of Love."

The Shepherds' Chorus followed with "Holy Night." This group consisted of Dolores Cook La Vonne Sherwood, Charles Tizer. Willard Nelson, Edison Nelson, Eula Veenstra and Margaret Veenstra.

Standing beside the manger and the babe, Emma Jane Barger gave a reading, "I Know a Little Baby." A solo, "Away in a Manger," by Dolores Cook, followed.

The "Wise Men" ended this part of the program with a song, Christmas Bells."

School Children Give Program

The school children of the Center School then presented the following numbers:

1. Christmas Greetings from Supt. Baggs, by Mrs. Hemenway.
2. Reading, "Christmas Mail," by Frances Kearney.
3. Reading, "Sleight of Hand," by Kenneth Griggs.
4. Dialogue, "Going Home For Christmas," Charles Tizer and Willard Nelson.
5. Pianologue, "The Gypsies Xmas", La Vonne Sherwood.
6. Reading, "Christmas," by Boyd Nelson.
7. Community Singing, "Joy To The World."

Review Farm Bureau Year

J. J. Cook reviewed the Farm Bureau work of the past year and commended the outgoing president, H. C. Barger, on his leadership of the past few years.

Mr. Barger responded by pointing out the importance of Farm Bureau work, and the need of greater cooperation among the farmers.

J. J. Cook commented on the bright outlook for the Farm Bureau work next year under the leadership of the new president, V. A. Cook.

V. A. Cook responded and closed with a poem on "Getting Acquaainted at our Farm Bureau Meetings."

With Miss Loney L. Kroeger on the stage posed as the Goddess Of Liberty, the audience joined in singing "America."

Santa Claus Was There, Too

The jingle of bells outside announced the appearance of Santa Claus (impersonated by Leon Sherwood,) who distributed treats to young and old. A social hour followed.

The Christmas tree was donated by the Cashman Grocery Store at Goodell.

BASKET AND PIE SOCIAL

There will be a Basket and Pie Social at Ell No. 8, 2 miles east of Klemme, Friday night, January 3rd, 1930. A short program by the pupils and a 3-act community play will be given. Ladies please bring baskets or pie. Dora Swanson, teacher; Oscar Swanson, directer. 1tc

TUNE N ON 4-H CLUB PROGRAM JANUARY 4, 1930

This Will Be The Sixth Of A Series Of National 4-H Programs

The sixth of a series of National 4-H Club radio programs to be broadcast over a national hook-up of 38 stations is scheduled for Saturday, January 4. At this time New New's greetings will be extended to club members throughout the nation by C. W. Warburton, Director of Extension work. Dagny E. Olsson, Kent County, Rhode Island and Victor Myers, Rockingham County, Virginia, representing club members in their respective states, will tell of their experiences in club work and interesting phases of club work conducted in their localities. Miss Madje J. Reese, field agent for the Western States, will give a brief talk on "Four-H Club Work in Hawaii." The music will be furnished by the National Broadcasting Company's staff orchestra and soloists at the Chicago Studios.

The time for the program is Central Standard Time, 12 noon to 12:45 p. m.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

An appropriate New Year's theme will be delivered next Sunday morning at the worship hour.

In the evening we will have lantern slides with a lecture, entitled, "Building the House of God." This set of slides should be especially interesting to all since we ourelves are engaged in a church building project.

All other services will be according to schedule.

Morning worship in Klemme at 10:00 o'clock.

Sunday school, Klemme at 11:00.

Sunday school, Liberty, 10:15.

Morning worship, Liberty, 11:15.

Evening worship, Klemme, 8:00.

6:30 p. m. Intermediate League.

Epworth League, 7:15.

Alumni Banquet Friday Night

The Alumni of the Klemme High School will hold their annual banquet at the Royal Neighbor Lodge Rooms this Friday evening. The R. N. A. Ladies will serve the dinner.

Following the dinner program the Alumni will have their annual dance and social time at the Idle Hour theatre.

There are many former students home for the holidays and a large ottendance is expected.

LOOP GAME ON LOCAL FLOOR NEXT MONDAY NIGHT

Mason City Diamond Bread Five To Play Klemme Independents

A basketball game for next Monday night has been scheduled by the local Independent basket ball team with the Diamond Bread quintet of Mason City. The game is called for 8:00 o'clock.

KLEMME HIGH CAGERS DEFEAT KANAWHA HIGH BOYS

Kanawha Grade Team Scores Win Over Klemme Midgets

Kanawha and Klemme high and grade schools divided honors in the double header basket ball games at the Klemme gym Friday night.

The Klemme high score won the first game by defeating Knaawha 14 to 12. The Kanawha grade team won over Klemme 11 to 7.

Well, Well!

The owner of a cheap watch brot it into the jeweler's shop to see what could be done for it. "The mistake I made, of course," he admitted, "was in dropping it."

"Well, I don't suppose you could help that," the jeweler remarked. "The mistake you made was in picking it up!"

As He Saw It

"What is more tempting than a beautiful girl to behold?"

"A live one to be held!"

PLACES AWARDED IN K.H.S. CONTEST

LOCAL ELIMINATION CONTEST HELD THURSDAY

Four Places Given In Each Division For Next Contest

The Klemme high school was certainly blessed with material for declamatory work this yeor, which made it necessary to hold an elimination contest last Thursday to decide the four best in each class for the local contest to be held soon, when the four in each division will be chosen to represent the schhool in the county and stote contests.

Following are the ones who were judged the four best in each class. The standings were not given out and the order in which we print the names has nothig to do with their ranking:

Oratorical

Raymond Barz "Crime and the Crimino"

Blanche Gimer, "The Sequence of Court Life."

Allen Klotzbach, "Unknown Speakker."

Clarice Wellemeyer, "Acres of Diamonds."

Dramatic

Margaret Gates, The Truly Mother."

Irene Harms, "The Christmas Substitute."

Nova Koerner, "The Chief Operator."

Valeria Koerner, "Dickens' Dog."

Humerous

Ethel Baack, "Janice Takes Care of the Baby."

Mitchel Bock, "Never Again."

Floyd Klotzbach, 'The Blue Eyed Shiek."

La Vohn Larsen, "Daddy on a Diet'

Others Who Competed

There were a large number of other students competing for honors which made competition keen and a difficult task for the judges to select the best speakers. The following who took part deserve honorable mention and credit for helping to make this an outstanding contest. Those who acted as judges say that all who enetred did remarkably well. The other competitors were:

Oratorical

Ethel Pringnitz, "The Prince of Peace."

Raymond Drake, 'The Sacrifice That Failed."

Dramatic

Norma Wille, "Let Nothing You Dismay."

Ethel Barz, "Thrush!"

Doris Carson, "Christmas Eve in the Morning Camp."

Reva Elder, "In Memory of William Dolan."

Eva Stokesbary, "The Coming of the White Swan."

Humorous

Dorance Day, "The Model Sermon."

Jane Dutheridge, "Making Him Feel At Home."

Gertie Trampel, 'Cranking the Ford."

Emma Goll, "Before the Curtain Goes Up."

CAMP FIRE GIRLS CARRY OUT THEIR PROMISE

Last week the Klemme Camp Fire Girls said they had made arrangements with Santa Claus to come to Kleme for a short visit with little boys and girls. The Camp Fire Girls kept their promise, and sure enough Santa was here with them for a short time Monday night and the girls accompanied him about town singing Christmas carols.

The Installment Age

Teacher: "Joseph, if your father could save a dollar a week for four weeks, what would he have?"

Joseph: "A radio, a new suit, and a ste of furniture."

FAMILY GATHERING AND XMAS DINNER AT H. WILLE HOME

Affair Was Big Surprise To Mr. And Mrs. Henry Willo

Christmas Day when aMr. and Mrs. Henry Wille came home from church they found their yard full of parked cars and when they stepped into their house found it full of people, who had come to stage a big surprise and a family Christmas Dinner.

Those present were: Rev. and Mrs. Calvin Grosshuesch and children; Ernest Palmby and family of Vernon Center, Minn.; Mr. and Mrs. Fred Barz and family; Mr. and Mrs. Fred Greiman and family; Mr. and Mrs. Albert Barz and family; Mr. and Mrs. Wm. Schlawin and family; Mr. and Mrs. John Bock and family; Mr. and Mrs. Cornelius Wille, and family; Mr. and Mrs. Leslie Hartbeck and family; Mr. and Mrs. Harold Leitzinger and family; Mr. and Mrs. Walter Rosendahl and family; Mr. and Mrs. Carl Wille and family; Mr. and Mrs. Fred Bell and family, and Miss Brouwer of Garner.

There sixty or more present to enjoy the big dinner and social gathering.

ELL TOWNSHIP 4-H GIRLS COMPLETE YEAR OF WORK

Held Last Meeting Of The Year At The Mrs. Chas. Griffen Home

Monday evening, Dec. 16th the 4-H Club Girls of Ell Township met with their leader, Mrs. Chas. Griffen. The meeting brought to a close a very successful club year. successful not only in honors won by various members but by the useful and valuable knowledge obtained this year concerning health and appreciation of the finer things of life. The Club regrets very much the loss of their congenial and energetic leader, Mrs. Griffen, who will make her home at Morris, Min. next year. Her presence will be greatly missed.

During the business meeting the annual election of officers was held. The new officers are: Reva Elder, President; Marjorie Stewart, Vice-Pres.; Norma Wille, Secretary; and Bernice Weaver, Treasurer.

The project for next year will be bread baking.

A "grab bag" was greatly enjoyed by all the girls and after a social hour they were served a delicious oyster stew. They departed at a late hour wishing their leader and each other a Merry Christmas.

It looks like old times again to see so many of the young people in Klemme for Christmas. Those we have seen who are home from college or jobs are: Asa Arnold from Iowa City; Gladys Wilson of Drake; Harvey Nelson, Morningside; Maurice Greiman, Claire West and Ray Lange, of Ames; Mabel Schuldt and Lucile Kraus of State Teachers; Andrew Wellemeyer, Kansas City; Milo Patet, Chicago; Clarence Elder, from anywhere his last address happens to be; Ethel Wellemeyr of the State Teachers; Elvira Stille of Alexander; Adalia Schroeder of Geneva, and perhaps others.

Not A Grunt Coming

A well known Pennsylvania oil man who has a farm on which he raises a fancy bred of pigs, recently gave several small pigs to a little boy. Some time thereafter the oil man, passing the boy's yard, asked:

"How are the pigs today?"

"Oh, just fine," replied the kid; "how are all your folks?"

Petrified

Horace: 'What did your wife have to say when you came in at four this morning?"

Maurice: 'Didn't have a word to say."

Horace: "Smatter, tongue tied?"

Maurice: "No, I put cement in her beauty clay."

Witch?

Smith: "I say, Isaac, these Russian blokes 'ave the funniest names, aint they? Michaelovitch, Androvitch, Jackovitch, Stephanovitch."

Isaac: "That's so. You can't tell vitch is vitch."

HONORING *the* MEMORY *of* "OLD HICKORY"

Unveiling Jackson Statue in Statuary Hall

Jackson Square, New Orleans

Jackson Statue in Washington, D. C.

By ELMO SCOTT WATSON

JANUARY 8 is a day for recalling one of the most picturesque figures in American history. Andrew Jackson was his name, but to his countrymen he is affectionately known as "Old Hickory." It is not a date for special observance because it is the anniversary of his birth, as is the case with other great Americans. Rather we remember it because it is the anniversary of a battle which he fought and won on that date.

The Battle of New Orleans on January 8, 1815, is unique in military history. It is the only major engagement on record which was fought after a treaty of peace between the two nations involved had been signed. But its significance in American history is more than that curious fact. The War of 1812 was a conflict fought by a nation divided against itself. It was one in which Americans of the time took little pride, at least, so far as the record of its military forces was concerned.

Disaster after disaster and reverse after reverse had caused the country to believe that the breed of successful generals, such as it had known in the Revolution, was extinct. Then Andrew Jackson and his frontiersmen at New Orleans faced the best troops that Great Britain could muster. They were Wellington's veterans who had broken the power of Napoleon. But Jackson gave them odds of two to one and defeated them disastrously. "To a country that had almost completely lost faith in itself, to a country that had almost learned to cringe, this news came like a reprieve to a man upon the gallows," says Gerald W. Johnson in "Andrew Jackson, An Epic in Homespun." "It was literally crazed with joy, and in its delirium it flung the name of Andrew Jackson against the stars. . . . If Jackson did not really save New Orleans, he saved something infinitely more important, namely: the self-respect of the country."

In view of this, it would seem that January 8 should be one of the red-letter days on the American calendar. The fact that it is not is only further proof that the old saying "A republic forgets" is true. For January 8 is not a general holiday, nor even a state holiday. In that respect it cannot take rank with March 2 when Texas recalls the Battle of San Jacinto and honors the memory of Sam Houston, nor with April 19 when Massachusetts honors the patriots who fought at Concord and Lexington, nor with August 16 when Vermont remembers how old John Stark beat the Hessians at Bennington. The only observance of the anniversary of the Battle of New Orleans as a holiday is in New Orleans, which has good reason to remember the name of Andrew Jackson.

In fact the only nation-wide notice of this anniversary is a celebration which has only a meager connection with the battle and even this occurs intermittently. That is the Jackson Day dinner, held in Washington by the leaders of the Democratic party on January 8 and there tribute is paid more to Andrew Jackson, the President and the founder of "Jacksonian Democracy" than to "Old Hickory" Jackson, the soldier and military victor.

Even though America has not chosen to honor the memory of Andrew Jackson by making a holiday of the date on which he won his great victory and started on the path which led eventually to the White House, this does not mean that he is forgotten or is ever likely to be. For, as his biographer previously has pointed out, "He is the hero of the people, not of the intelligentsia. The people still delight in the legends of his prowess, of his lurid language, of his imperious and dictatorial temper. The tale of his usurpations does not appall them, but delights them, for Americans have always loved a really masterful man. If Jackson's spiritual heir should appear now, there is every reason to believe America of the Twentieth century would hail him as rapturously and follow him as blindly as it hailed and followed the hero of long ago."

Another reason why he is not likely to be forgotten lies in the fact that, with the exception of Washington and Lincoln, more monuments and markers have been erected to his memory than any other President. Fascinating as is the story of Jackson's career, a story which is familiar to most Americans, equally interesting is the story of some of these memorials. Outstanding among them is the famous "rocking horse" statue in Lafayette park, opposite the White House, in Washington. Perhaps it is particularly appropriate that this memorial to a man whose life was turbulent from beginning to end should be the subject for frequent controversy and should furnish material for an almost endless debate among politicians, sculptors and horsemen.

The statue, which has the distinction of being the first equestrian statue in the United States, is the work of Clark Mills, a New Yorker born in 1815, who drifted to South Carolina where he worked in a plaster and cement mill. While doing stucco work there, he developed a method for taking a cast from a living face and, although he had no art education, he began working in marble. His first effort, a bust of John C. Calhoun, was purchased by the city of Charleston and he was given a gold medal by the commonwealth of South Carolina. Mills next went to Washington to make busts of Webster and Crittenden. On the way he stopped in Richmond and there saw Houdon's statue of Washington, the first real piece of sculpture he had ever seen.

Arriving in Washington, he found plans were under way for the erection of an equestrian statue of Jackson. Cave Johnson, then postmaster general and president of the Jackson monument committee, invited him to submit a design. But Mills, never having seen an equestrian statue, felt obliged to refuse the offer. However, he was prevailed upon to make the attempt and, having bought some land near Lanham, Md., he set up a foundry and a studio and went to work. For nine months he worked patiently on a small model on a new principle—that of bringing the hind legs of a horse directly beneath the center of its body, thus producing perfect balance.

A race horse, named "Olympus," was his model for Jackson's charger and he trained this horse to pose for the work. Finally, his design was finished and accepted by the commission and Mills set to work to make the bronze statue. Cannon, captured by Jackson at Pensacola, were to be melted down for the statue of the horse and its rider, and other guns, captured from the British at New Orleans, was to be used for the base. But just when Mills was ready to begin the melting and recasting, a gale destroyed his studio. Before he could rebuild it, fire destroyed the foundry. Despite these handicaps, to which were added such misfortunes as the breaking of cranes, the bursting of furnaces and six failures in making the body of the horse, Mills persisted until his work was completed.

Just before the statue was dedicated Mills, as the head of a company of militia he had organized, tried to ride "Olympus" at the head of the parade. The horse, perhaps feeling that occasion was an appropriate one, did some impromptu posing on its hind legs, similar to the Jackson statue, whereupon its rider slid off hastily and continued on his way afoot! The statue was unveiled on January 8, 1853, and Senator Stephen A. Douglas of Illinois was the orator for the occasion.

For all the ridicule that has been heaped upon "Jackson and his rocking horse," the statue is a remarkable one in many respects. It is mounted without pivots, rivets or clamps of any kind. Among many people there is an idea that the tall and hind legs of the horse were cast solid to balance the rest of the figure. But this idea is erroneous. The statue is balanced perfectly on the hind legs of the horse and, despite the fact, it has not shifted a fraction of an inch in the 75 years that it has stood on the same spot. From the original model Mills made a replica for New Orleans and it stands today in Jackson square (originally called the Place d' Armes, but changed to honor the savior of the city after the historic battle in 1815) in that city. Another replica stands on the grounds of the statehouse in Nashville, Tenn.

Mills' statue of Jackson brought him fame and he was commissioned to do others. The first was the equestrian statue of Washington which stands in the circle of that name in the National Capital. Another was the statue of "Armed Liberty" which stands on the dome of the Capitol in Washington.

If Jackson's life was a disputatious one, it is appropriate also that it should have begun on disputed ground and that the dispute over the scene of his birth should continue long after his death. At the time of his birth, March 15, 1767, the boundary line between the two provinces of North and South Carolina was not clearly defined. That boundary line ran north and south less than a quarter of a mile from the log cabin in which Andrew Jackson first saw the light of day. But was the cabin east of the boundary line, i. e., in South Carolina, or west of it, hence in North Carolina? That is a point over which his biographers and other historians have never been able to agree.

And so the two states of North Carolina and South Carolina have had a part in another "Jackson controversy" as to which one belongs the honor of being his native state. Apparently South Carolina has had the last word in the controversy, for in November, 1928, there was erected a marker on the James Crawford plantation, 10 miles from Lancaster, S. C., bearing on the front these words, "Birthplace of Andrew Jackson, brave, truculent, noble, able, honest." On the rear is an inscription from a letter, said to have been written by Jackson to a Lancaster citizen, which reads "I was born in South Carolina, as I have been told, at the plantation whereon James Crawford lived about crossing of the Waxhaw Creek" and beneath that is this inscription, "This stone stands upon the plantation whereon James Crawford lived near the site of the dwelling house according to the Mills map of 1820."

The year 1926 saw the erection of another memorial to Andrew Jackson. That was on April 15 when the statue of Jackson was unveiled in Statuary hall in the Capitol. It was presented to the federal government by the state of Tennessee in honor of the centennial year of his inauguration as President and was accepted on behalf of the nation by President Coolidge. The statue, which shows Jackson in the full dress uniform of a major general of the regular army of his time—cocked hat, tight-fitting military dress coat and breeches, long cloak and high boots, is the work of Belle Kinney Scholz, formerly of Nashville, Tenn. On that occasion President Coolidge paid a tribute to Jackson as one who exemplified the unlimited opportunities offered to men, regardless of seeming handicaps:

"He gave to the nationalistic spirit, through loyalty to the Union, a new strength which was decisive for many years," President Coolidge said. "His management of our foreign affairs was such as to secure a wholesome respect for our government and the rights of our citizens. He left the treasury without obligations and with a surplus.

"Coming up from the people, he demonstrated that there is sufficient substance in self government to solve important public questions and to rise superior to a perplexing crisis. Like a true pioneer, he broke through all restraints and impediments into which he was born, and, leaving behind the provincialisms and prejudices of his day, pushed out towards a larger freedom and a sounder government, carrying the country with him.

"If at times he was high tempered and overbearing there is no fairer story of chivalrous devotion and affectionate consideration than that which he lavished upon his wife."

But if one would see the memorial which best exemplifies the tender side of Andrew Jackson, it is only necessary to go to Nashville, Tenn., and there visit the Hermitage where he lived the happiest days of his life with his beloved Rachel, where the most crushing blow in his whole career, her death, was dealt him and where at last he died with a miniature of her next to his heart. In that fine old mansion, which has become a patriotic shrine of the sort that Washington's Mount Vernon and Jefferson's Monticello are, preserved as it was in the days when Jackson lived there, one may come nearer understanding Andrew Jackson—not Andrew Jackson, the Indian fighter or the general or the politician or the President, but Andrew Jackson, the man.

FLECKED TWEED IS POPULAR; LACE GIVES CHARM TO VELVET

HAD you thought about flecked tweed for little daughter's midwinter coat? It's really a suggestion well worth following up, for they are ever so good looking, these colorful coatings which are flecked usually with white or with cream or a darker tone.

The beauty of these sturdy tweeds which have quite captured the heart of school faring youth, is their handsome colorings which include in addition to the usual browns and tans a range of pastel greens, blues, capucine and soft violet tones.

Girl's Coat of Flecked Tweed.

The coat in the picture is a serviceable little model of tan tweed flecked with brown. It is collared and cuffed with a pile fabric in semblance of fur. There is quite a little fabric fur being used this season, a favorite type simulates krimmer while still another looks the part of handsome beaver. The krimmer pile-fabric is especially effective on pastel tweeds. Matching muffs and hats of the simulated fur add an attractive note to these outdoor outfits. Sometimes entire coats are made of the pile fabrics which look like fur.

In unfurred coats, cape effects are contesting the supremacy of scarfed models. On tiny-tot coats made of broadcloth or suede sometimes the triple-layer capes are used. Some of the tweed coats with capes also add fur collars thus insuring warmth and comfort.

The vogue for flared hemlines extends to coats for girls. The fullness is achieved, in various ways, either through circular cut or princess lines, or through the introduction of godets employed in like manner as in adult styles.

Plaided blanket coats with self fringe are practical, colorful and moderately priced. For school wear and hard outdoor usage they are ideal, look charming, too, in their mixture of gay yellows, greens and reds.

Any fabric just so it is velvet is apparently the prevailing sentiment when it comes to material for the frock to be worn during the afternoon social hours. Indeed, minus a velvet costume, no wardrobe can qualify this season, as being all there.

About the greatest difficulty encountered in selecting the velvet frock is to decide as to whether it shall be black or in some one of the delectable dahlia or eggplant shades, or forest greens, or a radiant brown or some other of fashions glamorous hues. For the frock in the lower picture the designer settles the question by deciding upon a lovely violet-toned transparent velvet.

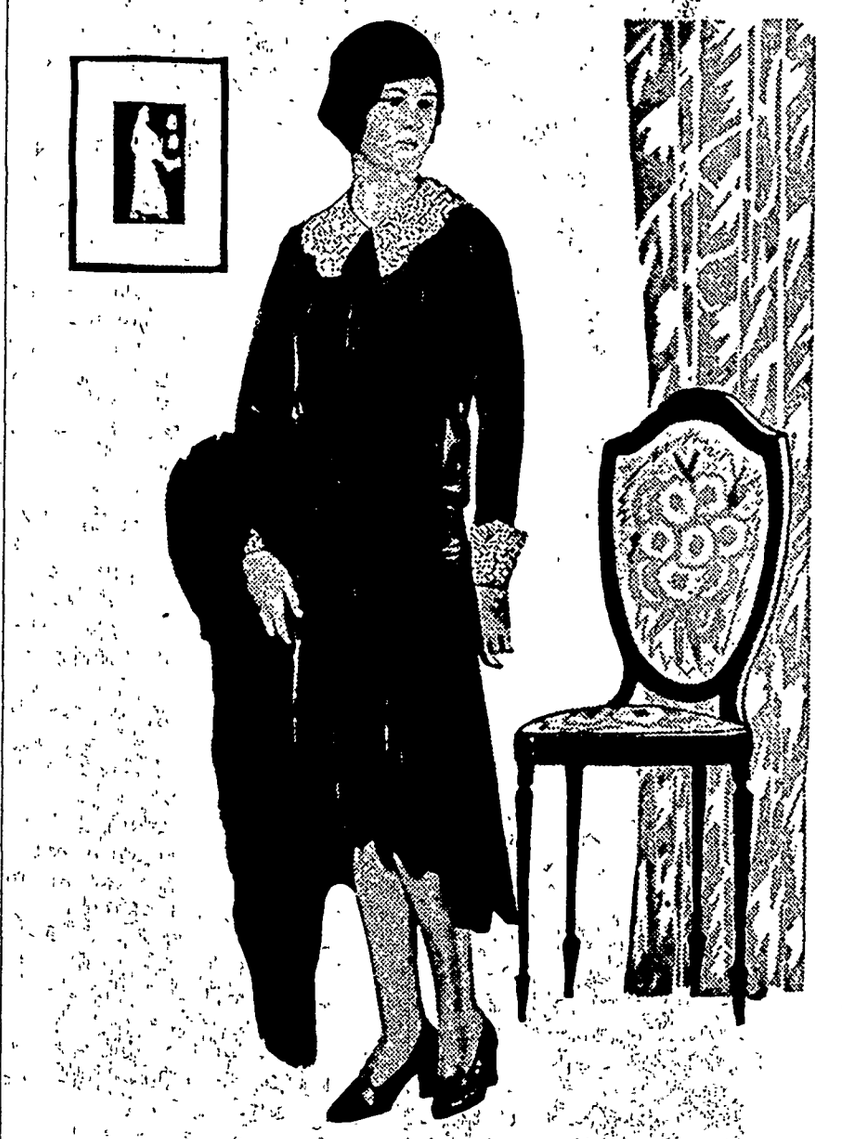
Nowadays, the first thing one looks to in connection with a gown under scrutiny is its hemline, for it seems that a dress is known by its hemline this season. What a tantalizing telltale way hemlines have of establishing the identity of a gown, as to whether it be of this season's vintage or not. The hemline in the picture, while it is thoroughly smart and correct, succeeds in making a very happy compromise with those exaggerated types which are being so reluctantly accepted by the majority of women.

The widened hemline which reaches below the knees in front, gracefully sloping in a downward course to the back, as here pictured, is meeting with general approval. It adds a feminine touch for the hemline to be scalloped, especially where the material is velvet, as it is in this instance. However, for the more tailored cloth versions, the scallops are likely to be omitted, following otherwise just such a slope as is defined by the hemline in the picture.

The shirred girdle fitted snugly to the hips, such as distinguishes this gown, is also a featured detail in the newer modes. The interest which holds for this dress is the fact that while achieving unmistakable chic it at the same time maintains that fine conservatism which appeals to discriminating taste.

The exquisite lace collar-and-cuff set worn with this dress also bespeaks that ladylikeness which is sought for in the new fashions. Note the word "exquisite" used in referring to the very lovely lace which enhances this gown. The prefix has been employed advisedly, for one of the conditions impressed on fashion's followers is that lace to be smart must be of the very finest and refined types, no recognisance being given to inferior grades. Real laces are consequently being brought out from their lavender-scented wrappings to re-enact their former triumphs.

JULIA BOTTOMLEY.



Smart Velvet Frock.

New Year Song

Our Old Year goes, and let him go!
A New Year comes. We hardly know
The change, so peaceful and so slow,
And unsought, too; but be it so!

The Old Year hears the rusty leaf,
The Old Year carries all the grief;
The New Year brings us all relief,
And bears the blossom and the sheaf.

Our New Year comes! And let him give
Us purer thought by which to live,
And greater courage in our strife,
And higher purposes in life.

—*Farm and Fireside.*

A New Happy Year

BY CLARA AGEE HAYS

MISS HELEN BROWN turned her back upon her freshman history girls to hide those awful surface tears which would show just when one tried to smile and say, "Happy New Year!" Happy New Year! Soon these young things would learn, too, that the newness of a year was—bunk. Nothing was new but illusion. Life was old and weary and humdrum.

"Brownie's got a grouch!" signaled June Wells who sat in the front row.

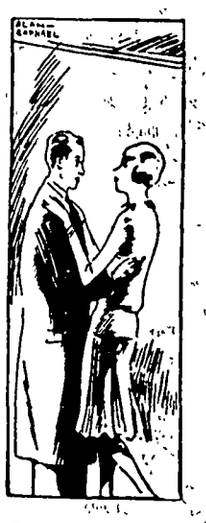
The girls opened their books uneasily. Miss Brown faced them.

"I've decided to give you a test."

The girls wriggled in hopeless desperation. Brownie did have a grouch! Just when they had to have school on New Year's day, too!

Writing the questions Miss Brown felt old. Maybe she hadn't a gray hair, maybe she wasn't thirty yet but—again she saw that letter:

"I've thought it over, Helen, and I feel like a cad saying it, but I'm convinced that our engagement was a sad mistake. . . ."



Her tall, boyish Jim! . . . "Our engagement was a mistake!" Her life broken—like that! He who always said she was too beautiful, too good for him! Probably he'd found somebody younger—one of these college girls or—

"What caused the misunderstanding between France and England?" her chalk wrote viciously.

Those steady gray eyes of Jim's He was her's! "Our engagement a sad mistake!"

The girls were glaring. A test on a day which should have been vacation! Miss Brown went to answer a knock. ". . . a mistake, our engagement. . . ."

"Helen!"

Miss Brown stared at the tall figure before her. Quickly she stepped into the hall and closed the door.

"Helen, you darling!" Jim was breathing. "If you only knew! That letter! I thought I'd lost every cent. Couldn't ask you to take me—like that. Lord! What it cost me to write it! But, I haven't and—"

When Miss Brown returned to the room she smiled.

"Let's put away our work, girls," she beamed, "and have a little New Year's program. For the New Year is the time to be happy. Everything, then, is fresh and new and—joyous!"

The Thief of Hearts, but He Was Arrested

SEATED in the comfortable Raston living room, with Lois Raston bewitchingly beautiful, and the elder Rastons seeing the Old Year out at the village church, William Field determined to make his great plunge.

"Lois," he breathed, his lips caressing her name, "I have come to beg a New Year's gift. Will you make it?"

"All depends," returned the practical young woman. "All depends what you're asking."

"I'm asking your heart, Lois," he blurted, amazed at his temerity. "Asking your heart, all for myself."

In the firelight her smile seemed kind, but sad. "I'm sorry, Bill," she murmured, "but I can't give you my heart. You see—well—it isn't mine to give. It was stolen weeks ago."

So his misgivings were confirmed. He took the blow, he hoped, manfully. "I'm sorry, Lois," he said, rising. "We will always be friends." One moment their hands met.

He had reached the gate before he was arrested by her voice crying, "Bill!"—Robert Stead.

A New Year's Homecoming

By Katherine Edelman

NEW YEAR'S eve and all the little town of Ashton astir and alight! Sounds of laughter and good cheer floated out upon the night and everywhere there was evidence of the hearty good will and fellowship that prevails at this season.

A full moon was lending its charm to the beauty of the night, throwing a soft and silvery radiance on the snow-covered earth. It was one of those nights when Nature seems to almost outdo herself in the lavishness of the beauty that she dispenses.

Ashton had particular cause for happiness this evening. For, in addition to the joy of the New Year holiday, a big celebration was taking place in the town hall to welcome home the town's most distinguished man, Warren Denham.

One home in particular held a very excited person. Marian York found it hard to keep up a semblance of calm. She was fearful lest the loud beating of her heart would betray her feelings to those around her. Over and over again she told herself that she was foolish, that she meant nothing to Warren Denham, that probably the silly vows they had exchanged in childhood were forgotten by him long ago.

She felt that the wisest plan would be for her to stay away from the celebrations; not to risk the pain of the old longings and desires that the sight of him would be sure to arouse.

But the urge to see him again was too strong, and now she was standing before the mirror, giving a last critical glance at herself before departing for the hall. She had let the rest of the family go on ahead, as she felt that she wanted to go alone.

It was over ten years since she had last seen Warren Denham. During that time he had gone out into the world and made his name famous, while she remained at home, living the quiet, uneventful life of the little town. He was now a famous engineer, who had brought to a successful completion one of the most difficult engineering feats that had ever been accomplished in western Africa. She had remained a nobody. It was unlikely that he would feel the slightest interest in her.

Once Marian had hopes that things would be different; she had felt that Warren Denham loved her. But he had gone away from the little town without saying a word, had given up their happy comradeship without an apparent regret. And there was little to give her hope in the silence of the ten years that had elapsed since he had gone to Africa. He had written to her occasionally before that time, friendly, interesting letters that might or might not mean anything.

Nine o'clock found the hall packed with a happy, expectant crowd. It was going to be late when the train reached Ashton, and they wanted Warren Denham to see all of the big program that had been planned for him. They felt that the town should be particularly proud of the honor he was paying them in coming so soon after his landing, and were leaving nothing undone to show their gratitude.

A great cheer went up from the crowd when the big moment came and Warren Denham stood before them. The slender, dark-haired man smiled repeatedly as cries of welcome came from every corner of the hall. Then he spoke, quietly and easily, as one of their own might speak to them:

"Friends," he said, "I am very happy to be with you tonight. This is a moment that I have looked forward to for a long time. During all my wanderings the thought of the day I would come home has been with me. But you have made it even happier than I had anticipated." His voice almost broke for a moment, then he went on:

"It was the thought of your faith and trust in me that often lent me strength—that made me want to do my level best. I owe you far more than you owe me. And I am proud and happy to be back."

It was nearing midnight when the program was over; then the crowd surged up to shake Warren Denham's hand. But Marian York stole quietly away. She felt it was better to do this. More than ever now she seemed to realize the great gulf that lay between her and Warren Denham. She must not allow herself to see him; it would entail too much after-suffering to see the indifference in his eyes.

With quick steps she walked up the deserted street. "Oh, why had he come back, to revive all those memories she had tried so hard to stifle? Life was going to be harder and lonelier for her than ever now! If only he had stayed away!"

Suddenly she woke to the consciousness that she was being followed; footsteps were gaining on her at every moment. Her heart began to pound. There was something about the footsteps that seemed to be familiar. Again she told herself that she was foolish; that it was probably some one who was in a hurry to get home.

Now, the hurrying one had caught up with her and a voice spoke—a dear and well-remembered voice out of the past: "Why—why are you rushing away, Marian? I thought you would be one of the first to welcome me."

"Why—Why Are You Rushing Away, Marian?"

Confused and stammering, Marian stood before Warren Denham. "I—I thought there were so many others," she said. "I—I did not think that you would miss me. Things are different now, Warren."

"Not miss you, Marian!" Warren Denham's voice held tenderness and emotion. "Why, Marian, all the things I said in the hall tonight were meant for you. I do love this little town, but—but you are really Ashton to me. I—I found out as soon as I got to Africa how much you meant to me. But my word was pledged then, and I could not come back. I felt that I must finish the job, and I couldn't ask you to come there. But all the time I kept hoping that you would wait for me.

"Marian, tell me now if the old promise of our childhood still stands good. Will you marry me?"

As Marian gave him her answer the joyous bells rang out the happy message that another New Year was born. While the strains of rejoicing were wafted over the snow-covered ways, two hearts sang with joy for the happiness that the New Year had brought them.

(©, 1929, Western Newspaper Union.)

Longest and Shortest Day

There has been some discussion as to which is really the shortest day of the year. It is agreed, however, that the longest day for some folks is the second day in the life of a New Year resolution.

ORCHARD GLEANINGS

BRIDGE-GRAFTING ON GIRDLED TREE

Important to Keep Cion Wood Dormant by Burying.

The one way to save girdled trees is by bridge-grafting, says Prof. G. W. Peck of Cornell university.

Bridge-grafting is done with cion wood, cut from a hardy tree such as McIntosh or Northern spy. One-year-old sprouts are best, and if these are not obtainable, water sprouts may be used. Professor Peck says that even those trees which are only slightly girdled should be bridge-grafted. The age of the tree apparently in no way affects the success of the operation, since trees thirty years old, or older, have been saved by grafting.

It is important to keep the cion wood dormant; this may be done by burying the shoots in well-drained sandy soil. The most favorable time for bridge-grafting is in the spring when the buds are swelling.

"One of the most serious mistakes made by the amateur," said Professor Peck, "is the use of too few cions. As many as possible should be used, placed at distances from one and one-half to two inches apart. I have known as many as twenty-three cions to be bridge-grafted on one tree."

Probably the most effective way to prevent girdling by rodents is to place many poisoned baits about the trees. These must be placed in closed traps so that birds cannot get at them. Another method is to sink a cylinder of galvanized wire mesh around the trees, but this is not wholly dependable. If the roots are too badly girdled, it is wiser to let the tree go, than to attempt to save it with doubtful success, and at great expense.

Pruning Apple Orchard Rather Difficult Job

In pruning old apple orchard, try to avoid cutting off any large branches. Large pruning wounds heal over very slowly and often allow decay to enter the heart of the tree. Cutting off large branches will create "holes" in the bearing surface. Such holes often mean seriously reduced yields, sunscalded branches, and a jungle of water-sprouts. Our advice would be that you cut off all dead wood and then thin out the smaller branches in such a way that each branch will have its own small quota of room and sunlight. The tree should not be too thick and neither should it be too open. By thinning out the smaller branches, you will make a fine-mesh sieve of your tree, through which the sunlight can filter. The top of the tree should receive the most attention because a thick top will act as an umbrella which will keep the sunlight out of the rest of the tree. Do not leave any stubs, but make all cuts close to the parent branch. Our final advice is that you do not prune too much. Do not cut off a branch unless you know why you are doing so, and when in doubt as to whether a branch should come off or not give it the benefit of the doubt and leave it on the tree.

Strawberry Beds Should Be Mulched When Frozen

Strawberry beds should not be mulched until the ground has frozen at least two inches deep. If the mulch is applied before this time, the subsoil will not have been cooled sufficiently to stop root growth, and after the mulch has been applied and snow falls upon it, this warmth in the subsoil will come up and warm the soil around the roots and start growth. Then when severe winter sets in, the ill effects will be much worse than if the mulch had never been applied at all.

Horticultural Facts

Small trees must be protected from injury by jack rabbits.

* * *

Cut a poor tree when it is young to permit a good one to replace it.

* * *

Keep poor apples off the market because they will spoil prices in spite of the short crop and increased demand.

* * *

Care of the spray machine equipment includes thoroughly cleaning the hose line, nozzle and cut-off and storing in a dry place.

* * *

Mark the weak trees in the orchard so that you will know next spring which ones should have a generous supply of a nitrogen fertilizer.

* * *

Assist stored apples to breathe correctly by furnishing plenty of air. Proper ventilation will aid in keeping the fruit longer in storage. If the humidity is not right, the floors should be sprinkled.

* * *

If the soil is in condition to work without injury to its texture, the last of February and the first week of March is the best time to plant orchard trees. The latest safe date is April 1. Sour cherry trees are not of much value if set that late unless they have been in first-class storage.

Other Senses of Blind Not Overly Developed

Blind persons do not hear better, they simply seem to because they listen harder, Mrs. Winifred Hathaway, of the National Society for the Prevention of Blindness, told members of the Michigan Educational institute. The popular belief that blind people have more acuity of other senses, such as hearing and touch, is not exactly correct. The special senses of blind people, aside from sight, are no better in the beginning than those of other people, sometimes not so good. But experience and specialization on the part of the blind persons enable them to make their other senses take the place of sight, so that their senses are better developed than those of normal people. The same thing applies to deaf persons who appear to have much keener vision than normal.

Champion Egg Tester

The "egg wizard" is the name given Miss May Norton of the United Dairies, London. She can toss them about as a juggler does billiard balls, but her specialty is passing them in front of a light at the rate of 1,440 an hour. Miss Norton's official title is egg tester. It is her job to see whether an egg is new laid, fresh, or on the stale side. She does it by a present-day candling method, which consists of putting a black metal box with a hole at one end around an electric globe and letting the rays strike through the eggs when held up to the aperture. In response to a challenge by a farmer, Miss Norton once tested 360 eggs in 12 minutes. Since she started she has not had a single break.

The New Spirit

The Viscountess Astor, at a dinner in New York, said of the rising generation:

"The rising generation criticizes its parents—justly, too, but then it criticizes everything, and I confess that I don't like that irreverent spirit.

"'The Lord,' a Sunday school teacher said to a little boy the other day—'the Lord loveth a cheerful giver.'

"The little boy sneered.

"'Rats!' he said. 'Who doesn't?'"

Mechanical Violin

Said to play with an uncanny human touch, a mechanical violin has been invented by two engineers in France. It has a number of keys which press the strings like the left hand of a player, and a revolving bow which permits different degrees of pressure. The violin is driven by two motors. One takes the place of the player's arm and the other imparts the swift movements of the wrist.

Compulsion Gains Nothing

One fact stands out in bold relief in the history of men's attempt for betterment. That is, that when compulsion is used, only resentment is aroused, and the end is not gained. Only through moral suasion and appeal to men's reason can a movement succeed.—Gompers.

Baseness in Self Pity

Self pity is a most degrading habit. There is no sense in staging a funeral over a failure. Life's greatest lesson is learned when we honestly acknowledge our faults as we make them. Then we will blame ourselves and give our pity to others.—Grit.

Added Interest

"Van Spenger claims to have a great following."

"Well, I think he must have—he owes everybody."—New Bedford Standard.

The Capital

Teacher—Why do you insist on spelling bank with a capital "B"?

Johnny—Well, Pa said a bank was no good unless it had a big capital.—Chicago Tribune.

Beating Water Helps Taste

Faced with the necessity of boiling water during a drought, the residents of Pittsfield, Mass., were advised to beat the water like eggs to restore the original taste.

Has Many Meanings

While it may not have the most varied meanings, the word "set" ranks among words with many meanings and uses.

Cities' Many Bridges

In its course of seven miles through the city of Paris the Seine is crossed by thirty-two bridges. In London there are twenty bridges across the Thames.

Free

"What are you gonna do with your divorce money, girlie?"

"Buy Liberty bonds."

Necessity is the mother of doing things that you never thought you could do.

Literary genius thinks it has to get to New York where it very often deteriorates.

SLEEPLESSNESS
Successfully Fought in this Scientific Way

Camera Finishes Picture

Invented by a blind man, a camera which takes pictures and makes prints at practically the same time, has appeared in London. It has two lenses, one being the ordinary camera "eye," and the other admitting only ultraviolet rays. Films and paper are inserted together, and whenever the shutter is opened a secret "gas" is released from a small cylinder to develop, fix and print the exposures. When the spool is removed the photographs are unwound at the same time.

Marvel Hands in Bridge

In a bridge game at Fort Madison, Iowa, Judge John Craig shuffled the cards, then handed them to Miss Ehart, to be cut and shuffled again. When the cards were dealtb Craig found he had 13 spades, Miss Ehart had all the hearts and Mr. and Mrs. A. R. Buy held full suits of diamonds and clubs respectively. In the law of averages that can happen but once in millions of times.—Capper's Weekly.

Substance and Shadow

It was a saying of Demetrius Phalerus, that "Men having often abandoned what was visible for the sake of what was uncertain, have not got what they expected, and have lost what they had—being unfortunate by an enigmatical sort of calamity."—Athenaeus (circa A. D. 200.). "The Deipnosophists."

He'd Be a Zero

"What is your objection to having a husband and wife on the same jury?" asked the judge.

"It's just the same as having a jury of only eleven members, your honor," replied the lawyer for the defense.

For All the World

"Sportsmanship," says Charlie Paddock, in the American Magazine, "knows no nationality. It is to be found wherever men play together."

Worth Remembering

If you do nothing when you are angry you will have less to undo afterward.—Capper's Weekly.

Don't ask anything of your friends that you know they can't grant. It leaves a hurt on both sides.

The longer a man is married the less he dodges when his wife throws things at him.

Within the Reach of All

CLEAR, healthy skin and soft, lustrous hair are your best assets. They are so easy to lose through neglect, yet so easy to retain if you will only use Cuticura Preparations every day. The Soap cleanses, the Ointment heals and the Talcum imparts a pleasing fragrance.

Soap 25c. Ointment 25c. and 50c. Talcum 25c. Sample each free.
Address: "Cuticura," Dept. B7, Malden, Mass.

Not Homemade

Goof—"Home ties are hard to break aren't they?" Spoof—"I don't know. I always buy mine."

Foolish Question

"Are you in debt?" asked the nosy one. "I told you I was married, didn't I?" snapped his victim.

The Skyscraper Apartments

"So you've taken an apartment farther up?" "Yes, only five minutes more on the elevator."—Life.

Excellent Definition

Teacher—"What is the definition of flirtation?" Intelligent Pupil—"It is attention without intention."

The Return

Mrs. M—"What is your husband's average income?" Mrs. N—"From 1 to 2 a. m."—Leeds Mercury.

Time Does Fly

She—"Just think, dear, we've been married 24 hours." He—"Yes, it seems as if it were only yesterday."

Reason Enough

"Now why on earth must we go to Afghanistan?"

"Grandma wants some afghans."

An Apology

Rippy—"McBoob boasts that his wife made him all that he is." Dippy—"That is not boasting; it's apologizing."

Locate Well Believed Dug by Dutch Settlers

A well, believed to have been sunk by the early Dutch settlers of Long Island, was recently uncovered in Long Island City. Discovery of the shaft, which is 90 feet deep, came through the widening of the street. The ground over the well, which was placed in the street line by the new width of the thoroughfare, was weakened by the passage of heavy trucks.

Commissioner of Public Works, John J. Halleran, said that the well probably was one of a series of community wells dug by the early settlers. He recalled that when De Witt Clinton was governor his home was nearby, and that probably water from the well was used by the governor's household.

"Sea Level" Inaccurate

Though the position of the "sea level" as the earth's standard of levels is not threatened, scientists have found that after all it is not so level. Its mean, or average level, formerly was believed to be uniform down to the fraction of an inch. But differences are found of from nearly an inch to as much as two. They are ascribed to contours of the coast lines. The facts are reported for the national research council by Prof. Douglas Johnson of Columbia university.

Cat Sounded Alarm

"Murder! Murder!" was the message an excited man telephoned to House Sergeant Butler, of the Philadelphia police. Sergeant Butler sent Sergeant Dever in a bandit chase to investigate. In a vacant house Dever found a big black cat with its head trapped in a coffee can and producing a good imitation of a terrified woman's screams. Fifteen minutes with a hack saw freed the cat.

Sponge-Rubber Flooring

Flooring made from sponge rubber is to be introduced in England soon. Products already shown there include sponge rubber upholstery and tires. For durability, comfort and hygiene, the new type of flooring is said to be far superior to any other now made from rubber or rubber substitutes.

How Smart Are Yuh?

"Mr. Smith, can you tell me where the Augarten bridge is?"

"How did you know my name was Smith?"

"I guessed it."

"Then guess where the Augarten bridge is."—Faun, Vienna.

Years of Hard Work

Artist—This picture took eight years of work.

Friend—That's a long time to devote to one painting.

Artist—Well, it took six days to paint it and the rest of the time to sell it.—Swindon Advertiser.

All Set Now

First Housewife—I haven't seen Mrs. Binks shopping lately.

Second Delicatessen Patroness—Haven't you heard? Her husband bought a drug store.—American Legion Monthly.

Thrifty

He—I threw myself away when I married you.

She—Well, I never knew you to throw away anything that was worth anything.—Vancouver Province.

A Big Difference

Waiter—Isn't this pie just like mother used to make?

Diner—Yes, indeed, but it isn't cut like mother used to cut it.

TIME PLAYS GREAT PART IN AFFECTION

"The fabric of affection can only be woven on the loom of time," says Dorothy Canfield, discussing family relations in Woman's Home Companion. "Too great impermanence of human relationships kills it. If we wish to preserve affections as an element of our human lives, we must provide for them a fair share of permanence in human relations.

"No one can feel affection for a fellow traveler who gets into a train at one station and out at the next. Nor can you have it for the man who sells you your ticket and whom you never see again.

"Yesterdays are a part of affection. Today is not a broad enough canvas on which to paint that picture. A mother cannot love her child, nor a child his mother, nor a little girl her doll; a man cannot love his profession or a golf club or his wife, without having shared with them many yesterdays and without looking forward to giving them many of his tomorrows."

America Has Practical Broom-Corn Monopoly

Broom corn is one of those natural products, like cork, that are so perfectly adapted to the uses to which they are put that no substitute has been found or is likely to be found. It is almost exclusively an American crop. The first broom-corn market in this country was developed by the Shaker community at Watervliet, N.Y., in 1798.

In the early part of the Eighteenth century broom-corn raising and broom making were largely in the hands of the Shakers and others in New England, especially in the Connecticut valley. Later the center of the industry shifted to the Mohawk valley. Until well past the middle of the century New York and Virginia continued to be the broom country; then production started moving westward.

Case of Jaundice

Judge Harper Harb of Little Rock, who recently condemned for blasphemy President Charles Smith of the American Association for the Advancement of Atheism, said at a luncheon the other day:

"It's bad enough to be an atheist, but to go about the country trying to rob others of their faith shows a spirit jaundiced in the extreme.

"Such a spirit is like that which prevailed in the schoolroom. The schoolmaster said to a boy:

"'A synonym for "friends," Jones.

"'Money, sir,' Jones answered.

"'Quite right, Jones,' said the schoolmaster."

The Lamp and the Book

The Viscountess Astor, about to sail for her English home, talked to a reporter about a book that had failed.

'It was such a good book, too," she said. "Its failure makes you almost think that the American reading public is like Mrs. Smith.

"'I'm going to buy a book,' Mrs. Smith said.

"'A book!' said the astonished Mrs. Jones.

"'Yes,' Mrs. Smith explained. 'John has given me a jim dandy reading-lamp, and now I simply must have a book.'"

Famous Castle on Market

Hurstmonceux castle, famous as one of the most beautiful buildings in the south of England, has been offered for sale. It is a mellow, red brick stronghold, built by Sir Roger Fiennes in 1440. The castle is part of the estate of Col. Claude Lowther, who spent $1,000,000 on its restoration. The majestic entrance, with towers 84 feet high on either side, has been much admired. Tradition tells of a ghost who haunts the castle in the guise of a drummer.

School Teachers' Salaries

Elementary school teachers in cities over 100,000 received $837 more last year than did the teachers in cities in the 2,500-5,000 population group. According to the research division of the National Education association, the median salary for elementary teachers in large cities was $2,049 last year, while in the small cities it was only $1,212.

Ups and Downs

Two friends met in midair.

"Fancy meeting you here," cried one. "I'm falling from my airplane."

"That so?" replied the other. "I'm rising from my gas stove."—Leicester Chronicle.

Gooseflesh

Kathryn—Mr. Quotit paid me a high compliment. He said I reminded him of the song, "Annie Laurie."

Kittye—H'm! "Her throat is like the swan." Just think of a swan's throat picked bare.

Spry Uncle

Tim Hay—So you made a lot of money playing at Monte Carlo, did you, Uncle Eli? What did you play—roulette?

Uncle Eli—No, saxophone.

Picked the Place

Blinks—Taking your wife with you on your vacation?

Jinks—Not exactly. I'm going with her on it.

More Camouflage

Mother—Willie, I told you to wash your neck clean.

Willie—Well, mother, ain't I going to wear a collar?

CHIEFLY CHAFF

Begin "loving your enemy" by being polite to him.

If at first you don't succeed, try something else.

The best pavements in the town may lead to the jail.

One glimpse of a dental sign may ease an aching molar.

If you can't be firm, be stubborn; but don't keep it up too long.

A characteristic of bachelors is that they have too many neckties.

All things seem easy to the man who never tries to do anything.

Most folks welcome almost any kind of bad weather after a hot spell.

The greatest tyranny is to love where we are not loved again.—Balzac.

In a schedule of probable expenses nothing ever seems to cost less than you estimated.

A pessimist carries a lantern like Diogenes'; an optimist carries a lamp like Aladdin's.

Read a book about diseases and you'll think you have the worst one described there.

Whether you get delight out of spending your money or not, spending it determines your character.

Men keep track of their kin if the kin become rich and famous; women keep track of them, anyway.

A man who can put a baby to sleep when no one else can says it's personal magnetism; he may be right.

BURIED CITY YIELDS RARE ART OBJECTS

Rich archeological discoveries have been made by the French mission which, under the command of M. Shaffer, of the Strasburg Prehistoric museum, is excavating ancient deposits at Minet-el-Baida and Ras Shamma, in Syria. The most important of these finds is the unearthing at Ras Shamma of a number of baked clay tiles bearing cuneiform inscriptions, which are believed to be about 4,000 years old and to have constituted part of a great library.

A buried city which is now being explored on the same site has yielded among other treasures a gigantic granite bust, apparently of Egyptian origin, and bronze objects engraved with cuneiform characters, which their discoverers claim are the best preserved in existence. Finds of almost equal importance have been made at Minet-el-Baida, 4,000 years old.

Around these tombs were tables bearing offerings to the dead, numerous Egyptian statuettes in bronze enriched with precious stones, a golden diadem, necklace, and numerous pieces of fine pottery.

Found Out

The late Governor Strong of the Federal Reserve bank condemned shirkers in a Y. M. C. A. address in Toledo last year.

"Don't shirk," he said. "Shirkers always get found out.

"There was a shirking lieutenant in the World war. Whenever he got news of a coming attack illness would overtake him, and he'd ask permission to go to the rear.

"Well, one day when he applied again for permission to retire on account of illness his colonel said to him:

"'Lieutenant, if this keeps on I'll have to send in your name for a decoration—for a wreath of leaves of absence.'"

Sound Accurately Recorded

Transmission of light beams, through a fabric film upon which positive sound images are recorded, has resulted, the inventor of the process says, in the reproduction of sounds without distortion. Projecting the light through the fabric medium for the purpose of translating sound images into musical or vocal sounds may be conducted either with or without motion pictures, says Popular Mechanics Magazine.

Autumn

Eleven-year-old Jimmie's sense of humor is just budding, and at times shows rapid growth, as when driving through southern Indiana recently he saw the many roadside stands of watermelons and cantaloupes, and said: "I know now why they say 'The melon colic days have come, the saddest of the year.'"—Indianapolis News.

Baby Dress Society Vogue

Dressing as babies and going to parties with scooters and toy motor cars has gripped the fancy of those who have been called derisively "Bright Young People" in England. The fashion has started another serious wagging of heads over the younger generation.

Railway Ties of Steel

To give railway ties of steel a thorough test in comparison to those of wood three railways of England have ordered large numbers of the new sleepers. One line will install 10,560 pressed steel ties, another 6,000, each weighing 192 pounds, and the third, 600.

Another Year

Fritz—Dad, you are a lucky man.

Father—How is that?

Fritz—You won't have to buy me any school books this year. I have been left in the same class.—Stockholm Kasper.

Could Put Up With Himself

"I don't see where we can put that lecturer up for the night."

"Don't worry. He always brings his own bunk."

MEATY MORSELS

Ignorance is mind darkness.

It's hard to keep "easy money."

Nature overshadows education.

Involuntary lying is hard to cure.

A friend who is never in need is a friend indeed.

Good oratory is as popular as ever—but where is it?

Poise is just another way of concealing your feelings.

People will prevaricate pretty extensively to avoid a row.

Methuselah lived 969 years—but doctors were scarce in his day.

Some people are not in society because it is too much trouble.

You can't uplift people—mostly because they hate to be pitied.

Hash survived all the jokes made about it and so does spinach.

When pride turns a woman's head she is apt to look the wrong way.

If every man had a fortune, would anyone do any work except to be obliging?

You can't argue people out of their notions of propriety, no matter what those notions are.

Doing what they don't like has not often been done by great men. Resignation is not for genius.

Exact justice has never been defined and this may be why there are so many loopholes in the law.

A young man can have such a heedless mind that he doesn't know what vocation he wants to follow.

We realize when a man has "evolved" far beyond us—and between us there is a great gulf fixed.

Use of Tobacco Almost Universal in Holland

Holland is the smoker's paradise. Tobacco from the East Indies is cheap and good. I have seen boys of ten years puffing big cigars. A good cigar costs 4 cents American, today, while before the World war it could be bought for 1 cent. The men are furious smokers. I heard of an old Dutchman who had smoked all his life. In making arrangements for his decease he directed that all old smokers be invited to his funeral; each was to receive a pound of tobacco and a pipe and was asked to smoke during the service. Then he arranged for his favorite pipe and a quantity of tobacco and matches to be deposited in his coffin; for, he said, "One never knows what might happen."—National Geographic Magazine.

His First Ride

Capt. Rene Fonck, the French airman, told this story during his recent American visit:

"A friend of mine," he said, "gave a sheik an automobile ride last year in the heart of the desert. The going was very bad. The desert was so bumpy, in fact, that the car tilted over and the sheik was dumped out.

"Instead of being angry he scrambled in again with profuse apologies to my friend.

"'You must excuse me, sir,' he said. 'I'm very sorry, but I haven't learned to ride one of these things yet.'"

Wonder What Firemen Said

Just because a fire alarm box was numbered 31, an Anaconda (Mont.) man thought it was necessary to pull the lever 31 times. All the apparatus in the city responded and the firemen found the man industriously yanking the little handle when they arrived to extinguish a small fire on the porch roof of a dwelling. He hadn't quite reached his total when he was interrupted.

Normans Should Speak Up

Normans with William the Conqueror and his comrades at the battle of Hastings have many descendants and two French professors have been commissioned to trace them so that their names may be placed on a tablet which soon is to be erected in the castle of Falaise, where the duke of Normandy was born.

Jumps 150 Pounds

A type of sweet potato grown in the Virgin islands achieves a weight of 150 pounds, but we suppose in the seed catalogues it is represented as a good 300, at least.—Hamilton Evening Journal.

Fall of Man

Seventeen boys took the course in cooking in a Buffalo high school. Most of us learn to get breakfast after we're married.—Morristown Jerseyman.

Not Financially Interested

"What has your Aunt Gouldbaggs put into your business?"

"Nothing, except her foot, once in a while, and at other times she sticks her nose into it."

Food for Thought

Moron—Will marriage settle my troubled mind?

Robot—No, but it will give you something new to worry about.

Another Times Feature

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Mrs. Roy Schaefer has been on the sick list lately.

Quinten Stille has been sick and in bed the past few days.

Mr. and Mrs. Will Lemke and baby visited at the Will Beier home in Goodell Sunday afternoon.

Mr. and Mrs. Ed. Schoenwetter and twins visited at the Carlson home Sunday.

Mr. and Mrs. Herman Bridges and family were dinner guests at the Oscar Carlson home Sunday.

Mrs. Walter Blumer has been sick the past week with heart trouble.

Misses Lorraine and Ethel Lemke were dinner guests at the Abele home Sunday.

Several familie from thi vicinity were Garner visitors Saturday, most of them going to see Santa Claus.

Mr. and Mrs. J. J. Lemke and Walter Blumer were Mason City shoppers Monday.

A nephew of Mrs. Ben Reemtsma, and his bride, from Applington, Ia. visited at the Reemtsma home a few days last week.

Paul Stilles and the Carlson family attended the surprise party given for Herman Bridges Tuesday evening.

The children in this township are enjoying a Christmas vacation, some for one week; others for two.

Miss Fern Stille's School Enjoys A

Kermit Stille and Agatha Steiman left for Waterloo the latter part of the week to spend the holidays with Miss Stieman's parents, Mr. and Mrs. Jack Stieman.

Miss Lackore, teacher at No. 2, held a social Thursday evening. A community play was given for entertainment. A small crowd was present, due to the extreme cold weather that evening.

Large Crowd Attends Social

A large crowd attended the Social at No. 7 Friday evening. The children gave the entire program and about $38.00 was received from the sale of articles auctioned.

Christmas Program

Miss Fern Stille gave a Christmas program at her school Friday afternoon. A Christmas tree was nicely decorated and presents were given each cild present. Several of the parents were present to enjoy it with the children.

Moving In Liberty Township

Mr. and Mrs. Floyd Franklin moved from the Chris Schaefer farm west of Klemme to one of the J. N. Sprole farms west of Garner, Thursday. Ralph Stokesbary and wife moved on the Schaefer farm the first of this week, which they have rented for the coming year.

Fine Christmas Program Held At Liberty Church Tuesday Eve

The Liberty Church held their Christmas Program Tuesday evening. The children gave the entire program. The small children gave the exercises, and the boys under fourteen gave all the singing. The most important part of the program, according to the children, was the passing out of the Christmas sacks. The young people will give two play and two pantomines on the evening of January 1 at the church for their part of the holiday entertainment.

2 GLASSES WATER, NOT TOO COLD, HELP CONSTIPATION

One glass water is not enough—take 2 glasses a half hour before breakfast. You get quicker and better results by adding a little simple glycerin, saline, etc. (known as Adlerika) to one glass.

Unlike other remedies, Adlerika acts on BOTH upper and lower bowel and removes old poisons you never thought were in your system. Adlerika stops GAS and sour stomach in 10 minutes! Relieves constipation in 2 hours. Wilson Drug Store. 1c

A Hint For Santa

Betty: "I'm going to roll my stocking before I hang it up on the fireplace Christmas Eve."

Gladys: "Silly!"

Betty: "Well, Santa might give me a lot of old-fashioned presents if I didn't."

Thanks! Just phone that item of news to The Times. Phone 1-3.

KLEMME LOCALS

Mr. and Mrs. Joe Johnson entertained the following to dinner Christmas day: Clarence Johns and family; Art Kudje and family John Johnson and family and L. Gimer.

Mr. and Mrs. W. F. Pavey entertained for Christmas dinner, and Mrs. Ben Coobs and son, Mr. and Mrs. Verner Lewis and children. A fine goose dinner was served.

Mr. ond Mrs. Wm. Smith entertained the following for Christmas dinner: J. N. Day and family; and Mrs. Walter Ross and Pearl Garner and Lynn Payne of Goldfield.

Miss Marie Corson's school will have but one week of vacation, beginning again Dec. 30, and take one more day off for New Year. The school wil let out earlier in the summer in this way.

Christmas day Mr. and Mrs. Alvin Stokesbory entertained the following to a duck dinner: Mr. and Mrs. C. A. Larsen and children; and Mrs. R. W Elder, Clarence and Reva.

Chritmas day for dinner Mr. and Mrs. Fred Ridder entertained and Mrs. S. A. Harvey and Enid, Mason City; Mr. ond Mrs. Walt Beatty of Chicago, and Mr. and Mrs. Gordon of Mason City.

Mr. and Mrs. Clarence Wiles, Ames, drove up Friday for a visit with his mother and sister at brother, Roscoe Wiles' home. They also visited a shrot time with and Mrs. Lew Lewis, and return to Ames Saturday.

Mrs. Fred Bachman and her sis Mrs. Lee Lathrop and son of La Cornelia went to Delavan, Minn Sota Sunday to visit their sist Mrs. Jas. Caswell and family. A other sister, Miss Nora Christie New York City wa also expected come.

For Christmas dinner Mr. a Mrs. Tom Blank entertained Mr. a Mrs. Casey Blonk, of Waterloo, and Mrs. Worthy Usher and baby Rowan; Gracka Quandt; Kathr and Fred Blank of Estherville; a Mrs. A. Ahrenkeil and son, Goode and Miss Morie Blank.

Mr. and Mrs. Earl Kahler had lot of company ot their home f Christmas dinner. Those presen Mr. and Mrs. Chas. Velau and M and Mrs. E. A Zeldler of Klemm Mr and Mrs. John Velau and so Charles and daughter, Bessie, Liberty township; Mr. ond Mrs. E on Kahler and son, and Mr. a Mrs. Gust Kahler, of Forest City.

Mr. and Mrs. Jesse K. Kera and son, Reginald, drove down fro Huron, South Dakota, Monday spend Christmas and a few da with his parents, Mr. and Mrs. F. Keraus, and ister, Mr. C. G. Wa erman and family They also visit at Swea City with his sister, M Tom Mitchell, and with his brothe Wm. C. Keraus at Traer. They e pect to return home Friday.

There Are All Kinds of Collectors

"Yo' suah has a nice collection chickens in yoah coop!"

"Now, look heah, what right h yo' got to 'sinuate dat dem chicke has been collected?"

Willing To Be Shown

Salesman: "This is the type washing machine that pays for its sir."

Prospect: "Well, as soon as it h done that, you can have it deliver at my house."

Maybe It Was Heart Trouble

Doctor: "Daughter, did you te that young man of yours what thought of him?"

Daughter: "Yes, and he said yo were wrong in your diagnosis, usual."

Married Woman Fears Gas —Eats Only Baby Foo

"For 3 years I ate only baby foo everything else formed gas. No thanks to Adlerika, I eat anythi and enjoy life."—Mrs. M. Gunn.

Just ONE spoonful Adlerika r lieves all GAS so you can eat a sleep better. Acts on BOTH upp and lower bowel removing poiso which caused your stomach troub No matter what you have tried f stomach and bowels, Adlerika w surprise you! Wilson's Drug Store

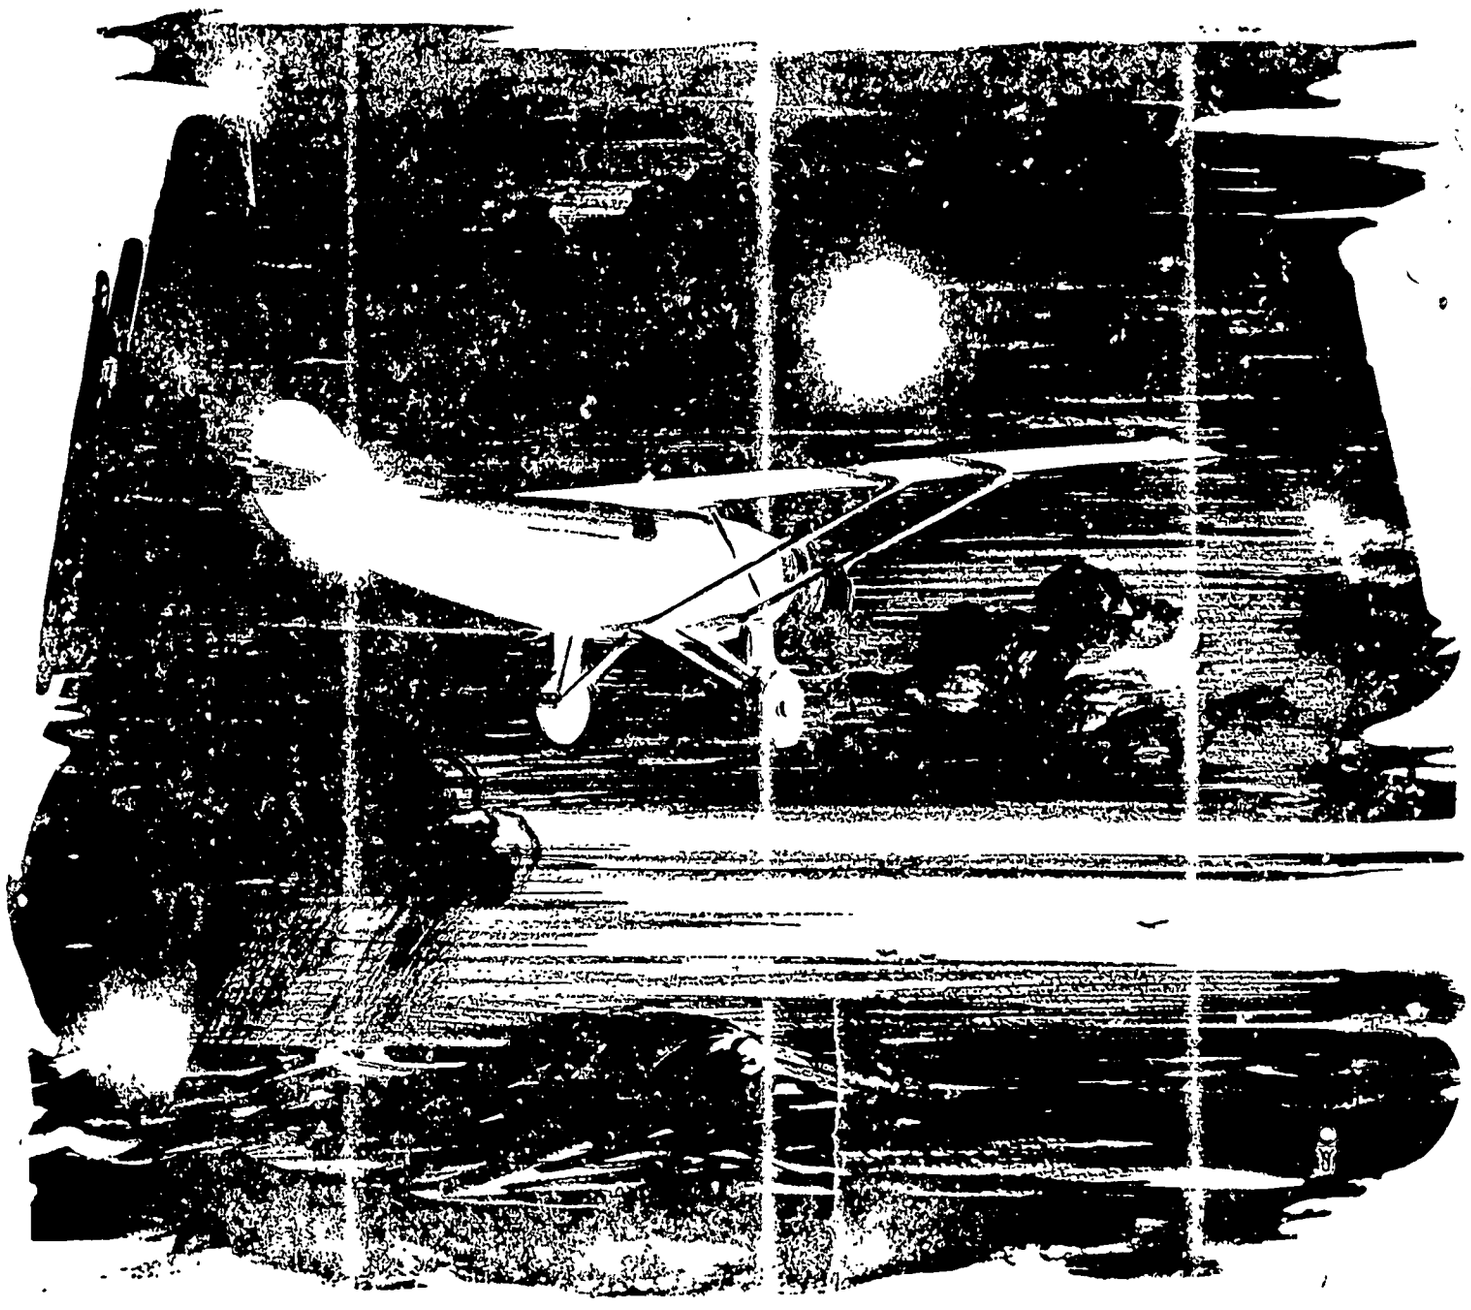
Onward Into The Dawn Of A NEW YEAR



As we forge onward into the dawn of a new year, where we will be apt to meet storms of unknown strength— where we will be forced to cross seas of unknown depth and width — where none can tell what awaits— let us ever keep before us the knowledge that in union there is strength.

As a united community we can meet and overcome all. Boosting, not alone by word of mouth, but by acts as well, we can make this, our community, better and more prosperous, come what may. And— we the Business Men Of Klemme wish to thank our friends and patrons of this Community for their liberal patronage the past year.

NEWS REVIEW OF CURRENT EVENTS

Senate Approves Tax Reduction and French War Debt Settlement.

By EDWARD W. PICKARD

WITH the tax cut bill passed by both house and senate and the Mellon-Berenger agreement for the funding of the French debt ratified by the upper house, congress quit work on Saturday and went home to celebrate Christmas and New Year's.

Fourteen senators, most of them classed as radicals, voted against the tax reduction measure but 63 were recorded in its favor, and it was promptly signed by President Hoover. The act, whose terms are already quite generally known, remains in effect only one year, but it is presumed that congress a year hence will provide for another reduction if tax revenues continue at the present high level.

The vote on the ratification of the French debt settlement was 52 to 21. Senator Howell of Nebraska, Republican, led the opposition on behalf of the radical group, which consistently fights about everything the administration seeks to accomplish. Howell contended that the effect of the settlement was to cancel the entire principal of the debt. His theory was that the payments over a period of 62 years represent merely interest at a rate of 2.17 per cent.

The French indebtedness, which was funded at a total of $4,025,000,000, not only was one of the largest of any of the debts but is the last to be disposed of except those of Russia and Armenia, which are at present listed in the hopeless class. The principal and accrued interest at the time of the funding of the debts totaled approximately $11,500,000,000.

Unless the entire debt question is reopened at some future time the controversy is now officially closed. There is an impression that if the American public debt continues to be retired at its present rate and is entirely wiped out within the next 17 or 18 years an agitation will immediately develop for a cancellation of all foreign debts which remain outstanding at that time.

PROSPECTS for the naval limitation conference in London in January are no quite so rosy as they were. In the first place the Japanese delegates, who have been entertained in Washington on their way to England, revealed that their program differs sharply from that of the United States in the matters of cruisers and submarines. The Japanese are still asking a 10-7 ratio for all auxiliary craft, including the big gun cruisers, though it is hoped they will modify their demands slightly in order to gain their point concerning submarines. They wish to retain 78,000 tons of underwater craft now in their fleet or under construction. As the United States is anxious to sharply reduce her submarine tonnage and there are some indications the cruiser demands by Japan may be modified, the Japanese submarine proposal now furnishes the chief obstacle to an accord between the two powers.

American naval officials, especially, are opposed to permitting Japan such a large submarine force. One big reason for the navy's opposition lies in the fact that possession of a big submarine navy, together with numerous naval bases, would give Japan control of the Asiatic trade routes over which the United States must transport its supplies of tin and rubber, raw materials not produced in sufficient quantities in this country, but absolutely essential to the prosecution of a successful war.

Over in Paris the chamber of deputies' commission on foreign affairs and naval matters, sitting jointly, approved the government's viewpoint that all results of the London conference must be considered tentative and must be submitted to the League of Nations' disarmament commission for consideration of their possible incorporation into a general disarmament program. Foreign Minister Briand explained to the commissions that France had accepted the theory of limitation on the basis of global tonnage instead of categories; that she demanded the right to devote as high a percentage of her global allotment as she wishes to submarines, and that she insists that each power tell the others just what types of vessels it is using in its tonnage. Premier Tardieu and his delegation, it is believed, will demand a full 800,000 tons for the French fleet, which figure is thought too high by both Great Britain and Italy. There is reason to believe, however, that France and Italy have made progress in reconciling their viewpoints.

A correspondent of the London Daily Telegraph says the American delegates have prepared a series of charts, graphs and data that actually demonstrate that the British navy not only is not superior in strength to the American, but is really greatly inferior. The correspondent understands that these revelations have "deeply impressed the members of President Hoover's cabinet and other American statesmen who previously had accepted the view, carefully fostered by propaganda, that the American navy is below the treaty strength and badly outclassed by the British navy. It is an ironical circumstance that this disclosure should have emerged from the work of American naval officers who were, of course, anxious to make out the case for a larger ship building program."

JAPAN is deeply concerned over the new situation in Manchuria, and statesmen the world over see in it the possibilities of another big war in the Far East. Mongols in the Barga district have seized control and declared Barga independent of China, and the young Mongol party in Hailar is reported to have organized an independent government, installing as officials emissaries from Urga, the capital of outer Mongolia. These movements are believed to be inspired and supported actively by the Soviet Russian government, and if they are successful they will bring the Soviet zone several miles inside the present Chinese-Russian frontier. Dispatches from Harbin said Japan had lodged a verbal protest against the Soviet activities with the Russian ambassador to Tokyo.

PRESIDENT HOOVER'S request for authority to send a commission to investigate affairs in Haiti was approved by the house of representatives. The debate provided an opportunity for Oscar De Priest, colored representative from Chicago, to make his maiden speech, in support of the proposition. He took occasion to give the Southern Democrats some shrewd digs that made the Republicans laugh. One opponent of the opposition was Representative Huddleston of Alabama, who recently declined to serve on a house committee because De Priest had been appointed one of its members.

Seven Haitian political organizations have asked the United States to supervise the island's presidential election in April, 1930. Their petition is considered the climax of a campaign of the anti-Borno factions which hope to effect the withdrawal of American marines before the expiration of the treaty in 1936, under which the United States took over the safeguarding of the republic.

UNDER the terms of a decree recommended to the Supreme Court of the United States by Charles Evans Hughes, special master, the Chicago sanitary district would be required to complete a $176,000,000 sewage treatment program within the next nine years. Meanwhile there would be successive reductions in the diversion of water from Lake Michigan at Chicago from 8,500 cubic feet per second to 6,500, 5,000 and finally, on completion of the sewage treatment works, to 1,500 feet per second, which Mr. Hughes holds is all that is required for navigation purposes in the Chicago river. The figures given are exclusive of pumpage for domestic purposes. The proposed decree is of interest to the entire Great Lakes region, and the Mississippi valley.

In the light of the adverse decision of the Supreme court of last January, which held that there is no legal basis for diversion of water beyond the comparatively small amount necessary for navigation in the Chicago river, the Hughes report was regarded as being about as favorable to Chicago as could have been expected.

Mr. Hughes made it clear that it is within the power of congress to provide for a greater diversion for navigation purposes. It appeared evident that if congress approves the Illinois state waterway as a federal project the way will be opened for a sufficient diversion of water to maintain navigation in a nine foot channel from Chicago to the Mississippi.

TWO members of the British royal air force, Squadron Commander Jones-Williams and Flight Lieutenant Jenkins, started on a 6,000 mile nonstop flight from England to Cape town, but crashed and were killed on a mountainside 30 miles southeast of Tunis. They had run into a severe storm and supposedly lost their way.

More fortunate were Maj. Tadeo Larre-Borges of Uruguay and Lieut. Leon Challe of France, though they, too, failed in accomplishing what they set out to do. They took off from Seville, Spain, hoping to fly without stop to Montevideo, but, having crossed the ocean safely, they lost their bearings in the dark and made a forced landing in a Brazilian forest. Their plane was smashed and both men were injured slightly.

ONE of the worst mine disasters of the year occurred at McAlester, Okla. An explosion in the Old Town coal mine trapped 59 men, and not one of them escaped death. Seven others who were on upper levels got out alive. Rescue teams penetrated with great effort to the lower levels, which were filled with gas, and there found the bodies of the victims, many of them charred by the blast. The majority had died swiftly of gas suffocation.

CONSIDERABLE relief was assured disabled veterans of the World war when the senate unanimously passed the veterans' hospitalization bill which had previously been put through the house. The measure carries a total appropriation of $15,950,000.

World war veterans and dependants of deceased veterans who have not filed applications for federal compensation are warned by officials of the veterans' bureau that they must do so not later than January 2.

PRESIDENT HOOVER appointed Joseph B. Eastman of Boston, a Democrat, and Robert M. Jones of Knoxville, Tenn., a Republican, members of the Interstate Commerce commission for terms of seven years beginning January 1. Eastman has been a member of the commission for more than ten years representing the New England section. Jones, who is chancellor of the Eleventh judicial district in Tennessee, will succeed Richard V. Taylor of Mobile, Ala., appointed three years ago by President Coolidge to fill out an unexpired term.

DWIGHT W. MORROW, ambassador to Mexico and delegate to the naval conference, has formally announced his acceptance of the appointment as senator from New Jersey upon the resignation of Senator Baird. He will assume his new duties as soon as his work in connection with the London parley is completed. Baird was given the place when Edge resigned to be ambassador to France, with the understanding that he would step aside for Morrow.

S. P. McNAUGHT, who has been engaged in prohibition work in Iowa, was elected superintendent of the Indiana Anti-Saloon league to succeed the late E. S. Shumaker. He was the choice of F. Scott McBride, the national superintendent of the league, so other candidates retired from competition.

In the process of drying up the National Capital George L. Cassidy, known as "the man with the green hat" and reputed to be the bootlegger to United States senators, has been indicted under the Jones act.

LIVE STOCK

LICE CAUSE SKIN ILLS OF ANIMALS

Much Annoyance and Unthrift Comes in Winter.

Lousiness is one of the most common skin disorders affecting domestic animals during the winter and spring months, and results in a good deal of annoyance and unthrift. Two general types of lice are to be found on animals, namely biting and sucking lice. The first variety feeds upon the skin secretions and epidermic cells, while the second pierces the skin and sucks blood.

Because of their feeding habits, biting lice can be destroyed by the use of stomach poisons, such as sodium fluoride, dusted into the coat of the animal or bird. Biting lice are the only type affecting fowls, hence this powder is very effective in treating them. These poisons, however, are worthless in treating sucking lice. Here either contact poisons or oily preparations must be used.

Hogs harbor only sucking lice and are usually treated by dipping or hand dressing with crude petroleum—equal parts of kerosene and cotton-seed oil or some similar preparation. Oils, while effective in destroying lice on horses and cattle, are objectionable, because of the messy condition in which the coat is left and because oils used freely tend to cause a loss of hair, especially in horses. Coal tar dips are effective, cheap and easily applied. They should be used with caution, however, in cold weather because of likelihood of chilling the animal and danger of pneumonia. Wood alcohol is an effective insecticide when used on horses or other animals but is inflammable and care must be exercised to avoid fire.

Whatever insecticide is used for destroying lice will require repetition in about twenty days, as none of these agents destroy the eggs or nits effectively. Clipping of long hair is a material aid in treatment when weather or housing conditions will permit.—R. F. Bourne, Department of Veterinary Medicine, Colorado Agricultural College.

Stockmen Taking Steps Leading to Big Horses

Since the supply of draft horses is limited, many stock men are taking steps leading up to the breeding and production of their own animals. Not every farmer is adapted for the production of horses and many do not have the facilities at hand for economical horse production. However, in every community, there are men who enjoy working with horses and know how to raise them. These men are equipped usually to give intelligent time and feeding to the development of draft colts and there is but little doubt that the time is at hand when such men can profitably engage in horse production, at least to the extent of taking care of their own replacements and so managing their operations that they will have a team or two to sell each season.

Rough Handling Causes Heavy Losses of Swine

The hog is subjected to its first danger of bruising when being loaded out of the feeding pen at the farm previous to being taken to market. Very often the pigs have not been out of the fattening pen for months, and unless strict precaution is exercised in loading out of the pen difficulties will occur. Where the shipper loses his temper and the pigs are beaten and hammered the result is that they are heated up and often bruised before they leave the station. Bruises that occur before shipment are the most serious because sufficient time elapses before slaughter to allow such bruises to fester, thus damaging a portion of the surrounding tissue in addition to the bruised spot.

Live Stock Facts

Good yields per animal are necessary to low cost production.

* * *

Oats or rye, either one, are feeds than can be used with fair success in feeding hogs.

* * *

Nothing but pure bred sires are now being used by 17,345 live stock owners in the United States.

* * *

Dehorning calves should be done when a few days old, or as soon as the horns can be felt under the skin.

* * *

A foal makes more than half of its entire growth during the first year. If stunted during this time, it will never fully recover. Good bone and muscle are of prime importance with the horse and feeds which tend to produce these should be chosen.

* * *

Barley is a good hog feed. It is trifle bulky for the best results for fattening purposes when fed alone. When used on a 50-50 basis with corn and a 5 per cent tankage ration, good results have been obtained with barley as a pork producer.

Sweet Clover to Save Pastures

Heavy Early Grazing Is Regarded as Besetting Sin in Wisconsin.

Shall we have race tracks for our herds or pastures for profit producing animals?

Too much of Wisconsin's permanent pasture land is as bare as a race track in midsummer.

It provides feed for a short period in the spring but during the summer period it fails to function. "The reason is that either the soil is run down or the grass is worn out," says L. F. Graber of the Wisconsin College of Agriculture, "and not infrequently both conditions operate to cut down the summer carrying capacity of blue grass."

Early Spring Grazing.

Mr. Graber regards heavy early spring grazing as the besetting sin in the management of grass land. He has found this practice wears out grass roots and makes grass plants weak and unproductive even when the soil is fairly fertile.

In order to improve blue grass and to increase its carrying capacity, investigators at the Wisconsin Agricultural experiment station seeded sweet clover on top of an old blue grass soil and for four years have had excellent success growing sweet clover right on blue grass. The plan seemingly works where the grass is poor from over grazing or from a lack of nitrogen. Apparently it works only where the land has plenty of lime and phosphate in it. Without these, sweet clover, the agronomists feel, will fail just as it often fails in cultivated fields.

In this treatment it requires heavy seedings of 30 pounds of seed an acre, and requires the removal, by burning or otherwise, of accumulation of old blue grass.

Sweet Clover Yields.

The combined yields of sweet clover and blue grass growing together, reported by the station workers, have been twice and three times that of blue grass growing alone. They find that a double benefit comes from this plan. In its second year of growth the sweet clover itself supplies excellent grazing during the dry period of the summer, and in the third year the grass is often so strongly stimulated by the nitrogen left by the sweet clover crop the year before that the clover could not reseed itself.

These benefits more than justify the absence of grazing the year of seeding sweet clover. This is essential in order to get the roots of the sweet clover well established in the blue grass sod the first year.

Advisable to Disinfect and Paint Tree Wounds

In bearing and neglected orchards where the presence of fire blight or blister canker is suspected, it is advisable to disinfect and paint all wounds made which are two inches or more in diameter. Several disinfectants may be used for this purpose, the most important of which are: Mercuric cyanide and corrosive sublimate, one part of each to 500 parts of water; or copper sulphate (blue stone) dissolved in water at the rate of quarter pound to one gallon of water—one of the cheapest and most effective disinfectants. These disinfectants may be applied by means of a sponge or several wraps of soft cloth tied around a stick about 12 inches long.

Brome Grass Pasture

Brome is a grass that is especially well suited to pasture on low, heavy, wet land in the northern regions. It makes a better pasture grass than it does a hay crop, as it does not yield particularly heavy as a hay crop. It is, however, being used more and more each year through the small grain-growing sections of the northern part of the United States and Canada, both as a pasture crop and as a hay crop. It is quite palatable and is relished by stock.

Agricultural Squibs

Trees should be planted as early in the spring as soil conditions will permit.

* * *

Reasonably early seeding for oats is much better as a rule than late seeding.

* * *

It is a good time to check up on treated seed corn as compared to untreated seed corn.

* * *

We can't change the weather, but we can make the buildings warmer where the cattle, hogs and hens are kept.

* * *

Package bees are used to increase the population of existing apiaries or to start new ones. Order now for delivery in late April.

* * *

Lath fencing, such as is used to keep snow off highways, can be used effectively by farmers in protecting yards, orchards and young windbreaks that usually blow bare of snow.

* * *

To encourage early spring brood rearing, it is necessary to maintain a temperature of about 93 degrees Fahrenheit in the entire brood chamber. Protection from the cold and winds can be supplied by packing cases and windbreaks.

POULTR

LIGHTS PROMOTE EGGS IN WIN

Scratch Feed Is Scattere Litter Previous Nigh

Egg production can be profitab creased during winter months th the use of artificial lighting, su O. C. Ufford, extension poultr for the Colorado Agricultural c

"Hens normally lay the most in the spring and early summer there is the greatest amount of light," Mr. Ufford declares. "I been found that by prolonging period of light during winter d higher average egg production w obtained than when artificial lig not used."

There are three methods of ficially lighting the henhouse b use of an automatic clock. Pro the most popular method is th turning on the lights between 4 a. m. and keeping them on until light. The morning scratch fe scattered in the litter the night be

Sometimes a combination of m ing and evening lights is used, evening lights being turned on a 4 p. m. and kept on until 6:30 p. m., when the birds are sent to by automatically dimming the li before they are entirely turned The lights are turned on again by clock early in the morning.

The evening lunch method per the birds to go to roost at the reg time, but arouses them when the li are turned on about 8 p. m., wh feed of grain is scattered in the li This brings the birds off the ro for about an hour for grain, mash water, and then they are sent bac roost by the use of dimmers. lunch prevents them from becon hungry during the winter nights enables them to better resist weather.

Mash for Winter Eggs Favored by Special

With a 50 per cent production young stock as a practical economi limit for their production, J. B. Ha poultry specialist at the University Wisconsin, advises that careful fe ing should attend their introduct into the class of producers.

"Forcing," he declares, "should be attempted on young stock, should it be expected of them that p duction on top of early matur gained from forcing will be the b for flock production."

For poultry stock which is in c dition to be forced, such as pull that are well along to maturity, a hens that have fully recovered fr their molt and are again in good c dition, increased feeding during t winter months is a good way to bri up production of the flock. One of t best of rations for the flock to bri them to better production is this on

Scratch Feed Mixture: Crack corn, 2 pounds; wheat, 2 pounds; oa 1 pound.

Mash: Bran, 100 pounds; whe middlings, 100 pounds; buckwhe middlings, 100 pounds; ground oa 100 pounds; oil meal, 50 pounds; sa 3 pounds.

Practices in feeding that have be found to be the best, according Hayes, include the feeding of gra in two or three portions during t day. The mash is the true "forcer" the feed for the flock.

Rotting of Eggs Blamed on Carbon Dioxide Ga

According to a Cornell chemist, o of the chief reasons for the rottin of eggs is the escape of carbo dioxide gas through the shell. He di covered that newly laid eggs conta this gas in a limited quantity, b the porousness of the shell permits to pass off within a short time.

He proved, however, that the e would reabsorb the gas, and by expo ing the shells to a minute quantity carbon dioxide succeeded in keepi them fresh indefinitely. The cost the treatment was said to be a fe hundredths of a cent per dozen.

Fowls for Breeding

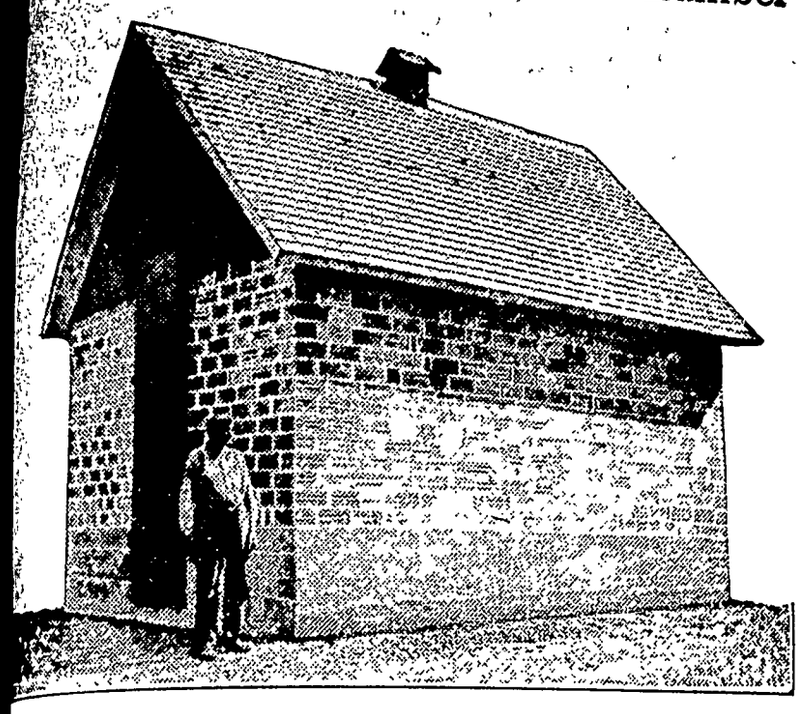
It is time to make the breeding pen Select your best hens and confine the in small flocks of from 12 to 20, a cording to the breed, and place a goo male in each pen. Have the hens l each pen as near alike as possible. a number of males are allowed to ru with a large flock you can never te what the chicks will be when you s lect the eggs for hatching. Promiscu ous breeding, even for utility stock, never satisfactory for a profitabl flock.

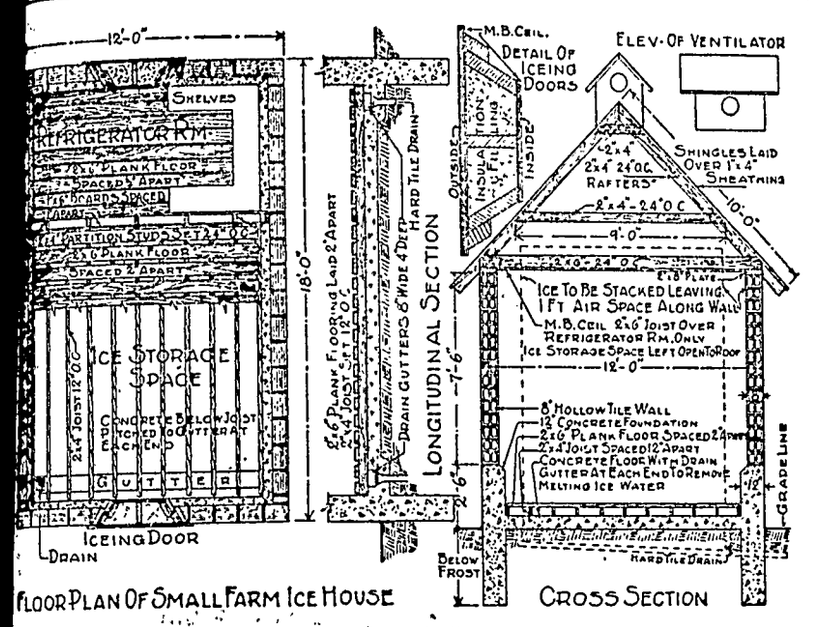
Management of Pullets

With regard to the management o the pullets, it will be advisable grad ually to introduce the rations likel to be used during the laying period Any change in the diet should be mad before eggs are forthcoming in an large number.

All poultry keepers have difficult in preventing the partial moul While admitting that various factor may be responsible for this trouble there is no doubt that management has much to do with it.

House for Farm May Be Built of Either Concrete or Lumber





FLOOR PLAN OF SMALL FARM ICE HOUSE — CROSS SECTION

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

During the next two or three months ice in the northern section of the United States will be about the least valuable of nature's products. It will be so plentiful that most people will wish there was less of it. However, when the scorching days come next summer ice will be welcome, not only for cooling drinks, but for the preservation of food. Where mechanical refrigeration is not available ice is the medium by which food may be protected from the ravages of hot weather.

Nowhere is ice more useful than on the farm, especially where there is a dairy herd, for modern methods of handling milk and cream require that it be cooled immediately after drawing. The method of doing this in the summer time requires ice.

To have a supply of ice next summer an ice house is required. This building may be inexpensive. What is required are double walls between which there is a material that will act as an insulation to protect the ice from the heat of the summer sun.

Shown in the illustration is a small two-gable ice house of concrete and hollow tile. This house may be duplicated in frame. In either case there should be an inside wall with space between it and the outside wall that could be packed with sawdust, shavings, hay or straw or some other material that provides dead air space which is the best type of insulation.

This building is 12 feet by 18 feet and is 9 feet to the eaves. It has a concrete foundation with a drain set in one corner of the concrete floor. Accompanying the exterior view is a floor plan and a cross-section of the building which shows the construction when hollow tile is used. To construct it of frame requires only that the 8-inch wall of hollow tile be replaced by a double wall of lumber.

The ice cakes, of course, are packed in with a liberal amount of sawdust, hay or straw, between each cake.

As has been said, an ice house of this size is not expensive and its contents will be appreciated when summer comes again.

Insulating Lumber Is Cheap and Efficient

Thousands of American homes already built with insulating lumber show extraordinary results in comfort and economy. Where synthetic lumber is used for sheathing in place of ordinary lumber it serves two purposes: rigid, strong construction and insulation against heat and cold. On inside walls it replaces lath and makes a beautiful smooth wall with plaster applied directly to the surface. On the room under the slate, shingles or prepared roofing, it protects the entire house against outside heat in summer and prevents leakage of heat in winter.

In the light of these developments, insulation can no longer be called a luxury. It is ready to take its place beside the staple, everyday necessities such as brick, stone, wood, concrete and steel. The future modern home builder will no more sacrifice the blessings of insulation than he would give up the health and comfort of modern plumbing, lighting or heating. The scheme of progress we call civilization consists merely of the gradual adoption of improvements that create better living conditions. Better living means better people. The better citizens of the future will owe no small part of this higher standard to the men who in the present day are making better homes possible for all

Bricks O. K. for Floor, Walks, Steps, Gate Posts

The possibilities of the use of face brick for floors, walks, steps, gateposts, seats and in other places about the house and garden are unlimited. For outside work, face brick are permanent and have beautiful color which never fades. The brick used may be the same color and texture as those of the house, thus linking house and garden into a harmonious whole.

Planning New Roof?

Planning to reroof your home this fall? Remember and choose your roof to harmonize with your house, for the correct sort of roof on a home is as vital as the correct hat on a pretty lady. Put a wrong hat on an attractive woman and the result is sad; put a wrong roof on a house and the result is tragic.

Grain of Wood Is Not Fit for All Finishes

Because the grain of the wood is not equally receptive to colored filler in all parts, certain portions retain more of it than others; it is in this way that the interesting effects are obtained.

Handsome and rich are the color-stippled finishes for living-room woodwork. After the work has been brought up to a smooth surface of desired ground color (in case of new wood at least three coats are required) then a thin glaze coat of contrasting color is applied, which is stippled with a large stencil brush.

The brush should be kept fairly clean and dry by frequent wiping. Good color combinations are light buff ground with olive-green glaze. Venetian red ground with mahogany glaze, white ground with orange glaze, silver ground with blue-black glaze, ivory ground with raw sienna glaze.

On account of the extreme thinness of the glaze color the durability of these finishes will be greatly enhanced if one coat of varnish is applied as soon as the glaze is thoroughly dry.

Picturesque Termed Elusive When Sought

An architect hears so much about the picturesque from clients who ask him to give them picturesque designs that he is tempted to say that if you want the picturesque do not seek it.

The last centuries having to complete the great edifices of the past did not believe themselves riveted to a style that had disappeared. The Palace of Justice in Paris was carried on without being made in the style of the Thirteenth century. Yet it is picturesque.

In Notre Dame and in many churches you will find the successive styles from the Twelfth to the Fifteenth century, and Notre Dame is picturesque. What kills the picturesque is archaelogical anachronism.

Cement and Winter

When using cement or concrete in winter care must be taken that the work does not freeze. For an expert this an easy task, but the amateur had better wait for a "break" in the weather.

TRAVEL HIGH ON POOR HIGHWAYS

Motorists Pay One-Third More Over Bad Roads.

(By E. E. Duffy)

The motorist who pays out a dollar in car operating expenses in traveling over high type roads, must pay $1.18 in traveling the same distance on intermediate type roads. The travel cost of the same distance on low type roads is $1.38.

Cost of Gravel.

These costs, determined by Prof. T. R. Agg and H. S. Carter of Iowa State college for the "imaginary" average car, clearly indicate the high cost of traveling over so-called low type roads. According to their calculations the cost of driving over gravel and so on is one-third greater than driving over smooth concrete.

For the sake of convenience, let it be conservatively considered that the cost of driving a car over concrete is five cents a mile. A dollar will then buy 20 miles of travel on hard pavement. The average motorist now travels some 6,000 miles yearly at, therefore, an estimated cost of $300. If the motorist's traveling were all to be done over intermediate type roads rather than concrete, the additional cost for this "privilege" would be $54. But if the motorist were compelled to bump over low type roads the extra travel cost would be $114—which is $114 that could be better spent.

Money on Improvements.

A motorists' association has just pointed out that 16 states this year spent less money on highway improvement than they did last year, even in the face of mounting car registrations. Obviously, this cannot be called economy, for every mile of unimproved road a community tolerates costs the taxpayer hard cash through extra car expenses which have to do with fuel and oil, car depreciation, tire wear aud allied items.

Cheaper motoring can only come through more extensive highway improvements and these must come through the expedient of making more money available for highway construction.

Motor Lubrication Is of Great Importance

Motor lubrication, important at all times, is doubly so during warm weather when longer trips at higher speeds are made, according to C. W. McKinley, research engineer, who says:

"Oil suitable for summer driving, however, may not be suitable for winter driving, when a lighter oil should be used in most cases. Consult chart at your service station and change oil if necessary.

"Another important factor in maintaining proper lubrication is attention to the oil filter. This device filters the oil and keeps it clean. But after 10,000 miles the filtering unit becomes filled with dirt taken from the oil and needs to be serviced.

"By having the oil filter serviced at 10,000 miles, by using the proper grade oil, and by following the car manufacturer's recommendation as to changing oil the motorist is assured of trouble-free operation so far as the all-important matter of lubrication is concerned."

Bad Roads Have Fewest Automobile Accidents

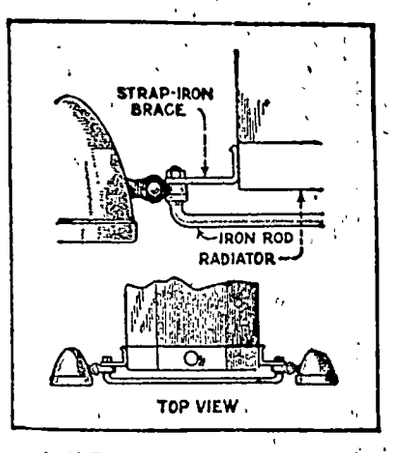
The most common excuses given for road accidents are bad roads, foggy weather, poor light and defective brakes. However, according to the statistical bureau of the National Automobile club, these claims are not borne out by official report. Out of 1,827 accidents during one single month, 1,151 took place on perfectly dry roads; 1,238 in clear weather, and 998 in broad daylight.

Out of 2,773 vehicles involved, investigators found that 2,659 were in good condition mechanically and only 29 were found to have defective brakes. The chief reasons for the accidents were reported to be careless and reckless driving.

ANTI-RATTLER FOR FRONT CAR FENDER

Two Pieces of Strap Iron on Lamp Lug Stop Noise.

You can prevent the front fenders of certain types of small cars from rattling by installing two small pieces of strap iron as shown in the drawing. The strap iron should be about 3-16 inches thick and the pieces about 3½ inches long. They are bent at right



Anti-Rattler Attached to Car.

angles, and a hole is drilled at the outer end, to fit on a lug of the lamp bracket. The installation shown was made on a Chevrolet of the 490-type. Before drilling the holes, place the pieces beside the radiator shell so that they will spring tightly against it after they have been attached to the lamp-bracket lug.—Guy E. Clark, Everett, Wash., in Popular Mechanics Magazine.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q. How many head of live stock did trucks haul in 1928?

Ans. Data from 17 markets show us that 12,000,000 head were hauled. The average haul was 50 miles.

Q. How many persons are there per motor vehicle in the United States?

Ans. Four and nine-tenths. In China there are 17,000 persons to the motor vehicle.

Q. In what country is the price of gasoline probably the highest?

Ans. Bolivia has an average cost of around 65 cents a gallon. United States is lowest with about 18.3 cents a gallon.

Q. How many carloads of automotive freight were hauled in 1928?

Ans. It is estimated that there were 3,500,000 carloads.

Good Performance Will Depend on Spark Plugs

Spark plug must be in good condition and the electrodes must be adjusted correctly for not only satisfactory all-around performance but especially to relieve strain on the battery and facilitate easy starting, which is so important during the winter season.

A surprisingly large percentage of poor performance may be traced and often eliminated by an examination of the spark plugs. Hard starting; missing at low idling speeds; sluggishness and power loss on hills and hard pulls are often traceable to the spark plugs. This is why car manufacturers recommend that spark plugs be renewed every 10,000 miles, and inspected at least twice a year.

AUTOMOBILE HINTS

Rim lugs should be tightened a little at a time.

* * *

Don't attempt to turn out of ruts while under speed.

* * *

The running gear of the car can be cleaned with gasoline.

* * *

When a 1,500-pound roadster meets a 50-ton locomotive at the crossing, that isn't what you call parity.

* * *

Recently a driver "stopped, looked and listened." Saw the train coming and thought he had time to start and cross. He made a bad guess. Always give the approaching train the benefit of the doubt.

CANADIAN INVENTS AN AUTO-AMPHIBIAN

An auto amphibian which was invented and constructed by a resident of Winnipeg. The machine was recently driven through the streets of Winnipeg and then into the Red river. It then made the trip from Winnipeg to Lake Manitoba, up the Red river, a distance of fifty miles. It has a water speed of twenty miles per hour and is fitted with regular plane pontoons attached to racks fastened to the car and when out of the water they can be removed and put on top of the rack. It was designed principally for fishing.

Wit and Humor

FORESIGHT

He was visiting the newlyweds at their home. Everything was fine, but—

"Why did you take an apartment with such a tiny kitchenette, Tom, old boy?"

"Well, you're the first man I've told, so keep it quiet. It's so small I can't get in there to help my wife when she's doing the dishes."

Early Tuition

"Do you think a successful politician must spend many years in getting an education?"

"All depends," said Senator Sorghum, "on what kind of politics he gets into. I know of underworld workers who appear to have learned more in jail than they learned in school."—Washington Star.

A REINCARNATION SURE

Friend (referring to new-born babe) "Just think, Tom, there's your son having his first day of crying." Dad—"I can hardly think it is Jim—sounds to me like he's had a lot of practice before."

Antarctic Advantage

Yonder, in far Antarctic seas,
The ships repose amid a freeze
And make us envy icy storm,
While weather prophs say "fair and warm."

Opinions Differ

Wifey (reading paper)—It's a shame! Simply revolting! Down in the South Sea islands a man pays $20 for a wife!

Hubby—Yes, that's a lot of money, but if she is pleasant and good looking and a willing worker she might be worth it.

The Guest Towels

Hubby—Well, darling, I ran that errand for you today. I bought the towels and took them to a seamstress to have the question marks sewed on.

Surprised Wife—What on earth did you think I asked you to buy?

Hubby—You told me to buy a dozen guess towels, of course.—Chicago Daily News.

MEAN INDEED

"You say Jack's father is miserably mean?"

"Yes, he's so mean he wouldn't even give Jack a liberal education."

Who Has the Answer?

I ask a simple question,
This only truth I wish:
Are all fishermen liars,
Or do only liars fish?

Business First

The Officer—When you seen them dames start bitin' an' hair pullin' why didn't you stop 'em an' not wait till they near murdered each other?

The Movie Operator—Stop 'em! Why, man, there was a hundred feet of film in the camera.

Merely Advisory

Mr. Neversweat—I can't get out and hustle up a job. The doctor's forbidden me to work.

His Wife—Fergit it! The doc ain't the business agent of your union.

Chances Bright

"Hm! So you wish to marry my daughter. May I ask, how are your future prospects? Can you provide for her?"

"Yes, absolutely. I have a very rich uncle, sixty-five years old, who has lately taken up aviation."

The Right Place

Bill—Do you notice that lady over there? What a friendly expression she wears on her face.

Hal—Yes, but where else could she possibly have it?

TAKE IT FROM DAD

By Frank H. Cheley

Is the Church Really Dying?

"Another evening wasted away," sighed Bob from his corner just as Dad put down his paper and reached for his magazine.

"How come," asked Mr. Smithhough, not quite understanding, "lessons a bit irksome?"

"Sunday school lessons, yes," replied Bob half reflectively. "Dad, I'm about through with Sunday school and church. Seems to me it's just wasted time when there is so much a fellow wants to do. Besides the church is dying. In a generation or two there won't be any such a thing at all, will there?

Dad smiled indulgently, "Bob you are always so cock certain in your conclusions. I suppose you have gathered dependable facts for that statement. It's very dangerous to allow one's thinking to be based on mere opinions, or worse, casual impressions.

"It's a very popular indoor sport nowadays among certain very wise folks never to lose an opportunity to give the church and all it stands for, a good kick in the pants, unconscious, no doubt, that such talk advertises to the high heavens their total ignorance of facts. Some things in our modern life, my boy, are far too big to judge from a few scattered facts. Much the same situation as your 'rotten politics.' No doubt that we do have too many little struggling ineffective churches and I share heartily the idea that we have vastly too many sects and creeds and denominations. It would be a marvelous forward step for all modern life if an effective get-together program could be arrived at, but just because here and there you find a half-dead church and an old moss-back preacher who has outlived his day and his usefulness—don't generalize too soon on little or no data.

"Bob, I saw some facts the other day which tended to show that the modern church is the greatest business in the world. It has absolutely world-wide scope. It has branch offices in every community in every civilized country in the world. It has more paid employees than the greatest industry. Its hospitals and orphan homes, its schools and colleges; its organized agencies of hope and love and mercy add more to our modern peace and happiness than any other given single factor.

"Bob, if you and your gang would catch some of the historical values out of your Sunday school lessons instead of just spending your time arguing some minor point for the sake of argument, things would look much different to you. Why take this fact alone, boy, pretty much our whole modern attitude toward women, and that means to us our attitude toward mother, is the result of the tremendous efforts of this church which has from its beginning championed women and motherhood and any boy who is not too old to feel a love for his own mother is not too old to support an institution that is making life more worthwhile for mothers all over the world.

"And Bob, going to college? Sure if you're ever going to be a senator. But, say, where did the colleges get their start? Did you know that Harvard was founded by a Christian minister? Yale was founded by a group of Christian ministers and supported by the church largely for many years. Fully a quarter of a million of college students in America today are attending schools founded and developed and supported by this 'dying church.' Sort of surprises you doesn't it, boy?

"Well, another thing to remember, boy, is that the church of today is quite unlike the church of yesterday and very likely the church of tomorrow will be different again. Change and progress are always at work. We know a great deal more in every realm of thought today than even a hundred years ago, and just as rapidly as folks with their prejudice and deep ingrown convictions will allow it to happen, the church, too, will adjust her thinking and teaching to the best that is known by men. Keep in mind as you consider your attitude toward the church that religion is neither apart from life nor a part of life but life itself, lived at its very best. Any agency that devotes itself to such a task cannot die, it can only re-adjust and re-adapt itself to new times and new conditions. So don't be a 'wise guy' my boy, and try to blow out the moon!

"The best of men in all times, men of world travel and very large experience have supported and do still support the church at work with their personal allegiance and their time and their money. Hand me that 'Life of Roosevelt' there, I marked a passage in it not so very long ago. Here it is: 'I think it is the duty of every man to go to church. Frequently I have to listen to sermons that bore me, but the church has contributed so enormously to civilization; its service to society is so great that irrespective of all other considerations I feel I ought to support it and to attend whenever I can.'

"There you are, old boy, and such argument might be presented on and on and on.
